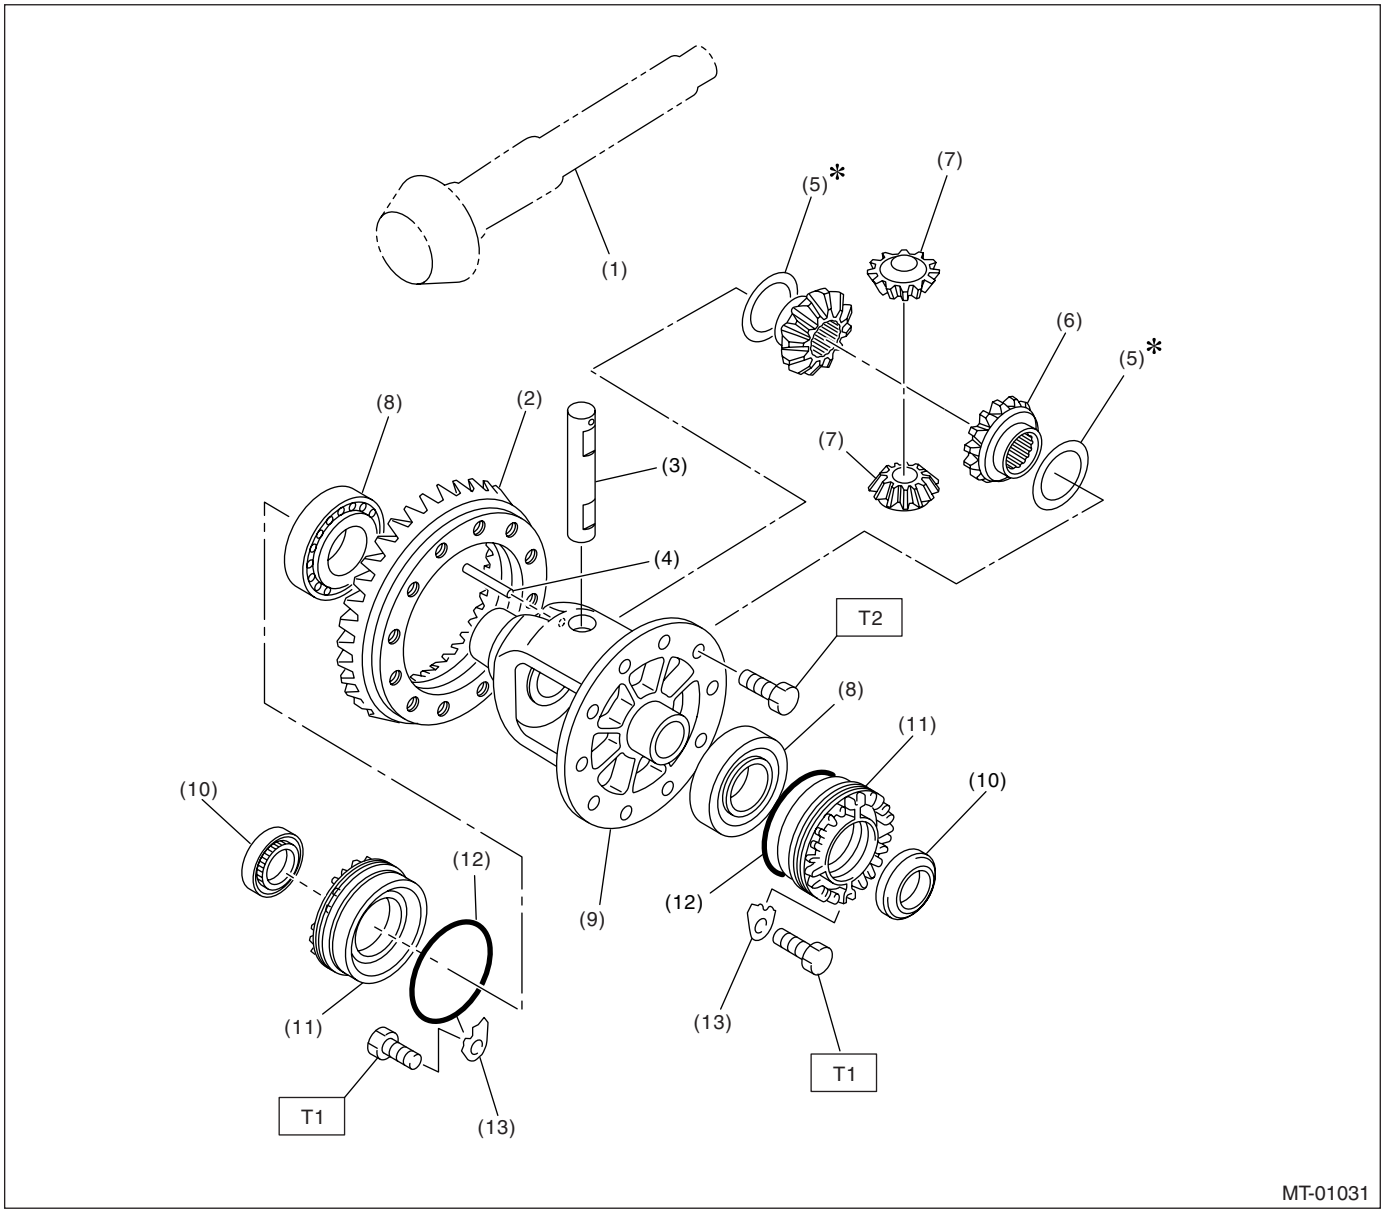
(28) Ball bearing
(29) Center differential
(30) Adjusting washer
(31) Transfer drive gear
(32) Ball bearing
(33) Extension case
(34) Oil seal
(35) Dust cover
(36) Shift bracket
(37) Snap ring

Tightening torque: N·m (kgf-m, ft-lb)
T1: 6.4 (0.65, 4.7)
T2: 10 (1.0, 7.4)
T3: 25 (2.5, 18.4)
T4: 26 (2.7, 20)
T5: 40 (4.1, 29.7)

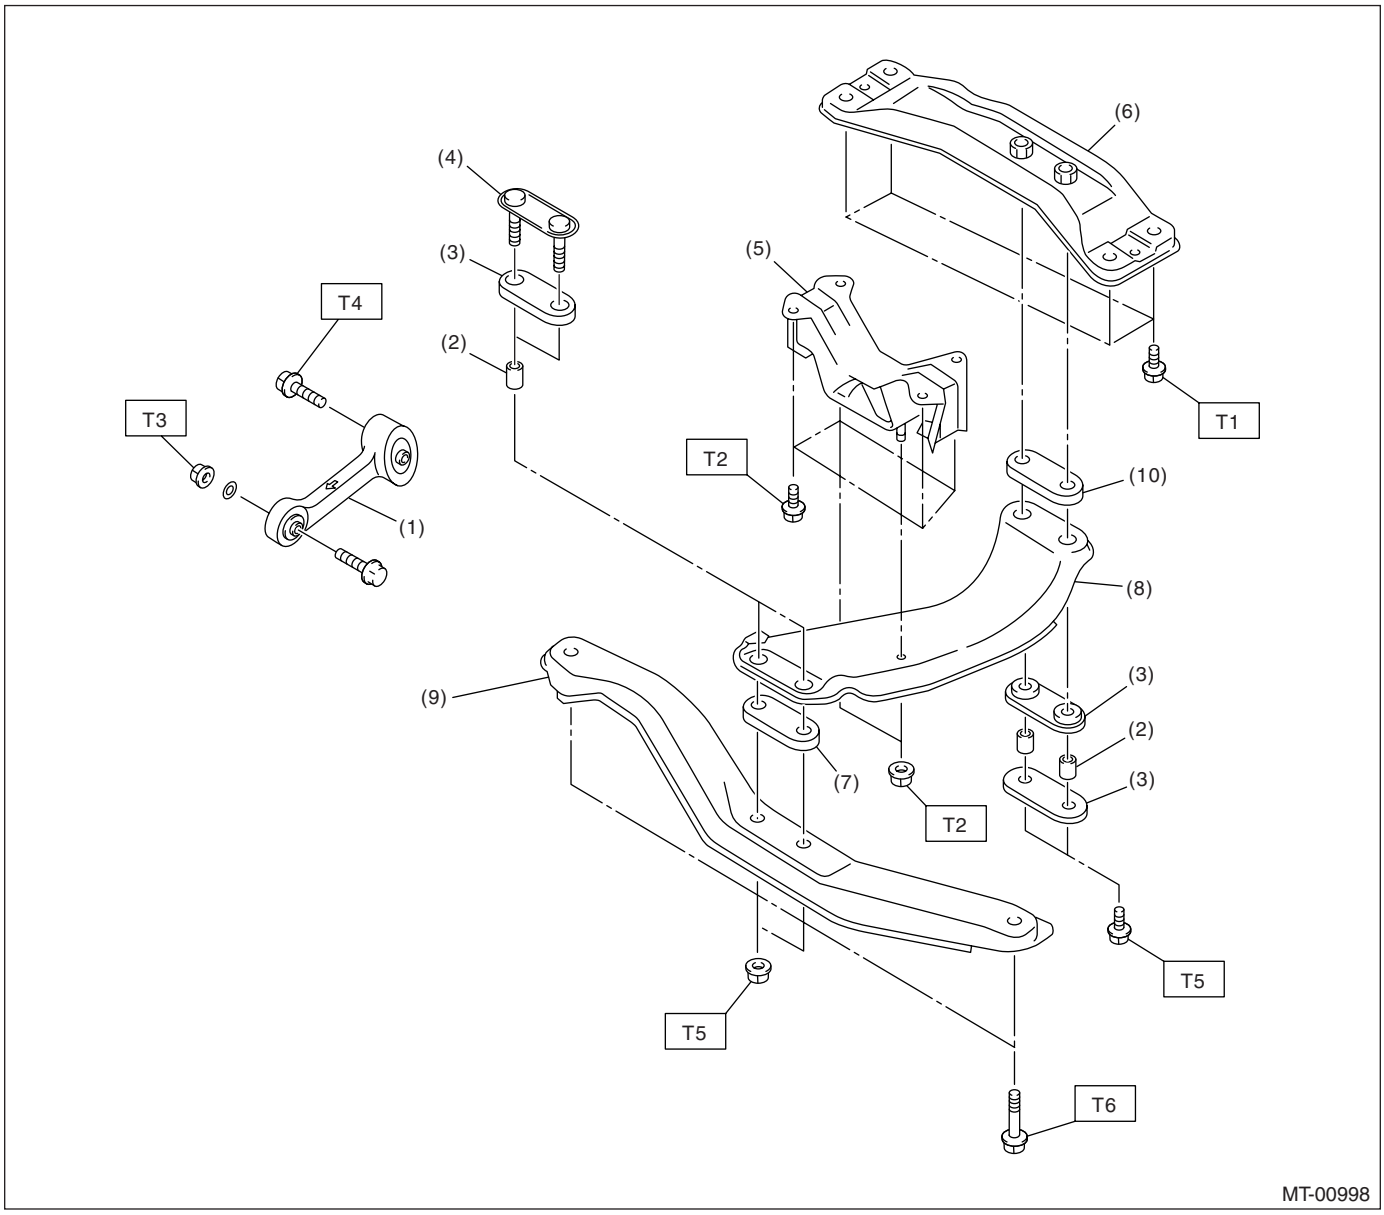
7. FRONT DIFFERENTIAL



(1) Drive pinion shaft
(2) Hypoid driven gear
(3) Pinion shaft
(4) Straight pin
(5) Washer
(6) Differential bevel gear
(7) Differential bevel pinion
(8) Roller bearing
(9) Differential case
(10) Oil seal
(11) Differential side retainer
(12) O-ring
(13) Retainer lock plate

Tightening torque: N·m (kgf-m, ft-lb)
T1: 25 (2.5, 18.1)
T2: 62 (6.3, 45.6)

8. TRANSMISSION MOUNTING



(1) Pitching stopper
(2) Spacer
(3) Cushion rubber
(4) Front plate
(5) Rear cushion rubber
(6) Rear crossmember
(7) Cushion D
(8) Center crossmember
(9) Front crossmember
(10) Cushion (crossmember)

Tightening torque: N·m (kgf-m, ft-lb)
T1: 70 (7.1, 51)
T2: 35 (3.6, 26)
T3: 50 (5.1, 37)
T4: 58 (5.9, 43)
T5: 70 (7.1, 51)
T6: 140 (14.3, 103)

C: CAUTION

• Wear work clothing, including a cap, protective goggles and protective shoes, during operation.
• Remove contamination including dirt and corrosion before removal, installation or disassembly.
• Keep the disassembled parts in order and protect them from dust and dirt.
• Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
• When disassembling the case and other light alloy parts, use a plastic hammer to force it apart. Do not pry it apart with a screwdriver or other tool.
• Be careful not to burn yourself, because each part on the vehicle is hot after running.
• Use SUBARU genuine gear oil, grease etc. or equivalent. Do not mix gear oil, grease etc. with that of another grade or from other manufacturers.
• Be sure to tighten fasteners including bolts and nuts to the specified torque.
• Place shop jacks or rigid racks at the specified points.
• Apply gear oil onto sliding or revolution surfaces before installation.
• Replace deformed or damaged snap rings with new ones.
• Before installing O-rings or oil seals, apply sufficient amount of gear oil to avoid damage and deformation.
• Be careful not to incorrectly install or fail to install O-rings, snap rings and other such parts.
• Before securing a part on a vice, place cushioning material such as wood blocks, aluminum plate or cloth between the part and the vice.
• Avoid damaging the mating surface of the case.
• Before applying sealant, completely remove the old seal.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-399411700	399411700	ACCENT BALL INSTALLER	Used for installing reverse shifter rail arm.
 ST-899524100	899524100	PULLER SET	Used for removing and installing roller bearing (Differential). (1) Puller (2) Cap

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-399780104	399780104	WEIGHT	Used for measuring preload on roller bearing.
 ST-498077000	498077000	REMOVER	Used for removing roller bearing of drive pinion shaft.
 ST-498077300	498077300	CENTER DIFFERENTIAL BEARING REMOVER	Used for removing the center differential cover ball bearing.
 ST-498147000	498147000	DEPTH GAUGE	Used for adjusting main shaft axial end play.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-498247001	498247001	MAGNET BASE	• Used for measuring backlash between side gear and pinion, and hypoid gear. • Used with DIAL GAUGE (498247100).
 ST-498247100	498247100	DIAL GAUGE	• Used for measuring backlash between side gear and pinion, and hypoid gear. • Used with MAGNET BASE (498247001).
 ST-498427100	498427100	STOPPER	Used for securing drive pinion shaft assembly and driven gear assembly when removing lock nut of drive pinion shaft assembly.
 ST-498787100	498787100	MAIN SHAFT STOPPER	Used for removing and installing lock nut of transmission main shaft.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-498937000	498937000	TRANSMISSION HOLDER	Used for removing and installing transmission main shaft lock nut.
 ST-499277100	499277100	BUSHING 1-2 INSTALLER	• Used for installing 1st driven gear thrust plate and 1st-2nd driven gear bushing. • Used for installing roller bearing outer races to differential case.
 ST-499277200	499277200	INSTALLER	Used for press-fitting 2nd driven gear, roller bearings, and 5th driven gear onto driven shaft.
 ST-499757002	499757002	INSTALLER	• Used for installing snap ring (OUT 25), and ball bearing (25 × 26 × 17). • Used for installing bearing cone of transfer driven gear (extension core side).

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-499787000	499787000	WRENCH ASSY	Used for removing and installing differential side retainer.
 ST-499827000	499827000	PRESS	Used for installing speedometer oil seal when installing speedometer cable to transmission.
 ST-499857000	499857000	5TH DRIVEN GEAR REMOVER	Used for removing 5th driven gear.
 ST-499877000	499877000	RACE 4-5 INSTALLER	• Used for installing 4th needle bearing race and ball bearing onto transmission main shaft. • Used with REMOVER (899714110).

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-499917500	499917500	DRIVE PINION GAUGE ASSY	Used for adjusting drive pinion shim.
 ST-499927100	499927100	HANDLE	Used for fitting transmission main shaft.
 ST-499937100	499937100	TRANSMISSION STAND SET	Stand used for transmission disassembly and assembly.
 ST-499987003	499987003	SOCKET WRENCH (35)	Used for removing and installing driven pinion lock nut and main shaft lock nut.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-499987300	499987300	SOCKET WRENCH (50)	Used for removing and installing driven gear assembly lock nut.
 ST-899714110	899714110	REMOVER	Used for installing transmission main shaft drive pinion and rear drive shaft.
 ST-899864100	899864100	REMOVER	Used for removing parts on transmission main shaft and drive pinion.
 ST-899884100	899884100	HOLDER	Used for tightening lock nut on sleeve.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-899904100	899904100	REMOVER	Used for removing and installing straight pin.
 ST-899988608	899988608	SOCKET WRENCH (27)	Used for removing and installing drive pinion lock nut.
 ST-398497701	398497701	ADAPTER	• Used for installing roller bearing onto differential case. • Used with INSTALLER (499277100).
 ST-499587000	499587000	INSTALLER	Used for installing driven gears to driven shaft.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-499987100	499987100	SOCKET WRENCH (35)	Used for removing and installing drive pinion lock nut.
 ST-899984103	899984103	SOCKET WRENCH (35)	Used for removing and installing drive pinion lock nut.
 ST-498057300	498057300	INSTALLER	Used for installing extension oil seal.
 ST-498255400	498255400	PLATE	Used for measuring backlash.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-498077400	498077400	SYNCHRONIZER CONE REMOVER	• Used for removing synchronizer cone of main shaft. • Used for removing 5th driven gear of drive pinion shaft.
 ST41099AA000	41099AA000	ENGINE SUPPORT BRACKET	Used for supporting engine. (1) ENGINE SUPPORT BRACKET (41099AA010) (2) ENGINE SUPPORT (41099AA020)
 ST-398527700	398527700	PULLER ASSY	Used for removing extension case roller bearing.
 ST-398643600	398643600	GAUGE	Used for measuring total end play, extension end play and drive pinion height.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-398177700	398177700	INSTALLER	• Used for installing bearing cone of transfer driven gear (transfer case side). • Used for installing ball bearing of transfer drive gear.
 ST28399SA010	28399SA010	FRONT DRIVE SHAFT OIL SEAL PROTECTOR	Used for protecting oil seal from damage when inserting front drive shaft.
 ST18675AA000	18675AA000	DIFFERENTIAL SIDE OIL SEAL INSTALLER	Used for installing differential side retainer oil seal.
 ST-398507703	398507703	DUMMY COLLAR	• Used for installing input shaft holder oil seal. • For dual-range model.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-398663600	398663600	PLIERS	• Used for removing and installing input shaft snap ring. • For dual-range model.
 ST-499757001	499757001	SNAP RING GUIDE	• Used for installing snap ring (OUT 25). • For dual-range model.
 ST-899858600	899858600	RETAINER	• Used for removing ball bearing. • For dual-range model.
 ST-899474100	899474100	EXPANDER	• Used for removing and installing snap ring. • For dual-range model.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-899580100	899580100	INSTALLER	• Used for pressing ball bearings into input shaft. • For dual-range model.
 ST-399513600	399513600	INSTALLER	• Used for pressing ball bearings into input shaft. • For dual-range model.

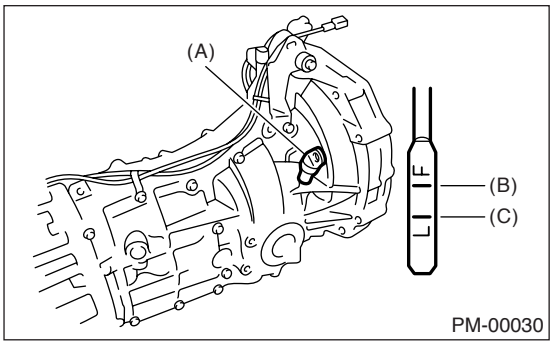
2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and ampere.

2. Transmission Gear Oil

A: INSPECTION

1) Park the vehicle on a level surface.
2) Turn the ignition switch to OFF, and wait until the engine cools.
3) Remove the oil level gauge and wipe it clean.
4) Reinsert the level gauge all the way. Be sure that the level gauge is correctly inserted and in the proper direction.
5) Pull out the oil level gauge again, and check the oil level. If it is below the lower level, add oil through the oil level gauge hole to bring the level up to the upper level.



(A) Oil level gauge
(B) Upper level
(C) Lower level

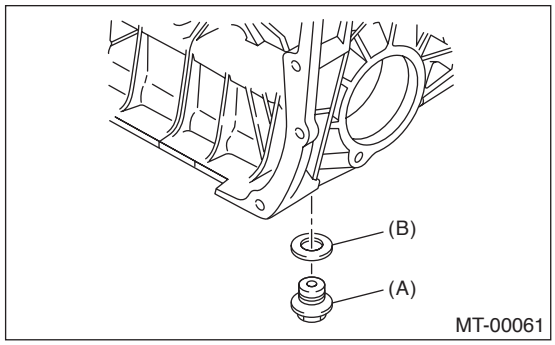
B: REPLACEMENT

1) Pull out the oil level gauge.
2) Lift-up the vehicle.
3) Drain transmission gear oil completely.

CAUTION:
Immediately after the engine running, the transmission gear oil is very hot. Be careful not to burn yourself.

NOTE:
• Tighten the transmission gear oil drain plug after draining transmission gear oil.
• Use a new gasket.

Tightening torque:
70 N·m (7.1 kgf-m, 51 ft-lb)



(A) Drain plug
(B) Gasket

4) Lower the vehicle.
5) Pour gear oil through the gauge hole.

Recommended gear oil:
GL-5 (75W-90) or equivalent

Gear oil capacity:
Single-range model
3.5 ℓ (3.7 US qt, 3.1 Imp qt)
Dual-range model
4.0 ℓ (4.2 US qt, 3.5 Imp qt)

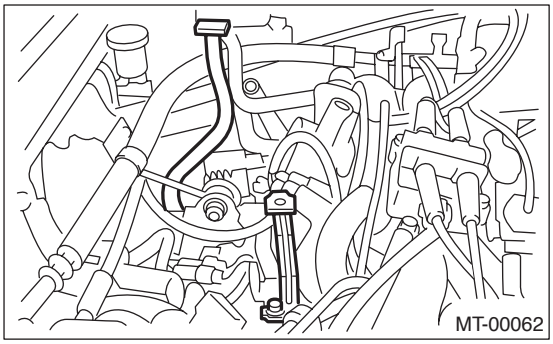
6) Check the level of transmission gear oil.

CAUTION:
The level should be within the specified range marked on the gauge.

3. Manual Transmission Assembly

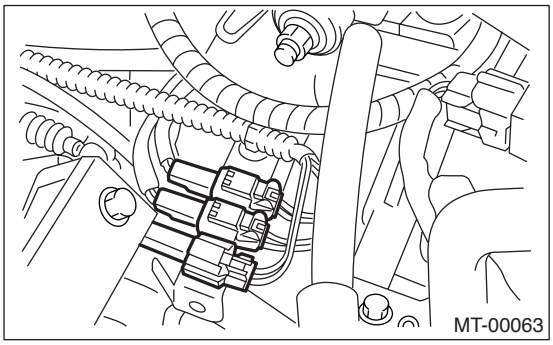
A: REMOVAL

1) Open the front hood fully, and support with stay.
2) Disconnect the ground cable from battery.
3) Drain transmission gear oil completely.
4) Remove the air intake chamber and air cleaner case. <Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.> <Ref. to IN(H4SO 2.0)-6, REMOVAL, Air Cleaner Case.>
5) Remove the air intake chamber stay.



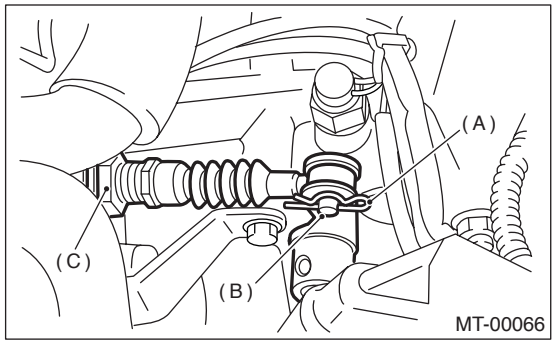
MT-00062

6) Disconnect the following connectors:
   (1) Neutral position switch connector
   (2) Back-up light switch connector
   (3) High-low switch connector (Dual-range model)



MT-00063

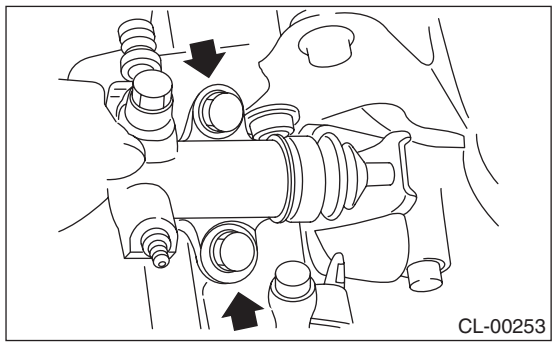
7) Remove the snap pin and clevis pin from drive select cable. (Dual-range model)
8) Remove the drive select cable on transmission side. (Dual-range model)



MT-00066

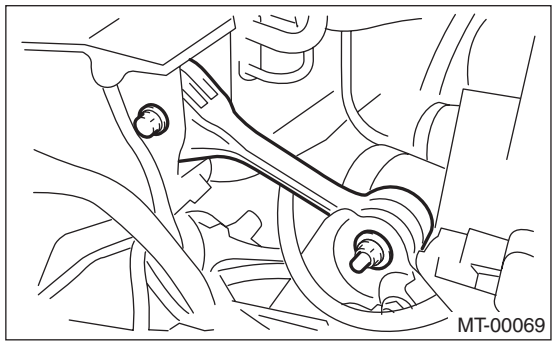
(A) Snap pin
(B) Clevis pin
(C) Drive select cable

9) Remove the starter. <Ref. to SC(H4SO 2.0)-6, REMOVAL, Starter.>
10) Remove the operating cylinder from transmission.



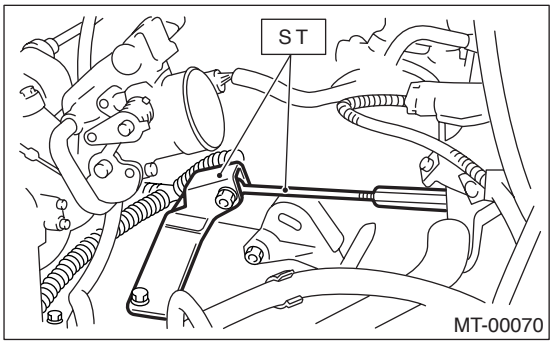
CL-00253

11) Remove the pitching stopper.

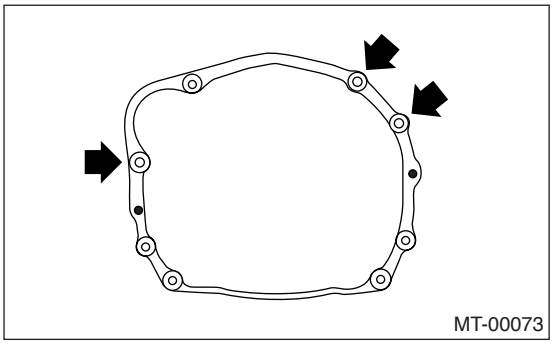


MT-00069

12) Set the ST.
ST 41099AA000 ENGINE SUPPORT ASSY



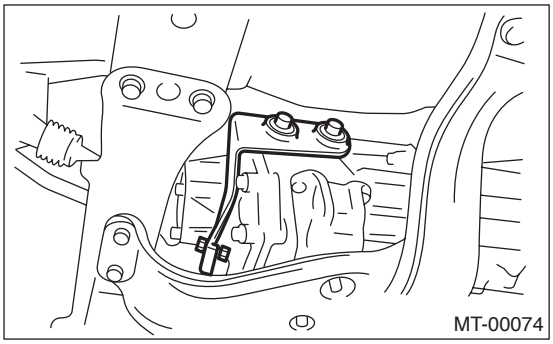
13) Remove the bolts which hold upper side of transmission to engine.



14) Lift-up the vehicle.
15) Remove the front and center exhaust pipes. <Ref. to EX(H4SO 2.0)-7, REMOVAL, Front Exhaust Pipe.>
16) Remove the rear exhaust pipe and muffler. <Ref. to EX(H4SO 2.0)-11, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-13, REMOVAL, Muffler.>

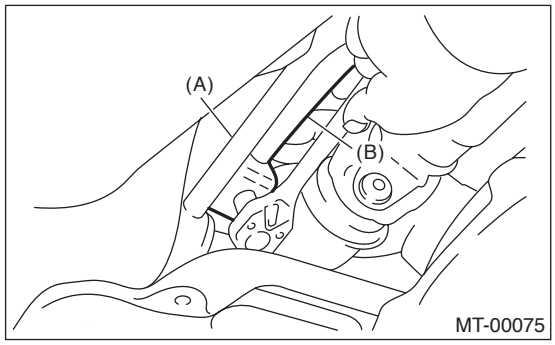
CAUTION:
When removing the exhaust pipes, be careful each exhaust pipe does not drop out.

17) Remove the heat shield cover. (if equipped)
18) Remove the hanger bracket from the right side of transmission.



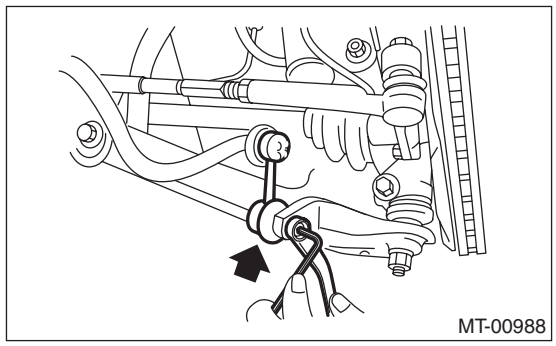
19) Remove the propeller shaft. <Ref. to DS-10, REMOVAL, Propeller Shaft.>
20) Remove the gear shift rod and the stay from transmission.

(1) Disconnect the stay from transmission.
(2) Remove the rod from transmission.

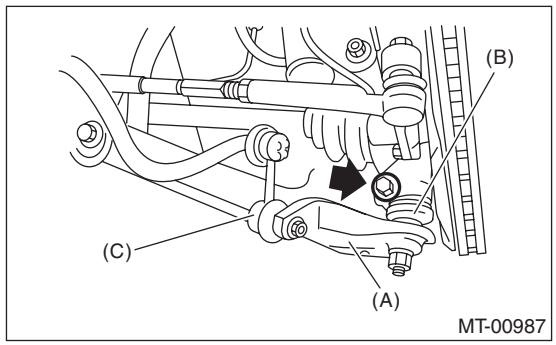


(A) Stay
(B) Rod

21) Remove the stabilizer link from front arm.

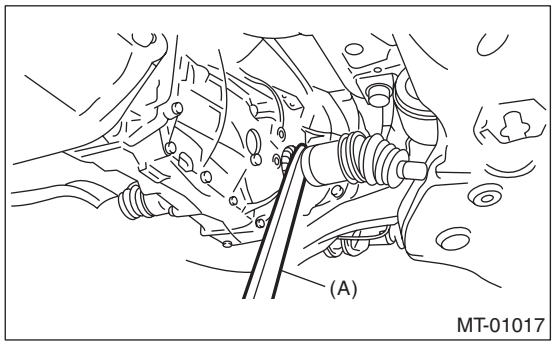


22) Remove the bolt securing ball joint of front arm to housing.



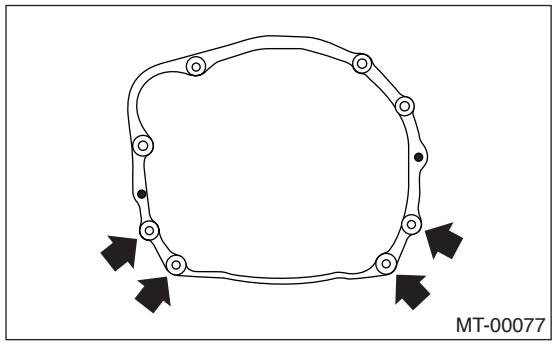
(A) Front arm
(B) Ball joint
(C) Stabilizer link

23) Using the lever, remove the left and right front drive shaft from transmission.



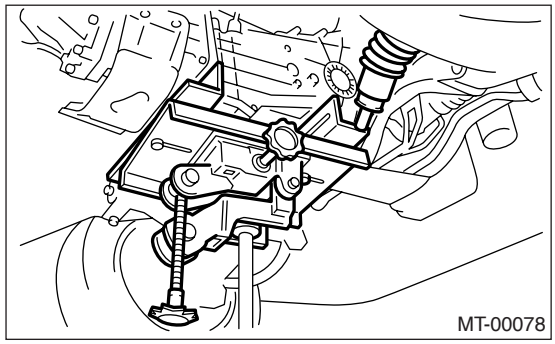
(A) Lever

24) Remove the nuts which hold lower side of transmission to engine.

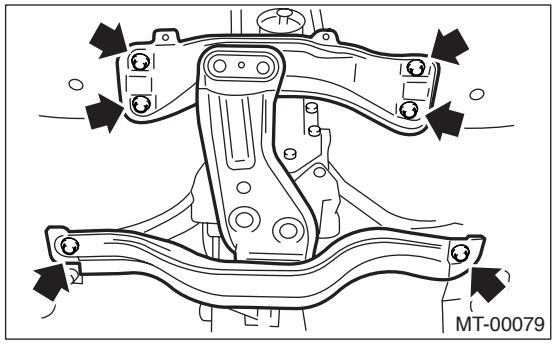


25) Place the transmission jack under transmission.

CAUTION:
Always support transmission case with a transmission jack.



26) Remove the transmission rear crossmember from vehicle.



27) Remove the transmission.

NOTE:
Move the transmission jack toward rear until main shaft is withdrawn from clutch disc.

28) Separate the transmission assembly from rear cushion rubber.

B: INSTALLATION

1) Install the rear cushion rubber to transmission assembly.

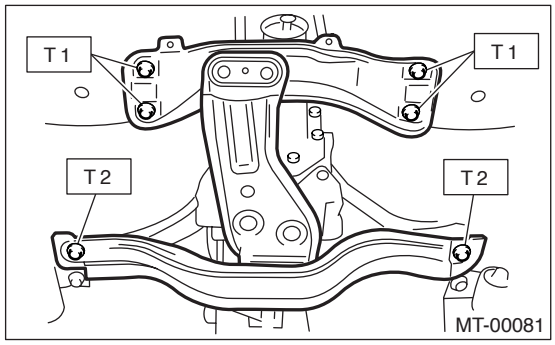
Tightening torque:
35 N·m (3.57 kgf-m, 25.8 ft-lb)

2) Install the transmission onto engine.
(1) Gradually raise the transmission with transmission jack.
(2) Engage them at splines.

NOTE:
Be careful not to strike the main shaft against clutch housing cover.

3) Install the transmission rear crossmember.

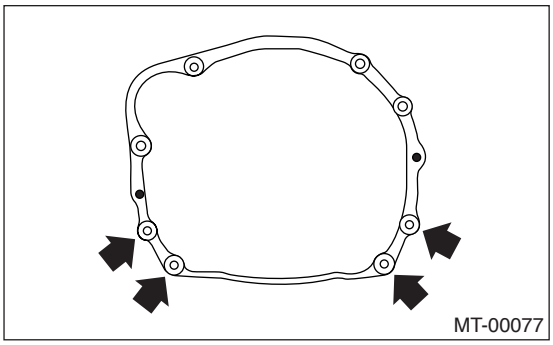
Tightening torque:
T1: 70 N·m (7.1 kgf-m, 51 ft-lb)
T2: 140 N·m (14.3 kgf-m, 103 ft-lb)



4) Take out the transmission jack.

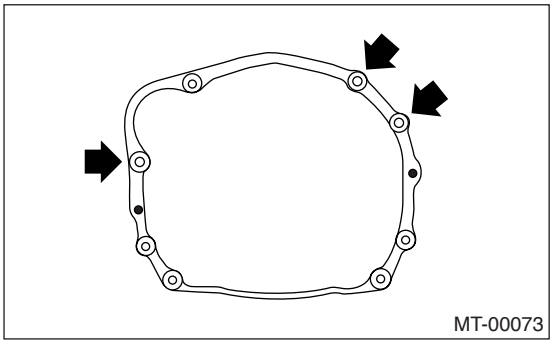
5) Tighten the nuts which hold lower side of transmission to engine.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

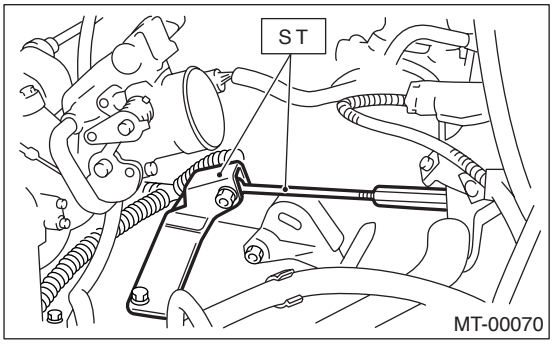


6) Connect the transmission to engine.
(1) Install the starter.
<Ref. to SC(H4SO 2.0)-6, INSTALLATION, Starter.>
(2) Tighten the bolts that hold upper side of transmission to engine.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

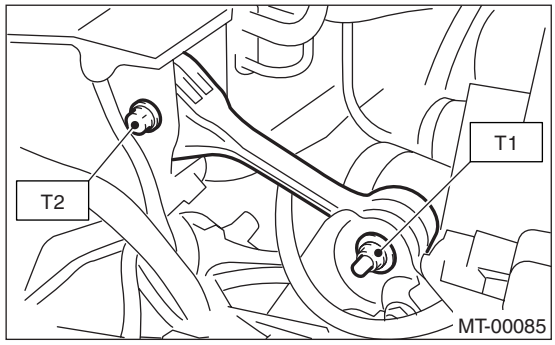


7) Remove the ST.



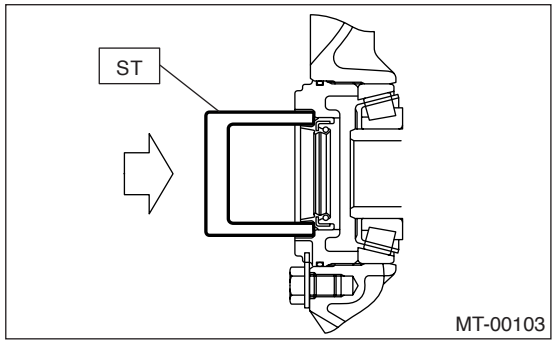
8) Install the pitching stopper.

Tightening torque:
T1: 50 N·m (5.1 kgf-m, 37 ft-lb)
T2: 58 N·m (5.9 kgf-m, 43 ft-lb)

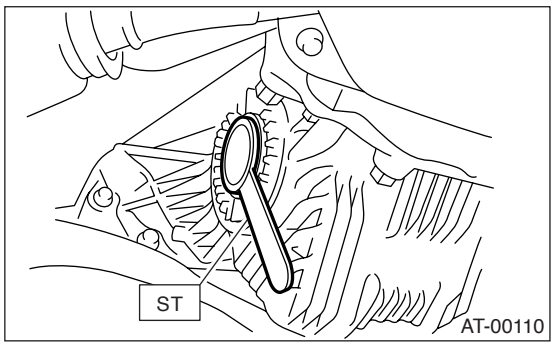


9) Lift-up the vehicle.
10) Install the front drive shaft into transmission.
11) Replace the differential side retainer oil seal. <Ref. to 5MT-40, REPLACEMENT, Differential Side Retainer Oil Seal.>
ST 186755AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

NOTE:
Be sure to replace the differential side retainer oil seal after the procedure of removing the front drive shaft.

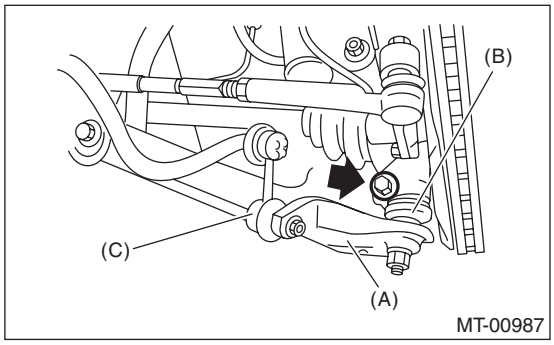


12) Install the front drive shaft into transmission.
ST 28399SA010 FRONT DRIVE SHAFT OIL SEAL PROTECTOR



13) Install the ball joint of lower arm.

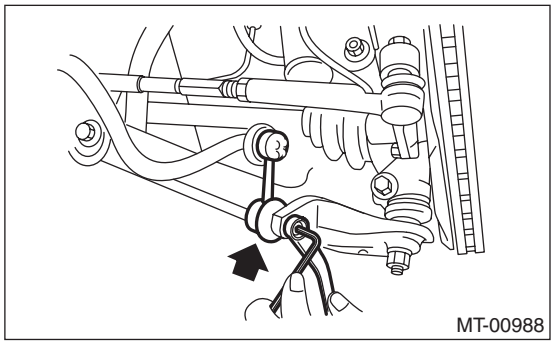
Tightening torque:
49 N·m (5.0 kgf-m, 36 ft-lb)



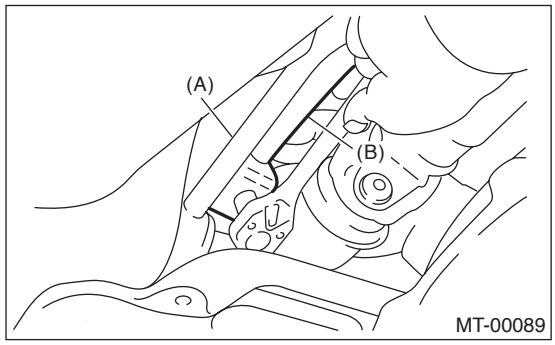
(A) Front arm
(B) Ball joint
(C) Stabilizer link

14) Install the stabilizer link into front arm.

Tightening torque:
45 N·m (4.6 kgf-m, 33.2 ft-lb)



15) Install the gear shift rod and the stay.
(1) Install the gear shift rod into transmission.



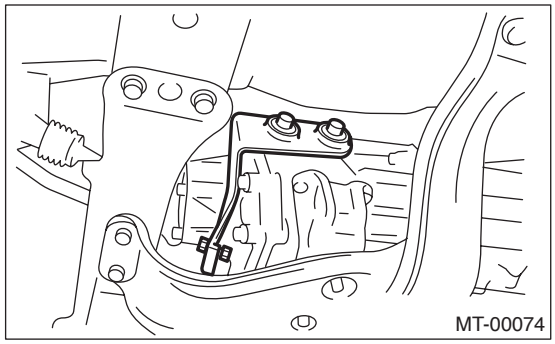
(A) Stay
(B) Rod

(2) Install the stay onto transmission.

16) Install the propeller shaft. <Ref. to DS-11, INSTALLATION, Propeller Shaft.>

17) Install the heat shield cover. (if equipped)

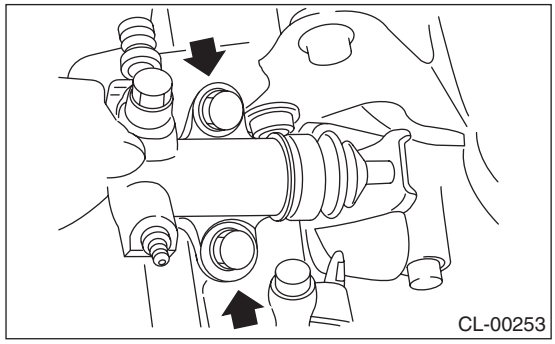
18) Install the hanger bracket on the right side of transmission.



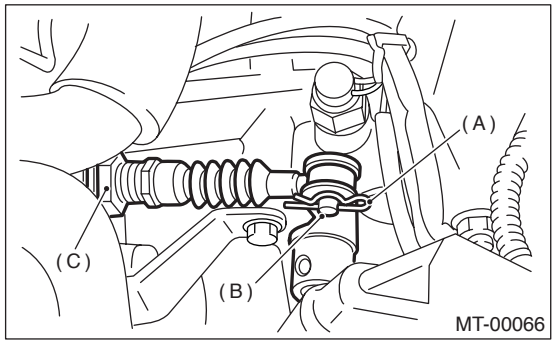
19) Install the front, center and rear exhaust pipe, and muffler. <Ref. to EX(H4SO 2.0)-8, INSTALLATION, Front Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-11, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-13, INSTALLATION, Muffler.>

20) Install the operating cylinder.

Tightening torque:
37 N·m (3.8 kgf-m, 27.5 ft-lb)



21) Install the drive select cable on transmission side. (Dual-range model)



(A) Snap pin
(B) Clevis pin
(C) Drive select cable

22) Connect the following connectors:
(1) Transmission ground cable

Tightening torque:
13 N·m (1.3 kgf-m, 9.4 ft-lb)

(2) Neutral position switch connector
(3) Back-up light switch connector
(4) High-low switch connector (Dual-range model)

23) Fill transmission gear oil through the transmission level gauge hole.
24) Install the air intake chamber stay.

Tightening torque:
16 N·m (1.6 kgf-m, 11.6 ft-lb)

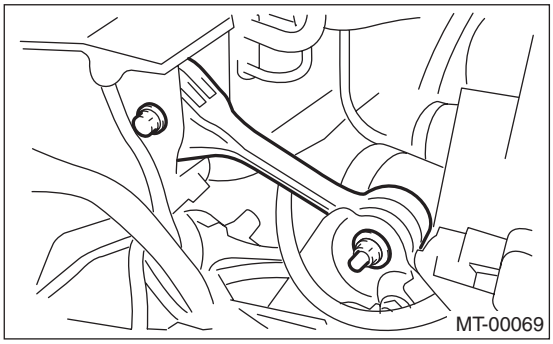
25) Install the air intake chamber and air cleaner case. <Ref. to IN(H4SO 2.0)-7, INSTALLATION, Air Cleaner Case.> <Ref. to IN(H4SO 2.0)-8, INSTALLATION, Air Intake Chamber.>
26) Connect the battery ground cable to battery.
27) Take off the vehicle from lift arms.

4. Transmission Mounting System

A: REMOVAL

1. PITCHING STOPPER

1) Disconnect the ground cable from battery.
2) Remove the air intake chamber. <Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.>
3) Remove the air cleaner case. <Ref. to IN(H4SO 2.0)-6, REMOVAL, Air Cleaner Case.>
4) Remove the pitching stopper.

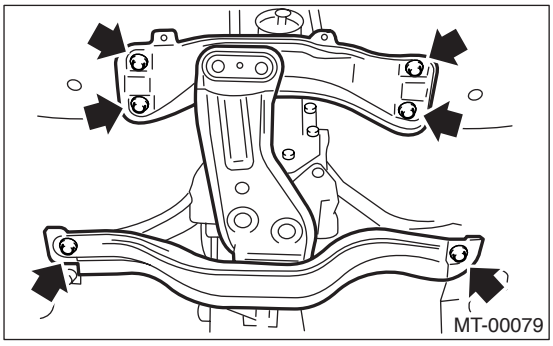


2. CROSSMEMBER AND CUSHION RUBBER

1) Disconnect the ground cable from battery.
2) Jack-up the vehicle and support it with rigid racks.
3) Remove the front, center and rear exhaust pipe, and muffler. <Ref. to EX(H4SO 2.0)-7, REMOVAL, Front Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-11, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-13, REMOVAL, Muffler.>
4) Remove the heat shield cover. (If equipped)
5) Set the transmission jack under transmission body.

CAUTION:
Always support the transmission case with a transmission jack.

6) Remove the rear crossmember.



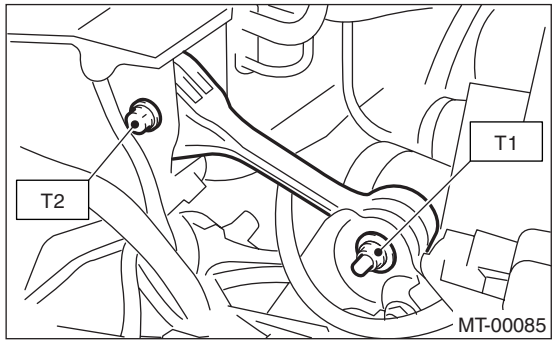
7) Remove the rear cushion rubber.

B: INSTALLATION

1. PITCHING STOPPER

1) Install the pitching stopper.

Tightening torque:
T1: 50 N·m (5.1 kgf-m, 37 ft-lb)
T2: 58 N·m (5.9 kgf-m, 43 ft-lb)



2) Install the air intake chamber and cleaner case. <Ref. to IN(H4SO 2.0)-7, INSTALLATION, Air Cleaner Case.> <Ref. to IN(H4SO 2.0)-8, INSTALLATION, Air Intake Chamber.>
3) Connect the battery ground cable to battery.

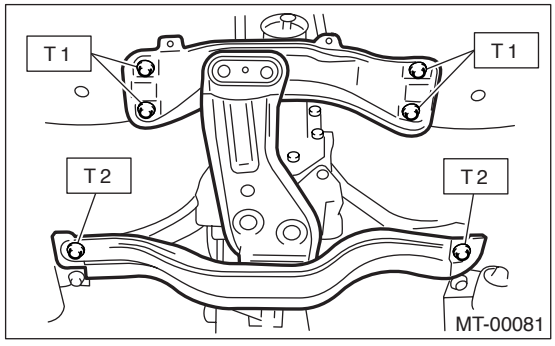
2. CROSSMEMBER AND CUSHION RUBBER

1) Install the rear cushion rubber.

Tightening torque:
35 N·m (3.6 kgf-m, 26 ft-lb)

2) Install the rear crossmember.

Tightening torque:
T1: 70 N·m (7.1 kgf-m, 51 ft-lb)
T2: 140 N·m (14.3 kgf-m, 103 ft-lb)



3) Remove the transmission jack.
4) Install the heat shield cover. (If equipped)
5) Install the front, center and rear exhaust pipe, and muffler. <Ref. to EX(H4SO 2.0)-8, INSTALLATION, Front Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-11, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-13, INSTALLATION, Muffler.>
6) Lower the vehicle.
7) Connect the battery ground cable to battery.

C: INSPECTION

Perform the following inspection procedures and repair or replace defective parts.

1. PITCHING STOPPER

Check pitching stopper for bends or damage. Check that the rubber is not stiff, cracked, or otherwise damaged.

2. CROSSMEMBER AND CUSHION RUBBER

Check crossmember for bends or damage. Check that the cushion rubber is not stiff, cracked, or otherwise damaged.

5. Oil Seal

A: INSPECTION

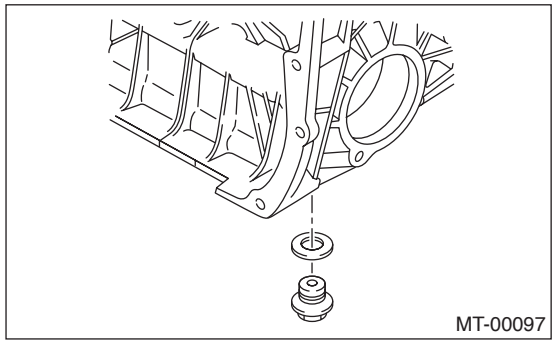
Check leakage of gear oil from the oil seal part. If there is oil leakage, replace with a new oil seal.

B: REPLACEMENT

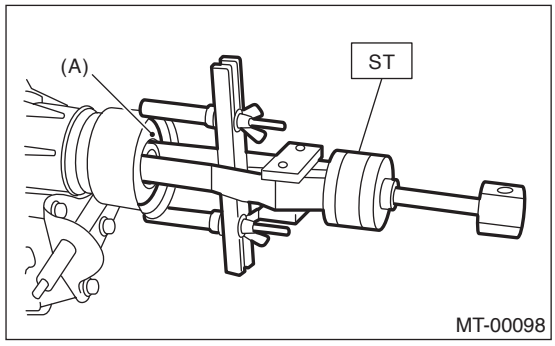
1) Clean the transmission exterior.
2) Drain gear oil completely.

NOTE:
Tighten the drain plug after draining gear oil.

Tightening torque:
70 N·m (7.1 kgf-m, 51 ft-lb)

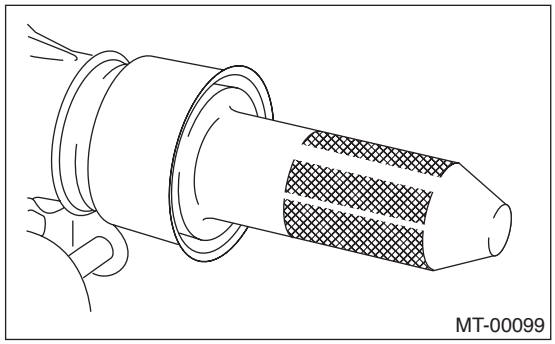


3) Remove the rear exhaust pipe and muffler. <Ref. to EX(H4SO 2.0)-11, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-13, REMOVAL, Muffler.>
4) Remove the heat shield cover. (If equipped)
5) Remove the propeller shaft. <Ref. to DS-10, REMOVAL, Propeller Shaft.>
6) Using the ST, remove the oil seal.
ST 398527700 PULLER ASSY



(A) Oil seal

7) Using the ST, install the oil seal.
ST 498057300 INSTALLER



8) Install the propeller shaft. <Ref. to DS-11, INSTALLATION, Propeller Shaft.>
9) Install the heat shield cover. (If equipped)
10) Install the rear exhaust pipe and muffler. <Ref. to EX(H4SO 2.0)-11, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-13, INSTALLATION, Muffler.>
11) Pour gear oil and check the oil level. <Ref. to 5MT-30, REPLACEMENT, Transmission Gear Oil.>

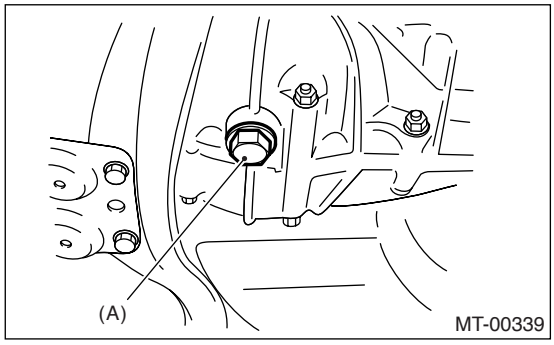
6. Differential Side Retainer Oil Seal

A: INSPECTION

Check leakage of gear oil from the differential side retainer oil seal part. If there is oil leakage, replace with a new oil seal.

B: REPLACEMENT

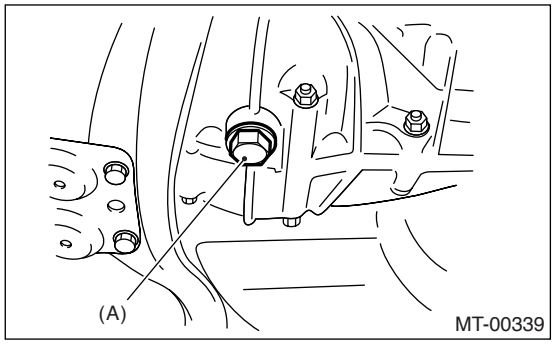
1) Lift-up the vehicle.
2) Drain gear oil from differential oil drain plug.



(A) Differential oil drain plug

3) Replace with a new gasket and tighten the differential oil drain plug.

Tightening torque:
70 N·m (7.1 kgf-m, 51 ft-lb)



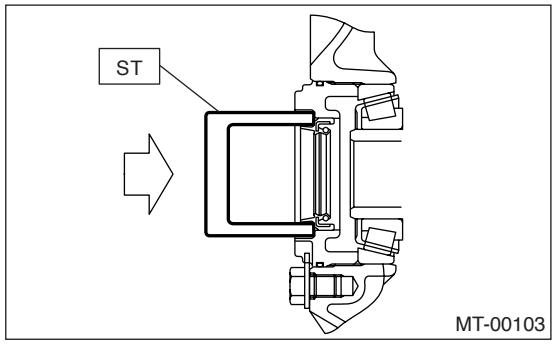
(A) Differential oil drain plug

4) Remove the front and center exhaust pipe.
<Ref. to EX(H4SO 2.0)-7, REMOVAL, Front Exhaust Pipe.>
5) Separate the front drive shaft from transmission.
<Ref. to DS-22, REMOVAL, Front Drive Shaft.>
6) Remove the differential side retainer oil seal.

NOTE:
• Be sure to replace the differential side retainer oil seal after the procedure of removing the front drive shaft from transmission.
• When prying to remove the part using flat tip screwdriver, be careful not to scratch the differential side retainer. ST 398527700 puller assembly may be used for this operation procedure.

7) Using the ST, install the differential side retainer by slightly tapping with a plastic hammer.
ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

NOTE:
Apply oil to the oil seal lips.



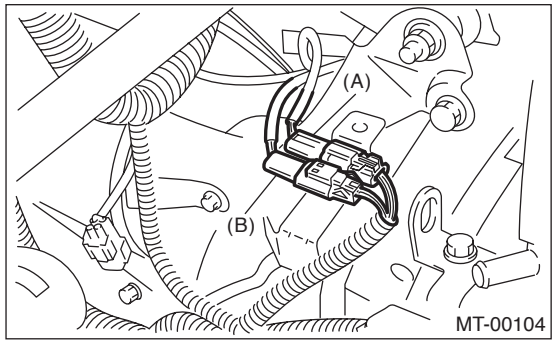
8) Install the front drive shaft. <Ref. to DS-22, INSTALLATION, Front Drive Shaft.>
ST 28399SA010 FRONT DRIVE SHAFT OIL SEAL PROTECTOR
9) Install the front and center exhaust pipe.
<Ref. to EX(H4SO 2.0)-8, INSTALLATION, Front Exhaust Pipe.>
10) Lower the vehicle.
11) Pour gear oil through the gauge hole. <Ref. to 5MT-30, REPLACEMENT, Transmission Gear Oil.>

7. Switches and Harness

A: REMOVAL

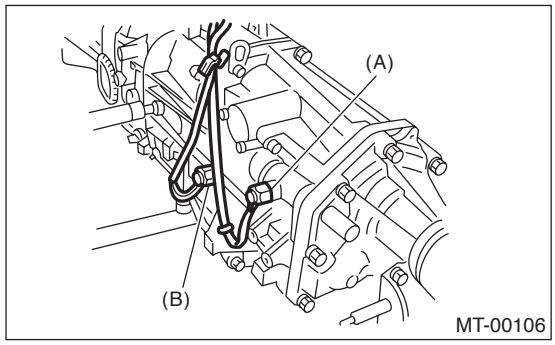
1. BACK-UP LIGHT SWITCH AND NEUTRAL POSITION SWITCH

1) Disconnect the ground cable from battery.
2) Remove the air intake chamber and cleaner case. <Ref. to IN(H4SO 2.0)-6, REMOVAL, Air Cleaner Case.> <Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.>
3) Disconnect the connectors of back-up light switch and neutral position switch.



(A) Neutral position switch connector (Brown)
(B) Back-up light switch connector (Gray)

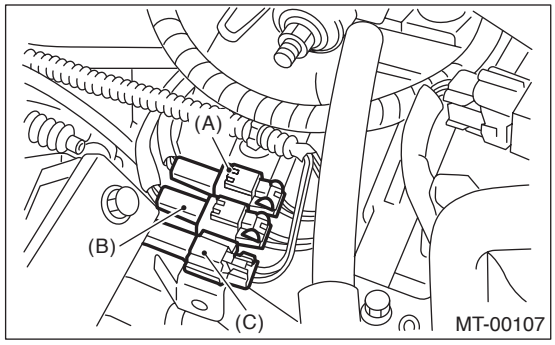
4) Lift-up the vehicle.
5) Remove the back-up light switch and neutral position switch with harness.



(A) Neutral position switch (Brown)
(B) Back-up light switch (Gray)

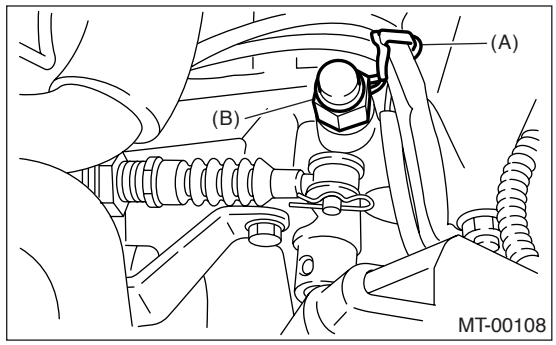
2. HIGH-LOW SWITCH (DUAL-RANGE MODEL)

1) Disconnect the ground cable from battery.
2) Remove the air intake chamber and cleaner case. <Ref. to IN(H4SO 2.0)-6, REMOVAL, Air Cleaner Case.> <Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.>
3) Disconnect the connector of high-low switch.



(A) Neutral switch (Brown)
(B) Back-up light switch (Gray)
(C) High-low switch (Black)

4) Remove the high-low switch cable from clamp.
5) Remove the high-low switch.



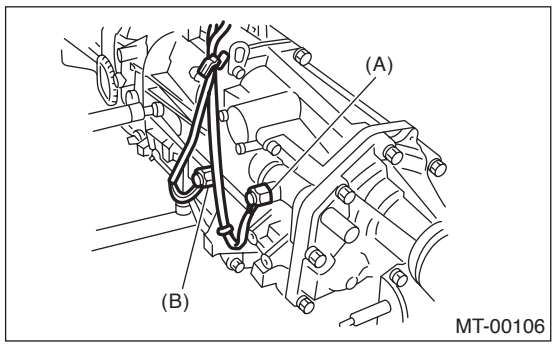
(A) Clamp
(B) High-low switch

B: INSTALLATION

1. BACK-UP LIGHT SWITCH AND NEUTRAL POSITION SWITCH

1) Install the back-up light switch and neutral position switch with harness.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



(A) Neutral position switch
(B) Back-up light switch

2) Connect the connectors of back-up light switch and neutral position switch.
3) Install the air intake chamber and cleaner case. <Ref. to IN(H4SO 2.0)-7, INSTALLATION, Air Cleaner Case.> <Ref. to IN(H4SO 2.0)-8, INSTALLATION, Air Intake Chamber.>
4) Connect the battery ground cable to battery.

2. HIGH-LOW SWITCH (DUAL-RANGE MODEL)

1) Install the high-low switch.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

2) Install the high-low switch cable to clamp.
3) Connect the connector of high-low switch.
4) Install the air intake chamber and cleaner case. <Ref. to IN(H4SO 2.0)-7, INSTALLATION, Air Cleaner Case.> <Ref. to IN(H4SO 2.0)-8, INSTALLATION, Air Intake Chamber.>
5) Connect the battery ground cable to battery.

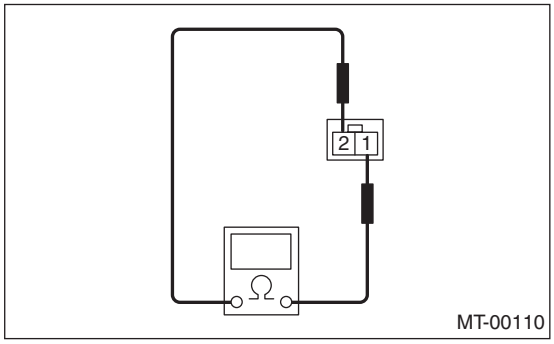
C: INSPECTION

1. BACK-UP LIGHT SWITCH

Inspect the back-up light switch. <Ref. to LI-7, INSPECTION, Back-up Light System.>

2. NEUTRAL POSITION SWITCH

1) Turn the ignition switch to OFF.
2) Disconnect the connector of neutral position switch.
3) Measure the resistance between neutral position switch terminals.



Gear shift position	Terminal No.	Specified resistance
Neutral position	1 and 2	More than 1 MΩ
Other positions		Less than 1 Ω

4) Replace the faulty parts.

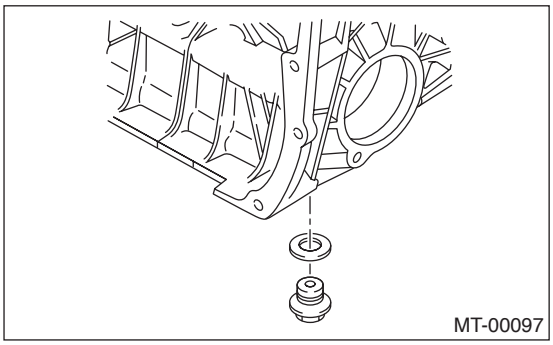
8. Preparation for Overhaul

A: PROCEDURE

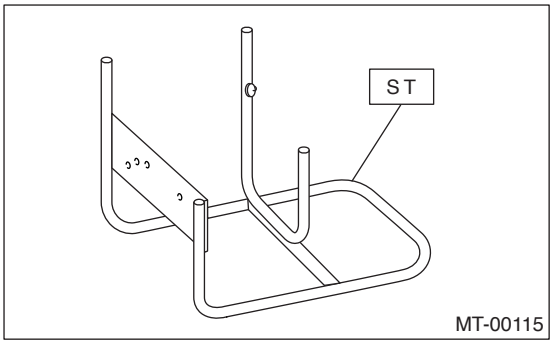
1) Clean oil, grease, dirt and dust from transmission.
2) Remove the drain plug to drain oil. Tighten the engine oil drain plug after draining.

NOTE:
Use a new gasket.

Tightening torque:
70 N·m (7.1 kgf-m, 51 ft-lb)



3) Attach the transmission to ST.
ST 499937100 TRANSMISSION STAND

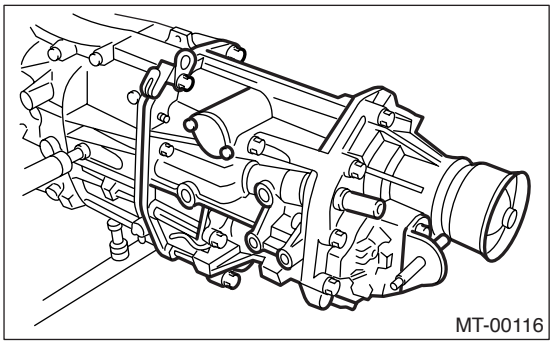


4) Rotating parts should be coated with oil prior to assembly.
5) All disassembled parts, if to be reused, should be reinstalled in the original positions and directions.
6) Always use new ones for gaskets, lock washers and lock nut.
7) Liquid gasket should be used where specified to prevent leakage.

9. Transfer Case and Extension Case Assembly

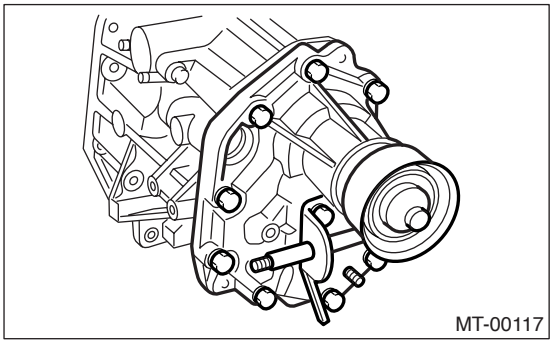
A: REMOVAL

1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>
2) Remove the back-up light switch and neutral position switch. <Ref. to 5MT-41, REMOVAL, Switches and Harness.>
3) Remove the transfer case with extension case assembly.



MT-00116

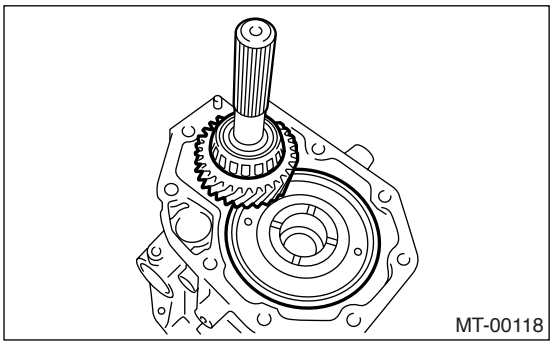
4) Remove the shifter arm.
5) Remove the extension case assembly.



MT-00117

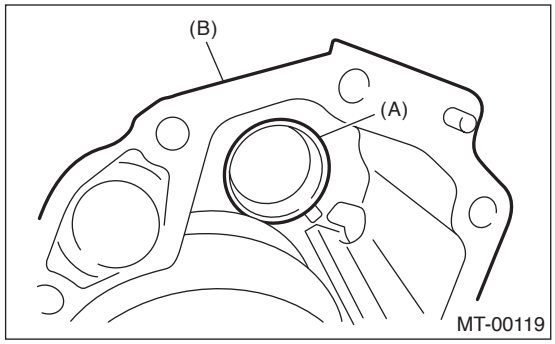
B: INSTALLATION

1) Install the center differential and transfer driven gear into transfer case.



MT-00118

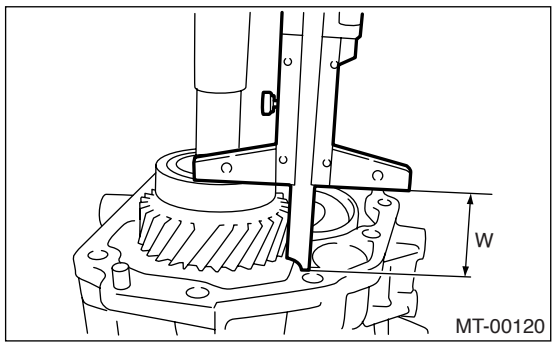
2) Remove the bearing outer race from extension case.



MT-00119

(A) Bearing outer race
(B) Extension case

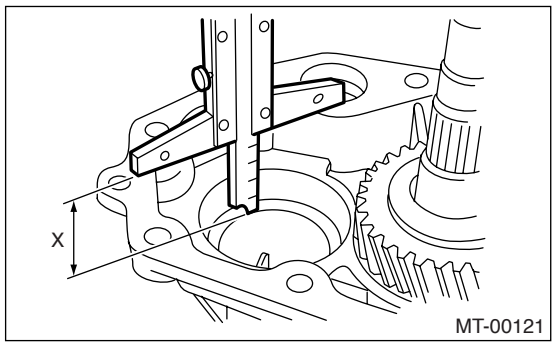
3) While pressing the bearing outer race horizontally, turn the driven shaft ten rotations.
4) Measure the height “W” between transfer case and taper roller bearing on the transfer driven gear.



MT-00120

5) Measure the depth “X” on bearing insertion part of extension case.

NOTE:
Measure with bearing outer race and thrust washer removed.



MT-00121

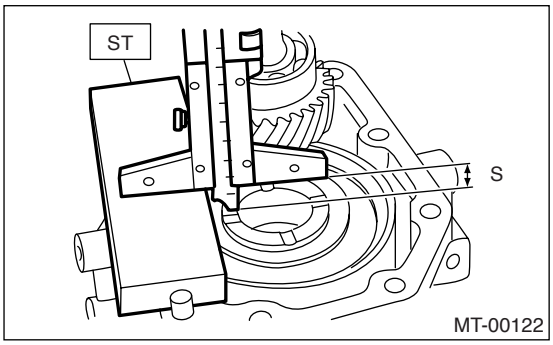
6) Calculate the tight “t” using following equation.
t = X − W + 0.2 to 0.3 mm (0.008 to 0.012 in)
7) Select the washer of nearest value in the following table:

Standard preload between thrust washer and taper roller bearing:
0.2 — 0.3 mm (0.008 — 0.012 in)

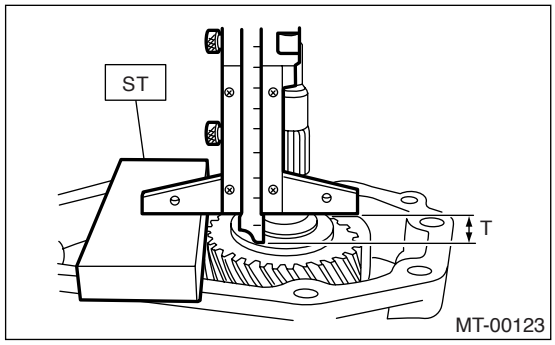
NOTE:
Be sure that the preload is within standard value.

Thrust washer (50 × 61 × t)	
Part Number	Thickness mm (in)
803050060	0.50 (0.0197)
803050061	0.55 (0.0217)
803050062	0.60 (0.0236)
803050063	0.65 (0.0256)
803050064	0.70 (0.0276)
803050065	0.75 (0.0295)
803050066	0.80 (0.0315)
803050067	0.85 (0.0335)
803050068	0.90 (0.0354)
803050069	0.95 (0.0374)
803050070	1.00 (0.0394)
803050071	1.05 (0.0413)
803050072	1.10 (0.0433)
803050073	1.15 (0.0453)
803050074	1.20 (0.0472)
803050075	1.25 (0.0492)
803050076	1.30 (0.0512)
803050077	1.35 (0.0531)
803050078	1.40 (0.0551)
803050079	1.45 (0.0571)

8) Fit the thrust washers on transfer drive shaft.
9) Install the bearing outer race into extension case.
10) Measure the depth “S” between transfer case and center differential.
ST 398643600 GAUGE



11) Measure the height “T” between extension case and transfer drive gear.
ST 398643600 GAUGE



12) Calculate the thrust washer “U” using following equation.
U = {15 mm (1.18 in) – T} – {S – 15 mm (1.18 in)} – 0.15 to 0.35 mm (0.0059 to 0.0138 in)

U mm (in)	Thickness of transfer drive gear thrust washer
T mm (in)	Height from end of ST to transfer drive gear
S mm (in)	Depth from end of transmission case to the end of ST
0.15 — 0.35 mm (0.0059 — 0.0138 in)	Standard clearance between thrust washer and transfer drive gear.
15 mm (1.18 in)	Thickness of ST

13) Select a suitable washer in the following table:

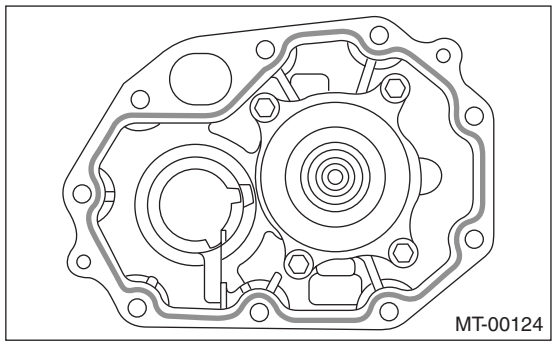
Standard clearance:
0.15 — 0.35 mm (0.0059 — 0.0138 in)

Thrust washer	
Part Number	Thickness mm (in)
803036050	0.9 (0.035)
803036054	1.0 (0.039)
803036051	1.1 (0.043)
803036055	1.2 (0.047)
803036052	1.3 (0.051)
803036056	1.4 (0.055)
803036053	1.5 (0.059)
803036057	1.6 (0.063)
803036058	1.7 (0.067)

14) Fit the thrust washer on center differential.

15) Apply proper amount of liquid gasket to the transfer case mating surface.

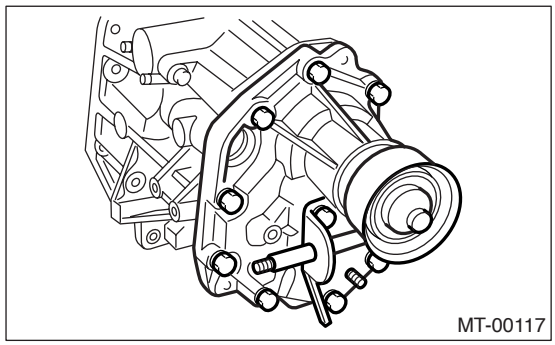
Liquid gasket
THREE BOND 1215 (Part No. 004403007) or equivalent



MT-00124

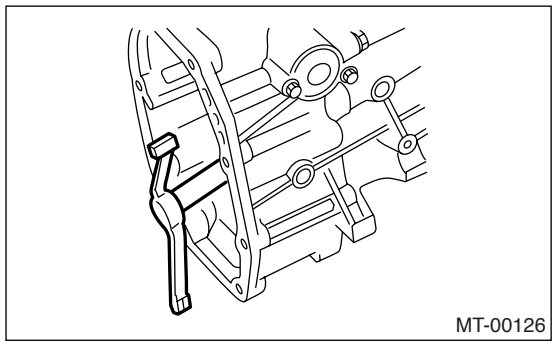
16) Install the extension assembly into transfer case.

Tightening torque:
40 N·m (4.1 kgf-m, 29.7 ft-lb)



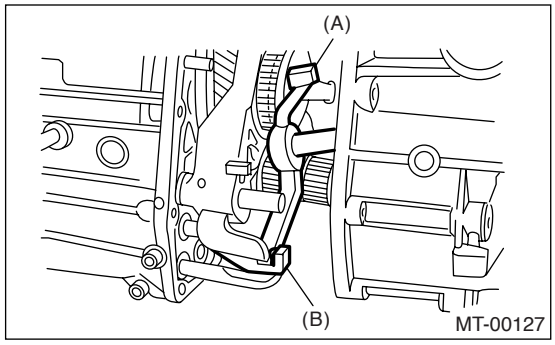
MT-00117

17) Install the shifter arm to transfer case.



MT-00126

18) Hang the shifter arm on 3rd-4th fork rod.

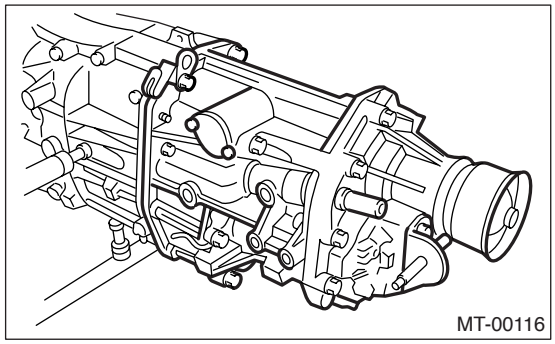


MT-00127

(A) Shifter arm
(B) 3rd-4th fork rod

19) Install the transfer case with extension case assembly to transmission case.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

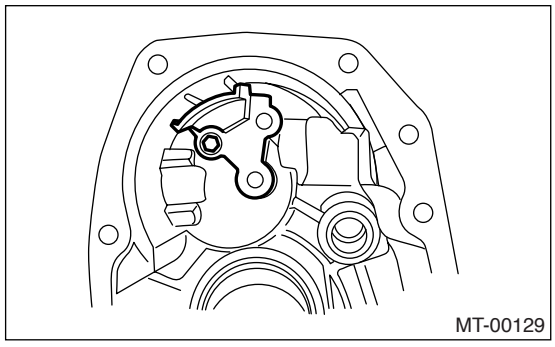


MT-00116

C: DISASSEMBLY

1. TRANSFER CASE

1) Remove the reverse check assembly. <Ref. to 5MT-53, REMOVAL, Reverse Check Sleeve.>
2) Remove the oil guide.

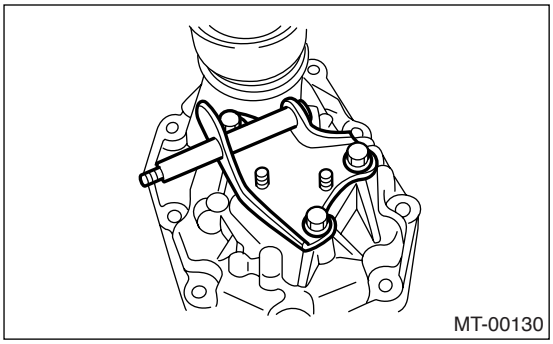


MT-00129

2. EXTENSION CASE

1) Remove the transfer drive gear assembly. <Ref. to 5MT-48, REMOVAL, Transfer Drive Gear.>

2) Remove the shift bracket.



MT-00130

3) Remove the oil seal from extension case. <Ref. to 5MT-39, Oil Seal.>

D: ASSEMBLY

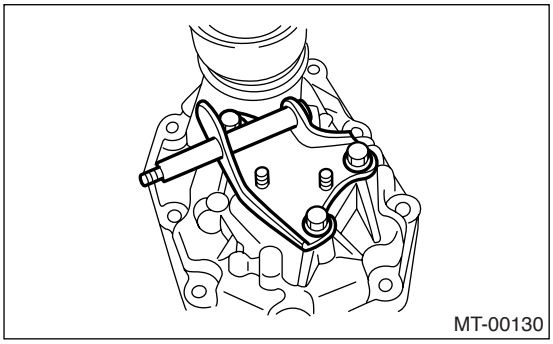
1. EXTENSION CASE

1) Using the ST, install the oil seal to extension case. <Ref. to 5MT-39, Oil Seal.>

NOTE:
Use a new oil seal.

2) Install the shift bracket to extension case.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



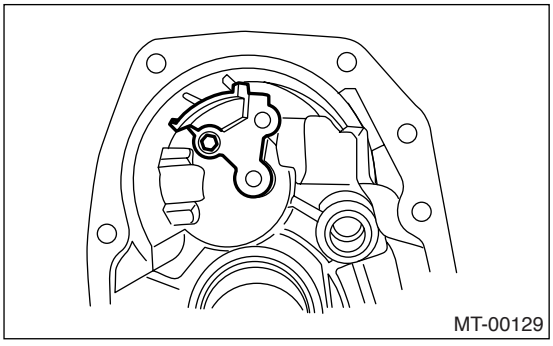
MT-00130

3) Install the transfer drive gear to extension case. <Ref. to 5MT-48, INSTALLATION, Transfer Drive Gear.>

2. TRANSFER CASE

1) Install the oil guide to transfer case.

Tightening torque:
6.4 N·m (0.65 kgf-m, 4.7 ft-lb)



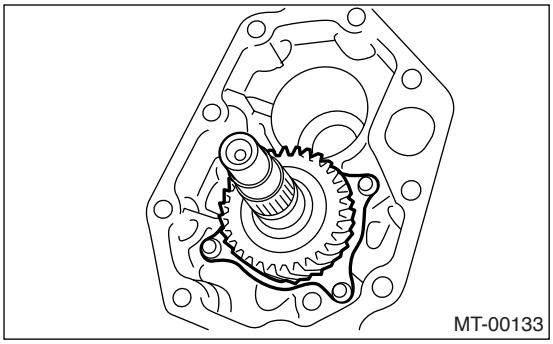
MT-00129

2) Install the reverse check sleeve assembly to transfer case. <Ref. to 5MT-53, INSTALLATION, Reverse Check Sleeve.>

10.Transfer Drive Gear

A: REMOVAL

1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>
2) Remove the back-up light switch and neutral position switch. <Ref. to 5MT-41, REMOVAL, Switches and Harness.>
3) Remove the transfer case with extension case assembly. <Ref. to 5MT-44, REMOVAL, Transfer Case and Extension Case Assembly.>
4) Remove the extension case assembly.
5) Remove the transfer driven gear.
6) Remove the transfer drive gear.

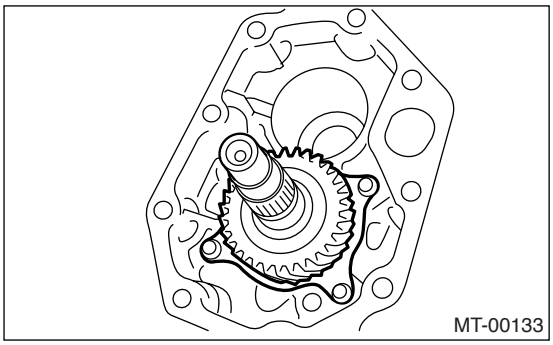


MT-00133

B: INSTALLATION

1) Install the transfer drive gear.

Tightening torque:
26 N·m (2.7 kgf-m, 20 ft-lb)

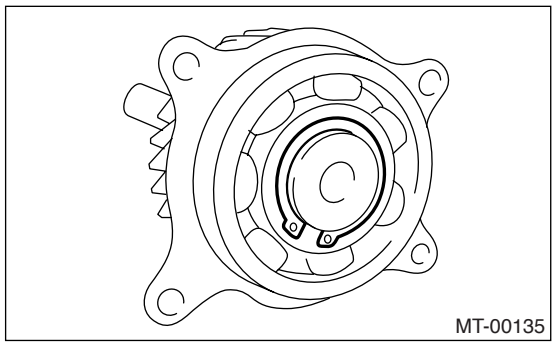


MT-00133

2) Install the transfer driven gear.
3) Install the extension case assembly.
4) Install the transfer case and extension case assembly. <Ref. to 5MT-44, INSTALLATION, Transfer Case and Extension Case Assembly.>
5) Install the back-up light switch and neutral position switch. <Ref. to 5MT-41, INSTALLATION, Switches and Harness.>
6) Install the manual transmission assembly into vehicle. <Ref. to 5MT-33, INSTALLATION, Manual Transmission Assembly.>

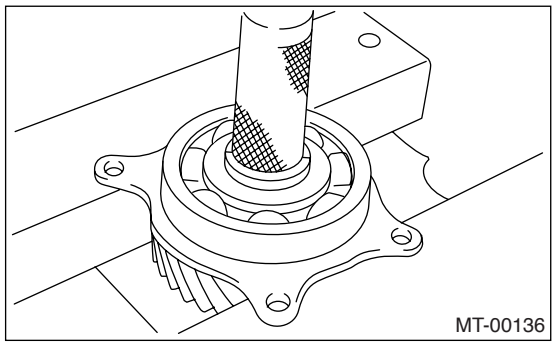
C: DISASSEMBLY

1) Remove the snap ring.



MT-00135

2) Remove the ball bearing.

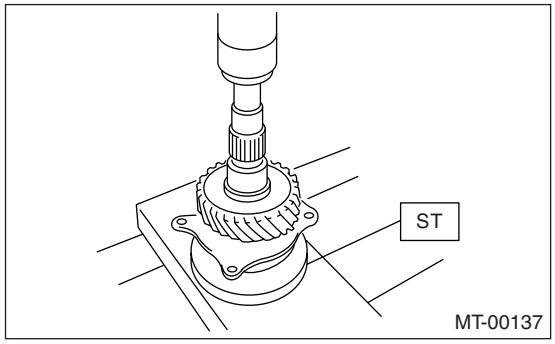


MT-00136

D: ASSEMBLY

1) Set the ST applying to the inner race of bearing to install the drive shaft.
ST 398177700 INSTALLER

NOTE:
Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).



MT-00137

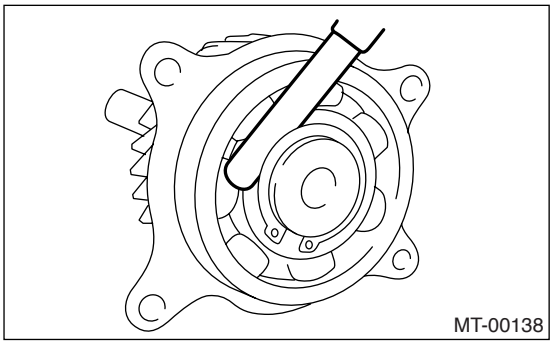
2) Install the snap ring on transfer drive shaft.
3) Inspect the clearance between snap ring and ball bearing. <Ref. to 5MT-48, INSPECTION, Transfer Drive Gear.>

E: INSPECTION

1) Bearings
Replace the bearing in following cases:
- In case of broken or rusty bearings
- In case of worn or damaged bearings
- When the bearings fail to turn smoothly or emit noise in rotation after gear oil lubrication.

2) Drive gear
Replace the drive gear when their tooth surface and shaft are excessively broken or damaged.
3) Measure the clearance between snap ring and inner race of ball bearing with a thickness gauge.

Clearance:
0.01 — 0.15 mm (0.0004 — 0.0059 in)



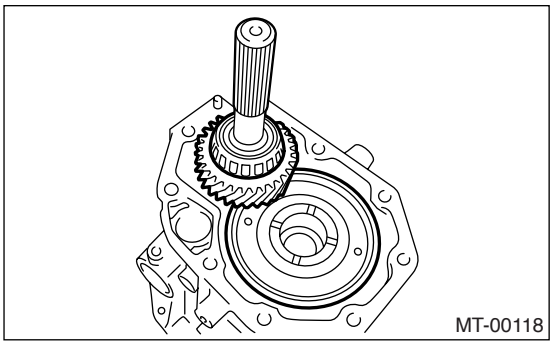
If the measurement is not within specification, select a suitable snap ring and replace it.

Snap ring (Outer-30)	
Part Number	Thickness mm (in)
805030041	1.53 (0.0602)
805030042	1.65 (0.0650)
805030043	1.77 (0.0697)

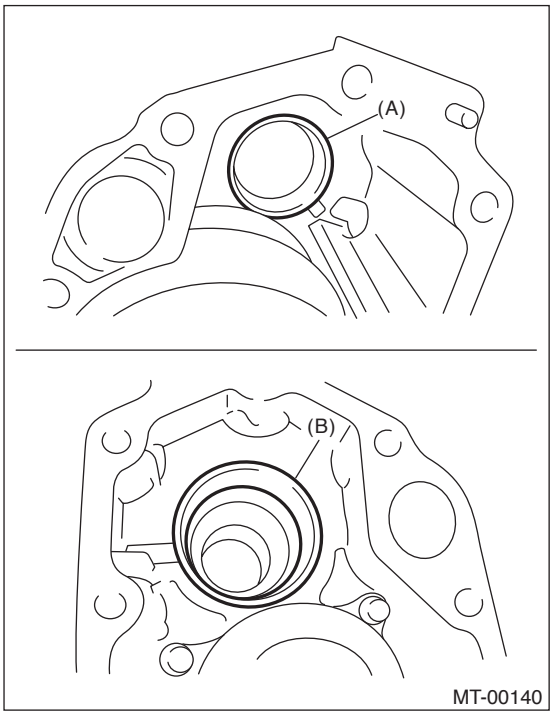
11.Transfer Driven Gear

A: REMOVAL

1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>
2) Remove the back-up light switch and neutral position switch. <Ref. to 5MT-41, REMOVAL, Switches and Harness.>
3) Remove the transfer case with extension case assembly. <Ref. to 5MT-44, REMOVAL, Transfer Case and Extension Case Assembly.>
4) Remove the extension case assembly.
5) Remove the transfer driven gear.



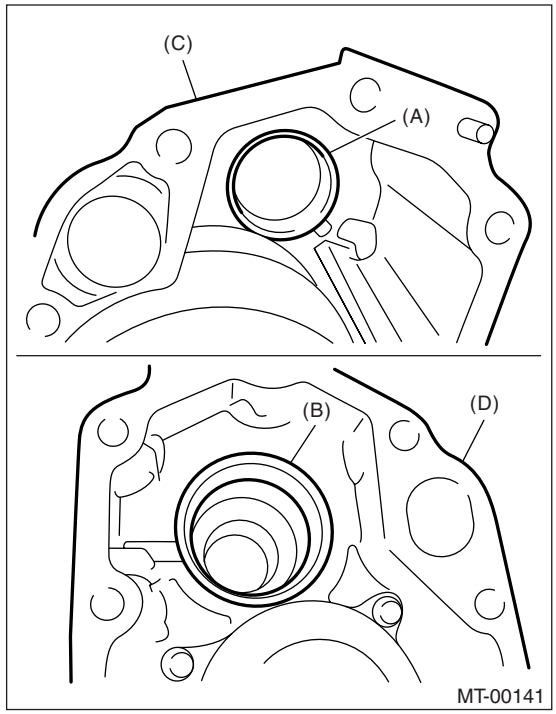
6) Remove the bearing outer races from the extension case and transfer case.



(A) Bearing outer race (Transfer case side)
(B) Bearing outer race (Extension case side)

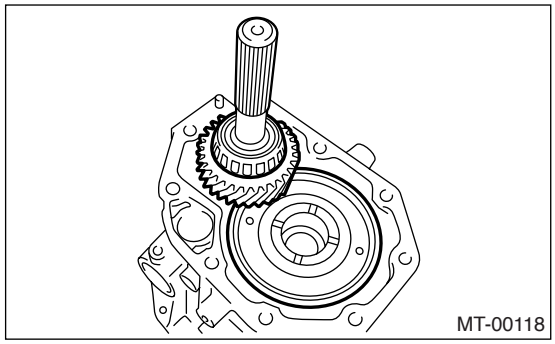
B: INSTALLATION

1) Install the bearing outer races to the extension case and transfer case.



(A) Bearing outer race
(B) Bearing outer race
(C) Transfer case
(D) Extension case

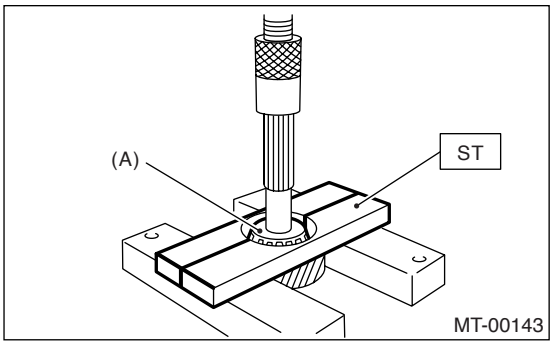
2) Install the transfer driven gear.



3) Install the transfer case and extension case assembly. <Ref. to 5MT-44, INSTALLATION, Transfer Case and Extension Case Assembly.>
4) Install the back-up light switch and neutral position switch. <Ref. to 5MT-41, INSTALLATION, Switches and Harness.>
5) Install the manual transmission assembly into vehicle. <Ref. to 5MT-33, INSTALLATION, Manual Transmission Assembly.>

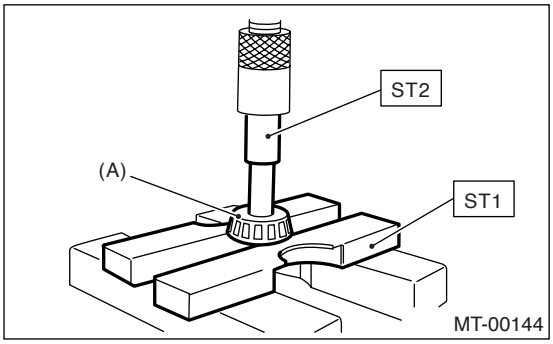
C: DISASSEMBLY

1) Using the ST, remove the roller bearing (extension case side).
ST 498077000 REMOVER



(A) Roller bearing

2) Using the ST1 and ST2, remove the roller bearing (transfer case side).
ST1 498077000 REMOVER
ST2 899864100 REMOVER

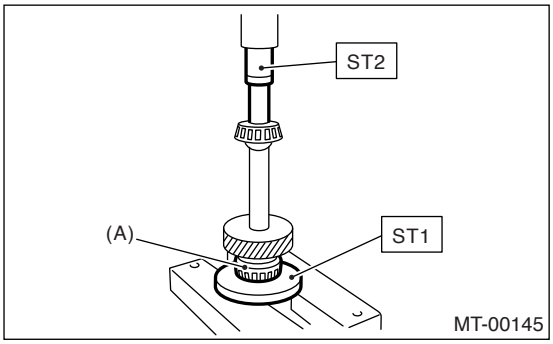


(A) Roller bearing

D: ASSEMBLY

1) Using the ST, install the roller bearing (extension case side).
ST1 398177700 INSTALLER
ST2 899864100 REMOVER

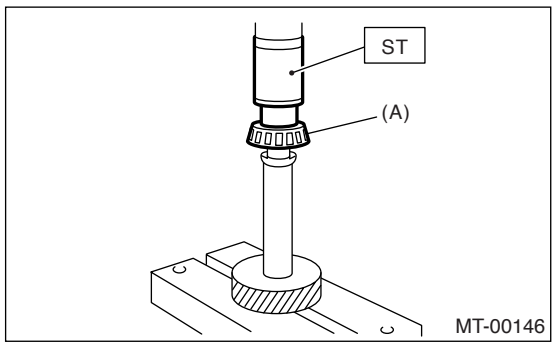
NOTE:
Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).



(A) Roller bearing

2) Using the ST, install the roller bearing (transfer case side).
ST 499757002 INSTALLER

NOTE:
Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).



(A) Roller bearing

E: INSPECTION

1) Bearings
Replace the bearing in following cases:
- In case of broken or rusty bearings
- In case of worn or damaged bearings
- When the bearings fail to turn smoothly or emit noise in rotation after gear oil lubrication.

2) Driven gear
Replace the drive gear when their tooth surface and shaft are excessively broken or damaged.

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

12.Center Differential

A: REMOVAL

1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>
2) Remove the transfer case with extension case assembly. <Ref. to 5MT-44, REMOVAL, Transfer Case and Extension Case Assembly.>
3) Remove the extension case assembly. <Ref. to 5MT-44, REMOVAL, Transfer Case and Extension Case Assembly.>
4) Remove the transfer driven gear. <Ref. to 5MT-50, REMOVAL, Transfer Driven Gear.>
5) Remove the center differential.

B: INSTALLATION

1) Install the center differential into transfer case.
2) Install the transfer driven gear. <Ref. to 5MT-50, INSTALLATION, Transfer Driven Gear.>
3) Install the extension case assembly. <Ref. to 5MT-44, INSTALLATION, Transfer Case and Extension Case Assembly.>
4) Install the transfer case with extension case assembly. <Ref. to 5MT-44, INSTALLATION, Transfer Case and Extension Case Assembly.>
5) Install the back-up light switch and neutral position switch. <Ref. to 5MT-41, INSTALLATION, Switches and Harness.>
6) Install the manual transmission assembly into vehicle. <Ref. to 5MT-33, INSTALLATION, Manual Transmission Assembly.>

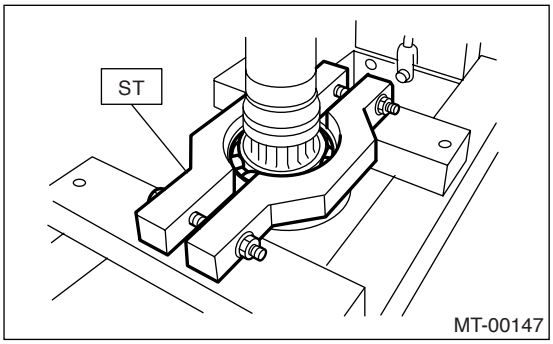
C: DISASSEMBLY

NOTE:
Center differential is a non-disassembled part which should not be disassembled.

Remove the ball bearing using ST.

NOTE:
Do not reuse the ball bearing.

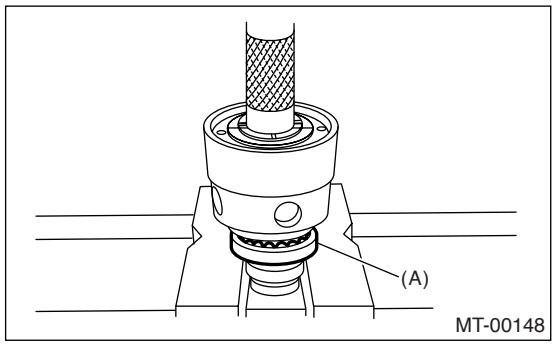
ST 498077300 CENTER DIFFERENTIAL BEARING REMOVER



D: ASSEMBLY

Install the ball bearing into center differential assembly.

NOTE:
Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).



(A) Ball bearing

E: INSPECTION

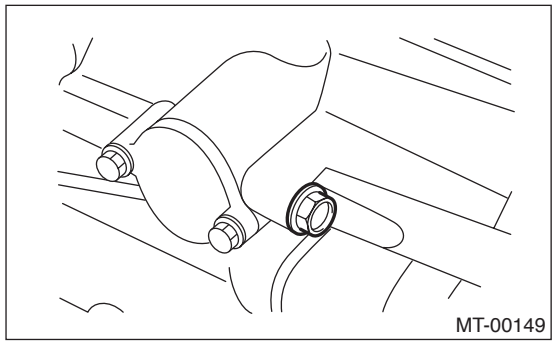
1) Bearings
Replace the bearing in following cases:
- In case of broken or rusty bearings
- In case of worn or damaged bearings
- When the bearings fail to turn smoothly or emit noise in rotation after gear oil lubrication.
- When bearings have other defects.

2) Center differential
Replace the center differential case assembly if worn or damaged.

13.Reverse Check Sleeve

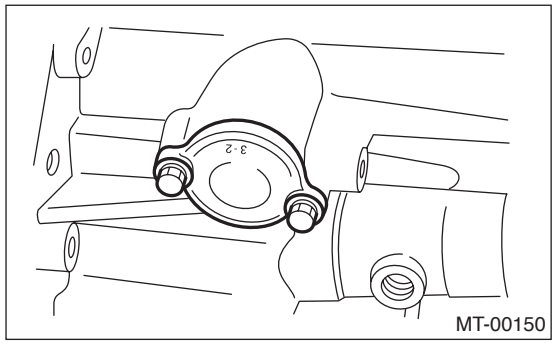
A: REMOVAL

1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>
2) Remove the transfer case with extension case assembly. <Ref. to 5MT-44, REMOVAL, Transfer Case and Extension Case Assembly.>
3) Remove the shifter arm.
4) Remove the plug, spring, washer and reverse check ball.



MT-00149

5) Remove the reverse check sleeve.

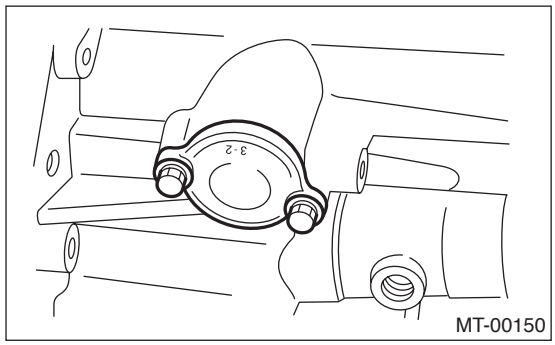


MT-00150

B: INSTALLATION

1) Install the reverse check sleeve.

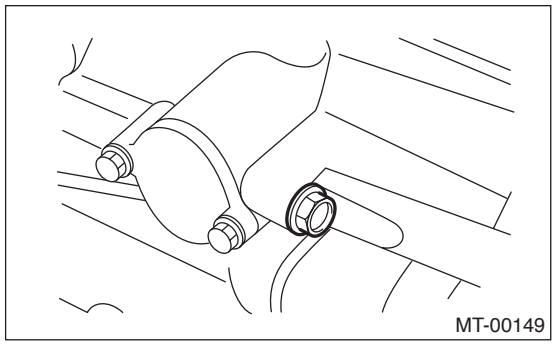
Tightening torque:
6.4 N·m (0.65 kgf-m, 4.7 ft-lb)



MT-00150

2) Install the ball, spring, washer and plug to transfer case.

Tightening torque:
10 N·m (1.0 kgf-m, 7.4 ft-lb)



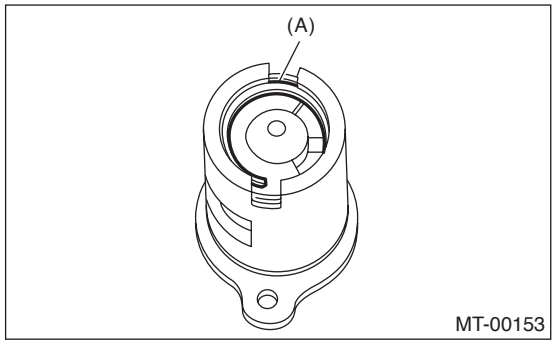
MT-00149

3) Install the shifter arm to transfer case assembly.
4) Install the transfer case with extension case assembly. <Ref. to 5MT-44, INSTALLATION, Transfer Case and Extension Case Assembly.>
5) Install the manual transmission assembly into vehicle. <Ref. to 5MT-33, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

1) Cover the reverse check sleeve with a rag, and remove the snap ring using a screwdriver.

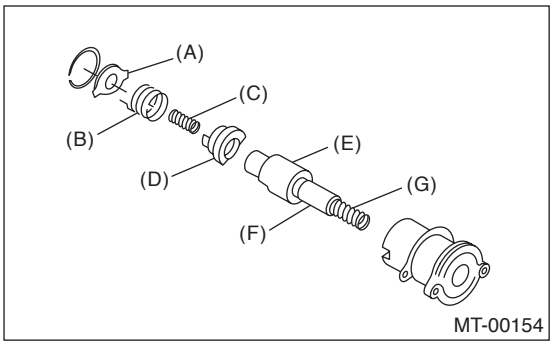
NOTE:
Replace the snap ring with a new one if it is deformed or reactive force is weakened.



MT-00153

(A) Snap ring

2) Remove the reverse check plate, reverse check spring, reverse check cam, return spring (5th-Rev), reverse accent shaft, return spring cap and return spring (1st-2nd).



(A) Reverse check plate
(B) Reverse check spring
(C) Return spring (5th-Rev)
(D) Reverse check cam
(E) Reverse accent shaft
(F) Return spring cap
(G) Return spring (1st-2nd)

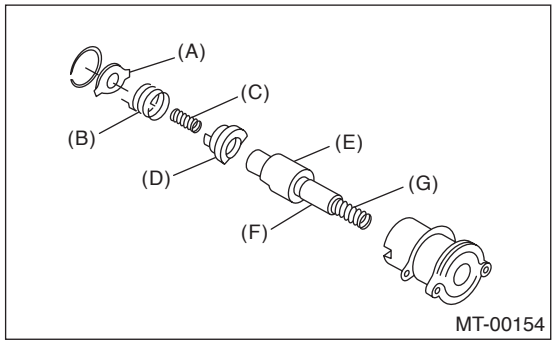
3) Remove the O-ring.

NOTE:
• Visually check the O-ring. Replace if defective.
• Be careful not to break adjustment shim placed between reverse check sleeve assembly and case.

D: ASSEMBLY

1) Install the return spring (1st-2nd), return spring cap, reverse accent shaft, check cam, return spring (5th-Rev.) and reverse check spring onto reverse check sleeve.

NOTE:
Be sure to position the bent section of reverse check spring in the groove in check cam.

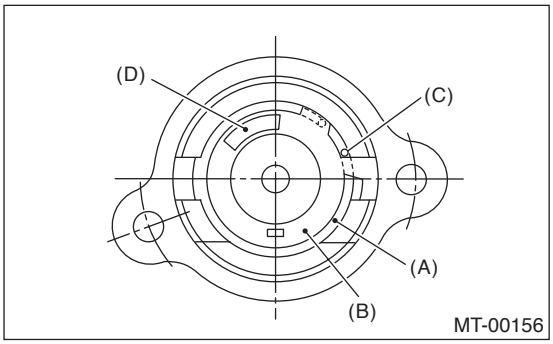


(A) Reverse check plate
(B) Reverse check spring
(C) Return spring (5th-Rev)
(D) Reverse check cam
(E) Reverse accent shaft
(F) Return spring cap
(G) Return spring (1st-2nd)

2) Hook the bent section of reverse check spring over reverse check plate.
3) Rotate the cam so that the protrusion of reverse check cam is at the opening in plate.
4) With cam held in that position, install the reverse check plate onto reverse check sleeve and hold with snap ring.
5) Position the O-ring in the groove in sleeve.

E: INSPECTION

• Make sure the cutout of reverse accent shaft is aligned with the opening in reverse check sleeve.
• Check the cam for smooth rotation by turning with hand.
• Make sure the cam and shaft move all the way toward plate and release.
If the cam does not return properly, replace the reverse check spring. If the shaft does not return, check for scratches on the inner surface of sleeve. If the sleeve is in good order, replace the spring.



(A) Snap ring
(B) Reverse check plate
(C) Checking spring
(D) Check cam

• Select a suitable reverse accent shaft and reverse check plate. <Ref. to 5MT-55, ADJUSTMENT, Reverse Check Sleeve.>

F: ADJUSTMENT

1. NEUTRAL POSITION ADJUSTMENT

1) Shift the gear into 3rd gear position.
2) Shifter arm turns lightly toward the 1st/2nd gear side but heavily toward the reverse gear side because of the function of return spring, until arm contacts the stopper.
3) Make adjustment so that the heavy stroke (reverse side) is a little more than the light stroke (1st/2nd side).
4) To adjust, remove the bolts holding reverse check sleeve assembly to the case, move the sleeve assembly outward, and place the adjustment shim between sleeve assembly and case to adjust the clearance.

CAUTION:
Be careful not to break O-ring when placing shim(s).

NOTE:
• When the shim is removed, the neutral position will move closer to reverse; when the shim is added, the neutral position will move closer to 1st gear.
• If the shims alone cannot adjust the clearance, replace the reverse accent shaft and re-adjust.

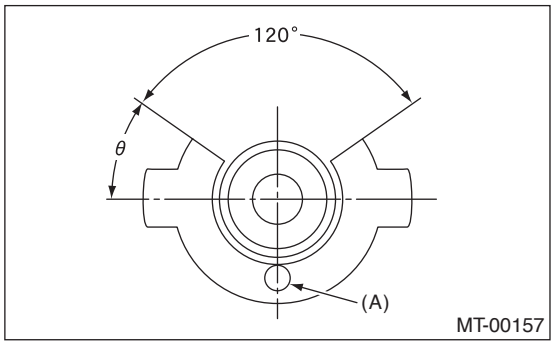
Adjusting shim	
Part Number	Thickness mm (in)
32190AA000	0.15 (0.0059)
32190AA010	0.30 (0.0118)

Reverse accent shaft		
Part No.	Mark	Remarks
32188AA090	3	Neutral position is closer to 1st.
32188AA100	0	Standard
32188AA110	1	Neutral position is closer to reverse gear.

2. REVERSE CHECK PLATE ADJUSTMENT

1) Shift the shifter arm to “5th” and then to reverse to see if reverse check mechanism operates properly.
2) Also check to see if the arm returns to neutral when released from the reverse position. If the arm does not return properly, replace the reverse check plate.

Reverse check plate			
Part Number	(A): No.	Angle θ	Remarks
32189AA000	0	28°	Arm stops closer to 5th gear.
32189AA010	1	31°	Arm stops closer to 5th gear.
32189AA020	2	34°	Arm stops in the center.
32189AA030	3	37°	Arm stops closer to reverse gear.
32189AA040	4	40°	Arm stops closer to reverse gear.

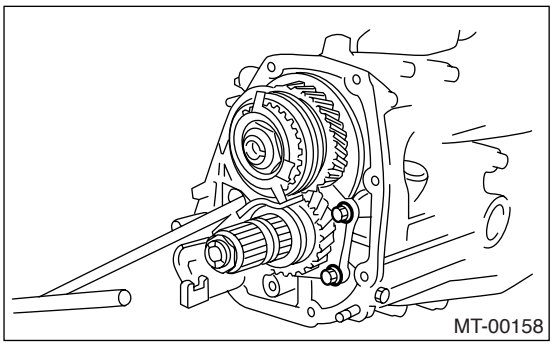


14.Transmission Case

A: REMOVAL

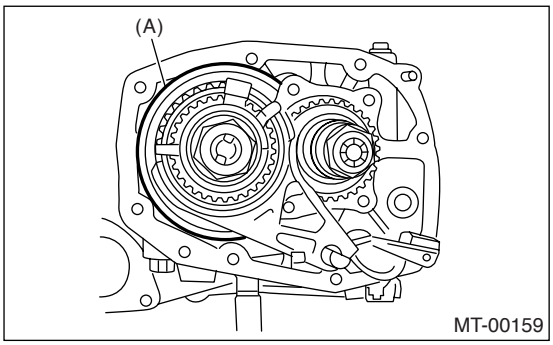
1. SINGLE-RANGE MODEL

1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>
2) Remove the clutch release lever. <Ref. to CL-18, REMOVAL, Release Bearing and Lever.>
3) Remove the transfer case with extension case assembly. <Ref. to 5MT-44, REMOVAL, Transfer Case and Extension Case Assembly.>
4) Remove the bearing mounting bolts.



MT-00158

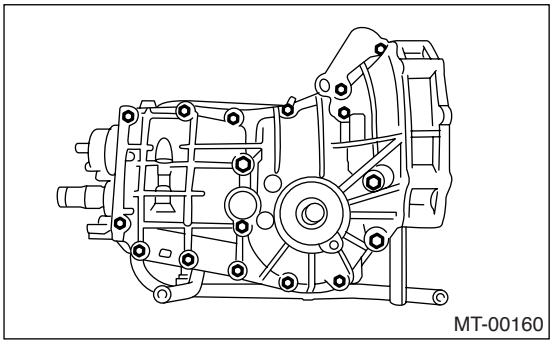
5) Remove the main shaft rear plate.



MT-00159

(A) Main shaft rear plate

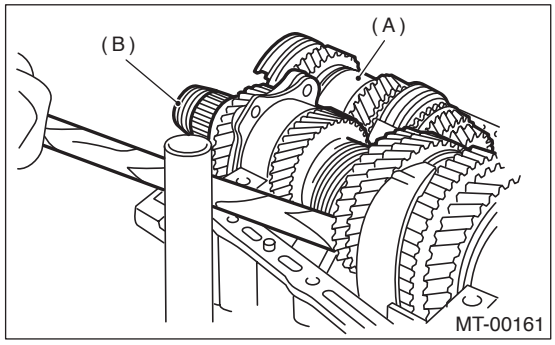
6) Separate the transmission case into the right and left cases by loosening coupling bolts and nuts.



MT-00160

7) Remove the drive pinion shaft assembly from the left side of transmission case.

NOTE:
Use a hammer handle, etc. to remove if too tight.

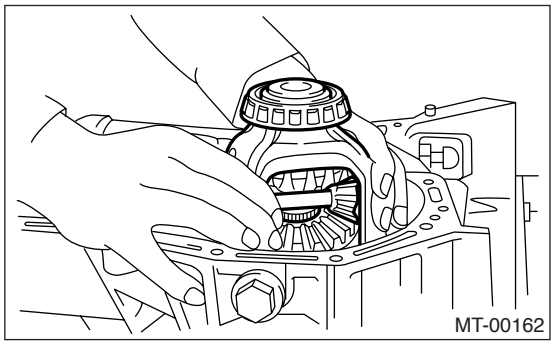


MT-00161

(A) Main shaft ASSY for single-range
(B) Drive pinion shaft ASSY

8) Remove the main shaft assembly for single-range.
9) Remove the differential assembly.

NOTE:
• Be careful not to confuse right and left roller bearing outer races.
• Be careful not to damage the oil seal of retainer.

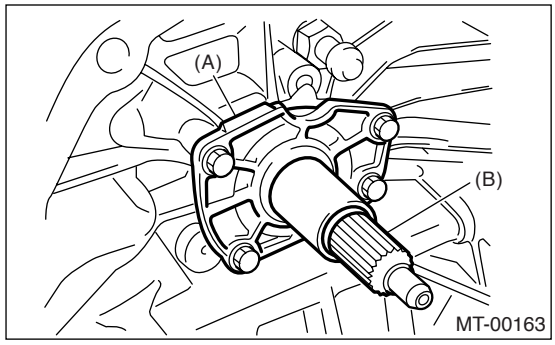


MT-00162

2. DUAL-RANGE MODEL

1) Remove the manual transmission assembly from vehicle. **<Ref. to 5MT-31,** REMOVAL, Manual Transmission Assembly.>
2) Remove the clutch release lever. <Ref. to CL-18, REMOVAL, Release Bearing and Lever.>
3) Remove the transfer case with extension case assembly. **<Ref. to 5MT-44,** REMOVAL, Transfer Case and Extension Case Assembly.>

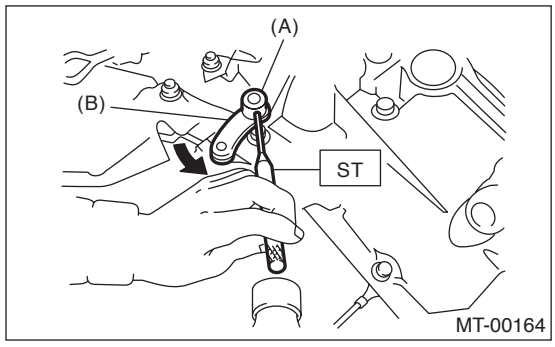
4) Remove the input shaft holder.



(A) Input shaft holder
(B) Input shaft

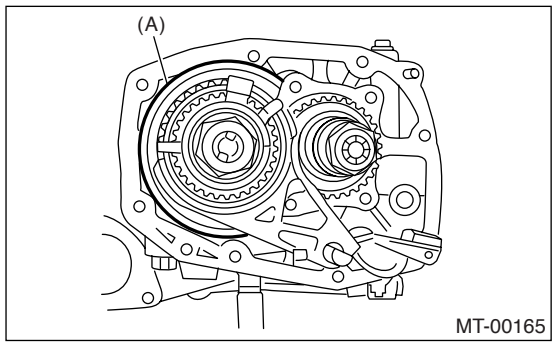
5) Remove the high-low switch. **<Ref. to 5MT-41,** REMOVAL, Switches and Harness.>
6) Using the ST, drive out the straight pin, and remove the high-low shifter lever.
ST 398791700 STRAIGHT PIN REMOVER 2

NOTE:
When driving out the straight pin, remove it in the direction that it does not hit against transmission case.



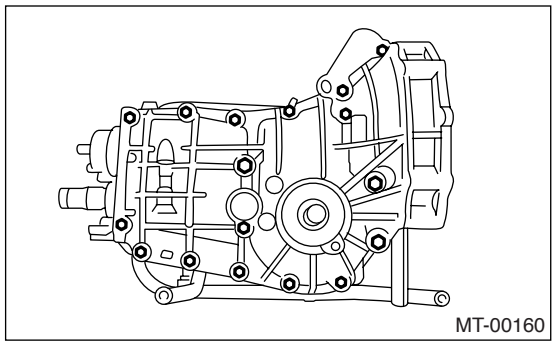
(A) Straight pin
(B) High-low shifter lever

7) Remove the main shaft rear plate.



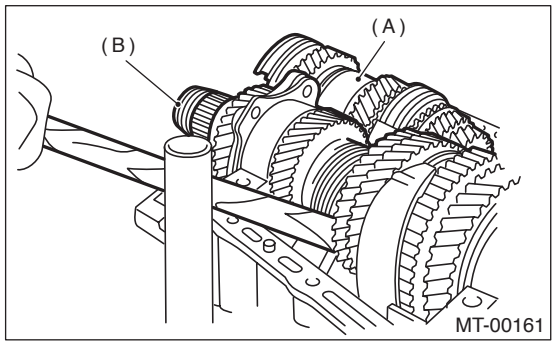
(A) Main shaft rear plate

8) Separate the transmission case into right and left cases by loosening the seventeen coupling bolts and nuts.



9) Remove the drive pinion shaft assembly from transmission case LH.

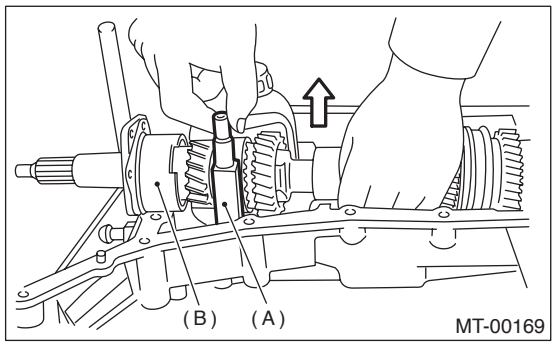
NOTE:
Use a hammer handle, etc. to remove if too tight.



(A) Main shaft ASSY for dual-range
(B) Drive pinion shaft ASSY

10) Removing high-low shifter fork:
Raise the main shaft assembly slightly, and remove the high-low shifter fork together with high-low shifter shaft and washer.

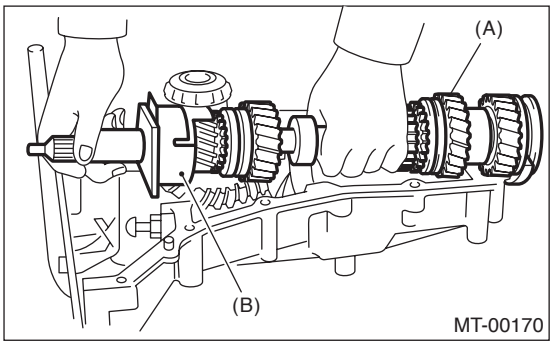
NOTE:
Be careful not to drop the two high-low shifter pieces.



(A) High-low shifter fork
(B) Input shaft ASSY

11) Remove the main shaft assembly and input shaft assembly.

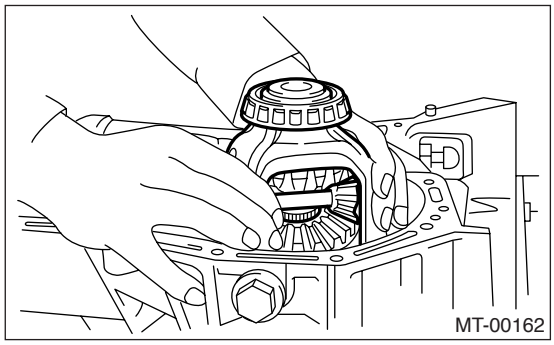
NOTE:
Be careful not to drop the input shaft and main shaft as they are separable.



(A) Main shaft ASSY
(B) Input shaft ASSY

12) Remove the differential assembly.

NOTE:
• Be careful not to confuse the right and left roller bearing outer races.
• Be careful not to damage the retainer oil seal.



B: INSTALLATION

1. SINGLE-RANGE MODEL

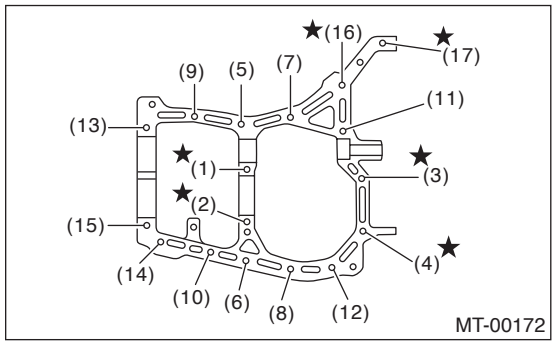
1) Wipe off grease, oil and dust on the mating surfaces of transmission cases with white gasoline.
2) Install the front differential assembly.
3) Install the main shaft assembly for single-range.
Install the transmission case knock pin into needle bearing knock pin hole.
4) Install the drive pinion shaft assembly.
Install the transmission case knock pin into roller bearing knock pin hole.
5) Apply liquid gasket, and then put the case RH and LH together.

Liquid gasket
THREE BOND 1215 (Part No. 004403007) or equivalent

6) Tighten seventeen bolts with bracket, clip, etc. as shown in the figure.

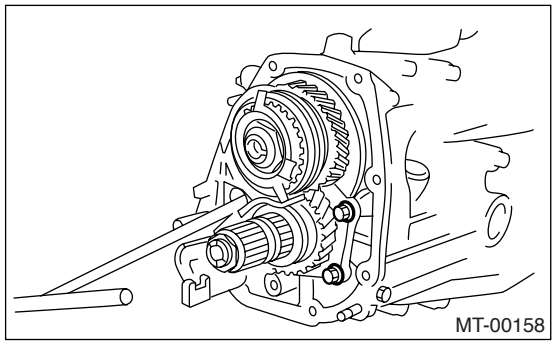
NOTE:
• Insert the bolts from the bottom and tighten nuts on the top.
• Put the cases together being careful that the drive pinion shim and input shaft holder shim are not caught up in between.

Tightening torque:
8 mm bolt
25 N·m (2.5 kgf-m, 18.1 ft-lb)
★ 10 mm bolt
39 N·m (4.0 kgf-m, 28.9 ft-lb)



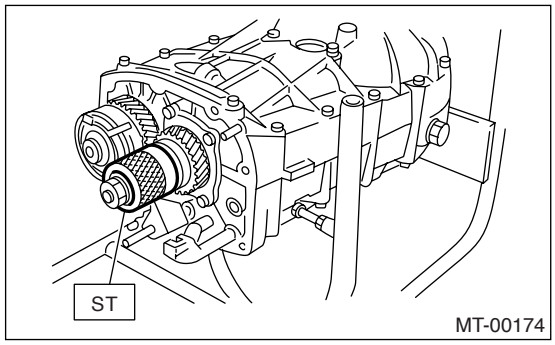
7) Tighten the ball bearing mounting bolts.

Tightening torque:
29 N·m (3.0 kgf-m, 21.7 ft-lb)



8) Backlash adjustment of hypoid gear and preload adjustment of roller bearing:

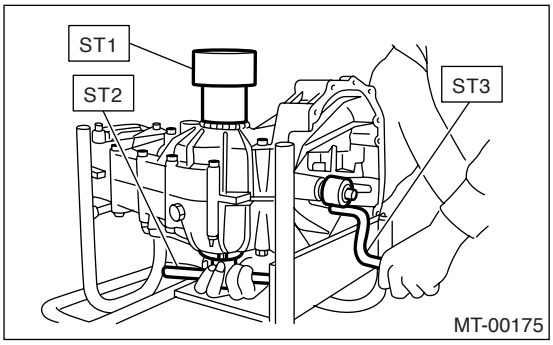
NOTE:
Set the ST on drive pinion assembly.
ST 498427100 STOPPER



9) Place the transmission with the left side of case facing downward, and put ST1 on bearing cup.

10) Screw the retainer assembly into left case from the bottom with ST2. Fit the ST3 on transmission main shaft. Shift the gear into 4th or 5th and turn the shaft several times. Screw in the retainer while turning ST3 until a slight resistance is felt on ST2. This is the contact point of hypoid gear and drive pinion shaft. Repeat the above sequence several times to ensure the contact point.

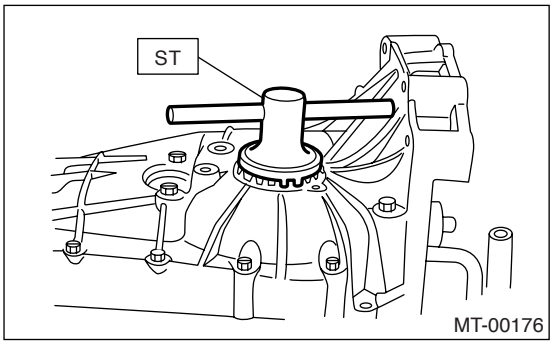
ST1 399780104 WEIGHT
ST2 499787000 WRENCH ASSY
ST3 499927100 HANDLE



11) Remove the weight, and screw in the retainer without O-ring on the upper side and stop at the point where slight resistance is felt.

NOTE:
At this condition, the backlash between hypoid gear and drive pinion shaft is zero.

ST 499787000 WRENCH ASSY



12) Install the lock plate. Loosen the retainer on the lower side by 1-1/2 notches from lock plate, and turn the retainer on the upper side by the same amount in order to obtain the backlash.

NOTE:
The notch on the lock plate moves by 1/2 notch if the plate is turned upside down.

13) Turn in the retainer on the upper side additionally by 1 notch in order to apply preload on taper roller bearing.

14) Tighten temporarily both the upper and lower lock plates and mark both holder and lock plate for later readjustment.

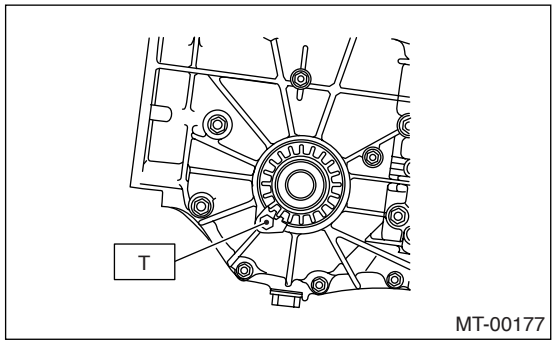
15) Turn the transmission main shaft several times while tapping around retainer lightly with plastic hammer.

16) Inspect and adjust the backlash and tooth contact of hypoid gear. <Ref. to 5MT-88, INSPECTION, Front Differential Assembly.>

17) After checking the tooth contact of hypoid gears, remove the lock plate. Then loosen the retainer until the O-ring groove appears. Fit O-ring into the groove and tighten the retainer into the position where retainer has been tightened in.
Tighten the lock plate.

NOTE:
Carry out this job on both upper and lower retainers.

Tightening torque:
T: 25 N·m (2.5 kgf-m, 18.4 ft-lb)



18) Selecting of main shaft rear plate: <Ref. to 5MT-66, ADJUSTMENT, Main Shaft Assembly for Single-Range.>

19) Install the clutch release lever and bearing. <Ref. to CL-18, INSTALLATION, Release Bearing and Lever.>

20) Install the transfer case with extension case assembly. <Ref. to 5MT-44, INSTALLATION, Transfer Case and Extension Case Assembly.>

21) Install the manual transmission assembly into vehicle. <Ref. to 5MT-33, INSTALLATION, Manual Transmission Assembly.>

2. DUAL-RANGE MODEL

1) Wipe off grease, oil and dust on the mating surfaces of transmission cases with white gasoline.

2) Install the front differential assembly.

3) Install the main shaft assembly for dual-range and the input shaft assembly.
Connect the main shaft assembly for dual-range with the input shaft assembly, and install the transmission case knock pin into needle bearing knock pin hole.

4) Install the drive pinion shaft assembly.
Install the transmission case knock pin into roller bearing knock pin hole.

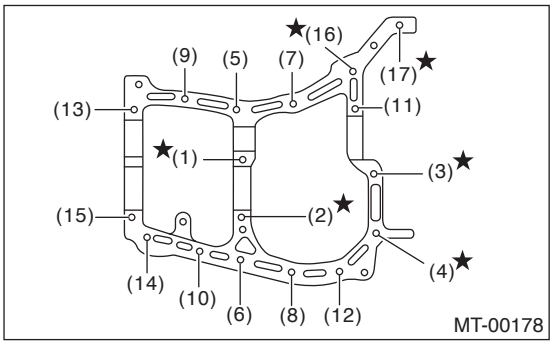
5) Apply liquid gasket, and then put the case right side and left side together.

Liquid gasket:
THREE BOND (Part No. 004403007) 1215 or equivalent

6) Tighten the seventeen bolts with bracket, clip, etc. as shown in the figure.

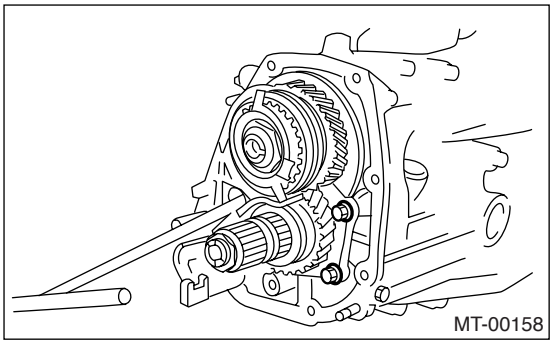
NOTE:
• Insert the bolts from the bottom and tighten the nuts at the top.
• Put the cases together being careful that the drive pinion shim and input shaft holder shim are not caught up in between.

Tightening torque:
8 mm bolt
25 N·m (2.5 kgf-m, 18.1 ft-lb)
★ 10 mm bolt
39 N·m (4.0 kgf-m, 28.9 ft-lb)



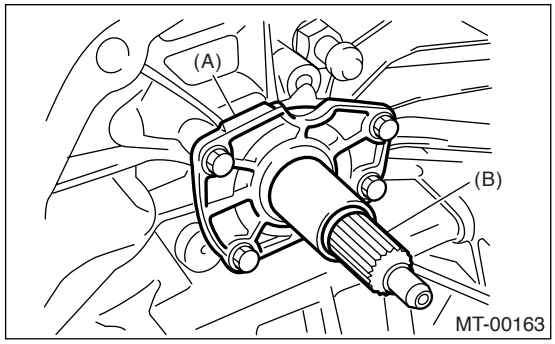
7) Tighten the ball bearing mounting bolts.

Tightening torque:
29 N·m (3.0 kgf-m, 21.7 ft-lb)



8) Tighten the input shaft holder attaching bolts.

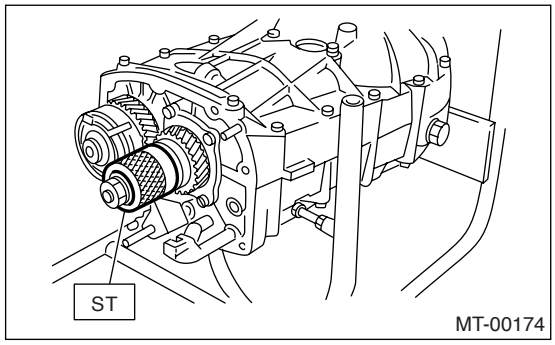
Tightening torque:
20 N·m (2.0 kgf-m, 14.5 ft-lb)



(A) Input shaft holder
(B) Input shaft

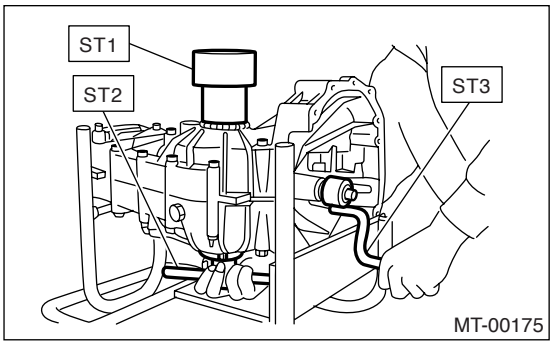
9) Backlash adjustment of hypoid gear and preload adjustment of roller bearing

NOTE:
Set the ST to drive pinion assembly.
ST 498427100 STOPPER



10) Place the transmission with the left side of case facing downward, and put ST1 on bearing cup.
11) Screw the retainer assembly into left case from the bottom using ST2. Fit the ST3 on transmission main shaft. Shift the gear into 4th or 5th and turn the shaft several times. Screw in the retainer while turning ST3 until a slight resistance is felt on ST2. This is the contact point of hypoid gear and drive pinion shaft. Repeat the above sequence several times to ensure the contact point.

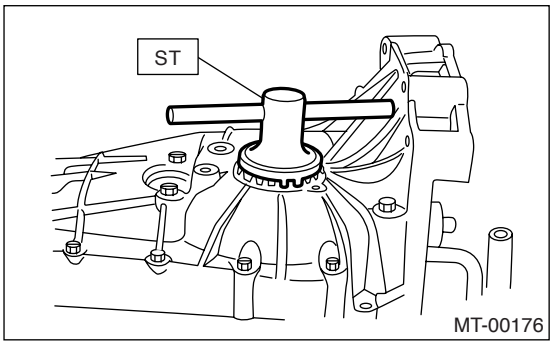
ST1 399780104 WEIGHT
ST2 499787000 WRENCH ASSY
ST3 499927100 HANDLE



12) Remove the weight, and screw in the retainer without O-ring on upper side and stop at the point where slight resistance is felt.

NOTE:
In this condition, the backlash between hypoid gear and drive pinion shaft is zero.

ST 499787000 WRENCH ASSY



13) Fit the lock plate. Loosen the retainer on the lower side by 1-1/2 notches of lock plate and turn in the retainer on upper side by the same amount in order to obtain the backlash.

NOTE:
The notch on the lock plate moves by 1/2 notch if the plate is turned upside down.

14) Turn in the retainer on the upper side additionally by 1 notch in order to apply preload on taper roller bearing.

15) Tighten temporarily both the upper and lower lock plates and mark both holder and lock plate for later readjustment.

16) Turn the transmission main shaft several times while tapping around the retainer lightly with plastic hammer.

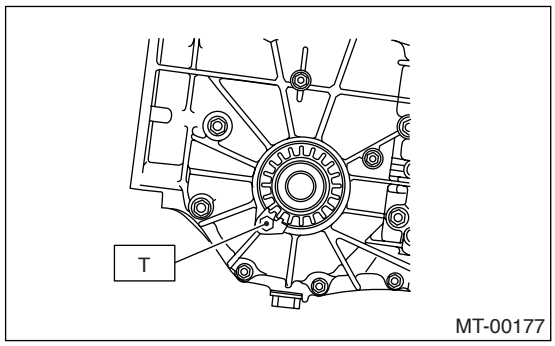
17) Inspect and adjust the backlash and tooth contact of hypoid gear. **<Ref. to 5MT-88,** INSPECTION, Front Differential Assembly.>

18) After checking the tooth contact of hypoid gears, remove the lock plate. Then loosen the retainer until the O-ring groove appears. Fit the O-ring into groove and tighten the retainer into the position where retainer has been tightened in.

Tighten the lock plate.

NOTE:
Carry out this job on both upper and lower retainers.

Tightening torque:
T: 25 N·m (2.5 kgf-m, 18.4 ft-lb)



19) Selection of main shaft rear plate: **<Ref. to 5MT-66,** ADJUSTMENT**, Main Shaft Assembly for Single-Range.>**

20) Install the transfer case with extension case assembly. **<Ref. to 5MT-44,** INSTALLATION, Transfer Case and Extension Case Assembly.>

21) Install the clutch release lever and bearing.
<Ref. to CL-18, INSTALLATION, Release Bearing and Lever.>

22) Install the manual transmission assembly into vehicle. **<Ref. to 5MT-33,** INSTALLATION, Manual Transmission Assembly.>

C: INSPECTION

Check the transmission case for cracks, damage, or oil leaks.

15.Main Shaft Assembly for Single-Range

A: REMOVAL

1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>
2) Remove the transfer case with extension case assembly. <Ref. to 5MT-44, REMOVAL, Transfer Case and Extension Case Assembly.>
3) Remove the transmission case. <Ref. to 5MT-56, REMOVAL, Transmission Case.>
4) Remove the drive pinion shaft assembly. <Ref. to 5MT-77, REMOVAL, Drive Pinion Shaft Assembly.>
5) Remove the main shaft assembly for single range.

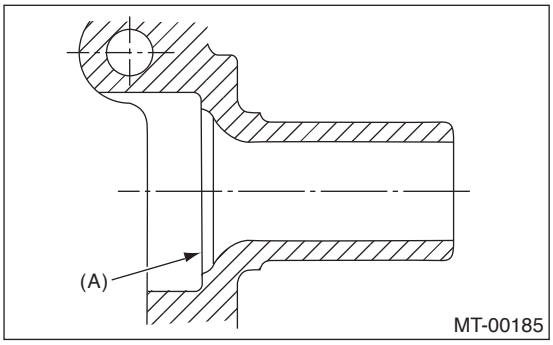
B: INSTALLATION

1) Install the needle bearing and oil seal onto the front of transmission main shaft assembly for single range.

NOTE:
• Wrap the clutch splined section with vinyl tape to prevent damage to oil seal.
• Apply grease (UNILUBE #2 or equivalent) to the sealing lip of oil seal.
• Use a new oil seal.

2) Install the transmission case knock pin into needle bearing outer race knock pin hole.

NOTE:
Align the end face of seal with surface (A) when installing oil seal.



3) Install the drive pinion assembly. <Ref. to 5MT-77, INSTALLATION, Drive Pinion Shaft Assembly.>
4) Install the transmission case. <Ref. to 5MT-58, INSTALLATION, Transmission Case.>
5) Install the transfer case with extension case assembly. <Ref. to 5MT-44, INSTALLATION, Transfer Case and Extension Case Assembly.>
6) Install the manual transmission assembly into vehicle. <Ref. to 5MT-33, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

1) Put the vinyl tape around main shaft splines to protect oil seal from damage. Then pull out the oil seal and needle bearing by hand.
2) Remove the lock nut from transmission main shaft assembly for single range.

NOTE:
Unlock the caulking before removing lock nut.

NOTE:
Caulk the lock nuts in two places after tightening.

ST1 499987003 SOCKET WRENCH
ST2 498937000 TRANSMISSION HOLDER

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

E: INSPECTION

Disassembled parts should be washed with unleaded gasoline first and then inspected carefully.

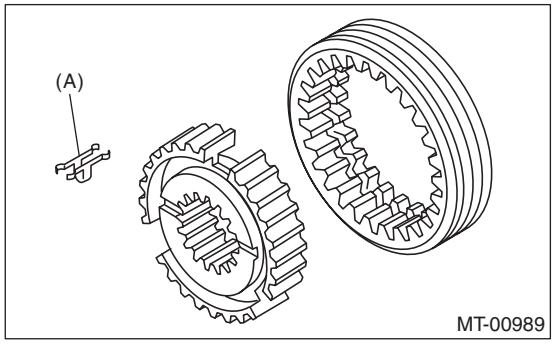
1) Bearings
Replace the bearing in following cases:
• When the bearing balls, outer races and inner races are broken or rusty.
• When the bearing is worn.
• When the bearings fail to turn smoothly or emit noise in rotation after gear oil lubrication.
• When bearings have other defects.

2) Bushing (each gear)
Replace the bushings in following cases:
• When the sliding surface is damaged or abnormally worn.
• When the inner wall is abnormally worn.

3) Gears
• Replace gears with new ones if their tooth surfaces are broken, damaged or excessively worn.
• Correct or replace if the cone that contacts the baulk ring is rough or damaged.
• Correct or replace if the inner surface or end face is damaged.

4) Baulk ring
Replace the ring in following cases:
• When the inner surface and end face is damaged.
• When the ring inner surface is abnormally or partially worn.
• When contact surfaces of the synchronizer ring insert have cracks or abnormally worn.

5) Shifting insert key
Replace the insert key if deformed, excessively worn or defective in any way.



(A) Insert key

6) Oil seal
Replace the oil seal if the lip is deformed, hardened, worn or defective in any way.

7) O-ring
Replace the O-ring if the sealing face is deformed, hardened, damaged, worn or defective in any way.

8) Gearshift mechanism
Repair or replace the gearshift mechanism if excessively worn, bent or defective in any way.

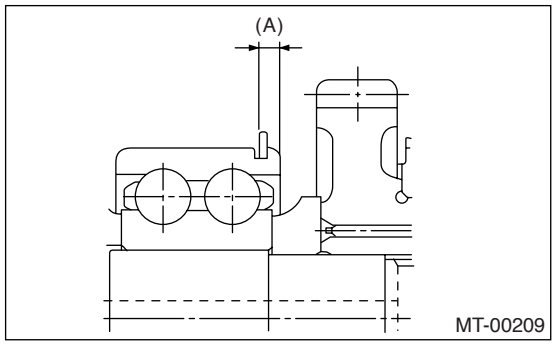
F: ADJUSTMENT

Selection of main shaft rear plate:
Using the ST, measure the amount (A) of ball bearing protrusion from transmission main case surface, and select a suitable plate in the following table.

NOTE:
Before measuring, tap the end of main shaft with a plastic hammer lightly in order to make the clearance zero between the main case surface and moving flange of bearing.

ST 498147000 DEPTH GAUGE

Dimension (A) mm (in)	Part Number	Marking
4.00 — 4.13 (0.1575 — 0.1626)	32294AA041	1
3.87 — 3.99 (0.1524 — 0.1571)	32294AA051	2



16. Main Shaft Assembly for Dual-Range

A: REMOVAL

1) Remove the manual transmission assembly from vehicle. **<Ref. to 5MT-31,** REMOVAL, Manual Transmission Assembly.>
2) Remove the transfer case with extension case assembly. **<Ref. to 5MT-44,** REMOVAL, Transfer Case and Extension Case Assembly.>
3) Remove the transmission case. **<Ref. to 5MT-56,** REMOVAL, Transmission Case.>
4) Remove the drive pinion shaft assembly. **<Ref. to 5MT-77,** REMOVAL, Drive Pinion Shaft Assembly.>
5) Remove the main shaft assembly and input shaft assembly.

B: INSTALLATION

1) Install the needle bearing onto the front of transmission main shaft assembly.
2) Connect the main shaft assembly and input shaft assembly.
3) Install the transmission case knock pin into needle bearing outer race knock pin hole.
4) Install the drive pinion assembly. **<Ref. to 5MT-77,** INSTALLATION, Drive Pinion Shaft Assembly.>

E: INSPECTION

Disassembled parts should be washed with unleaded gasoline first and then inspected carefully.
1) Bearings
Replace the bearings in following cases:
• Bearings balls, outer races and inner races are broken or rusty.
• Worn bearings
• Bearings fail to turn smoothly or emit noise in rotation after gear oil lubrication.
• Bearings having other defects
2) Bushing (each gear)
Replace the bushing in following cases:
• When the sliding surface is damaged or abnormally worn.
• When the inner wall is abnormally worn.
3) Gears
• Replace the gears with new ones if their tooth surfaces are broken, damaged or excessively worn.
• Correct or replace if the cone that contacts the baulk ring is rough or damaged.
• Correct or replace if the inner surface or end face is damaged.
4) Baulk ring
Replace the ring in following cases:
• When the inner surface and end face are damaged.
• When the ring inner surface is abnormally or partially worn down.
• When the contact surface of the synchronizer ring insert is scored or abnormally worn down.
5) Shifting insert key
Replace the insert key if deformed, excessively worn or defective in any way.
6) Oil seal
Replace the oil seal if the lip is deformed, hardened, worn or defective in any way.
7) O-ring
Replace the O-ring if the sealing face is deformed, hardened, damaged, worn or defective in any way.
8) Gearshift mechanism
Repair or replace the gearshift mechanism if excessively worn, bent or defective in any way.

F: ADJUSTMENT

Select a suitable main shaft rear plate. **<Ref. to 5MT-66,** ADJUSTMENT**, Main Shaft Assembly for Single-Range.>**

17.Input Shaft Assembly

A: REMOVAL

1) Remove the manual transmission assembly from vehicle. **<Ref. to 5MT-31,** REMOVAL, Manual Transmission Assembly.>

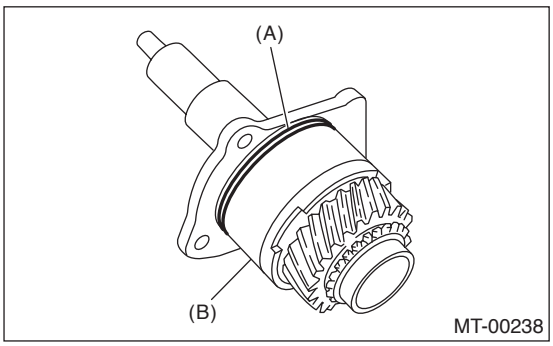
805168040	2.00 (0.0787)

9) Install the O-ring to input shaft holder.



(A) O-ring
(B) Input shaft holder

E: INSPECTION

Disassembled parts should be washed clean first with unleaded gasoline and then inspected carefully.

1) Bearings
Replace the bearings in following cases:
• Bearing balls, outer races and inner races are broken or rusty.
• Worn bearings
• Bearings fail to turn smoothly or emit noise in rotation after gear oil lubrication.
• Bearings having other defects

2) Bushing (each gear)
Replace the bushing in following cases:
• When the sliding surface is damaged or abnormally worn.
• When the inner wall is abnormally worn.

3) Gears
• Replace the gears with new ones if their tooth surfaces are broken, damaged or excessively worn.
• Correct or replace if the cone that contacts the baulk ring is rough or damaged.
• Correct or replace if the inner surface or end face is damaged.

4) Baulk ring
Replace the ring in following cases:
• When the inner surface and end face are damaged.
• When the ring inner surface is abnormally or partially worn down.
• When the contact surface of the synchronizer ring insert is scored or abnormally worn down.

5) Shifting insert key
Replace the insert key if deformed, excessively worn or defective in any way.

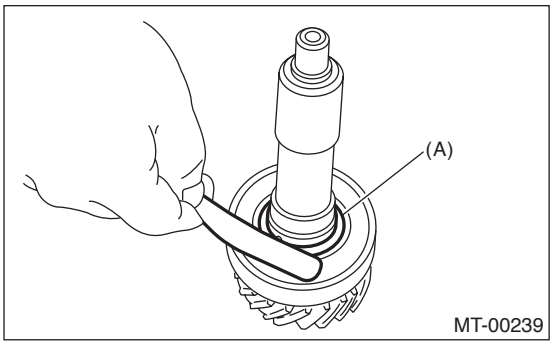
6) Oil seal
Replace the oil seal if the lip is deformed, hardened, worn or defective in any way.

7) O-ring
Replace the O-ring if the sealing face is deformed, hardened, damaged, worn or defective in any way.

8) Gearshift mechanism
Repair or replace the gearshift mechanism if excessively worn, bent or defective in any way.

9) Measure the clearance between snap ring and ball bearing using thickness gauge.

Clearance:
0 — 0.12 mm (0 — 0.0047 in)



(A) Snap ring

If the measurement is not within specification, select a suitable snap ring.

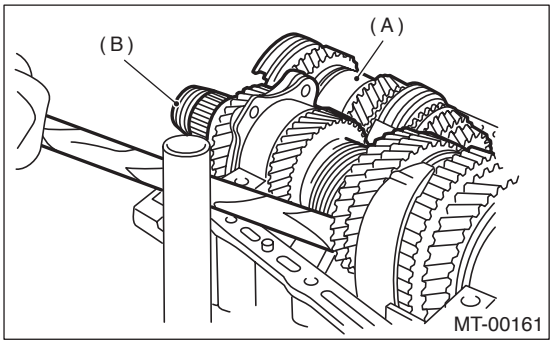
Snap ring	
Part No.	Thickness mm (in)
805028050	2.48 (0.0976)
805028060	2.56 (0.1008)
805028070	2.64 (0.1039)

18.Drive Pinion Shaft Assembly

A: REMOVAL

1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>
2) Remove the transfer case with extension case assembly. <Ref. to 5MT-44, REMOVAL, Transfer Case and Extension Case Assembly.>
3) Remove the transmission case. <Ref. to 5MT-56, REMOVAL, Transmission Case.>
4) Remove the drive pinion shaft assembly.

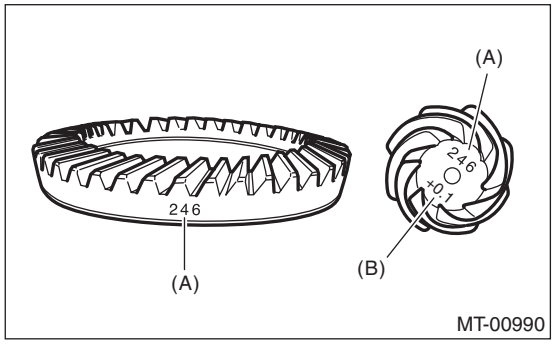
NOTE:
Use a hammer handle, etc. to remove if too tight.



(A) Main shaft ASSY
(B) Drive pinion shaft ASSY

B: INSTALLATION

1) Remove the differential assembly.
2) Alignment marks/numbers on hypoid gear set:
Use hypoid driven gear of its match number corresponding with upper one on the drive pinion (A).
The figure (B) shows a number for shim adjustment. If no number is shown, the value is zero.

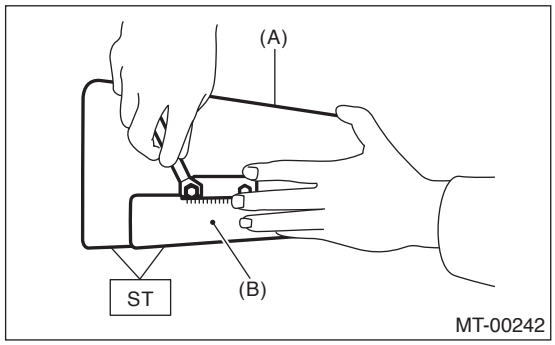


(A) Match number
(B) Number for shim adjustment

3) Place the drive pinion shaft assembly on the transmission main case RH without shim and tighten the bearing mounting bolts.
4) Inspection and adjustment of ST:

NOTE:
• Loosen the two bolts and adjust so that the scale indicates 0.5 correctly when the plate end and the scale end are on the same level.
• Tighten the two bolts.

ST 499917500 DRIVE PINION GAUGE ASSY



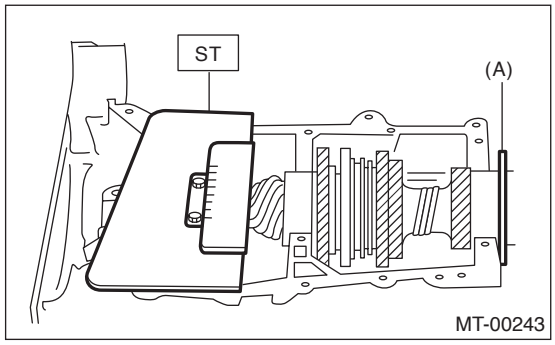
(A) Plate
(B) Scale

5) Position the ST by inserting the knock pin of ST into the knock hole in the transmission case.

ST 499917500 DRIVE PINION GAUGE ASSY

6) Slide the drive pinion gauge scale with finger tip and read the value at the point where it matches with the end face of drive pinion.

ST 499917500 DRIVE PINION GAUGE ASSY



(A) Adjust clearance to zero without shim.

7) The thickness of shim shall be determined by adding the value indicated on drive pinion to the value indicated on the ST. (Add if the number on drive pinion is prefixed by +, and subtract if the number is prefixed by −.)

ST 499917500 DRIVE PINION GAUGE ASSY

8) Select one to three shims in the next table for the value determined as described above, and take the shim(s) which thickness is closest to the said value.

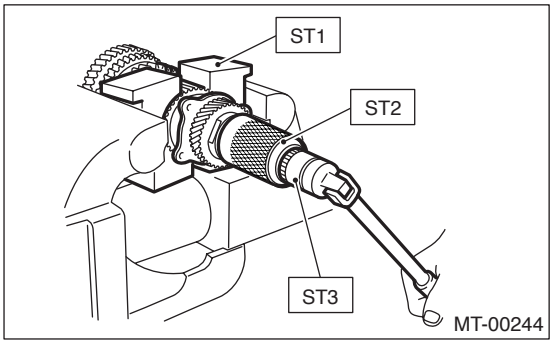
Drive pinion shim	
Part Number	Thickness mm (in)
32295AA031	0.150 (0.0059)
32295AA041	0.175 (0.0069)
32295AA051	0.200 (0.0079)
32295AA061	0.225 (0.0089)
32295AA071	0.250 (0.0098)
32295AA081	0.275 (0.0108)
32295AA091	0.300 (0.0118)
32295AA101	0.500 (0.0197)

9) Install the differential assembly. <Ref. to 5MT-85, INSTALLATION, Front Differential Assembly.>
10) Set the transmission main shaft assembly and drive pinion assembly in position. (So there is no clearance between these two when moved all the way to the front). Inspect the suitable 1st — 2nd, 3rd — 4th and 5th shifter fork so that the coupling sleeve and reverse driven gear are positioned in the center of their synchronizing mechanisms. <Ref. to 5MT-82, INSPECTION, Drive Pinion Shaft Assembly.>
11) Install the transmission case. <Ref. to 5MT-58, INSTALLATION, Transmission Case.>
12) Install the transfer case with extension case assembly. <Ref. to 5MT-44, INSTALLATION, Transfer Case and Extension Case Assembly.>
13) Install the manual transmission assembly to vehicle. <Ref. to 5MT-31, Manual Transmission Assembly.>

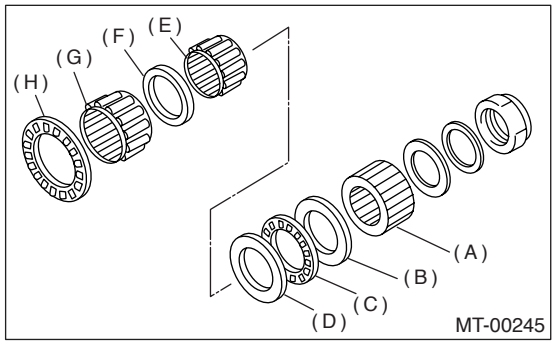
C: DISASSEMBLY

NOTE:
Attach a cloth to the end of driven shaft (on the frictional side of thrust needle bearing) to prevent damage during disassembly or reassembly.

1) Unlock the caulking of lock nut. Remove the lock nut using ST1, ST2 and ST3.
ST1 899884100 HOLDER
ST2 498427100 STOPPER
ST3 899988608 SOCKET WRENCH (27)



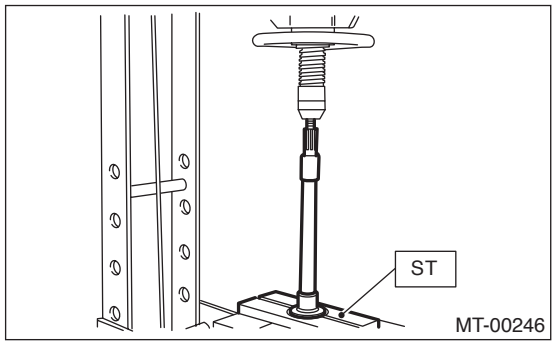
2) Draw out the drive pinion from driven shaft. Remove the differential bevel gear sleeve, adjusting washer No. 1, adjusting washer No. 2, thrust bearing, needle bearing and drive pinion collar.



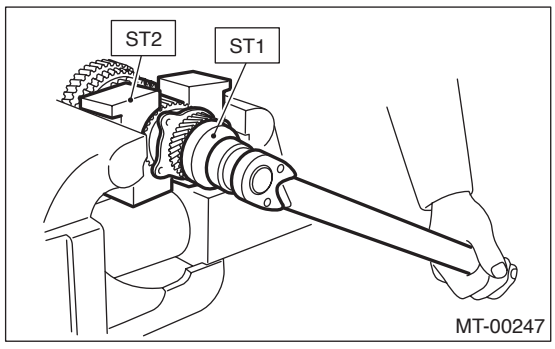
(A) Differential bevel gear sleeve
(B) Washer No. 1 (25 × 37.5 × t)
(C) Thrust bearing (25 × 37.5 × 3)
(D) Washer No. 2 (25 × 37.5 × 4)
(E) Needle bearing (25 × 30 × 20)
(F) Drive pinion collar
(G) Needle bearing (30 × 37 × 23)
(H) Thrust bearing (33 × 50 × 3)

3) Remove the roller bearing and washer using ST and press.

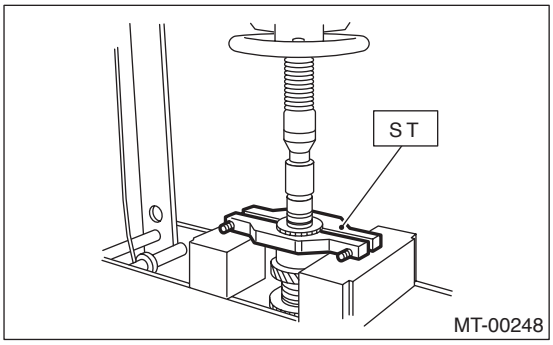
NOTE:
Do not reuse the roller bearing.
ST 498077000 REMOVER



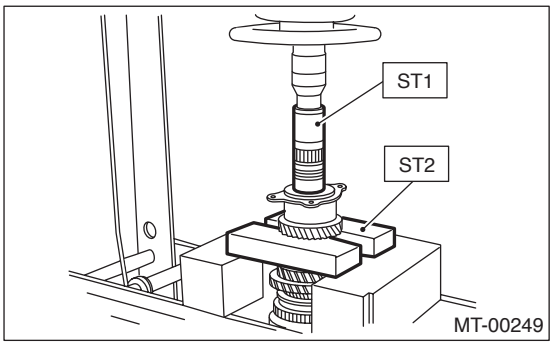
4) Unlock the caulking of lock nut. Remove the lock nut using ST1 and ST2.
ST1 499987300 SOCKET WRENCH (50)
ST2 899884100 HOLDER



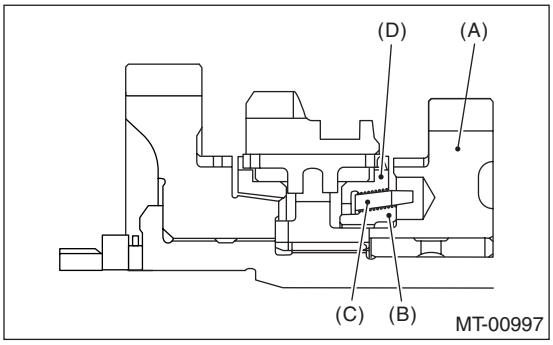
5) Remove the 5th driven gear using ST.
ST 499857000 5TH DRIVEN GEAR REMOVER



6) Remove the woodruff key.
7) Remove the roller bearing and 3rd-4th driven gear using ST1 and ST2.
ST1 499757002 INSTALLER
ST2 899714110 REMOVER

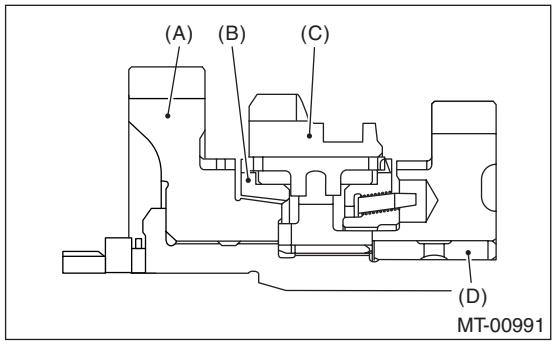


8) Remove the key.
9) Remove the 2nd driven gear, inner baulk ring, synchro cone and outer baulk ring.



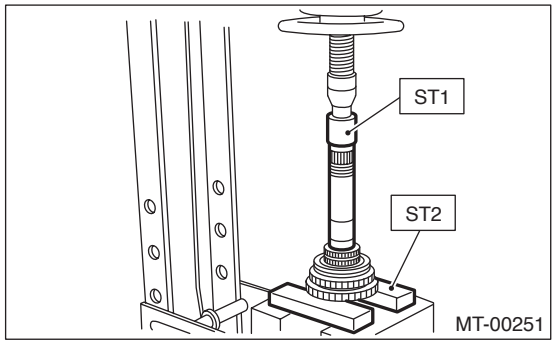
(A) 2nd driven gear
(B) Inner baulk ring
(C) Synchro cone
(D) Outer baulk ring

10) Remove the 1st driven gear, 2nd gear bushing, gear and hub using ST1 and ST2.



(A) 1st driven gear
(B) Inner baulk ring
(C) Hub
(D) 2nd gear bushing

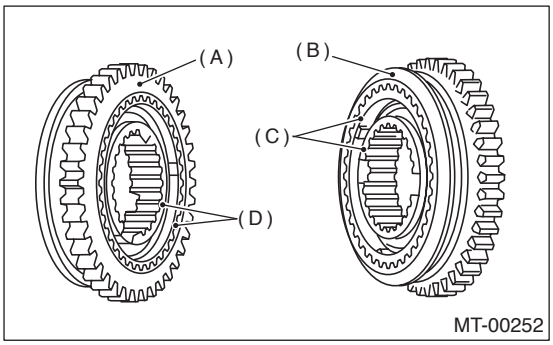
NOTE:
Replace the gear and hub if necessary. Do not disassemble because they must engage at a specified point. If they have to be disassembled, mark the engaging point on the spline beforehand.
ST1 499757002 INSTALLER
ST2 899714110 REMOVER



D: ASSEMBLY

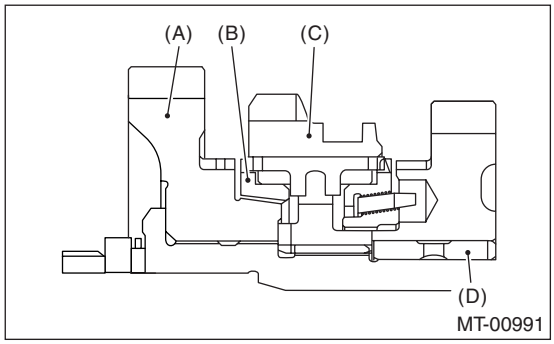
1) Install the sleeve and hub assembly by matching alignment marks.

NOTE:
Use the new gear and hub assembly, when replacing the gear or hub.



(A) 1st gear side
(B) 2nd gear side
(C) Flush surface
(D) Stepped surface

2) Install the washer to 1st driven gear. (EC, EK and KA model)
3) Install the washer, snap ring and sub gear onto 1st driven gear. (Except for EC, EK and KA model)
4) Install the 1st driven gear, 1st baulk ring, gear and hub assembly onto driven shaft.



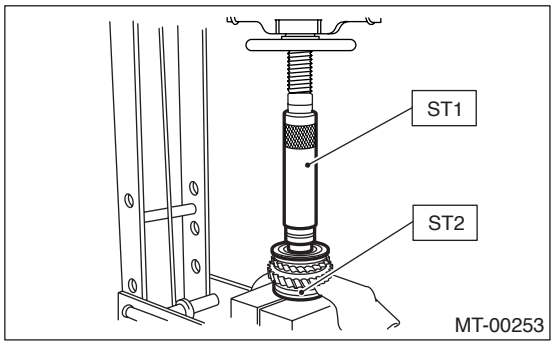
(A) 1st driven gear
(B) 1st baulk ring
(C) Gear and hub ASSY
(D) 2nd gear bushing

NOTE:
• Take care to install the gear and hub assembly in proper direction.
• Align the baulk ring and gear and hub assembly with key groove.

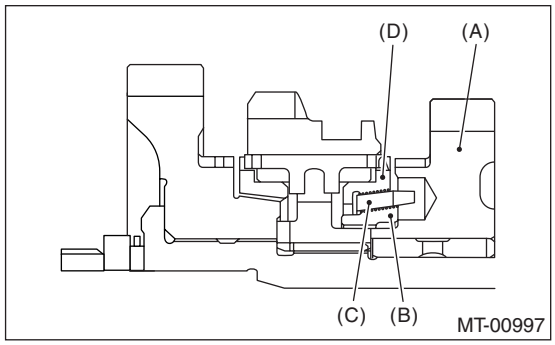
5) Install the 2nd driven gear bushing onto driven shaft using ST1, ST2 and a press.

NOTE:
• Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).
• Attach a cloth to the end of driven shaft to prevent damage.
• When press-fitting, align the oil holes of shaft and bushing.

ST1 499277200 INSTALLER
ST2 499587000 INSTALLER



6) Install the 2nd driven gear, inner baulk ring, synchro cone and outer baulk ring, and insert onto driven shaft.

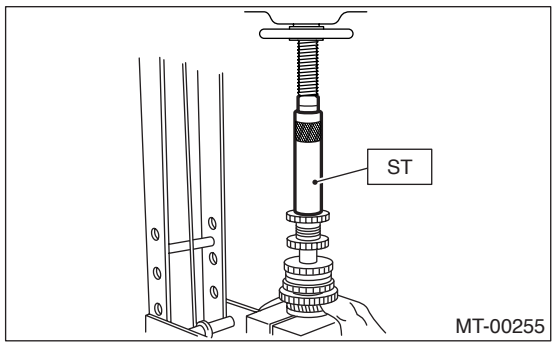


(A) 2nd driven gear
(B) Inner baulk ring
(C) Synchro cone
(D) Outer baulk ring

7) After installing the key on driven shaft, install the 3rd-4th driven gear using ST and press.

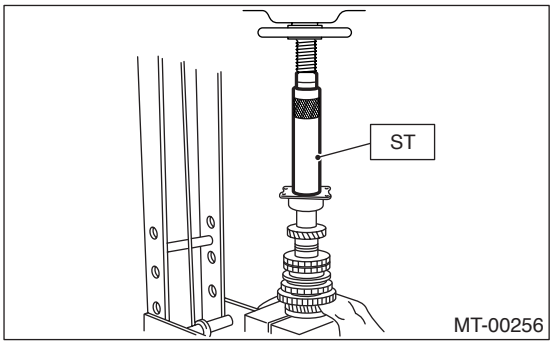
NOTE:
• Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).
• Align the groove in baulk ring with insert.

ST 499277200 INSTALLER



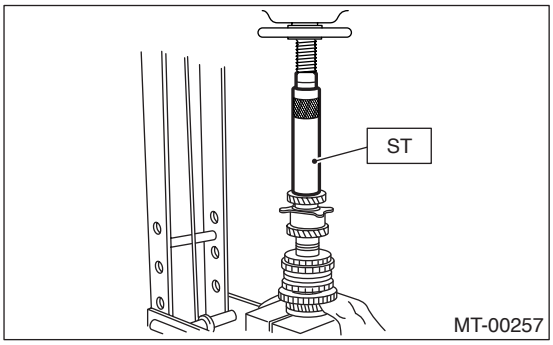
8) Install a set of roller bearings onto the driven shaft using ST and press.

NOTE:
Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).
ST 499277200 INSTALLER



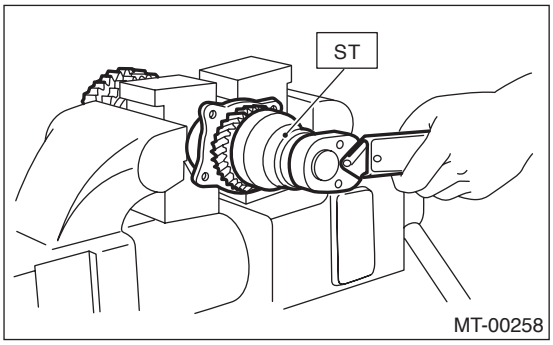
9) Position the woodruff key in groove on the rear of driven shaft. Install the 5th driven gear onto driven shaft using ST and press.

NOTE:
Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).
ST 499277200 INSTALLER



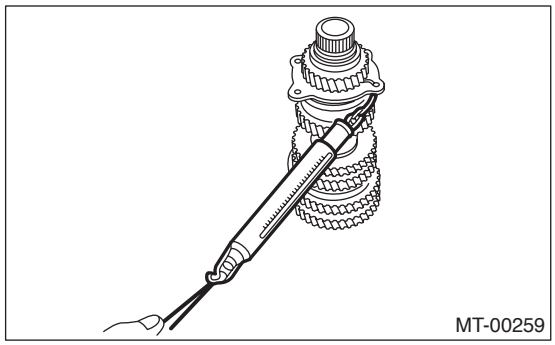
10) Install the lock washer. Install the lock nut and tighten to the specified torque using ST.
ST 499987300 SOCKET WRENCH (50)

Tightening torque:
260 N·m (26.5 kgf-m, 191.7 ft-lb)



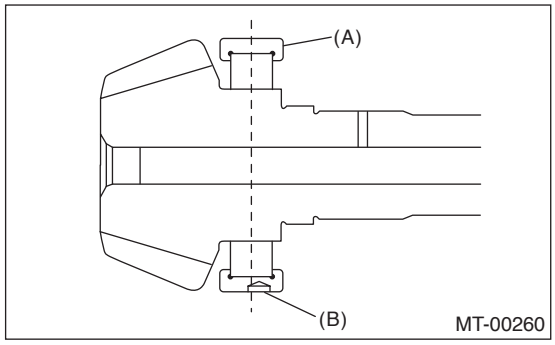
NOTE:
• Stake the caulking of lock nut at two points.

• Using a spring balancer, check that starting torque of roller bearing is 0.1 to 1.5 N (0.01 to 0.15 kgf, 0.02 to 0.33 ft).



11) Install the roller bearing onto drive pinion.

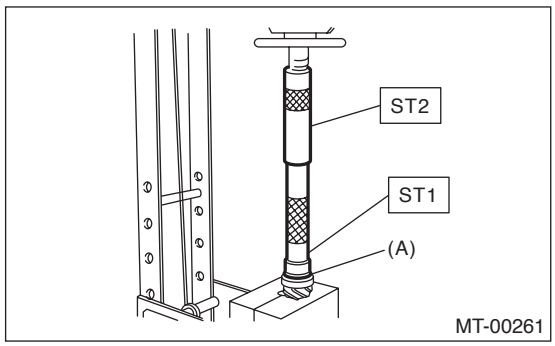
NOTE:
When installing roller bearing, note its directions (front and rear) because the knock pin hole in outer race is offset.



(A) Roller bearing
(B) Knock pin hole

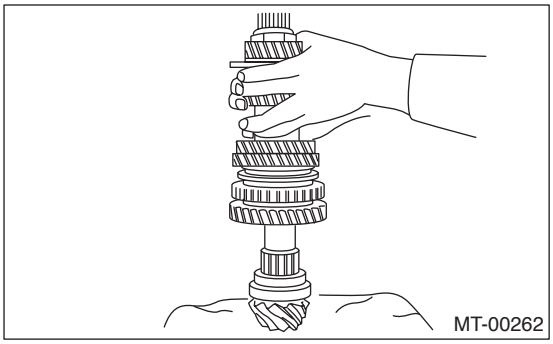
12) Install the washer using ST1, ST2 and a press.

NOTE:
Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).
ST1 499277100 BUSHING 1-2 INSTALLER
ST2 499277200 INSTALLER



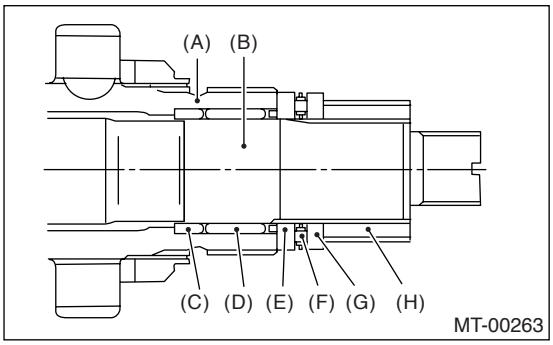
(A) Washer

13) Install the thrust bearing and needle bearing. Install the driven shaft assembly.



14) Install the drive pinion collar, needle bearing, adjusting washer No. 2, thrust bearing, adjusting washer No. 1 and differential bevel gear sleeve in this order.

NOTE:
Be careful because the spacer must be installed in proper direction.

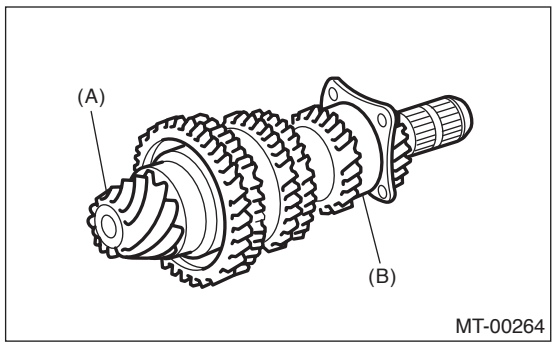


(A) Driven shaft
(B) Drive shaft
(C) Drive pinion collar
(D) Needle bearing (25 × 30 × 20)
(E) Washer No. 2 (25 × 36 × 4)
(F) Thrust bearing (25 × 37.5 × 3)
(G) Washer No. 1 (25 × 36 × t)
(H) Differential bevel gear sleeve

15) Adjust the thrust bearing preload. <Ref. to 5MT-83, THRUST BEARING PRELOAD, ADJUSTMENT, Drive Pinion Shaft Assembly.>

E: INSPECTION

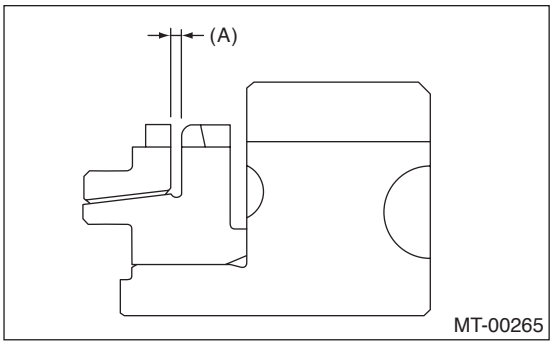
Disassembled parts should be washed with unleaded gasoline first and then inspected carefully.
1) Bearings
Replace the bearing in following cases:
• When the bearing balls, outer races and inner races are broken or rusty.
• When the bearing is worn.
• When the bearings fail to turn smoothly or emit noise in rotation after gear oil lubrication.
• The ball bearing on the rear side of the drive pinion shaft should be checked for smooth rotation before the drive pinion assembly is disassembled. In this case, because a preload is working on the bearing, its rotation feels like it is slightly dragging unlike other bearings.



(A) Drive pinion shaft
(B) Ball bearing

• When bearings have other defects:
2) Bushing (each gear)
Replace the bushings in following cases:
• When the sliding surface is damaged or abnormally worn.
• When the inner wall is abnormally worn.
3) Gears
• Replace gears with new ones if their tooth surfaces are broken, damaged, or excessively worn.
• Correct or replace if the cone that contacts the baulk ring is rough or damaged.
• Correct or replace if the inner surface or end face is damaged.
4) Baulk ring
Replace the ring in following cases:
• When the inner surface and end face are damaged.
• When the ring inner surface is abnormally or partially worn.
• If the gap between the end faces of ring and the gear splined part is excessively small, check the clearance (A) while pressing the ring against the cone.

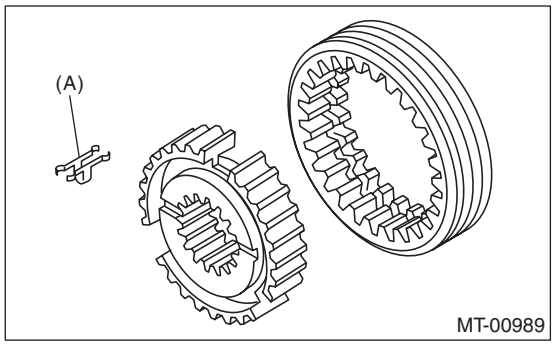
Clearance (A):
0.5 — 1.0 mm (0.020 — 0.040 in)



• When the contact surface of synchronizer ring insert is scratched or abnormally worn.

5) Shifting insert key

Replace the insert key if deformed, excessively worn, or defective in any way.



(A) Insert key

6) Oil seal

Replace the oil seal if the lip is deformed, hardened, worn, or defective in any way.

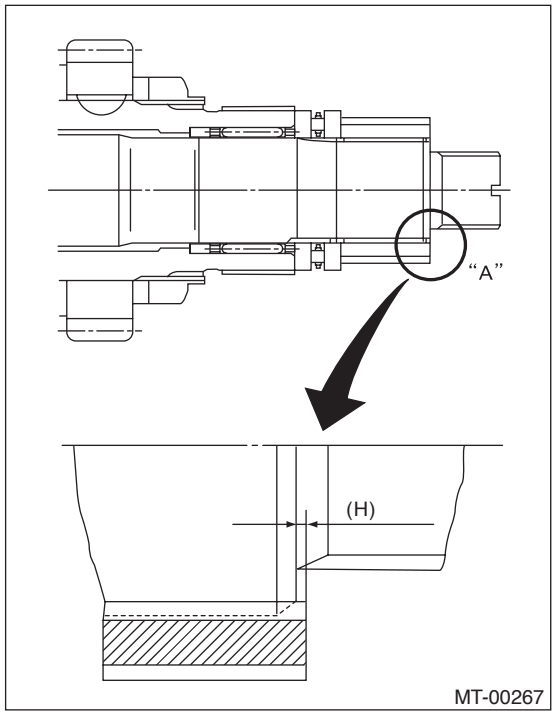
7) O-ring

Replace the O-ring if the sealing face is deformed, hardened, damaged, worn, or defective in any way.

F: ADJUSTMENT

1. THRUST BEARING PRELOAD

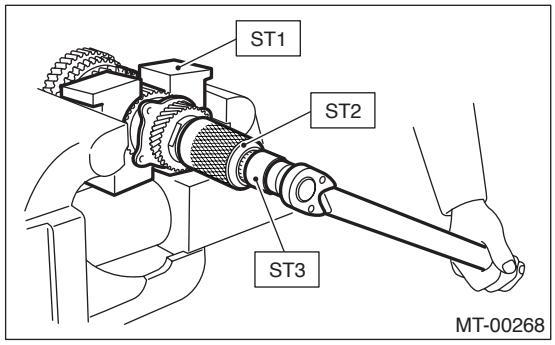
1) Select a suitable adjusting washer No. 1 to adjust dimension (H) to zero through visual check. Position the washer (18.3 × 30 × 4) and lock washer (18 × 30 × 2) and install the lock nut (18 × 13.5).



2) Using the ST1, ST2 and ST3, tighten new lock nut to the specified torque.

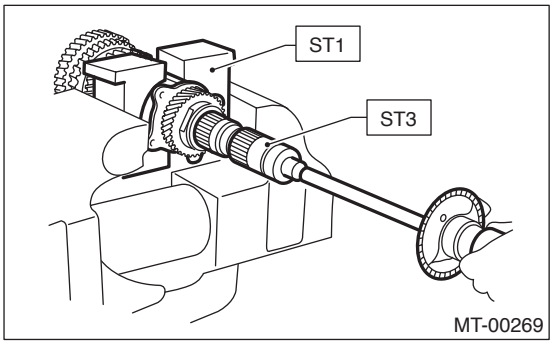
ST1	899884100	HOLDER
ST2	498427100	STOPPER
ST3	899988608	SOCKET WRENCH (27)

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

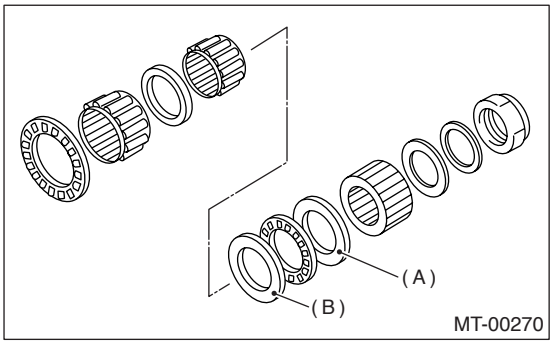


3) After removing the ST2, measure the starting torque using torque driver.
ST1 899884100 HOLDER
ST3 899988608 SOCKET WRENCH (27)

Starting torque:
0.3 — 0.8 N·m (0.03 — 0.08 kgf-m, 0.2 — 0.6 ft-lb)



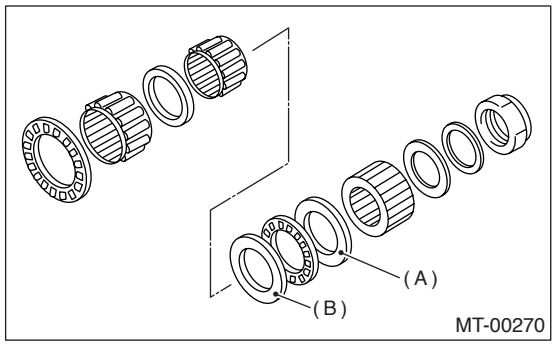
4) If the starting torque is not within specified limit, select new adjusting washer No. 1 and recheck starting torque.



(A) Adjusting washer No. 1
(B) Adjusting washer No. 2

Adjusting washer No. 1	
Part Number	Thickness mm (in)
803025051	3.925 (0.1545)
803025052	3.950 (0.1555)
803025053	3.975 (0.1565)
803025054	4.000 (0.1575)
803025055	4.025 (0.1585)
803025056	4.050 (0.1594)
803025057	4.075 (0.1604)

5) When the specified starting torque cannot be obtained by the adjusting washer No. 1, select the adjusting washer No. 2 from following table. Repeat steps 1) through 4) to adjust starting torque.



(A) Adjusting washer No. 1
(B) Adjusting washer No. 2

Starting torque	Dimension H	Washer No. 2
Low	Small	Select thicker one.
High	Large	Select thinner one.

Adjusting washer No. 2	
Part Number	Thickness mm (in)
803025059	3.850 (0.1516)
803025054	4.000 (0.1575)
803025058	4.150 (0.1634)

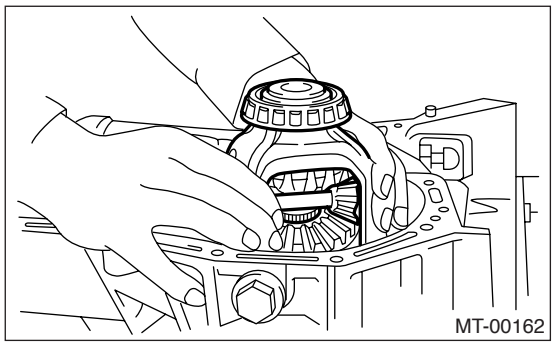
6) Recheck that the starting torque is within specified range, then clinch the lock nut at four positions.

19.Front Differential Assembly

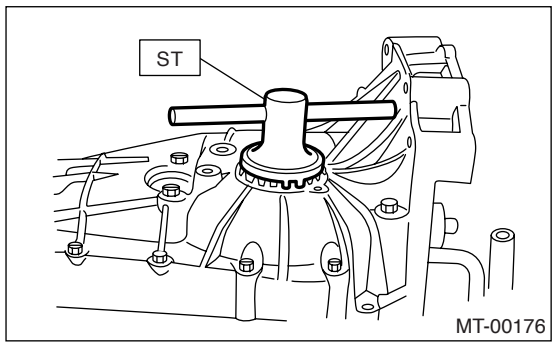
A: REMOVAL

1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>
2) Remove the transfer case with extension case assembly. <Ref. to 5MT-44, REMOVAL, Transfer Case and Extension Case Assembly.>
3) Remove the transmission case. <Ref. to 5MT-56, REMOVAL, Transmission Case.>
4) Removes the drive pinion shaft assembly. <Ref. to 5MT-77, REMOVAL, Drive Pinion Shaft Assembly.>
5) Remove the main shaft assembly.
• Single-range model
<Ref. to 5MT-62, REMOVAL, Main Shaft Assembly for Single-Range.>
• Dual-range model
<Ref. to 5MT-67, REMOVAL, Main Shaft Assembly for Dual-Range.>
6) Remove the differential assembly.

NOTE:
• Be careful not to confuse right and left roller bearing outer races.
• Be careful not to damage the oil seal of retainer.



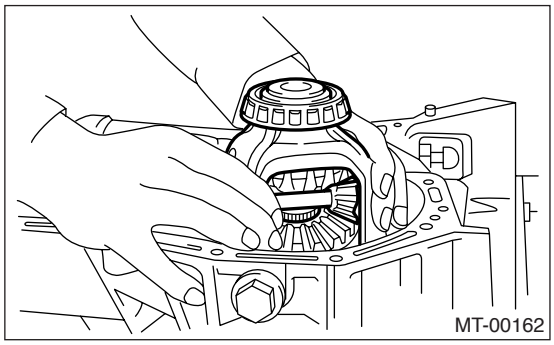
7) Remove the differential side retainers using ST.
ST 499787000 WRENCH ASSY



B: INSTALLATION

1) Install the differential side retainers using ST.
ST 499787000 WRENCH ASSY
2) Install the bearing outer race on transmission case.
3) Install the differential assembly.

NOTE:
Be careful not to fold the sealing lip of oil seal.

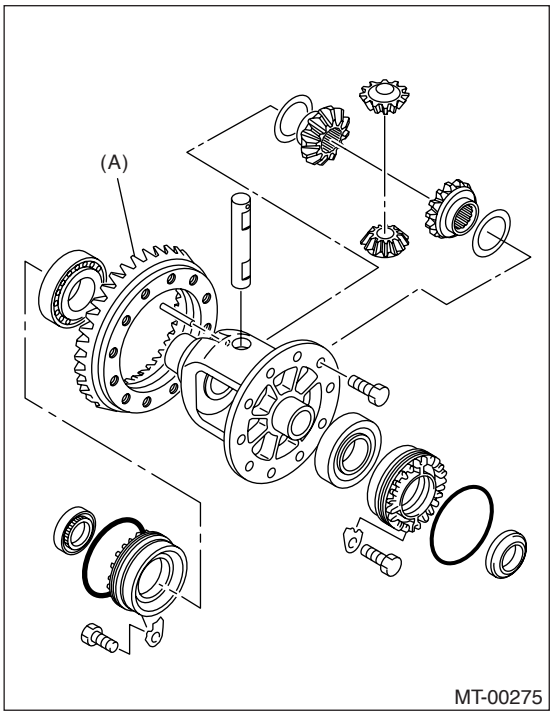


4) Install the main shaft assembly.
• Single-range model
<Ref. to 5MT-62, INSTALLATION, Main Shaft Assembly for Single-Range.>
• Dual-range model
<Ref. to 5MT-67, INSTALLATION, Main Shaft Assembly for Dual-Range.>
5) Install the drive pinion assembly. <Ref. to 5MT-77, INSTALLATION, Drive Pinion Shaft Assembly.>
6) Install the transmission case. <Ref. to 5MT-58, INSTALLATION, Transmission Case.>
7) Install the transfer case with extension case assembly. <Ref. to 5MT-44, INSTALLATION, Transfer Case and Extension Case Assembly.>
8) Install the manual transmission assembly into vehicle. <Ref. to 5MT-33, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

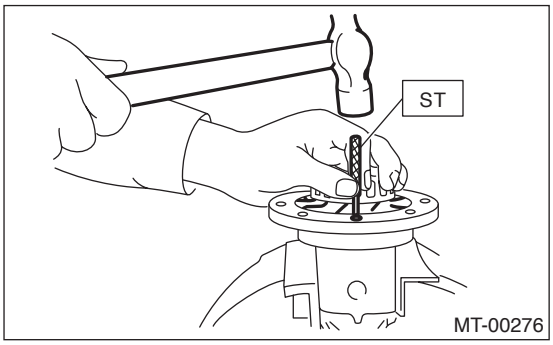
1. DIFFERENTIAL CASE ASSEMBLY

1) Loosen the twelve bolts and remove hypoid driven gear.

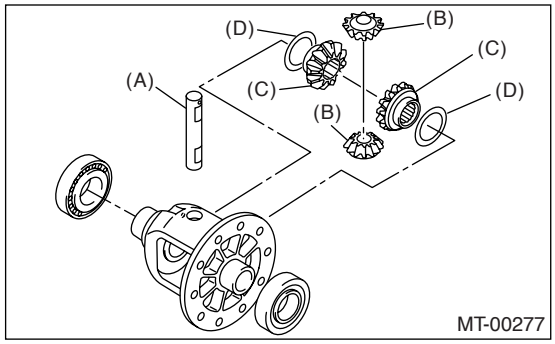


(A) Hypoid driven gear

2) Drive out the straight pin from differential assembly toward hypoid driven gear side.
ST 899904100 REMOVER

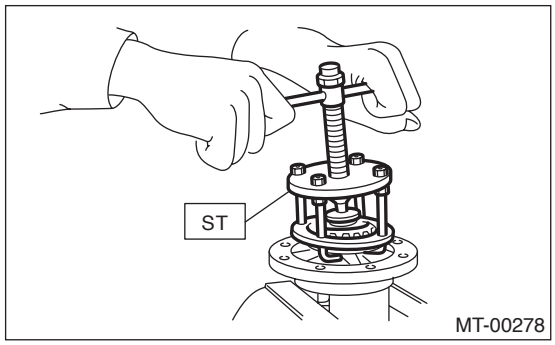


3) Pull out the pinion shaft, and remove the differential bevel pinion, bevel gear and washer.



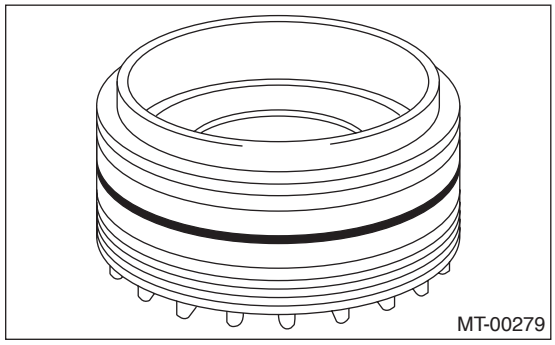
(A) Pinion shaft
(B) Bevel pinion
(C) Bevel gear
(D) Washer

4) Using the ST, remove the roller bearing.
ST 899524100 PULLER SET



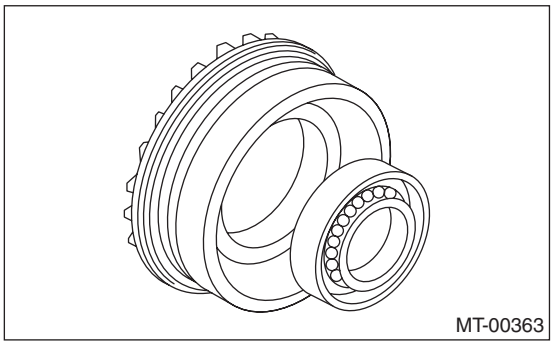
2. SIDE RETAINER

1) Remove the O-ring.



2) Remove the oil seal.

NOTE:
Do not reuse the oil seal. Replace with a new oil seal.

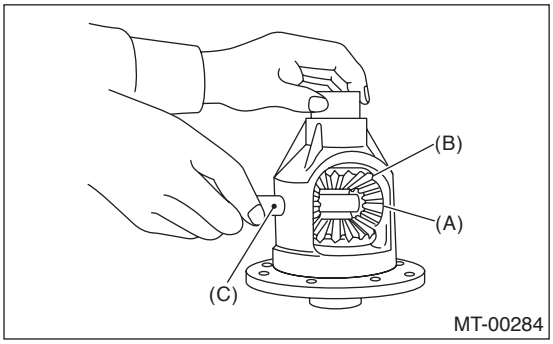


D: ASSEMBLY

1. DIFFERENTIAL CASE ASSEMBLY

1) Install the bevel gear and bevel pinion together with washers, and insert the pinion shaft.

NOTE:
Face the chamfered side of washer toward gear.



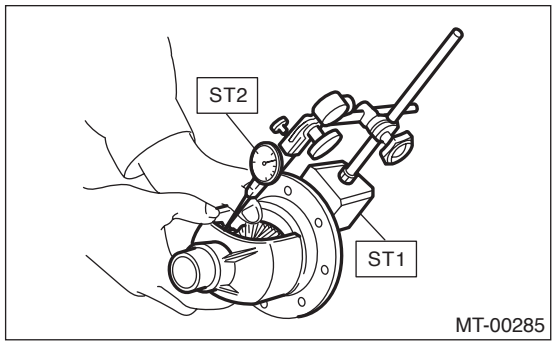
(A) Bevel pinion
(B) Bevel gear
(C) Pinion shaft

2) Measure the backlash between bevel gear and pinion. If it is not within specifications, install a suitable washer to adjust. <Ref. to 5MT-89, ADJUSTMENT, Front Differential Assembly.>

NOTE:
Be sure the pinion gear teeth contacts adjacent gear teeth during measurement.

ST1 498247001 MAGNET BASE
ST2 498247100 DIAL GAUGE

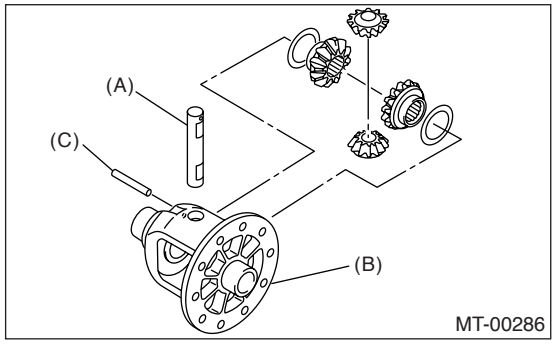
Standard backlash
0.13 — 0.18 mm (0.0051 — 0.0071 in)



3) Align the pinion shaft and differential case at their holes, and drive the straight pin into holes from the hypoid driven gear side, using ST.

NOTE:
Lock the straight pin after installing.

ST 899904100 REMOVER

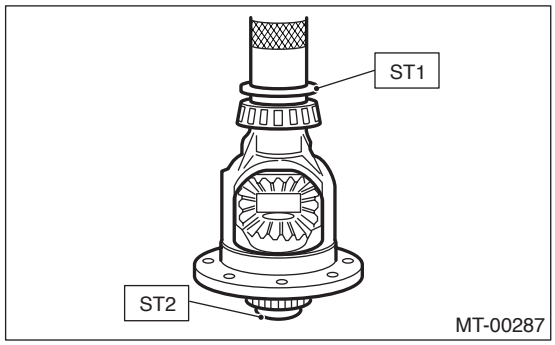


(A) Pinion shaft
(B) Differential case
(C) Straight pin

4) Install the roller bearing to differential case.

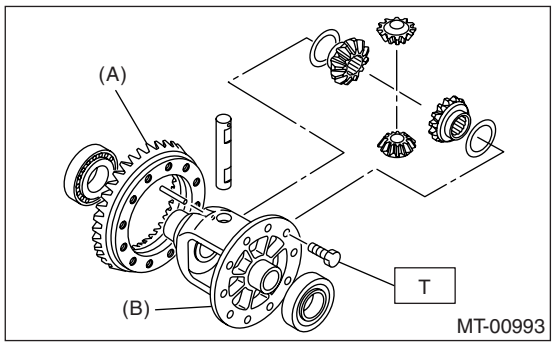
NOTE:
• Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).
• Be careful because the roller bearing outer races are used as a set.

ST1 499277100 BUSHING 1-2 INSTALLER
ST2 398497701 ADAPTER



5) Install the hypoid driven gear to differential case using twelve bolts.

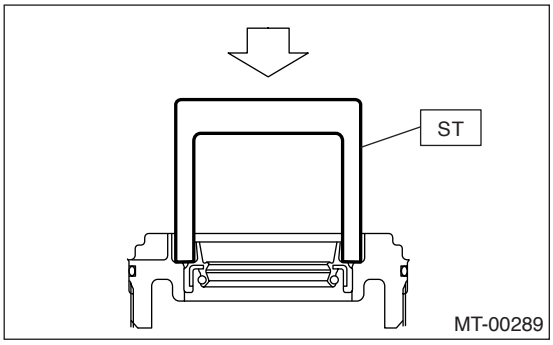
Tightening torque:
T: 62 N·m (6.3 kgf-m, 45.6 ft-lb)



(A) Hypoid driven gear
(B) Differential case

2. SIDE RETAINER

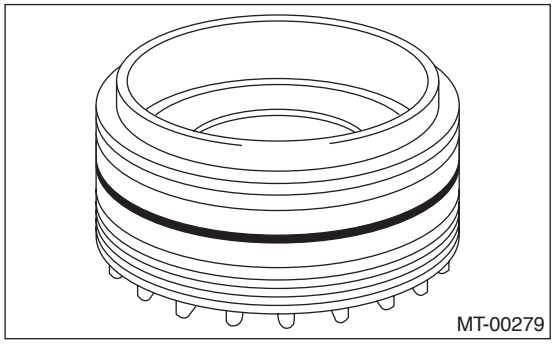
1) Install a new oil seal.
ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER



NOTE:
• For press-fitting of oil seal to retainer, make tapping with plastic hammer etc.
• Do not use press.

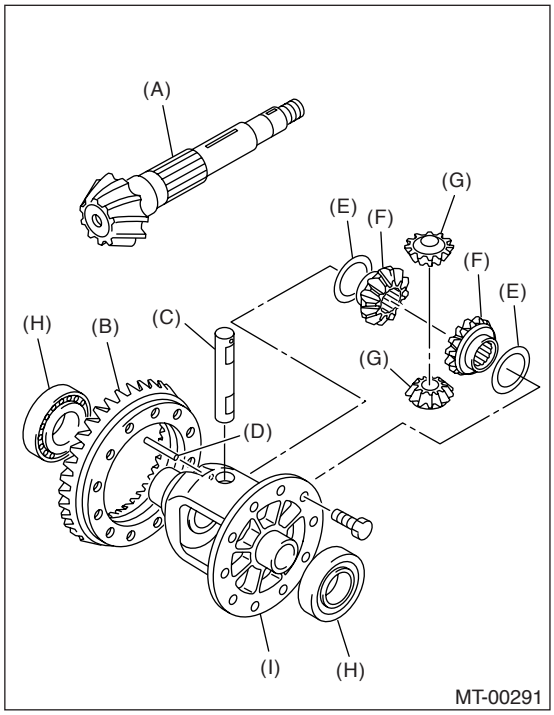
2) Install a new O-ring.

NOTE:
Do not stretch or damage the O-ring.



E: INSPECTION

Repair or replace the differential gear in following cases:
• When the hypoid drive gear and drive pinion shaft tooth surface are damaged, excessively worn or seized.
• When the roller bearing on the drive pinion shaft is worn or damaged.
• When there is damage, wear or seizure of the differential bevel pinion, differential bevel gear, washer, pinion shaft and straight pin.
• When the differential case sliding surfaces is worn or damaged.



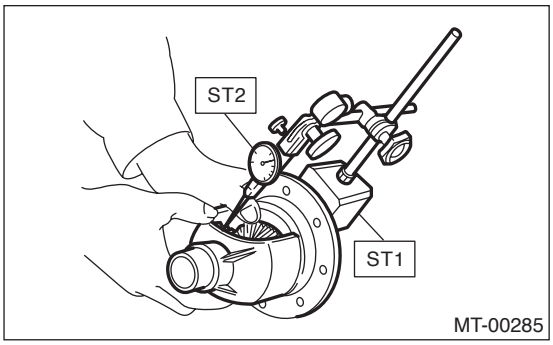
(A) Drive pinion shaft
(B) Hypoid driven gear
(C) Pinion shaft
(D) Straight pin
(E) Washer
(F) Differential bevel gear
(G) Differential bevel pinion
(H) Roller bearing
(I) Differential case

1. BEVEL PINION GEAR BACKLASH

Measure the backlash between bevel gear and pinion. If it is not within specifications, install a suitable washer to adjust.

NOTE:
Be sure the pinion gear teeth contacts adjacent gear teeth during measurement.
ST1 498247001 MAGNET BASE
ST2 498247100 DIAL GAUGE

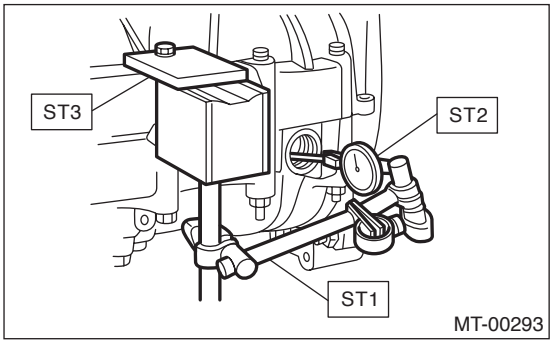
Standard backlash
0.13 — 0.18 mm (0.0051 — 0.0071 in)



2. HYPOID GEAR BACKLASH

1) Set the ST1, ST2 and ST3. Insert the needle through transmission oil drain plug hole so that the needle comes in contact with the tooth surface on the right corner and check the backlash.
ST1 498247001 MAGNET BASE
ST2 498247100 DIAL GAUGE
ST3 498255400 PLATE
2) Install the SUBARU genuine axle shafts to both side, rotate in the inversion direction so that the gauge contact with the tooth surface and read the dial gauge.
Part No. 38415AA100 AXLE SHAFT

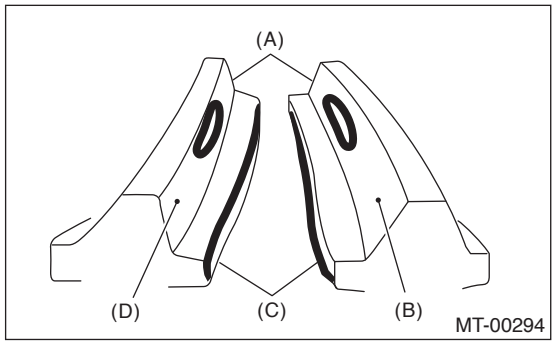
Backlash
0.13 — 0.18 mm (0.0051 — 0.0071 in)



NOTE:
If the backlash is outside the specified range, adjust it by turning the side retainer in right side case.

3. TOOTH CONTACT OF HYPOID GEAR

Check tooth contact of hypoid gear as follows: Apply a uniform thin coat of red lead on both tooth surfaces of 3 or 4 teeth of the hypoid gear. Move the hypoid gear back and forth by turning the transmission main shaft until a definite contact pattern is developed on hypoid gear, and judge whether face contact is correct. If it is inaccurate, make adjustment. <Ref. to 5MT-89, ADJUSTMENT, Front Differential Assembly.>
• Tooth contact is correct.



(A) Toe
(B) Coast side
(C) Heel
(D) Drive side

F: ADJUSTMENT

1. BEVEL PINION GEAR BACKLASH

1) Disassemble the front differential. <Ref. to 5MT-85, REMOVAL, Front Differential Assembly.>
2) Select a different washer from the table and install.

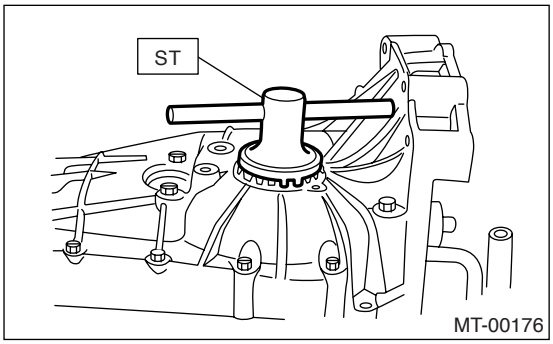
Washer	
Part Number	Thickness mm (in)
803038021	0.925 — 0.950 (0.0364 — 0.0374)
803038022	0.975 — 1.000 (0.0384 — 0.0394)
803038023	1.025 — 1.050 (0.0404 — 0.0413)

3) Adjust until the standard value is obtained.

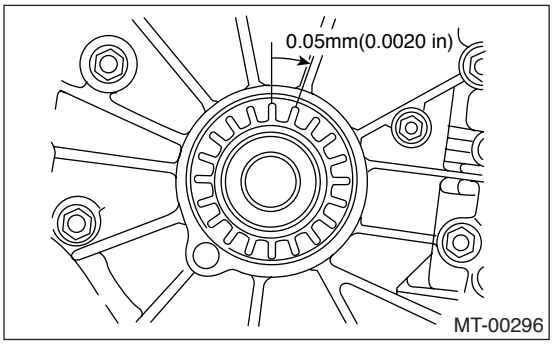
Backlash:
Standard
0.13 — 0.18 mm (0.0051 — 0.0071 in)

2. HYPOID GEAR BACKLASH

Adjust the backlash by turning holder in the right side case.
ST 499787000 WRENCH ASSY

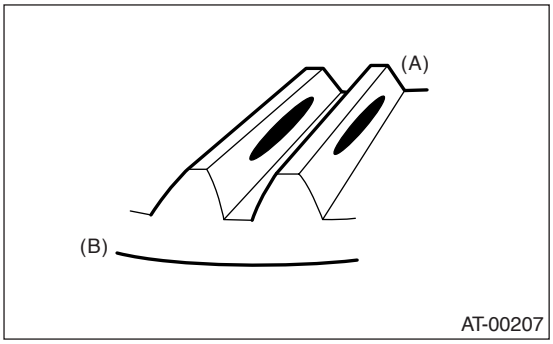


NOTE:
Each time the side retainer rotates one notch, backlash changes by 0.05 mm (0.020 in).



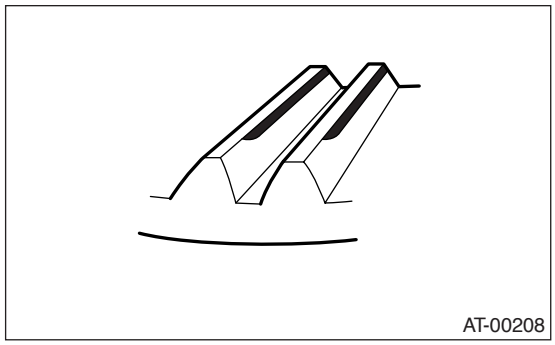
3. TOOTH CONTACT OF HYPOID GEAR

1) Adjust until correct teeth contact is obtained.
2) Check tooth contact as follows.
• Tooth contact
Checking item: Tooth contact pattern is slightly shifted to toe side under no-load rotation. [When loaded, contact pattern moves toward heel.]

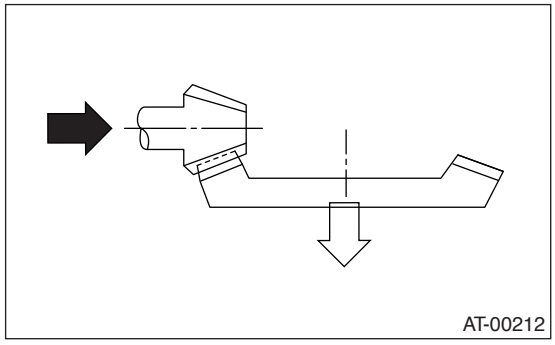


(A) Toe side
(B) Heel side

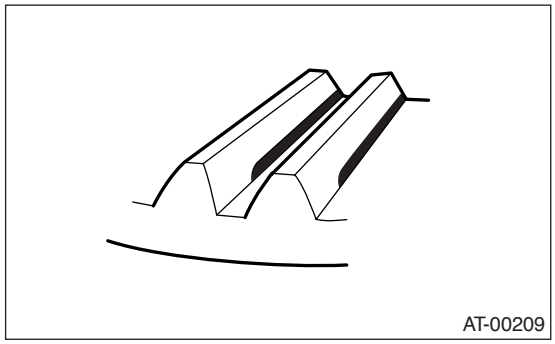
• Face contact
Checking item: Backlash is too large.
Contact pattern



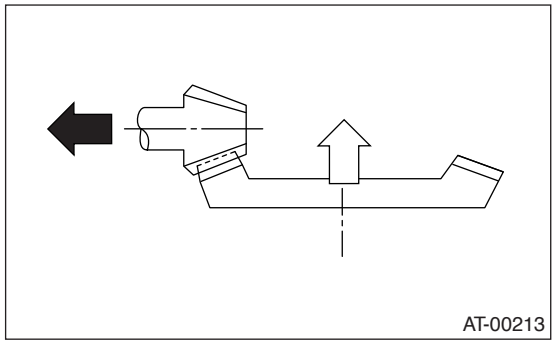
Corrective action: Reduce thickness of pinion height adjusting washer in order to bring drive pinion closer to driven gear.



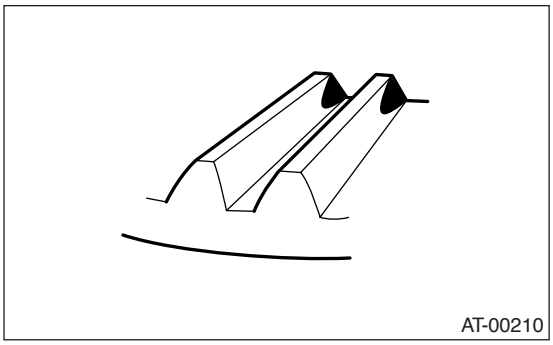
• Flank contact
Checking item: Backlash is too small.
Contact pattern



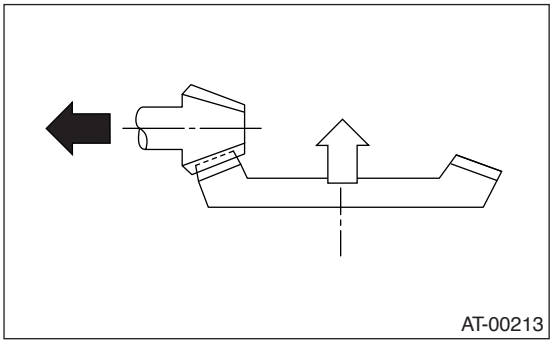
Corrective action: Increase thickness of pinion height adjusting washer in order to bring drive pinion away from driven gear.



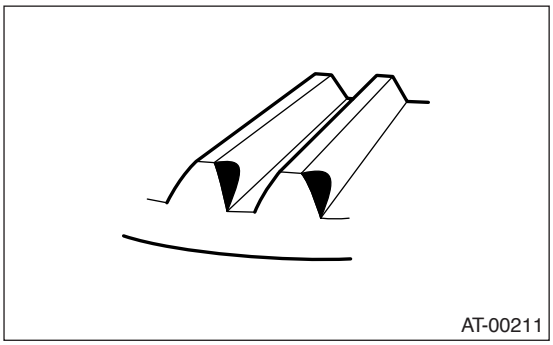
• Toe contact (inside end contact)
Checking item: Contact area is small.
Contact pattern



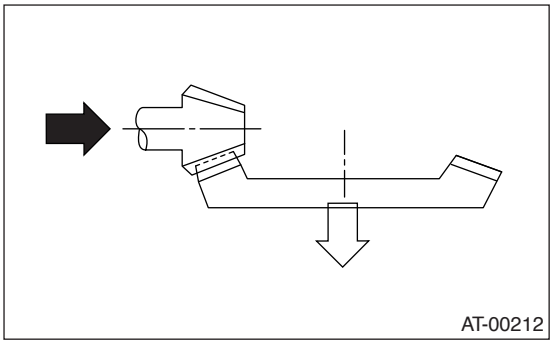
Corrective action: Increase thickness of pinion height adjusting washer in order to bring drive pinion closer to driven gear.



• Heel contact (outside end contact)
Checking item: Contact area is small.
Contact pattern



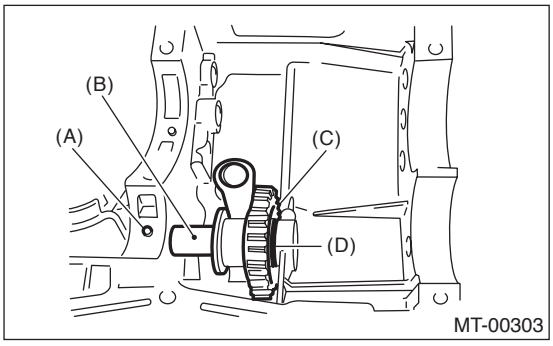
Corrective action: Reduce thickness of pinion height adjusting washer in order to bring drive pinion away from driven gear.



20.Reverse Idler Gear

A: REMOVAL

1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>
2) Remove the back-up light switch and neutral position switch. <Ref. to 5MT-41, REMOVAL, Switches and Harness.>
3) Remove the transfer case with extension case assembly. <Ref. to 5MT-44, REMOVAL, Transfer Case and Extension Case Assembly.>
4) Remove the transmission case. <Ref. to 5MT-77, REMOVAL, Drive Pinion Shaft Assembly.>
5) Remove the drive pinion shaft assembly. <Ref. to 5MT-77, REMOVAL, Drive Pinion Shaft Assembly.>
6) Remove the main shaft assembly.
• Single-range model
<Ref. to 5MT-62, REMOVAL, Main Shaft Assembly for Single-Range.>
• Dual-range model
<Ref. to 5MT-67, REMOVAL, Main Shaft Assembly for Dual-Range.>
7) Remove the differential assembly. <Ref. to 5MT-85, REMOVAL, Front Differential Assembly.>
8) Remove the shifter forks and rods. <Ref. to 5MT-94, REMOVAL, Shifter Fork and Rod.>
9) Pull out the straight pin, and remove the idler gear shaft, reverse idler gear and washer.



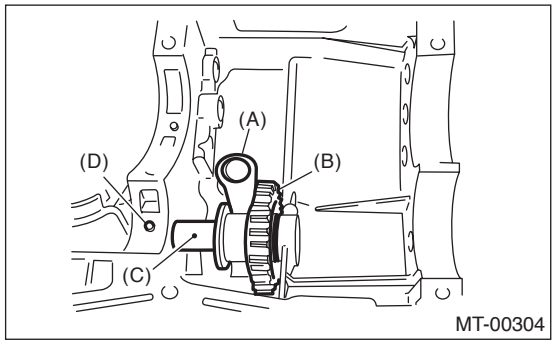
(A) Straight pin
(B) Reverse idler gear shaft
(C) Reverse idler gear
(D) Washer

10) Remove the reverse shifter lever.

B: INSTALLATION

1) Install the reverse shifter lever, reverse idler gear and reverse idler gear shaft, and secure them with straight pin.

NOTE:
Be sure to install the reverse idler shaft from rear side.



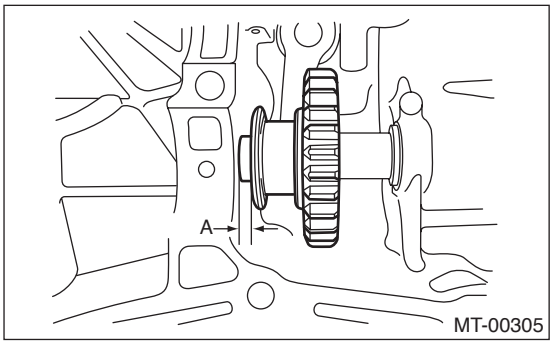
(A) Reverse shifter lever
(B) Reverse idler gear
(C) Reverse idler gear shaft
(D) Straight pin

2) Inspect and adjust the clearance between reverse idler gear and transmission case wall. <Ref. to 5MT-92, INSTALLATION, Reverse Idler Gear.> <Ref. to 5MT-93, ADJUSTMENT, Reverse Idler Gear.>
3) Install the shifter forks and rods. <Ref. to 5MT-94, INSTALLATION, Shifter Fork and Rod.>
4) Install the differential assembly. <Ref. to 5MT-85, INSTALLATION, Front Differential Assembly.>
5) Install the main shaft assembly.
• Single-range model
<Ref. to 5MT-62, INSTALLATION, Main Shaft Assembly for Single-Range.>
• Dual-range model
<Ref. to 5MT-67, INSTALLATION, Main Shaft Assembly for Dual-Range.>
6) Install the drive pinion shaft assembly. <Ref. to 5MT-77, INSTALLATION, Drive Pinion Shaft Assembly.>
7) Install the transmission case. <Ref. to 5MT-58, INSTALLATION, Transmission Case.>
8) Install the transfer case with extension case assembly. <Ref. to 5MT-44, INSTALLATION, Transfer Case and Extension Case Assembly.>
9) Install the back-up light switch and neutral position switch. <Ref. to 5MT-41, INSTALLATION, Switches and Harness.>
10) Install the manual transmission assembly into vehicle. <Ref. to 5MT-33, INSTALLATION, Manual Transmission Assembly.>

C: INSPECTION

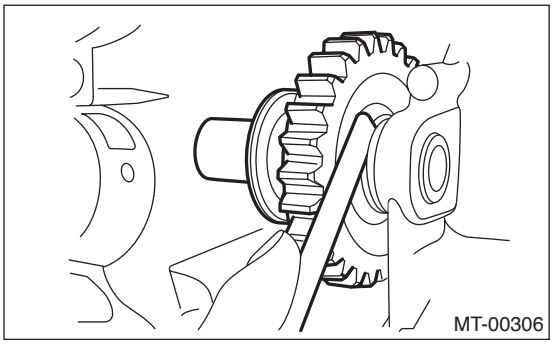
1) Move the reverse shifter rod toward reverse side. Inspect the clearance between reverse idler gear and transmission case wall.
If out of specification, select an appropriate reverse shifter lever and adjust.

Clearance A:
6.0 — 7.5 mm (0.236 — 0.295 in)



2) After installing a suitable reverse shifter lever, shift into neutral. Inspect the clearance between reverse idler gear and transmission case wall.
If out of specification, select an appropriate washer and adjust.

Clearance:
0 — 0.5 mm (0 — 0.020 in)

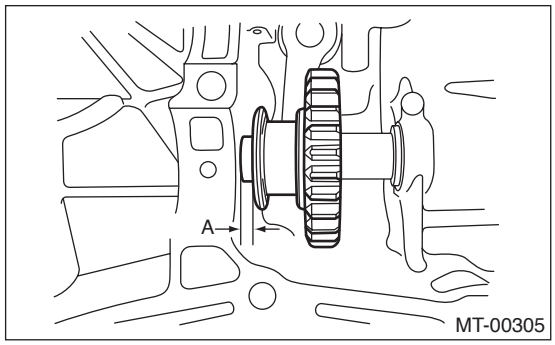


3) Check the reverse idler gear and shaft for damage. Replace if it is damaged.

D: ADJUSTMENT

1) Select an appropriate reverse shifter lever from the table below, and adjust until the gap between reverse idler gear and transmission case wall is within specification.

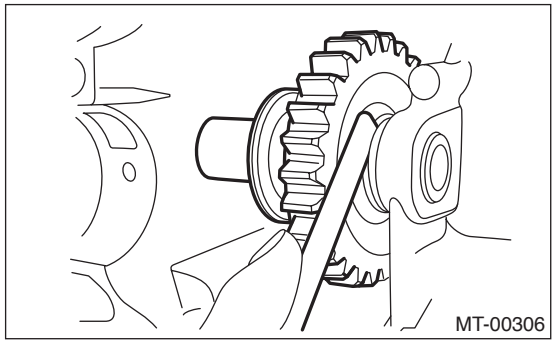
Clearance A:
6.0 — 7.5 mm (0.236 — 0.295 in)



Reverse shifter lever		
Part Number	Marking	Remarks
32820AA070	7	Further from case wall
32820AA080	8	Standard
32820AA090	9	Closer to case wall

2) Select an appropriate washer from the table below, and adjust until the gap between the reverse idler gear and transmission case wall is within specification.

Clearance:
0 — 0.5 mm (0 — 0.020 in)

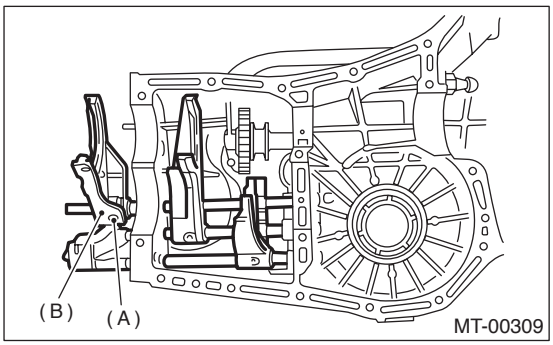


Washer	
Part Number	Thickness mm (in)
803020151	0.4 (0.016)
803020152	1.1 (0.043)
803020153	1.5 (0.059)
803020154	1.9 (0.075)
803020155	2.3 (0.091)

21.Shifter Fork and Rod

A: REMOVAL

1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>
2) Remove the back-up light switch and neutral position switch. <Ref. to 5MT-41, REMOVAL, Switches and Harness.>
3) Remove the transfer case with extension case assembly. <Ref. to 5MT-44, REMOVAL, Transfer Case and Extension Case Assembly.>
4) Remove transmission case. <Ref. to 5MT-56, REMOVAL, Transmission Case.>
5) Removes the drive pinion shaft assembly. <Ref. to 5MT-77, REMOVAL, Drive Pinion Shaft Assembly.>
6) Remove the main shaft assembly.
• Single-range model
<Ref. to 5MT-62, REMOVAL, Main Shaft Assembly for Single-Range.>
• Dual-range model
<Ref. to 5MT-67, REMOVAL, Main Shaft Assembly for Dual-Range.>
7) Remove the differential assembly. <Ref. to 5MT-85, REMOVAL, Front Differential Assembly.>
8) Drive out the straight pin tapping by ST, and pull out the 5th shifter fork.
ST 398791700 STRAIGHT PIN REMOVER

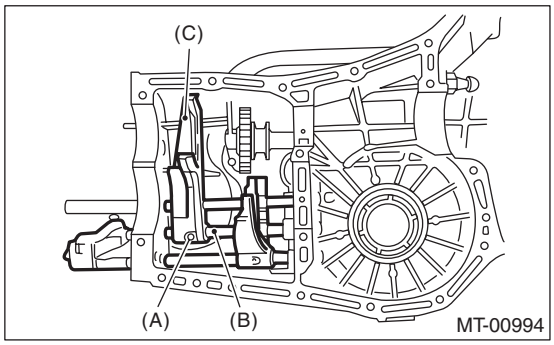


(A) Straight pin
(B) 5th shifter fork

9) Remove the plugs, springs and checking balls.
10) Drive out the straight pin tapping by ST, and pull out the 3-4 fork rod and shifter fork.

NOTE:
When removing a rod, keep other rods in neutral. Also, when pulling out the straight pin, remove it toward the inside of case so that it does not hit against the case.

ST 398791700 STRAIGHT PIN REMOVER



(A) Straight pin
(B) 3-4 fork rod
(C) Shifter fork

11) Drive out the straight pin tapping by ST, and pull out the 1-2 fork rod and shifter fork.
ST 398791700 STRAIGHT PIN REMOVER
12) Remove the outer snap ring, and pull out reverse fork rod from reverse shifter rod arm. Then take out the ball, spring and interlock plunger from rod.
And then remove the rod.

NOTE:
When pulling out reverse shifter rod arm, be careful not to let ball pop out of arm.

13) Remove the reverse shifter lever.

B: INSTALLATION

1) Install the reverse arm fork spring, ball and interlock plunger to reverse fork rod arm. Insert the reverse fork rod into the hole in reverse fork rod arm, and hold it with outer snap ring using ST.

NOTE:
Apply a coat of grease to plunger to prevent it from falling.

ST 399411700 ACCENT BALL INSTALLER
2) Position the ball, spring and new gasket in the reverse shifter rod hole on the left side of transmission case, and tighten the checking ball plug.
3) Install the 1-2 fork rod into 1-2 shifter fork through the hole on the rear of transmission case.
4) Align the holes in rod and fork, and drive new straight pin into these holes using ST.

NOTE:
• Set other rods to neutral.
• Make sure the interlock plunger is on the 3-4 fork rod side.

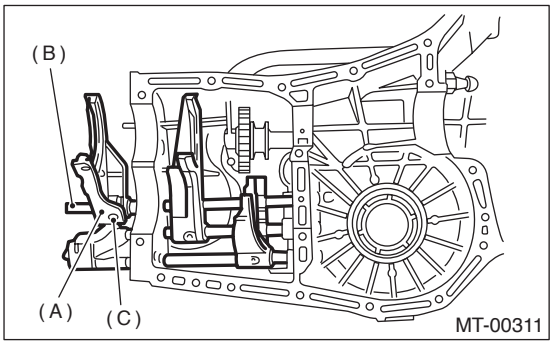
ST 398791700 STRAIGHT PIN REMOVER
5) Install the interlock plunger onto 3-4 fork rod.

NOTE:
Apply a coat of grease to plunger to prevent it from falling.

6) Install the 3-4 fork rod into 3-4 shifter fork through the hole on the rear of transmission case.
7) Align the holes in rod and fork, and drive new straight pin into these holes.

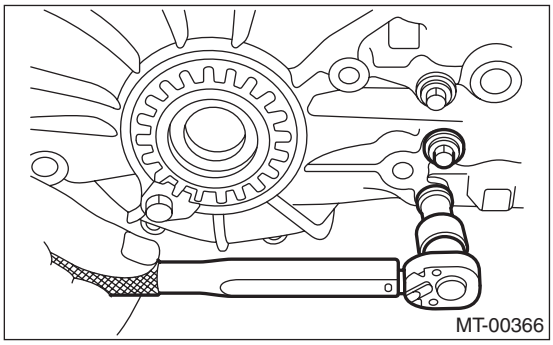
NOTE:
• Set the reverse fork rod to neutral.
• Make sure the interlock plunger (before installation) is on the reverse fork rod side.

ST 398791700 STRAIGHT PIN REMOVER
8) Install the 5th shifter fork onto the rear of reverse fork rod. Align the holes in the two parts and drive new straight pin into the specified place.
ST 398791700 STRAIGHT PIN REMOVER



(A) 5th shifter fork
(B) Reverse fork rod
(C) Straight pin

9) Position the balls, checking ball springs and new gaskets into 3-4 and 1-2 rod holes, and install plugs.

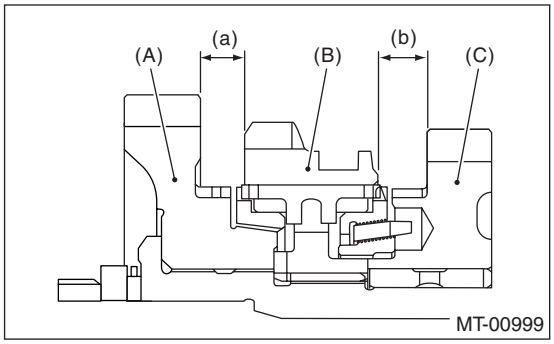


10) Install the differential assembly. <Ref. to 5MT-85, INSTALLATION, Front Differential Assembly.>
11) Install the main shaft assembly.
• Single-range model
<Ref. to 5MT-62, INSTALLATION, Main Shaft Assembly for Single-Range.>
• Dual-range model
<Ref. to 5MT-67, INSTALLATION, Main Shaft Assembly for Dual-Range.>
12) Install the drive pinion shaft assembly. <Ref. to 5MT-77, INSTALLATION, Drive Pinion Shaft Assembly.>
13) Install the transmission case. <Ref. to 5MT-58, INSTALLATION, Transmission Case.>
14) Install the transfer case with extension case assembly. <Ref. to 5MT-44, INSTALLATION, Transfer Case and Extension Case Assembly.>
15) Install the back-up light switch and neutral position switch. <Ref. to 5MT-41, INSTALLATION, Switches and Harness.>
16) Install the manual transmission assembly into vehicle. <Ref. to 5MT-33, INSTALLATION, Manual Transmission Assembly.>

C: INSPECTION

1) Inspect the fork and rod for damage. Replace if it is damaged.
2) Gearshift mechanism
Repair or replace the gearshift mechanism if excessively worn, bent, or defective in any way.
3) Inspect the clearance between 1st, 2nd driven gear and reverse driven gear. If any clearance is not within specifications, replace the shifter fork as required.

Clearance (a) and (b):
9.5 mm (0.374 in)

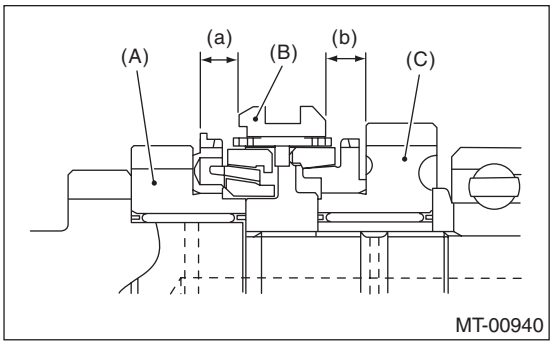


(A) 1st driven gear
(B) Reverse driven gear
(C) 2nd driven gear

1st-2nd shifter fork		
Part Number	Marking	Remarks
32804AA060	1	Approach to 1st gear by 0.2 mm (0.008 in).
32804AA070	—	Standard
32804AA080	3	Become distant from 2nd gear by 0.2 mm (0.008 in).

4) Inspect the clearance between 3rd, 4th drive gear and coupling sleeve. If any clearance is not within specifications, replace the shifter fork as required.

Clearance (a) and (b):
7.3 mm (0.287 in)

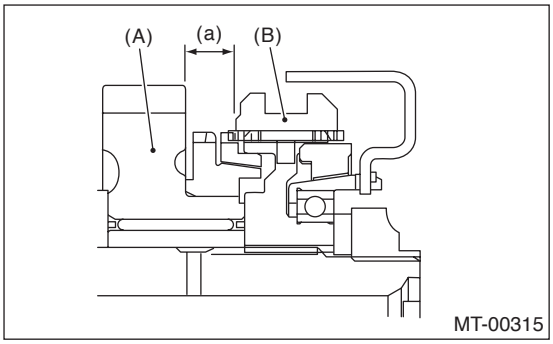


(A) 3rd drive gear
(B) Coupling sleeve
(C) 4th drive gear

3rd-4th shifter fork		
Part Number	Marking	Remarks
32810AA061	1	Approach to 4th gear by 0.2 mm (0.008 in).
32810AA071	—	Standard
32810AA101	3	Become distant from 3rd gear by 0.2 mm (0.008 in).

5) Inspect the clearance between 5th drive gear and coupling sleeve. If any clearance is not within specifications, replace the shifter fork as required.

Clearance (a):
9.3 mm (0.366 in)



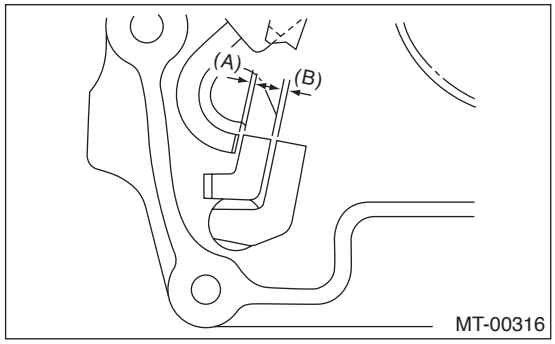
(A) 5th drive gear
(B) Coupling sleeve

5th shifter fork		
Part Number	Marking	Remarks
32812AA201	4	Approach to 5th gear by 0.2 mm (0.008 in).
32812AA211	5	Standard
32812AA221	6	Become distant from 5th gear by 0.2 mm (0.008 in).

6) Inspect the rod end clearances (A) and (B). If any clearance is not within specifications, replace the rod or fork as required.

Clearance (A):
3rd-4th — 5th:
0.5 — 1.3 mm (0.020 — 0.051 in)

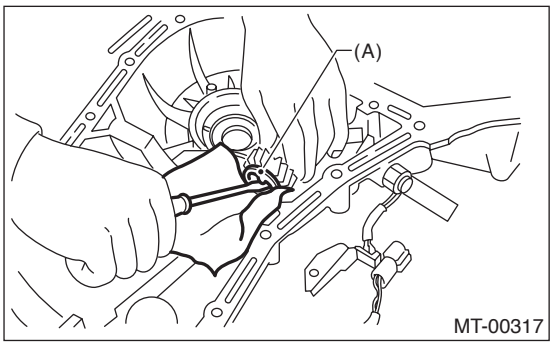
Clearance (B):
1st-2nd — 3rd-4th
0.4 — 1.4 mm (0.016 — 0.055 in)



22.Counter Gear

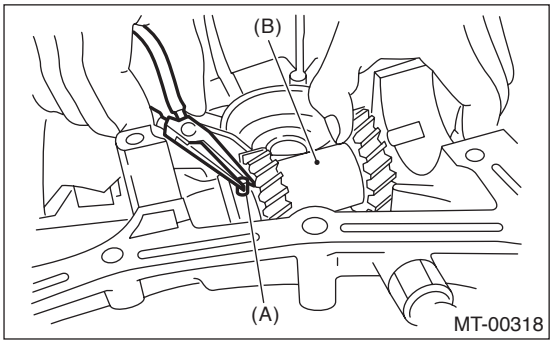
A: REMOVAL

1) Remove the manual transmission assembly from vehicle. **<Ref. to 5MT-31,** REMOVAL, Manual Transmission Assembly.>
2) Remove the transfer case with extension case assembly. **<Ref. to 5MT-44,** REMOVAL, Transfer Case and Extension Case Assembly.>
3) Remove the transmission case. **<Ref. to 5MT-56,** REMOVAL, Transmission Case.>
4) Move the counter gear shaft until it touches transmission case, and remove the snap ring with a suitable tool.



(A) Snap ring

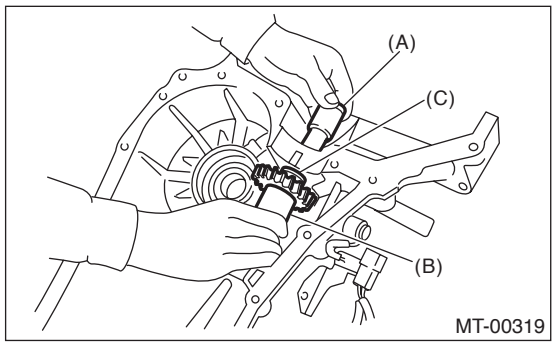
5) Slide the washer to the rear of high-low counter shaft, and remove the straight pin from counter shaft.



(A) Straight pin
(B) Counter gear

6) Remove the counter shaft from transmission case, taking care not to drop the counter gear and two washers.

NOTE:
• Be careful not to damage the O-ring.
• Be careful not to drop the straight pin on front side.
• Be careful not to drop the two needle bearings and collar contained in counter gear.



(A) Counter shaft
(B) Counter gear
(C) Washers

B: INSTALLATION

1) Install the O-ring and straight pin onto counter gear shaft.
2) Install the following parts in main case (Right-side), and push the shaft perfectly into case.
• Counter gear shaft
• Two counter gear washers
• Two needle bearings
• Counter gear collar
• Counter gear
• Straight pin
• Snap ring
3) Install the transmission case. **<Ref. to 5MT-58,** INSTALLATION, Transmission Case.>
4) Install the transfer case with extension case assembly. **<Ref. to 5MT-44,** INSTALLATION, Transfer Case and Extension Case Assembly.>
5) Install the manual transmission assembly on vehicle. **<Ref. to 5MT-33,** INSTALLATION, Manual Transmission Assembly.>

NOTE:
• Make sure that the cut-out end surface of counter gear shaft does not protrude above the end surface of the case.
• Position the cut-out portion of counter gear shaft.

C: INSPECTION

1) After installing the snap ring, measure the clearance between snap ring and counter washer.

Clearance:
0.05 — 0.35 mm (0.0020 — 0.0138 in)

2) If the clearance is out of specified value, select a snap ring and install to put clearance within specified value. **<Ref. to 5MT-98,** ADJUSTMENT**, Counter Gear.>**

D: ADJUSTMENT

Selection of snap ring:
If the measurement is not within specification, select a suitable snap ring.

Snap ring	
Part No.	Thickness mm (in)
031319000	1.50 (0.0591)
805019010	1.72 (0.0677)

23.General Diagnostic Table

A: INSPECTION

1. MANUAL TRANSMISSION

Symptom	Possible cause	Corrective action
1. Gears are difficult to intermesh. NOTE: The cause for difficulty in shifting gears can be classified into two kinds: one is defective gear shift system and the other is defective transmission. However, if the operation is heavy and engagement of the gears is difficult, defective clutch disengagement may also be responsible. Check whether the clutch is correctly functioning, before checking the gear shift system and transmission.	(a) Worn, damaged or burred chamfer of internal spline of sleeve and reverse driven gear	Replace.
	(b) Worn, damaged or burred chamfer of spline of gears	Replace.
	(c) Worn or scratched bushings	Replace.
	(d) Incorrect contact between synchronizer ring and gear cone, or wear	Rectify or replace.
2. Gear slip-out • Gear slips out when coasting on rough road. • Gear slips out during acceleration.	(a) Defective pitching stopper adjustment	Adjust.
	(b) Loose engine mounting bolts	Tighten or replace.
	(c) Worn fork shifter, broken shifter fork rail spring	Replace.
	(d) Worn or damaged ball bearing	Replace.
	(e) Excessive clearance between splines of synchronizer hub and synchronizer sleeve	Replace.
	(f) Worn tooth step of synchronizer hub (caused by slip-out of 3rd gear)	Replace.
	(g) Worn 1st driven gear and driven shaft	Replace.
	(h) Worn 2nd driven gear and bushing	Replace.
	(i) Worn 3rd drive gear and needle bearing	Replace.
	(j) Worn 3rd drive gear and needle bearing	Replace.
	(k) Worn reverse idler gear and bushing	Replace.
3. Noise emit from transmission. NOTE: If a noise is heard when the vehicle is parked with its engine idling and if a noise ceases when the clutch is disengaged, it may be considered that the noise comes from the transmission.	(a) Insufficient or improper lubrication	Lubricate with specified oil or replace.
	(b) Worn or damaged gears and bearings NOTE: If the trouble is only wear of the tooth surfaces, merely a high roaring noise will occur at high speeds, but if any part is broken, rhythmical knocking sound will be heard even at low speeds.	Replace.

2. DIFFERENTIAL

Symptom	Possible cause	Corrective action
1. Broken differential (case, gear, bearing, etc.) NOTE: Noise will be developed and finally it will become impossible to continue to run due to broken pieces obstructing the gear revolution.	(a) Insufficient or improper oil	Disassemble differential and replace broken components. At the same time check other components for any trouble, and replace if necessary.
	(b) Use of vehicle under severe conditions such as excessive load and improper use of clutch	Readjust bearing preload and backlash and face contact of gears.
	(c) Improper adjustment of taper roller bearing	Adjustment.
	(d) Improper adjustment of drive pinion and hypoid driven gear	Adjustment.
	(e) Excessive backlash due to worn differential side gear, washer or differential pinion under severe operating conditions of the vehicle.	Add recommended oil to the specified level. Do not use vehicle under severe operating conditions.
	(f) Loose hypoid driven gear tightening bolts	Tighten.
2. Differential and hypoid gear noises Troubles of the differential and hypoid gear always appear as noise problems. Therefore noise is the first indication of trouble. However noises from the engine, muffler, tire, exhaust gas, bearing, body, etc. are easily mistaken for the differential noise. Pay special attention to the hypoid gear noise because it is easily confused with other gear noises. There are the following four kinds of noises. • Gear noise when driving: If noise increases as the vehicle speed increases it may be due to insufficient gear oil, incorrect gear engagement, damaged gears, etc. • Gear noise when coasting: Damaged gears due to maladjusted bearings and incorrect shim adjustment. • Bearing noise when driving or coasting: Cracked, broken or rusty bearings • Noise mainly when turning: Noise occurs form differential side gear, differential pinion or differential pinion shaft, etc.	(a) Insufficient oil	Lubricate.
	(b) Improper adjustment of hypoid driven gear and drive pinion	Check tooth contact.
	(c) Worn teeth of hypoid driven gear and drive pinion	Replace as a set. Readjust bearing preload.
	(d) Loose roller bearing	Readjust hypoid driven gear to drive pinion backlash and check tooth contact.
	(e) Distorted hypoid driven gear or differential case	Replace.
	(f) Worn washer and differential pinion shaft	Replace.

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

1. General Description

A: SPECIFICATION

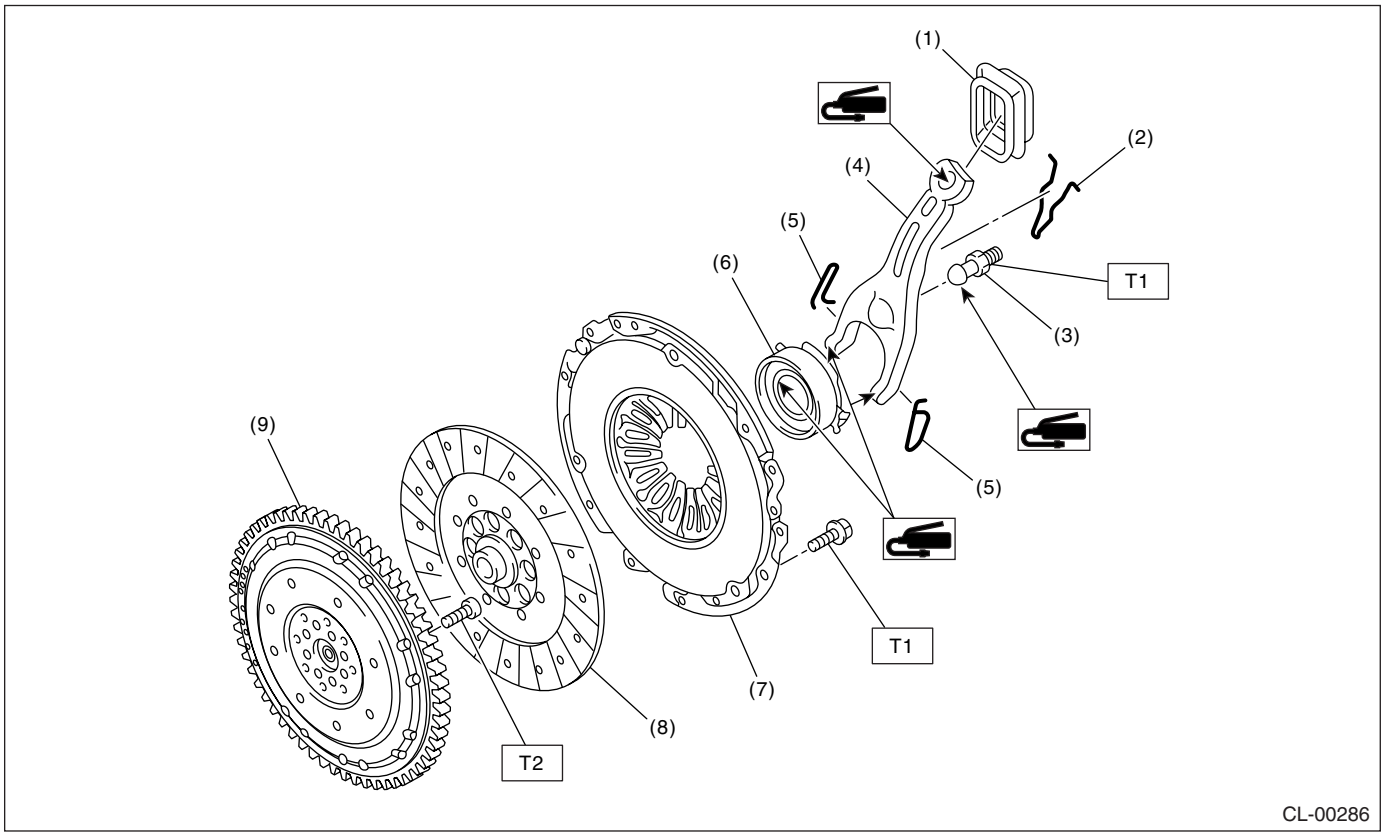
Option code★1			EC, EK, KA		KS, K4	
Model			2.0 L	2.5 L	2.0 L	2.5 L
Clutch cover	Diaphragm set load	kgf (lb)	550 (1,213)		450 (992)	580 (1,279)
Clutch disc	Facing material		Woven			
	Outer diameter × Inner diameter × Thickness	mm (in)	228.6 × 155 × 2.95 (9.00 × 6.10 × 0.1161)		225 × 150 × 3.5 (8.86 × 5.91 × 0.138)	
	Spline outer diameter	mm (in)	25.2 (0.992)			
	Depth of rivet head mm (in)	Standard	1.3 — 1.9 (0.051 — 0.075)			
		Limit of sinking	0.3 (0.012)			
	Limit for deflection	mm (in)	1.0 (0.039) at R = 110 (4.33)			
Clutch release lever ratio			1.6			
Release bearing			Grease-packed self-aligning			
Clutch pedal	Full stroke	mm (in)	130 — 135 (5.12 — 5.31)			
	Free play	mm (in)	4 — 13 (0.16 — 0.51)			
Flywheel	Type		Dual mass		Flexible	

★1: For option code, refer to “ID” section. <Ref. to ID-5, MODEL NUMBER PLATE, IDENTIFICATION, Identification.>

B: COMPONENT

1. CLUTCH ASSEMBLY

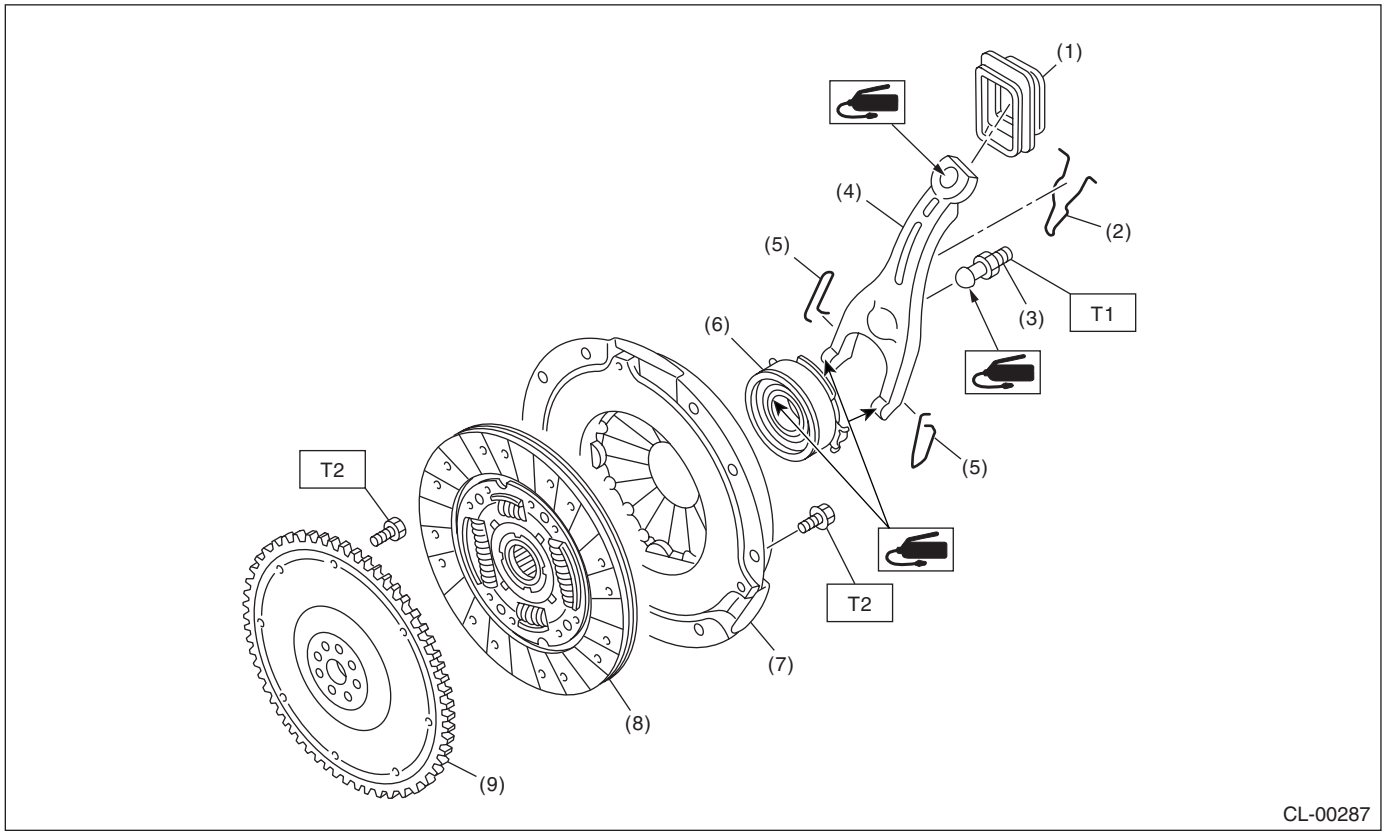
• EC, EK and KA model



(1) Dust cover
(2) Lever spring
(3) Pivot
(4) Release lever
(5) Clip
(6) Release bearing
(7) Clutch cover
(8) Clutch disc
(9) Dual mass flywheel

Tightening torque: N·m (kgf-m, ft-lb)
T1: 16 (1.6, 11.8)
T2: 72 (7.3, 52.8)

• KS and K4 model

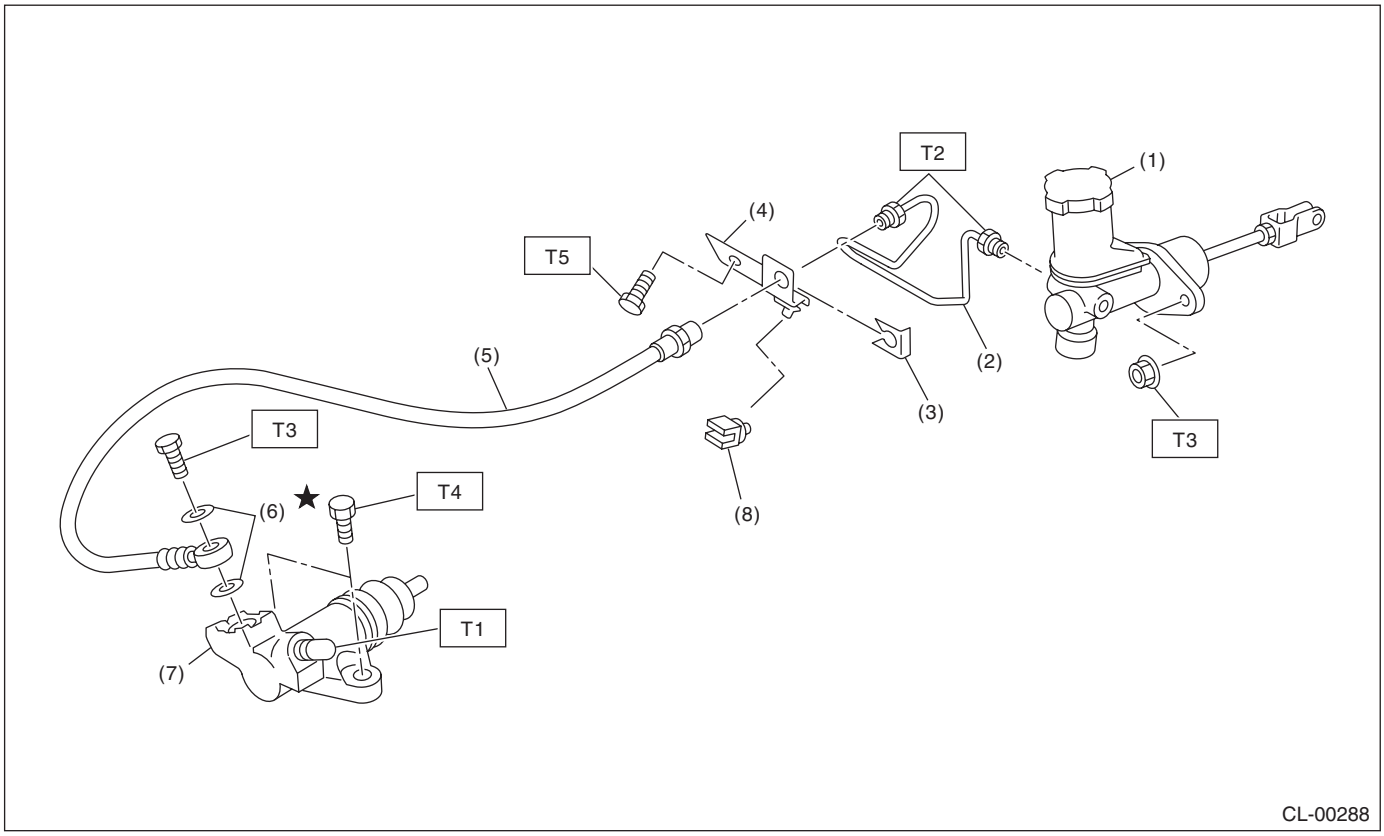


(1) Dust cover
(2) Lever spring
(3) Pivot
(4) Release lever
(5) Clip
(6) Release bearing
(7) Clutch cover
(8) Clutch disc
(9) Flexible flywheel

Tightening torque: N·m (kgf-m, ft-lb)
T1: 16 (1.6, 11.8)
T2: 72 (7.3, 52.8)

2. CLUTCH PIPE AND HOSE

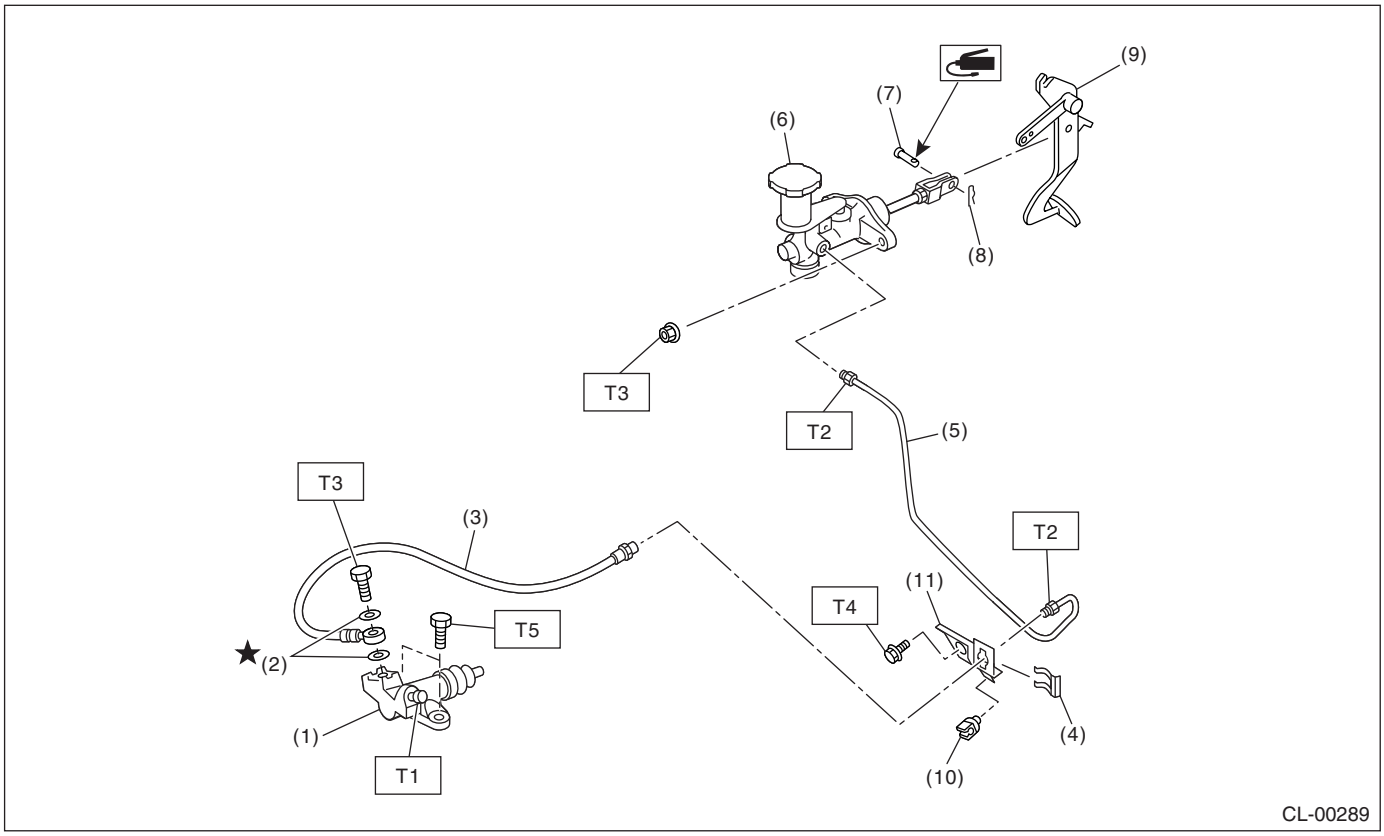
• LHD model



(1) Master cylinder ASSY
(2) Clutch pipe
(3) Clamp
(4) Bracket
(5) Clutch hose
(6) Washer
(7) Operating cylinder
(8) Clip

Tightening torque: N·m (kgf-m, ft-lb)
T1: 8 (0.8, 5.8)
T2: 15 (1.5, 10.8)
T3: 18 (1.8, 13.0)
T4: 37 (3.8, 27.5)
T5: 25 (2.5, 18.4)

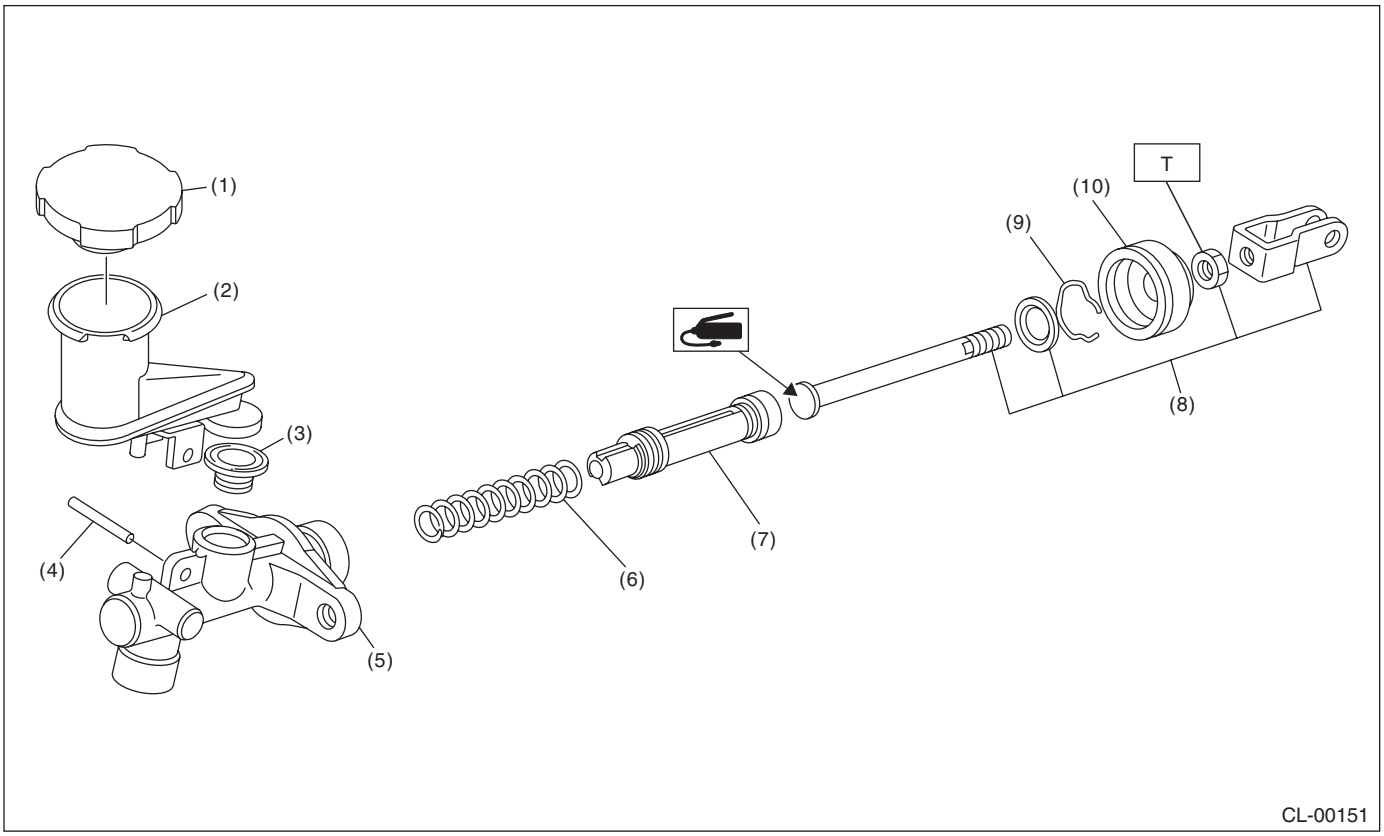
• RHD model



(1)	Operating cylinder	(7)	Clevis pin
(2)	Washer	(8)	Snap pin
(3)	Clutch hose	(9)	Pedal
(4)	Clamp	(10)	Clip
(5)	Clutch pipe	(11)	Bracket
(6)	Master cylinder ASSY		

Tightening torque: N·m (kgf-m, ft-lb)
T1: 8 (0.8, 5.8)
T2: 15 (1.5, 10.8)
T3: 18 (1.8, 13.0)
T4: 25 (2.5, 18.4)
T5: 37 (3.8, 27.5)

3. MASTER CYLINDER

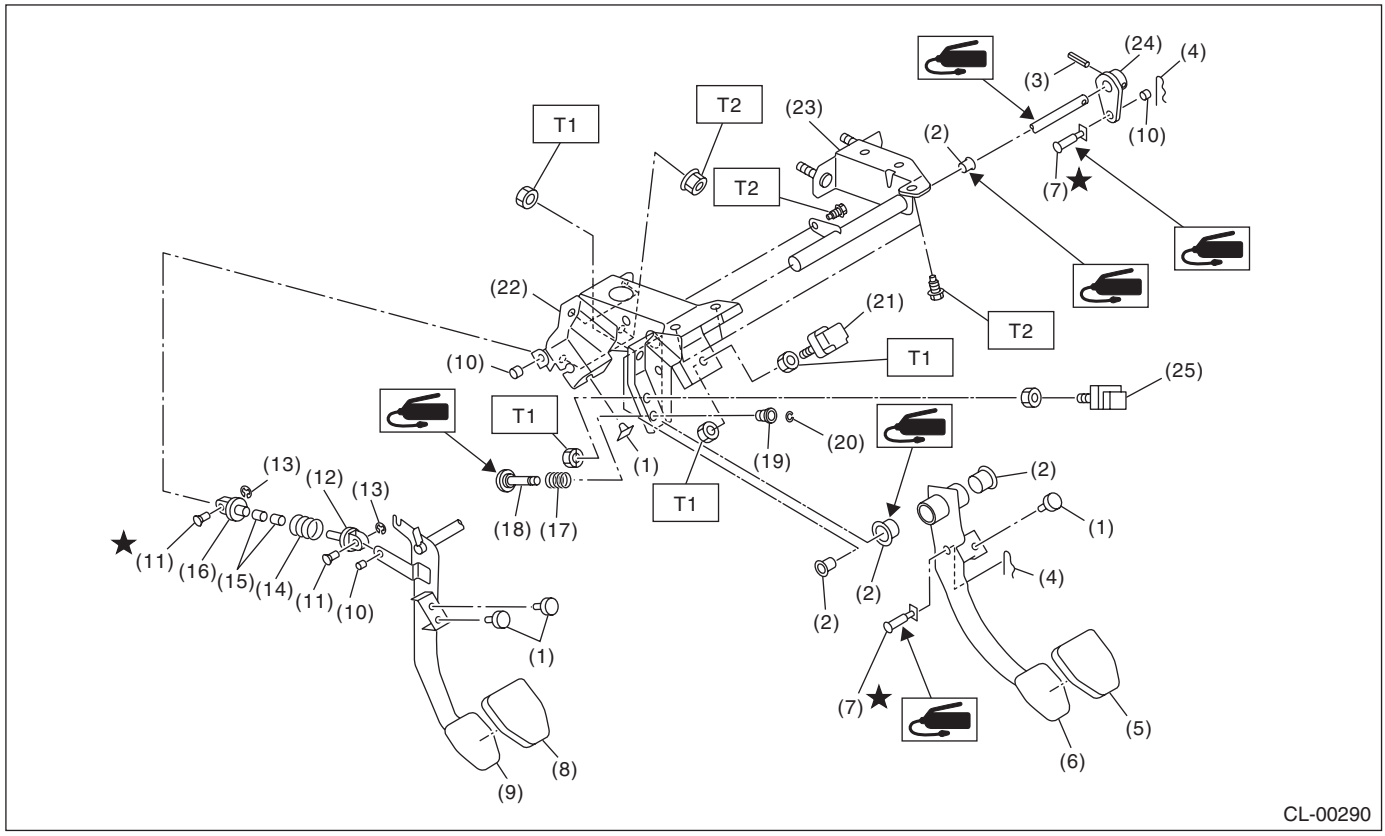


(1) Reservoir cap
(2) Reservoir tank
(3) Oil seal
(4) Straight pin
(5) Master cylinder
(6) Return spring
(7) Piston
(8) Push rod ASSY
(9) Piston stop ring
(10) Cylinder boot

Tightening torque: N·m (kgf-m, ft-lb)
T: 10 (1.0, 7)

4. CLUTCH PEDAL

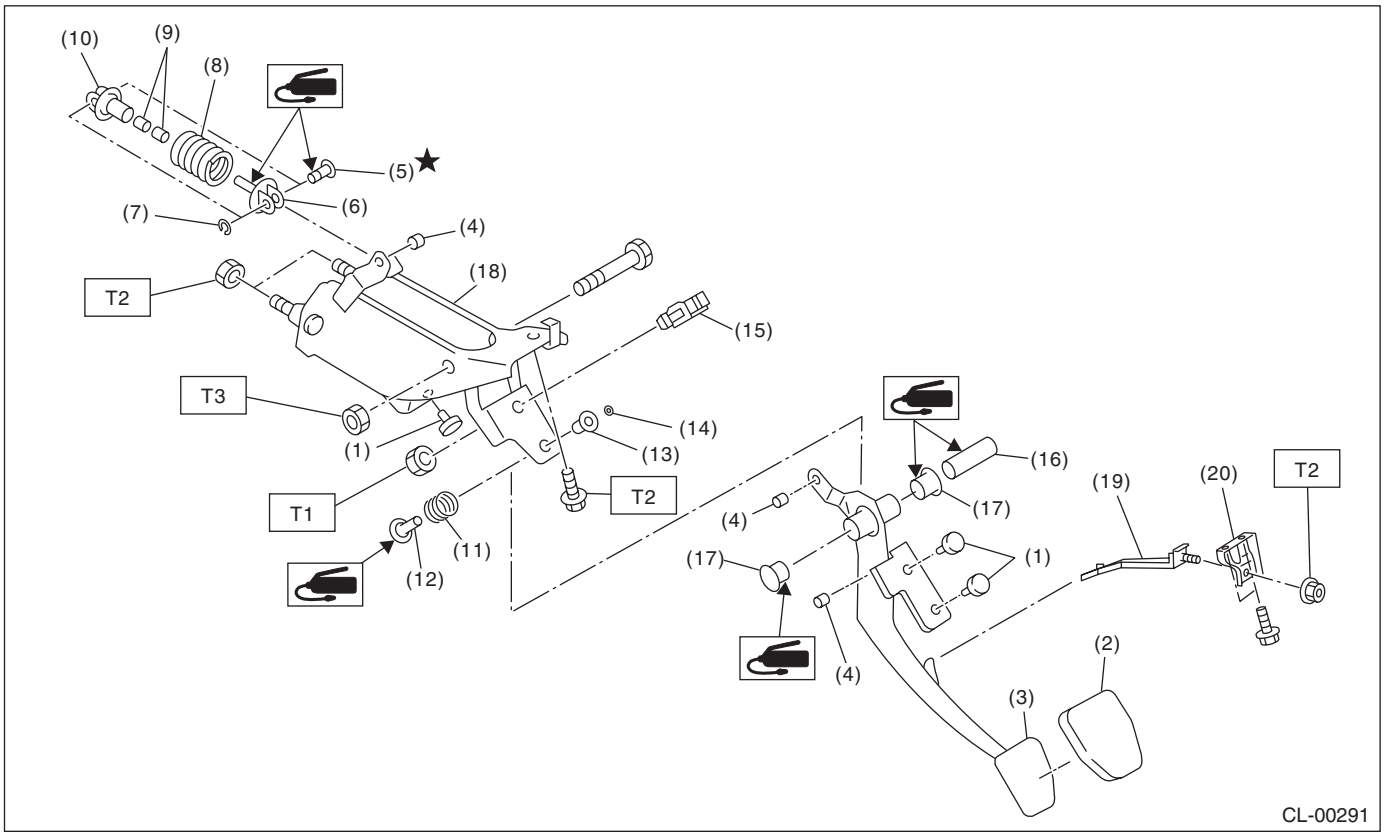
• LHD model



(1) Stopper
(2) Bushing
(3) Spring pin
(4) Snap pin
(5) Brake pedal pad
(6) Brake pedal
(7) Clevis pin
(8) Clutch pedal pad
(9) Clutch pedal
(10) Bushing C
(11) Clutch clevis pin
(12) Assist rod A
(13) Clip
(14) Assist spring
(15) Assist bushing
(16) Assist rod B
(17) Spring A (EC and 2.5 L model)
(18) Rod (EC and 2.5 L model)
(19) Bushing B (EC and 2.5 L model)
(20) Clip (EC and 2.5 L model)
(21) Stop light switch
(22) Pedal bracket
(23) Clutch master cylinder bracket
(24) Lever
(25) Clutch switch

Tightening torque: N·m (kgf-m, ft-lb)
T1: 8 (0.8, 5.8)
T2: 18 (1.8, 13.0)

• RHD model



(1) Stopper
(2) Clutch pedal pad
(3) Clutch pedal
(4) Bushing C
(5) Clutch clevis pin
(6) Assist rod A
(7) Clip
(8) Assist spring
(9) Assist bushing
(10) Assist rod B
(11) Spring A
(12) Rod S
(13) Bushing B
(14) Clip
(15) Clutch switch
(16) Spacer
(17) Bushing
(18) Clutch pedal bracket
(19) Clutch pedal catcher
(20) Bracket (Clutch pedal catcher)

Tightening torque: N·m (kgf-m, ft-lb)
T1: 8 (0.8, 5.8)
T2: 18 (1.8, 13.0)
T3: 30 (3.1, 22.4)

C: CAUTION

• Wear work clothing, including a cap, protective goggles and protective shoes during operation.
• Remove contamination including dirt and corrosion before removal, installation or disassembly.
• Keep the disassembled parts in order and protect them from dust and dirt.
• Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
• Be careful not to burn yourself, because each part on the vehicle is hot after running.
• Use SUBARU genuine fluid, grease etc. or equivalent. Do not mix fluid, grease, etc. with that of another grade or from other manufacturers.
• Be sure to tighten fasteners including bolts and nuts to the specified torque.
• Place shop jacks or rigid racks at the specified points.
• Apply grease onto sliding or revolution surfaces before installation.
• Before installing O-rings or snap rings, apply sufficient amount of fluid to avoid damage and deformation.
• Before securing a part on a vice, place cushioning material such as wood blocks, aluminum plate or cloth between the part and the vice.
• Keep fluid away from the vehicle body. If any fluid contacts the vehicle body, immediately flush the area with water.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-498497100	498497100	CRANKSHAFT STOPPER	Used for stopping rotation of flywheel when loosening/tightening bolt, etc.
 ST-499747100	499747100	CLUTCH DISC GUIDE	Used for installing clutch disc to flywheel.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-499057000	499057000	TORX® PLUS	Used for removing flywheel (dual mass flywheel type).

2. GENERAL TOOL

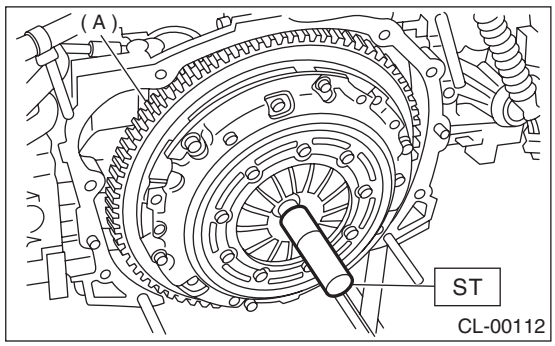
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and ampere.
Dial gauge	Used for measuring clutch disk run-out.

2. Clutch Disc and Cover

A: REMOVAL

1. EC, EK AND KA MODEL

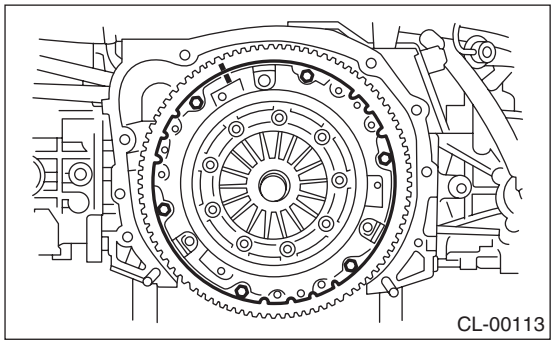
1) Remove the transmission assembly from vehicle. <Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>
2) Insert the ST on flywheel.
ST 499747100 CLUTCH DISC GUIDE



(A) Dual mass flywheel

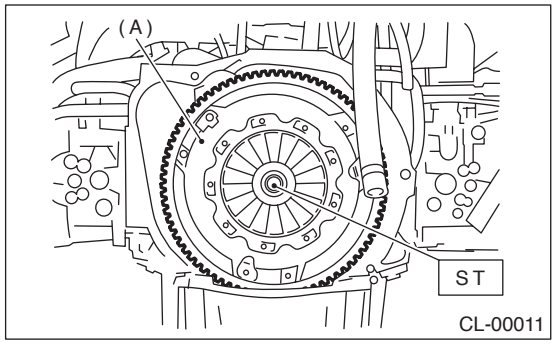
3) Remove the clutch cover and clutch disc.

NOTE:
• Take care not to allow oil on the clutch disc surface.
• Do not disassemble the clutch cover or clutch disc.
• Be sure to mark alignment marks on the flywheel and clutch cover before removing the clutch cover.



2. KS AND K4 MODEL

1) Remove the transmission assembly from vehicle body. <Ref. to 5MT-33, INSTALLATION, Manual Transmission Assembly.>
2) Install the ST on flywheel.
ST 499747100 CRANKSHAFT STOPPER



(A) Clutch cover

3) Remove the clutch cover and clutch disc.

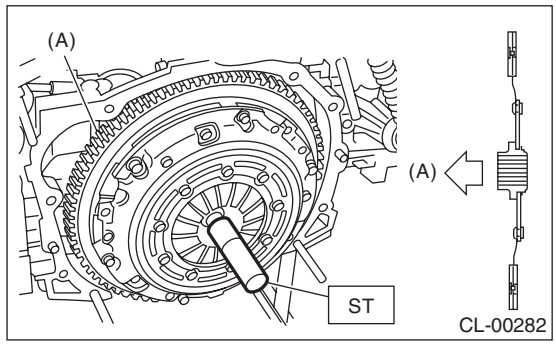
NOTE:
• Take care not to allow oil on the clutch disc facing.
• Do not disassemble the clutch cover or clutch disc.

B: INSTALLATION

1. EC, EK AND KA MODEL

1) Insert the ST into clutch disc and install on the flywheel by inserting the ST end into pilot bearing.

NOTE:
When installing the clutch disc, be careful of its direction.
ST 499747100 CLUTCH DISC GUIDE



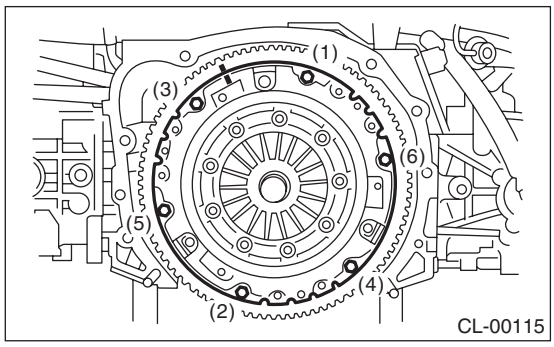
(A) Flywheel side

2) Place the clutch cover on flywheel and tighten the bolts to specified torque.

NOTE:
• When reinstalling, align the alignment marks.
• When installing a new clutch cover and flywheel, position the clutch cover in order to make the gap between “0” marks of flywheel and clutch cover 120° or more.
• Note the front and rear of the clutch disc when installing.

• Tighten the clutch cover installing bolts gradually. Each bolt should be tightened to the specified torque in a crisscross order.

Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)



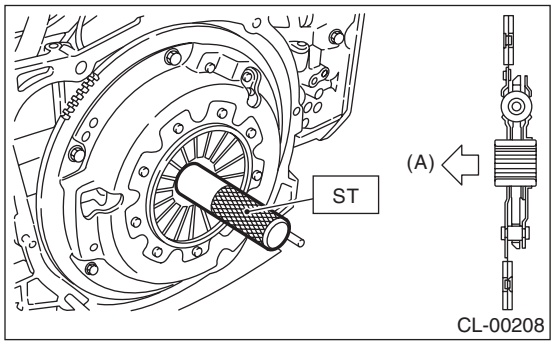
3) Remove the ST.
ST 499747100 CLUTCH DISC GUIDE
4) Install the transmission assembly. <Ref. to 5MT-33, INSTALLATION, Manual Transmission Assembly.>

2. KS AND K4 MODEL

1) Insert the ST into clutch disc and install them on the flywheel by inserting the ST end into pilot bearing.

NOTE:
When installing the clutch disc, be careful to its direction.

ST 499747100 CLUTCH DISC GUIDE



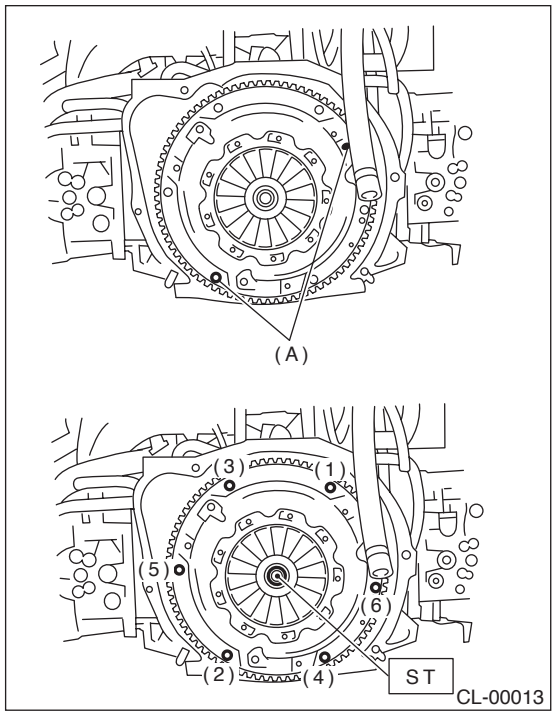
(A) Flywheel side

2) Install the clutch cover on flywheel and tighten the bolts to specified torque.

NOTE:
• When installing the clutch cover on flywheel, position the clutch cover so that there is a gap of 120° or more between “0” marks on the flywheel and clutch cover. (“0” marks indicate the directions of residual unbalance.)
• Note the front and rear of the clutch disc when installing.

• Temporarily tighten the bolts by hand. Each bolt should be tightened to the specified torque in a crisscross order.

Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)



(A) “0” marks

3) Remove the ST.
ST 499747100 CLUTCH DISC GUIDE
4) Install the transmission assembly. <Ref. to 5MT-33, INSTALLATION, Manual Transmission Assembly.>

C: INSPECTION

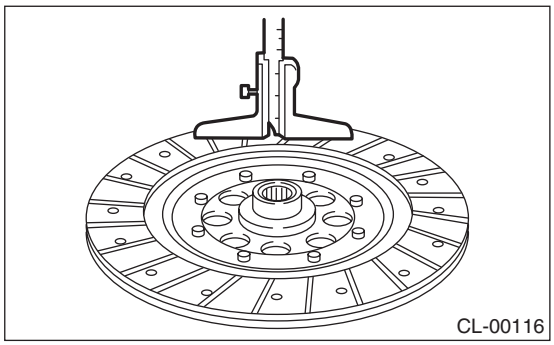
1. CLUTCH DISC

1) Facing wear:
Measure the depth from the surface of facing to rivet head. Replace if the facings are worn locally or worn down to less than the specified value.

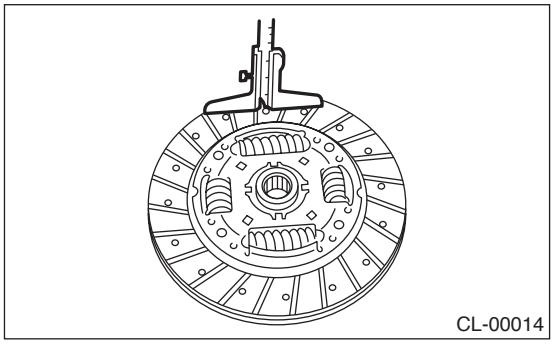
Depth of rivet head:
Limit of sinking
0.3 mm (0.012 in)

NOTE:
Do not wash the clutch disc with any cleaning fluid.

• EC, EK and KA model

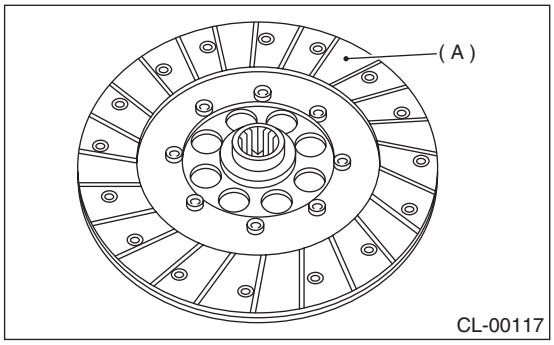


• KS and K4 model



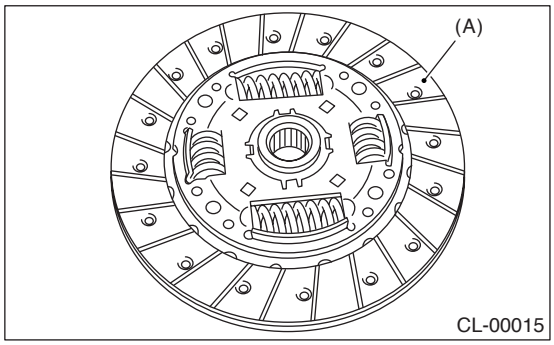
2) Hardened facing:
Replace the clutch disc.
3) Oil leakage on facing:
Replace the clutch disc and inspect the transmission front oil seal, transmission case mating surface, engine rear oil seal and other points for oil leakage.

• EC, EK and KA model



(A) Clutch facing

• KS and K4 model

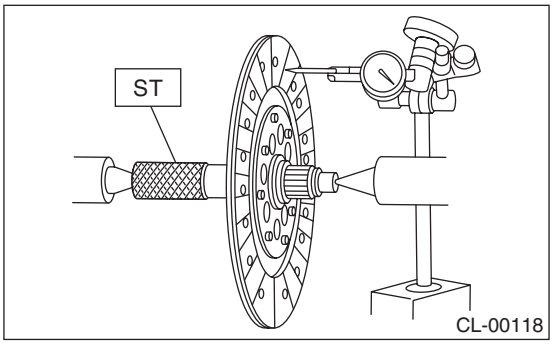


(A) Clutch facing

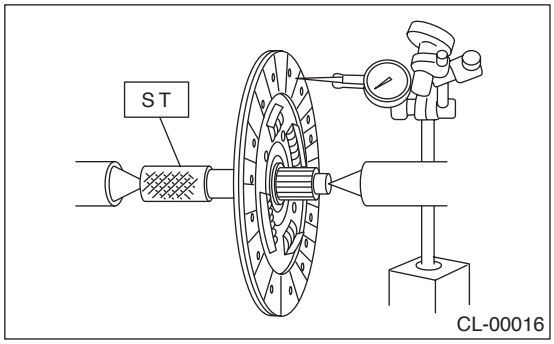
4) Deflection on facing:
If deflection exceeds the specified value at the outer circumference of facing, replace the clutch disc.
ST 499747100 CLUTCH DISC GUIDE

Limit for deflection:
1.0 mm (0.039 in) at R = 110 mm (4.33 in)

• EC, EK and KA model

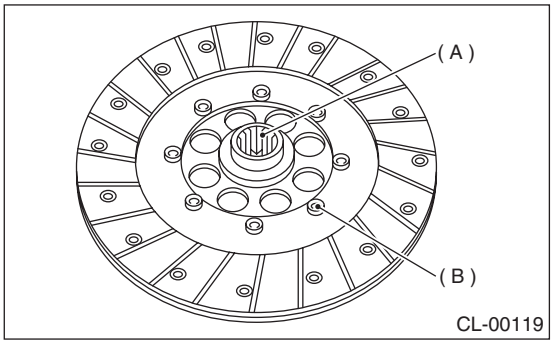


• KS and K4 model



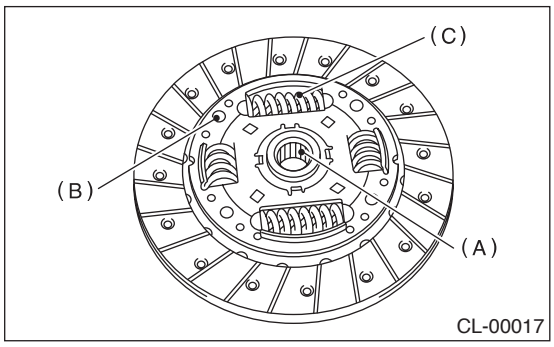
5) If the spline wears, rivets loosen and damper spring is failure, replace the clutch disc.

• EC, EK and KA model



(A) Spline
(B) Rivet

• KS and K4 model



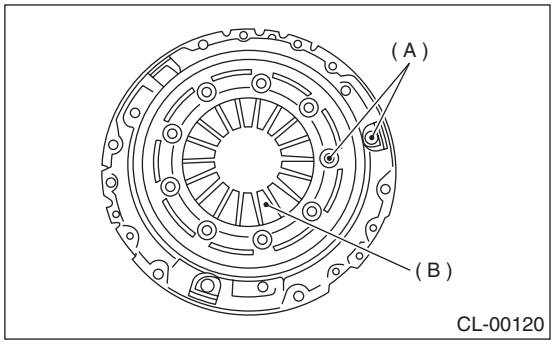
(A) Spline
(B) Rivet
(C) Damper spring

2. CLUTCH COVER

NOTE:
Visually check the following items without disassembling, and replace or repair if defective.

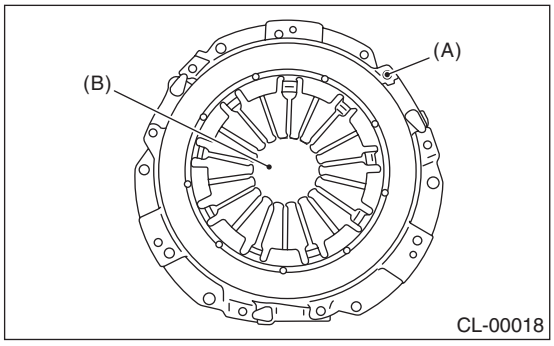
1) Loose thrust rivet
2) Damaged or worn bearing contact area at the center of diaphragm spring

• EC, EK and KA model



(A) Thrust rivet
(B) Diaphragm spring

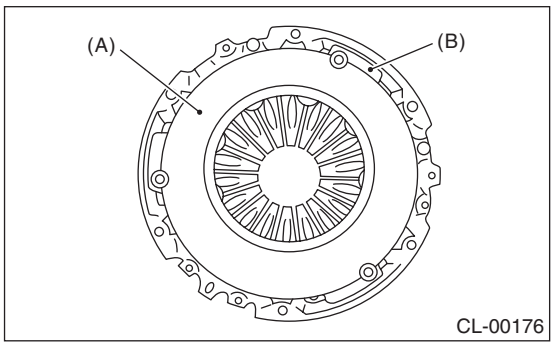
• KS and K4 model



(A) Thrust rivet
(B) Diaphragm spring

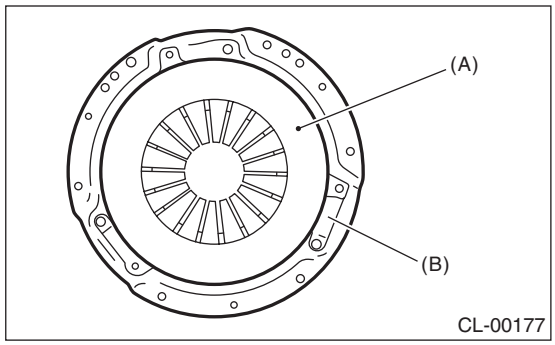
3) Damaged or worn disc contact surface of pressure plate
4) Loose strap plate installation area
5) Worn diaphragm sliding area

• EC, EK and KA model



(A) Pressure plate
(B) Strap plate

• KS and K4 model



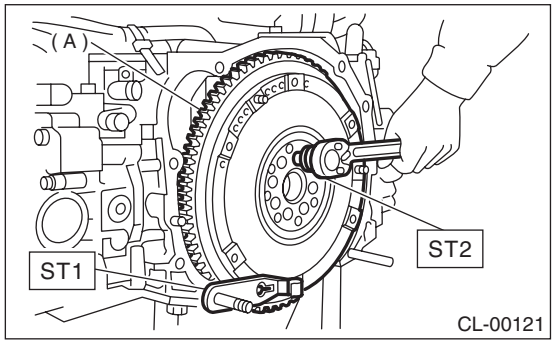
(A) Pressure plate
(B) Strap plate

3. Flywheel

A: REMOVAL

1. EC, EK AND KA MODEL

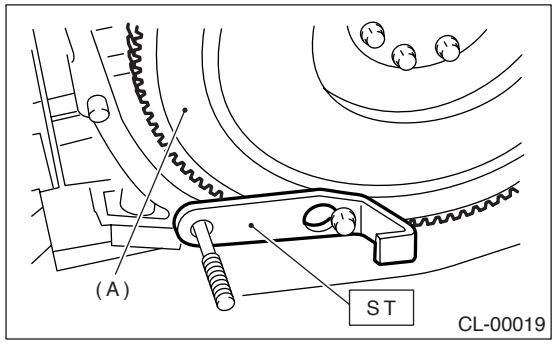
1) Remove the transmission assembly. <Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>
2) Remove the clutch cover and clutch disc. <Ref. to CL-12, REMOVAL, Clutch Disc and Cover.>
3) Using ST1 and ST2, remove the flywheel.
ST1 498497100 CRANKSHAFT STOPPER
ST2 499057000 TORX® PLUS



(A) Flywheel

2. KS AND K4 MODEL

1) Remove the transmission assembly. <Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>
2) Remove the clutch cover and clutch disc. **<Ref. to CL-12,** REMOVAL, Clutch Disc and Cover.>
3) Using the ST, remove the flywheel.
ST 498497100 CRANKSHAFT STOPPER

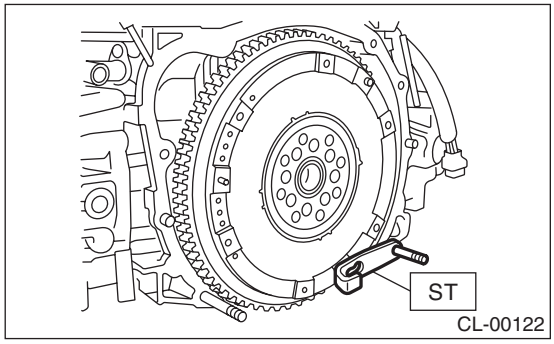


(A) Flywheel

B: INSTALLATION

1. EC, EK AND KA MODEL

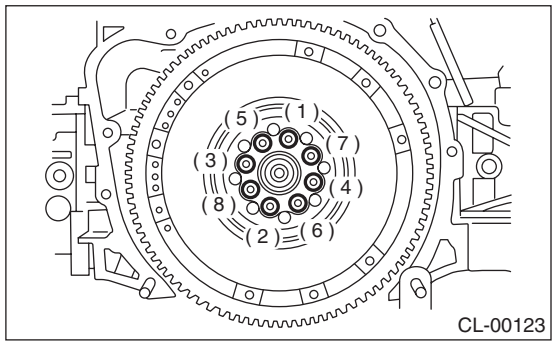
1) Set the flywheel and ST.
ST 498497100 CRANKSHAFT STOPPER



2) Tighten the flywheel mounting bolts to specified torque.
ST 499057000 TORX® PLUS

NOTE:
Tighten the flywheel installing bolts gradually. Each bolt should be tightened to the specified torque in a crisscross order.

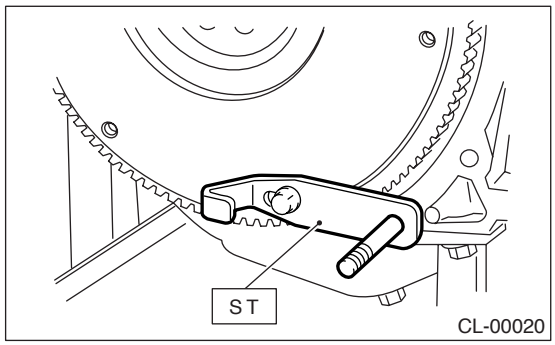
Tightening torque:
72 N·m (7.3 kgf-m, 52.8 ft-lb)



3) Install the clutch disc and cover. <Ref. to CL-12, INSTALLATION, Clutch Disc and Cover.>
4) Install the transmission assembly. <Ref. to 5MT-33, INSTALLATION, Manual Transmission Assembly.>

2. KS AND K4 MODEL

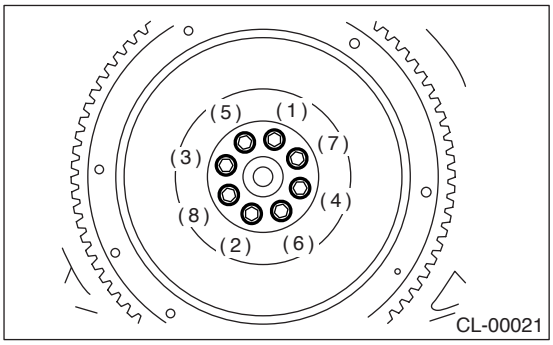
1) Install the flywheel and ST.
ST 498497100 CRANKSHAFT STOPPER



2) Tighten the flywheel attaching bolts to specified torque.

NOTE:
Tighten the flywheel installing bolts gradually. Each bolt should be tightened to the specified torque in a crisscross order.

Tightening torque:
72 N·m (7.3 kgf-m, 52.8 ft-lb)

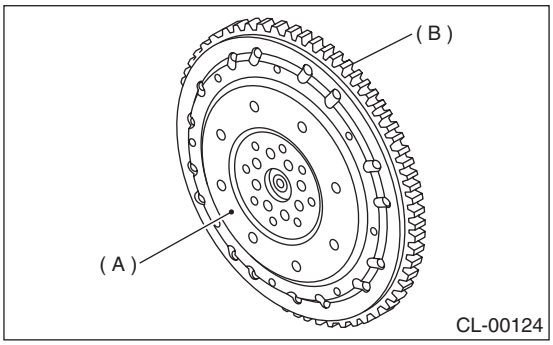


3) Install the clutch disc and cover. **<Ref. to CL-13,** KS AND K4 MODEL, INSTALLATION**, Clutch Disc and Cover.>**
4) Install the transmission assembly. <Ref. to 5MT-33, INSTALLATION, Manual Transmission Assembly.>

C: INSPECTION

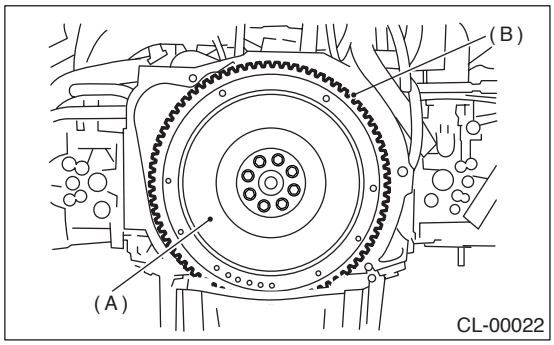
CAUTION:
Since this bearing is grease-sealed and non-lubrication type, do not wash it with gasoline or any solvent.

1) Damage on sliding surface of facing and ring gear:
If defective, replace the flywheel.
• EC, EK and KA model



(A) Flywheel
(B) Ring gear

• KS and K4 model



(A) Flywheel
(B) Ring gear

2) Smoothness of rotation
Rotate the ball bearing while applying pressure in thrust direction.
3) If noise or excessive play is noted, replace the flywheel.

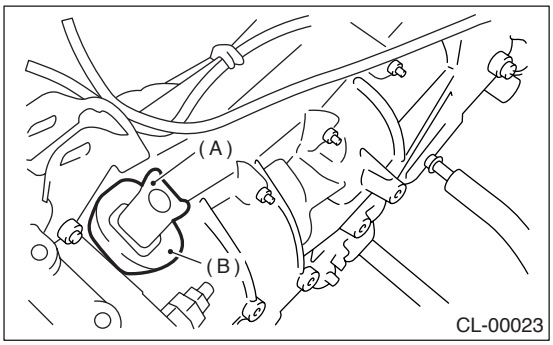
4. Release Bearing and Lever

A: REMOVAL

1) Remove the transmission assembly from vehicle body.
<Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>
2) Remove the two clips from clutch release lever and remove the release bearing.

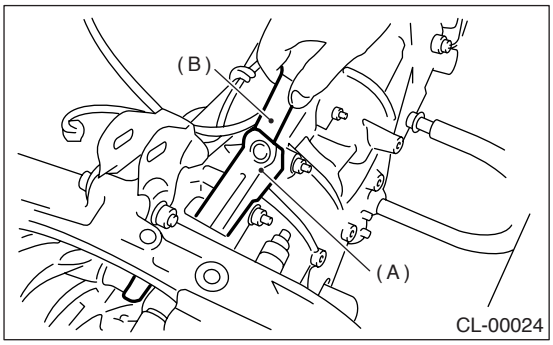
CAUTION:
Be careful not to deform the clips.

3) Remove the dust cover.



(A) Clutch release lever
(B) Dust cover

4) Remove the lever spring from pivot with a screwdriver by accessing it through the clutch housing release lever hole. Then remove the release lever.



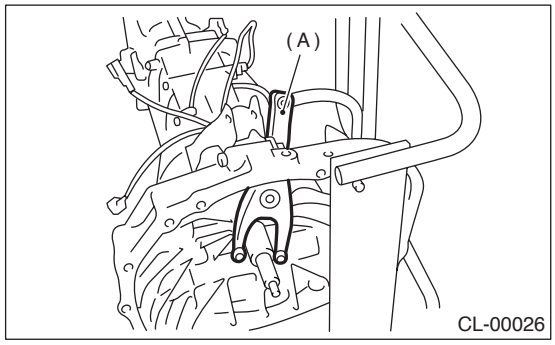
(A) Clutch release lever
(B) Screwdriver

B: INSTALLATION

NOTE:
Before or during installation, lubricate the following points with a light coat of grease.
• Contact surface of lever and pivot
• Contact surface of lever and bearing
• Transmission main shaft spline (Use grease containing molybdenum disulphide.)

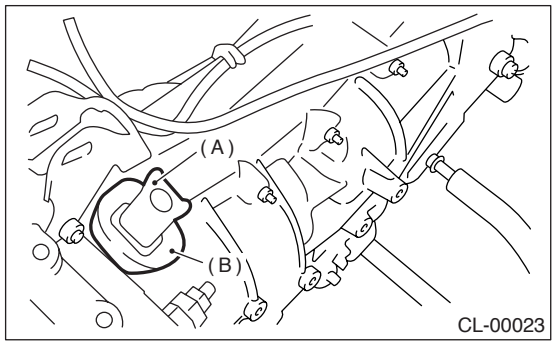
1) While pushing the release lever to pivot and twisting it to both sides, fit the lever spring onto the constricted portion of pivot.

NOTE:
• Apply grease (SUNLIGHT 2: Part No. 003602010) to the contact point of release lever and operating cylinder.
• Observing from main case hole, check that the lever spring is installed securely.



(A) Release lever

2) Place the release bearing and fasten it with two clips.
3) Install the dust cover.



(A) Release lever
(B) Dust cover

4) Check smooth movement of bearing with operating release lever.
5) Install the transmission assembly.
<Ref. to 5MT-33, INSTALLATION, Manual Transmission Assembly.>

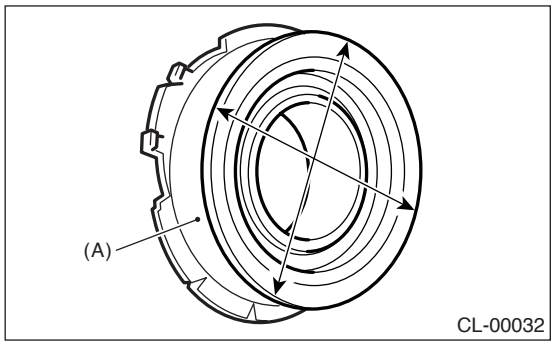
C: INSPECTION

1. RELEASE BEARING

NOTE:
Since this bearing is grease-sealed and non-lubrication type, do not wash with gasoline or any solvent when servicing the clutch.

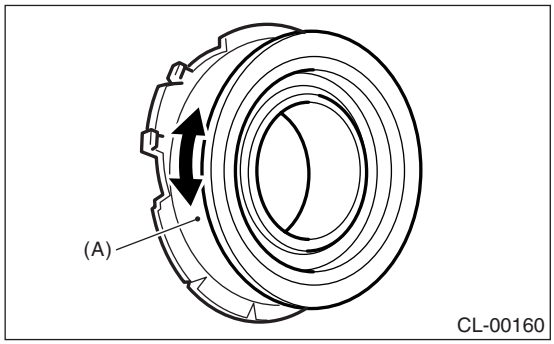
1) Check the bearing for smooth movement by applying force to the bearing in radial direction.

Radial direction stroke:
1.6 mm (0.063 in)



(A) Bearing case

2) Check the bearing for smooth rotation by applying force to the bearing in thrust direction.

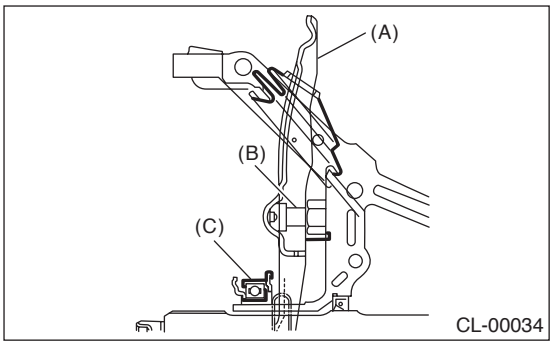


(A) Bearing case

3) Check wear and damage of bearing case surface contacting with lever.

2. RELEASE LEVER

Check the lever pivot portion and contact point with release bearing case for wear.



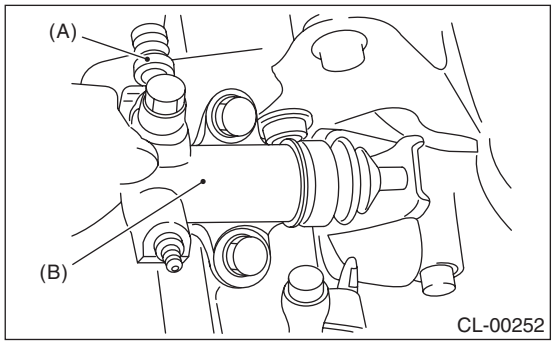
(A) Clutch release lever
(B) Pivot
(C) Clutch release bearing

5. Operating Cylinder

A: REMOVAL

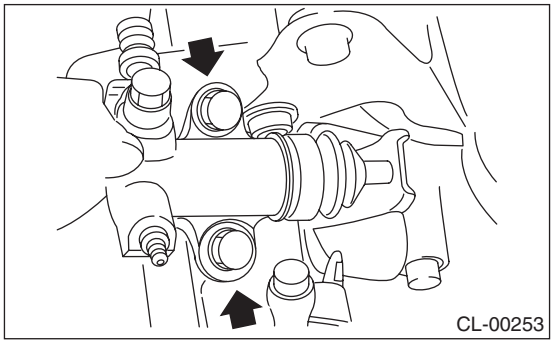
1) Remove the air intake chamber. <Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.>
2) Disconnect the clutch hose from operating cylinder.

CAUTION:
Cover the hose joint to prevent clutch fluid from flowing out.



(A) Clutch hose
(B) Operating cylinder

3) Remove the operating cylinder from transmission.

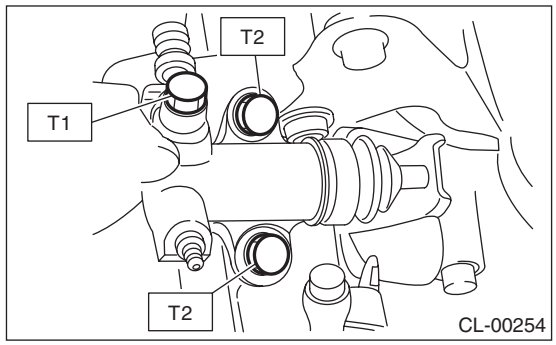


B: INSTALLATION

1) Install in the reverse order of removal.

NOTE:
Before installing the operating cylinder, apply grease (SUNLIGHT 2: Part No. 003602010) to the contact point of the release lever and operating cylinder.

Tightening torque:
T1: 18 N·m (1.8 kgf-m, 13.0 ft-lb)
T2: 37 N·m (3.8 kgf-m, 27.5 ft-lb)



2) After bleeding air from the operating cylinder, ensure that clutch operates properly.
<Ref. to CL-25, Clutch Fluid Air Bleeding.>

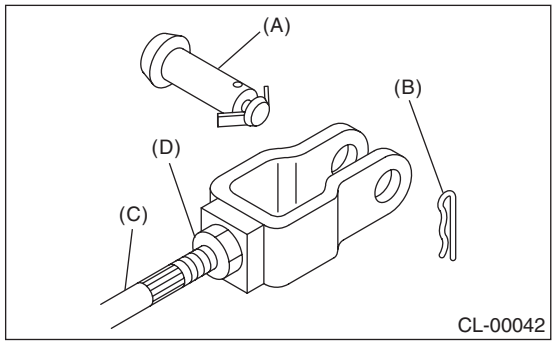
C: INSPECTION

1) Check the operating cylinder for damage. If operating cylinder is damaged, replace it.
2) Check the operating cylinder for fluid leakage or damage on boot. If any leakage or damage is found, replace the operating cylinder.

6. Master Cylinder

A: REMOVAL

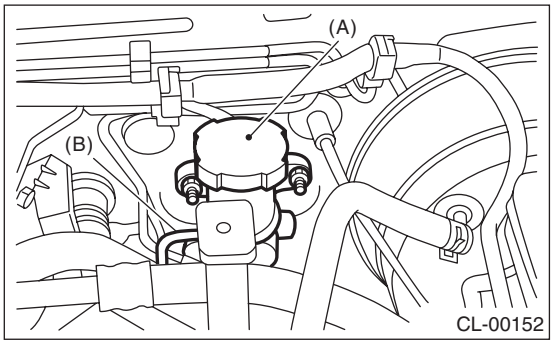
1) Thoroughly drain the brake fluid from reservoir tank.
2) Remove the snap pin and clevis pin, and then separate the push rod of master cylinder from clutch pedal.



(A) Clevis pin
(B) Snap pin
(C) Push rod
(D) Lock nut

3) Remove the air intake chamber. <Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.>
4) Disconnect the clutch pipes from master cylinder.
5) Remove the master cylinder and reservoir tank as a unit.

CAUTION:
Be careful not to spill the brake fluid. Brake fluid spilt on the vehicle body will harm the paint surface; wipe it off quickly if spilt.



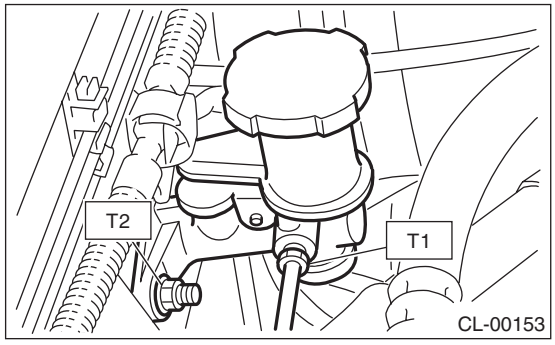
(A) Master cylinder ASSY
(B) Clutch pipe

B: INSTALLATION

1) Install the master cylinder to the vehicle, and connect the clutch pipe to master cylinder.

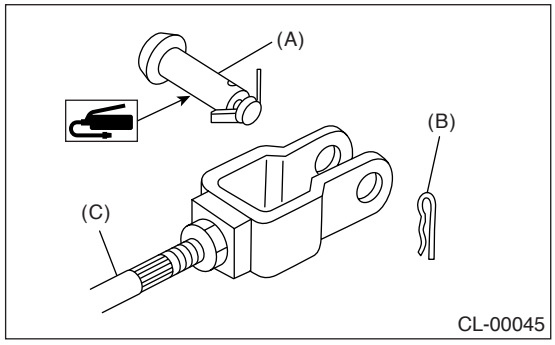
NOTE:
Check that the pipe is routed properly.

Tightening torque:
T1: 15 N·m (1.5 kgf-m, 10.8 ft-lb)
T2: 18 N·m (1.8 kgf-m, 13.0 ft-lb)



2) Connect the push rod of master cylinder to clutch pedal, and install the clevis pin and snap pin.

NOTE:
Apply grease to the clevis pin.

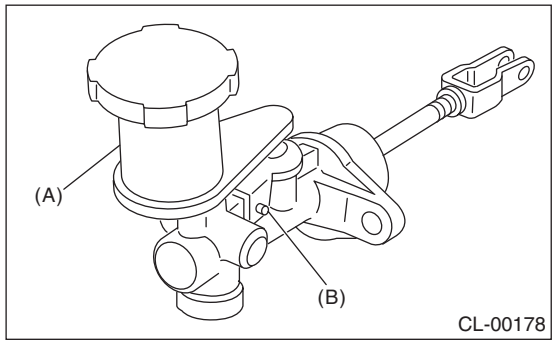


(A) Clevis pin
(B) Snap pin
(C) Push rod

3) After bleeding air from the clutch system, ensure that clutch operates properly. <Ref. to CL-25, Clutch Fluid Air Bleeding.>
4) Install the air intake chamber. <Ref. to IN(H4SO 2.0)-8, INSTALLATION, Air Intake Chamber.>

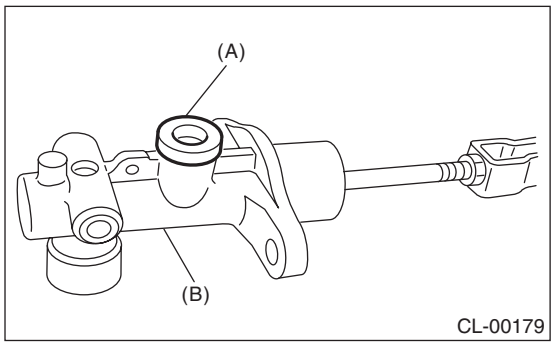
C: DISASSEMBLY

1) Remove the straight pin and reservoir tank.



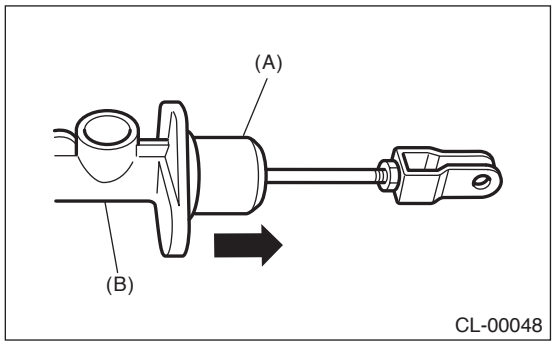
(A) Reservoir tank
(B) Straight pin

2) Remove the oil seal.



(A) Oil seal
(B) Master cylinder

3) Pull the cylinder boot backward.



(A) Cylinder boot
(B) Master cylinder

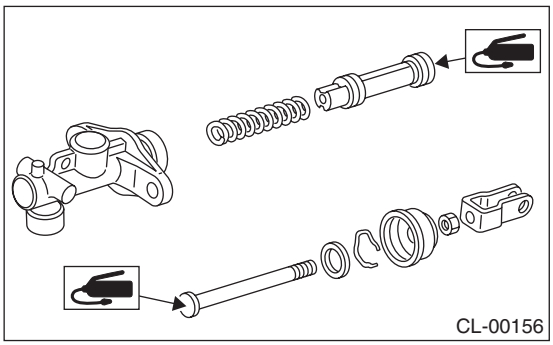
4) Remove the snap ring.

CAUTION:
Be careful to prevent the rod, washer, piston and return spring from flying out when removing the snap ring.

D: ASSEMBLY

1) Apply a coat of grease to the contacting surfaces of the push rod and piston before installation.

Grease:
SILICONE GREASE G40M (Part No. 004404003)

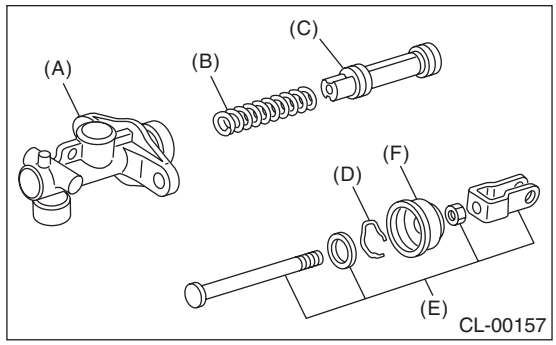


2) Assemble in the reverse order of disassembly.

Tightening torque:
10 N·m (1.0 kgf-m, 7 ft-lb)

E: INSPECTION

If any damage, deformation, wear, swelling, rust or other faults are found on the cylinder, piston, push rod, fluid reservoir, return spring, gasket, clutch damper cylinder boot or hose, replace the faulty part.

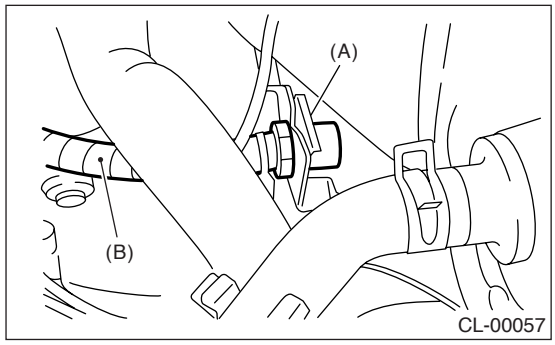


(A) Master cylinder body
(B) Return spring
(C) Piston
(D) Stop ring
(E) Push rod ASSY
(F) Cylinder boot

7. Clutch Pipe and Hose

A: REMOVAL

1) Remove the air intake chamber. <Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.>
2) Drain the clutch fluid. <Ref. to CL-24, Clutch Fluid.>
3) Disconnect the clutch pipe from the clutch hose and master cylinder.
4) Pull out the clamp, then remove the clutch hose from bracket.



(A) Clamp
(B) Clutch hose

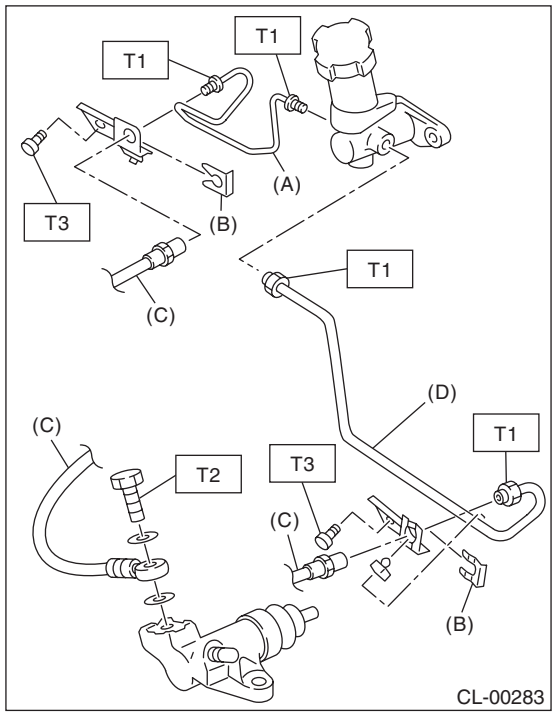
5) Disconnect the hose from operating cylinder.
6) Remove the bracket.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:
Bleed the air of clutch fluid. <Ref. to CL-25, Clutch Fluid Air Bleeding.>

Tightening torque:
T1: 15 N·m (1.5 kgf-m, 10.8 ft-lb)
T2: 18 N·m (1.8 kgf-m, 13.0 ft-lb)
T3: 25 N·m (2.5 kgf-m, 18.4 ft-lb)



(A) Clutch pipe (LHD model)
(B) Clip
(C) Clutch hose
(D) Clutch pipe (RHD model)

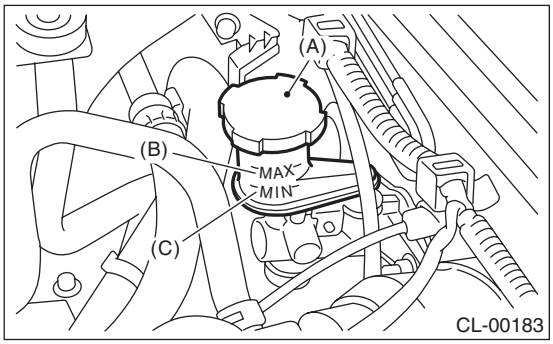
C: INSPECTION

Check pipes and hoses for cracks, breakage or damage. Check joints for fluid leakage. If any crack, breakage, damage or leakage is found, repair or replace the defective pipe or hose.

8. Clutch Fluid

A: INSPECTION

1) Park the vehicle on a level surface.
2) Inspect the fluid level using the scale on the outside of reservoir tank. If the level is below “MIN”, add fluid to bring it up to “MAX”, and also inspect for leakage.



(A) Reservoir tank
(B) MAX. level
(C) MIN. level

B: REPLACEMENT

CAUTION:
• The FMVSS No. 116, fresh DOT3 or 4 brake fluid must be used.
• When loosening bleeder screw, cover the bleeder with cloth to prevent brake fluid from being splashed over surrounding parts.
• Avoid mixing different brands of brake fluid to prevent the quality of fluid from degrading.
• Be careful not to allow dirt or dust to get into the reservoir tank.

NOTE:
• During bleeding operation, keep the clutch reservoir tank filled with brake fluid to eliminate the entry of air.
• Clutch pedal operating must be very slow.
• For convenience and safety, it is advisable to have two people working.
• The amount of brake fluid required is approx. 70 mℓ (2.4 US fl oz, 2.5 Imp fl oz) for total clutch system.

1) Remove the air intake chamber. <Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.>
2) Drain the brake fluid from reservoir tank.
3) Refill the reservoir tank with recommended brake fluid.

Recommended brake fluid:
FMVSS No. 116, fresh DOT3 or 4 brake fluid

4) Drain all contaminated fluid in the same method as air bleeding.

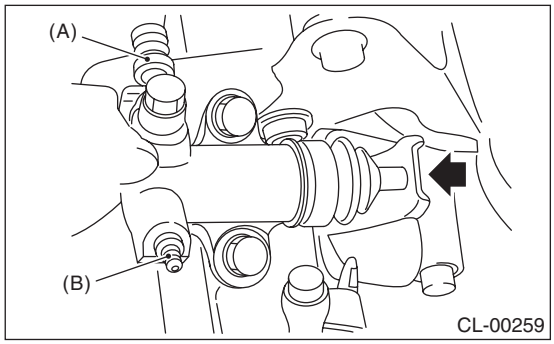
NOTE:
Refill the brake fluid before reservoir tank becomes empty.

9. Clutch Fluid Air Bleeding

A: PROCEDURE

NOTE:
Bleed air from the oil line with help of a co-worker.

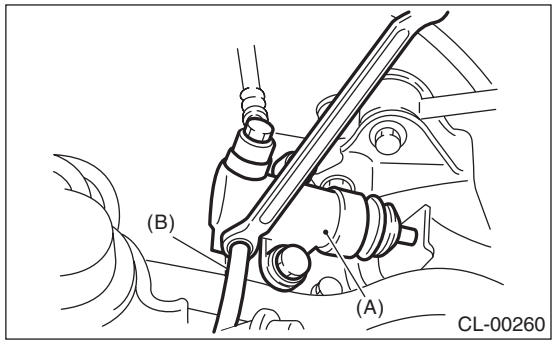
1) Remove the air intake chamber. <Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.>
2) Fit one end of a vinyl tube into the air bleeder of operating cylinder and put the other end into a brake fluid container.



(A) Clutch hose
(B) Air bleeder

3) Slowly depress the clutch pedal and keep it depressed. Then open the air bleeder to discharge air together with the fluid.
Release the air bleeder for 1 or 2 seconds. Next, with the bleeder closed, slowly release the clutch pedal.

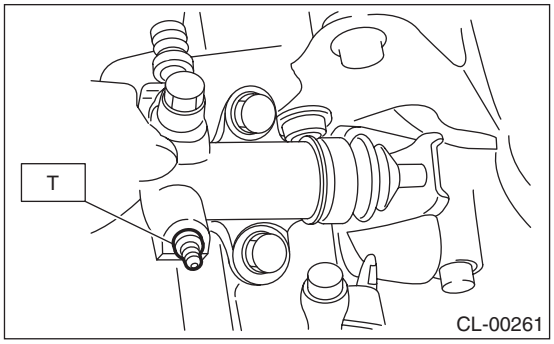
CAUTION:
When loosening bleeder screw, cover the bleeder with cloth to prevent brake fluid from being splashed over surrounding parts.



(A) Operating cylinder
(B) Vinyl tube

4) Repeat the procedure 3), until there are no more air bubbles in the vinyl tube.
5) Tighten the air bleeder.

Tightening torque:
T: 8 N·m (0.8 kgf-m, 5.8 ft-lb)



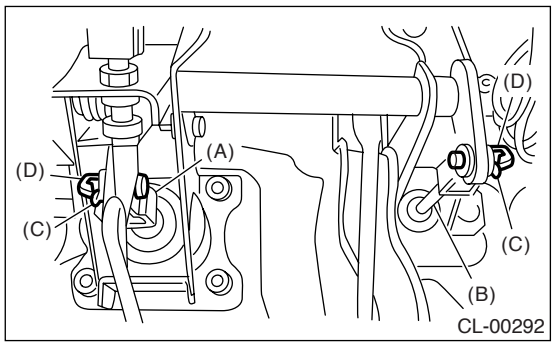
6) After depressing the clutch pedal, make sure that there are no leaks evident in the entire clutch system.
7) After bleeding air from the clutch system, ensure that clutch operates properly.

10.Clutch Pedal

A: REMOVAL

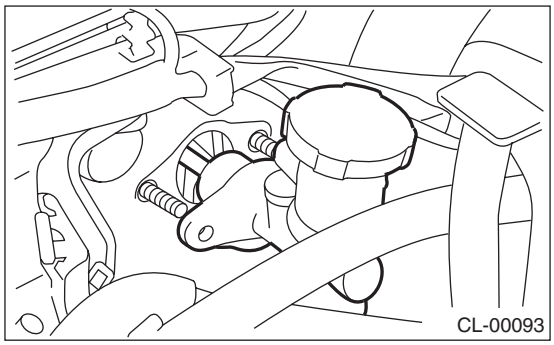
1. LHD MODEL

1) Disconnect the ground cable from battery.
2) Remove the steering column. <Ref. to PS-23, REMOVAL, Tilt Steering Column.>
3) Disconnect the connectors from the stop light and clutch switches.
4) Remove the snap pins which secure lever to push rod and operating rod.
5) Remove the clevis pins which secure lever to push rod and operating rod.



(A) Operating rod
(B) Push rod
(C) Snap pin
(D) Clevis pin

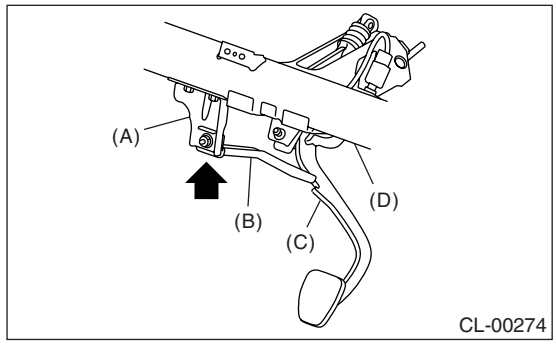
6) Remove the nut which secures clutch master cylinder.



7) Remove the bolts and nuts which secure brake pedal and clutch pedal, and remove the pedal assembly.

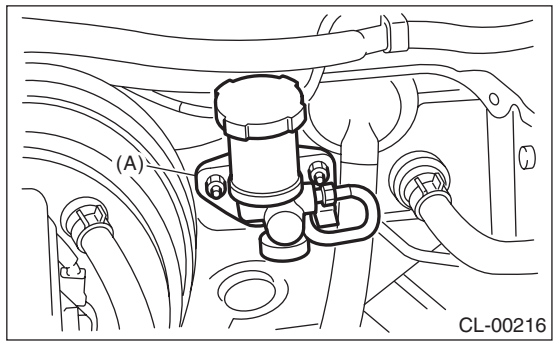
2. RHD MODEL

1) Disconnect the ground cable from battery.
2) Remove the instrument panel lower cover.
3) Remove the clutch pedal catcher from bracket (clutch pedal catcher).



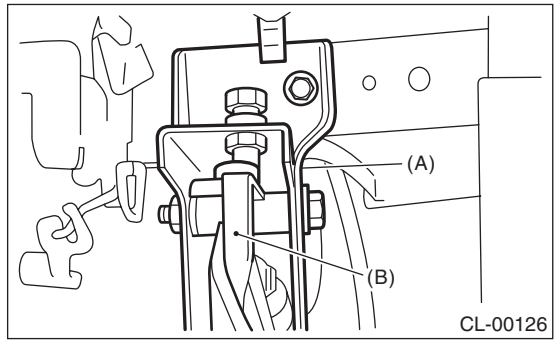
(A) Bracket (Clutch pedal catcher)
(B) Clutch pedal catcher
(C) Clutch pedal
(D) Steering support beam

4) Remove the clutch switch connector from clutch pedal.
5) Remove the snap pin and clevis pin which join the push rod and clutch pedal.
6) Remove the master cylinder mounting nuts.



(A) Master cylinder

7) Remove the clutch pedal and bracket as a unit.



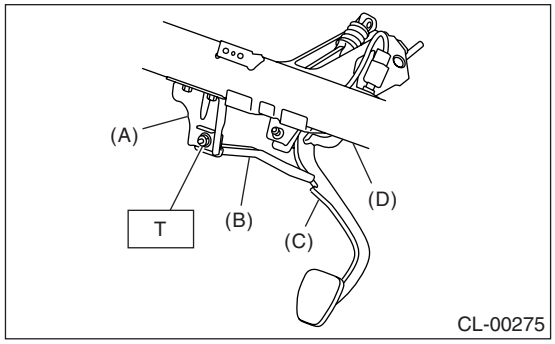
(A) Clutch pedal bracket
(B) Clutch pedal

B: INSTALLATION

1) Install in the reverse order of removal.

Tightening torque:
T: 18 N·m (1.8 kgf-m, 13.0 ft-lb)

- Clutch pedal catcher



(A) Bracket (Clutch pedal catcher)
(B) Clutch pedal catcher
(C) Clutch pedal
(D) Steering support beam

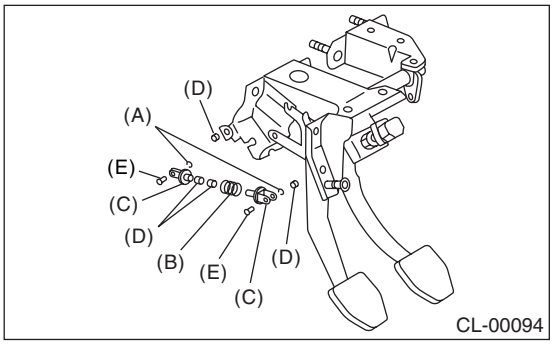
CAUTION:
Always use a new clevis pin.

2) Adjust the clutch pedal after installation. <Ref. to CL-29, ADJUSTMENT, Clutch Pedal.>

C: DISASSEMBLY

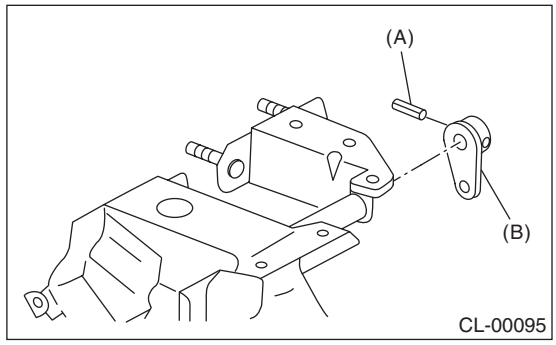
1. LHD MODEL

1) Remove the clutch switches.
2) Remove the clips, assist spring, rod and bushing.



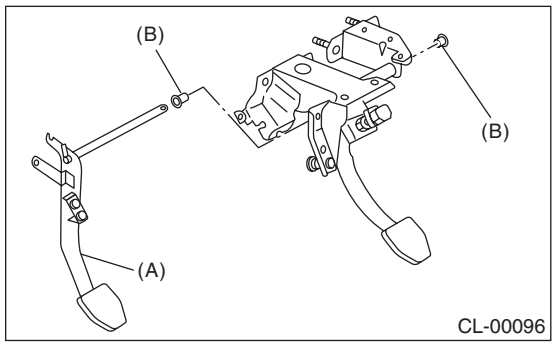
(A) Clip
(B) Assist spring
(C) Assist rod
(D) Bushing
(E) Clevis pin

3) Remove the spring pin and lever.



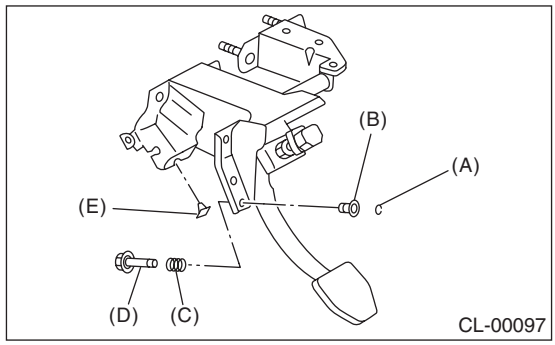
(A) Pin
(B) Lever

4) Remove the clutch pedal and bushings.



(A) Clutch pedal
(B) Bushing

5) Remove the stopper, clip and rod S, and then remove the spring and bushing S.

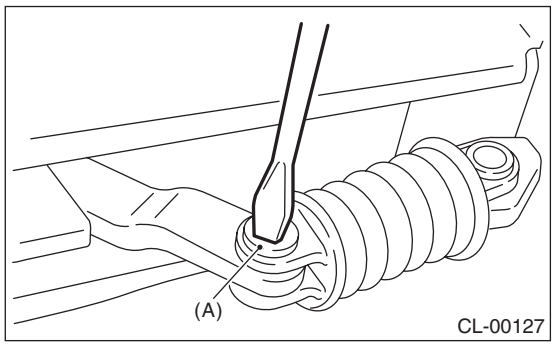


(A) Clip
(B) Bushing S
(C) Spring S
(D) Rod S
(E) Stopper

6) Remove the stoppers from clutch pedal.
7) Remove the clutch pedal pad.

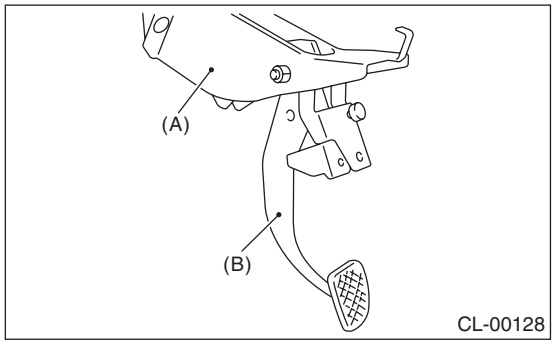
2. RHD MODEL

1) Remove the clutch switch.
2) Remove the clip, and then pull out the clevis pin.



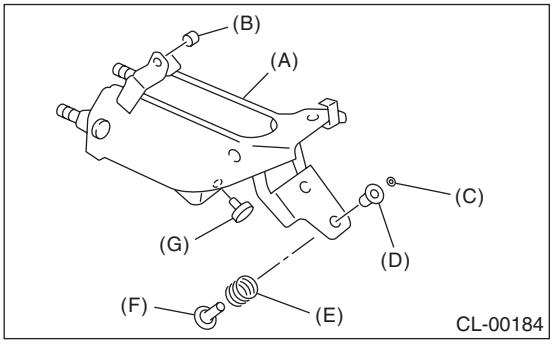
(A) Clevis pin

3) Remove the assist rod, spring and bushing.
4) Remove the clutch pedal from clutch pedal bracket.



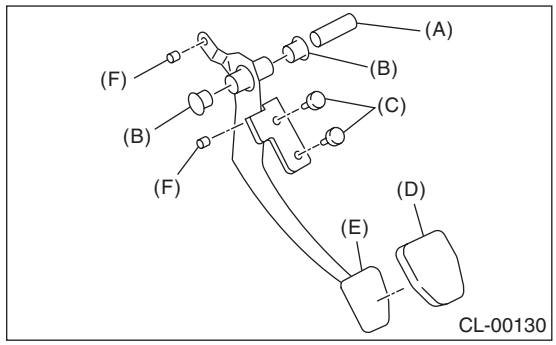
(A) Clutch pedal bracket
(B) Clutch pedal

5) Remove the following parts (B to G) from clutch pedal bracket (A) as shown in the figure.



(A) Clutch pedal bracket
(B) Bushing C
(C) Clip
(D) Bushing S
(E) Spring S
(F) Rod S
(G) Bushing

6) Remove the spacer, bushing and pedal pad from clutch pedal.



(A) Spacer
(B) Bushing
(C) Bushing
(D) Pedal pad
(E) Clutch pedal
(F) Bushing C

D: ASSEMBLY

1. LHD MODEL

1) Attach the clutch switch, etc. to pedal bracket temporarily.
2) Clean the inside of bores of clutch pedal and brake pedal, and apply grease, and set bushings into bores.
3) Align the bores of pedal bracket, clutch pedal and brake pedal, and then attach the brake pedal return spring, assist rods, spring and bushing.

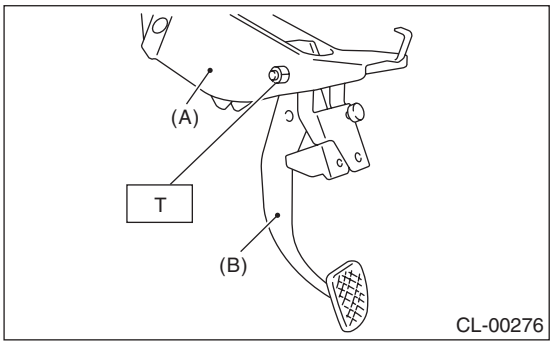
NOTE:
Clean up the inside of bushings and apply grease before installing spacer.

2. RHD MODEL

1) Clean and apply grease to the hole of sliding portion between clutch pedal and bushing.
2) Install the pad, stopper, bushing C, spacer and bushing to clutch pedal.
3) Install the rod S, spring S, bushing S, clip, bushing, clutch switch and bushing C to clutch pedal bracket.

4) Install the clutch pedal assembly, stopper, adjusting rod, bushing and spring to clutch pedal bracket.

Tightening torque:
T: 30 N·m (3.1 kgf-m, 22.4 ft-lb)



(A) Clutch pedal bracket
(B) Clutch pedal

5) Install the assist rod, bushing and assist spring to clutch pedal and pedal bracket.

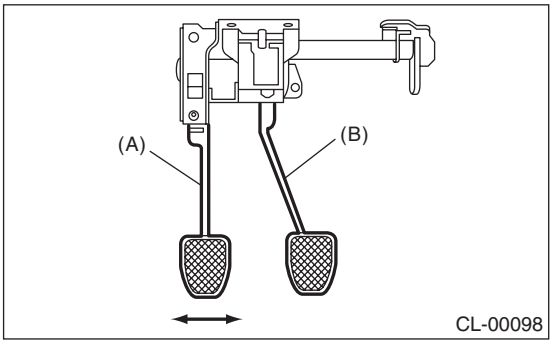
E: INSPECTION

1. CLUTCH PEDAL

Move the clutch pedal pads in the lateral direction with a force of approximately 10 N (1 kgf, 2 lb) to ensure the pedal deflection is in specified range.
If excessive deflection is noted, replace the bushings with new ones.

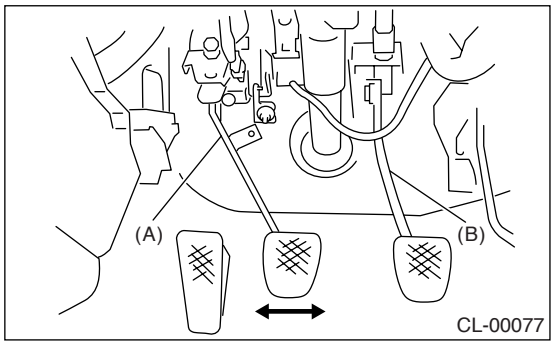
Deflection of clutch pedal:
Service limit
5.0 mm (0.197 in) or less

• LHD model



(A) Clutch pedal
(B) Brake pedal

• RHD model



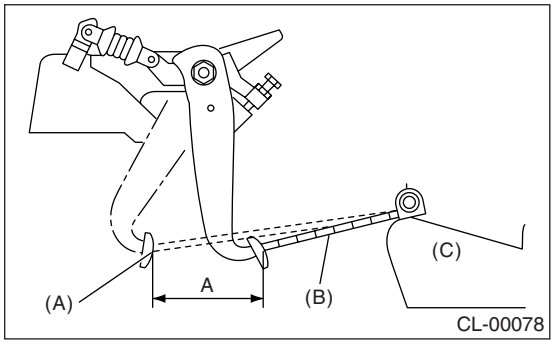
(A) Clutch pedal
(B) Brake pedal

F: ADJUSTMENT

1) Measure the full stroke amount of clutch pedal.

NOTE:
• Measure the length between the seat cushion front end and center portion of clutch pedal.
• Slide the seat at seventh notch from first notch.

Specified clutch pedal full stroke A:
130 — 135 mm (5.12 — 5.31 in)

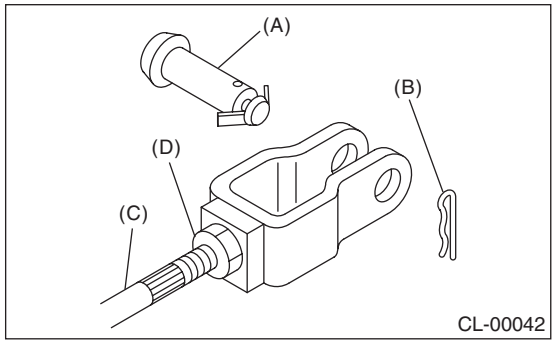


(A) Clutch pedal (Full stroke condition)
(B) Scale
(C) Seat

2) If the clutch pedal stroke is out of specification, loosen the clutch stopper nut and adjust it.

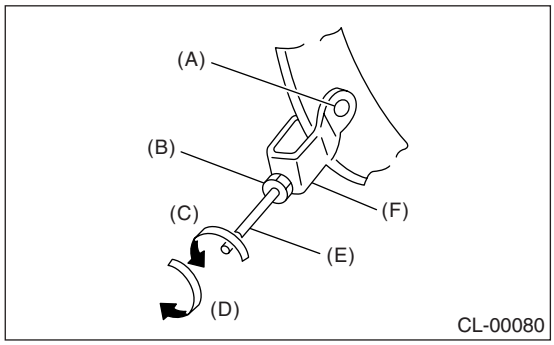
Tightening torque (Clutch stopper nut):
8 N·m (0.8 kgf-m, 5.8 ft-lb)

3) Loosen the push rod lock nut.



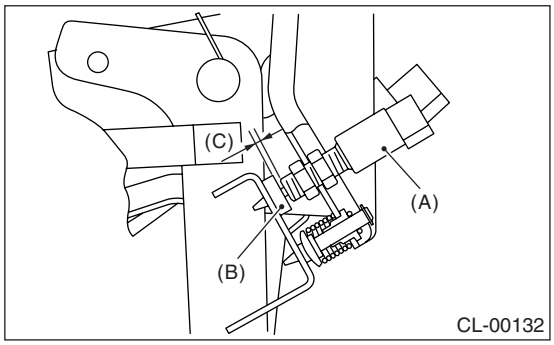
(A) Clevis pin
(B) Snap pin
(C) Push rod
(D) Push rod lock nut

4) Turn the push rod to adjust.
(1) Ensure that the clutch pedal contacts clutch switch, when releasing the clutch pedal.
(2) Ensure that the clutch pedal contacts clutch pedal bracket stopper, when fully depressing the clutch pedal.



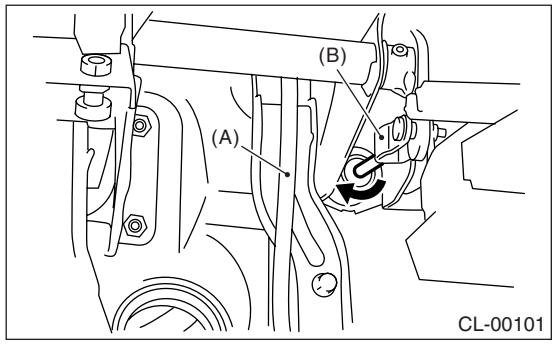
(A) Clevis hole
(B) Push rod lock nut
(C) Shortening direction
(D) Lengthening direction
(E) Push rod
(F) U shaped bracket

5) Turn the push rod counterclockwise to shorten until clearance is made at clutch switch.



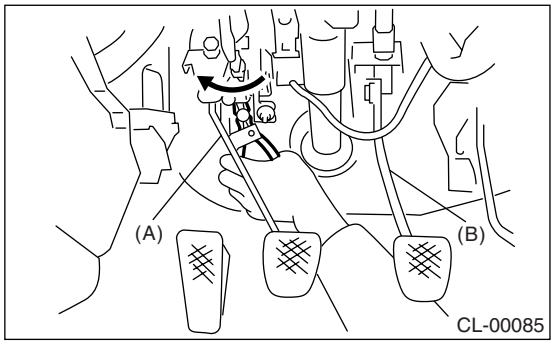
(A) Clutch switch
(B) Stopper
(C) Clearance

6) Turn the push rod clockwise to lengthen until clutch pedal contacts to clutch switch.
7) Turn the push rod further 270° counterclockwise to shorten (arrow direction as shown in the figure).
• LHD model



(A) Accelerator pedal
(B) Clevis

• RHD model



(A) Clutch pedal
(B) Brake pedal

8) Move the clevis pin in lateral direction to ensure it moves smoothly.

9) Tighten the push rod lock nut.

Tightening torque:
10 N·m (1.0 kgf-m, 7.2 ft-lb)

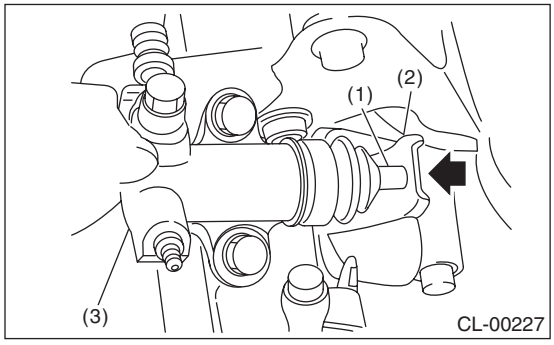
10) Depress and release the clutch pedal two or three times to ensure that clutch pedal and release fork operates smoothly. If the clutch pedal and release fork do not operate smoothly, bleed air from the clutch hydraulic system. **<Ref. to CL-25, Clutch Fluid Air Bleeding.>**

11) Measure the clutch pedal full stroke length again to ensure that it is within specifications. If it is not, repeat adjustment procedures again from the beginning.

Specified clutch pedal full stroke:
130 — 135 mm (5.12 — 5.31 in)

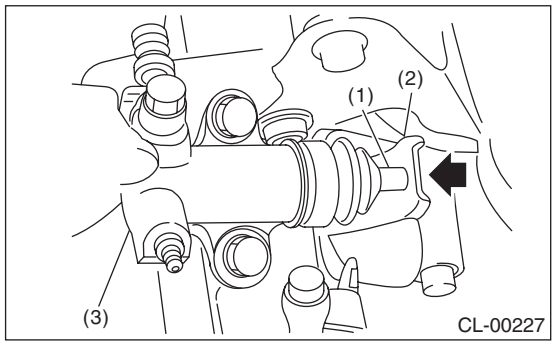
12) Move the clevis pin to the left and then to the right. It should move without resistance while it is rattling. If resistance is felt, repeat adjustment procedures again from the beginning.

13) Push the release lever until operating cylinder push rod retracts. Ensure that clutch fluid level in reservoir tank increases. If the clutch fluid level increases, hydraulic clutch is properly adjusted; if fluid level does not increase or push rod does not retract, replace the master cylinder with a new one. **<Ref. to CL-21, Master Cylinder.>**



(1) Push rod
(2) Release lever
(3) Operating cylinder

14) Push the release lever until operating cylinder push rod retracts. Check that the clutch fluid level in reservoir tank increases.



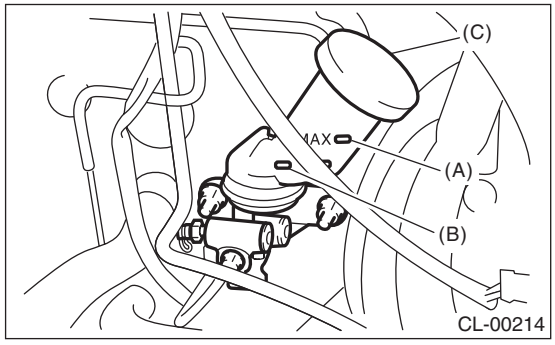
(1) Push rod
(2) Release lever
(3) Operating cylinder

15) If the clutch fluid level increases, hydraulic clutch play is correct.

16) If the clutch fluid level does not increase or push rod does not retract, clutch pedal must be readjusted.

17) Check the fluid level on the outside of the reservoir tank. If the level is below “MIN”, add clutch fluid to bring it up to “MAX”.

Recommended clutch fluid:
FMVSS No. 116, fresh DOT 3 or DOT 4 brake fluid



(A) Max. level
(B) Min. level
(C) Reservoir tank

11.Clutch Switch

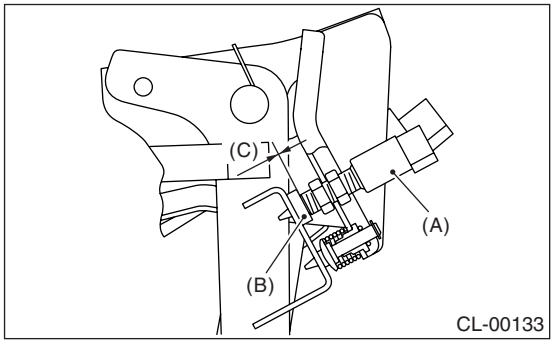
A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the instrument panel lower cover.
3) Disconnect the connector from clutch switch.
4) Remove the clutch switch.

B: INSTALLATION

1) Install the clutch switch and clutch pedal stopper so that the gap between them is 0 mm (0 in).

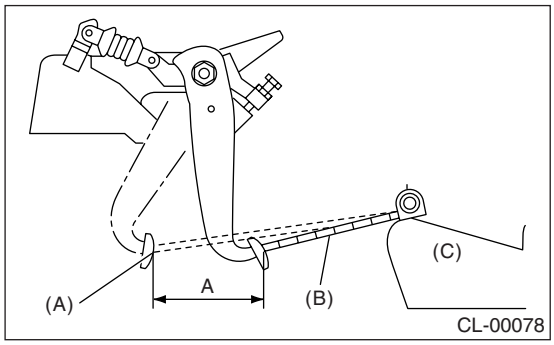
Tightening torque:
8 N·m (0.8 kgf-m, 5.8 ft-lb)



(A) Clutch switch
(B) Stopper
(C) 0 mm (0 in)

2) Measure the stroke of clutch pedal.

Specified clutch pedal full stroke A:
130 — 135 mm (5.12 — 5.31 in)



(A) Clutch pedal (Full stroke condition)
(B) Scale
(C) Seat

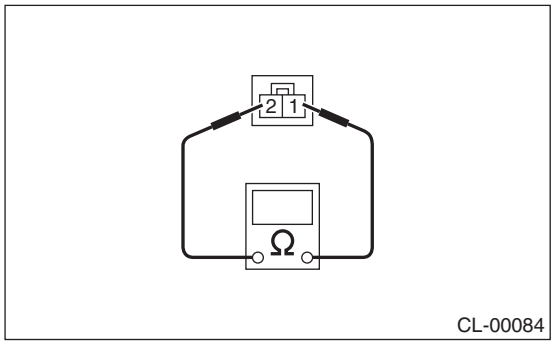
3) If the clutch pedal stroke is out of specification, adjust the stroke. **<Ref. to CL-29,** ADJUSTMENT**, Clutch Pedal.>**
4) Connect the clutch switch connector.

C: INSPECTION

Check the clutch switch continuity. If continuity is not as specified, replace the switch.
(1) Disconnect the clutch switch connector.
(2) Measure the resistance between terminal 1 and 2 of switch.

Terminal / Specified resistance
When clutch pedal depressed:
1 — 2/More than 1 MΩ

Terminal / Specified resistance
When clutch pedal not depressed:
1 — 2/Less than 1Ω



D: ADJUSTMENT

Refer to “ADJUSTMENT” for clutch pedal. **<Ref. to CL-29,** ADJUSTMENT**, Clutch Pedal.>**

12.General Diagnostic Table

A: INSPECTION

1. CLUTCH

Symptom	Possible cause	Corrective action
1. Clutch slippage It is hard to perceive clutch slippage in the early stage, but pay attention to the following symptoms. • Engine speeds up when shifting. • High-speed driving is impossible; especially rapid acceleration is impossible and vehicle speed does not increase in proportion to the increase in engine speed. • Power falls, particularly when ascending a slope, and there is a smell of burning of the clutch facing. • Method of testing: Put the vehicle in a stationary condition with parking brake fully applied. Disengage the clutch and shift the transmission gear into the 1st. Gradually allow the clutch to engage while gradually increasing the engine speed. The clutch function is satisfactory if the engine stalls. However, the clutch is slipping if the vehicle does not start off and the engine does not stall.	(a) Clutch facing smeared by oil	Replace.
	(b) Worn clutch facing	Replace.
	(c) Deteriorated diaphragm spring	Replace.
	(d) Distorted pressure plate or flywheel	Rectify or replace.
	(e) Defective release bearing holder	Rectify or replace.
2. Clutch drags. As a symptom of this trouble, a harsh scratching noise develops and control becomes quite difficult when shifting gears. The symptom becomes more apparent when shifting into the 1st gear. However, because much trouble of this sort is due to defective synchronization mechanism, carry out the following tests. • Method of testing: <Ref. to CL-34, DIAGNOSTIC DIAGRAM OF CLUTCH DRAG, INSPECTION, General Diagnostic Table.> It may be judged as insufficient disengagement of clutch if any noise occurs during this test.	(a) Worn or rusty clutch disc hub spline	Replace clutch disc.
	(b) Excessive deflection of clutch disc facing	Rectify or replace.
	(c) Stick of crankshaft pilot needle bearing	Replace.
	(d) Cracked clutch disc facing	Replace.
	(e) Stuck clutch disc (smeared by oil or water)	Replace.
3. Clutch chatters. Clutch chattering is an unpleasant vibration to the whole body when the vehicle is just started with clutch partially engaged.	(a) Adhesion of oil on the facing	Replace clutch disc.
	(b) Weak or broken damper spring	Replace clutch disc.
	(c) Defective facing contact or excessive disc	Replace the defective clutch disc.
	(d) Warped pressure plate or flywheel	Rectify or replace.
	(e) Loose disc rivets	Replace clutch disc.
	(f) Loose engine mounting	Retighten or replace mounting.
	(g) Improper adjustment of pitching stopper	Adjustment.
4. Noisy clutch Examine whether the noise is generated when the clutch is disengaged, engaged, or partially engaged.	(a) Broken, worn or unlubricated release bearing	Replace the release bearing.
	(b) Insufficient lubrication of pilot bearing	Replace the pilot bearing.
	(c) Loose clutch disc hub	Replace clutch disc.
	(d) Loose damper spring retainer	Replace clutch disc.
	(e) Deteriorated or broken damper spring	Replace clutch disc.

Symptom	Possible cause	Corrective action
5. Clutch grabs. When starting the vehicle with the clutch partially engaged, the clutch grabs suddenly and the vehicle jumps instead of making a smooth start.	(a) Grease or oil on facing	Replace clutch disc.
	(b) Deteriorated cushioning spring	Replace clutch disc.
	(c) Worn or rusted spline of clutch disc or main shaft	Take off rust, apply grease or replace clutch disc or main shaft.
	(d) Deteriorated or broken damper spring	Replace clutch disc.
	(e) Loose engine mounting	Retighten or replace mounting.
	(f) Deteriorated diaphragm spring	Replace.

2. CLUTCH PEDAL

Trouble	Corrective action
Insufficient pedal play	Adjust pedal free play.
Insufficient clutch pedal free play	Adjust pedal free play.
Excessively worn and damaged pedal shaft and/or bushing	Replace the bushing and/or shaft with a new one.

3. DIAGNOSTIC DIAGRAM OF CLUTCH DRAG

	Step	Check	Yes	No
1	**CHECK GEAR NOISE.** 1) Start the engine. 2) Disengage the clutch and shift quickly from neutral to reverse in idling condition.	Is there any abnormal noise from the transmission gear?	Go to step **2.**	Clutch is normal.
2	**CHECK GEAR NOISE.** Disengage the clutch at idle and shift from neutral to reverse within 0.5 — 1.0 seconds.	Is there any abnormal noise from the transmission gear?	Go to step **3.**	For defective transmission or excessive clutch drag torque; inspect the pilot bearing, clutch disc, transmission and clutch disc hub spline.
3	**CHECK GEAR NOISE.** 1) Disengage the clutch at idle and shift from neutral to reverse within 0.5 — 1.0 seconds. 2) With the clutch disengaged, shift from neutral to reverse, reverse to neutral several times.	Is there any abnormal noise from the transmission gear?	Defect in clutch disengaging. Inspect clutch disc, clutch cover, clutch release, and clutch pedal free play.	Clutch and flywheel seizure. Inspect clutch disc, spline of clutch disc hub.

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

A: SPECIFICATION

	Model		Sedan				Wagon				
			2.0 i	2.5 i	2.0 GT	3.0 R	2.0 i	2.5 i	2.0 GT	3.0 R	OUTBACK 2.5 i, OUTBACK 3.0 R
Front	Wheel arch height [Tolerance: $^{+12}_{-24}$ mm ($^{+0.47}_{-0.94}$ in)]	mm (in)	376 (14.8)				381 (15.0)		376 (14.8)		429 (16.9)
	Camber (Tolerance: ±0°45′ Differences between RH and LH: 45′ or less)		−0°20′				−0°15′		−0°20′		0°30′
	Caster		6°00′				5°45′				5°05′
	Steering angle (Tolerance: ±1.5°)	Inner wheel	37.3°								37.8°
		Outer wheel	33.0°								33.5°
	Toe-in	mm (in)	0±3 (0±0.12) Toe angle (sum of both wheels): 0°±0°15′								
	Kingpin angle		13°50′				13°45′		13°50′		12°25′
	Diameter of stabilizer	mm (in)	20 (0.79)		21 (0.83)		20 (0.79)		21 (0.83)		
Rear	Wheel arch height [Tolerance: $^{+12}_{-24}$ mm ($^{+0.47}_{-0.94}$ in)]	mm (in)	360 (14.2)				375 (14.8)				430 (16.9)
	Camber (Tolerance: ±0°45′ Differences between RH and LH: 45′ or less)		−0°45′				−0°30′				0°00′
	Toe-in	mm (in)	0±3 (0±0.12) Toe angle (sum of both wheels): 0°±0°15′								
	Thrust angle (Tolerance: ±0°30′)		0°								
	Diameter of stabilizer	mm (in)	17.3 (0.68)		19.1 (0.75)			20 (0.78)	19.1 (0.75)		17.3 (0.68)

NOTE:
• Front and rear toe-ins and front camber can be adjusted. If the toe-in or camber tolerance exceeds specifications, adjust them.
• Other items indicated in the specification table cannot be adjusted. If those items exceed specifications, check suspension parts and connections for deformities; replace with new ones as required.

C: CAUTION

• Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
• Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
• Use SUBARU genuine grease or the equivalent. Do not mix grease, etc. with that of another grade or from other manufacturers.
• Before securing a part on a vice, place cushioning material such as wood blocks, aluminum plate, or cloth between the part and the vice.
• Be sure to tighten fasteners including bolts and nuts to the specified torque.
• Place shop jacks or rigid racks at the specified points.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-927380002	927380002	ADAPTER	Used as an adapter for camber & caster gauge when measuring camber and caster. (1) 28199AC000 PLATE (2) 28199AC010 BOLT
 ST-927680000	927680000	INSTALLER & REMOVER SET	Used for replacing the front arm front bushing.
 ST20299AG000	20299AG000 (Newly adopted tool)	REMOVER	Used for replacing the front arm rear bushing. Used with BASE (20999AG010).
 ST20299AG010	20299AG010 (Newly adopted tool)	BASE	Used for replacing the front arm rear bushing. Used with REMOVER (20999AG000).

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST20299AG020	20299AG020 (Newly adopted tool)	STUD BOLT SOCKET	Used for removing and installing the stud bolt for front arm installing portion.
 ST20399AG000	20399AG000 (Newly adopted tool)	STRUT MOUNT SOCKET	Used for disassembling and assembling the strut mount.

2. GENERAL TOOL

TOOL NAME	REMARKS
Alignment gauge	Used for wheel alignment measurement.
Turning radius gauge	Used for wheel alignment measurement.
Toe-in gauge	Used for toe-in measurement.
Dial gauge	Used for damper strut measurement.
Coil spring compressor	Used for strut assembly/disassembly.

2. Wheel Alignment

A: INSPECTION

Check the following items before taking wheel alignment measurement.
Check items before taking wheel alignment measurement:

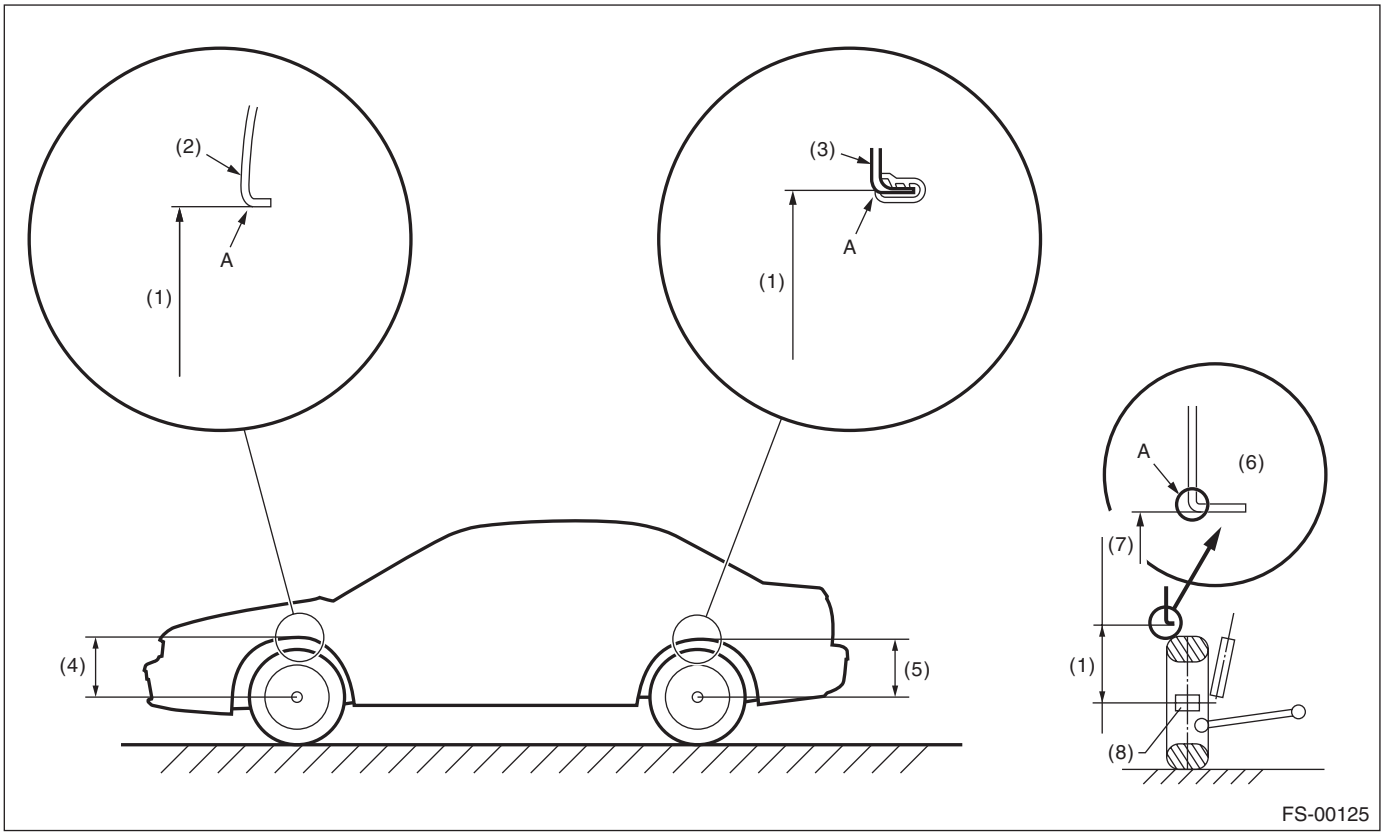
- Tire inflation pressure
- Unbalanced right and left tire wear, size difference
- Tire runout
- Excessive play and wear in ball joint
- Excessive play and wear in tie rod end
- Excessive play in wheel bearing
- Right and left wheel base imbalance
- Deformation and excessive play in steering link
- Deformation and excessive play in suspension parts

Check, adjust and measure the wheel alignment in accordance with the procedures indicated in the figure.

Wheel arch height (front and rear wheels) <Ref. to FS-9, WHEEL ARCH HEIGHT, INSPECTION, Wheel Alignment.>
↓
Camber (front and rear wheels) <Ref. to FS-10, CAMBER, INSPECTION, Wheel Alignment.>
↓
Caster (front wheel) <Ref. to FS-11, CASTER, INSPECTION, Wheel Alignment.>
↓
Steering angle <Ref. to FS-11, STEERING ANGLE, INSPECTION, Wheel Alignment.>
↓
Front wheel toe-in <Ref. to FS-12, FRONT WHEEL TOE-IN, INSPECTION, Wheel Alignment.>
↓
Rear wheel toe-in <Ref. to FS-12, REAR WHEEL TOE-IN, INSPECTION, Wheel Alignment.>
↓
Thrust angle <Ref. to FS-14, THRUST ANGLE, INSPECTION, Wheel Alignment.>

1. WHEEL ARCH HEIGHT

1) Park the vehicle on a level surface.
2) Set the vehicle under “curb weight” condition. (Make the luggage compartment empty, install the spare tire, jack and service tools, and top up the fuel tank.)
3) Set the steering wheel in a straight-ahead position, and stabilize the suspensions by moving the vehicle straight more than 5 m (16 ft).
4) Suspend a thread from wheel arch (point “A” in the figure below) to determine the point directly above the center of wheel.
5) Measure the distance between the point “A” and the center of wheel.



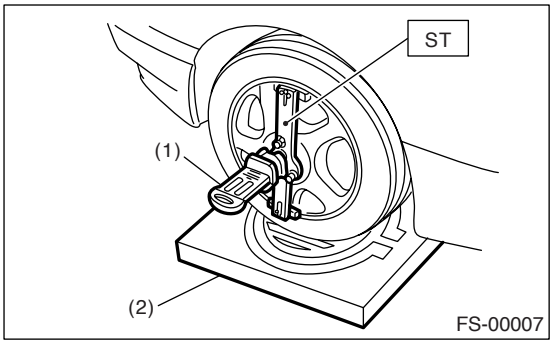
(1) Wheel arch height
(2) Front fender
(3) Rear quarter
(4) Front wheel arch height
(5) Rear wheel arch height
(6) Flange bend line
(7) Point of measurement
(8) Tip end of spindle

Wheel arch height standard value mm (in) (Tolerance ±12 mm)							
Model	Sedan				Wagon		
	2.0 i	2.5 i	2.0 GT	3.0 R	2.0 i, 2.5 i	2.0 GT, 3.0 R	OUTBACK 2.5 i, OUTBACK 3.0 R
Front	376 (14.8)				381 (15.0)	376 (14.8)	429 (16.9)
Rear	360 (14.2)				375 (14.8)		430 (16.9)

2. CAMBER

• INSPECTION

1) Place the front wheel on turning radius gauge. Make sure the ground contacting surfaces of front and rear wheels are set at the same height.
2) Set the ST into the center of wheel, and then set the wheel alignment gauge.
ST 927380002 ADAPTER



(1) Alignment gauge
(2) Turning radius gauge

3) Measure the camber angle in accordance with the operation manual for wheel alignment gauge.

Model		Camber (Differences between RH and LH: 45′ or less)
Sedan		–0°20′±0°45′
Wagon	2.0 i, 2.5 i	–0°15′±0°45′
	2.0 GT, 3.0 R	–0°20′±0°45′
	OUTBACK 2.5 i, OUTBACK 3.0 R	0°30′±0°45′

• FRONT CAMBER ADJUSTMENT

1) When adjusting the camber, adjust it to the following value.

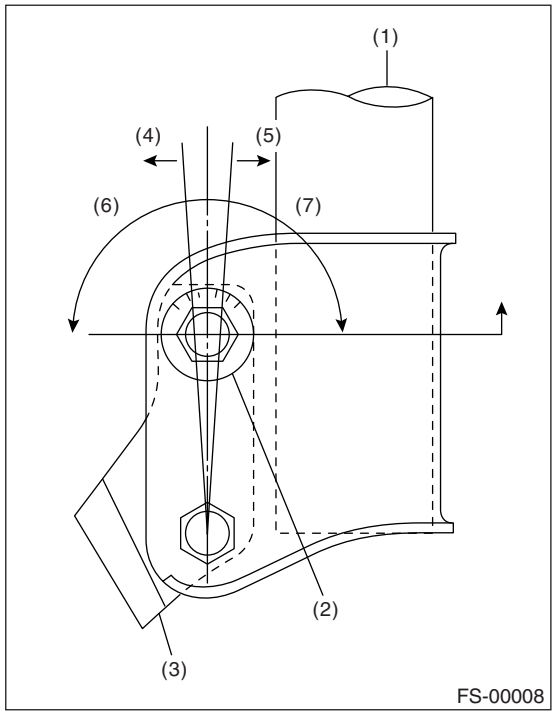
Model		Camber (Differences between RH and LH: 45′ or less)
Sedan		–0°20′±0°30′
Wagon	2.0 i, 2.5 i	–0°15′±0°30′
	2.0 GT, 3.0 R	–0°20′±0°30′
	OUTBACK 2.5 i, OUTBACK 3.0 R	0°30′±0°30′

2) Loosen the two self-locking nuts located at the lower front portion of strut.

NOTE:
When the adjusting bolt needs to be loosened or tightened, hold its head with a wrench and turn the self-locking nut.

3) Turn the camber adjusting bolt so that the camber is set at specification.

NOTE:
Moving the adjusting bolt by one scale changes the camber by approx. 0°15′.



(1) Strut
(2) Adjusting bolt
(3) Housing
(4) Outer
(5) Inner
(6) Camber is increased.
(7) Camber is decreased.

To increase camber.	
Rotate the left side counterclockwise.	Rotate the right side clockwise.
 FS-00009	 FS-00010

To decrease camber.	
Rotate the left side clockwise.	Rotate the right side counterclockwise.
 FS-00010	 FS-00009

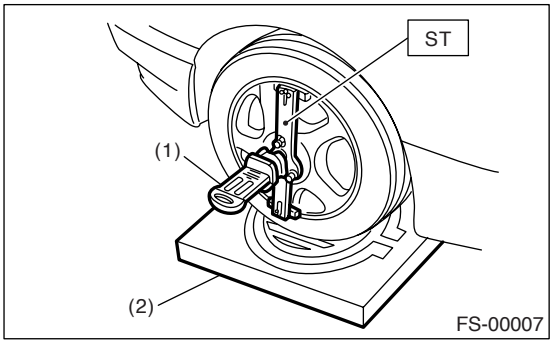
4) Tighten two new self-locking nuts.

Tightening torque:
175 N·m (17.8 kgf-m, 129 ft-lb)

3. CASTER

• INSPECTION

1) Place the front wheel on turning radius gauge. Make sure the ground contacting surfaces of front and rear wheels are set at the same height.
2) Set the ST into the center of wheel, and then set the wheel alignment gauge.
ST 927380002 ADAPTER



(1) Alignment gauge
(2) Turning radius gauge

3) Measure the caster angle in accordance with the operation manual for wheel alignment gauge.

Model	Caster
Sedan	6°00′
Wagon	5°45′
OUTBACK	5°05′

4. STEERING ANGLE

• INSPECTION

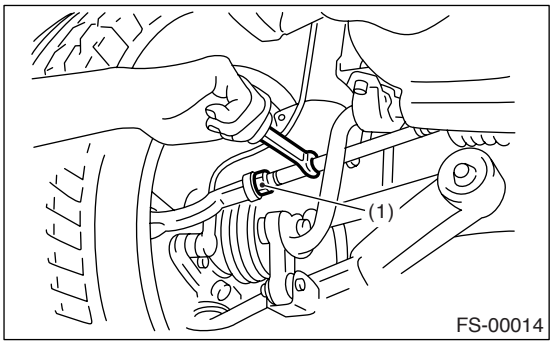
1) Place the vehicle on turning radius gauge.
2) While depressing the brake pedal, turn the steering wheel fully to the left and right. With the steering wheel held at each fully turned position, measure both the inner and outer wheel steering angle.

Model	Inner wheel	Outer wheel
OUTBACK	37.8°±1.5°	33.5°±1.5°
Except for OUTBACK	37.3°±1.5°	33.0°±1.5°

• ADJUSTMENT

1) Turn the tie-rod to adjust the steering angle of both inner and outer wheels.
2) Check the toe-in.

NOTE:
Correct the boot if it is twisted.



(1) Lock nuts

5. FRONT WHEEL TOE-IN

• INSPECTION

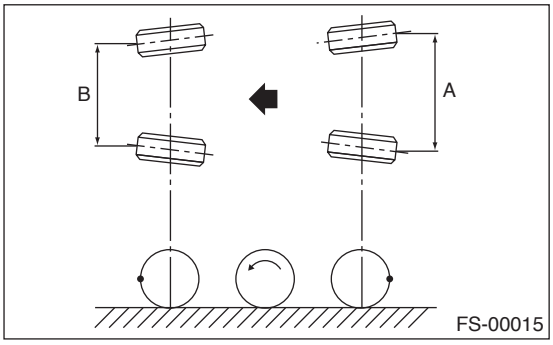
Toe-in:
0±3 mm (0±0.12 in)

1) Set the toe-in gauge in the position at wheel axis center height behind the right and left front tires.
2) Measure the distance “A” between the marks which are put on the centers of left and right tires.
3) Move the vehicle forward and rotate the tires 180°.

NOTE:
Be sure to rotate the tires in the forward direction.

4) Measure the distance “B” between the left and right marks. Detect toe-in by the following equation:

A − B = Toe-in

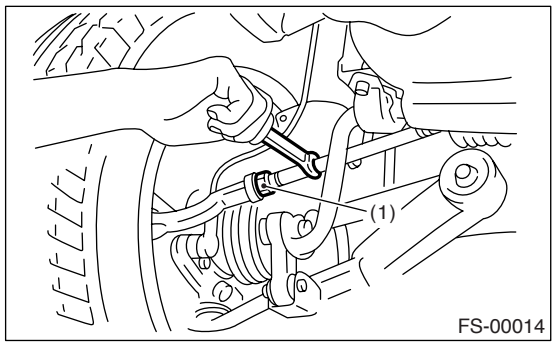


• ADJUSTMENT

When adjusting the toe-in, adjust it to the following value.

Toe-in:
0±2 mm (0±0.08 in)

1) Check that the left and right wheel steering angle is within specifications.
2) Loosen the left and right side steering tie-rod lock nuts.
3) Turn the left and right tie rods equal amounts until the toe-in is at the specification.
Both the left and right tie-rods are right-hand threaded. To increase toe-in, turn both tie-rods clockwise by equal amount (viewing from the inside of vehicle).



(1) Lock nuts

4) Tighten the tie-rod lock nut.

Tightening torque:
85 N·m (8.7 kgf-m, 62.7 ft-lb)

NOTE:
Check and correct the tie rod boot if twisted.

6. REAR WHEEL TOE-IN

• INSPECTION

Toe-in:
0±3 mm (0±0.12 in)

Refer to “FRONT WHEEL TOE-IN” for rear toe-in inspection procedure.
<Ref. to FS-12, FRONT WHEEL TOE-IN, INSPECTION, Wheel Alignment.>

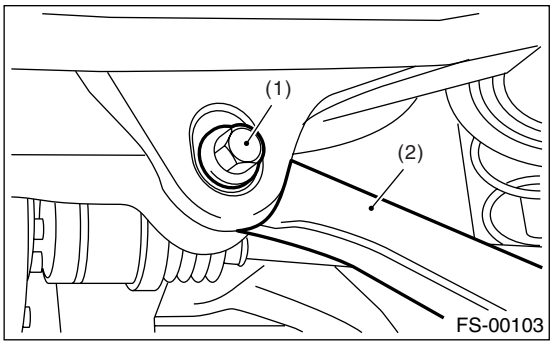
• ADJUSTMENT

When adjusting, adjust it to the following value.

Toe-in:
0±2 mm (0±0.08 in)

1) Loosen the self-locking nut on the inner side of rear link.

NOTE:
When loosening or tightening the adjusting bolt, hold the bolt head and turn self-locking nut.



(1) Adjusting bolt
(2) Rear link

2) Turn the adjusting bolt until toe-in is at the specification.

NOTE:
When the left and right wheels are adjusted for toe-in at the same time, the movement of one scale graduation changes toe-in by approx. 0.6 mm (0.02 in).

To increase toe-in.	
Rotate the left side clockwise.	Rotate the right side counterclockwise.
 FS-00018	 FS-00019

To decrease toe-in.	
Rotate the left side counterclockwise.	Rotate the right side clockwise.
 FS-00019	 FS-00018

3) Tighten a new self-locking nut.

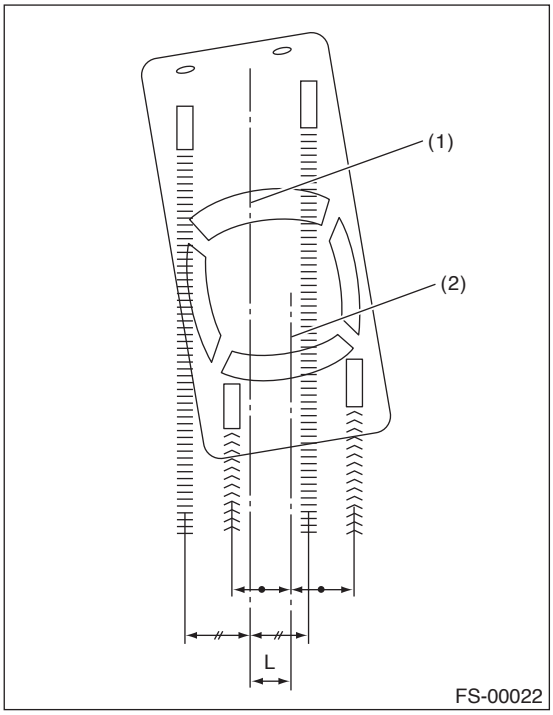
Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

7. THRUST ANGLE

• INSPECTION

1) Park the vehicle on a level surface.
2) Move the vehicle 3 to 4 meters (10 to 13 feet) directly forward.
3) Draw the center of loci of both the front and rear axles.
4) Measure the distance “L” between center lines of the loci of axles.

Thrust angle:
0°±30′
Less than 30′ when “L” is less than 23 mm (0.9 in).



(1) Center line of loci (front axle)
(2) Center line of loci (rear axle)

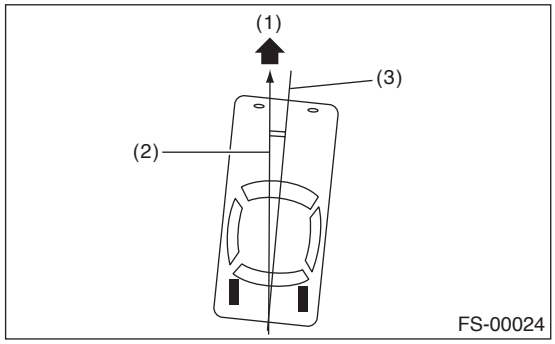
• ADJUSTMENT

When adjusting, adjust it to the following value.

Thrust angle:
0°±20′
Less than 20′ when “L” is less than 15 mm (0.6 in).

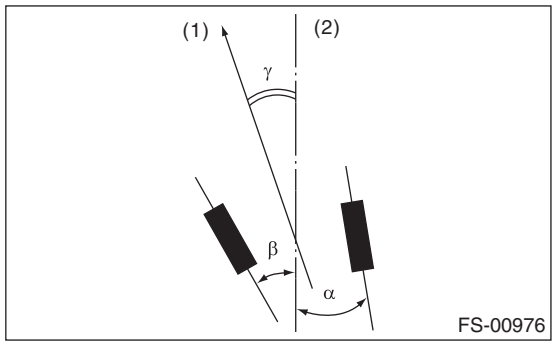
1) Make the thrust angle adjustments by turning the toe-in adjusting bolts of rear suspension equally in the same direction.
2) When one rear wheel is adjusted in a toe-in direction, adjust the other rear wheel equally in toe-out direction, in order to make the thrust angle adjustment.
3) When the left and right adjusting bolts are turned by one graduation, the thrust angle will change approx. 17′ [“L” is approx. 13 mm (0.51 in)].

NOTE:
Thrust angle refers to a mean value of left and right rear wheel toe angles in relation to the vehicle body center line. Vehicle is driven straight in the thrust angle direction while slanting in the oblique direction depending on the degree of the mean thrust angle.



(1) Front
(2) Thrust angle
(3) Body center line

Thrust angle: r = ($\alpha - \beta$)/2
α: Rear RH wheel toe-in angle
β: Rear LH wheel toe-in angle
Use only positive toe-in values from each wheel to substitute for α and β in the equation.



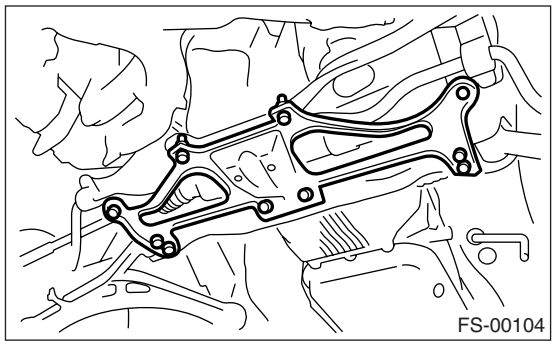
(1) Front
(2) Body center line

3. Front Crossmember Support Plate

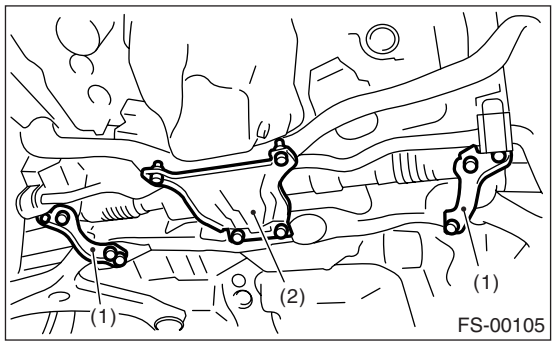
A: REMOVAL

1) Lift-up the vehicle.
2) Remove the front under cover. <Ref. to EI-26, REMOVAL, Front Under Cover.>
3) Remove the bolt and remove front crossmember support plate.

• Large type



• Small type



(1) Crossmember support plate
(2) Jack-up plate

B: INSTALLATION

Install in the reverse order of removal.

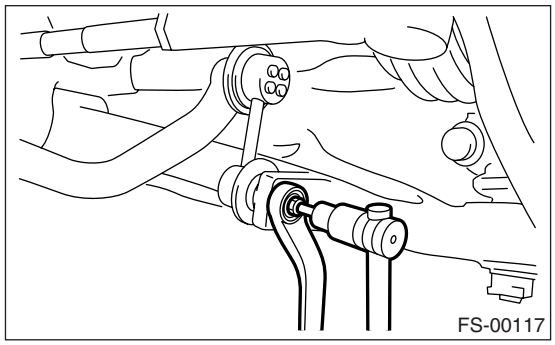
NOTE:
Tighten the small type crossmember support plate together with stabilizer bracket.
After installing the stabilizer bracket to crossmember, tighten the crossmember support plate together.

Tightening torque:
Crossmember support plate:
60 N·m (6.1 kgf-m, 44.3 ft-lb)
Crossmember support plate (Joint tightening portion of stabilizer bracket):
25 N·m (2.5 kgf-m, 18.1 ft-lb)
Jack-up plate:
60 N·m (6.1 kgf-m, 44.3 ft-lb)

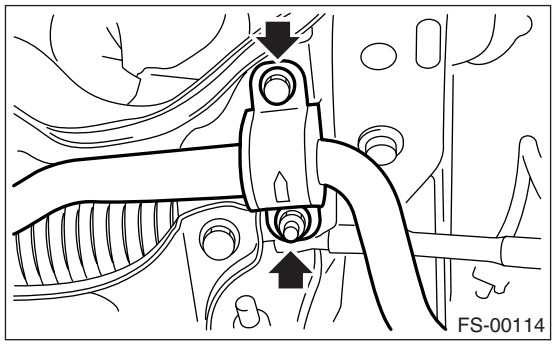
4. Front Stabilizer

A: REMOVAL

1) Lift-up the vehicle, and then remove the front wheels.
2) Remove the front under cover. <Ref. to EI-26, REMOVAL, Front Under Cover.>
3) Remove the front crossmember support plate. <Ref. to FS-15, REMOVAL, Front Crossmember Support Plate.>
4) Remove the stabilizer link.



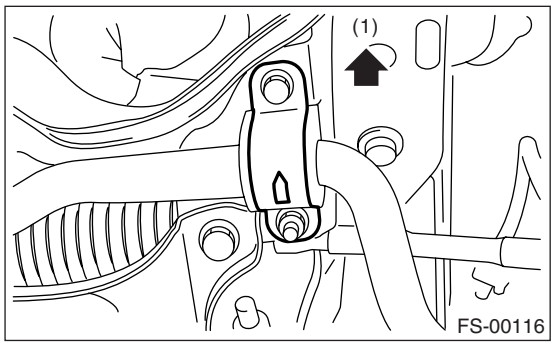
5) Remove the stabilizer bracket.



B: INSTALLATION

Install in the reverse order of removal.

NOTE:
• Use a new self-locking nut.
• Ensure that the stabilizer bushing and stabilizer have the same identification colors.
• Install the stabilizer bushing (front crossmember side) while aligning it with the paint mark on stabilizer.
• Stabilizer bracket has an orientation, so install it with the arrow mark faced to the front side of vehicle.



(1) Front side of vehicle

Tightening torque:
Stabilizer link
45 N·m (4.6 kgf-m, 33.2 ft-lb)
Stabilizer bracket
25 N·m (2.5 kgf-m, 18.1 ft-lb)

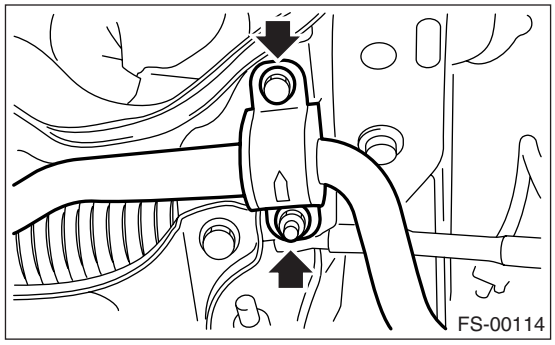
C: INSPECTION

1) Check the bushing for crack, fatigue or damage.
2) Check the stabilizer link for damage.

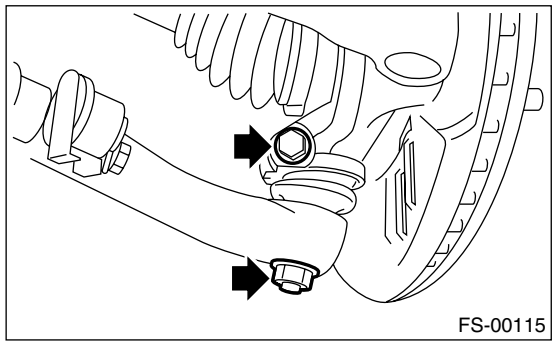
5. Front Ball Joint

A: REMOVAL

1) Lift-up the vehicle and remove the front wheels.
2) Remove the both sides of stabilizer bracket.



3) Pull out the pin from ball stud, remove the castle nut, and extract the ball stud from front arm.
4) Remove the bolt installing ball joint to housing.



5) Extract the ball joint from housing.

B: INSTALLATION

1) Insert the ball joint into housing.

Tightening torque (Bolt):
50 N·m (5.1 kgf-m, 36.9 ft-lb)

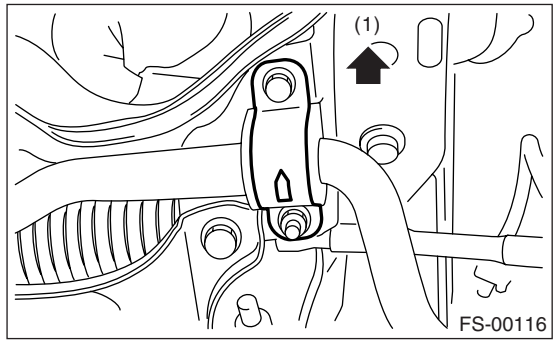
CAUTION:
Do not apply grease to the tapered portion of ball stud.

2) Install the ball joint into front arm.

Tightening torque (Castle nut)
Front arm:
39 N·m (4.0 kgf-m, 28.8 ft-lb)

3) Retighten the castle nut further within 60° until the hole in ball stud is aligned with a slot in castle nut. Then, insert a new cotter pin and bend it around castle nut.
4) Install the stabilizer bracket.

NOTE:
Stabilizer bracket has an orientation, so install it with the arrow mark faced to the front side of vehicle.



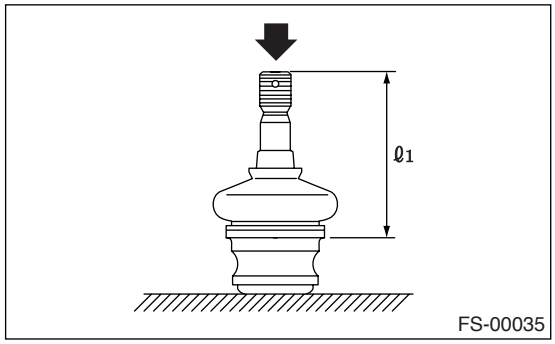
(1) Front side of vehicle

Tightening torque:
25 N·m (2.5 kgf-m, 18.1 ft-lb)

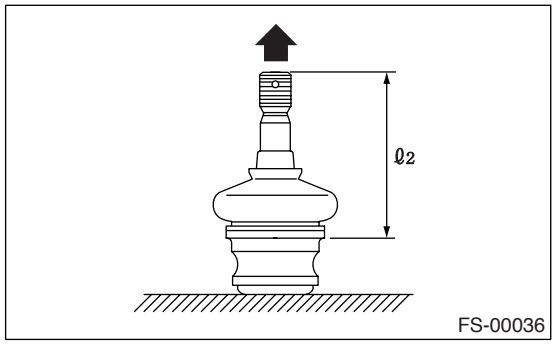
5) Install the front wheels.

C: INSPECTION

1) Measure the play of ball joint by the following procedures. Replace with a new one when the play exceeds specified value.
(1) With 686 N (70 kgf, 154 lb) loaded in direction shown in the figure, measure the dimension ℓ_1.



(2) With 686 N (70 kgf, 154 lb) loaded in direction shown in the figure, measure the dimension ℓ_2.



(3) Determine the plays from the following formula. $S = \ell_2 - \ell_1$

(4) Replace with a new one when the play exceeds specified value.

FRONT BALL JOINT

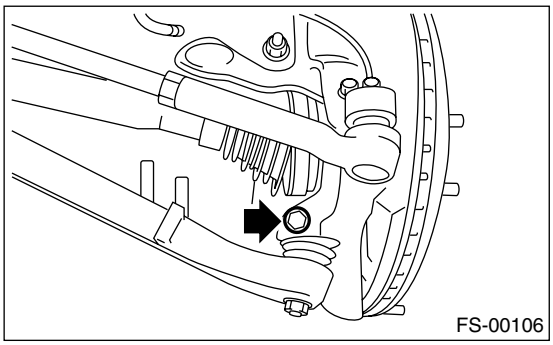
Specified play for replacement S:
Less than 0.3 mm (0.012 in)

2) When the play is within specified value, visually check the dust cover.
3) Remove the ball joint and cover, check them for wear, damage or cracks, and then replace them if any defective part is found.
4) If the dust cover is damaged, replace with a new ball joint.

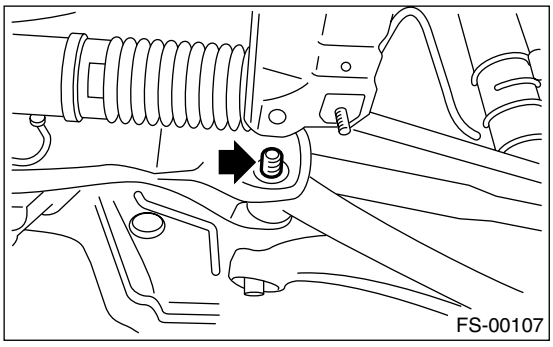
6. Front Arm

A: REMOVAL

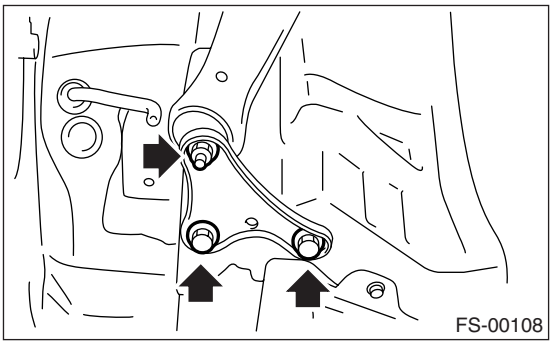
1) Lift-up the vehicle, and then remove the front wheels.
2) Remove the front crossmember support plate. <Ref. to FS-15, REMOVAL, Front Crossmember Support Plate.>
3) Remove the front stabilizer. <Ref. to FS-16, REMOVAL, Front Stabilizer.>
4) Remove the ball joint of front arm.



5) Remove the nut securing the front arm to crossmember. (Do not remove the bolt.)

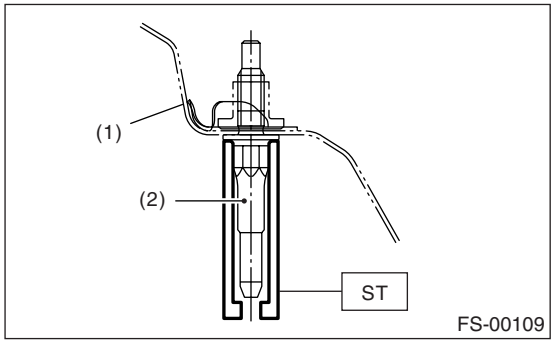


6) Remove the front arm support plate.



7) Remove the bolt securing the front arm to crossmember and extract the front arm from crossmember.
8) To remove the stud bolt, use ST.
ST 20299AG020 STUD BOLT SOCKET

CAUTION:
Do not remove the stud bolt without necessity. Always replace the parts with new ones when removed.



(1) Vehicle body
(2) Stud bolt

B: INSTALLATION

1) Using the ST, install the stud bolt.
ST 20299AG020 STUD BOLT SOCKET

Tightening torque:
110 N·m (11.2 kgf-m, 81.1 ft-lb)

2) Using new bolts and self-locking nuts, temporarily tighten the front arm to crossmember.
3) Secure the front arm to body, and then install the support plate with new bolts and self-locking nuts.

Tightening torque:
Support plate-to-Front arm:
110 N·m (11.2 kgf-m, 81.1 ft-lb)
Support plate-to-Body:
150 N·m (15.3 kgf-m, 110.6 ft-lb)

4) Install the ball joint into housing.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

5) Install the stabilizer. <Ref. to FS-16, INSTALLATION, Front Stabilizer.>
6) Lower the vehicle from the lift, and tighten the bolt which secures the front arm to crossmember at the state that wheels are in full contact with the ground and the vehicle is curb weight.

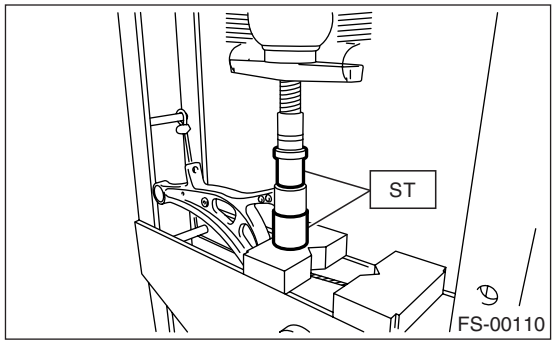
Tightening torque:
95 N·m (9.7 kgf-m, 70.1 ft-lb)

NOTE:
Inspect the wheel alignment and adjust if necessary.

C: DISASSEMBLY

1. FRONT BUSHING

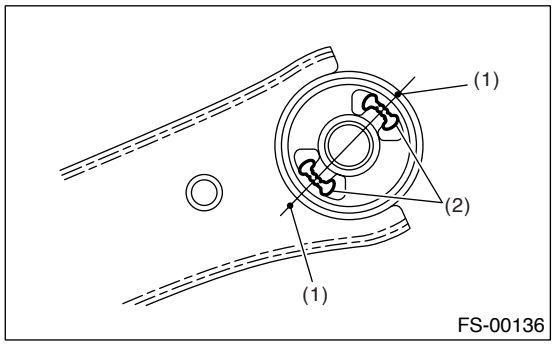
Using the ST and a press, remove the front bushing.
ST 927680000 INSTALLER & REMOVER SET



2. REAR BUSHING

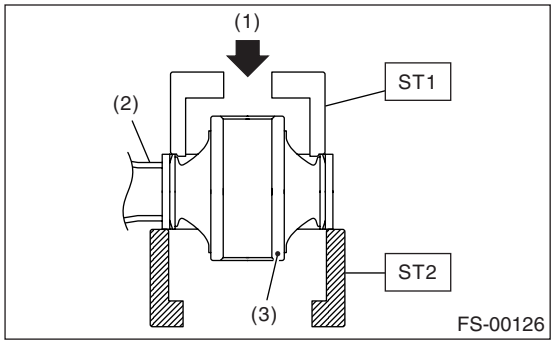
1) Scribe an aligning mark on the front arm based on the center of rear bushing recess portion.

CAUTION:
Always put an alignment mark for aligning the position on bushing installation.



(1) Put an alignment mark.
(2) Recess portion

2) Using the ST and a press, remove the rear bushing.
ST1 20299AG000 REMOVER
ST2 20299AG010 BASE



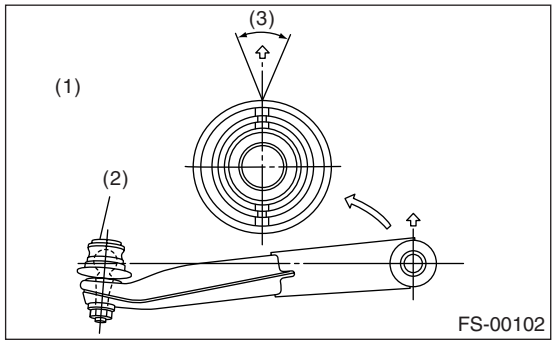
(1) Press
(2) Front arm
(3) Rear bushing

D: ASSEMBLY

1. FRONT BUSHING

Assemble in the reverse order of disassembly.

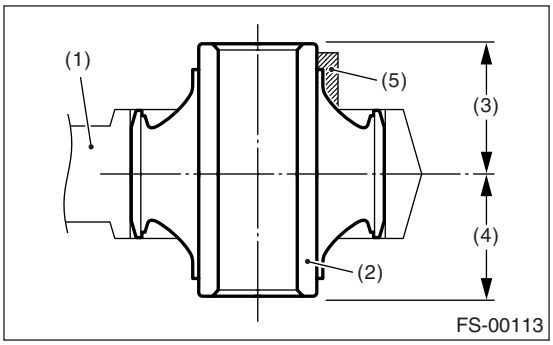
CAUTION:
Install the front bushing in proper direction as shown in the figure.



(1) Face the bushing toward the center of ball joint.
(2) Ball joint
(3) ±3°

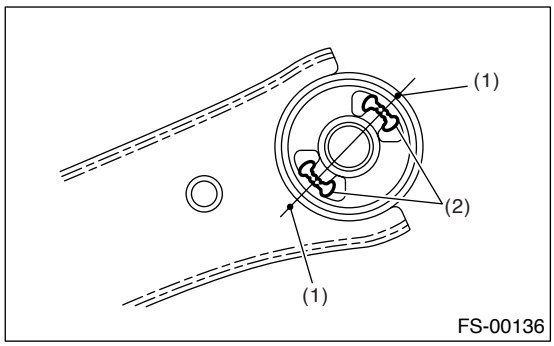
2. REAR BUSHING

1) Install the rear bushing with its longer inner cylinder faced upward and its shorter one faced downward and protruding part rearward as shown in the figure.



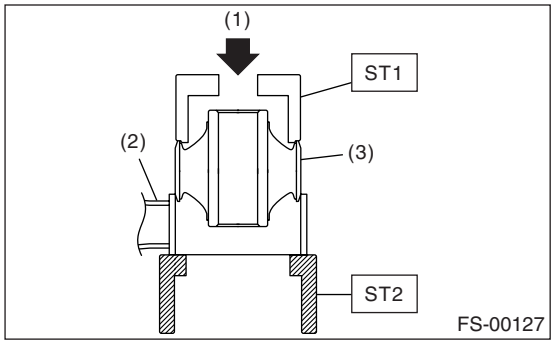
(1) Front arm
(2) Bushing inner cylinder
(3) Longer
(4) Shorter
(5) Protrusion portion

2) Align the center of rear bushing recess portion with the aligning mark on the front arm.



(1) Alignment mark
(2) Recess portion

3) Using the ST and a press, install the rear bushing.
ST1 20299AG000 REMOVER
ST2 20299AG010 BASE



(1) Press
(2) Front arm
(3) Rear bushing

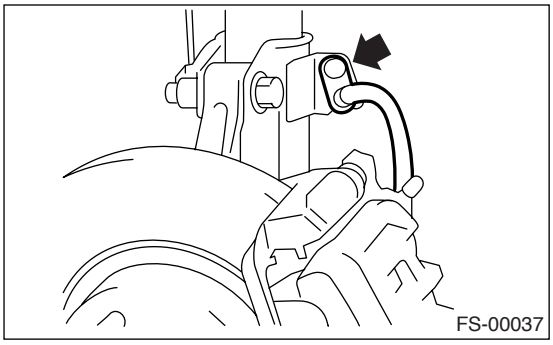
E: INSPECTION

1) Check the front arm for wear, damage or cracks, and correct or replace if defective.
2) Check the bushing for crack, fatigue or damage.

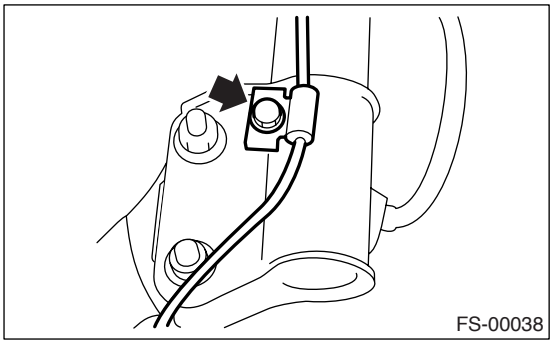
7. Front Strut

A: REMOVAL

1) Lift-up the vehicle, and then remove the front wheels.
2) Scribe an alignment mark on the camber adjusting bolt and strut.
3) Remove the bolt securing brake hose from strut.



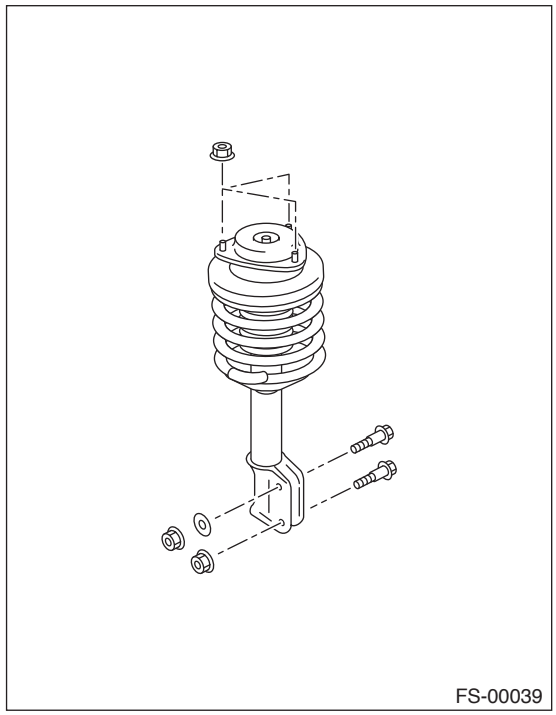
4) Remove the bolt securing ABS wheel speed sensor harness.



5) Remove the two bolts securing housing to strut.

NOTE:
While holding the head of adjusting bolt, loosen the self-locking nut.

6) Remove the three nuts securing strut mount to body.



B: INSTALLATION

1) Install the strut mount at the upper side of strut to body, and tighten it with new self-locking nuts.

Tightening torque:
20 N·m (2.0 kgf-m, 14.5 ft-lb)

2) Align alignment marks on the camber adjusting bolt and strut.
Using new self-locking nuts, install the strut to housing.

NOTE:
While holding the head of adjusting bolt, tighten the self-locking nut.

Tightening torque:
175 N·m (17.8 kgf-m, 129 ft-lb)

3) Secure the ABS wheel speed sensor harness to strut.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)

4) Install the bolts which secure the brake hose to strut.

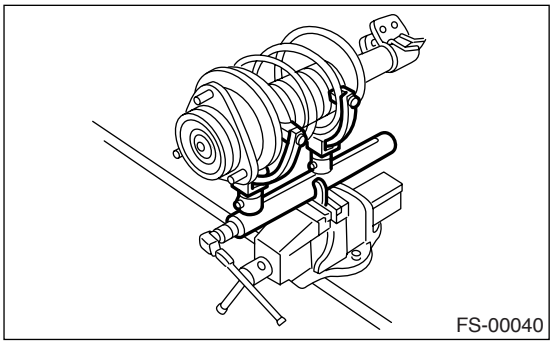
Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)

5) Install the front wheels.

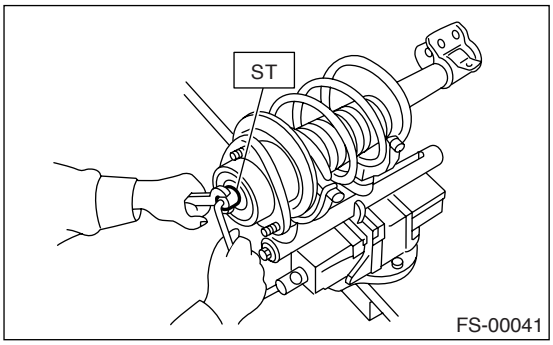
NOTE:
Inspect the wheel alignment and adjust if necessary.

C: DISASSEMBLY

1) Using a coil spring compressor, compress the coil spring.



2) Using the ST, remove the self-locking nut.
ST 20399AG000 STRUT MOUNT SOCKET



3) Remove the strut mount and upper spring seat from strut.
4) Gradually decrease the compression force of compressor, and remove the coil spring.
5) Remove the dust cover and helper spring.

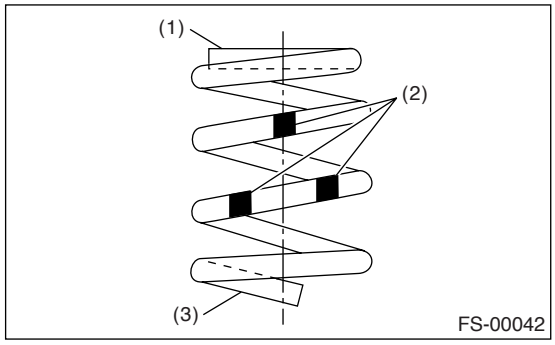
D: ASSEMBLY

1) Before installing the coil spring, strut mount, etc. on strut, check for the presence of air in the dampening force generating mechanism of the strut since air prevents proper dampening force production.
2) Check for presence of air
   (1) Place the strut vertically with the piston rod facing up.
   (2) Move the piston rod to the center of its entire stroke.
   (3) While holding the piston rod end with fingertips, move the rod up and down.
   (4) If the piston rod moves at least 10 mm (0.39 in) in the former step, purge air from the strut.
3) Air purging procedure
   (1) Place the strut vertically with the piston rod facing up.
   (2) Fully extend the piston rod.
   (3) With the piston rod fully extended, place the piston rod side down. The strut must stand vertically.
   (4) Fully contract the piston rod.
   (5) Repeat 3 to 4 times from the step (1).

NOTE:
After completely purging air from the strut, be sure to place the strut with the piston rod facing up. If the strut is laid down and set, check for the entry of air in accordance with “Check for presence of air”.

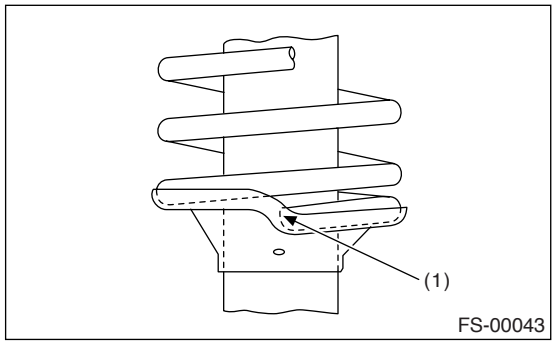
4) Using a coil spring compressor, compress the coil spring.

NOTE:
Make sure that the vertical installing direction of coil spring is as shown in the figure.



(1) Diameter is small (Upper part)
(2) Identification paint
(3) Diameter is large (Bottom part)

5) Set the coil spring correctly so that its end face fits well into the spring seat as shown in the figure.

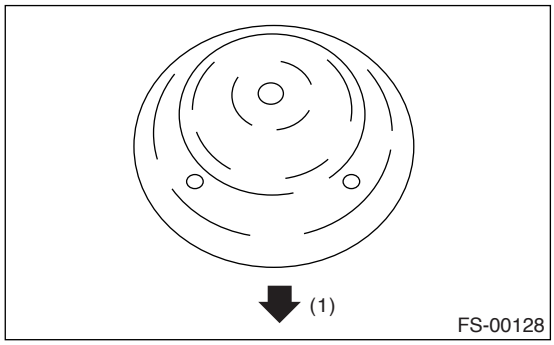


(1) Coil spring end face

6) Install the helper and dust cover to piston rod.

7) Pull the piston rod fully upward, and install the spring seat.

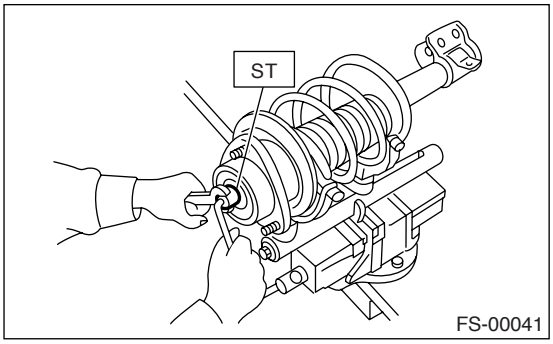
NOTE:
Ensure the upper spring seat is positioned as shown in the figure.



(1) Outside of body

8) Install the strut mount to piston rod, and tighten a new self-locking nut temporarily.
9) Using a hexagon wrench to prevent strut rod from turning, tighten the new self-locking nut with ST.
ST 20399AG000 STRUT MOUNT SOCKET

Tightening torque:
55 N·m (5.6 kgf-m, 41 ft-lb)



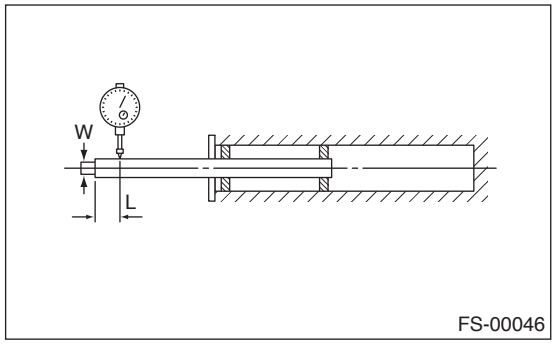
10) Loosen the coil spring carefully.

E: INSPECTION

Check the removed part for wear, damage or cracks, and then repair or replace it if defective.

1. DAMPER STRUT

1) Check for oil leaks.
2) Move the piston rod up and down to check that it operates smoothly without any hitch.
3) Piston rod play
• Measure the play as follows:
Fix the outer shell and fully extend the rod. Set a dial gauge at the end of rod L [10 mm (0.39 in)], and then read the dial gauge indication P_1 while applying a force of W [20 N (2 kgf, 4 lb)] to threaded portion. Apply a force of 20 N (2 kgf, 4 lb) in the opposite direction of “W”, and then read the dial gauge indication P_2.



Play limit ($P_1 + P_2$):
0.8 mm (0.031 in)

If the play exceeds limit, replace the strut.

2. STRUT MOUNT

Check the rubber part for deformation, cracks or deterioration, and then replace it with a new one if defective.

3. DUST COVER

If any cracks or damage are found, replace it with a new one.

4. COIL SPRING

If a permanent strain is found, replaced it with a new one.

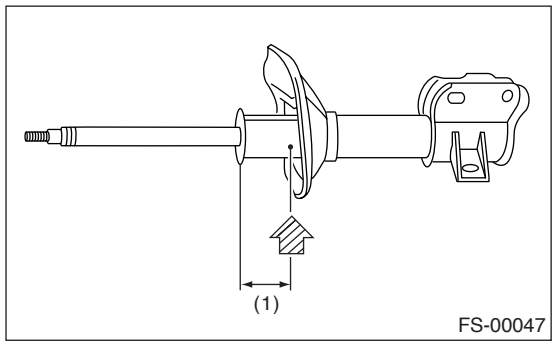
5. HELPER

Replace it with a new one if cracked or damaged.

F: DISPOSAL

CAUTION:
• Before handling struts, be sure to wear goggles to protect eyes from gas, oil and cutting powder.
• Do not disassemble the strut damper or place into a fire.
• Drill a hole into struts in case of discarding struts filled with gas.

1) Place the strut on a level surface with the piston rod fully expanded.
2) Using a 2 to 3 mm (0.08 to 0.12 in) dia. drill, make holes in areas shown in the figure.

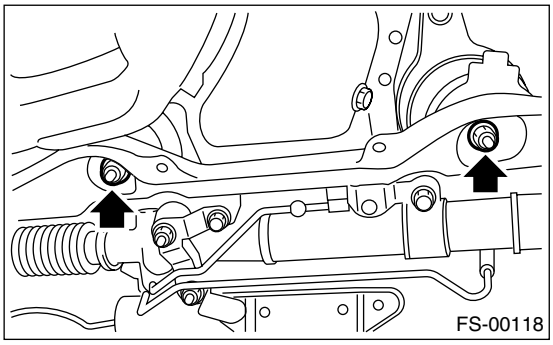


(1) 40 mm (1.57 in)

8. Front Crossmember

A: REMOVAL

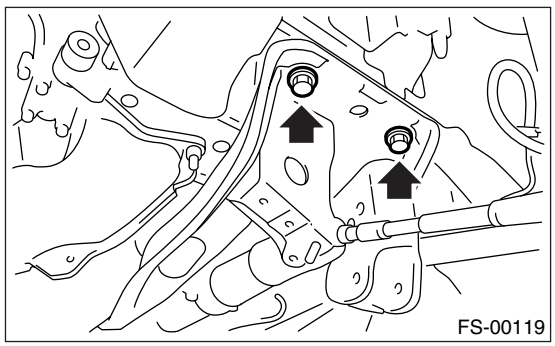
1) Lift-up the vehicle, and then remove the front wheels.
2) Remove the front exhaust pipe.
3) Remove the front crossmember support plate. <Ref. to FS-15, REMOVAL, Front Crossmember Support Plate.>
4) Remove the front stabilizer. <Ref. to FS-16, REMOVAL, Front Stabilizer.>
5) Disconnect the tie-rod end from housing.
6) Remove the front arm. <Ref. to FS-19, REMOVAL, Front Arm.>
7) Remove the nuts attaching the engine mount cushion rubber to crossmember.



FS-00118

8) Remove the steering universal joint.
9) Disconnect the power steering hose from steering gearbox.
10) Lift the engine approx. 10 mm (0.39 in) using a chain block.
11) Support the crossmember with a jack, remove the bolts securing crossmember to body, and then gradually lower the crossmember with steering gearbox as a unit.

CAUTION:
When removing the crossmember downward, be careful that the tie-rod end does not interfere with drive shaft boot.



FS-00119

B: INSTALLATION

1) Install in the reverse order of removal.

NOTE:
• Use a new bolt and self-locking nut. For the parts which are not reusable, refer to “COMPONENT”. <Ref. to FS-4, COMPONENT, General Description.>
• Always tighten the bushing in the state that wheels are in full contact with the ground and the vehicle is curb weight.

Tightening torque:
Crossmember to body:
95 N·m (9.7 kgf-m, 70.1 ft-lb)
Engine mounting to crossmember:
85 N·m (8.7 kgf-m, 62.7 ft-lb)
Front arm-to-Crossmember:
95 N·m (9.7 kgf-m, 70.1 ft-lb)
Front arm-to-Support plate:
110 N·m (11.2 kgf-m, 81.1 ft-lb)
Support plate body:
150 N·m (15.3 kgf-m, 110.6 ft-lb)
Tie-rod end to housing:
27.0 N·m (2.75 kgf-m, 19.9 ft-lb)

Retighten the castle nut further within 60° until the hole in ball stud is aligned with a slot in castle nut after tightening in specified torque.
Universal joint:
24 N·m (2.4 kgf-m, 17.4 ft-lb)
Stabilizer bracket:
25 N·m (4.6 kgf-m, 33.2 ft-lb)
Stabilizer link:
45 N·m (2.5 kgf-m, 18.4 ft-lb)
Power steering hose-to-Steering gearbox:
15 N·m (1.5 kgf-m, 11 ft-lb)

2) Purge air from the power steering system.
3) Inspect the wheel alignment and adjust if necessary.

C: INSPECTION

Check the crossmember for wear, damage or cracks, and then repair or replace if defective.

9. General Diagnostic Table

A: INSPECTION

1. IMPROPER VEHICLE POSTURE OR IMPROPER WHEEL ARCH HEIGHT

Possible cause	Corrective action
(1) Permanent distortion or breakage of coil spring	Replace.
(2) Rough operation of damper strut or shock absorber	Replace.
(3) Installation of wrong strut or shock absorber	Replace with proper parts.
(4) Installation of wrong coil spring	Replace with proper parts.

2. POOR RIDE COMFORT

1) Large rebound shock
2) Rocking of the vehicle continues too long after running over bump and hump.
3) Large shock in bumping

Possible cause	Corrective action
(1) Breakage of coil spring	Replace.
(2) Overinflating pressure of tire	Adjust.
(3) Improper wheel arch height	Adjust or replace the coil springs with new ones.
(4) Fault in operation of damper strut or shock absorber	Replace.
(5) Damage or deformation of strut mount or shock absorber mount	Replace.
(6) Unsuitability of maximum or minimum length of damper strut or shock absorber	Replace with proper parts.
(7) Deformation or loss of bushing	Replace.
(8) Deformation or damage of helper in strut assembly or shock absorber	Replace.
(9) Oil leakage of damper strut or shock absorber	Replace.

3. NOISE

Possible cause	Corrective action
(1) Wear or damage of damper strut or shock absorber component parts	Replace.
(2) Loosening of suspension link installing bolt	Tighten to specified torque.
(3) Deformation or loss of bushing	Replace.
(4) Unsuitability of maximum or minimum length of damper strut or shock absorber	Replace with proper parts.
(5) Breakage of coil spring	Replace.
(6) Wear or damage of ball joint	Replace.
(7) Deformation of stabilizer clamp	Replace.

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

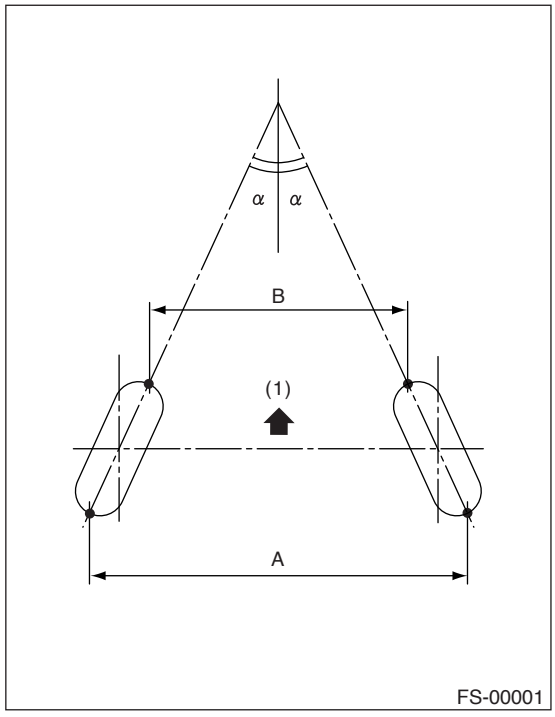
10.	Sub Frame Support Plate	22
11.	Rear Sub Frame	23
12.	Helper	24
13.	General Diagnostic Table	25

1. General Description

A: SPECIFICATION

Model	Sedan		Wagon		
	2.0 i, 2.5 i	2.0 GT, 3.0 R	2.0 i	2.5 i	OUTBACK 2.5 i, OUTBACK 3.0 R
Wheel arch height [Tolerance: $^{+12\ mm}_{-24\ mm}$ ($^{+0.47\ in}_{-0.94\ in}$)] mm (in)	360 (14.2)		375 (14.8)		430 (16.9)
Camber (Tolerance: ±0°45′ Differences between RH and LH: 45′ or less)	−0°45′		−0°30′		0°00′
Toe-in mm (in)	0±3 (0±0.12) Toe angle (sum of both wheels): 0°±0°15′				
Thrust angle (tolerance: ±0°30′)	0°				
Diameter of stabilizer mm (in)	17.3 (0.68)	19.1 (0.75)	19.1 (0.75)	20 (0.78)	17.3 (0.68)

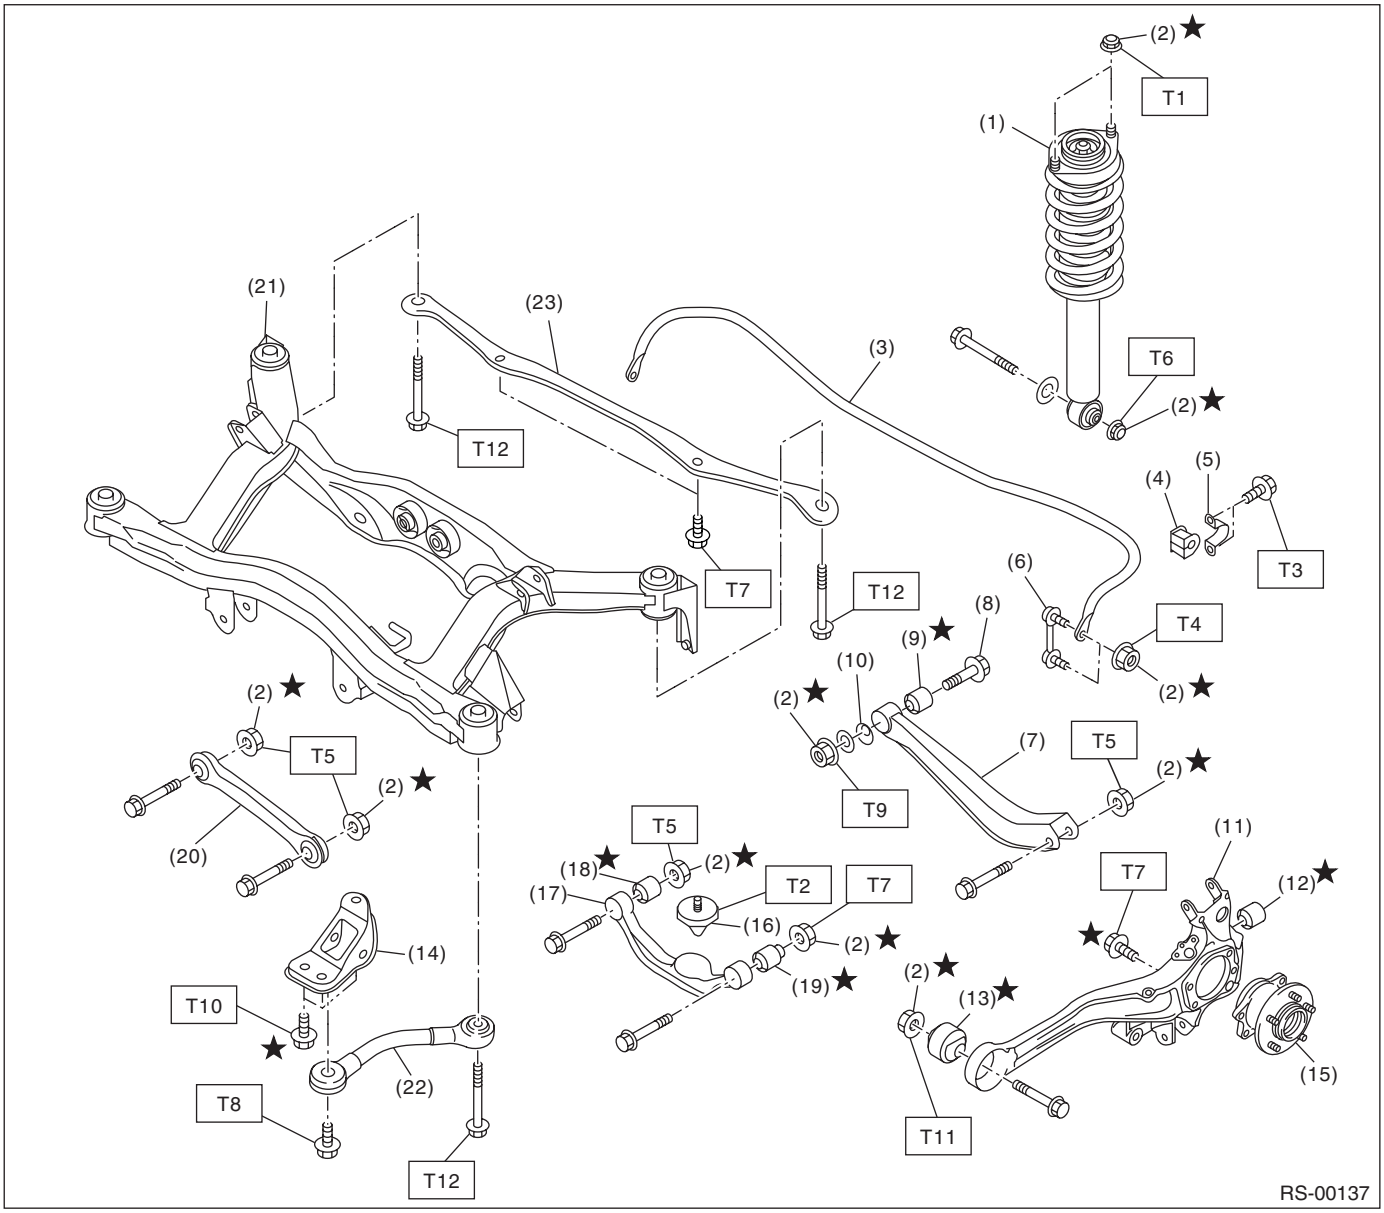
NOTE:
• Front and rear toe-ins and front camber can be adjusted. If the toe-in or camber tolerance exceeds specifications, adjust them.
• Other items indicated in the specification table cannot be adjusted. If other items exceeds specifications, check suspension parts and connections for deformation, and replace with new ones as required.



(1) Front
A − B = Positive: Toe-in, Negative: Toe-out
α = Each toe angle

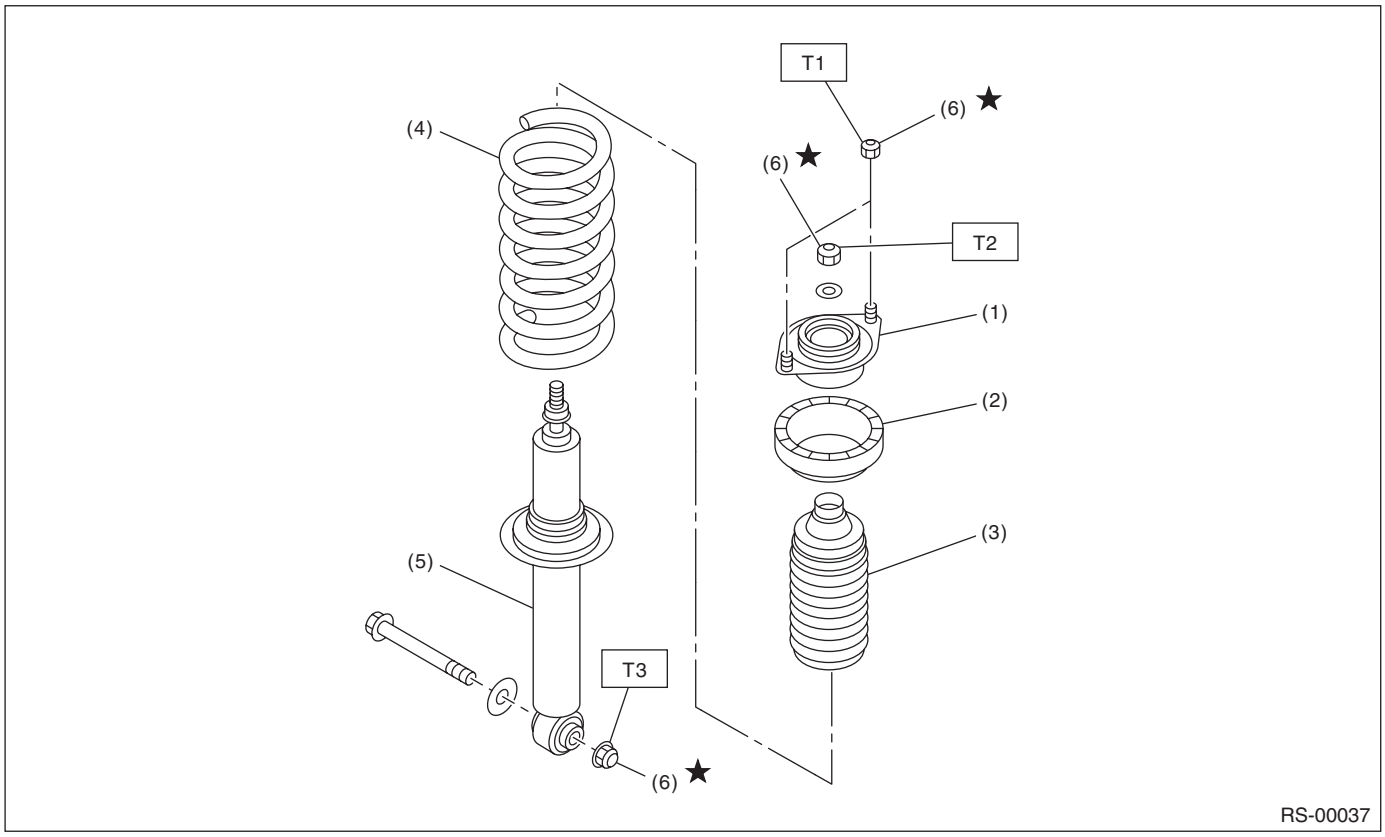
B: COMPONENT

1. REAR SUSPENSION



(1)	Shock absorber	(14)	Rear arm bracket	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Self-locking nut	(15)	Hub bearing unit	***T1: 30 (3.1, 22.4)***
(3)	Stabilizer	(16)	Helper	***T2: 32 (3.3, 24)***
(4)	Stabilizer bushing	(17)	Upper link	***T3: 40 (4.1, 30)***
(5)	Bracket	(18)	Upper link bushing (inner side)	***T4: 44 (4.5, 32.5)***
(6)	Stabilizer link	(19)	Upper link bushing (outer side)	***T5: 57 (5.8, 42)***
(7)	Rear link	(20)	Front link	***T6: 62 (6.3, 48)***
(8)	Adjusting bolt	(21)	Rear sub frame	***T7: 65 (6.6, 48)***
(9)	Rear link bushing	(22)	Sub frame support arm	***T8: 80 (8.2, 59)***
(10)	Adjusting washer	(23)	Sub frame support plate	***T9: 120 (12.2, 89)***
(11)	Rear arm			***T10: 125 (12.7, 92)***
(12)	Rear arm rear bushing			***T11: 150 (15.3, 111)***
(13)	Rear arm front bushing			***T12: 175 (17.8, 129)***

2. SHOCK ABSORBER



(1) Mount
(2) Upper rubber sheet
(3) Dust cover
(4) Coil spring
(5) Shock absorber
(6) Self-locking nut

Tightening torque: N·m (kgf-m, ft-lb)
T1: 30 (3.1, 22.4)
T2: 35 (3.6, 26)
T3: 62 (6.3, 48)

C: CAUTION

• Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
• Before discarding shock absorbers, be sure to bleed gas completely. Also, do not throw away in fire.
• Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
• Use SUBARU genuine grease etc. or the equivalent. Do not mix grease, etc. with that of another grade or from other manufacturers.
• Before securing a part on a vice, place cushioning material such as wood blocks, aluminum plate, or cloth between the part and the vice.
• Be sure to tighten fasteners including bolts and nuts to specified torque.
• Place shop jacks or rigid racks at the specified points.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-927380002	927380002	ADAPTER	Used for an adapter of camber & caster gauge when measuring the camber and caster. (1) 28199AC000 PLATE (2) 28199AC010 BOLT
 ST20099AE000	20099AE000	INSTALLER & REMOVER	Used for replacing the rear link bushing.
 ST20099AE010	20099AE010	INSTALLER & REMOVER	Used for replacing the upper link bushing.
 ST20099AE020	20099AE020	INSTALLER & REMOVER SET	Used for replacing the rear arm front bushing.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST20099AE040	20099AE040	INSTALLER & REMOVER SET	Used for replacing the rear arm rear bushing.
 ST20099AE030	20099AE030	HELPER SOCKET WRENCH	Used for replacing the helper.
 ST20399AG000	20399AG000 (New adopted tool)	STRUT MOUNT SOCKET	Used for removing and installing the shock mount.
 ST28099PA090	28099PA090	OIL SEAL PROTECTOR	• Used for installing the rear drive shaft to rear differential. • For oil seal protection

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST28099PA100	28099PA100	REMOVER	Used for removal of DOJ.

2. GENERAL TOOL

TOOL NAME	REMARKS
Alignment gauge	Used for wheel alignment measurement.
Turning radius gauge	Used for wheel alignment measurement.
Toe-in gauge	Used for toe-in measurement.
Transmission jack	Used for removing and installing suspension.
Bearing puller	Used for removing bushings.
Coil spring compressor	Used for disassembling and assembling shock absorber.

2. Wheel Alignment

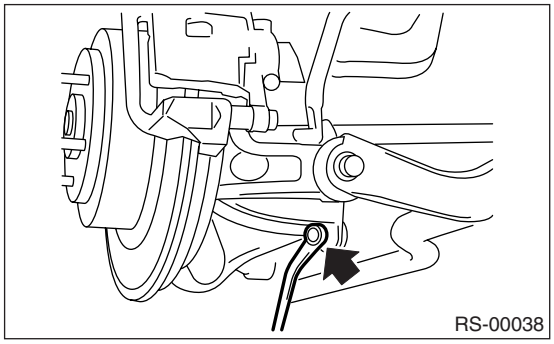
A: INSPECTION

NOTE:
Measure and adjust the front and rear wheel alignment at a time. Refer to “FS” section for measurement and adjustment of wheel alignment. <Ref. to FS-8, INSPECTION, Wheel Alignment.>

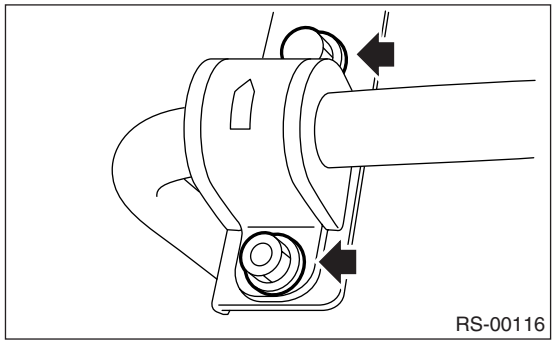
3. Rear Stabilizer

A: REMOVAL

1) Lift-up the vehicle, and then remove the rear wheels.
2) Remove the stabilizer link.



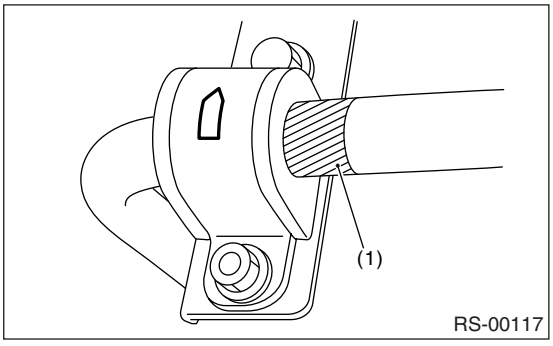
3) Remove the stabilizer bracket.



B: INSTALLATION

1) Install in the reverse order of removal.

NOTE:
• Use a new self-locking nut.
• Ensure the stabilizer bushing and stabilizer have the same identification colors.
• To install the stabilizer bushing, align the paint mark end of stabilizer to the end of stabilizer bushing.
• Stabilizer bracket has an orientation, so install it with the arrow mark faced to the upper side of vehicle.



(1) Paint mark

2) Always tighten the stabilizer bushing in the state that wheels are in full contact with the ground and the vehicle is curb weight.

Tightening torque:
Stabilizer link
44 N·m (4.5 kgf-m, 32.5 ft-lb)
Stabilizer bracket
40 N·m (4.1 kgf-m, 30 ft-lb)

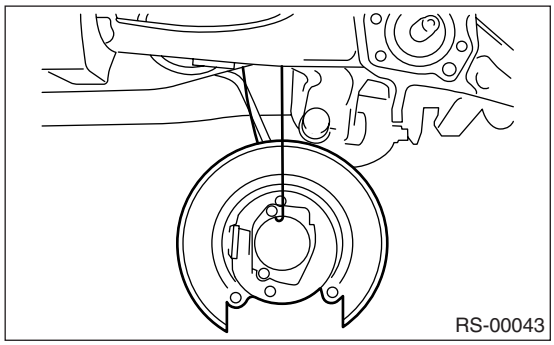
C: INSPECTION

1) Check the bushing for crack, fatigue and damage.
2) Check the stabilizer link for damage.

4. Rear Arm

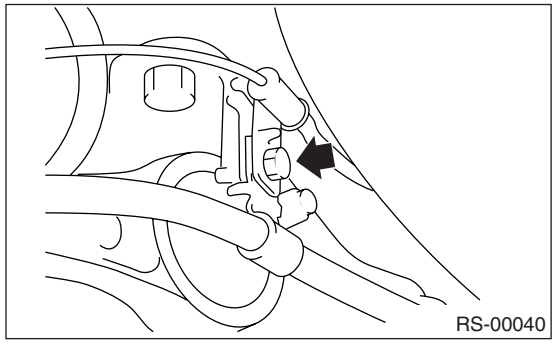
A: REMOVAL

1) Lift-up the vehicle, and then remove the rear wheels.
2) Remove the sub frame support arm.
<Ref. to RS-21, REMOVAL, Sub Frame Support Arm.>
3) Remove the bearing unit.
<Ref. to DS-19, REMOVAL, Rear Hub Unit Bearing.>
4) Hang the back plate from sub frame.



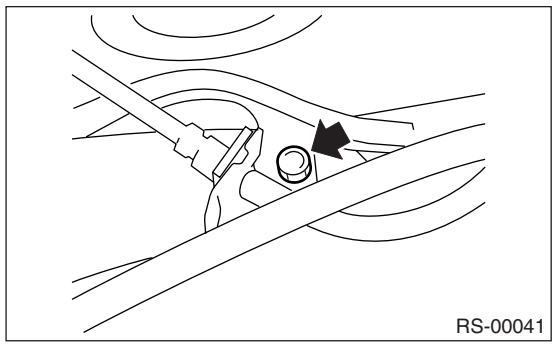
RS-00043

5) Remove the bolts which secure the parking brake cable clamp to rear arm bracket.



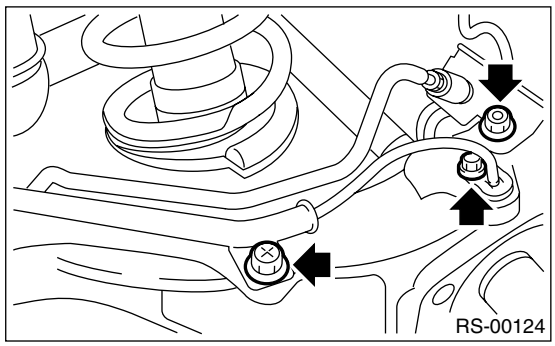
RS-00040

6) Remove the bolt which hold the brake hose bracket and ABS wheel speed sensor bracket to rear arm.



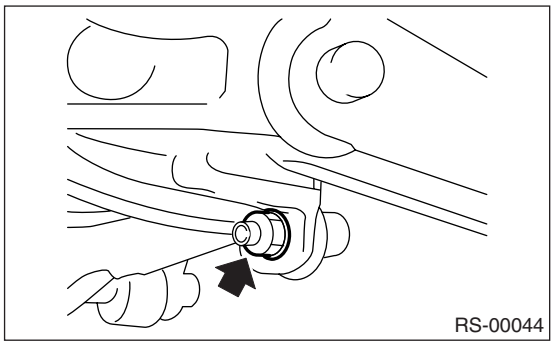
RS-00041

7) Remove the bolts which secure the brake hose bracket to rear arm. Remove the bolts which secure the ABS wheel speed sensor to rear arm.



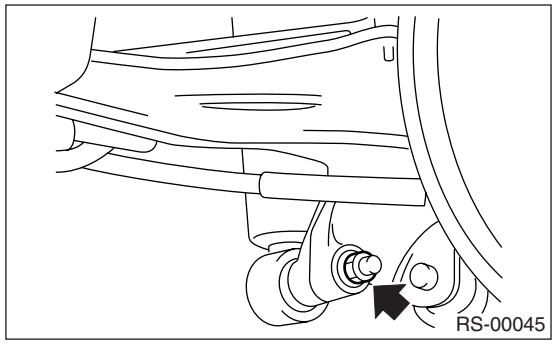
RS-00124

8) Remove the stabilizer link from rear arm.



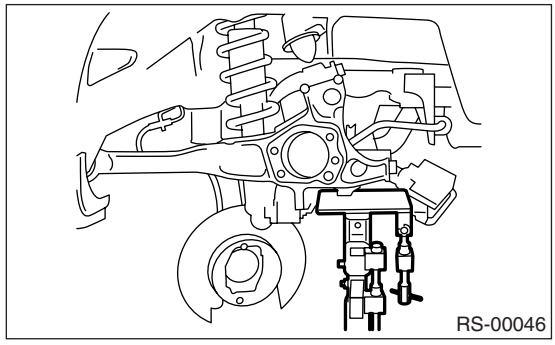
RS-00044

9) Remove the shock absorber from rear arm.



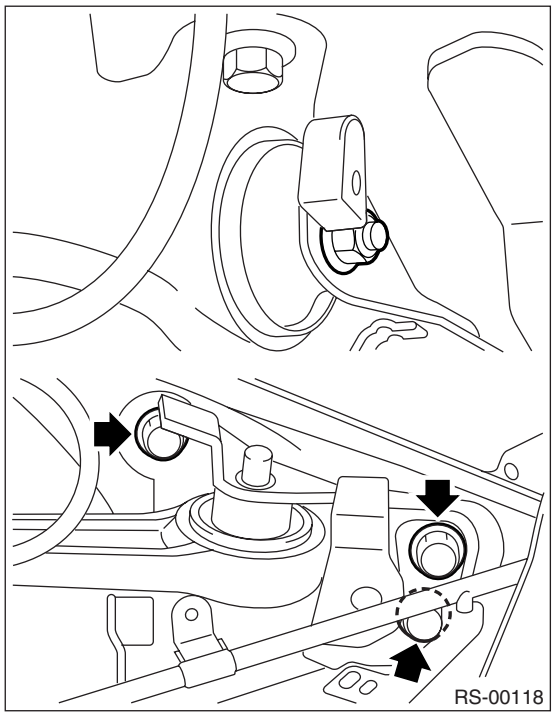
RS-00045

10) Support the rear arm horizontally using a transmission jack.

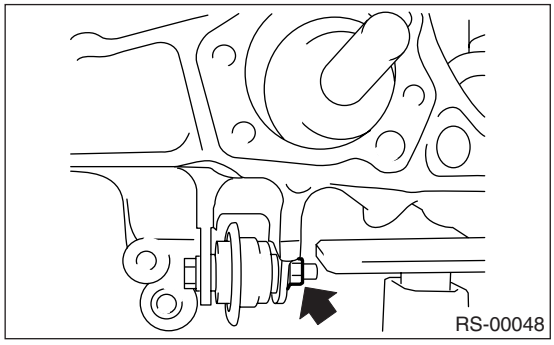


RS-00046

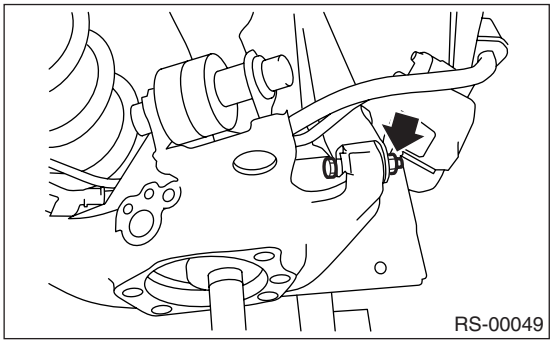
11) Remove the nuts which hold the rear arm to bracket. Remove the rear arm bracket.



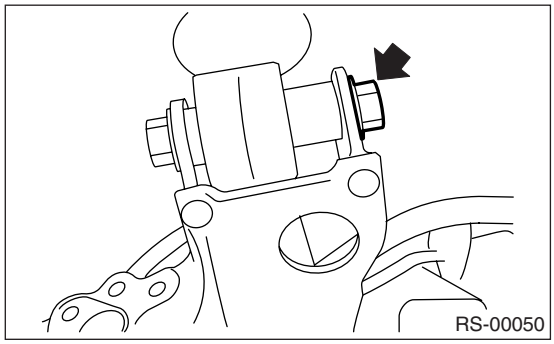
12) Loosen the nut which hold the front link to rear arm.



13) Loosen the nut which hold the rear link to rear arm.



14) Loosen the nut which hold the upper link to rear arm.



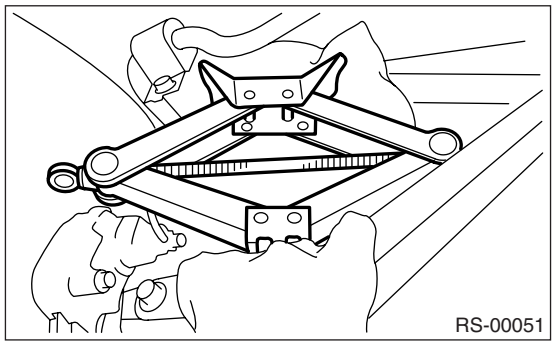
15) Remove the bolt which secure the rear arm to the link, and then remove the rear arm.

B: INSTALLATION

NOTE:
Use a new bolt and self-locking nut. For the parts which are not reusable, refer to “COMPONENT”. <Ref. to RS-3, REAR SUSPENSION, COMPONENT, General Description.>

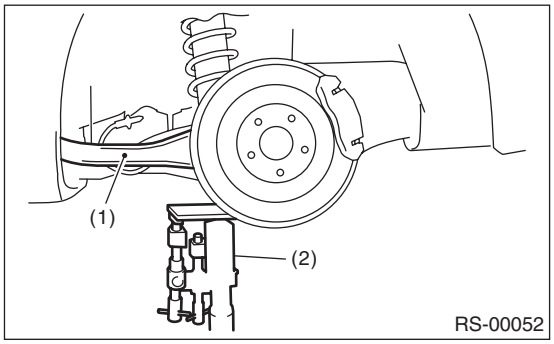
1) Support the rear arm using a transmission jack.
2) Install the rear arm and temporarily tighten the bolts which hold the rear arm to the link.
3) Install the bearing unit.
<Ref. to DS-20, INSTALLATION, Rear Hub Unit Bearing.>
4) Install the bolts which secure the ABS wheel speed sensor to rear arm.
5) Install the bolts which secure the brake hose to rear arm.
6) Install the bolts which secure the parking brake cable clamp to rear arm bracket.
7) Set the jack which is originally equipped to the vehicle under the upside down situation, and place the jack between rear link and sub frame. Align the installing position of rear shock absorber and rear arm by adjusting the jack position, temporarily tighten the bolt and nut.

CAUTION:
Protect the rear link and sub frame from scratch in the way of putting a cloth between the jack and mating portion.



8) Using the transmission jack, support the rear arm horizontally.
9) Tighten the nuts and bolts which hold the rear arm, front link, rear link, upper link and shock absorber.

NOTE:
Always tighten the bushing in the state that wheels are in full contact with the ground and the vehicle is curb weight.



(1) Rear arm
(2) Transmission jack

10) Install the sub frame support arm.

NOTE:
Inspect the wheel alignment and adjust it if necessary.

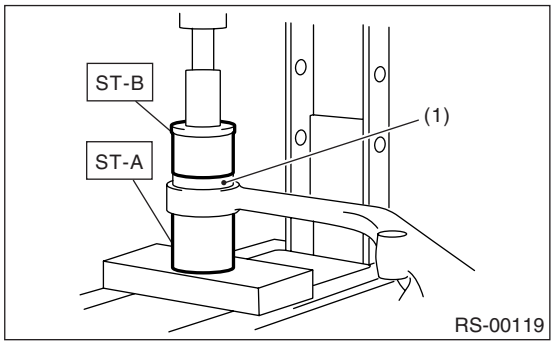
Tightening torque:
Refer to "COMPONENT" of "General Description" for tightening torque. <Ref. to RS-3, REAR SUSPENSION, COMPONENT, General Description.>

C: DISASSEMBLY

1. FRONT BUSHING

1) Set the ST A with the larger side of its inner diameter turned upward.
2) Set the rear arm with the protruding side of bushing turned upward.
3) Place the ST B on bushing, and push the bushing out.

ST A	20099AE020	INSTALLER & REMOVER SET
ST B	20099AE020	INSTALLER & REMOVER SET

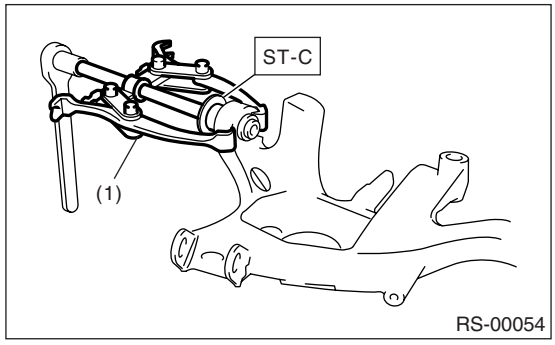


(1) Bushing

2. REAR BUSHING

Using the ST C and bearing puller, press the rear bushing out of place.

ST C	20099AE040	INSTALLER & REMOVER SET



(1) Bearing puller

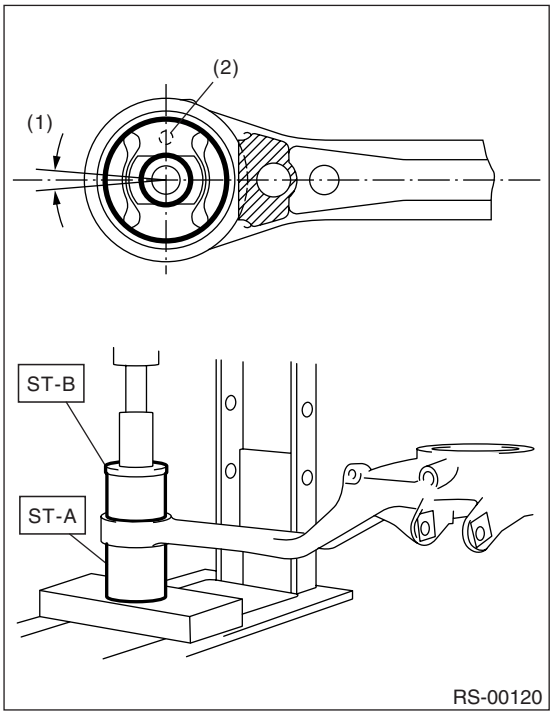
D: ASSEMBLY

1. FRONT BUSHING

1) Set the ST A with the larger side of its inner diameter turned upward.
2) Set the rear arm with the vehicle inner side of arm turned downward.
3) Place the bushing on rear arm as shown in the figure.

4) Place the ST B on bushing, and press-fit until each edge surface of bushing and rear arm comes to be aligned.

ST A 20099AE020 INSTALLER & REMOVER SET
ST B 20099AE020 INSTALLER & REMOVER SET

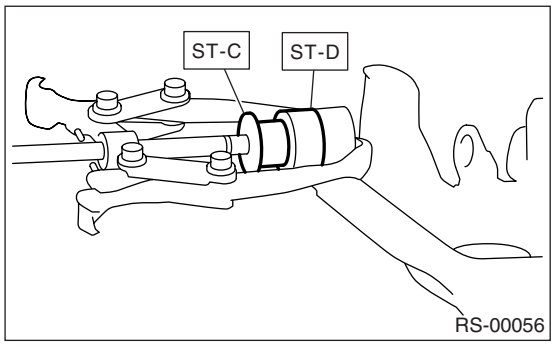


(1) 0±5°
(2) Identification paint: Assemble with the identification paint side faced to the arm inner side.

2. REAR BUSHING

1) Press the bushing into the bore inside of ST D.
2) Set the ST C, ST D and bearing puller in the specified position as shown in the figure, and then press-fit the bush until the outer end of bush and rear end of rear arm in flat.

ST C 20099AE040 INSTALLER & REMOVER SET
ST D 20099AE040 INSTALLER & REMOVER SET



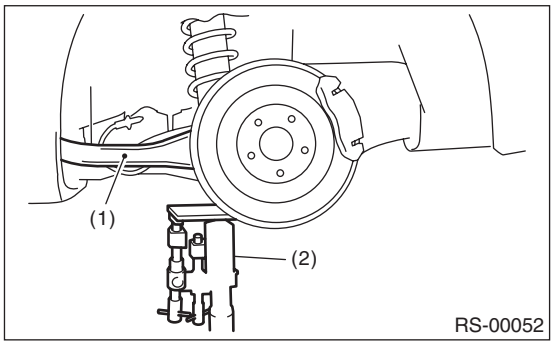
E: INSPECTION

Check the rear arm for bend, corrosion or damage.

5. Upper Link

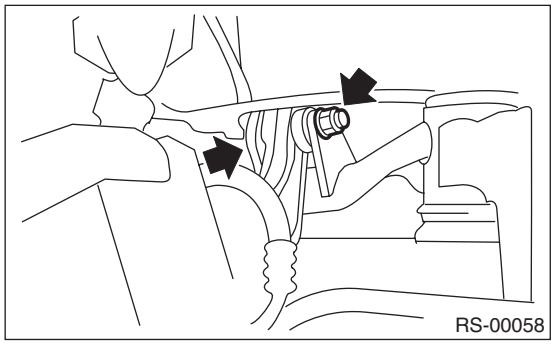
A: REMOVAL

1) Lift-up the vehicle, and then remove the rear wheels.
2) Using the transmission jack, support the rear arm horizontally.

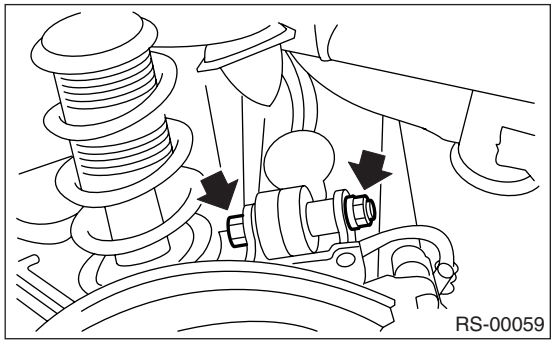


(1) Rear arm
(2) Transmission jack

3) Remove the bolt which secure the upper link to sub frame.

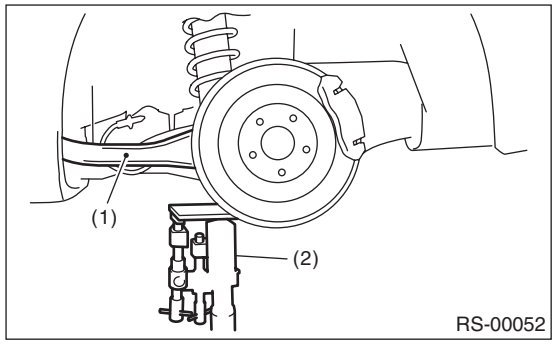


4) Remove the bolts which secure the upper link to rear arm, and then remove the upper link.



B: INSTALLATION

1) Using the transmission jack, support the rear arm horizontally.
2) Using new self-locking nuts, install the upper link.



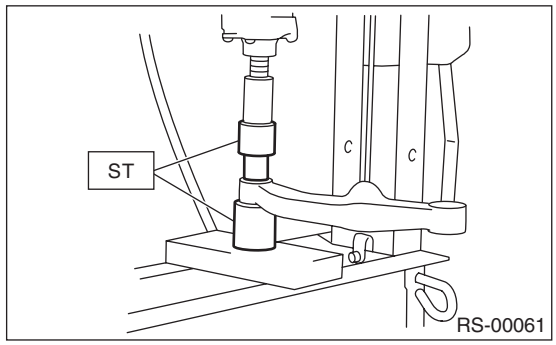
(1) Rear arm
(2) Transmission jack

NOTE:
Inspect the wheel alignment and adjust it if necessary.

Tightening torque:
Upper link to Sub frame
57 N·m (5.8 kgf-m, 42 ft-lb)
Upper link to Rear arm
65 N·m (6.6 kgf-m, 48 ft-lb)

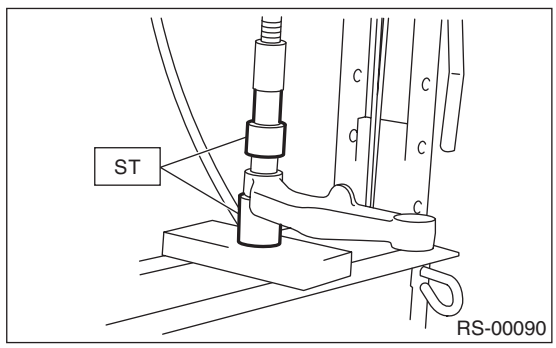
C: DISASSEMBLY

Using the ST, press the bushing out of place.
ST 20099AE010 INSTALLER & REMOVER

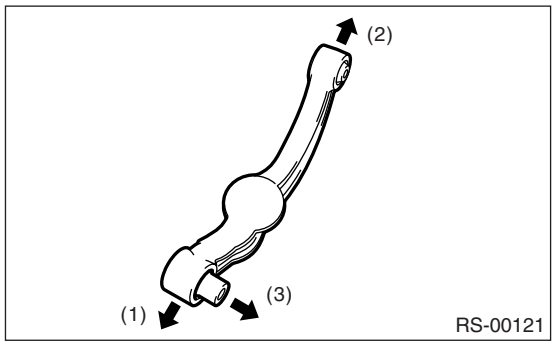


D: ASSEMBLY

Using the ST, press the bushing into place.
ST 20099AE010 INSTALLER & REMOVER



CAUTION:
Outer side bushing has an orientation. Assemble it with the longer protrusion faced to the rear side of vehicle.



(1) Rear arm
(2) Rear sub frame
(3) Rear side of vehicle

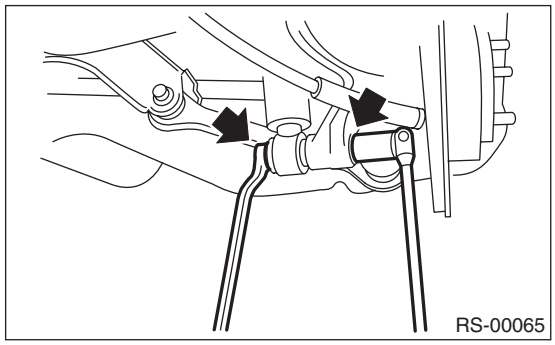
E: INSPECTION

1) Visually check the upper link for damage and deformation.
2) Visually check the bush for crack, damage and fatigue.

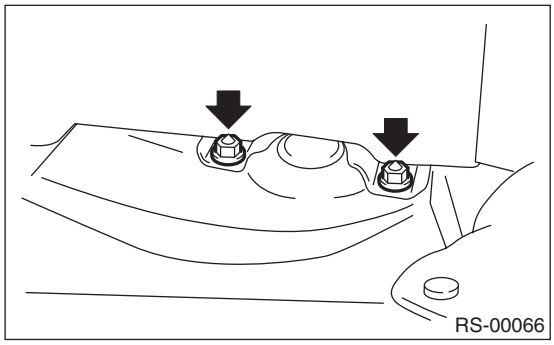
6. Rear Shock Absorber

A: REMOVAL

1) Remove the luggage floor mat. (Wagon model)
2) Roll up the trunk side trim. (Sedan model)
3) Lift-up the vehicle, and then remove the rear wheels.
4) Remove the bolts which secure the shock absorber to rear arm.



5) Support the shock absorber using a jack.
6) Remove the nuts which secure the shock absorber mount to vehicle.



7) Remove the shock absorber.

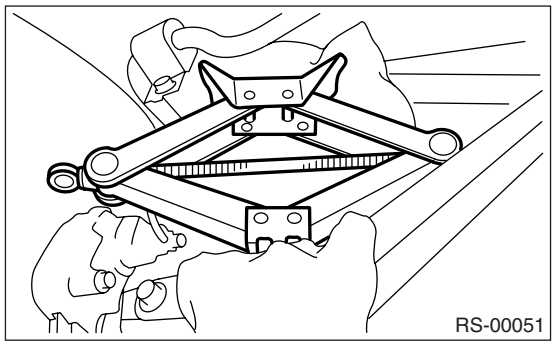
B: INSTALLATION

1) Support the shock absorber using a jack.
2) Using new self-locking nuts, secure the shock absorber to vehicle.

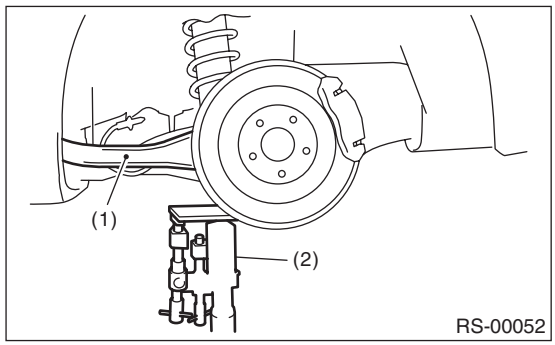
Tightening torque:
30 N·m (3.1 kgf-m, 22.4 ft-lb)

3) Set the jack which is originally equipped to the vehicle under the upside down situation, and place the jack between rear link and sub frame. Align the installing position of rear shock absorber and rear arm by adjusting the jack position. Using new self-locking nuts, temporary tighten the bolt.

CAUTION:
Protect the rear link and sub frame from scratch in the way of putting a shop cloth between the jack and the mating portion.



4) Using the transmission jack, support the rear arm horizontally.
5) Using new self-locking nuts, tighten the bolt and nut which secure the shock absorber.



(1) Rear arm
(2) Transmission jack

Tightening torque:
62 N·m (6.3 kgf-m, 48 ft-lb)

6) Install the floor mat. (Wagon model)
7) Set the trunk side trim. (Sedan model)

NOTE:
Check the wheel alignment and adjust it if necessary.

C: DISASSEMBLY

Refer to Front Strut for disassembly procedures.
<Ref. to FS-23, DISASSEMBLY, Front Strut.>

D: ASSEMBLY

Refer to Front Strut for installation procedures.
<Ref. to FS-23, ASSEMBLY, Front Strut.>

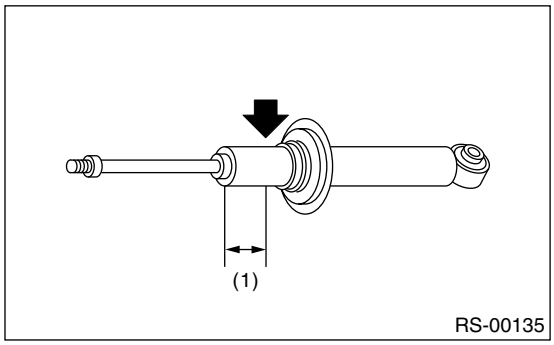
E: INSPECTION

Refer to “Front Strut” for inspection procedures.
<Ref. to FS-24, INSPECTION, Front Strut.>

F: DISPOSAL

CAUTION:
• Before handling shock absorbers, be sure to wear goggles to protect eyes from gas, oil and cutting powder.
• Do not disassemble the shock absorber or place it into a fire.
• Drill a hole into shock absorbers in case of discarding shock absorbers filled with gas.

1) Place the shock absorber on a level surface with the piston rod fully expanded.
2) Make a hole into the specified position 30 mm (1.18 in) deep using a drill with 2 to 3 mm (0.08 to 0.12 in) diameter.

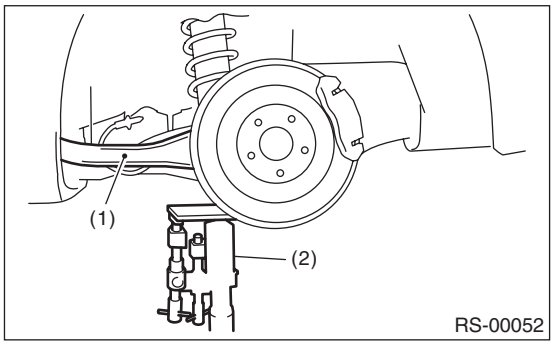


(1) 40 mm (1.57 in)

7. Front Link

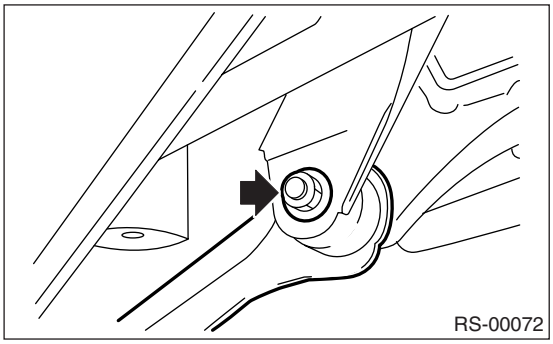
A: REMOVAL

1) Lift-up the vehicle, and then remove the rear wheels.
2) Using the transmission jack, support the rear arm horizontally.

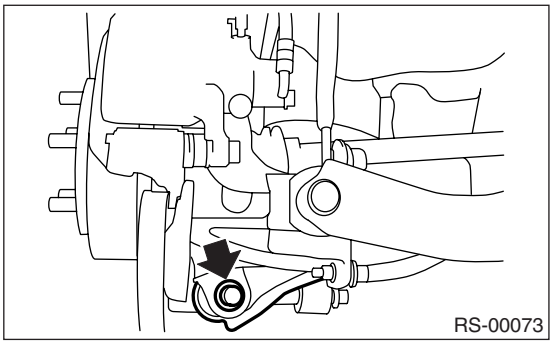


(1) Rear arm
(2) Transmission jack

3) Remove the bolt which secure the front link to sub frame.

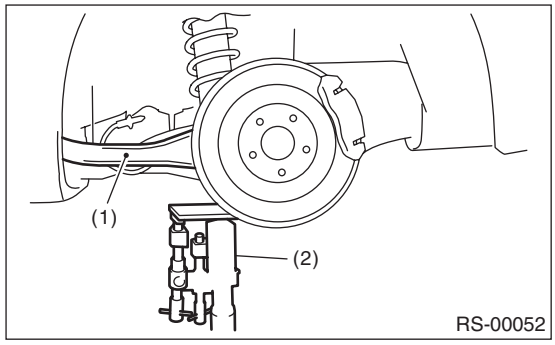


4) Remove the bolt which secure the front link to rear arm, and then remove the front link.



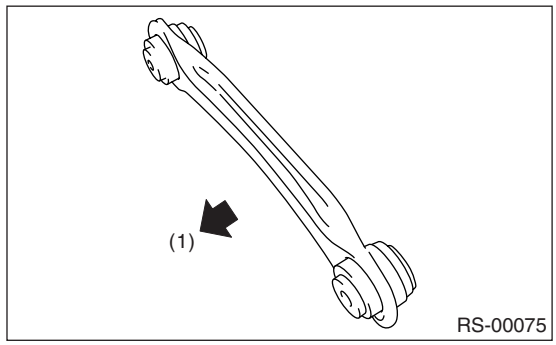
B: INSTALLATION

1) Using the transmission jack, support the rear arm horizontally.
2) Using new self-locking nuts, install the front link.



(1) Rear arm
(2) Transmission jack

CAUTION:
Install the front link with the protrusion side faced to the front side of vehicle.



(1) Front

NOTE:
Inspect the wheel alignment and adjust it if necessary.

Tightening torque:
57 N·m (5.8 kgf-m, 42 ft-lb)

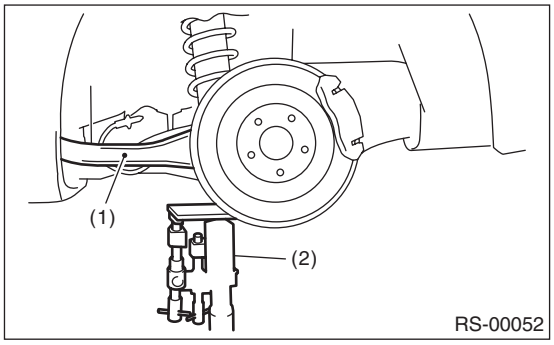
C: INSPECTION

Visually check the front link for damage and deformation.

8. Rear Link

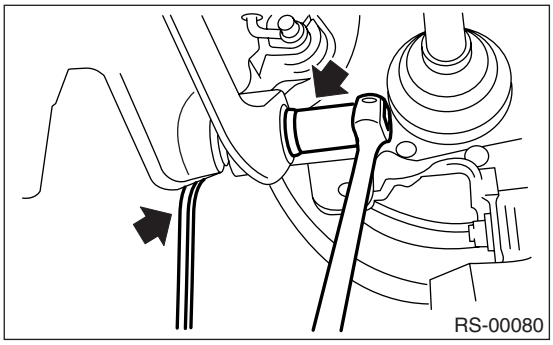
A: REMOVAL

1) Lift-up the vehicle, and then remove the rear wheels.
2) Remove the rear stabilizer. <Ref. to RS-9, REMOVAL, Rear Stabilizer.>
3) Using the transmission jack, support the rear arm horizontally.



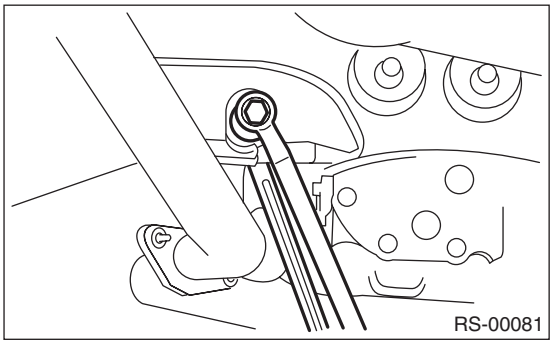
(1) Rear arm
(2) Transmission jack

4) Remove the bolts which secure the rear link to rear arm.



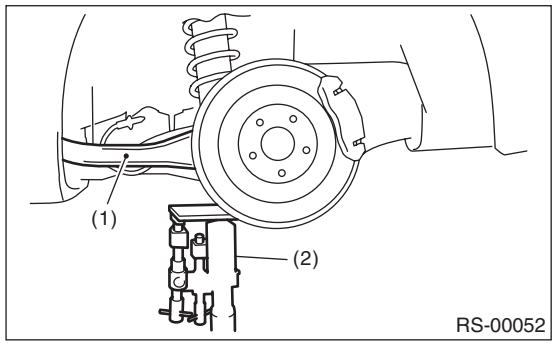
5) Put alignment marks on the rear link adjusting bolt and sub frame.
6) Remove the bolt which secure the rear link to sub frame, and then remove the rear link.

CAUTION:
Loosen the nut with the bolt head secured when loosening the adjusting bolt.



B: INSTALLATION

1) Using the transmission jack, support the rear arm horizontally.
2) Using new self-locking nuts, install the rear link.



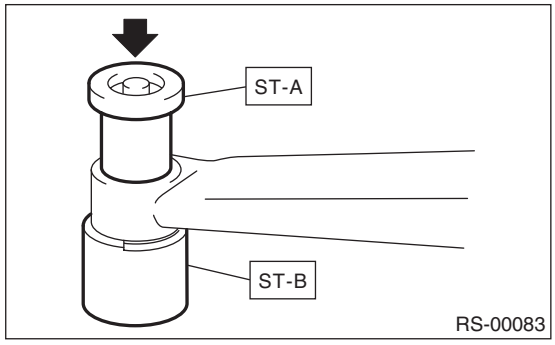
(1) Rear arm
(2) Transmission jack

NOTE:
• Tighten the self-locking nut with the bolt head secured when installing the adjusting bolt.
• Inspect the wheel alignment and adjust it if necessary.

Tightening torque:
Rear link to Sub frame
120 N·m (12.2 kgf-m, 89 ft-lb)
Rear link to Rear arm
57 N·m (5.8 kgf-m, 42 ft-lb)

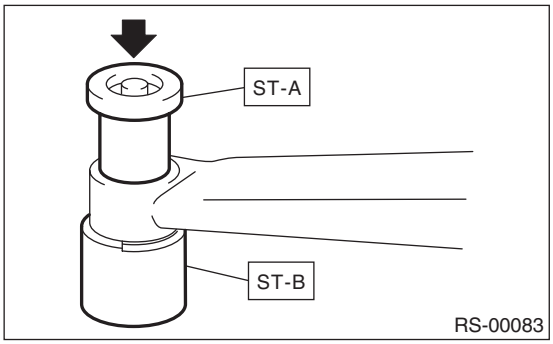
C: DISASSEMBLY

Using the ST A and ST B, press the bushing out of place.
ST A 20099AE000 INSTALLER & REMOVER
ST B 20099AE000 INSTALLER & REMOVER



D: ASSEMBLY

Using the ST A and ST B, press-fit the bushing.
ST A 20099AE000 INSTALLER & REMOVER
ST B 20099AE000 INSTALLER & REMOVER



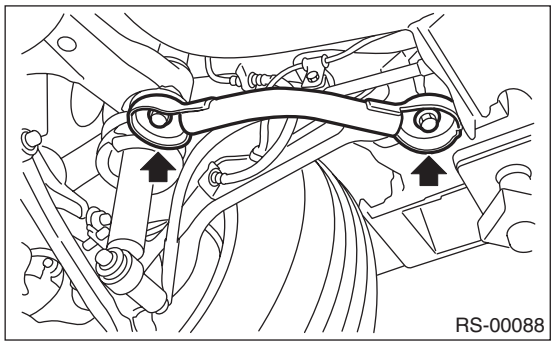
E: INSPECTION

Visually check the rear link for damage and deformation.

9. Sub Frame Support Arm

A: REMOVAL

1) Lift-up the vehicle, and support the rear sub frame with support stand.
2) Remove the sub frame support arm.



B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:
Sub frame support arm to Rear arm bracket
80 N·m (8.2 kgf-m, 59 ft-lb)
Sub frame support arm to Rear sub frame
175 N·m (17.8 kgf-m, 129 ft-lb)

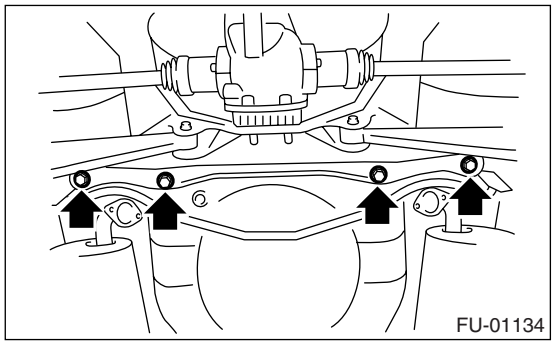
C: INSPECTION

Visually check the sub frame support arm for damage and deformation.

10.Sub Frame Support Plate

A: REMOVAL

1) Lift-up the vehicle, and support the rear sub frame with support stand.
2) Remove the sub frame support plate.



B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:
Support plate to Sub frame
175 N·m (17.8 kgf-m, 129 ft-lb)
Support plate to Body
65 N·m (6.6 kgf-m, 48 ft-lb)

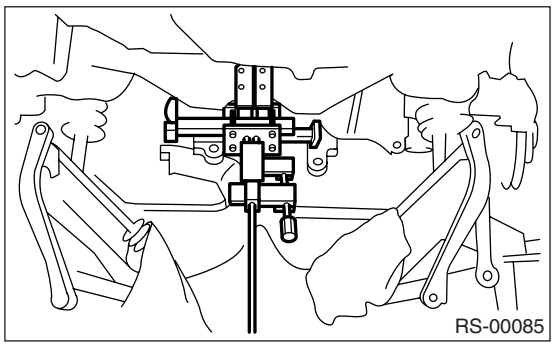
C: INSPECTION

Visually check the support plate for damage.

11.Rear Sub Frame

A: REMOVAL

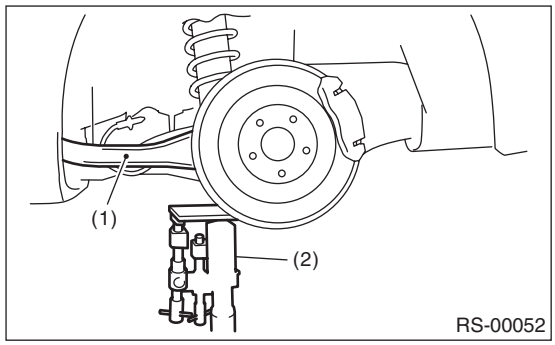
1) Separate the front exhaust pipe from rear exhaust pipe.
2) Remove the rear exhaust pipe and muffler.
3) Remove the rear differential.
T-type
<Ref. to DI-29, REMOVAL, Rear Differential (T-type).>
VA-type
<Ref. to DI-46, REMOVAL, Rear Differential (VA-type).>
4) Remove the rear stabilizer. <Ref. to RS-9, REMOVAL, Rear Stabilizer.>
5) Remove the bolts which secure the rear shock absorber to rear arm.
6) Support the sub frame using a transmission jack.



7) Remove the front link from sub frame.
<Ref. to RS-18, REMOVAL, Front Link.>
8) Remove the rear link from sub frame.
<Ref. to RS-19, REMOVAL, Rear Link.>
9) Remove the upper link from sub frame.
<Ref. to RS-14, REMOVAL, Upper Link.>
10) Remove the sub frame support arm.
11) After removing the bolt, remove the sub frame and sub frame support plate from vehicle.

B: INSTALLATION

1) Install in the reverse order of removal.
2) Follow the procedure below for the rear differential installation and tightening torque.
T-type
<Ref. to DI-30, INSTALLATION, Rear Differential (T-type).>
VA-type
<Ref. to DI-47, INSTALLATION, Rear Differential (VA-type).>
3) Using the transmission jack, support the rear arm horizontally. Then tighten the nuts and bolts which hold the rear arm, front link, rear link, upper link and shock absorber.



(1) Rear arm
(2) Transmission jack

NOTE:
Check the wheel alignment and adjust it if necessary.

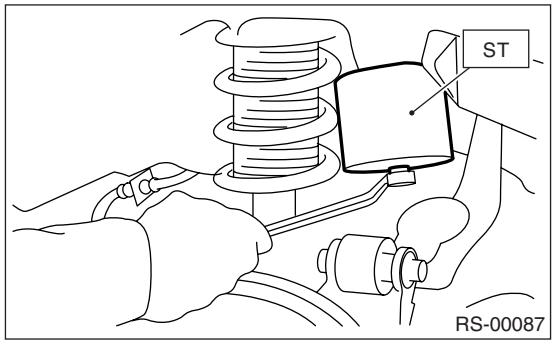
C: INSPECTION

Check the removed parts for wear, damage and crack, and repair or replace them if faulty.

12.Helper

A: REMOVAL

1) Lift-up the vehicle, and then remove the rear wheels.
2) Remove the helper using ST.
ST 20099AE030 HELPER SOCKET WRENCH



B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:
32 N·m (3.3 kgf-m, 24 ft-lb)

C: INSPECTION

Check the helper for crack, fatigue and damage.

13.General Diagnostic Table

A: INSPECTION

1. IMPROPER VEHICLE POSTURE OR IMPROPER WHEEL ARCH HEIGHT

Possible cause	Corrective action
(1) Permanent distortion or breakage of coil spring	Replace.
(2) Rough operation of damper strut or shock absorber	Replace.
(3) Installation of wrong strut or shock absorber	Replace with proper parts.
(4) Installation of wrong coil spring	Replace with proper parts.

2. POOR RIDE COMFORT

1) Large rebound shock
2) Rocking of the vehicle continues too long after running over bump and hump.
3) Large shock in bumping

Possible cause	Corrective action
(1) Breakage of coil spring	Replace.
(2) Overinflating pressure of tire	Adjust.
(3) Improper wheel arch height	Adjust or replace the coil springs with new ones.
(4) Fault in operation of damper strut or shock absorber	Replace.
(5) Damage or deformation of strut mount or shock absorber mount	Replace.
(6) Unsuitability of maximum or minimum length of damper strut or shock absorber	Replace with proper parts.
(7) Deformation or loss of bushing	Replace.
(8) Deformation or damage of helper in strut assembly or shock absorber	Replace.
(9) Oil leakage of damper strut or shock absorber	Replace.

3. NOISE

Possible cause	Corrective action
(1) Wear or damage of damper strut or shock absorber component parts	Replace.
(2) Loosening of suspension link installing bolt	Tighten to the specified torque.
(3) Deformation or loss of bushing	Replace.
(4) Unsuitability of maximum or minimum length of damper strut or shock absorber	Replace with proper parts.
(5) Breakage of coil spring	Replace.
(6) Wear or damage of ball joint	Replace.
(7) Deformation of stabilizer clamp	Replace.

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

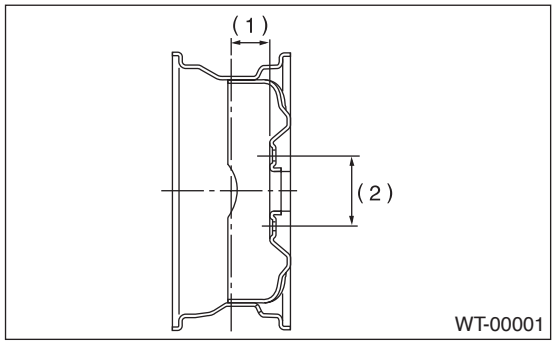
1. General Description

A: SPECIFICATION

1. WHEEL AND TIRE SIZE



(1) Offset
(2) P.C.D.

Specification		Tire size	Wheel size	Offset mm (in)	P.C.D. mm (in)	Tire inflation pressure kPa (kgf/cm^2, psi)	
						Front wheel	Rear wheel
Sedan	2.0 i, 2.5 i	205/55R16 89V	16 × 6$^1/_2$JJ	55 (2.17)	100 (3.94)	220 (2.2, 32)	220 (2.2, 32)
	2.5 i (OP)	215/45R17 87W	17 × 7JJ			230 (2.3, 33)	220 (2.2, 32)
	2.5 i (KA model)	215/45R17 87W	17 × 7JJ			230 (2.3, 33)	220 (2.2, 32)
	3.0 R	215/45R17 87W	17 × 7JJ			230 (2.3, 33)	220 (2.2, 32)
	2.0 GT	215/45R17 87W	17 × 7JJ			230 (2.3, 33)	220 (2.2, 32)
Wagon	2.0 i, 2.5 i	205/55R16 89V	16 × 6$^1/_2$JJ			220 (2.2, 32)	220 (2.2, 32)
	2.5 i (OP)	215/45R17 87W	17 × 7JJ			230 (2.3, 33)	210 (2.1, 31)
	2.5 i (KA model)	215/45R17 87W	17 × 7JJ			230 (2.3, 33)	210 (2.1, 31)
	3.0 R	215/45R17 87W	17 × 7JJ			230 (2.3, 33)	210 (2.1, 31)
	2.0 GT	215/45R17 87W	17 × 7JJ			230 (2.3, 33)	210 (2.1, 31)
	OUTBACK 2.5 i	215/60R16 95V	16 × 6$^1/_2$JJ	48 (1.89)		210 (2.1, 31)	200 (2.0, 29)
	OUTBACK 3.0 R	215/55R17 94V	17 × 7JJ			210 (2.1, 31)	200 (2.0, 29)
"T-type" Tire	2.0 GT, 3.0 R	T135/70D17 102M	17 × 4T	40 (1.57)		420 (4.2, 60)	
	2.0 i, 2.5 i	T135/80D16 101M	16 × 4T	50 (1.97)			

NOTE:
- Except for KA, KS model, "T-type" tire for temporary use is supplied as a spare tire.
- For KA, KS model, a spare tire of standard tire size is supplied.

2. SERVICE DATA

Part	Axial runout	Radial runout
Steel wheel	1.5 mm (0.059 in)	
Aluminum wheel	1.0 mm (0.039 in)	

3. ADJUSTING PARTS

Wheel balancing	Standard	Service limit
Dynamic unbalance	10 g (0.35 oz) or less	

Balance weight part number (Knock-on type weight for steel wheel)	Weight
28101TC000	5 g (0.18 oz)
28101SA060	10 g (0.35 oz)
28101SA070	15 g (0.53 oz)
28101SA080	20 g (0.71 oz)
28101SA090	25 g (0.88 oz)
723141340	30 g (1.06 oz)
723141350	35 g (1.23 oz)
723141360	40 g (1.41 oz)
723141370	45 g (1.59 oz)
723241380	50 g (1.76 oz)
723241580	55 g (1.94 oz)
723241590	60 g (2.12 oz)

Balance weight part number (Knock-on type weight for aluminum wheel)	Weight
28101SA000	5 g (0.18 oz)
28101SA010	10 g (0.35 oz)
28101SA020	15 g (0.53 oz)
28101SA030	20 g (0.71 oz)
28101SA040	25 g (0.88 oz)
23141GA512	30 g (1.06 oz)
23141GA522	35 g (1.23 oz)
23141GA532	40 g (1.41 oz)
23141GA542	45 g (1.59 oz)
23141GA552	50 g (1.76 oz)
—	55 g (1.94 oz)
23141GA572	60 g (2.12 oz)

Balance weight part number (Adhesive type weight for aluminum wheel)	Weight
28101AG000	5 g (0.18 oz)
28101AG010	7.5 g (0.26 oz)
28101AG020	10 g (0.35 oz)
28101AG030	12.5 g (0.44 oz)
28101AG040	15 g (0.53 oz)
28101AG050	17.5 g (0.62 oz)
28101AG060	20 g (0.71 oz)
28101AG070	22.5 g (0.79 oz)
28101AG080	25 g (0.88 oz)
28101AG090	27.5 g (0.97 oz)
28101AG100	30 g (1.06 oz)
28101AG110	32.5 g (1.15 oz)
28101AG120	35 g (1.23 oz)
28101AG130	37.5 g (1.32 oz)
28101AG140	40 g (1.41 oz)
28101AG150	42.5 g (1.50 oz)
28101AG160	45 g (1.59 oz)
28101AG170	47.5 g (1.68 oz)
28101AG180	50 g (1.76 oz)
28101AG190	52.5 g (1.85 oz)
28101AG200	55 g (1.94 oz)
28101AG210	57.5 g (2.03 oz)
28101AG220	60 g (2.12 oz)
28101AG230	62.5 g (2.20 oz)
28101AG240	65 g (2.29 oz)
28101AG250	67.5 g (2.38 oz)
28101AG260	70 g (2.47 oz)
28101AG270	72.5 g (2.56 oz)
28101AG280	75 g (2.65 oz)
28101AG290	77.5 g (2.73 oz)
28101AG300	80 g (2.82 oz)
28101AG310	82.5 g (2.91 oz)
28101AG320	85 g (3.00 oz)
28101AG330	87.5 g (3.09 oz)
28101AG340	90 g (3.17 oz)
28101AG350	92.5 g (3.26 oz)
28101AG360	95 g (3.35 oz)
28101AG370	97.5 g (3.44 oz)
28101AG380	100 g (3.53 oz)

B: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Air pressure gauge	Used for measuring tire inflation pressure.
Dial gauge with magnet stand	Used for measuring wheel runout.
Wheel balancer	Used for adjusting wheel balance.

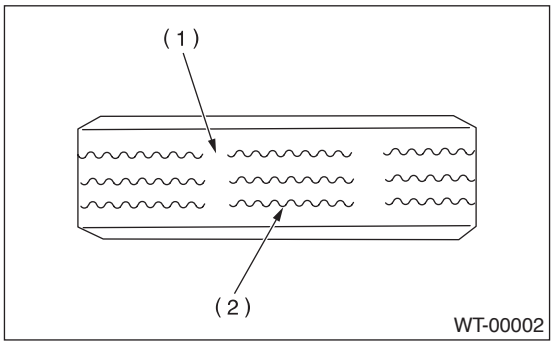
2. Tire

A: INSPECTION

1) Take stones, glass, nails etc. out of the tread groove.
2) Replace the tire if as follows.

CAUTION:
When replacing a tire, make sure to use only the same size, construction and load range as originally installed.

(1) When large crack on side wall, damage or crack on tread is found.
(2) When the “tread wear indicator” appears as a solid band across the tread.

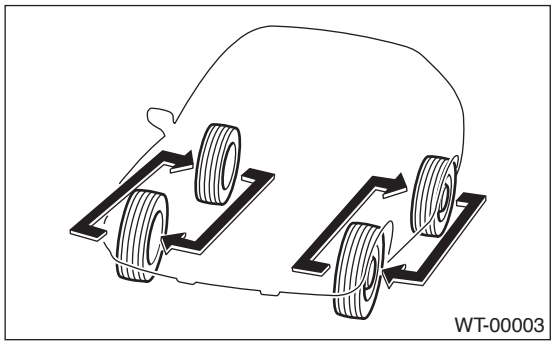


(1) Tread wear indicator
(2) Tire tread

3) When a crack on tire valve is found, replace the tire valve.

1. TIRE ROTATION

Rotate tires periodically (5,000 km/3,100 miles) as shown in the figure, in order to prevent them from uneven wear and to prolong their life.



3. Steel Wheel

A: REMOVAL

1) Apply the parking brake, and position the select lever to “P” or “LOW”.
2) Set the shop jacks or a lift to specified point, and support the vehicle with its wheels slightly contacting the floor.
3) Loosen the wheel nuts.
4) Raise the vehicle until its wheels take off the ground using a jack or a lift.
5) Remove the wheel nuts and wheels.

NOTE:
• When removing the wheels, prevent hub bolts from damage.
• Place the wheels with their outer sides facing upward to prevent wheels from damage.

B: INSTALLATION

1) Remove dirt from the mating surface of wheel and brake rotor.
2) Attach the wheel to the hub by aligning the wheel bolt hole with the hub bolt.
3) Temporarily attach the wheel nuts to the hub bolts. (In the case of aluminum wheel, use SUBARU genuine wheel nut for aluminum wheel.)
4) Manually tighten the nuts making sure the wheel hub hole is aligned correctly to the guide portion of hub.
5) Tighten the wheel nuts in a diagonal selection to the specified torque. Use a wheel nut wrench.

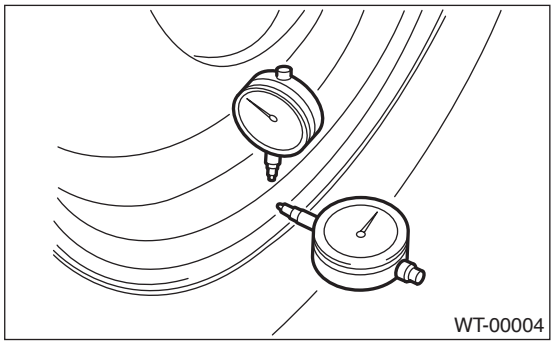
Wheel nut tightening torque:
90 N·m (9.1 kgf-m, 65.7 ft-lb)

CAUTION:
• Tighten the wheel nuts in two or three steps by gradually increasing the torque and working diagonally, until they reach the specified torque.
• Do not depress the wrench with foot. Always use both hands when tightening.
• Make sure the bolt, nut and the nut seating surface of the wheel are free from oil.

6) If a wheel is removed for replacement or for repair of a puncture, retighten the wheel nuts to the specified torque after running 1,000 km (600 miles).

C: INSPECTION

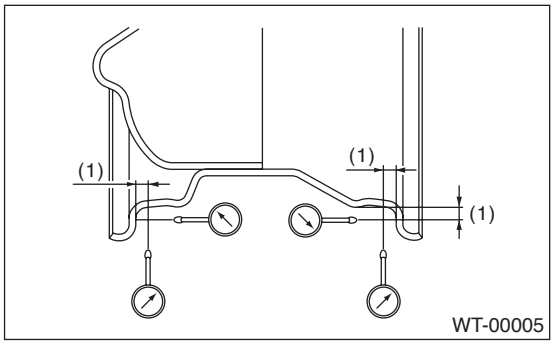
1) Deformation or damage on the rim may cause air leakage. Check the rim flange for deformation, crack or damage, and repair or replace as necessary.
2) Jack-up the vehicle until wheels clear the floor.
3) Slowly rotate the wheel to check rim “runout” using a dial gauge.



Rim runout:

Axial runout limit	Radial runout limit
1.5 mm (0.059 in)	

4) If the rim runout exceeds specifications, remove the tire from wheel and check runout while attaching the dial gauge to positions shown in the figure.



(1) Approx. 7 mm (0.28 in)

5) If the measured runout still exceeds specifications, replace the wheel.

4. Aluminum Wheel

A: REMOVAL

Refer to “Steel Wheel” for removal procedure of aluminum wheels. <Ref. to WT-5, REMOVAL, Steel Wheel.>

B: INSTALLATION

Refer to “Steel Wheel” for installation procedure of aluminum wheels. <Ref. to WT-5, INSTALLATION, Steel Wheel.>

C: INSPECTION

Refer to “Steel Wheel” for inspection procedure of aluminum wheels. <Ref. to WT-5, INSPECTION, Steel Wheel.>

Rim runout:

Axial runout limit	Radial runout limit
1.0 mm (0.039 in)	

D: CAUTION

Aluminum wheels are easily scratched. To maintain their appearance and safety, do the followings:
1) Do not damage the aluminum wheels during removal, installation, wheel balancing, etc. After removing the aluminum wheels, place them on a rubber mat, etc.
2) While driving the vehicle, be careful not to ride over sharp obstacles or allow aluminum wheels to contact the shoulder of the road.
3) When installing a tire chain, be sure to install it properly not to have slack, otherwise it may hit the wheel while driving.
4) When washing the aluminum wheel, use neutral synthetic detergent and water. Avoid using the cleanser including abrasive, hard brushes or an automatic car washer.

5. Wheel Balancing

A: ADJUSTMENT

NOTE:
Change the setting of wheel balancer to adhesive type weight as adhesive type weight is adopted for outside balance weight of 17-inch wheel.

1) Remove the balance weights.

CAUTION:
• Be careful not to damage the wheel.
• Completely remove the two-sided tape of the adhesive type weight from the wheel.

2) Using the wheel balancer, measure the wheel balance.
3) Select a weight close to the value measured by wheel balancer.

CAUTION:
Use SUBARU genuine balance weight.

Balance weight part number (Knock-on type weight for steel wheel)	Weight
28101TC000	5 g (0.18 oz)
28101SA060	10 g (0.35 oz)
28101SA070	15 g (0.53 oz)
28101SA080	20 g (0.71 oz)
28101SA090	25 g (0.88 oz)
723141340	30 g (1.06 oz)
723141350	35 g (1.23 oz)
723141360	40 g (1.41 oz)
723141370	45 g (1.59 oz)
723241380	50 g (1.76 oz)
723241580	55 g (1.94 oz)
723241590	60 g (2.12 oz)

Balance weight part number (Knock-on type weight for aluminum wheel)	Weight
28101SA000	5 g (0.18 oz)
28101SA010	10 g (0.35 oz)
28101SA020	15 g (0.53 oz)
28101SA030	20 g (0.71 oz)
28101SA040	25 g (0.88 oz)
23141GA512	30 g (1.06 oz)
23141GA522	35 g (1.23 oz)
23141GA532	40 g (1.41 oz)
23141GA542	45 g (1.59 oz)
23141GA552	50 g (1.76 oz)
—	55 g (1.94 oz)
23141GA572	60 g (2.12 oz)

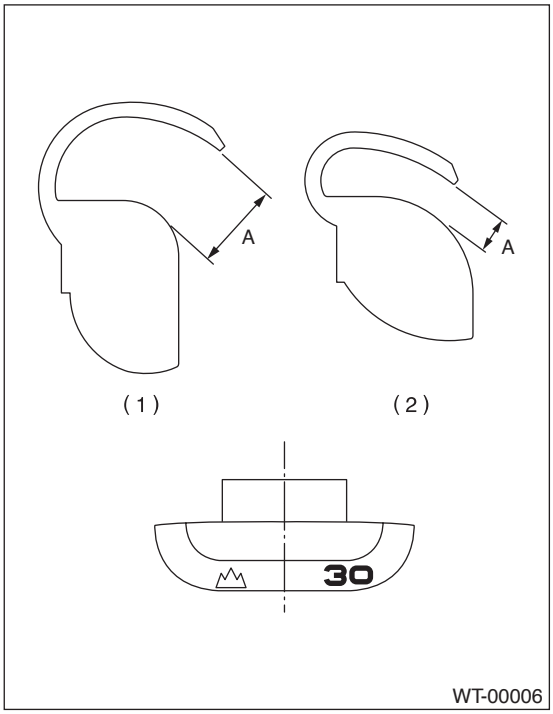
Balance weight part number (Adhesive type weight for aluminum wheel)	Weight
28101AG000	5 g (0.18 oz)
28101AG010	7.5 g (0.26 oz)
28101AG020	10 g (0.35 oz)
28101AG030	12.5 g (0.44 oz)
28101AG040	15 g (0.53 oz)
28101AG050	17.5 g (0.62 oz)
28101AG060	20 g (0.71 oz)
28101AG070	22.5 g (0.79 oz)
28101AG080	25 g (0.88 oz)
28101AG090	27.5 g (0.97 oz)
28101AG100	30 g (1.06 oz)
28101AG110	32.5 g (1.15 oz)
28101AG120	35 g (1.23 oz)
28101AG130	37.5 g (1.32 oz)
28101AG140	40 g (1.41 oz)
28101AG150	42.5 g (1.50 oz)
28101AG160	45 g (1.59 oz)
28101AG170	47.5 g (1.68 oz)
28101AG180	50 g (1.76 oz)
28101AG190	52.5 g (1.85 oz)
28101AG200	55 g (1.94 oz)
28101AG210	57.5 g (2.03 oz)
28101AG220	60 g (2.12 oz)
28101AG230	62.5 g (2.20 oz)
28101AG240	65 g (2.29 oz)
28101AG250	67.5 g (2.38 oz)
28101AG260	70 g (2.47 oz)
28101AG270	72.5 g (2.56 oz)
28101AG280	75 g (2.65 oz)
28101AG290	77.5 g (2.73 oz)
28101AG300	80 g (2.82 oz)
28101AG310	82.5 g (2.91 oz)
28101AG320	85 g (3.00 oz)
28101AG330	87.5 g (3.09 oz)
28101AG340	90 g (3.17 oz)
28101AG350	92.5 g (3.26 oz)
28101AG360	95 g (3.35 oz)
28101AG370	97.5 g (3.44 oz)
28101AG380	100 g (3.53 oz)

4) Install the selected weight to the point designated by wheel balancer.

CAUTION:
• Remove grease from adhesive type weight applying surface of wheel.
• Press the adhesive type weight by 25 N (2.5 kgf, 5.6 lb) or more per 5 g (0.18 oz) for 2 seconds at least to attain close contact.
• Make all amounts of the applied adhesive type weight to be 100 g (3.53 oz) or less.

5) Using the wheel balancer, measure the wheel balance again. Check that wheel balance is correctly adjusted.

NOTE:
• 55 g (1.94 oz) knock-on type weight used with aluminum wheel is not available.
• Balance weights of knock-on type weight for aluminum wheel are available for use with any of 15- to 17-inch aluminum wheels.



(1) Knock-on type weight for aluminum wheel
(2) Knock-on type weight for steel wheel

Service limit: A
Knock-on type weight for steel wheel:
5 — 25 g (0.18 — 0.88 oz) 2.0 mm (0.08 in)
30 g (1.06 oz) or more 1.8 mm (0.07 in)
Knock-on type weight for aluminum wheel:
5 — 25 g (0.18 — 0.88 oz) 5.0 mm (0.20 in)
30 g (1.06 oz) or more 4.5 mm (0.177 in)

6. "T-type" Tire

A: NOTE

"T-type" tire for temporary use is prepared as a spare tire. (Except for KA, KS model)

CAUTION:
• Do not use a tire chain with the "T-type" tire. Because of the smaller tire size, a tire chain will not fit properly and will result in damage to the vehicle and the tire.
• Do not drive at a speed greater than 100 km/h (62 MPH).
• Drive as slowly as possible and avoid passing over bumps.

B: REPLACEMENT

Refer to "Steel Wheel" for installation procedure of "T-type" tire. <Ref. to WT-5, REMOVAL, Steel Wheel.>

CAUTION:
Replace with a conventional tire as soon as possible since the "T-type" tire is only for temporary use.

C: INSPECTION

1) Check the tire air pressure.

Specifications:
420 kPa (4.2 kg/cm^2, 60 psi)

2) Take the stones, glass, nails, etc. out of the tread groove.
3) Check the tires for deformation, cracks, partial wear or wear.

CAUTION:
Replace the tire with a new one if defective.

7. General Diagnostic Table

A: INSPECTION

Symptom	Possible cause	Corrective action
Wheel wobble.	Improperly inflated tire.	Adjust the tire pressure.
	Uneven wear	Check the tire referring to Abnormal tire wear in this table, carry out the procedure and replace the tire.
	Front wheel alignment	Check the front wheel alignments. <Ref. to FS-8, INSPECTION, Wheel Alignment.>
	Rear wheel alignment	Check the rear wheel alignments. <Ref. to RS-8, INSPECTION, Wheel Alignment.>
	Front strut	Check the front strut. <Ref. to FS-24, INSPECTION, Front Strut.>
	Rear shock absorber	Check the rear shock absorber. <Ref. to RS-16, INSPECTION, Rear Shock Absorber.>
	Front axle	Check the front axle. <Ref. to DS-15, INSPECTION, Front Axle.>
	Front hub unit bearing	Check the front hub unit bearing. <Ref. to DS-18, INSPECTION, Front Hub Unit Bearing.>
	Rear hub unit bearing	Check the rear hub unit bearing. <Ref. to DS-21, INSPECTION, Rear Hub Unit Bearing.>
Vehicle is abnormally out of balance.	Improperly inflated tire.	Adjust the tire pressure.
	Uneven wear	Check the tire referring to Abnormal tire wear in this table, carry out the procedure and replace the tire.
	Front stabilizer	Check the front stabilizer. <Ref. to FS-16, INSPECTION, Front Stabilizer.>
	Front wheel alignment	Check the front wheel alignments. <Ref. to FS-8, INSPECTION, Wheel Alignment.>
	Rear wheel alignment	Check the rear wheel alignments. <Ref. to RS-8, INSPECTION, Wheel Alignment.>
Abnormal wheel vibration	Improperly inflated tire.	Adjust the tire pressure.
	Uneven wear	Check the tire referring to Abnormal tire wear in this table, carry out the procedure and replace the tire.
	Improper wheel balancing	Check the wheel balance. <Ref. to WT-7, ADJUSTMENT, Wheel Balancing.>
	Front axle	Check the front axle. <Ref. to DS-15, INSPECTION, Front Axle.>
	Front hub unit bearing	Check the front hub unit bearing. <Ref. to DS-18, INSPECTION, Front Hub Unit Bearing.>
	Rear hub unit bearing	Check the rear hub unit bearing. <Ref. to DS-21, INSPECTION, Rear Hub Unit Bearing.>

Symptom	Possible cause	Corrective action
Abnormal tire wear	Improperly inflated tire.	Adjust the tire pressure.
	Improper wheel balancing	Check the wheel balance. <Ref. to WT-7, ADJUSTMENT, Wheel Balancing.>
	Front wheel alignment	Check the front wheel alignments. <Ref. to FS-8, INSPECTION, Wheel Alignment.>
	Rear wheel alignment	Check the rear wheel alignments. <Ref. to RS-8, INSPECTION, Wheel Alignment.>

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

1. General Description

A: SPECIFICATION

1. REAR DIFFERENTIAL

When replacing a rear differential assembly, select the correct one according to the following table.

NOTE:
- Using the different rear differential assembly causes the drive line and tires to “drag” or emit noise.
- For option code, refer to “ID” section. <Ref. to ID-2, IDENTIFICATION, Identification.>

Model	Sedan, Wagon						
	2.0 L Non-turbo		2.5 L			3.0 L	2.0 L Turbo
	AT	MT	AT	MT		AT	
				KA, KS★1	EC, EK, K4★1		
Rear differential type	VA1-type	T-type				VA2-type	
Classification	XJ	T2			VB	XT	XU
LSD type	—					Viscous coupling	
Type of gear	Hypoid gear						
Gear ratio (Number of gear teeth)	4.111 (37/9)				3.700 (37/10)	3.083 (37/12)	3.272 (36/11)
Oil capacity	0.8 ℓ (0.8 US qt, 0.7 Imp qt)						
Rear differential gear oil	GL-5						

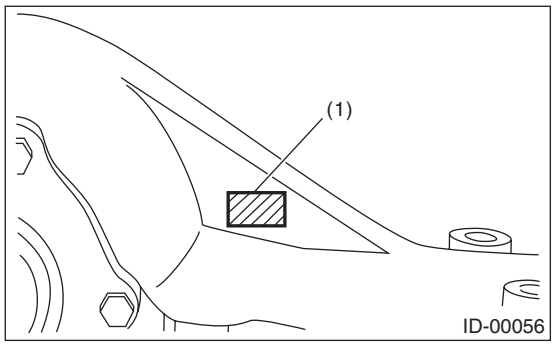
Model	OUTBACK			
	2.5 L			3.0 L
	AT	MT		AT
		EC, EK, K4★1	KS, KA★1	
Rear differential type	T-type			VA2-type
Classification	CF	EZ	JE	XU
LSD type	Viscous coupling			
Type of gear	Hypoid gear			
Gear ratio (Number of gear teeth)	4.444 (40/9)	3.900 (39/10)	4.111 (37/9)	3.272 (36/11)
Oil capacity	0.8 ℓ (0.8 US qt, 0.7 Imp qt)			
Rear differential gear oil	GL-5			

★1: Option code

2. CLASSIFICATION

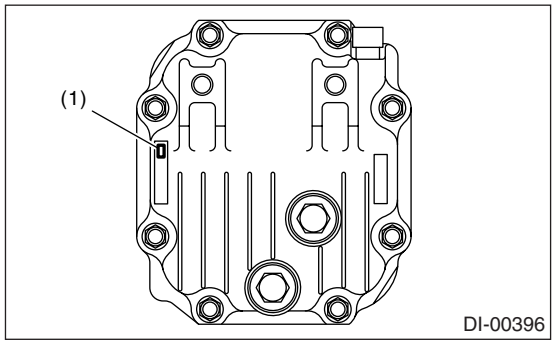
Identification label positions are shown in the following figures. For details concerning identification, refer to “ID” section.

• T-type



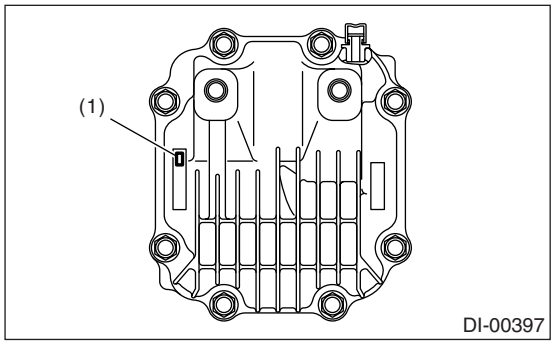
(1) Identification

• VA1-type



(1) Identification

• VA2-type

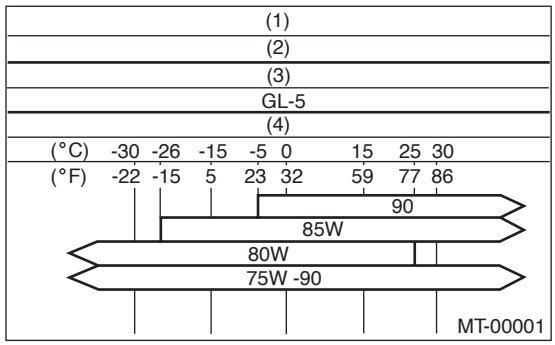


(1) Identification

3. REAR DIFFERENTIAL GEAR OIL

Recommended gear oil:
GL-5 (75W-90)

NOTE:
Each oil manufacturer has its base oil and additives. Thus, do not mix two or more brands.



(1) Item
(2) Rear differential gear oil
(3) API classification
(4) SAE viscosity No. and applicable temperature

4. SERVICE DATA

Drive pinion bearing preload (at companion flange bolt hole)	N (kgf, lb)	T-type	18.1 — 38.8 (1.8 — 4.0, 4.1 — 8.7)
		VA-type	12.7 — 32.4 (1.3 — 3.3, 2.9 — 7.3)
Side gear backlash	mm (in)	T-type	0.10 — 0.20 (0.0039 — 0.0079)
		VA1-type only	0.05 — 0.15 (0.0020 — 0.0059)
Side bearing standard width		mm (in)	20.00 (0.7874)
Hypoid driven gear to drive pinion backlash	mm (in)	T-type	0.10 — 0.20 (0.0039 — 0.0079)
		VA-type	0.10 — 0.15 (0.0039 — 0.0059)
Hypoid driven gear runout on its back surface	mm (in)	T-type only	0.05 (0.0020)

5. ADJUSTING PART

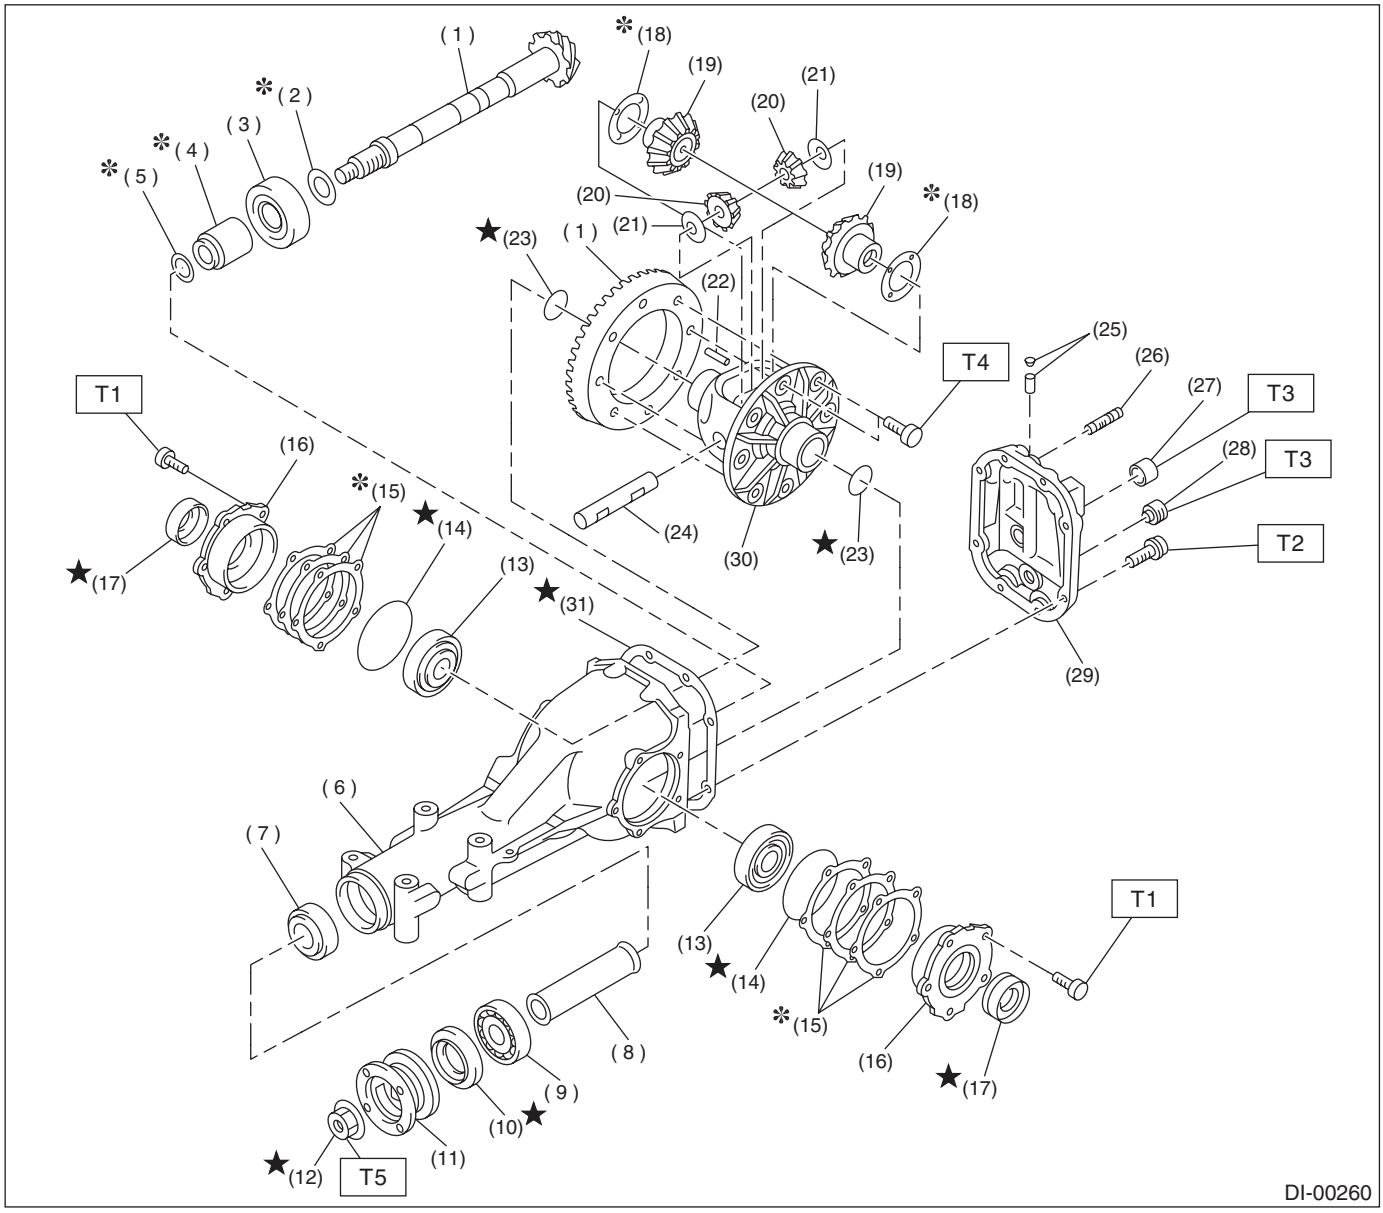
B: COMPONENT

1. REAR DIFFERENTIAL WITHOUT LSD (T-TYPE)

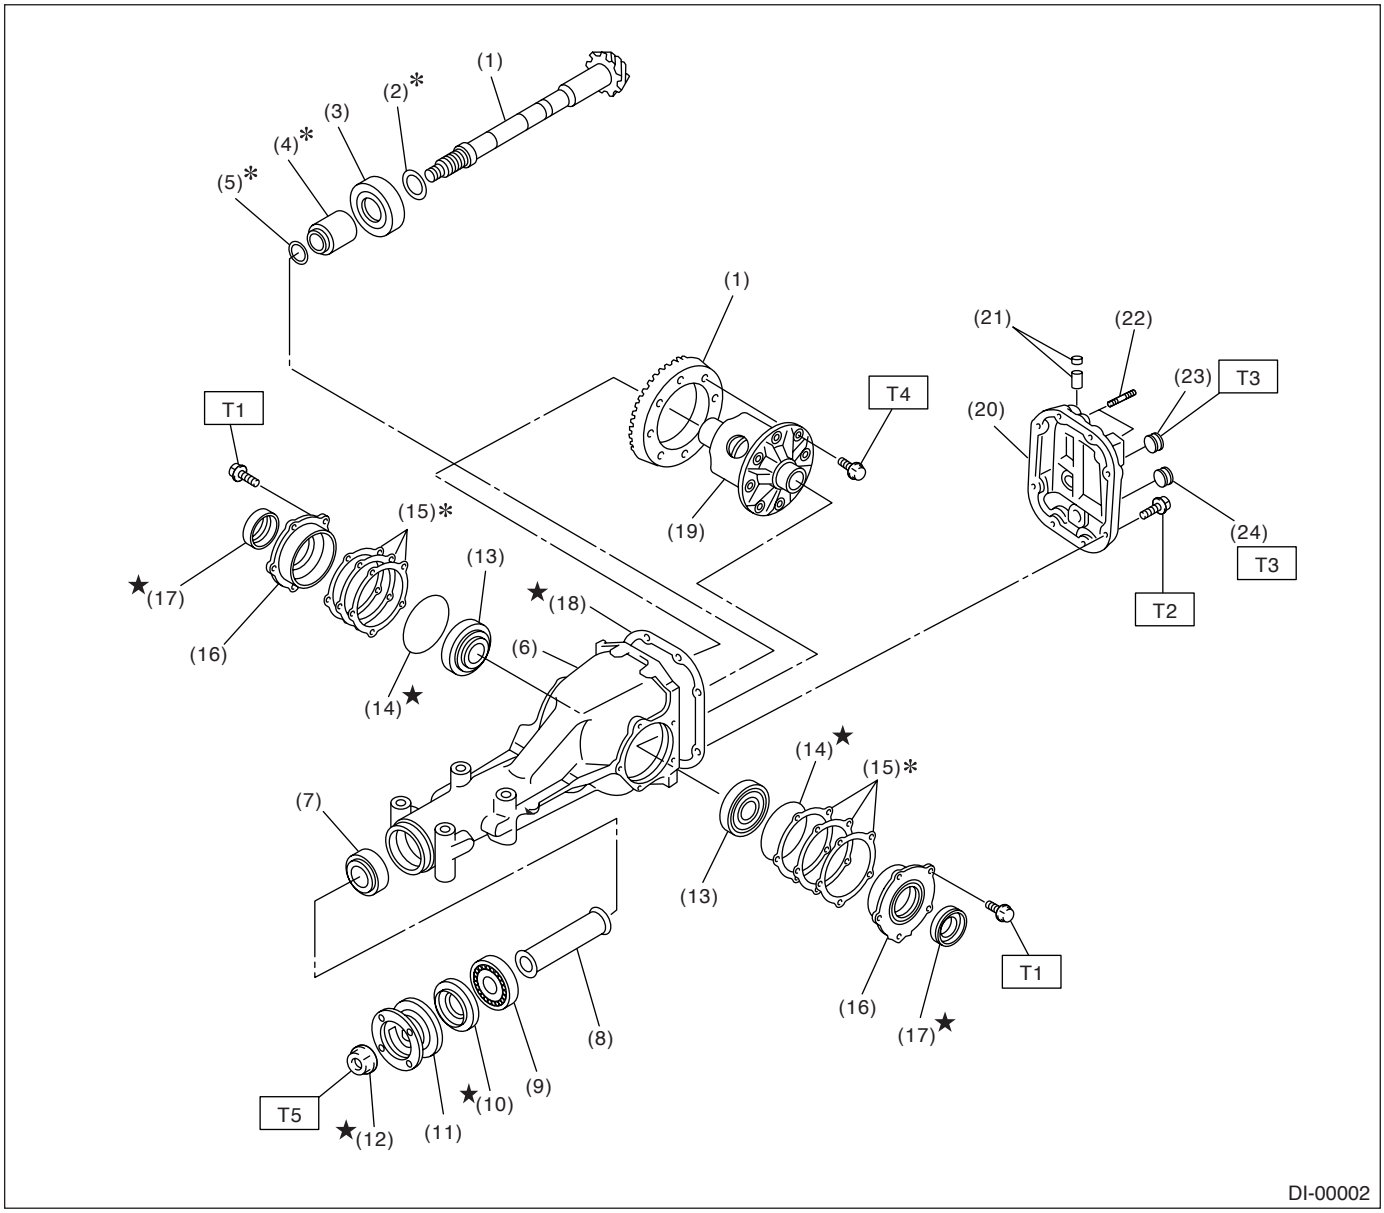


(1)	Hypoid driven gear and drive pinion set	(13)	Side bearing	(26)	Stud bolt
		(14)	O-ring	(27)	Oil filler plug
(2)	Pinion height adjusting washer	(15)	Side bearing retainer shim	(28)	Oil drain plug
(3)	Rear bearing	(16)	Side bearing retainer	(29)	Rear cover
(4)	Bearing preload adjusting collar	(17)	Side oil seal	(30)	Differential case
(5)	Bearing preload adjusting washer	(18)	Side gear thrust washer	(31)	Gasket
(6)	Differential carrier	(19)	Side gear		
(7)	Front bearing	(20)	Pinion mate gear		
(8)	Collar	(21)	Pinion mate gear washer		
(9)	Pilot bearing	(22)	Pinion shaft lock pin		
(10)	Front oil seal	(23)	Snap ring		
(11)	Companion flange	(24)	Pinion mate shaft		
(12)	Self-locking nut	(25)	Air breather cap		

Tightening torque: N·m (kgf-m, ft-lb)

T1: 10.3 (1.05, 7.6)
T2: 29 (3.0, 21.7)
T3: 49 (5.0, 36.2)
T4: 105 (10.7, 77.4)
T5: 181 (18.5, 134)

2. REAR DIFFERENTIAL WITH LSD (T-TYPE)

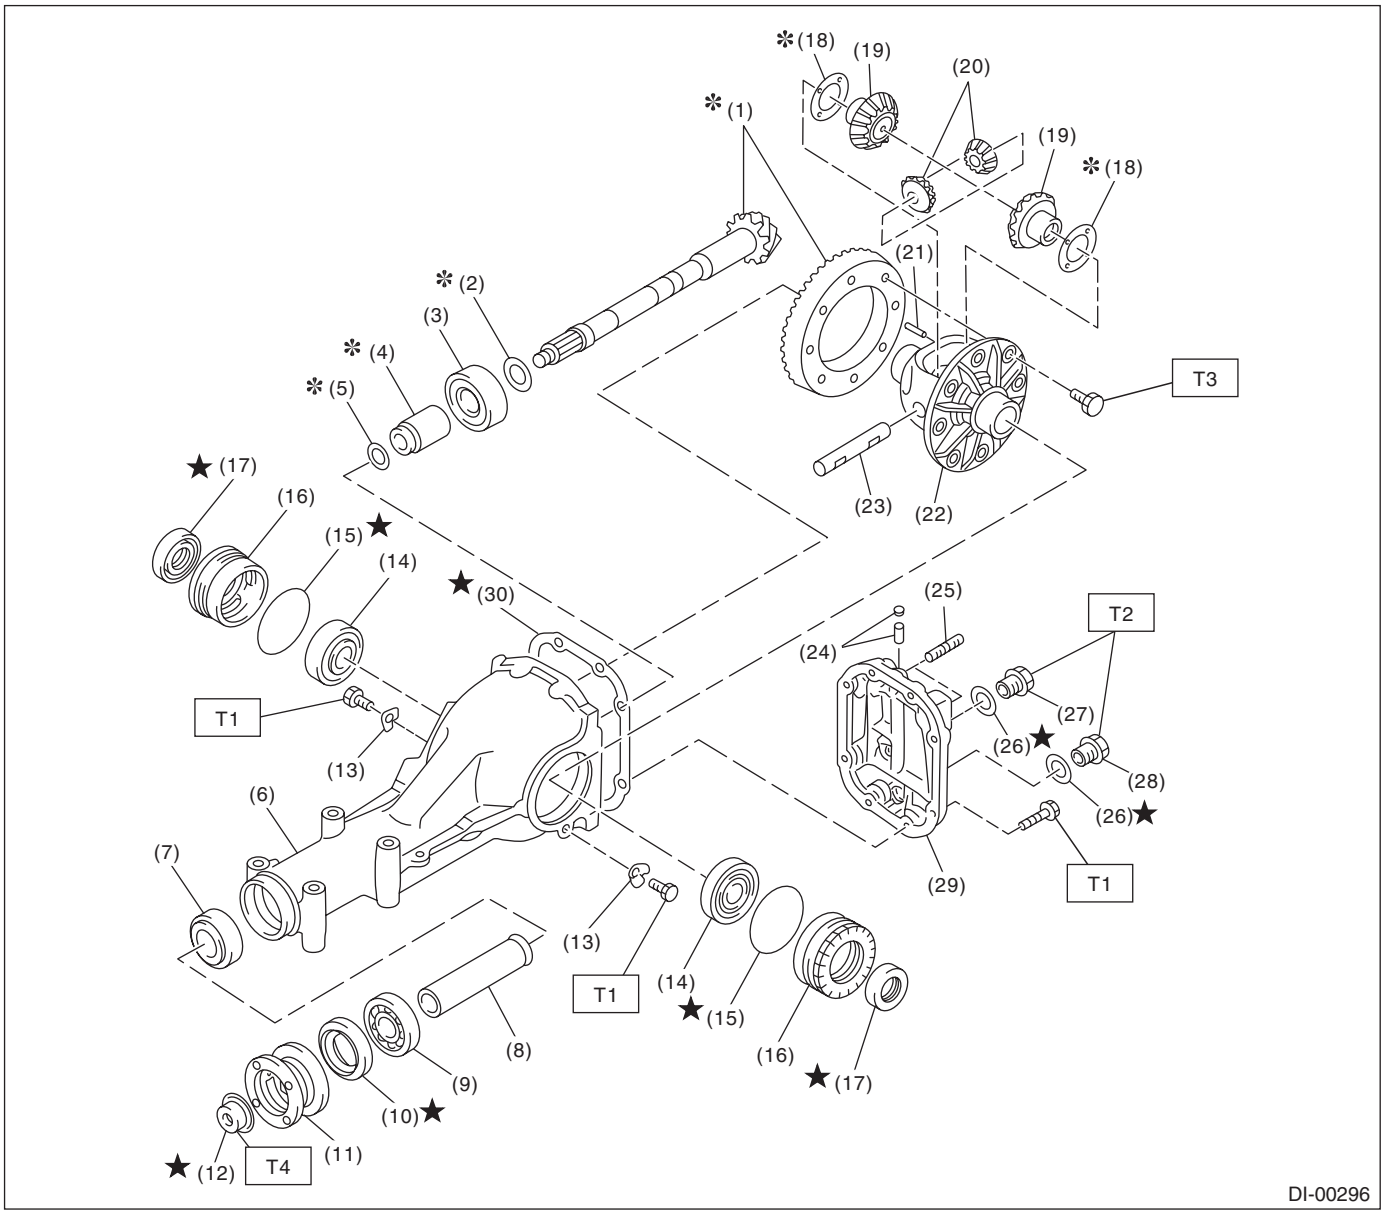


DI-00002

(1)	Hypoid driven gear and drive pinion set	(11)	Companion flange	(22)	Stud bolt
(2)	Pinion height adjusting washer	(12)	Self-locking nut	(23)	Oil filler plug
(3)	Rear bearing	(13)	Side bearing	(24)	Oil drain plug
(4)	Bearing preload adjusting collar	(14)	O-ring		
(5)	Bearing preload adjusting washer	(15)	Side bearing retainer shim		
(6)	Differential carrier	(16)	Side bearing retainer		
(7)	Front bearing	(17)	Side oil seal		
(8)	Collar	(18)	Gasket		
(9)	Pilot bearing	(19)	Differential case ASSY		
(10)	Front oil seal	(20)	Rear cover		
		(21)	Air breather cap		

Tightening torque: N·m (kgf-m, ft-lb)	
T1:	*10.3 (1.05, 7.6)*
T2:	*29 (3.0, 21.7)*
T3:	*49 (5.0, 36.2)*
T4:	*105 (10.7, 77.4)*
T5:	*181 (18.5, 134)*

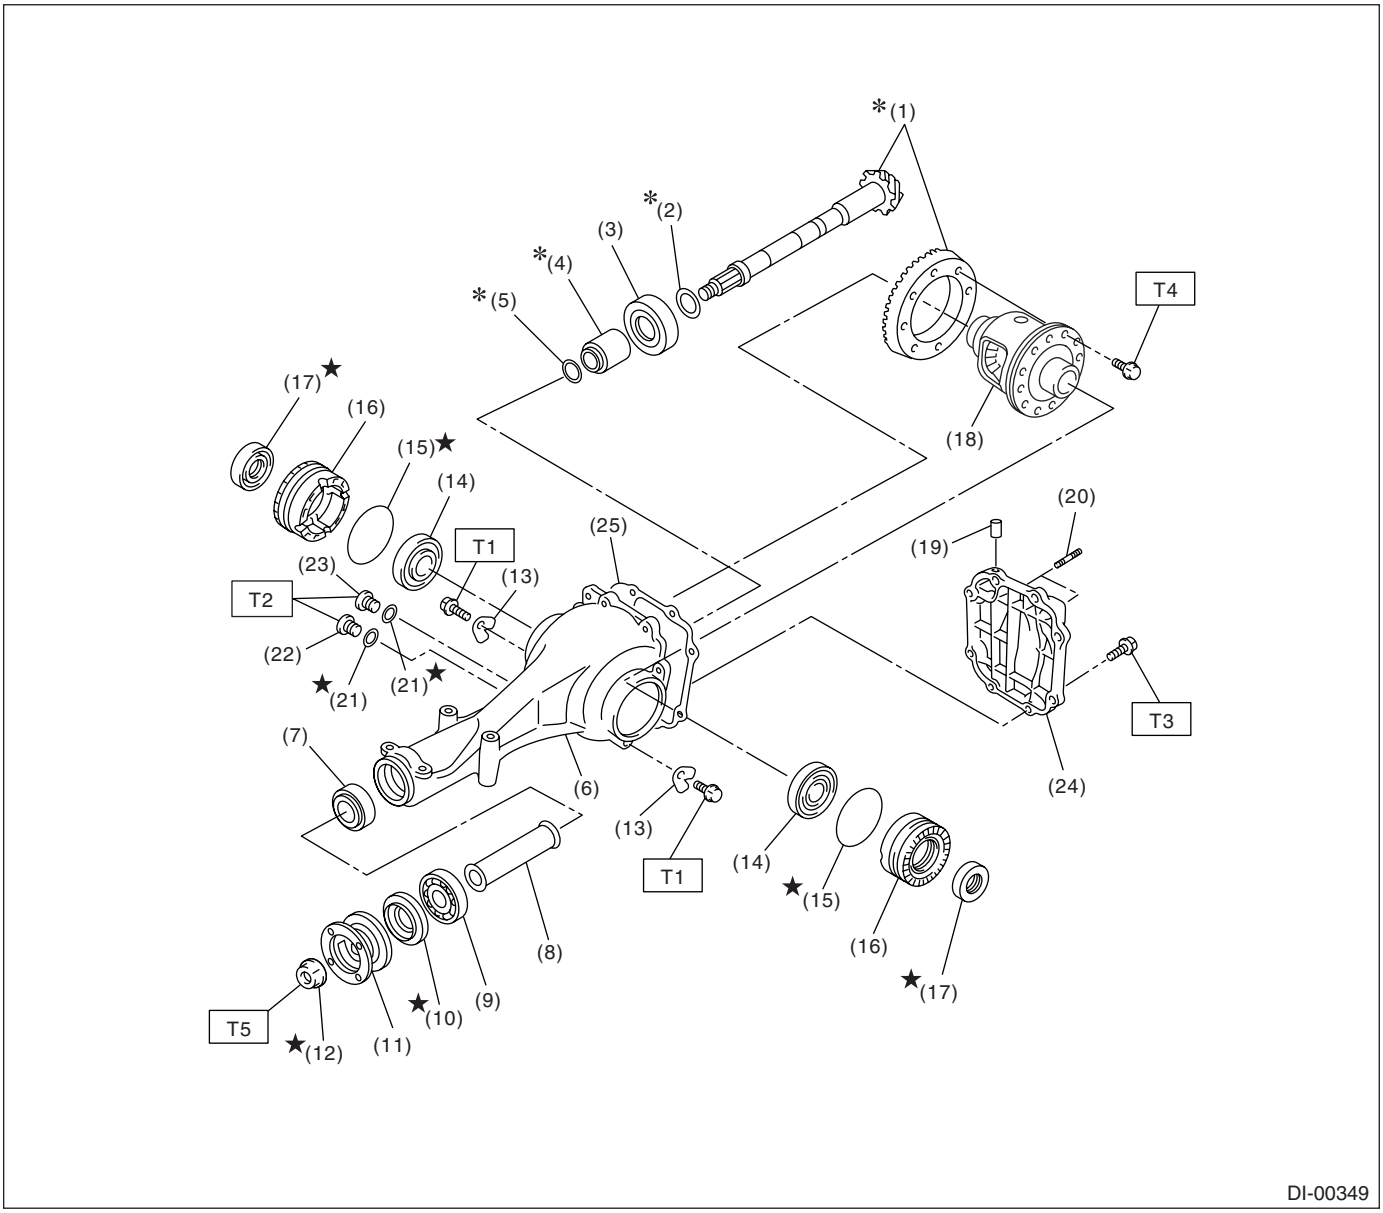
3. REAR DIFFERENTIAL (VA1-TYPE)



(1) Hypoid driven gear and drive pinion set
(2) Pinion height adjusting washer
(3) Rear bearing
(4) Bearing preload adjusting collar
(5) Bearing preload adjusting washer
(6) Differential carrier
(7) Front bearing
(8) Collar
(9) Pilot bearing
(10) Front oil seal
(11) Companion flange
(12) Self-locking nut
(13) Lock plate
(14) Side bearing
(15) O-ring
(16) Axle shaft holder
(17) Side oil seal
(18) Side gear thrust washer
(19) Side gear
(20) Pinion mate gear
(21) Pinion shaft lock pin
(22) Differential case
(23) Pinion mate shaft
(24) Air breather cap
(25) Stud bolt
(26) Gasket
(27) Oil filler plug
(28) Oil drain plug
(29) Rear cover
(30) Gasket

Tightening torque: N·m (kgf-m, ft-lb)
T1: 25 (2.5, 18.1)
T2: 34 (3.5, 25.3)
T3: 62 (6.3, 45.6)
T4: 191 (19.5, 141)

4. REAR DIFFERENTIAL (VA2-TYPE)



DI-00349

(1)	Hypoid driven gear and drive pinion set	(11)	Companion flange	(22)	Oil filler plug
(2)	Pinion height adjusting washer	(12)	Self-locking nut	(23)	Oil drain plug
(3)	Rear bearing	(13)	Lock plate	(24)	Rear cover
(4)	Bearing preload adjusting collar	(14)	Side bearing	(25)	Gasket
(5)	Bearing preload adjusting washer	(15)	O-ring		
(6)	Differential carrier	(16)	Axle shaft holder	***Tightening torque: N·m (kgf-m, ft-lb)***

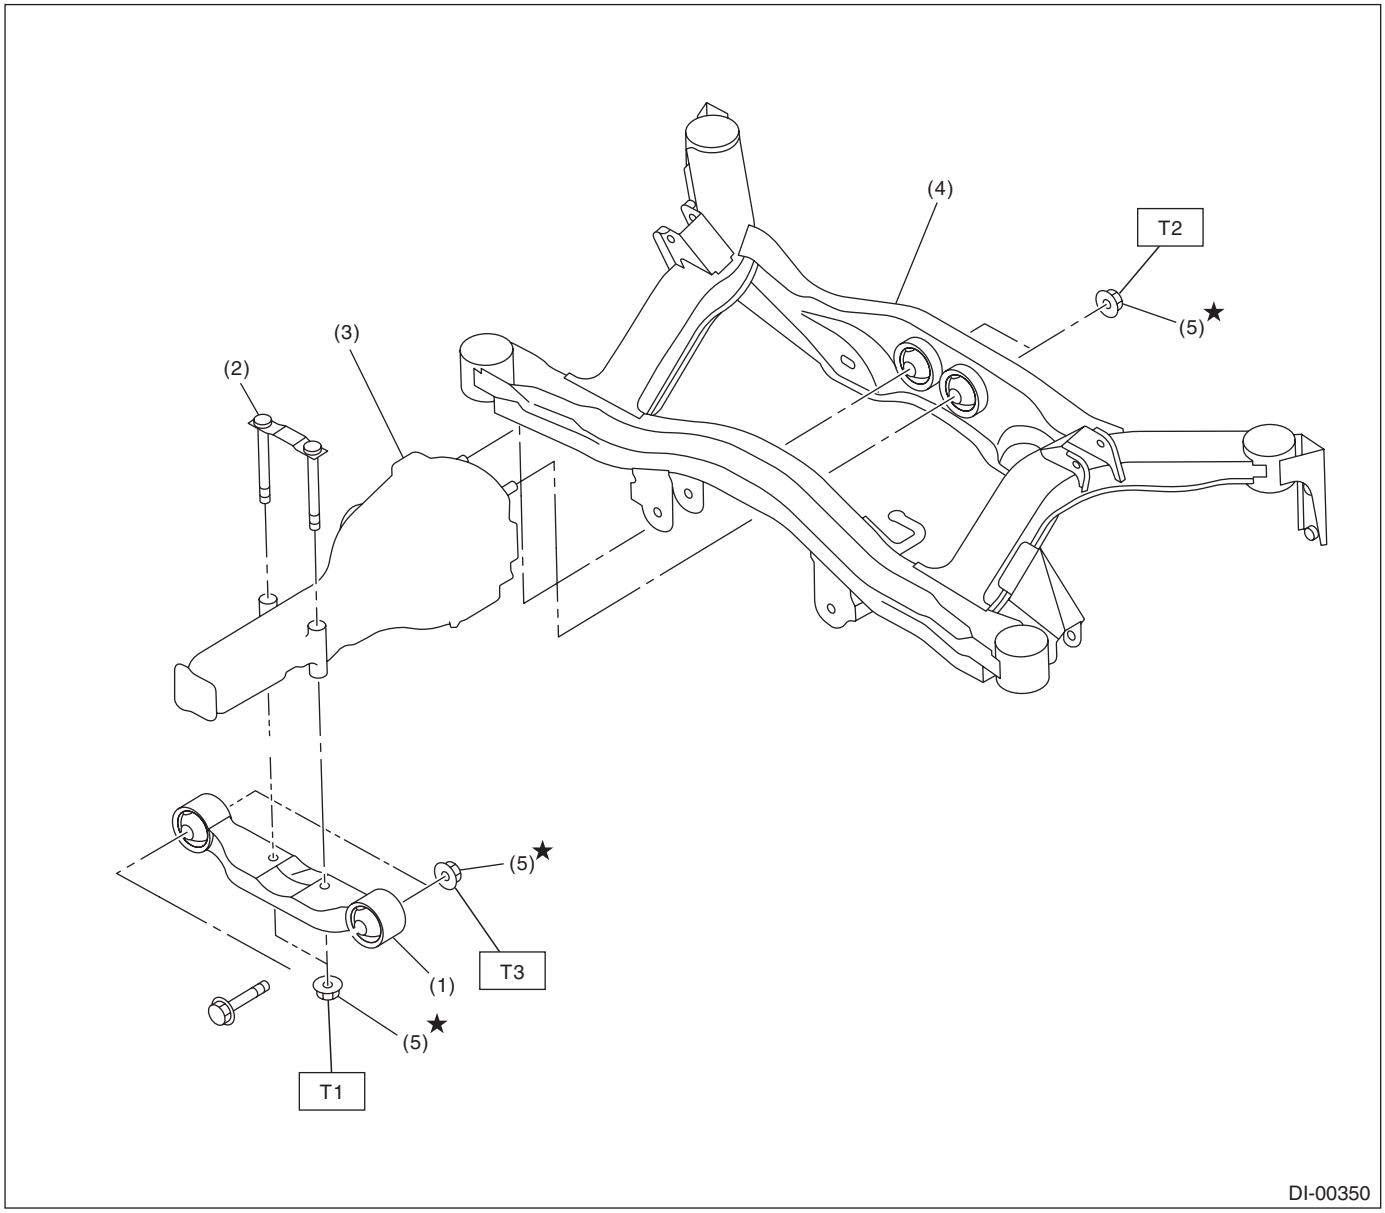
		(21)	Gasket	***T5:***	***191 (19.5, 141)***

5. REAR DIFFERENTIAL MOUNTING SYSTEM



(1) Rear differential front member
(2) Rear differential member plate
(3) Rear differential ASSY
(4) Sub frame
(5) Self-locking nut

Tightening torque: N·m (kgf-m, ft-lb)
T1: 52 (5.3, 38)
T2: 70 (7.1, 51)
T3: 110 (11.2, 81)

C: CAUTION

• Wear work clothing, including a cap, protective goggles and protective shoes during operation.
• Remove contamination including dirt and corrosion before removal, installation or disassembly.
• Keep the disassembled parts in order and protect them from dust and dirt.
• Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
• Be careful not to burn yourself, because each part on the vehicle is hot after running.
• Use SUBARU genuine gear oil, grease etc. or the equivalent. Do not mix gear oil, grease etc. with that of another grade or from other manufacturers.
• Be sure to tighten fasteners including bolts and nuts to the specified torque.
• Place shop jacks or rigid racks at the specified points.
• Apply gear oil onto sliding or revolution surfaces before installation.
• Before installing O-rings or snap rings, apply sufficient amount of gear oil to avoid damage and deformation.
• Before securing a part on a vice, place cushioning material such as wood blocks, aluminum plate, or shop cloth between the part and the vice.
• Avoid damaging the mating surface of the case.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-398477701	398477701	HANDLE	Used for installing front and rear bearing cone.
 ST-398477702	398477702	DRIFT	• Used for press-fitting the bearing cone of differential carrier (front). • For T-type
 ST-398217700	398217700	ATTACHMENT SET	Stand for rear differential carrier disassembly and assembly.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-498447120	498447120	INSTALLER	Used for installing front oil seal.
 ST-498427200	498427200	FLANGE WRENCH	Used for stopping rotation of companion flange when removing and tightening self-locking nut.
 ST-398467700	398467700	DRIFT	• Used for removing pinion, pilot bearing and front bearing cone. • For T-type and VA1-type
 ST-399780104	399780104	WEIGHT	Used for installing front bearing cone and pilot bearing companion flange.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-899580100	899580100	INSTALLER	Used for press-fitting front bearing cone and pilot bearing.
 ST-899904100	899904100	STRAIGHT PIN REMOVER	Used for driving out differential pinion shaft lock pin.
 ST-498247001	498247001	MAGNET BASE	• Used for measuring backlash between side gear and pinion, and hypoid gear. • Used with DIAL GAUGE (498247100).
 ST-498247100	498247100	DIAL GAUGE	• Used for measuring backlash between side gear and pinion, and hypoid gear. • Used with MAGNET BASE (498247001).

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-398507704	398507704	BLOCK	• Used for adjusting pinion height and preload. • For T-type and VA1-type
 ST-398177700	398177700	INSTALLER	• Used for installing rear bearing cone. • For T-type and VA2-type
 ST-398457700	398457700	ATTACHMENT	• Used for removal of side bearing retainer. • For T-type
 ST-398477703	398477703	DRIFT 2	• Used for press-fitting bearing race (rear) of differential carrier. • For T-type and VA2-type

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-398437700	398437700	DRIFT	• Used for installing side oil seal. • For T-type and VA2-type
 ST-398507702	398507702	DUMMY SHAFT	• Used for adjusting pinion height and preload. • For T-type
 ST-398507703	398507703	DUMMY COLLAR	• Used for adjusting pinion height and preload. • For T-type
 ST-398517700	398517700	REPLACER	• Used for removing rear bearing cone. • For T-type and VA2-type

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-398487700	398487700	DRIFT	• Used for press-fitting side bearing cone. • For T-type and VA2-type
 ST-398507701	398507701	DIFFERENTIAL CARRIER GAUGE	• Used for adjusting pinion height. • For T-type
 ST-398527700	398527700	PULLER ASSY	• Used for removing front oil seal. • Used for removing side bearing cup. (T-type)
 ST-398227700	398227700	DRIFT	• Used for installing side bearing. • For T-type and VA2-type

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST28099PA090	28099PA090	OIL SEAL PROTECTOR	• Used for installing the rear drive shaft to rear differential. • For oil seal protection
 ST-398237700	398237700	DRIFT	• Used for installing side bearing. • For T-type
 ST28099PA100	28099PA100	DRIVE SHAFT REMOVER	• Used for removing rear drive shaft from rear differential. • For T-type
 ST-399703600	399703600	PULLER ASSY	Used for removing companion flange.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-899874100	899874100	INSTALLER	Used for installing companion flange.

2. GENERAL PURPOSE TOOL

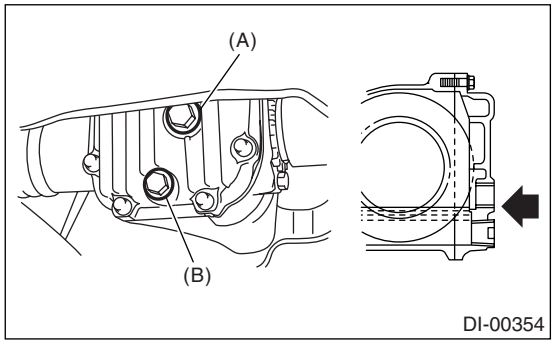
TOOL NAME	REMARKS
Transmission jack	Used for assembly/disassembly of rear differential.
Puller	Used for removal of side bearing retainer.
Thickness gauge	Used for measuring clearance.
Hexagon wrench	Used for installing and removing filler and drain plug.
Tire lever	Used for removal of rear drive shaft. (VA-type)

2. Differential Gear Oil

A: INSPECTION

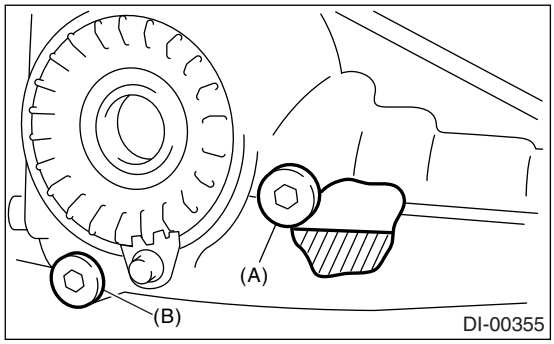
1) Remove the filler plug, and then check the gear oil. If it is contaminated or deteriorated, replace the gear oil. <Ref. to DI-26, REPLACEMENT, Differential Gear Oil.>
2) Check that the gear oil level is up to the bottom of filler plug hole. If the level is low, refill up to the bottom of filler plug hole.

• Except for VA2-type



(A) Filler plug
(B) Drain plug

• VA2-type



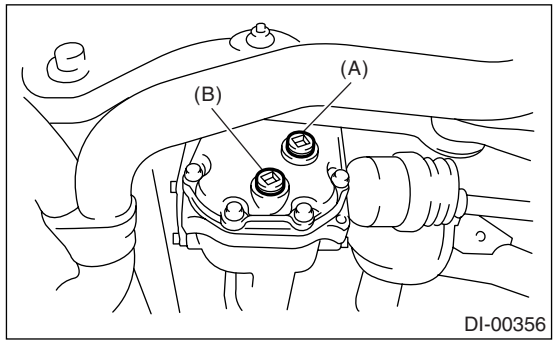
(A) Filler plug
(B) Drain plug

B: REPLACEMENT

1) Jack-up the vehicle and support it with rigid racks.
2) Remove the oil drain plug and filler plug, and drain the gear oil.

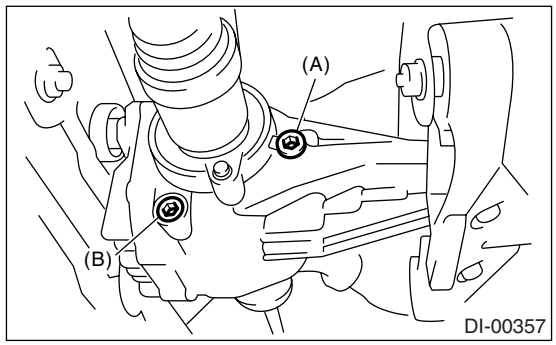
CAUTION:
Be careful not to burn your hands, because gear oil becomes extremely hot after running.

• Except for VA2-type



(A) Filler plug
(B) Drain plug

• VA2-type



(A) Filler plug
(B) Drain plug

3) Tighten the oil drain plug.

NOTE:
• Apply liquid gasket to the drain plug threads for T-type.

Liquid gasket:
THREE BOND 1105 (Part No. 004403010) or equivalent

• Use a new aluminum gasket for VA1-type.
• Use a new metal gasket for VA2-type.

Tightening torque:
T-type:
49 N·m (5.0 kgf-m, 36.2 ft-lb)
VA1-type:
34 N·m (3.5 kgf-m, 25.3 ft-lb)
VA2-type:
29 N·m (3.0 kgf-m, 21.4 ft-lb)

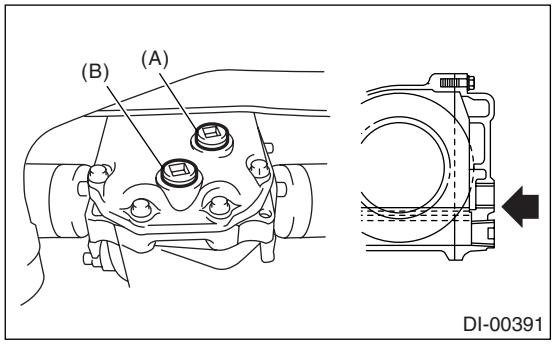
4) Fill the differential carrier with gear oil to the bottom of filler plug.

NOTE:
• Carefully refill oil while watching the level. Excessive or insufficient oil must be avoided.

Recommended gear oil:
<Ref. to DI-2, SPECIFICATION, General Description.>

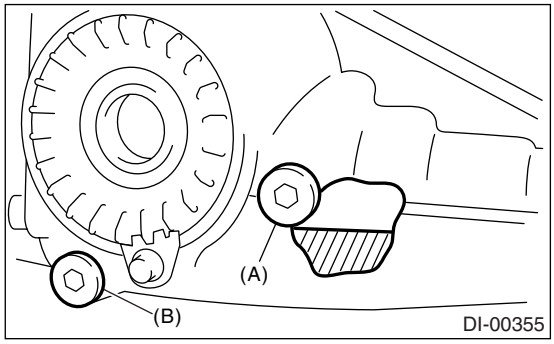
Oil capacity:
0.8 ℓ (0.8 US qt, 0.7 Imp qt)

- Except for VA2-type



(A) Filler plug
(B) Drain plug

- VA2-type



(A) Filler plug
(B) Drain plug

5) Install the filler plug.

NOTE:
- Apply liquid gasket to the filler plug threads for T-type.

Liquid gasket:
THREE BOND 1105 (Part No. 004403010) or equivalent

- Use a new aluminum gasket for VA1-type.
- Use a new metal gasket for VA2-type.

Tightening torque:
T-type:
49 N·m (5.0 kgf-m, 36.2 ft-lb)
VA1-type:
34 N·m (3.5 kgf-m, 25.3 ft-lb)
VA2-type:
29 N·m (3.0 kgf-m, 21.4 ft-lb)

3. Front Differential Assembly

A: NOTE

1. AT MODEL

• 4AT

For front differential of 4AT model, refer to “4AT” section. <Ref. to 4AT-113, Front Differential Assembly.>

• 5AT

For front differential of 5AT model, refer to “5AT” section. <Ref. to 5AT-94, Front Differential.>

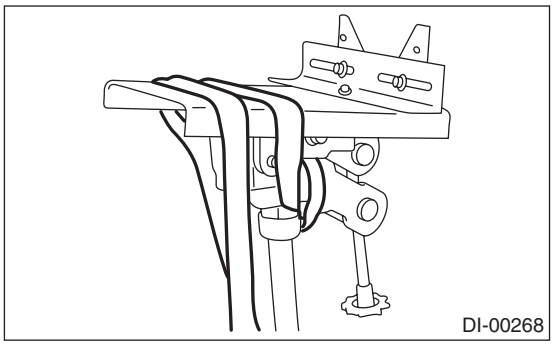
2. MT MODEL

For front differential of manual transmission, refer to “5MT” section. <Ref. to 5MT-85, Front Differential Assembly.>

4. Rear Differential (T-type)

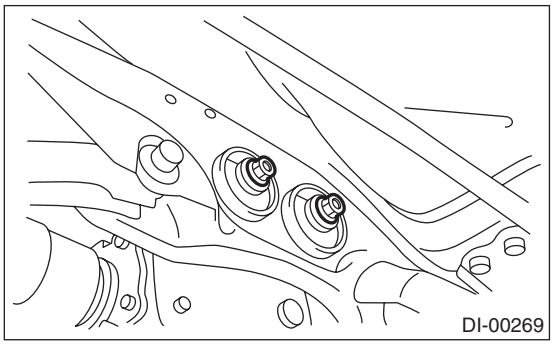
A: REMOVAL

1) Disconnect the ground cable from battery.
2) Move the select lever or gear shift lever to neutral.
3) Loosen the wheel nuts.
4) Release the parking brake.
5) Jack-up the vehicle and support it with rigid racks.
6) Remove the rear wheels.
7) Remove the rear exhaust pipe and muffler.
• 2.0 L SOHC and DOHC non-turbo model
<Ref. to EX(H4SO 2.0)-11, Rear Exhaust Pipe.>
<Ref. to EX(H4SO 2.0)-13, Muffler.>
• 2.0 L DOHC turbo model
<Ref. to EX(H4DOTC)-11, Rear Exhaust Pipe.>
8) Remove the propeller shaft.
<Ref. to DS-10, REMOVAL, Propeller Shaft.>
9) Prepare the transmission jack and band.



DI-00268

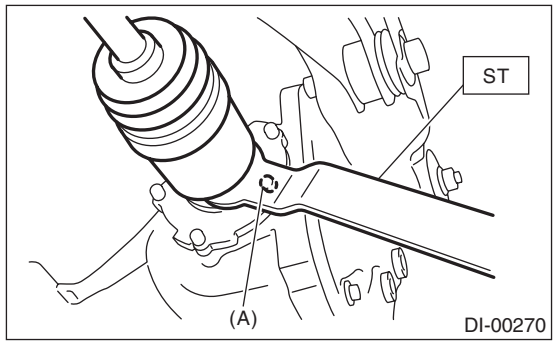
10) Loosen the self-locking nuts which hold the rear differential to rear crossmember.



DI-00269

11) Remove the DOJ of rear drive shaft from rear differential using ST.

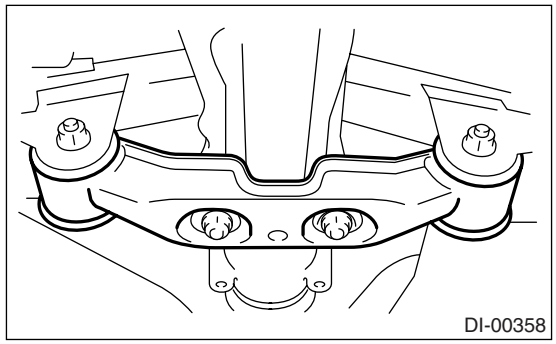
ST 28099PA100 DRIVE SHAFT REMOVER



DI-00270

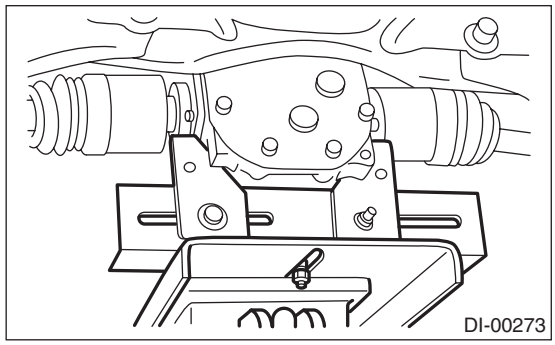
(A) Bolt

12) Remove the rear differential front member.



DI-00358

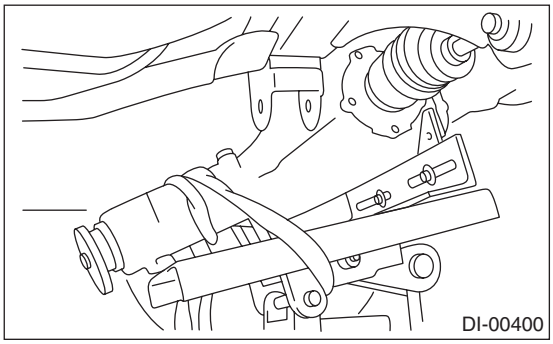
13) Support the rear differential with transmission jack.



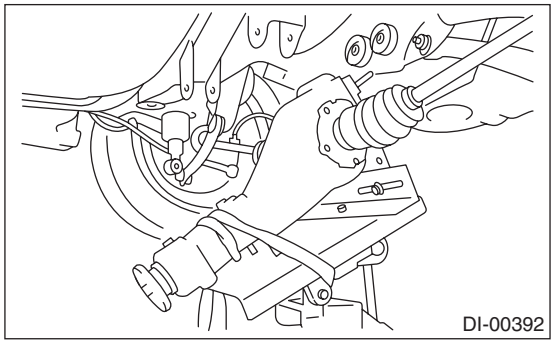
DI-00273

14) Secure the rear differential using band.
15) Remove the self-locking nuts which hold the rear differential to crossmember.
16) Remove the rear differential stud bolt from rear crossmember bushing.

NOTE:
When removing the stud bolt, carefully adjust the angle and location of transmission jack and jack stand, if necessary.



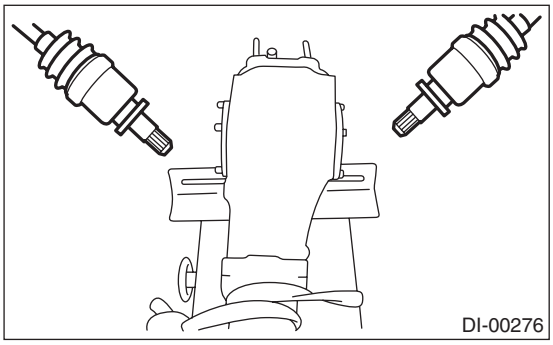
17) Lower the transmission jack stand after removing the rear differential stud bolt from rear crossmember. Rear drive shaft should not come into contact with lateral link bolt.



18) Pull out the axle shaft from rear differential.

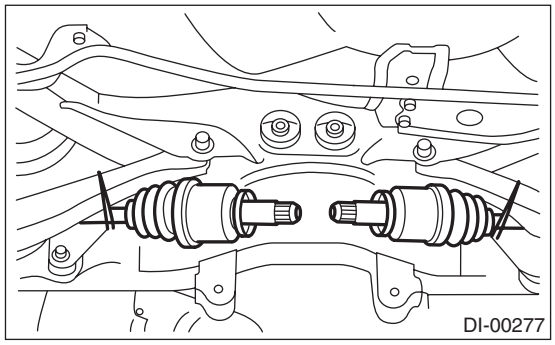
NOTE:
If it is difficult to remove the axle shaft from rear differential, remove it using ST.

ST 28099PA100 DRIVE SHAFT REMOVER

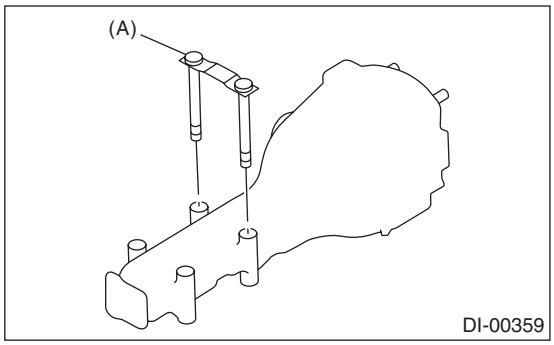


19) Lower the transmission jack.

20) Secure the rear drive shaft to lateral link using wire.



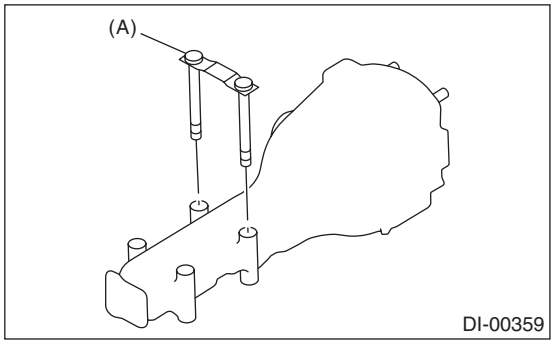
21) Remove the rear differential member plate from rear differential.



(A) Rear differential member plate

B: INSTALLATION

1) Install the rear differential member plate to rear differential.

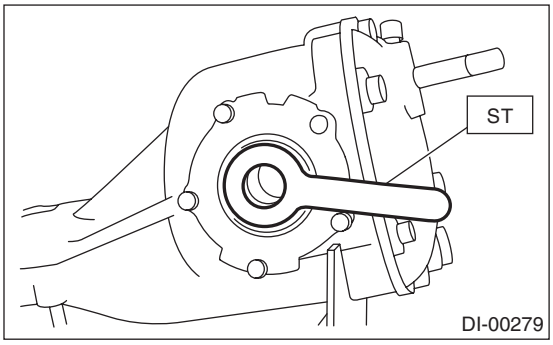


(A) Rear differential member plate

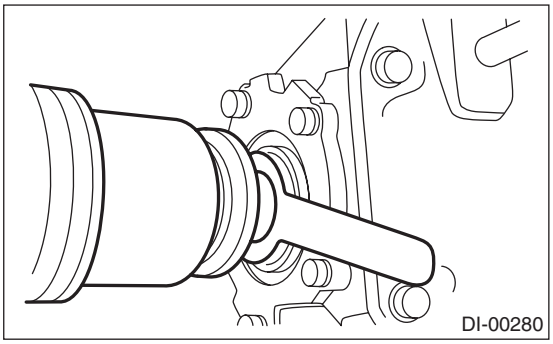
2) Set the rear differential to transmission jack.

NOTE:
Secure the rear differential to transmission jack using band.

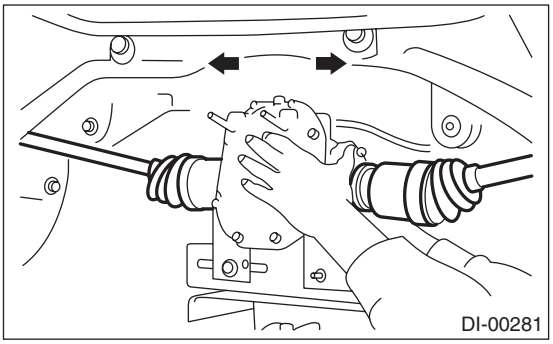
3) Install the ST to rear differential.
ST 28099PA090 OIL SEAL PROTECTOR



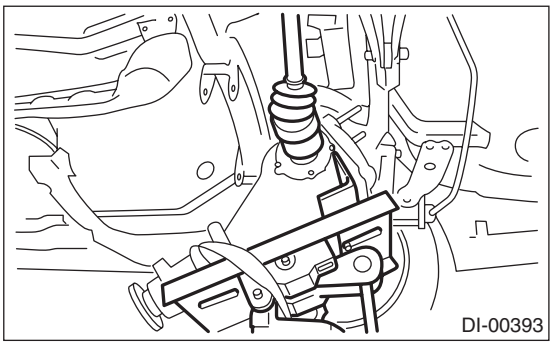
4) Insert the spline shaft until the spline portion comes inside the side oil seal.



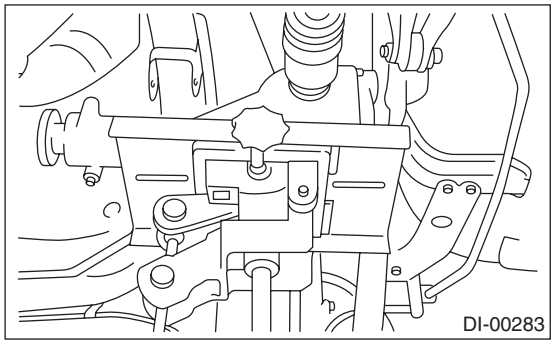
5) Remove ST from rear differential.
ST 28099PA090 OIL SEAL PROTECTOR
6) Push the rear differential to insert the axle shaft into rear differential.



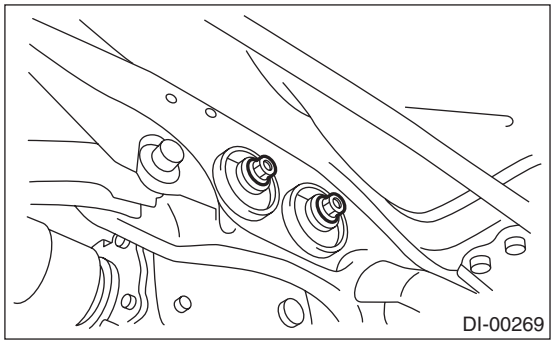
7) Adjust the transmission jack, if necessary, and insert the rear differential stud bolt into rear crossmember bushing properly.



8) After inserting the rear differential stud bolt into rear crossmember bushing, lift up the transmission jack and align the rear differential with its own position.

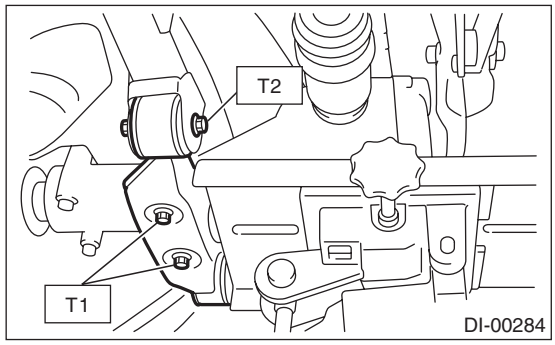


9) Tighten the rear crossmember self-locking nut temporarily.



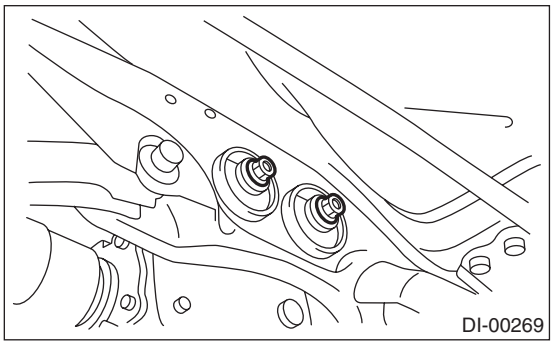
10) Remove the band from rear differential. Lift up the rear differential until the rear differential is separated from the transmission jack.
11) Install the rear differential front member.

Tightening torque:
T1: 52 N·m (5.3 kgf-m, 38 ft-lb)
T2: 110 N·m (11.2 kgf-m, 81 ft-lb)



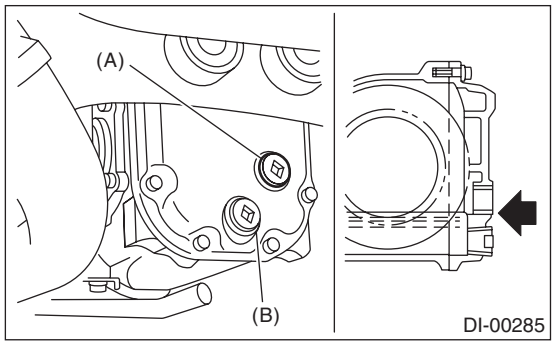
12) Tighten the self-locking nut.

Tightening torque:
70 N·m (7.1 kgf-m, 51 ft-lb)



13) Lower the transmission jack.
14) Install the propeller shaft. <Ref. to DS-11, INSTALLATION, Propeller Shaft.>
15) Install the heat shield cover.
16) Install the rear exhaust pipe and muffler.
17) After installing the rear differential carrier to the vehicle, remove the filler plug, and refill the gear oil to the bottom of plug hole.

Oil capacity:
0.8 ℓ (0.8 US qt, 0.7 Imp qt)



(A) Filler plug
(B) Drain plug

18) Tighten the filler plug.

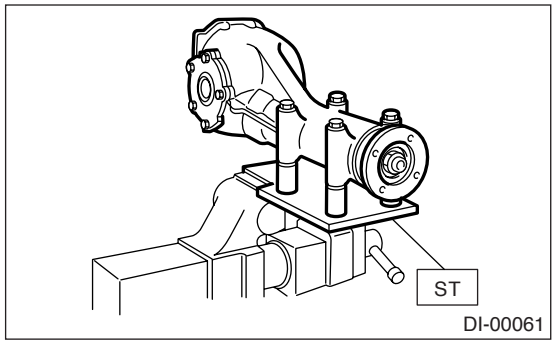
NOTE:
Apply liquid gasket to the drain plug.

Liquid gasket:
THREE BOND 1105 (Part No. 004403010) or equivalent

Tightening torque:
49.0 N·m (5.0 kgf-m, 36.2 ft-lb)

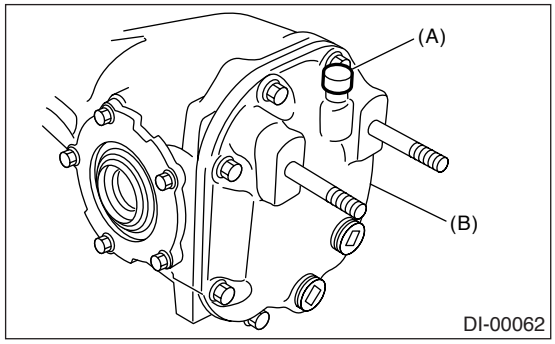
C: DISASSEMBLY

To detect the real cause of trouble, inspect the following items before disassembling.
• Tooth contact of hypoid driven gear and drive pinion, and backlash
• Hypoid driven gear runout on its back surface
• Total preload of drive pinion
1) Set the ST on vise and install the differential assembly to ST.
ST 398217700 ATTACHMENT



2) Drain the gear oil by removing plug.
3) Remove the air breather cap.

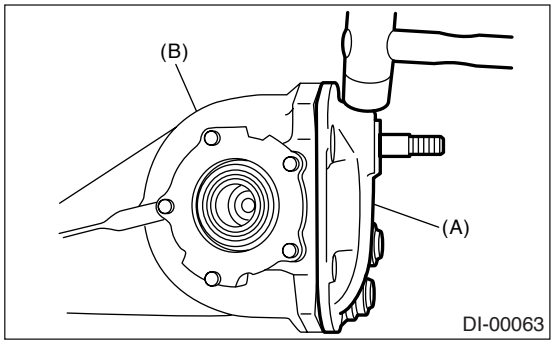
NOTE:
• Do not attempt to replace the air breather cap unless necessary.
• Replace the air breather cap with a new one when removing it.



(A) Air breather cap
(B) Rear cover

4) Remove the bolts, and then remove the rear cover.

NOTE:
Remove it by tapping with plastic hammer.

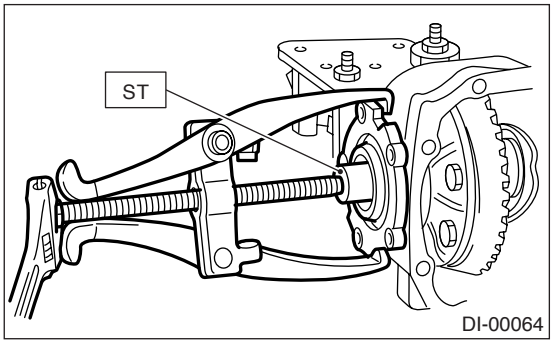


(A) Rear cover
(B) Differential carrier

5) Keep the side bearing retainers RH and LH separately for easier reassembly. Remove the side bearing retainer attaching bolts, set the ST to differential case, and extract the side bearing retainers RH and LH with a puller.

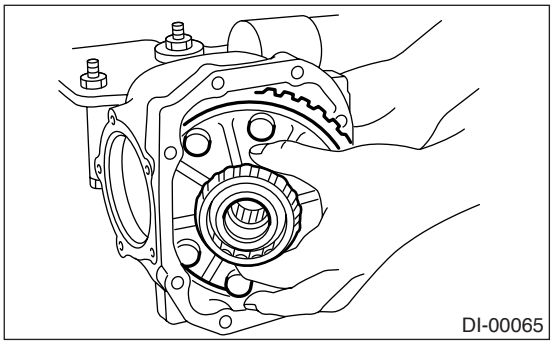
NOTE:
Each shim, which is installed to adjusted the side bearing preload, should be kept together with its mating retainer.

ST 398457700 ATTACHMENT



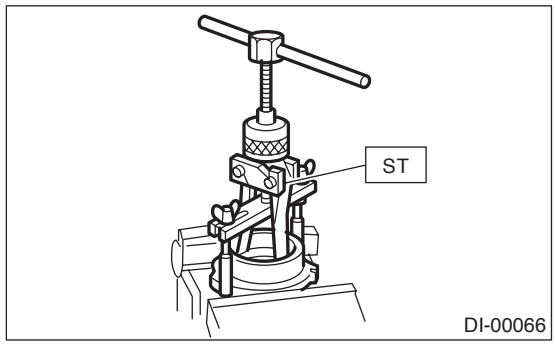
6) Pull out the differential case assembly from differential carrier.

NOTE:
Be careful not to hit the teeth against the case.



7) When replacing the side bearing, remove the bearing cup from side bearing retainer using ST.

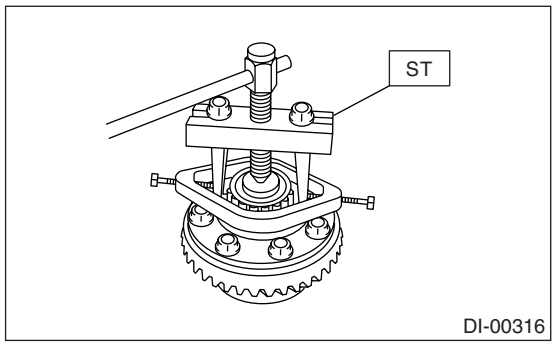
ST 398527700 PULLER ASSY



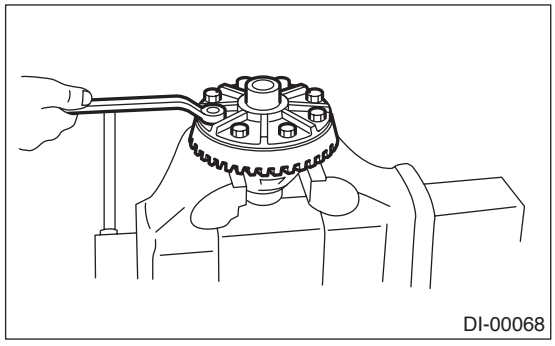
8) Extract the bearing cone with ST.

NOTE:
• Do not attempt to disassemble the parts unless necessary.
• Set the puller so that its claws catch the edge of the bearing cone.
• Never mix up the bearing races RH and LH and cones.

ST 18759AA000 PULLER ASSY



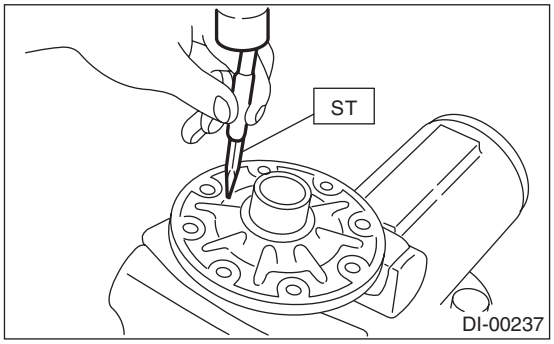
9) Remove the hypoid driven gear by loosening hypoid driven gear bolts.



10) Drive out the pinion shaft lock pin from hypoid driven gear side (Model without LSD).

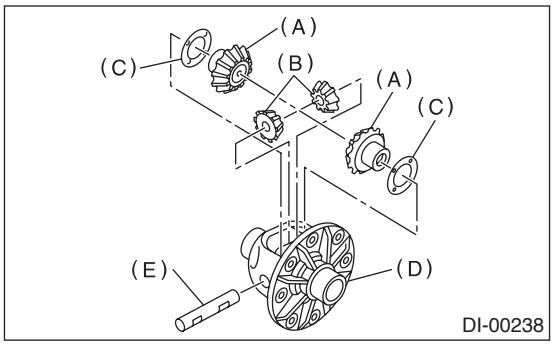
NOTE:
The lock pin is staked at the pin hole end on the differential carrier. Do not drive it out forcibly before removing the stake.

ST 899904100 STRAIGHT PIN REMOVER



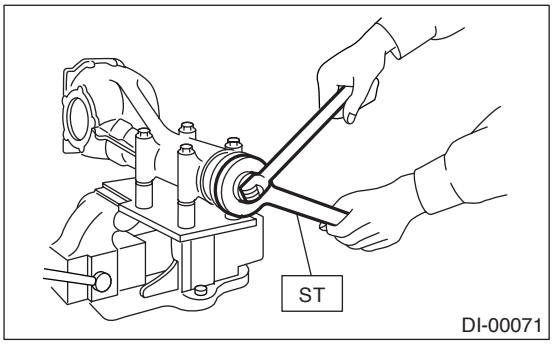
11) Draw out the pinion mate shaft and remove pinion mate gears, side gears and thrust washers. (Model without LSD)

NOTE:
The gears should be marked or kept separated right and left, and front and rear as well as thrust washers.

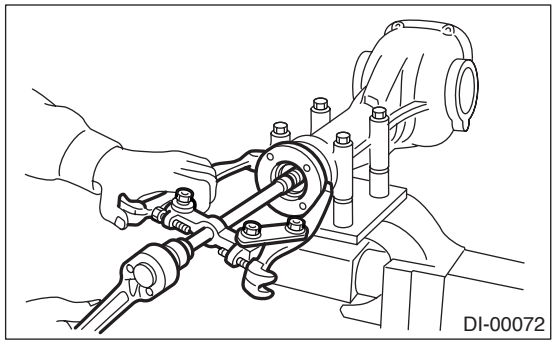


(A) Side gear
(B) Pinion mate gear
(C) Thrust washer
(D) Differential case
(E) Pinion mate shaft

12) Hold the companion flange with ST and remove the self-locking nut.
ST 498427200 FLANGE WRENCH

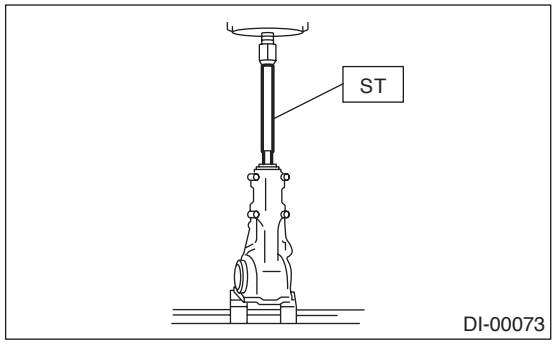


13) Extract the companion flange with a puller.



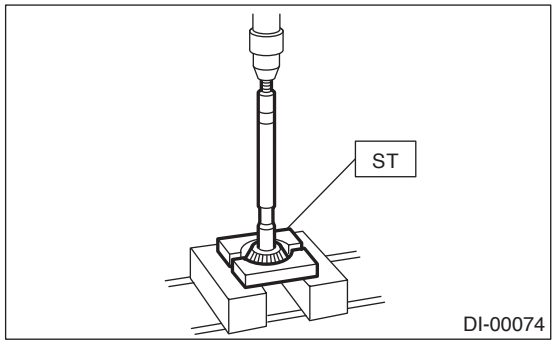
14) Press the end of drive pinion shaft and extract it together with rear bearing cone, pinion height adjust washer and washer.

NOTE:
Hold the drive pinion so as not to drop it.
ST 398467700 DRIFT

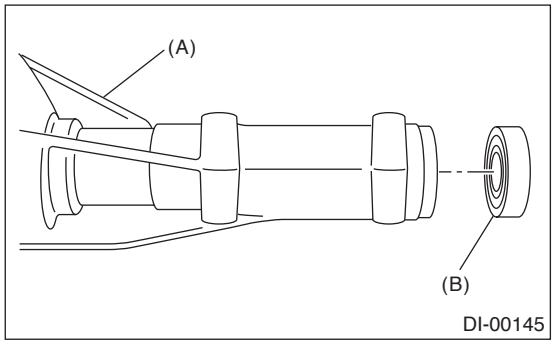


15) Remove the rear bearing cone from drive pinion by supporting the cone with ST.

NOTE:
Place the replacer so that its center-recessed side faces the pinion gear.
ST 398517700 REPLACER

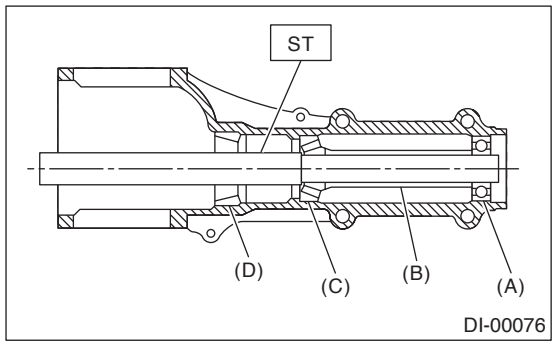


16) Remove the front oil seal from differential carrier using ST.
ST 398527700 PULLER ASSY



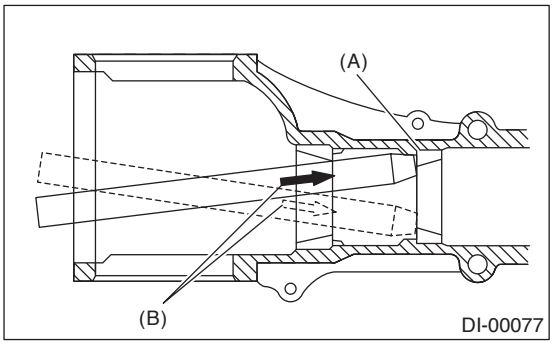
(A) Differential carrier
(B) Front oil seal

17) Remove the pilot bearing together with front bearing cone and collar using ST.
ST 398467700 DRIFT



(A) Pilot bearing
(B) Collar
(C) Front bearing
(D) Rear bearing cup

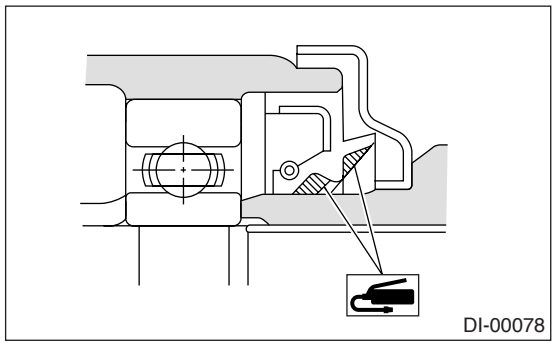
18) When replacing the bearings, hit out the front bearing cup and rear bearing cup in this order out of case using a brass bar.



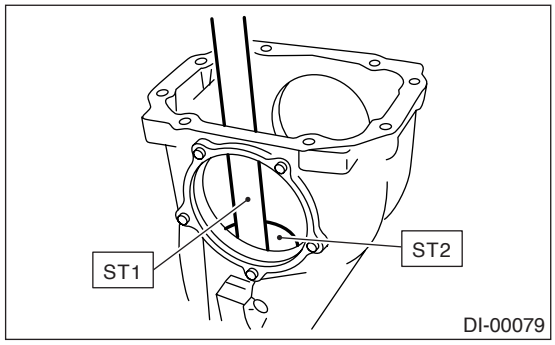
(A) 2 cutouts along diagonal lines
(B) Hit out alternately with brass bar

D: ASSEMBLY

NOTE:
• Assemble in the reverse order of disassembly.
• Check and adjust each part during assembly.
• Keep the shims and washers in order, so that they are not improperly installed.
• Thoroughly clean the surfaces on which the shims, washers and bearings are to be installed.
• Apply gear oil to the bearings and thrust washers when installing them.
• Be careful not to mix up the bearing races RH and LH.
• Use new O-rings and gasket.
• Replace the oil seals with new ones at every disassembly. Apply grease to the lips when installing the oil seals.
• Be careful not to mix up the differential oil seal RH and LH.



1) Adjusting preload for front and rear bearings:
Adjust the bearing preload with collar and washer between front and rear bearings. Pinion height adjusting washer are not affected by this adjustment. The adjustment must be carried out without oil seal inserted.
(1) Press the rear bearing race into differential carrier with ST1 and ST2.
ST1 398477701 HANDLE
ST2 398477703 DRIFT 2



(2) Install the front bearing race to differential carrier using ST1 and ST2.
ST1 398477701 HANDLE
ST2 398477702 DRIFT

(3) Measure and record the thickness of pinion height adjust washer.

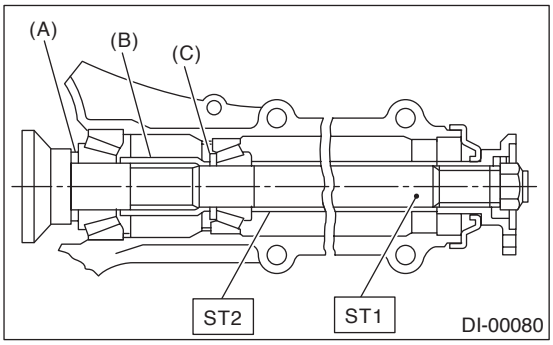
NOTE:
If tooth contact (drive pinion, hypoid driven gear) is normal in the inspection before disassembling, verify that the washer is not deformed, and then re-use the used washer.

(4) Insert the ST1 into carrier with pinion height adjusting washer and rear bearing cone fitted onto it.

NOTE:
Use new rear bearing cone.

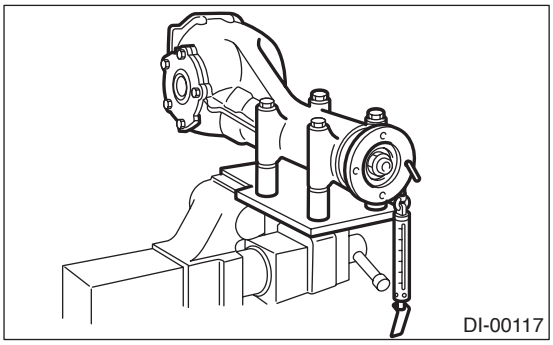
(5) Install the preload adjusting collar and washer, front bearing cone, ST2, companion flange, and washer and drive pinion nut.

ST1 398507702 DUMMY SHAFT
ST2 398507703 DUMMY COLLAR



(A) Pinion height adjusting washer
(B) Preload adjusting collar
(C) Preload adjusting washer

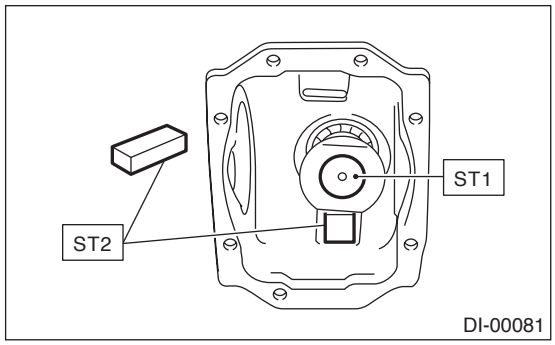
(6) Turn the ST1 with hand to make it seated, and tighten the self-locking nut while measuring the preload with spring balance. Select the preload adjusting washer and collar so that the specified preload is obtained when nut is tightened to the specified torque.



NOTE:
• Use a new self-locking nut.
• Be careful not to give excessive preload.
• When tightening the self-locking nut, lock ST1 with ST2 as shown in the figure.
• Measure the preload in direction of tangent to flange.

ST1 398507702 DUMMY SHAFT
ST2 398507704 BLOCK

Tightening torque:
181 N·m (18.5 kgf-m, 134 ft-lb)



Drive pinion bearing preload
18.1 — 38.8 N (1.8 — 4.0 kgf, 4.1 — 8.7 lb) at companion flange bolt hole

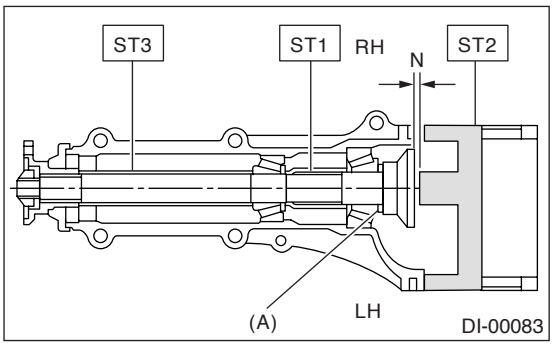
	Part No.	Thickness mm (in)
Preload adjusting washer	383705200	2.59 (0.1020)
	383715200	2.57 (0.1012)
	383725200	2.55 (0.1004)
	383735200	2.53 (0.0996)
	383745200	2.51 (0.0988)
	383755200	2.49 (0.0980)
	383765200	2.47 (0.0972)
	383775200	2.45 (0.0965)
	383785200	2.43 (0.0957)
	383795200	2.41 (0.0949)
	383805200	2.39 (0.0941)
	383815200	2.37 (0.0933)
	383825200	2.35 (0.0925)
	383835200	2.33 (0.0917)
	383845200	2.31 (0.0909)

	Part No.	Length mm (in)
Preload adjusting collar	383695201	56.2 (2.213)
	383695202	56.4 (2.220)
	383695203	56.6 (2.228)
	383695204	56.8 (2.236)
	383695205	57.0 (2.244)
	383695206	57.2 (2.252)

2) Adjusting drive pinion height:
Adjust the drive pinion height with washer installed between the rear bearing cone and the back of pinion gear.

(1) Install the ST2.

ST1 398507702 DUMMY SHAFT
ST2 398507701 DIFFERENTIAL CARRIER GAUGE
ST3 398507703 DUMMY COLLAR

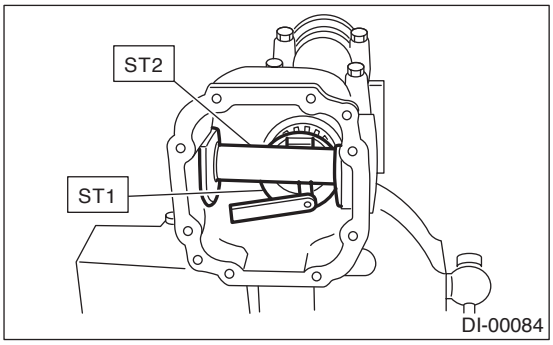


(A) Pinion height adjusting washer

(2) Measure the clearance N between the end of ST2 and the end surface of ST1 by using a thickness gauge.

NOTE:
Make sure there is no clearance between the case and ST2.

ST1 398507702 DUMMY SHAFT
ST2 398507701 DIFFERENTIAL CARRIER GAUGE



(3) Obtain the thickness of pinion height adjusting washer to be inserted from the following formula, and replace the temporarily installed washer with this one.
$T = To + N - (H \times 0.01) - 0.20$ mm

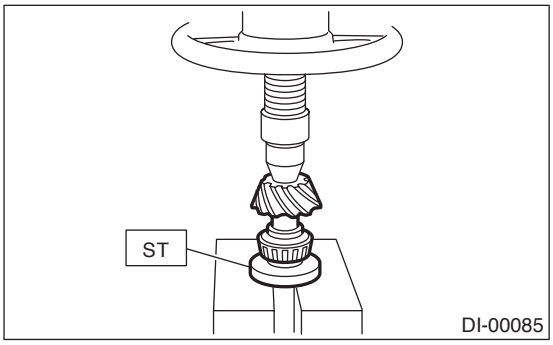
NOTE:
Use copies of this page.

T	Thickness of pinion height adjusting washer mm (in)	
To	Thickness of washer temporally inserted mm (in)	
N	Clearance of thickness gauge mm (in)	
H	Figure marked on drive pinion head	
Memo:		

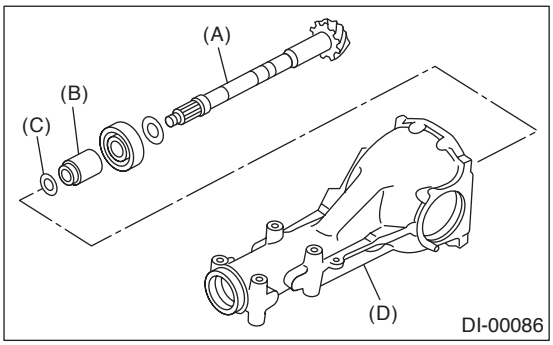
(Example of calculation)
To = 2.20 + 1.20 = 3.40 mm
N = 0.23 mm H = + 1
T = 3.40 + 0.23 − 0.01 − 0.20 = 3.42
Result: Thickness = 3.42 mm
Therefore use the pinion height adjusting washer of part number 383605200.

Pinion height adjusting washer	
Part No.	Thickness mm (in)
383495200	3.09 (0.1217)
383505200	3.12 (0.1228)
383515200	3.15 (0.1240)
383525200	3.18 (0.1252)
383535200	3.21 (0.1264)
383545200	3.24 (0.1276)
383555200	3.27 (0.1287)
383565200	3.30 (0.1299)
383575200	3.33 (0.1311)
383585200	3.36 (0.1323)
383595200	3.39 (0.1335)
383605200	3.42 (0.1346)
383615200	3.45 (0.1358)
383625200	3.48 (0.1370)
383635200	3.51 (0.1382)
383645200	3.54 (0.1394)
383655200	3.57 (0.1406)
383665200	3.60 (0.1417)
383675200	3.63 (0.1429)
383685200	3.66 (0.1441)

3) Install the selected pinion height adjusting washer on drive pinion, and press the rear bearing cone into position with ST.
ST 398177700 INSTALLER

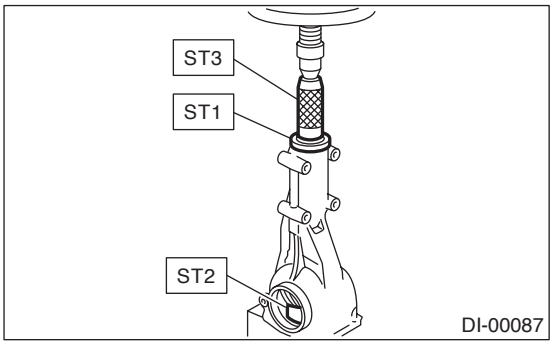


4) Insert the drive pinion into differential carrier, install the selected bearing preload adjusting collar and washer.

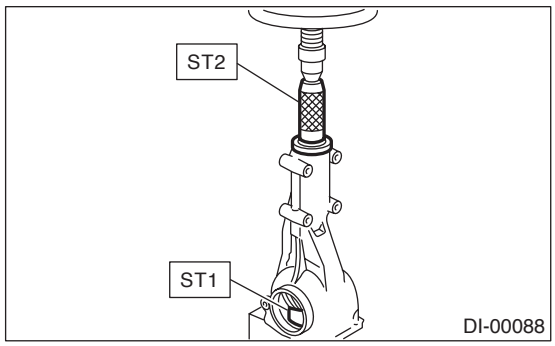


(A) Drive pinion
(B) Bearing preload adjusting collar
(C) Bearing preload adjusting washer
(D) Differential carrier

5) Press-fit the front bearing cone into case with ST1, ST2 and ST3.
ST1 398507703 DUMMY COLLAR
ST2 399780104 WEIGHT
ST3 899580100 INSTALLER

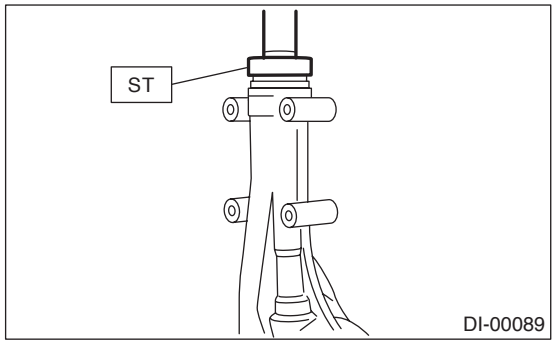


6) Insert the collar, then press-fit the pilot bearing with ST1 and ST2.
ST1 399780104 WEIGHT
ST2 899580100 INSTALLER



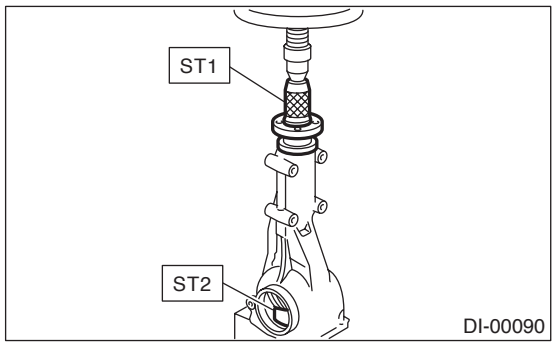
7) Fit a new oil seal with ST.

NOTE:
• Press-fit until end of oil seal is 1 mm (0.04 in) inward from end of carrier.
• Apply grease to the oil seal lips.
ST 498447120 INSTALLER



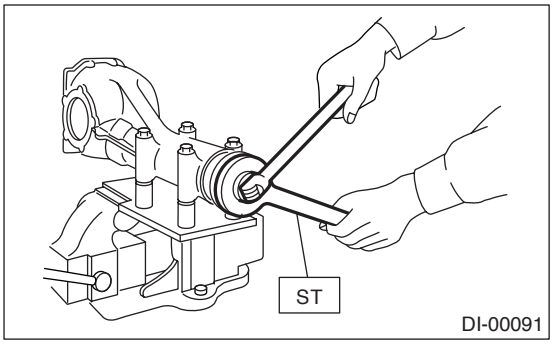
8) Press-fit the companion flange with ST1 and ST2.

NOTE:
Be careful not to damage the bearing.
ST1 899874100 INSTALLER
ST2 399780104 WEIGHT



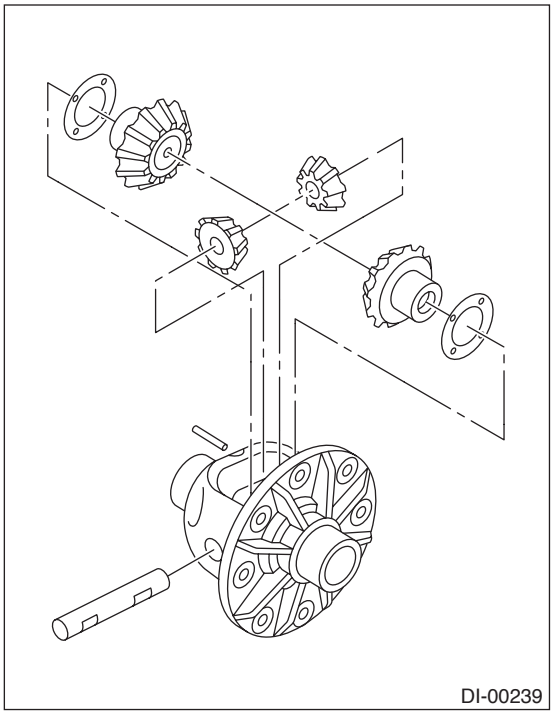
9) Install a new self-locking nut and secure the companion flange using ST and tighten the nut.
ST 498427200 FLANGE WRENCH

Tightening torque:
181 N·m (18.5 kgf-m, 134 ft-lb)



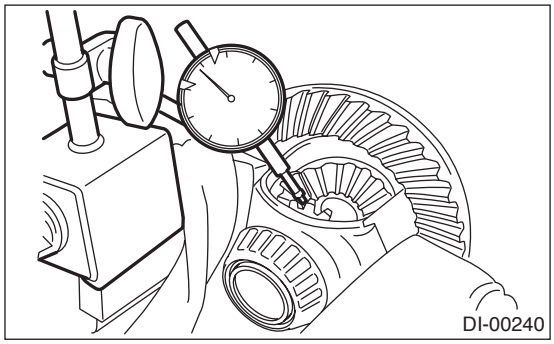
10) Assembling differential case
Install the side gears and pinion mate gears, with their thrust washers and pinion mate shaft, into differential case. (Model without LSD)

NOTE:
• Apply gear oil on both sides of the washer and on the side gear shaft before installing.
• Insert the pinion mate shaft into the differential case by aligning the lock pin holes.



(1) Measure the side gear backlash.

Side gear backlash:
0.10 — 0.20 mm (0.0039 — 0.0079 in)



(2) Adjust the side gear backlash as specified by selecting side gear thrust washer.

Side gear thrust washer	
Part No.	Thickness mm (in)
383445201	0.75 — 0.80 (0.0295 — 0.0315)
383445202	0.80 — 0.85 (0.0315 — 0.0335)
383445203	0.85 — 0.90 (0.0335 — 0.0354)

(3) Check the condition of rotation after applying oil to the gear tooth surfaces and thrust surfaces.
(4) After inserting the pinion shaft lock pin into differential case, stake the both sides of the hole to prevent pin from falling off.

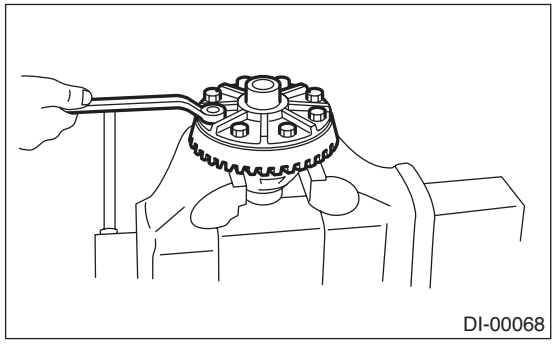
11) Install the hypoid driven gear to differential case.

NOTE:
• Before installing bolts, apply Lock Tite to bolt threads.

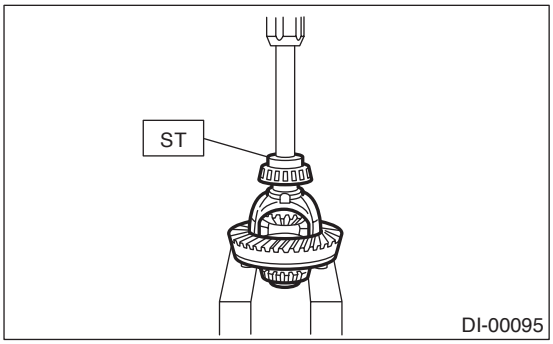
Lock Tite:
THREE BOND 1324 (Part No. 004403042)

• Tighten diagonally while tapping the bolt heads.

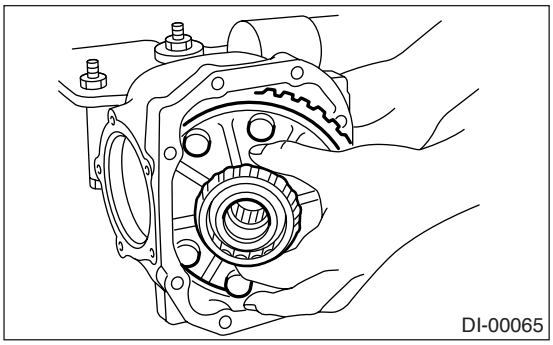
Tightening torque:
105 N·m (10.7 kgf-m, 77.4 ft-lb)



12) Press the side bearing into differential case using ST.
ST 398227700 DRIFT



13) Press-fit the side bearing cone to the side bearing retainer using ST.
ST 398437700 DRIFT
14) Adjusting the side bearing retainer shims
(1) The hypoid driven gear backlash and side bearing preload can be adjusted by the side bearing retainer shim thickness.
(2) Install the differential assembly into differential carrier in the reverse order of disassembly.



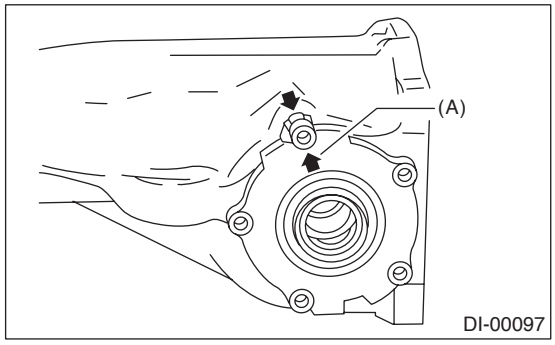
(3) Install the side bearing retainer shims to retainers RH and LH from which they were removed.

NOTE:
Replace the broken or corroded side retainer shim with a new one of same thickness.

Side bearing retainer shim	
Part No.	Thickness mm (in)
383475201	0.20 (0.0079)
383475202	0.25 (0.0098)
383475203	0.30 (0.0118)
383475204	0.40 (0.0157)
383475205	0.50 (0.0197)

(4) Align the arrow mark on differential carrier with the mark on side retainer during installation.

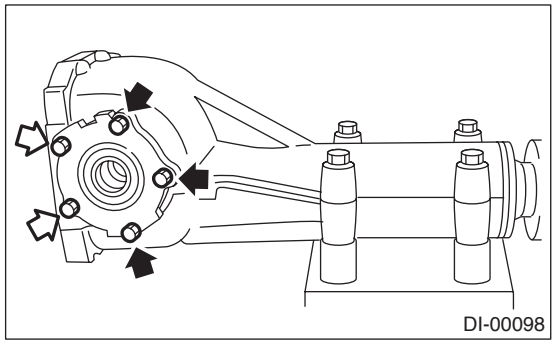
NOTE:
Be careful that side bearing outer race is not damaged by bearing roller.



(A) Arrow mark

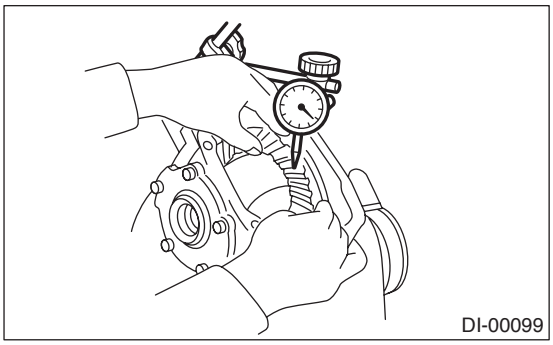
(5) Tighten the side bearing retainer bolts.

Tightening torque:
10.3 N·m (1.05 kgf-m, 7.6 ft-lb)



(6) Measure the hypoid driven gear to drive pinion backlash. Set the magnet base on differential carrier. Align the contact point of dial gauge with tooth face of hypoid driven gear, and move hypoid driven gear while holding drive pinion still. Read the value indicated on dial gauge.
If the backlash exceeds 0.2 mm (0.08 in), reduce the thickness of shim on the back face of hypoid driven gear and increase the thickness of shim on the tooth face of hypoid driven gear. If the backlash is less than 0.1 mm (0.004 in), increase the thickness of shim on the back face of hypoid driven gear and reduce the thickness of shim on the tooth face of hypoid driven gear.

Backlash:
0.10 — 0.20 mm (0.0039 — 0.0079 in)

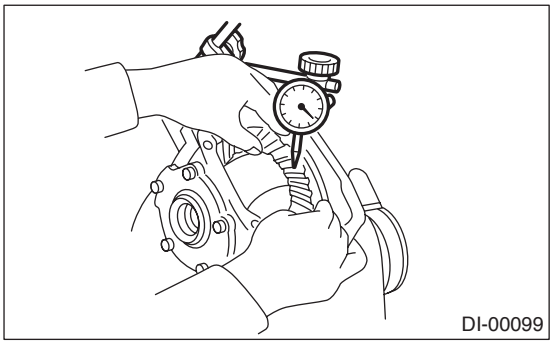


(7) At the same time, measure the total preload of drive pinion. Compared with the resistance when differential case is not installed, if the total preload is not within specification, adjust the thickness of side bearing retainer shims, increasing/reducing by an even amount at a time.

Total preload:
20.7 — 54.4 N (2.1 — 5.5 kgf, 4.7 — 12.2 lb)

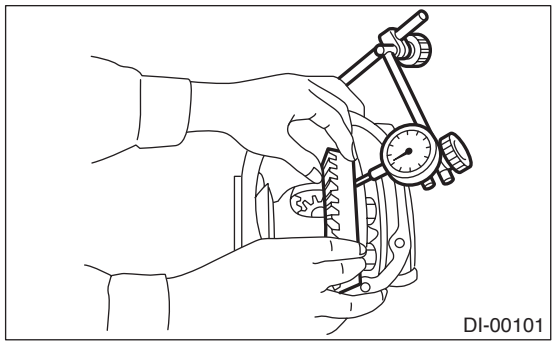
15) Recheck the hypoid driven gear to drive pinion backlash.

Backlash:
0.10 — 0.20 mm (0.0039 — 0.0079 in)



16) Check the hypoid driven gear runout on its back surface, and make sure that pinion and hypoid driven gear rotates smoothly.
If the hypoid driven gear runout on its back surface exceed the specification, verify that there is any foreign material between hypoid driven gear and differential case, and they are not deformed.

Hypoid driven gear runout on its back surface:
0.05 mm (0.0020 in)

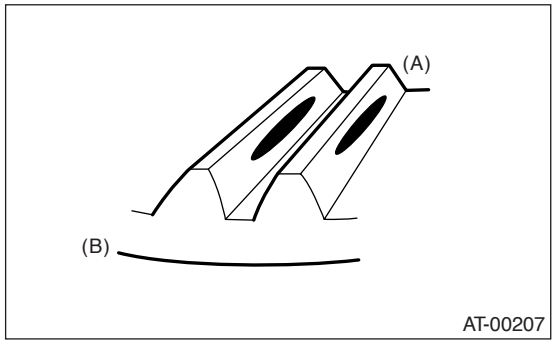


17) Checking and adjusting the tooth contact of hypoid driven gear
(1) Apply an even coat of red lead on both sides of three or four teeth on the hypoid driven gear. Check the contact pattern after rotating the hypoid driven gear several revolutions back and forth until a definite contact pattern appears on the hypoid driven gear.
(2) When the contact pattern is incorrect, readjust.

NOTE:
Be sure to wipe off red lead completely after adjustment is completed.

- Correct tooth contact

Checking item: Tooth contact pattern is slightly shifted toward toe side under no-load rotation. [When loaded, contact pattern moves toward heel.]

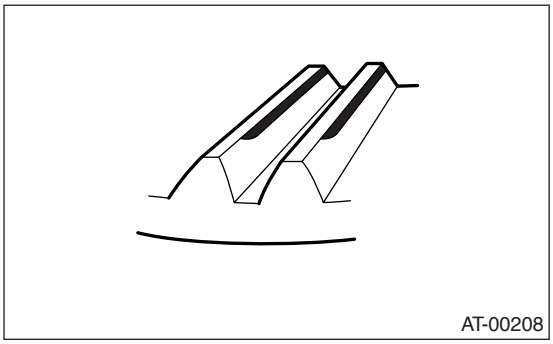


(A) Toe side
(B) Heel side

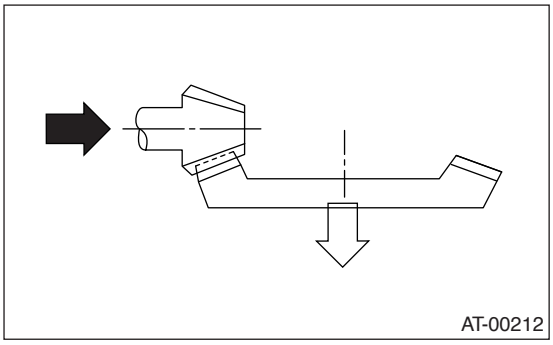
• Face contact

Checking item: Backlash is too large.

Contact pattern



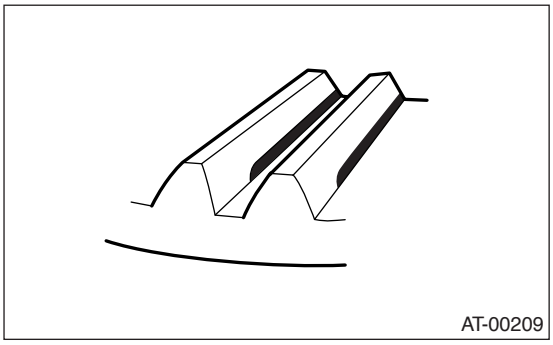
Corrective action: Increase thickness of drive pinion height adjusting washer in order to bring drive pinion close to hypoid driven gear.



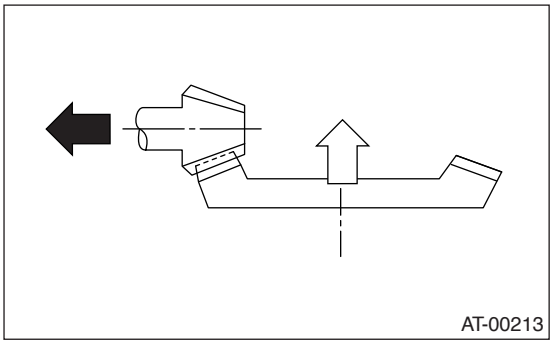
• Flank contact

Checking item: Backlash is too small.

Contact pattern



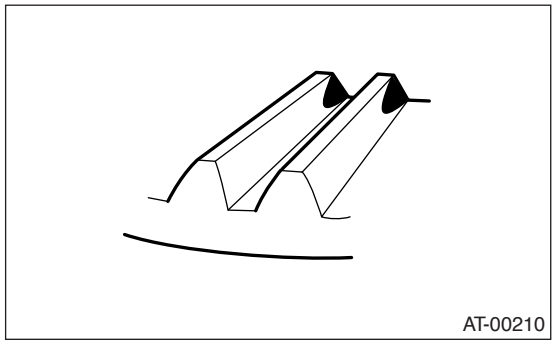
Corrective action: Reduce thickness of drive pinion height adjusting washer in order to bring drive pinion away from hypoid driven gear.



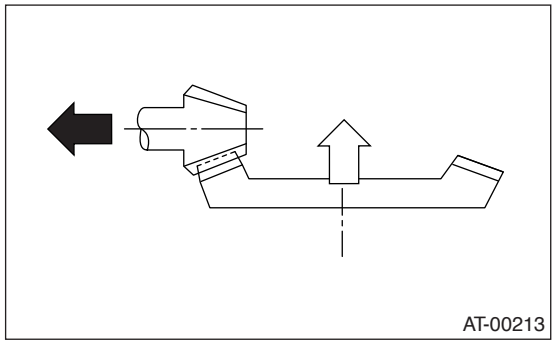
• Toe contact (inside end contact)

Checking item: Contact areas is small

Contact pattern



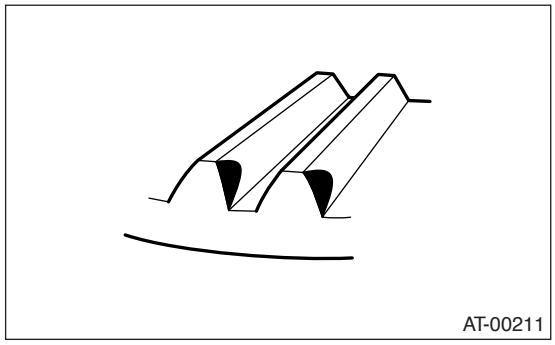
Corrective action: Reduce thickness of drive pinion height adjusting washer in order to bring drive pinion away from hypoid driven gear.



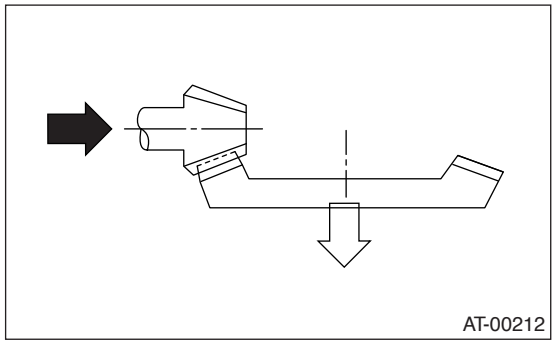
• Heel contact (outside end contact)

Checking item: Contact areas is small

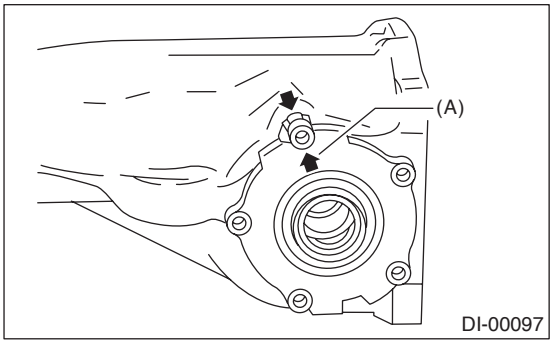
Contact pattern



Corrective action: Increase thickness of drive pinion height adjusting washer in order to bring drive pinion close to hypoid driven gear.



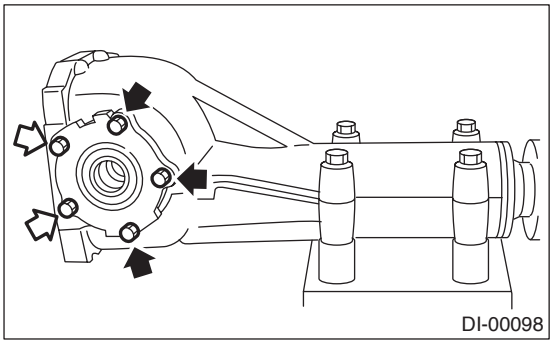
18) If proper tooth contact is not obtained, once again adjust the drive pinion height by changing RH and LH side bearing retainer shims and the hypoid gear backlash.
19) Remove the RH and LH side bearing retainer.
20) Install a new O-ring to side bearing retainer of both side.
21) Using the ST, install the oil seal to the side bearing retainer of both side.
ST 398437700 DRIFT
22) Align the arrow mark on differential carrier with the mark on side retainer during installation.



(A) Arrow mark

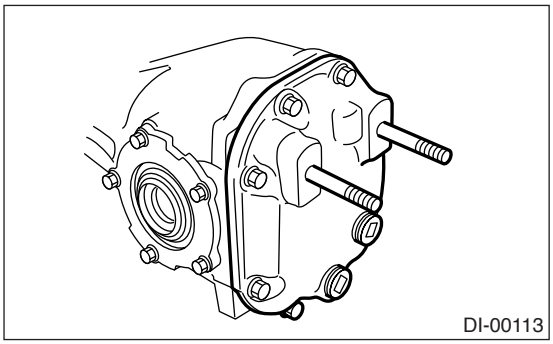
23) Tighten the side bearing retainer bolts.

Tightening torque:
10.3 N·m (1.05 kgf-m, 7.6 ft-lb)



24) Install the new gasket and rear cover to the differential carrier, and tighten the bolts to specified torque.

Tightening torque:
29 N·m (3.0 kgf-m, 21.7 ft-lb)



25) Install the breather cap.
26) Install the drain plug and filler plug.

Tightening torque:
49 N·m (5.0 kgf-m, 36.2 ft-lb)

E: INSPECTION

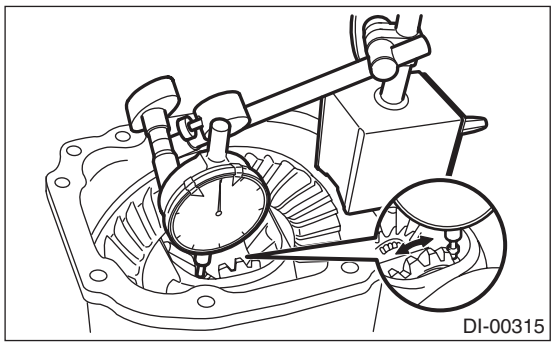
Wash all the disassembled parts clean, and examine them for wear, damage and other defects. Repair or replace the defective parts as necessary.
1) Hypoid driven gear and drive pinion
• If abnormal tooth contact is evident, find out the cause and adjust to give correct tooth contact. Replace the gear if excessively worn or incapable of adjustment.
• If crack, score or seizure is evident, replace as a set. Slight damage of tooth can be corrected by oil stone or the like.
2) Side gear and pinion mate gear
• Replace if crack, score or other defects are evident on tooth surface.
• Replace if thrust washer contacting surface is worn or seized. Slight damage of the surface can be corrected by oil stone or the like.
3) Bearings
Replace if seizure, peeling, wear, rust, dragging during rotation, noise or other defect is evident.
4) Thrust washers of side gear and pinion mate gear:
Replace if seizure, flaw, abnormal wear or other defect is evident.
5) Oil seal
Replace if deformed or damaged, and at every disassembling.
6) Differential carrier
Replace if the bearing bores are worn or damaged.
7) Differential case
Replace if its sliding surfaces are worn or cracked.
8) Companion flange
Replace if the oil seal lip contacting surfaces have flaws.

1. SIDE GEAR BACKLASH

Using a dial gauge, check the backlash of the side gear. (Model without LSD)

Side gear backlash:
0.1 — 0.2 mm (0.004 — 0.008 in)

If the side gear backlash is not within the specification, adjust it as specified by selecting side gear thrust washer.



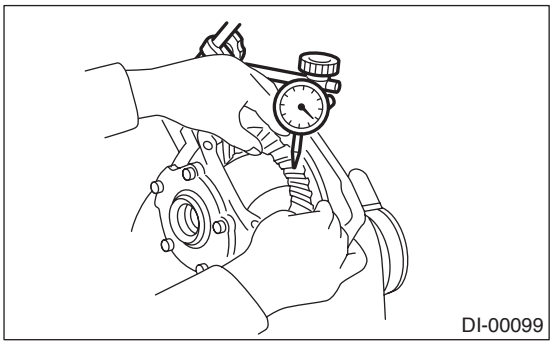
DI-00315

2. HYPOID DRIVEN GEAR BACKLASH

Using a dial gauge, check the backlash of hypoid driven gear.

Hypoid driven gear backlash:
0.1 — 0.2 mm (0.004 — 0.008 in)

If the hypoid driven gear backlash is not within the specification, adjust the side bearing preload or repair if necessary.



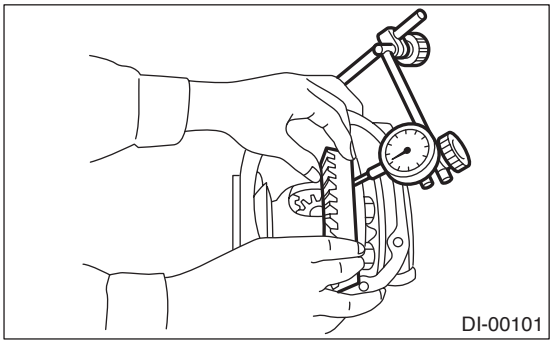
DI-00099

3. HYPOID DRIVEN GEAR RUNOUT ON ITS BACK SURFACE

Using a dial gauge, check the hypoid driven gear runout on its back surface.

Hypoid driven gear runout on its back surface:
0.05 mm (0.0020 in)

If the hypoid driven gear runout exceeds 0.05 mm (0.0020 in), replace the hypoid driven gear.



DI-00101

4. TOOTH CONTACT BETWEEN HYPOID DRIVEN GEAR AND DRIVE PINION

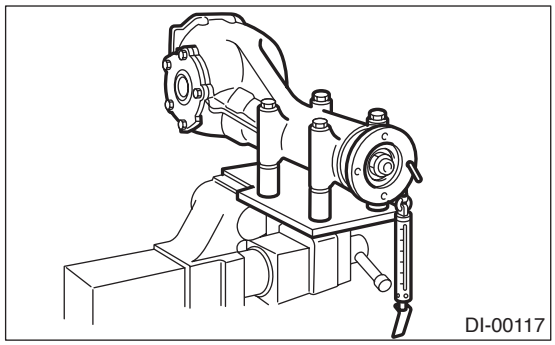
Inspect the tooth contact between hypoid driven gear and drive pinion. <Ref. to DI-35, ASSEMBLY, Rear Differential (T-type).>

5. TOTAL PRELOAD

Using a spring balance, check the total preload.

Total preload:
20.7 — 54.4 N (2.1 — 5.5 kgf, 4.7 — 12.2 lb)

If the total preload is not within the specification, adjust the side bearing retainer shims.

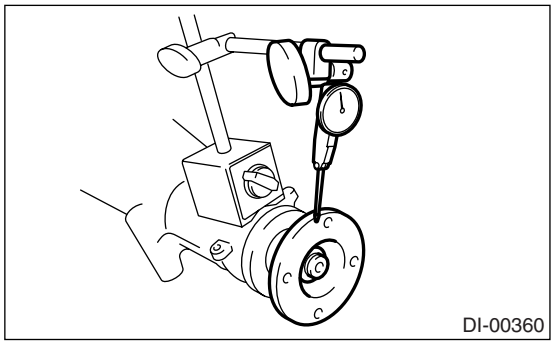


DI-00117

6. COMPANION FLANGE

1) If rust or dirt is attached to the companion flange, remove them.
2) Set a dial gauge at a companion flange surface (mating surface of propeller shaft and companion flange), and then measure the companion flange runout.

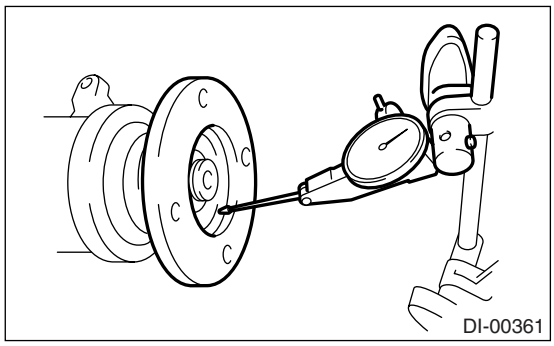
Limit of runout:
0.08 mm (0.0031 in)



DI-00360

3) Set the gauge inside of the companion flange, and measure the runout.

Limit of runout:
0.08 mm (0.0031 in)



4) If either runout exceeds the limit, move the phase of companion flange and drive pinion 90° each, and find the point where the runout is within the limit.
5) If the runout exceeds the limit after changing the phase, replace the companion flange and recheck the runout.
6) If the runout exceeds the limit after replacing the companion flange, the drive pinion may be assembled incorrectly or bearing is faulty.

F: ADJUSTMENT

1. SIDE GEAR BACKLASH

Adjust the side gear backlash.
<Ref. to DI-35, ASSEMBLY, Rear Differential (T-type).>

2. HYPOID DRIVEN GEAR BACKLASH

Adjust hypoid driven gear backlash.
<Ref. to DI-35, ASSEMBLY, Rear Differential (T-type).>

3. TOOTH CONTACT BETWEEN HYPOID DRIVEN GEAR AND DRIVE PINION

Adjust the tooth contact between hypoid driven gear and drive pinion gear.
<Ref. to DI-35, ASSEMBLY, Rear Differential (T-type).>

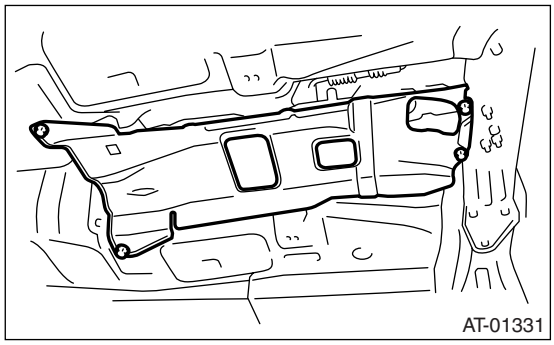
4. TOTAL PRELOAD

Adjust the side bearing shim.
<Ref. to DI-35, ASSEMBLY, Rear Differential (T-type).>

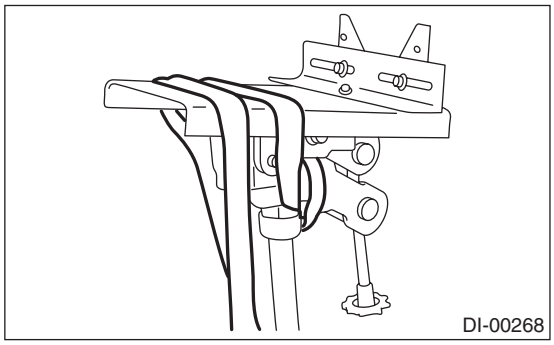
5. Rear Differential (VA-type)

A: REMOVAL

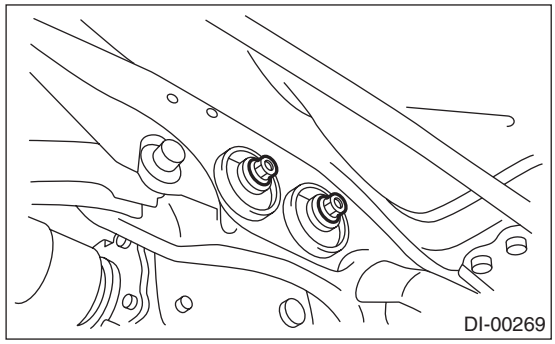
1) Disconnect the ground cable from battery.
2) Move the select lever or gear shift lever to neutral.
3) Loosen the wheel nuts.
4) Release the parking brake.
5) Jack-up the vehicle and support it with rigid racks.
6) Remove the rear wheels.
7) Remove the rear exhaust pipe and muffler.
8) Remove the heat shield cover.



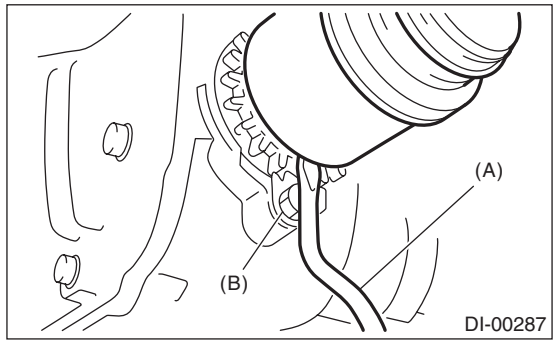
9) Remove the propeller shaft.
<Ref. to DS-10, REMOVAL, Propeller Shaft.>
10) Prepare the transmission jack and band.



11) Loosen the self-locking nuts which hold the rear differential to rear crossmember.

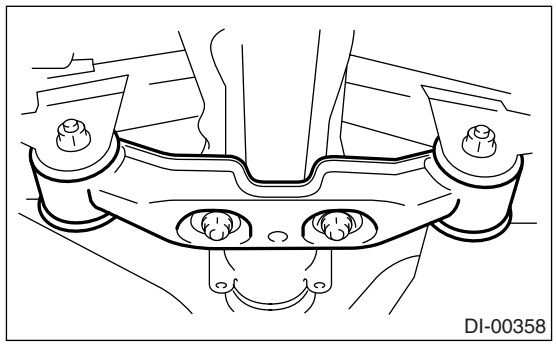


12) Remove the DOJ of rear drive shaft from rear differential.

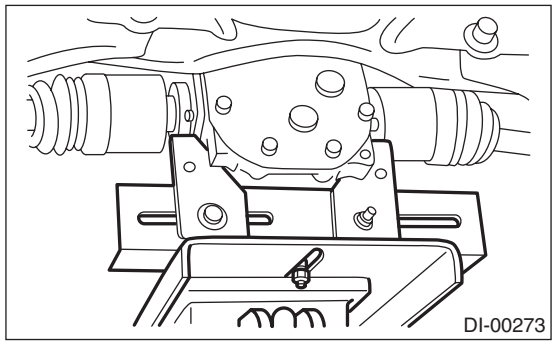


(A) Tire lever
(B) Bolt

13) Remove the nuts which hold the rear differential front member.



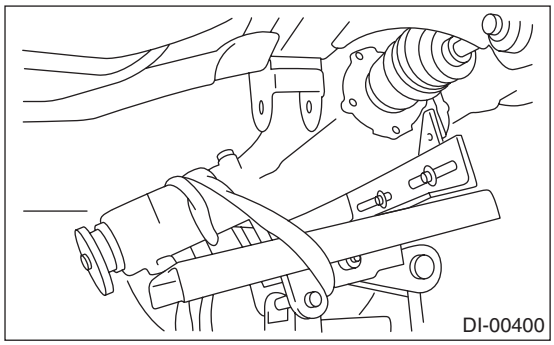
14) Support the rear differential with transmission jack.



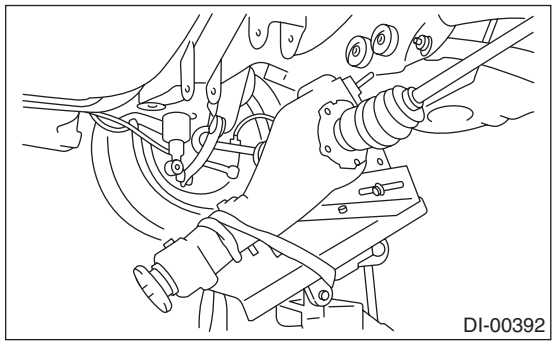
15) Remove the rear differential front member.
16) Secure the rear differential using band.
17) Remove the self-locking nuts which hold the rear differential to rear crossmember.

18) Remove the rear differential stud bolt from rear crossmember bushing.

NOTE:
When removing the stud bolt, carefully adjust the angle and location of transmission jack and jack stand, if necessary.

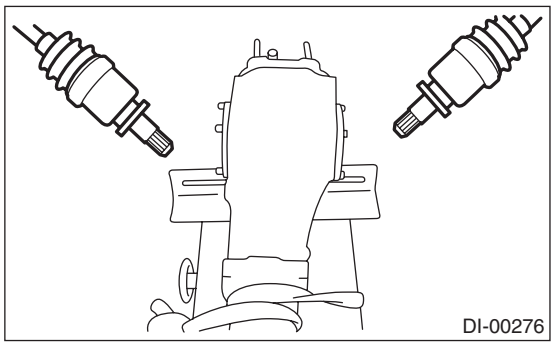


19) Lower the transmission jack stand after removing the rear differential stud bolt from rear crossmember. Rear drive shaft should not come into contact with lateral link bolt.



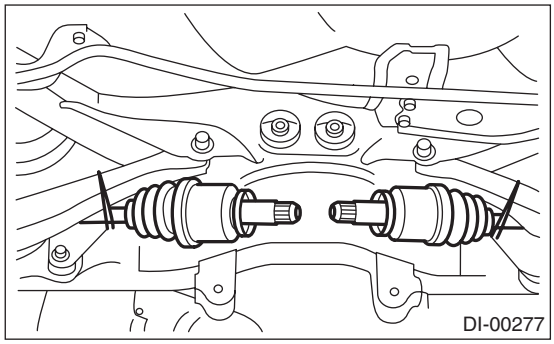
20) Pull out the axle shaft from rear differential.

NOTE:
If it is difficult to remove the axle shaft from rear differential, remove it using tire lever.

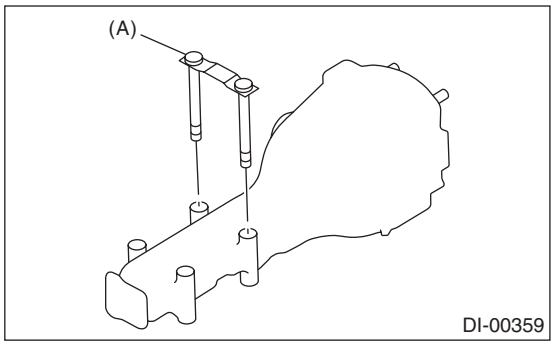


21) Lower the transmission jack.

22) Secure the rear drive shaft to lateral link using wire.



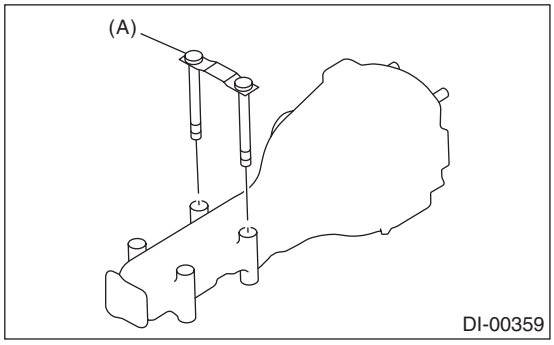
23) Remove the rear differential member plate from rear differential.



(A) Rear differential member plate

B: INSTALLATION

1) Insert the rear differential member plate into rear differential.

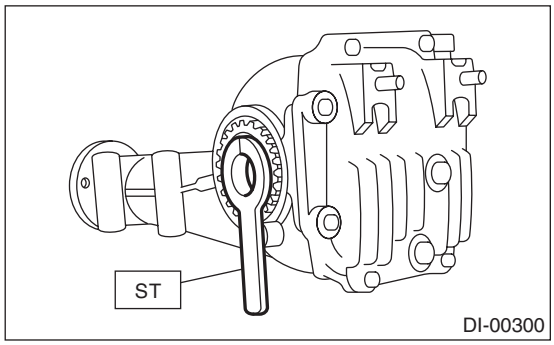


(A) Rear differential member plate

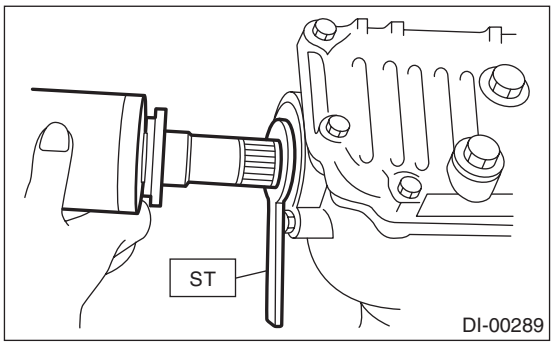
2) Set the rear differential to transmission jack.

NOTE:
Secure the rear differential to transmission jack using band.

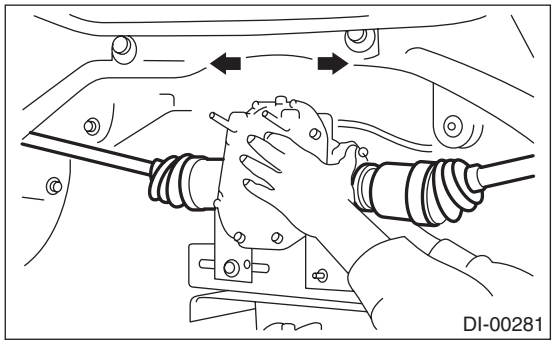
3) Install the ST to rear differential.
ST 28099PA090 OIL SEAL PROTECTOR



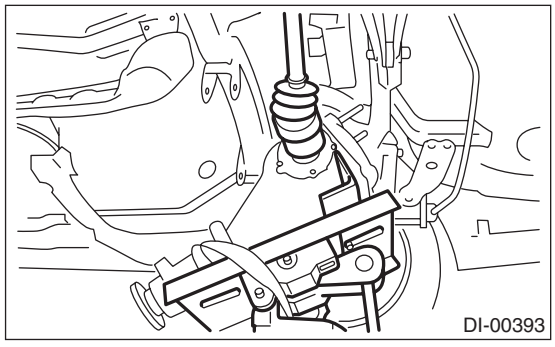
4) Insert the spline shaft until the spline portion comes inside the side oil seal.
ST 28099PA090 OIL SEAL PROTECTOR



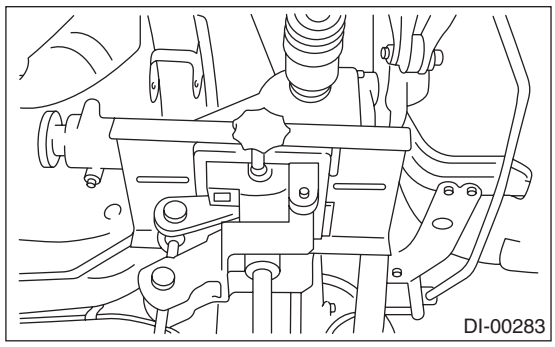
5) Remove ST from rear differential.
ST 28099PA090 OIL SEAL PROTECTOR
6) Push the rear differential to insert the axle shaft into rear differential.



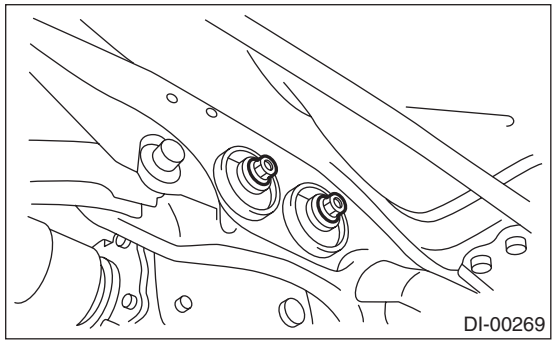
7) Adjust the transmission jack, if necessary, and insert the rear differential stud bolt into rear crossmember bushing properly.



8) After inserting the rear differential stud bolt into rear crossmember bushing, lift up the transmission jack and align the rear differential to the height of rear differential.

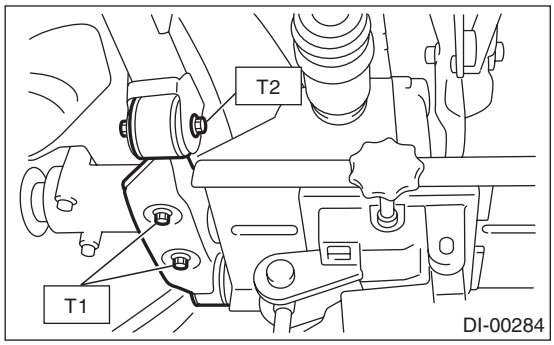


9) Tighten a new self-locking nut temporarily to rear crossmember.



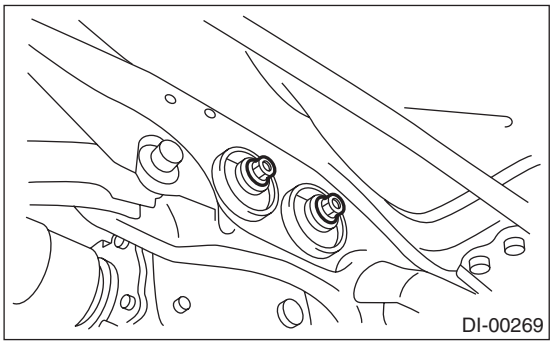
10) Remove the band from rear differential. Lift up the rear differential until the rear differential is left from the transmission jack.
11) Install the rear differential front member with a new self-locking nut.

Tightening torque:
T1: 52 N·m (5.3 kgf-m, 38 ft-lb)
T2: 110 N·m (11.2 kgf-m, 81 ft-lb)



12) Tighten the self-locking nut.

Tightening torque:
70 N·m (7.1 kgf-m, 51 ft-lb)

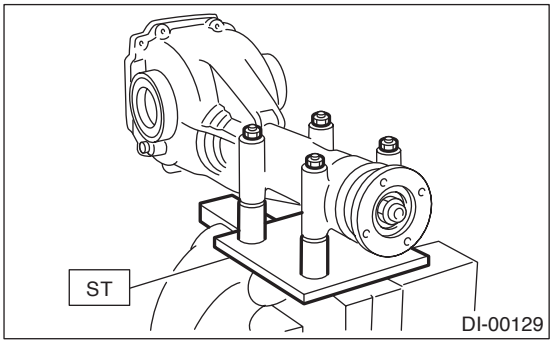


13) Lower the transmission jack.
14) Install the propeller shaft.
<Ref. to DS-11, INSTALLATION, Propeller Shaft.>
15) Install the heat shield cover.
16) Install the rear exhaust pipe and muffler.

C: DISASSEMBLY

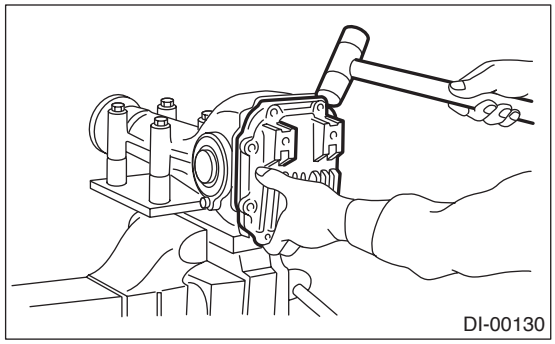
1. VA1-TYPE

To detect the real cause of trouble, inspect the following items before disassembling.
• Tooth contact and backlash between hypoid driven gear and drive pinion
• Hypoid driven gear runout on its back surface
• Total preload of drive pinion
1) Set the ST on vise and install the differential assembly to ST.
ST 398217700 ATTACHMENT



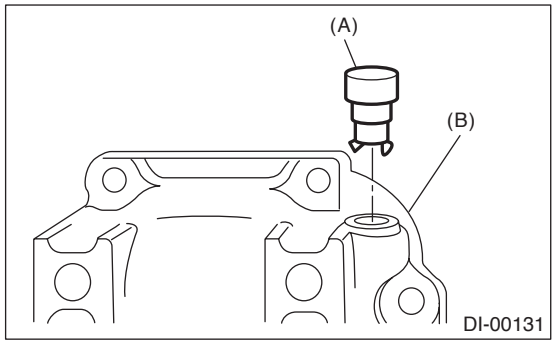
2) Drain the gear oil by removing plug.

3) Remove the rear cover by loosening retaining bolts.



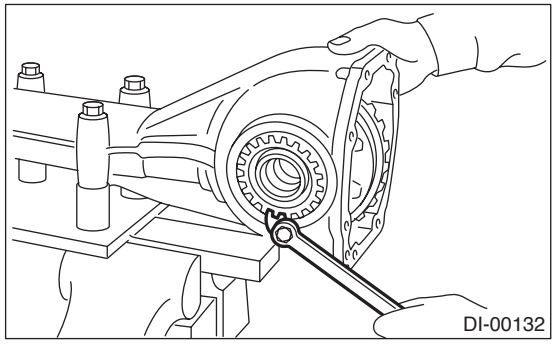
4) Remove the air breather cap.

NOTE:
• Do not attempt to remove the air breather cap unless necessary.
• When removing the air breather cap, replace it with a new one.

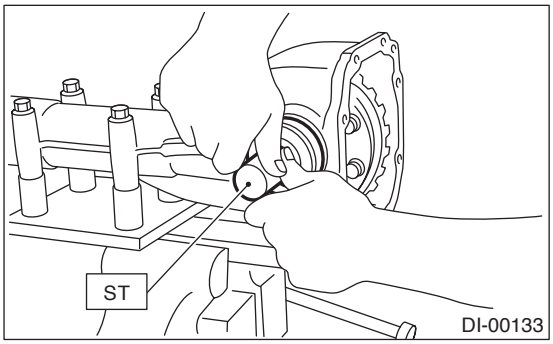


(A) Air breather cap
(B) Rear cover

5) Remove the lock plate RH and LH.

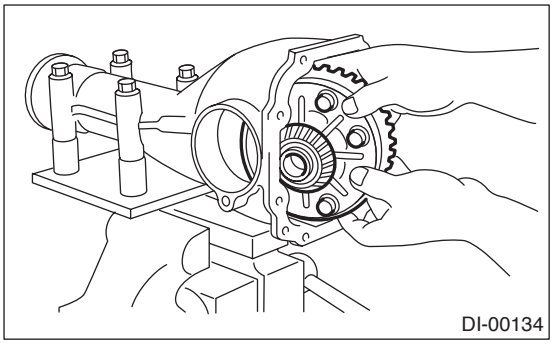


6) Remove the holder RH and LH with ST.
ST 499785500 WRENCH ASSY

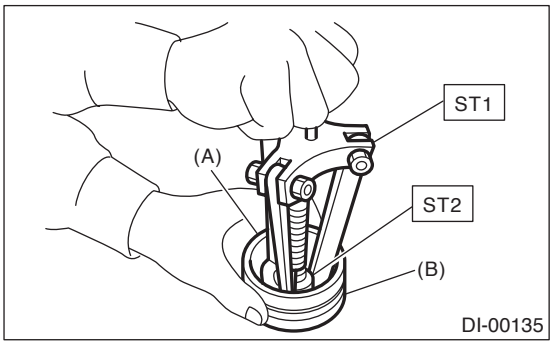


7) Pull out the differential case assembly from differential carrier.

NOTE:
Be careful not to hit the teeth against the case.



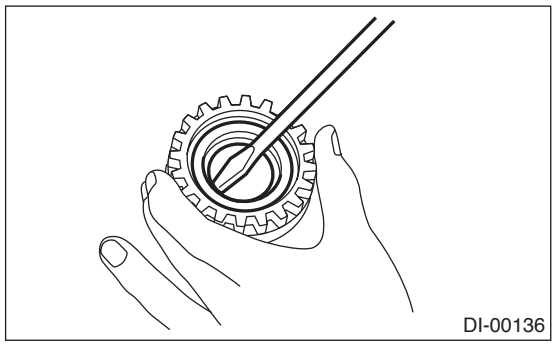
8) Remove the bearing race from holder RH and LH with ST1 and ST2.
ST1 499705401 PULLER ASSY
ST2 499705404 SEAT



(A) Bearing race
(B) Holder

9) Remove the oil seal from holder RH and LH using screwdriver.

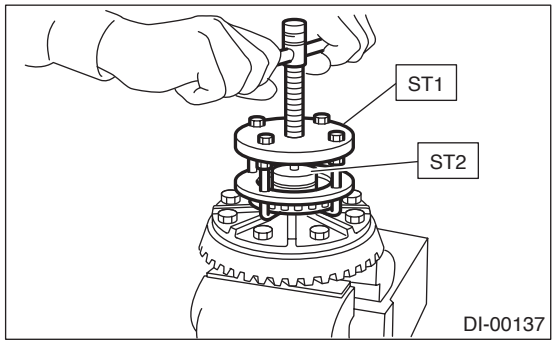
NOTE:
Perform this operation only when changing oil seal.



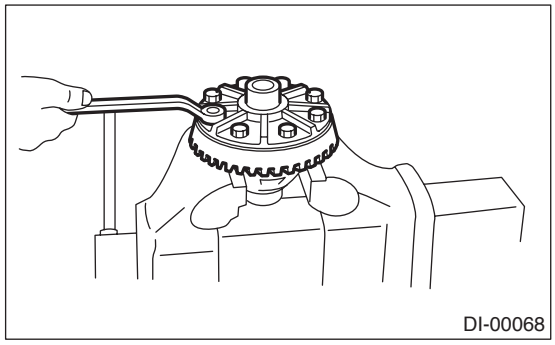
10) Extract the bearing cone with ST1 and ST2.

NOTE:
• Do not attempt to disassemble the parts unless necessary.
• Set the puller so that its claws catch the edge of the bearing cone.
• Never mix up the bearing races RH and LH and cones.

ST1 899524100 PULLER SET
ST2 399520105 SEAT



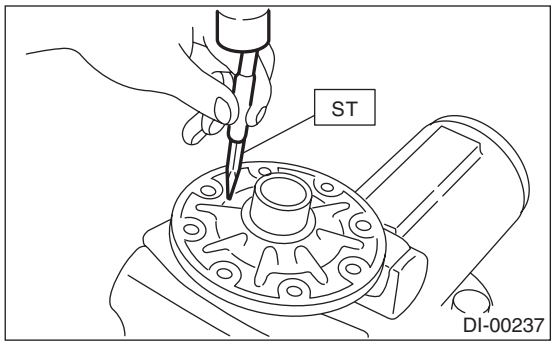
11) Remove the hypoid driven gear by loosening hypoid driven gear bolts.



12) Drive out the pinion shaft lock pin from hypoid driven gear side.

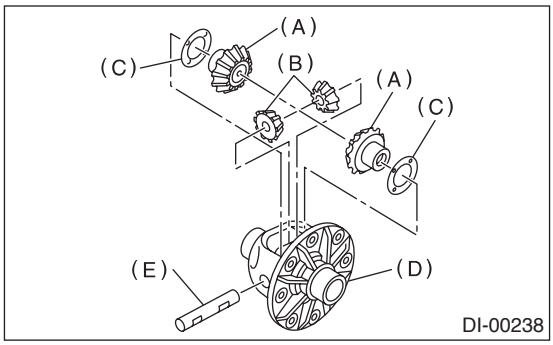
NOTE:
The lock pin is staked at the pin hole end on the differential case. do not drive it out forcibly before unstaking it.

ST 899904100 STRAIGHT PIN REMOVER



13) Draw out the pinion mate shaft and remove pinion mate gears, side gears and thrust washers.

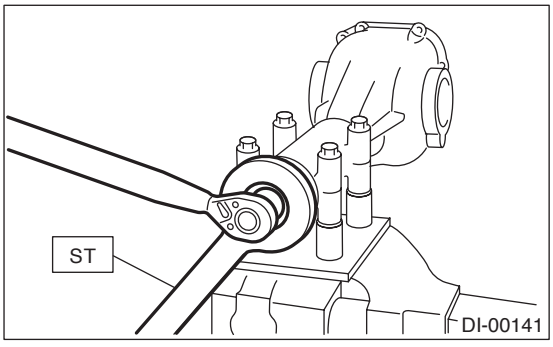
NOTE:
The gears should be marked or kept separated right and left, and front and rear as well as thrust washers.



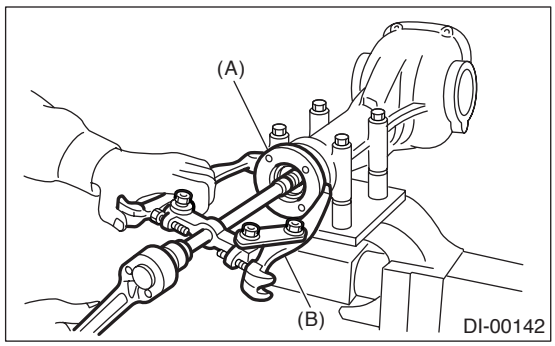
(A) Side gear
(B) Pinion mate gear
(C) Thrust washer
(D) Differential case
(E) Pinion mate shaft

14) Support the companion flange with ST and remove self-locking nut.

ST 498427200 FLANGE WRENCH



15) Extract the companion flange with a puller.

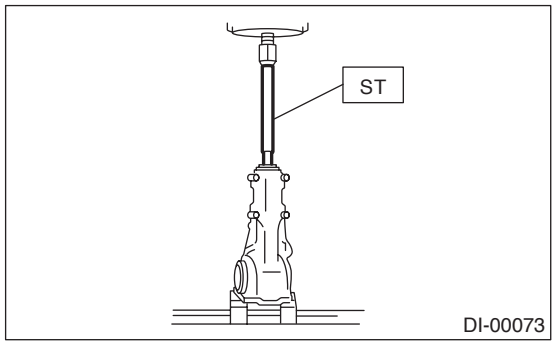


(A) Companion flange
(B) Puller

16) Press the end of drive pinion shaft and extract it together with rear bearing cone, pinion height adjust washer and washer.

NOTE:
Hold the drive pinion so as not to drop it.

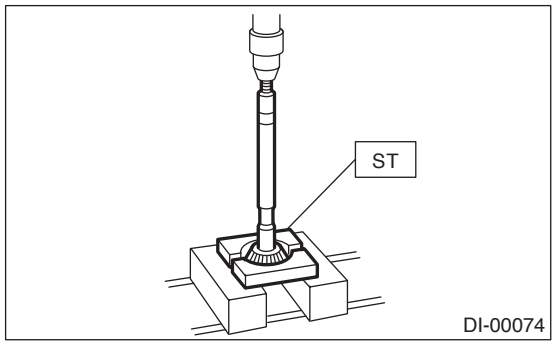
ST 398467700 DRIFT



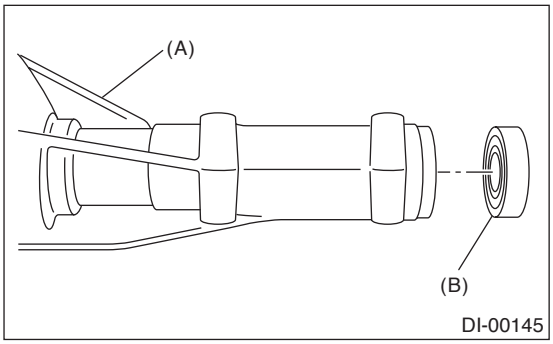
17) Remove the rear bearing cone from drive pinion by supporting the cone with ST.

NOTE:
Place the replacer so that its center-recessed side faces the pinion gear.

ST 498515500 REPLACER

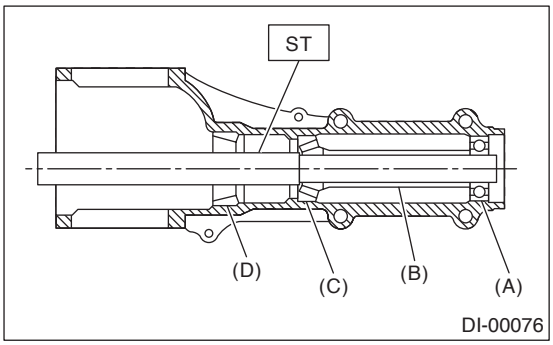


18) Remove the front oil seal from differential carrier using ST.
ST 398527700 PULLER SET



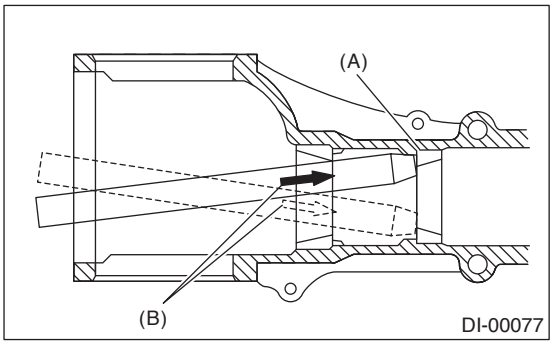
(A) Differential carrier
(B) Front oil seal

19) Remove the pilot bearing together with front bearing cone and collar using ST.
ST 398467700 DRIFT



(A) Pilot bearing
(B) Collar
(C) Front bearing
(D) Rear bearing cup

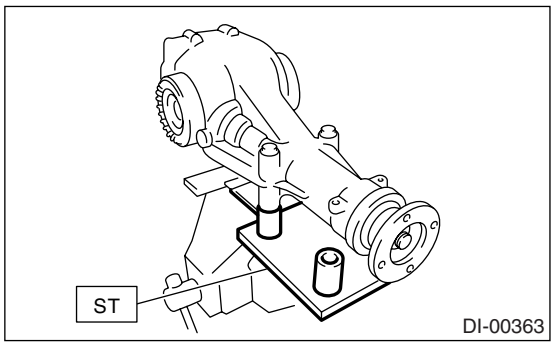
20) When replacing the bearings, hit out the front bearing cup and rear bearing cup in this order out of case by using a brass bar.



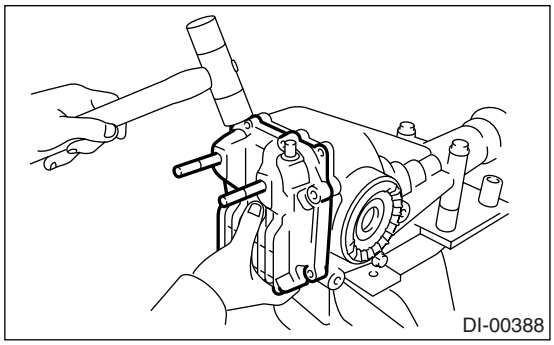
(A) 2 cutouts along diagonal lines
(B) Hit out alternately with brass bar

2. VA2-TYPE

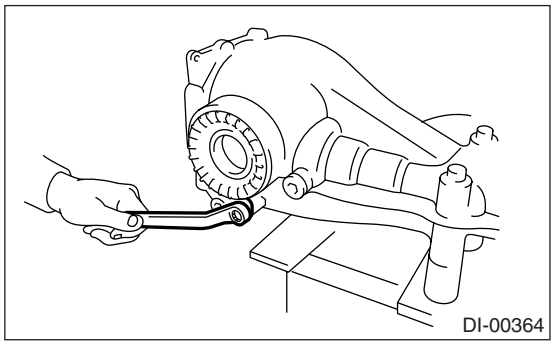
To detect the real cause of trouble, inspect the following items before disassembling.
• Tooth contact and backlash between hypoid driven gear and drive pinion
• Hypoid driven gear runout on its back surface
• Total preload of drive pinion
1) Set the ST on vise and install the differential assembly to ST.
ST 398217700 ATTACHMENT



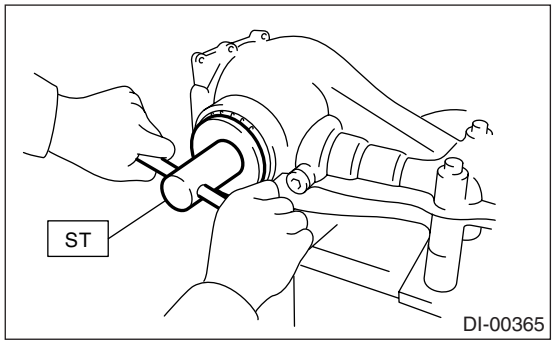
2) Drain the gear oil by removing plug.
3) Remove the rear cover by loosening retaining bolts.



4) Remove the lock plate RH and LH.

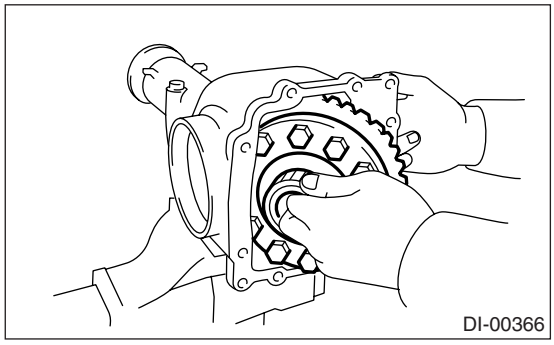


5) Remove the holder RH and LH with ST.
ST 18630AA010 WRENCH



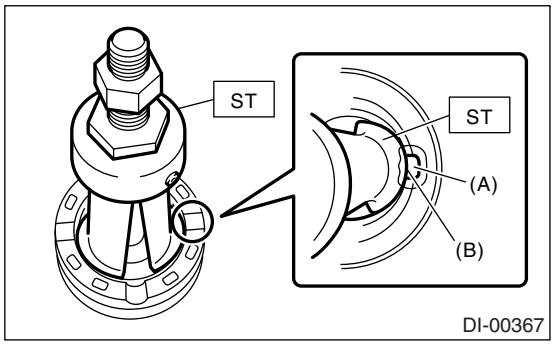
6) Pull out the differential case assembly from differential carrier.

NOTE:
Be careful not to hit the teeth against the case.

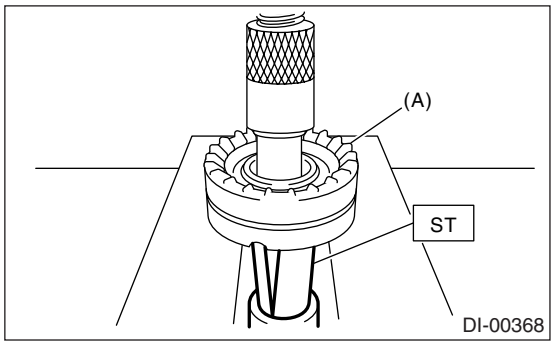


7) Remove the bearing race from holder RH and LH with ST1 and press.
ST 18758AA000 PULLER

NOTE:
• Make sure the bolt of puller turn manually.
• Set the puller so that its claws catch the groove of holder.



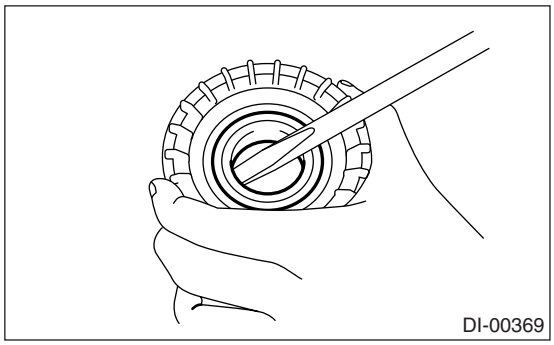
(A) Groove
(B) Claw



(A) Holder

8) Remove the oil seal from holder RH and LH using screwdriver.

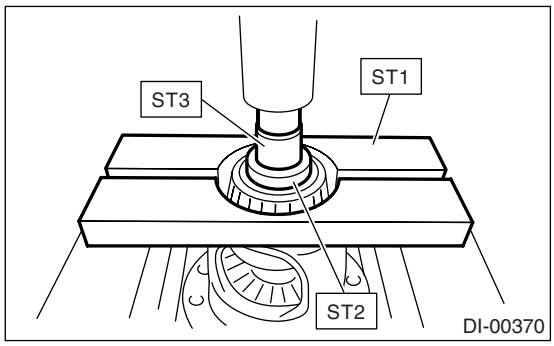
NOTE:
Perform this operation only when changing oil seal.



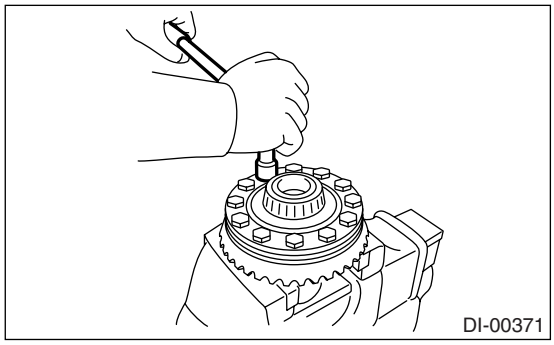
9) Extract the bearing cone with ST1, ST2 and ST3.

NOTE:
• Do not attempt to disassemble the parts unless necessary.
• Never mix up the bearing races RH and LH and cones.

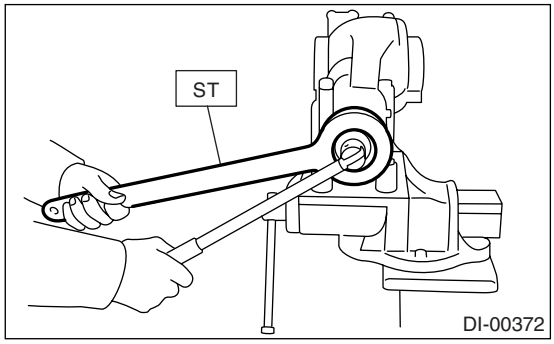
ST1 498077000 REMOVER
ST2 399520105 SEAT
ST3 899864100 REMOVER



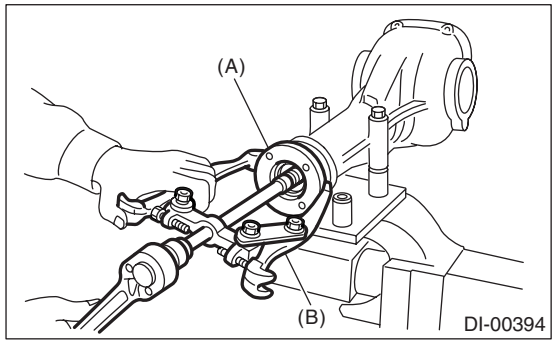
10) Remove the hypoid driven gear by loosening hypoid driven gear bolts.



11) Support the companion flange with ST and remove self-locking nut.
ST 498427200 FLANGE WRENCH



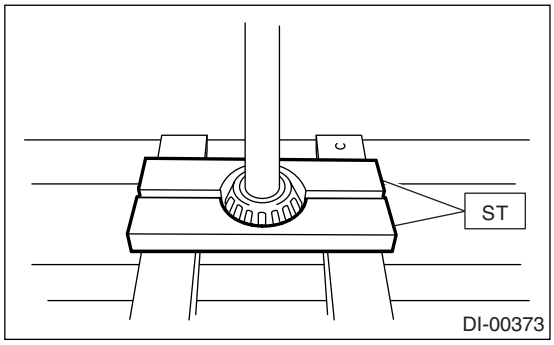
12) Extract the companion flange with a puller.



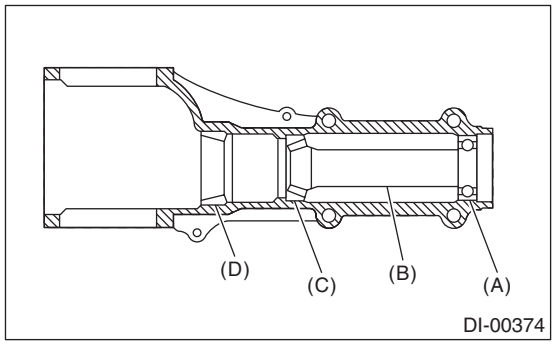
(A) Companion flange
(B) Puller

13) Removes the drive pinion shaft.
14) Remove the rear bearing cone from drive pinion by supporting cone with ST.

NOTE:
Place the replacer so that its center-recessed side faces the pinion gear.
ST 398517700 REPLACER

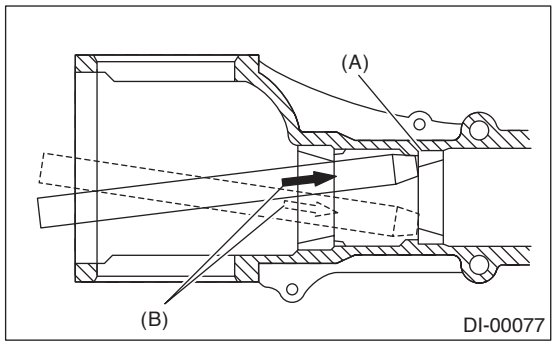


15) Remove the front oil seal from differential carrier using screwdriver.
16) Remove the pilot bearing, front bearing cone and collar.



(A) Pilot bearing
(B) Collar
(C) Front bearing
(D) Rear bearing cup

17) When replacing the bearings, hit out the front bearing cup and rear bearing cup in this order out of case by using a brass bar.

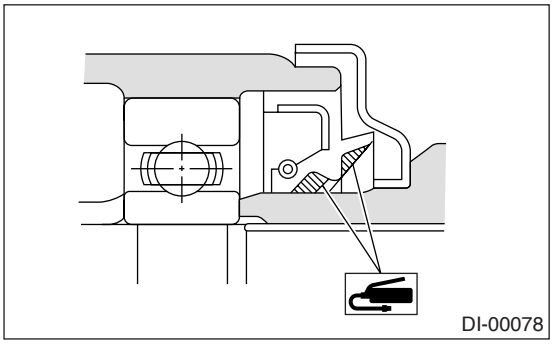


(A) 2 cutouts along diagonal lines
(B) Hit out alternately with brass bar

D: ASSEMBLY

1. VA1-TYPE

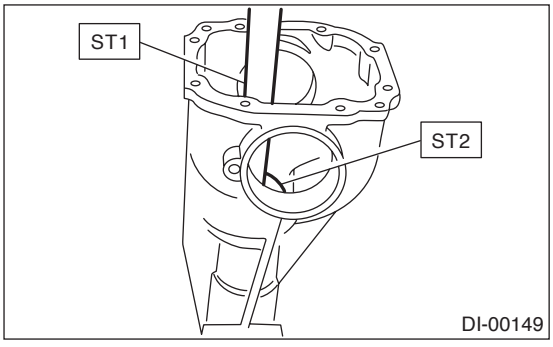
NOTE:
• Assemble in the reverse order of disassembly.
• Check and adjust each part during assembly.
• Use a new gasket.
• Keep the shims and washers in order, so that they are not improperly installed.
• Thoroughly clean the surfaces on which the shims, washers and bearings are to be installed.
• Apply gear oil when installing the bearings and thrust washers.
• Be careful not to mix up the bearing races RH and LH.
• Replace the oil seal with a new one at every disassembly. Apply grease to the lips when installing the oil seal.
• Be careful not to mix up the differential oil seal RH and LH.



1) Adjusting preload for front and rear bearings:
Adjust the bearing preload with collar and washer between front and rear bearings. Pinion height adjusting washer are not affected by this adjustment. The adjustment must be carried out without oil seal inserted.

(1) Install the rear bearing race into differential carrier with ST1 and ST2.

ST1 398477701 HANDLE
ST2 498447110 DRIFT



(2) Install the front bearing race to differential carrier using ST1 and ST2.

ST1 398477701 HANDLE
ST2 498447110 DRIFT

(3) Insert the front bearing cone.

NOTE:
Use new front bearing cone.

(4) Measure and record the thickness of pinion height adjust washer.

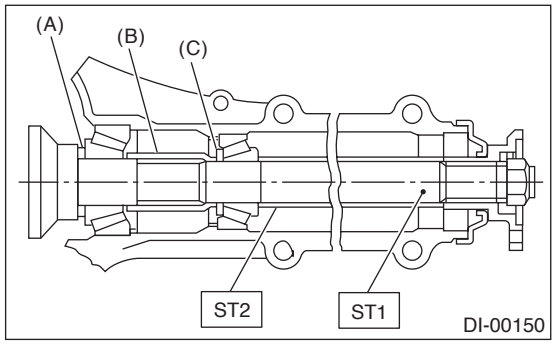
NOTE:
If tooth contact (drive pinion, hypoid driven gear) is normal in the inspection before disassembling, verify that the washer is not deformed, and then re-use the used washer.

(5) Insert the ST1 into the case with pinion height adjusting washer and rear bearing cone fitted onto it.

NOTE:
Use new rear bearing cone.

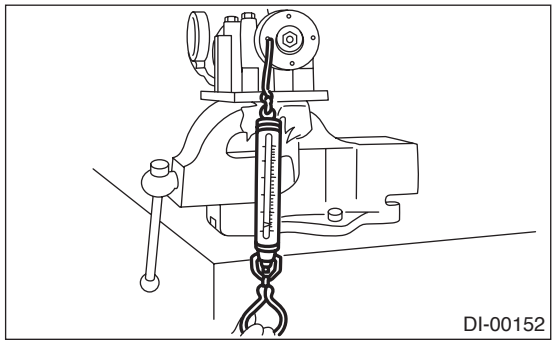
(6) Install the preload adjusting collar and washer, front bearing cone, ST2, companion flange, and washer and self-locking nut.

ST1 498447150 DUMMY SHAFT
ST2 32285AA000 DUMMY COLLAR



(A) Pinion height adjusting washer
(B) Preload adjusting collar
(C) Preload adjusting washer

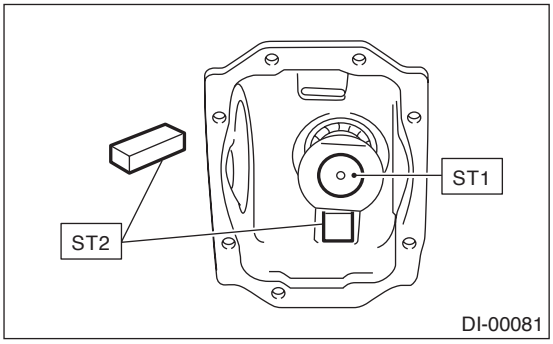
(7) Turn the ST1 with hand to make it seated, and tighten the self-locking nut while measuring the preload with spring balance. Select the preload adjusting washer and collar so that the specified preload is obtained when nut is tightened to the specified torque.



NOTE:
• Use a new self-locking nut.
• Be careful not to give excessive preload.
• When tightening the self-locking nut, lock ST1 with ST2 as shown in the figure.
• Measure the preload in direction of tangent to flange.

ST1 498447150 DUMMY SHAFT
ST2 398507704 BLOCK

Tightening torque:
191 N·m (19.5 kgf-m, 141 ft-lb)



Drive pinion bearing preload
For new bearing: 12.7 — 32.2 N (1.3 — 3.3 kgf, 2.9 — 7.3 lb) Measure at companion flange bolt hole

	Part No.	Thickness mm (in)
Preload adjusting washer	38336AA000	1.500 (0.0591)
	38336AA120	1.513 (0.0596)
	38336AA010	1.525 (0.0600)
	38336AA130	1.538 (0.0606)
	38336AA020	1.550 (0.0610)
	38336AA140	1.563 (0.0615)

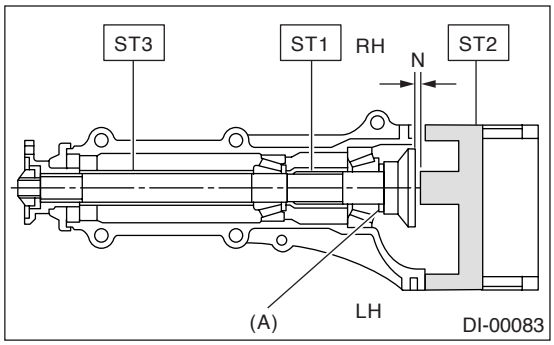
	38336AA150	1.588 (0.0625)
	38336AA040	1.600 (0.0630)
	38336AA160	1.613 (0.0635)
	38336AA050	1.625 (0.0640)
	38336AA170	1.638 (0.0645)
	38336AA060	1.650 (0.0650)
	38336AA180	1.663 (0.0655)
	38336AA070	1.675 (0.0659)
	38336AA190	1.688 (0.0665)
	38336AA080	1.700 (0.0669)
	38336AA200	1.713 (0.0674)
	38336AA090	1.725 (0.0679)
	38336AA210	1.738 (0.0684)
	38336AA100	1.750 (0.0689)
	38336AA220	1.763 (0.0694)
	38336AA110	1.775 (0.0699)

	Part No.	Length mm (in)
Preload adjusting collar	32288AA040	52.3 (2.059)
	32288AA050	52.5 (2.067)
	31454AA100	52.6 (2.071)
	32288AA060	52.7 (2.075)
	31454AA110	52.8 (2.079)
	32288AA070	52.9 (2.083)
	31454AA120	53.0 (2.087)
	32288AA080	53.1 (2.091)
	32288AA090	53.3 (2.098)

2) Adjusting drive pinion height:
Adjust the drive pinion height with washer installed between the rear bearing cone and the back of pinion gear.

(1) Install the ST2.

ST1 498447150 DUMMY SHAFT
ST2 498505501 DIFFERENTIAL CARRIER GAUGE
ST3 32285AA000 DUMMY COLLAR

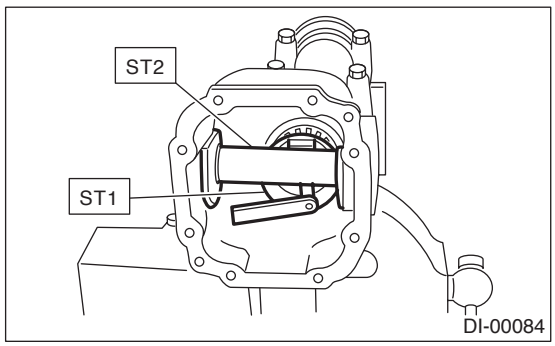


(A) Pinion height adjusting washer

(2) Measure the clearance N between the end of ST2 and the end surface of ST1 by using a thickness gauge.

NOTE:
Make sure there is no clearance between the case and ST2.

ST1 498447150 DUMMY SHAFT
ST2 498505501 DIFFERENTIAL CARRIER GAUGE



(3) Obtain the thickness of pinion height adjusting washer to be inserted from the following formula, and replace the temporarily installed washer with this one.

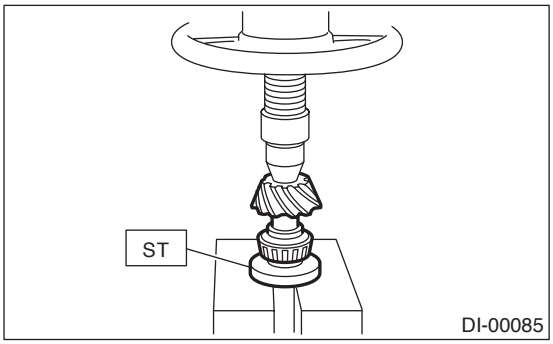
NOTE:
Adjust it using the 1 — 3 washers.
T = To + N − 0.05 (mm)

T	Thickness of pinion height adjusting washer mm (in)	
To	Thickness of washer temporally inserted mm (in)	
N	Clearance of thickness gauge mm (in)	
Memo:		

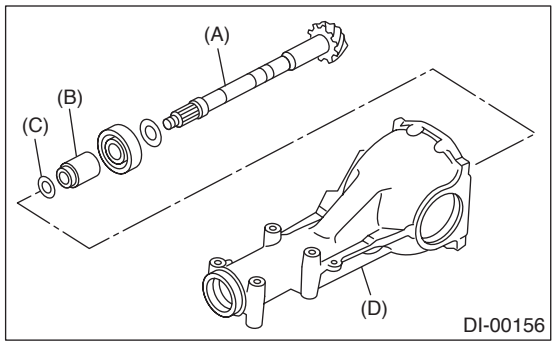
(Example of calculation)
To = 0.15 mm
N = 0.1 mm
T = 0.15 + 0.1 − 0.05 = 0.2 mm
Result: Thickness = 0.2 mm
Therefore use the pinion height adjusting washer of part number 32295AA220.

Pinion height adjusting washer	
Part No.	Thickness mm (in)
32295AA200	0.150 (0.0059)
32295AA210	0.175 (0.0069)
32295AA220	0.200 (0.0079)
32295AA230	0.225 (0.0089)
32295AA240	0.250 (0.0098)
32295AA250	0.275 (0.0108)

3) Install the selected pinion height adjusting washer on drive pinion, and press the rear bearing cone into position with ST.
ST 498175500 INSTALLER

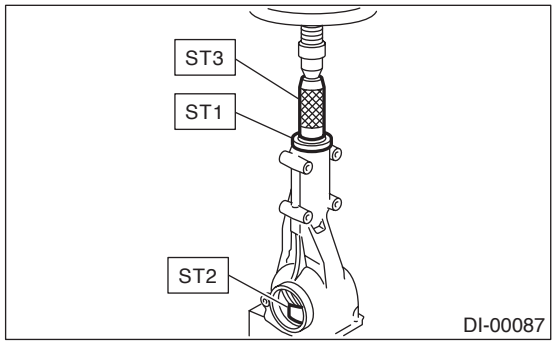


4) Insert the drive pinion into differential carrier, install the selected bearing preload adjusting collar and washer.

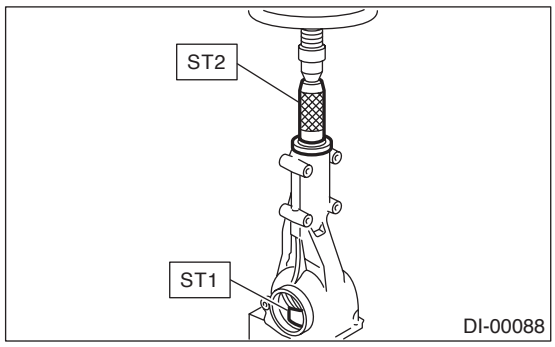


(A) Drive pinion
(B) Bearing preload adjusting collar
(C) Bearing preload adjusting washer
(D) Differential carrier

5) Press-fit the front bearing cone into carrier with ST1, ST2 and ST3.
ST1 32285AA000 DUMMY COLLAR
ST2 399780104 WEIGHT
ST3 899580100 INSTALLER



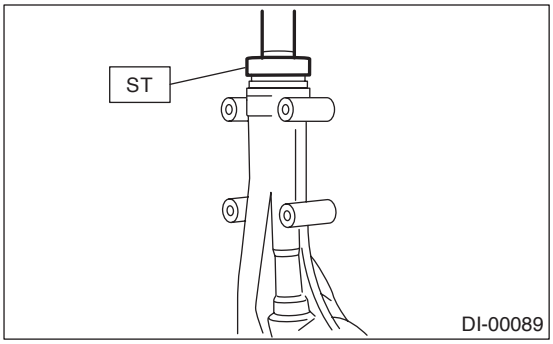
6) Insert the collar, then press-fit the pilot bearing with ST1 and ST2.
ST1 399780104 WEIGHT
ST2 899580100 INSTALLER



7) Fit a new oil seal with ST.

NOTE:
• Press-fit until end of oil seal is 1 mm (0.04 in) inward from end of carrier.
• Apply grease to the oil seal lips.

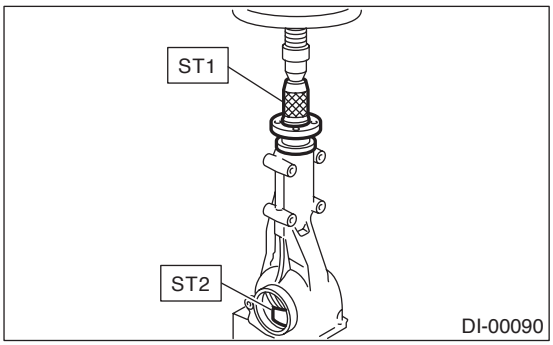
ST 498447120 INSTALLER



8) Press-fit the companion flange with ST1 and ST2.

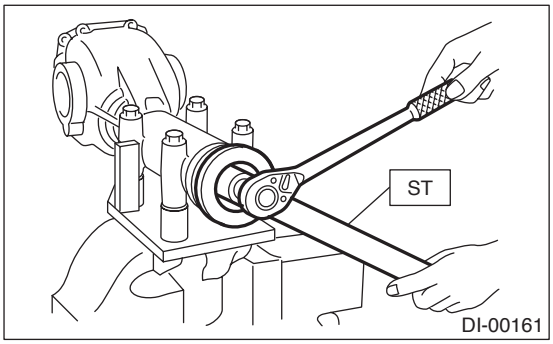
NOTE:
Be careful not to damage the bearing.

ST1 899874100 INSTALLER
ST2 399780104 WEIGHT



9) Install a new self-locking nut, and secure the companion flange using ST, and tighten the nut.
ST 498427200 FLANGE WRENCH

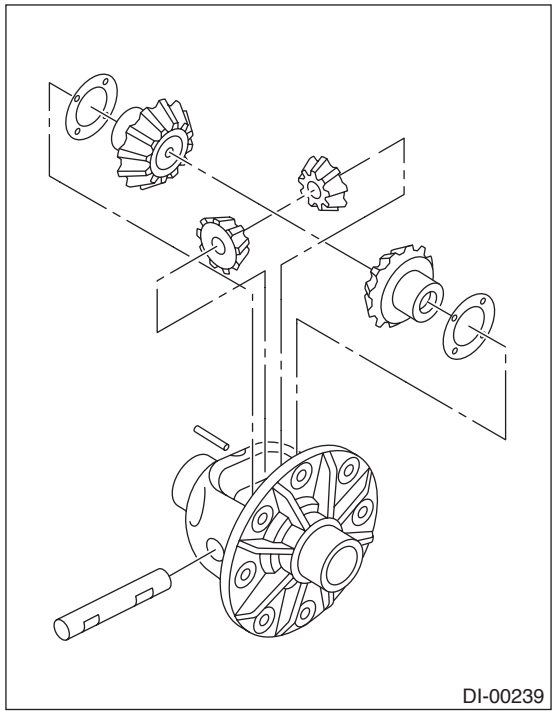
Tightening torque:
191 N·m (19.1 kgf-m, 141 ft-lb)



10) Assembling differential case
Install the side gears and pinion mate gears, with their thrust washers and pinion mate shaft, into differential case.

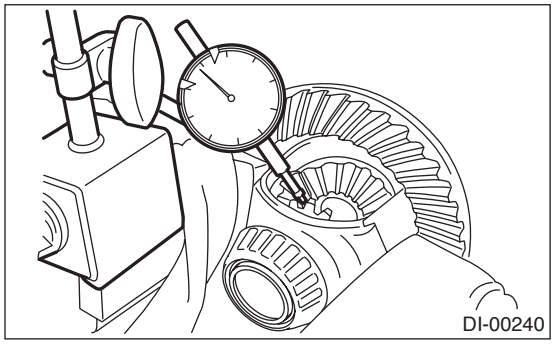
NOTE:
• Apply gear oil to both sides of the washer and the side gear shaft before installing.

• Insert the pinion mate shaft into the differential case by aligning the lock pin holes.



(1) Measure the side gear backlash.

Side gear backlash:
0.05 — 0.15 mm (0.0020 — 0.0059 in)



(2) Adjust the side gear backlash as specified by selecting side gear thrust washer.

Side gear thrust washer	
Part No.	Thickness mm (in)
803135011	0.925 — 0.950 (0.0364 — 0.0374)
803135012	0.950 — 0.975 (0.0374 — 0.0384)
803135013	0.975 — 1.000 (0.0384 — 0.0394)
803135014	1.000 — 1.025 (0.0394 — 0.0404)
803135015	1.025 — 1.050 (0.0404 — 0.0413)

(3) Check the condition of rotation after applying oil to the gear tooth surfaces and thrust surfaces.
(4) After inserting the pinion shaft lock pin into differential case, stake the both sides of the hole to prevent pin from falling off.

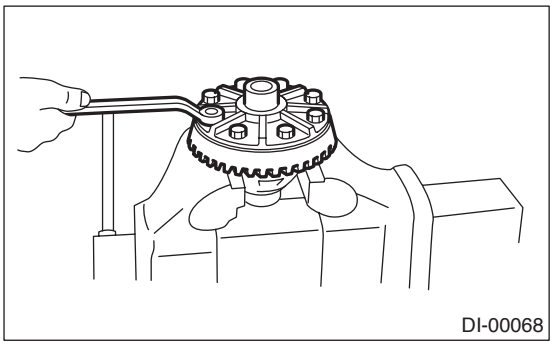
11) Install the hypoid driven gear on differential case.

NOTE:
• Before installing bolts, apply Lock Tite to bolt threads.

Lock Tite:
THREE BOND 1324 (Part No. 004403042)

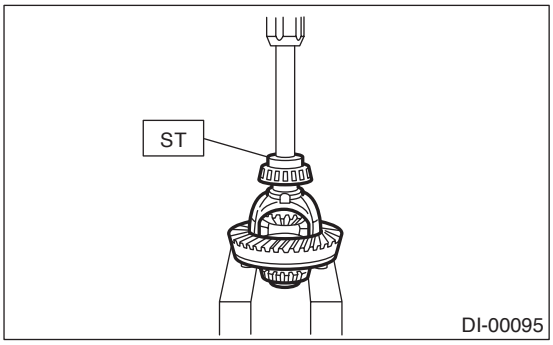
• Tighten diagonally while tapping the bolt heads.

Tightening torque:
62 N·m (6.3 kgf-m, 45.6 ft-lb)



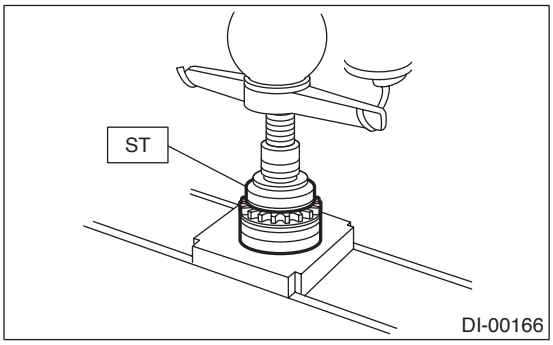
DI-00068

12) Press the side bearing into differential case using ST.
ST 498485400 DRIFT



DI-00095

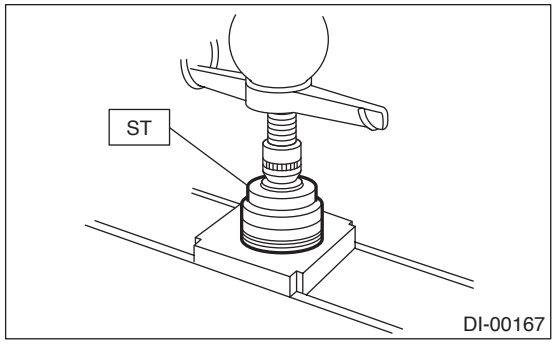
13) Assemble holders.
(1) Install the oil seal into holder RH and LH.
ST 498447100 INSTALLER



DI-00166

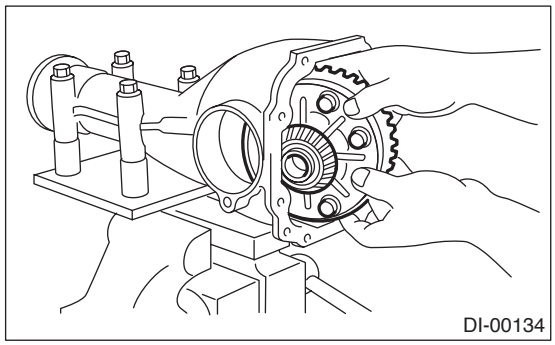
(2) Install the bearing race into holder RH and LH.
ST 398477702 DRIFT

CAUTION:
Make sure that the oil seal, bearing outer race and cone are properly assembled.



DI-00167

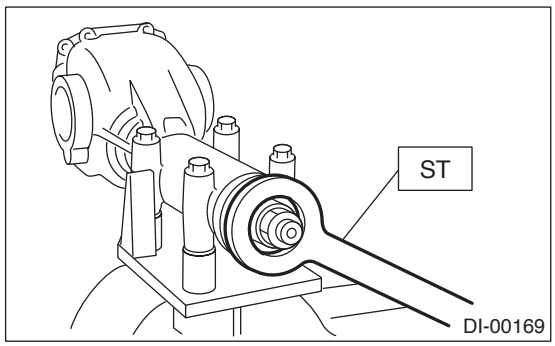
(3) Install the differential assembly into differential carrier in the reverse order of disassembly.



DI-00134

(4) Temporally tighten the side holder RH and LH in differential carrier to install.

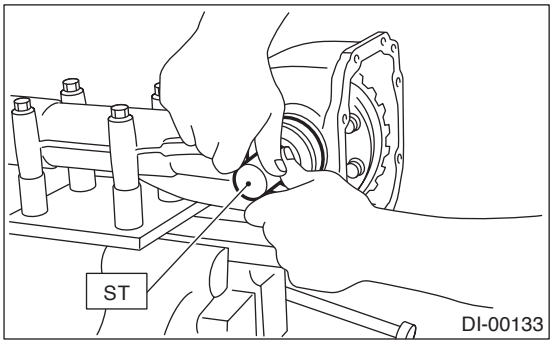
14) Perform the backlash adjustment between the hypoid driven gear and drive pinion, and preload adjustment of differential side bearing.
(1) Turn the drive pinion with ST for better fitting of differential side bearing.
ST 498427200 FLANGE WRENCH



DI-00169

(2) Screw in the side holder LH until light contact is made with ST.

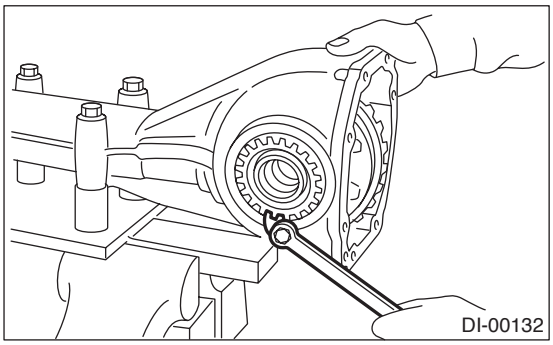
ST 499785500 WRENCH



(3) Back off the side (hypoid driven gear side) holder approx. 1 1/2 teeth of holder, and tighten the other side holder by approx. 2 teeth (approx. 1 1/2 + 1/2 teeth). [Back off amount of side (hypoid driven gear side) holder + 1/2 tooth.]
This + 1/2 tooth gives preload.

(4) Temporarily tighten the lock plate.

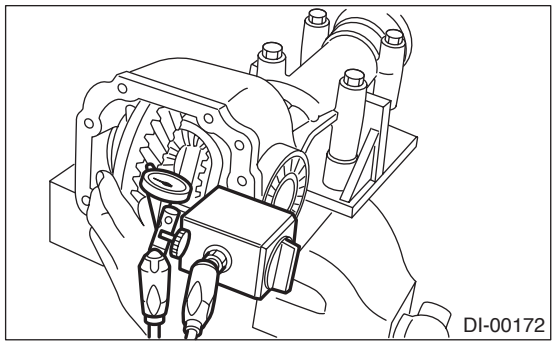
NOTE:
Turn over the lock plate to displace the holder 1/2 tooth.



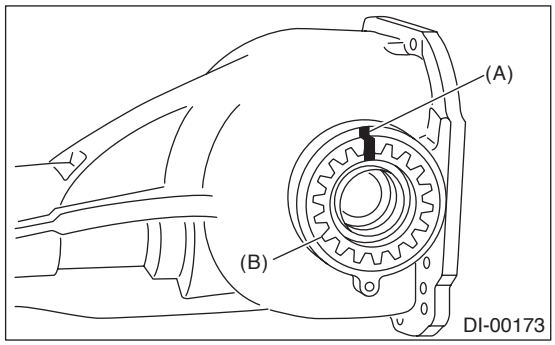
(5) Measure the hypoid driven gear-to-drive pinion backlash. Set the magnet base on differential carrier. Align the contact point of dial gauge with tooth face of hypoid driven gear, and move hypoid driven gear while holding drive pinion still. Read the value indicated on dial gauge.

NOTE:
If measured backlash is not within specified range, repeat the procedures for pinion driven gear set backlash adjustment and differential side bearing preload adjustment.

Backlash:
0.10 — 0.15 mm (0.0039 — 0.0059 in)



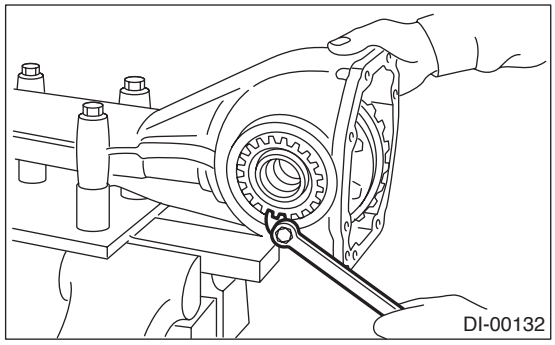
15) Draw a matching mark on both differential carrier and holder. Remove the holder side at a time. Replace in the original position after inserting an O-ring and applying grease to threaded portion.



(A) Alignment mark
(B) Holder

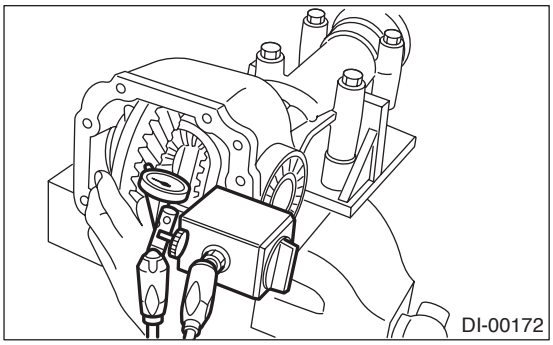
16) Tighten the bolt of lock plate to specified torque.

Tightening torque:
25 N·m (2.5 kgf-m, 18.1 ft-lb)



17) Recheck the hypoid driven gear to pinion backlash.

Backlash:
0.10 — 0.15 mm (0.0039 — 0.0059 in)

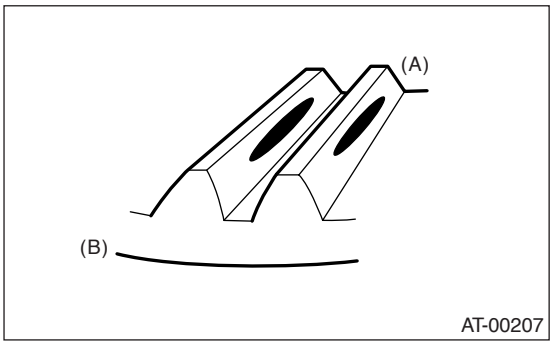


18) Checking and adjusting the tooth contact of hypoid driven gear
(1) Apply an even coat of red lead on both sides of three or four teeth on the hypoid driven gear. Check the contact pattern after rotating the hypoid driven gear several revolutions back and forth until a definite contact pattern appears on the hypoid driven gear.
(2) When the contact pattern is incorrect, readjust.

NOTE:
Be sure to wipe off red lead completely after adjustment is completed.

- Correct tooth contact

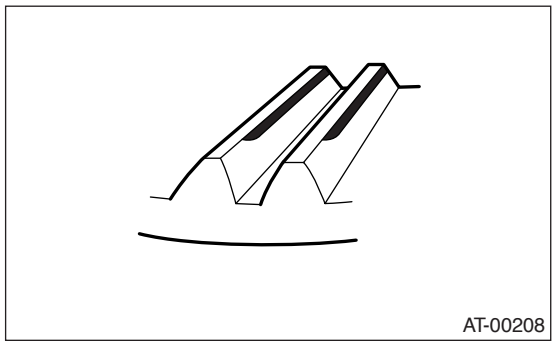
Checking item: Tooth contact pattern is slightly shifted toward to toe side under no-load rotation. [When loaded, contact pattern moves toward heel.]



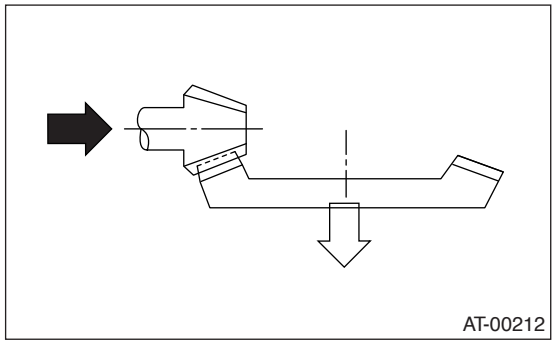
(A) Toe side
(B) Heel side

- Face contact

Checking item: Backlash is too large.
Contact pattern

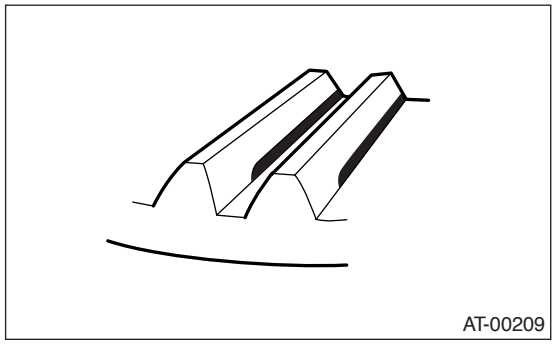


Corrective action: Increase thickness of drive pinion height adjusting washer in order to bring drive pinion close to hypoid driven gear.

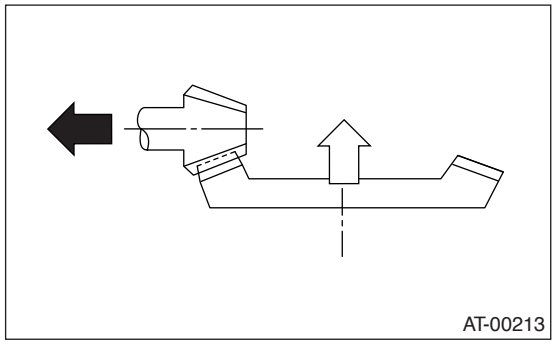


- Flank contact

Checking item: Backlash is too small.
Contact pattern



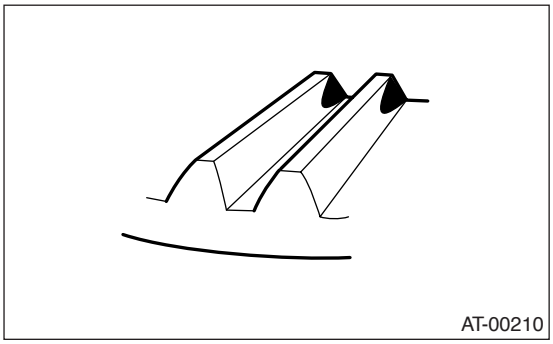
Corrective action: Reduce thickness of drive pinion height adjusting washer in order to bring drive pinion away from hypoid driven gear.



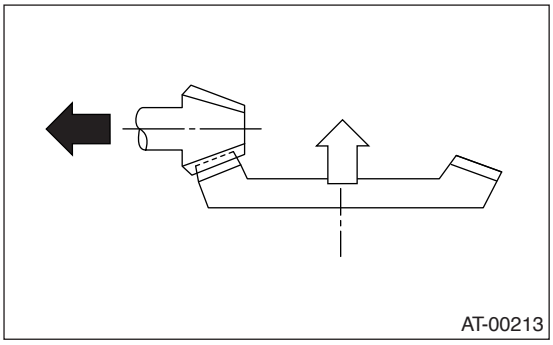
• Toe contact (inside end contact)

Checking item: Contact areas is small

Contact pattern



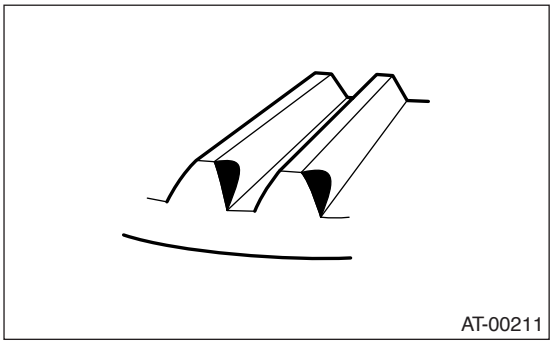
Corrective action: Reduce thickness of drive pinion height adjusting washer in order to bring drive pinion away from hypoid driven gear.



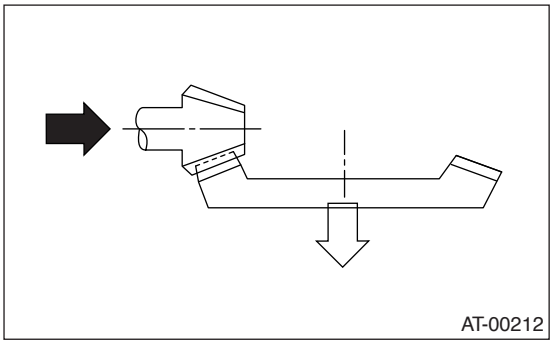
• Heel contact (outside end contact)

Checking item: Contact areas is small

Contact pattern



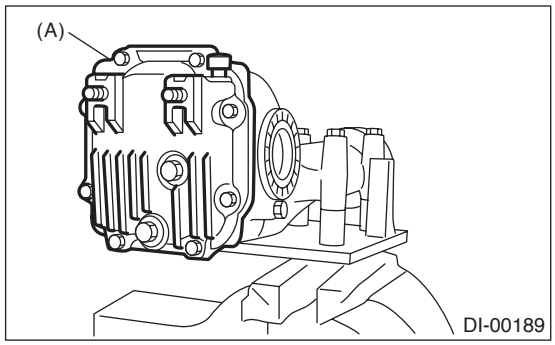
Corrective action: Increase thickness of drive pinion height adjusting washer in order to bring drive pinion close to hypoid driven gear.



19) If proper tooth contact is not obtained, once again adjust the drive pinion height and the differential side bearing preload (already mentioned) and the hypoid gear backlash.

20) Install the new gasket and rear cover to differential carrier and tighten the bolts to specified torque.

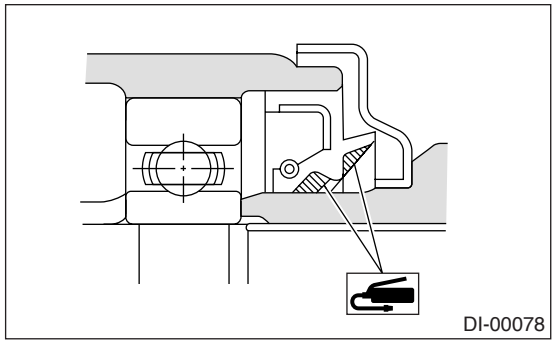
Tightening torque:
25 N·m (2.5 kgf-m, 18.1 ft-lb)



(A) Rear cover

2. VA2-TYPE

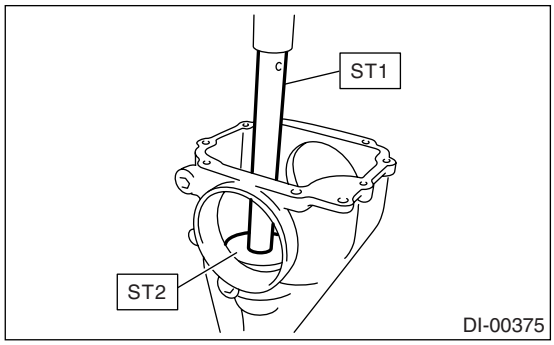
NOTE:
• Assemble in the reverse order of disassembly.
• Check and adjust each part during assembly.
• Use a new gasket.
• Keep the shims and washers in order, so that they are not improperly installed.
• Thoroughly clean the surfaces on which the shims, washers and bearings are to be installed.
• Apply gear oil when installing the bearings and thrust washers.
• Be careful not to mix up the bearing races RH and LH.
• Replace the oil seal with a new one at every disassembly. Apply grease to the lips when installing the oil seal.
• Be careful not to mix up the differential oil seal RH and LH.



1) Adjusting preload for front and rear bearings:
Adjust the bearing preload with collar and washer between front and rear bearings. Pinion height adjusting washer are not affected by this adjustment. The adjustment must be carried out without oil seal inserted.

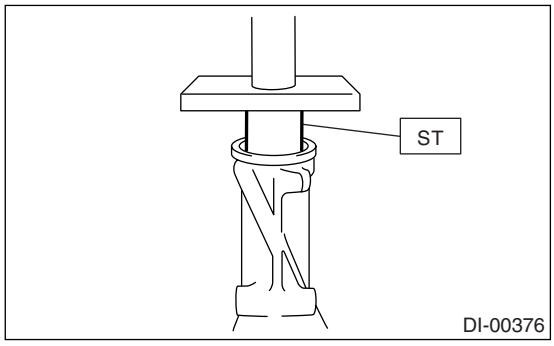
(1) Install the rear bearing race into differential carrier with ST1 and ST2.

ST1 398477701 HANDLE
ST2 398477703 DRIFT 2



(2) Using the ST, install the front bearing race to the differential carrier.

ST 499277200 INSTALLER



(3) Insert the front bearing cone.

NOTE:
Use new front bearing cone.

(4) Measure and record the thickness of pinion adjust washer.

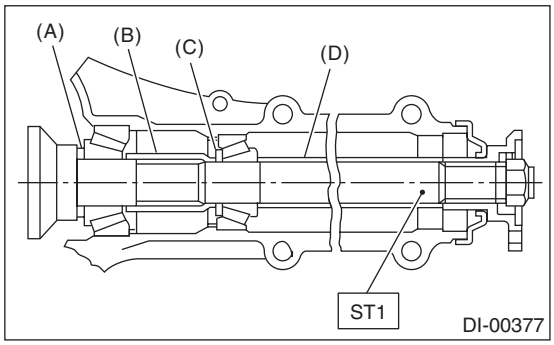
NOTE:
If tooth contact (drive pinion, hypoid driven gear) is normal in the inspection before disassembling, verify that the washer is not deformed, and then re-use the used washer.

(5) Insert the ST1 into carrier with pinion height adjusting washer and rear bearing cone fitted onto it.

NOTE:
Use new rear bearing cone.

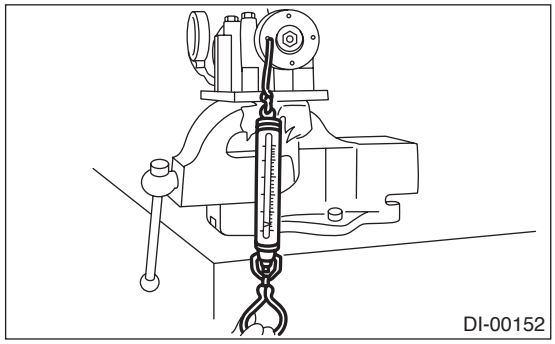
(6) Install the preload adjusting collar and washer, front bearing cone, collar, companion flange, and washer and self-locking nut.

ST1 18678AA000 DUMMY SHAFT



(A) Pinion height adjusting washer
(B) Preload adjusting collar
(C) Preload adjusting washer
(D) Collar

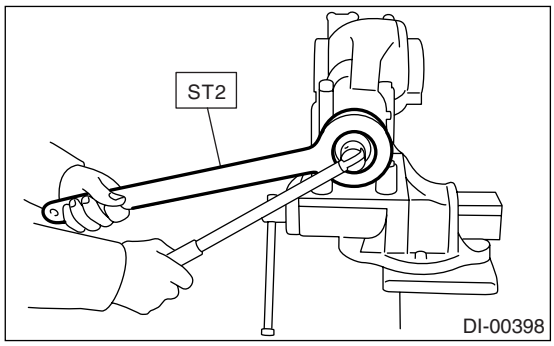
(7) Turn the ST1 with hand to make it seated, and tighten the self-locking nut while measuring the preload with spring balance. Select the preload adjusting washer and collar so that the specified preload is obtained when nut is tightened to the specified torque.



NOTE:
• Use a new self-locking nut.
• Be careful not to give excessive preload.
• When tightening the self-locking nut, lock companion flange with ST2 as shown in the figure.
• Measure the preload in direction of tangent to flange.

ST1 18678AA000 DUMMY SHAFT
ST2 498427200 FLANGE WRENCH

Tightening torque:
191 N·m (19.5 kgf-m, 141 ft-lb)



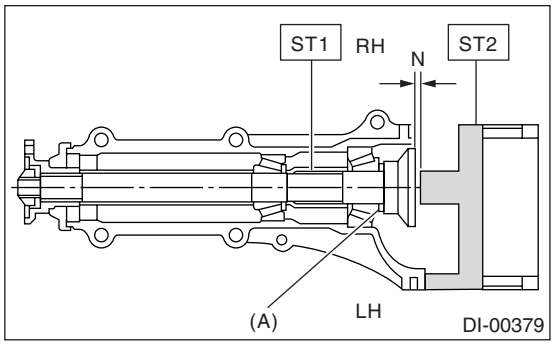
Drive pinion bearing preload
12.7 — 32.4 N (1.3 — 3.3 kgf, 2.9 — 7.3 lb) (at companion flange bolt hole)

	Part No.	Thickness mm (in)
Preload adjusting washer	38336AA430	1.500 (0.0591)
	38336AA440	1.513 (0.0596)
	38336AA450	1.525 (0.0600)
	38336AA460	1.538 (0.0606)
	38336AA470	1.550 (0.0610)
	38336AA480	1.563 (0.0615)
	38336AA490	1.575 (0.0620)
	38336AA500	1.588 (0.0625)
	38336AA510	1.600 (0.0630)
	38336AA520	1.613 (0.0635)
	38336AA530	1.625 (0.0640)
	38336AA540	1.638 (0.0645)
	38336AA550	1.650 (0.0650)
	38336AA560	1.663 (0.0655)
	38336AA570	1.675 (0.0659)
	38336AA580	1.688 (0.0665)
	38336AA590	1.700 (0.0669)
	38336AA600	1.713 (0.0674)
	38336AA610	1.725 (0.0679)
	38336AA620	1.738 (0.0684)
	38336AA630	1.750 (0.0689)
	38336AA640	1.763 (0.0694)
	38336AA650	1.775 (0.0699)
	Part No.	Length mm (in)
Preload adjusting collar	31454AA250	51.05 (2.010)
	31454AA260	51.25 (2.018)
	31454AA270	51.35 (2.022)
	31454AA280	51.45 (2.026)
	31454AA290	51.55 (2.030)
	31454AA300	51.65 (2.033)
	31454AA310	51.75 (2.037)
	31454AA320	51.85 (2.041)
	31454AA330	52.05 (2.049)

2) Adjusting drive pinion height:
Adjust the drive pinion height with washer installed between the rear bearing cone and the back of pinion gear.

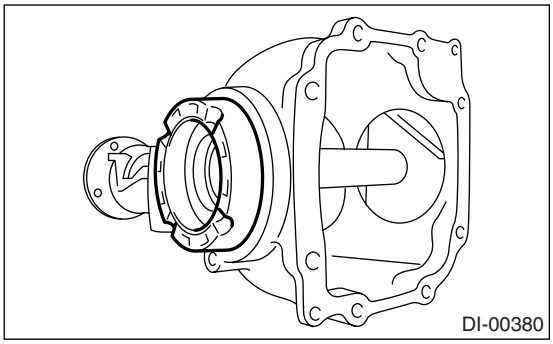
(1) Install the ST2.

ST1 18678AA000 DUMMY SHAFT
ST2 18831AA010 DIFFERENTIAL CARRIER GAUGE



(A) Pinion height adjusting washer

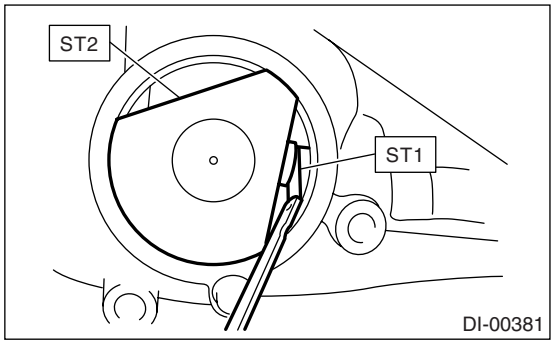
(2) Install the side holder LH to the left side of differential carrier in reverse direction.



(3) Measure the clearance N between the end of ST2 and the end surface of ST1 by using a thickness gauge.

NOTE:
Make sure there is no clearance between the case and ST2.

ST1 18678AA000 DUMMY SHAFT
ST2 18831AA010 DIFFERENTIAL CARRIER GAUGE



(4) Obtain the thickness of pinion height adjusting washer to be inserted from the following formula, and replace the temporarily installed washer with this one.

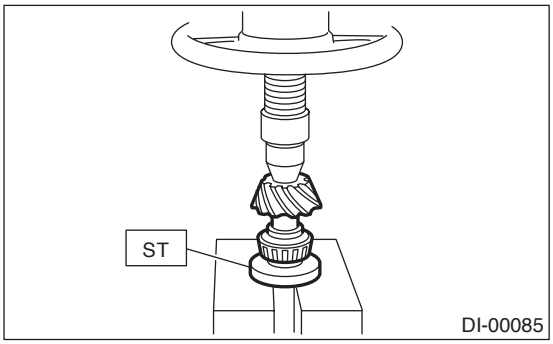
NOTE:
Adjust it using the 1 — 3 washers.
T = To + N − 0.05 (mm)

T	Thickness of pinion height adjusting washer mm (in)	
To	Thickness of washer temporally inserted mm (in)	
N	Clearance of thickness gauge mm (in)	
Memo:		

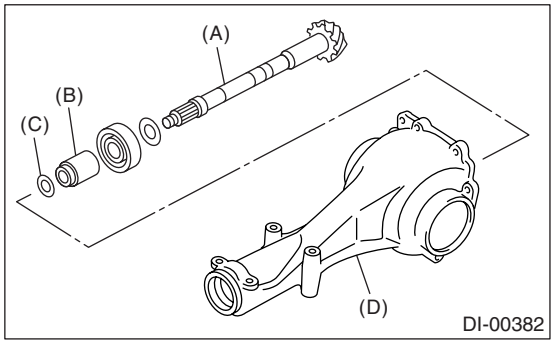
(Example of calculation)
To = 0.15 mm
N = 0.1 mm
T = 0.15 + 0.1 − 0.05 = 0.2 mm
Result: Thickness = 0.2 mm
Therefore use the pinion height adjusting washer of part number 32295AA370.

Pinion height adjusting washer	
Part No.	Thickness mm (in)
32295AA350	0.150 (0.0059)
32295AA360	0.175 (0.0069)
32295AA370	0.200 (0.0079)
32295AA380	0.225 (0.0089)
32295AA390	0.250 (0.0098)
32295AA400	0.275 (0.0108)

3) Install the selected pinion height adjusting washer on drive pinion, and press the rear bearing cone into position with ST.
ST 398177700 INSTALLER

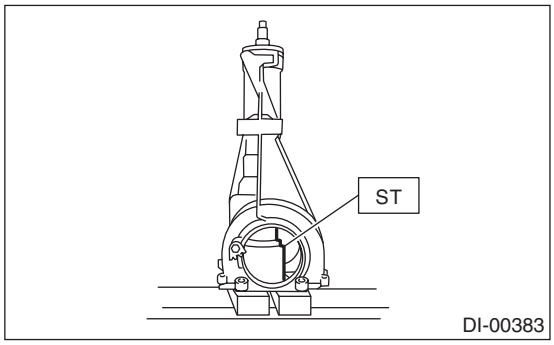


4) Insert the drive pinion into differential carrier, install the previously selected bearing preload adjusting collar and washer.



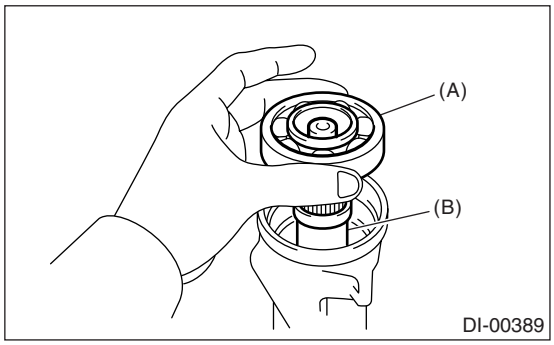
(A) Drive pinion
(B) Bearing preload adjusting collar
(C) Bearing preload adjusting washer
(D) Differential carrier

5) Set ST and differential carrier to the press and install the front bearing cone.
ST 399780104 WEIGHT



NOTE:
Set the carrier to the press until the companion flange is installed.

6) Insert the collar, then install the pilot bearing.

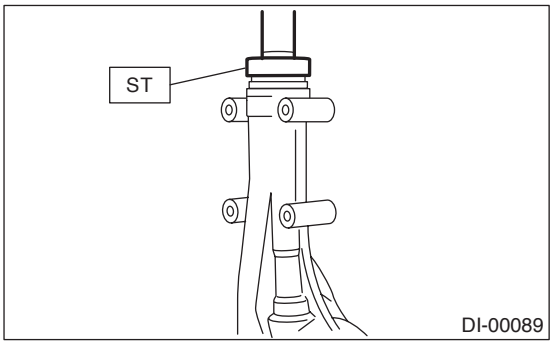


(A) Pilot bearing
(B) Collar

7) Fit a new oil seal with ST.

NOTE:
• Press-fit until end of oil seal is 1 mm (0.04 in) inward from end of carrier.
• Apply grease to the oil seal lips.

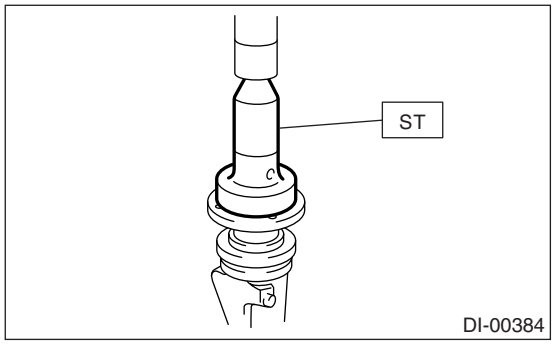
ST 499277200 INSTALLER



8) Press-fit the companion flange with ST.

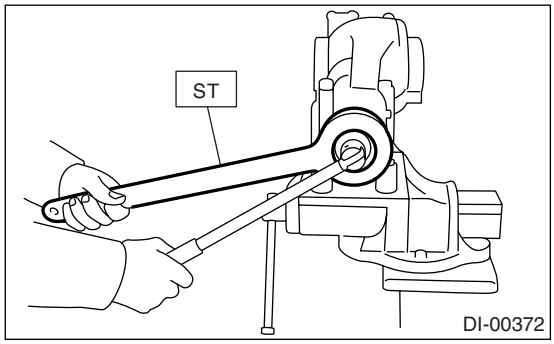
NOTE:
Be careful not to damage the bearing.

ST 899874100 INSTALLER



9) Install a new self-locking nut, and secure the companion flange using ST, and tighten the nut.
ST 498427200 FLANGE WRENCH

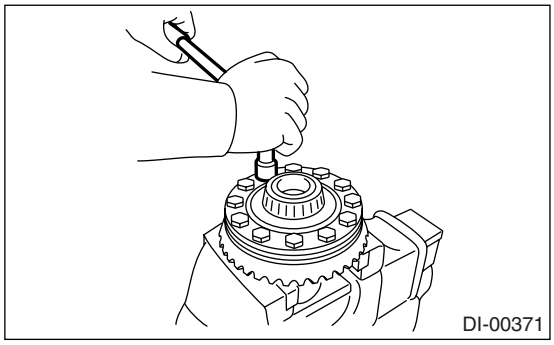
Tightening torque:
191 N·m (19.1 kgf-m, 141 ft-lb)



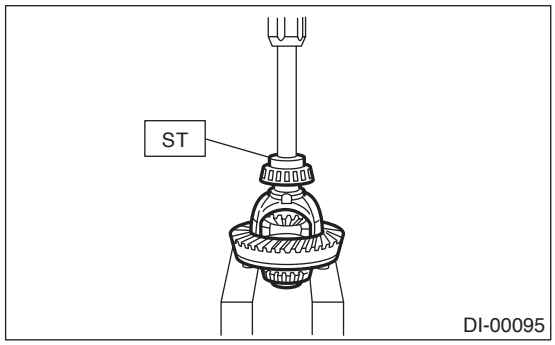
10) Install the hypoid driven gear on differential case.

NOTE:
• Tighten diagonally while tapping the bolt heads.
• Set a cushioning such as wooden block, aluminum plate or shop cloth between vise and differential case if the side gear comes into contact with vise.

Tightening torque:
62 N·m (6.3 kgf-m, 45.6 ft-lb)

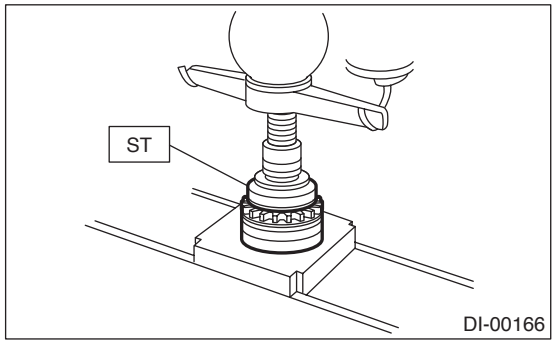


11) Press the side bearing into differential case using ST.
ST 398227700 DRIFT



12) Assemble holders.
(1) Install the new oil seal into holder RH and LH.

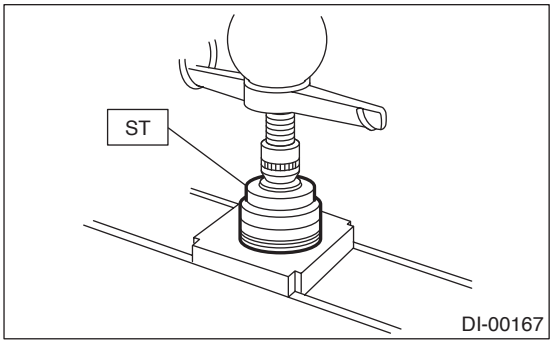
ST 498447100 INSTALLER



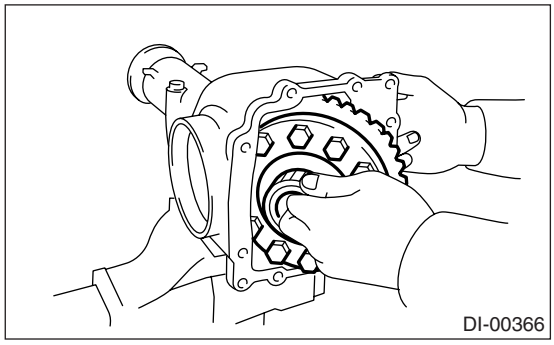
(2) Install the bearing race into holder RH and LH.

ST 398487700 DRIFT

CAUTION:
Make sure that the oil seal, bearing outer race and cone are properly assembled.



(3) Install the differential assembly into differential carrier in the reverse order of disassembly.

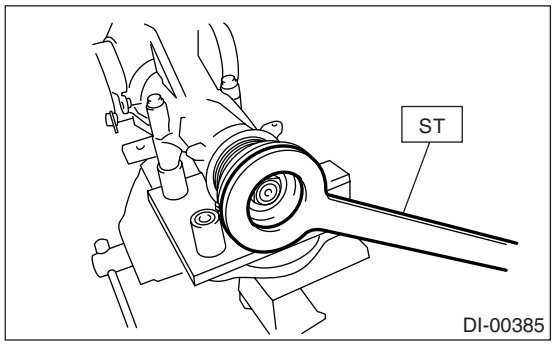


(4) Temporally tighten the side holder RH and LH in differential carrier to install.

13) Perform the backlash adjustment between the hypoid driven gear and drive pinion, and preload adjustment of differential side bearing.

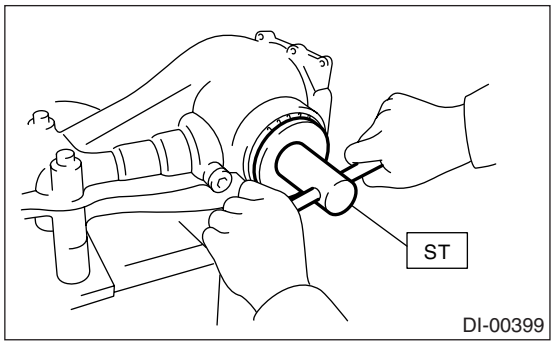
(1) Turn the drive pinion with ST for better fitting of differential side bearing.

ST 498427200 FLANGE WRENCH



(2) Screw in the side holder LH until light contact is made with ST.

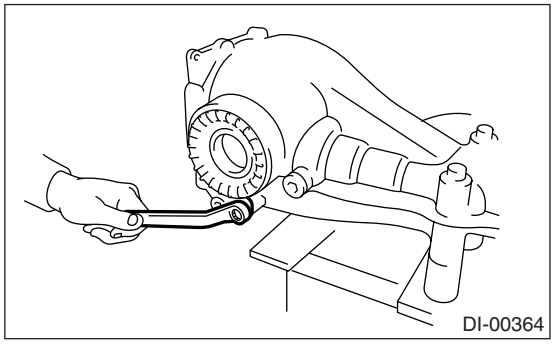
ST 18630AA010 WRENCH



(3) Back off the side (hypoid driven gear side) holder approx.1 1/2 teeth of holder, and tighten the other side holder by approx. 2 teeth (approx. 1 1/2 + 1/2 teeth). [Back off amount of side (hypoid driven gear side) holder + 1/2 tooth.]
This + 1/2 tooth gives preload.

(4) Temporarily tighten the lock plate.

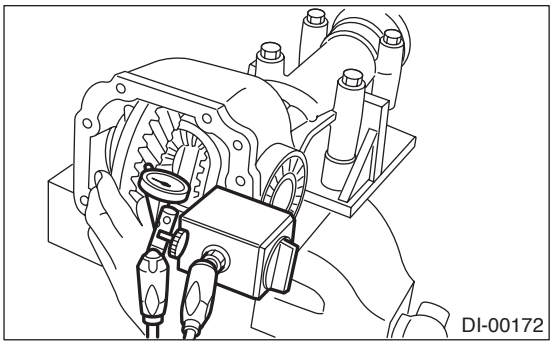
NOTE:
Turn over the lock plate to displace the holder 1/2 tooth.



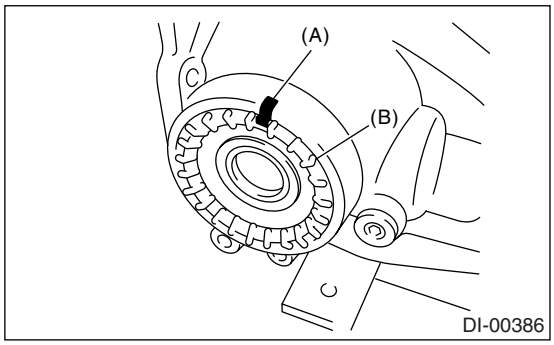
(5) Measure the hypoid driven gear-to-drive pinion backlash. Set the magnet base on differential carrier. Align the contact point of dial gauge with tooth face of hypoid driven gear, and move hypoid driven gear while holding drive pinion still. Read the value indicated on dial gauge.

NOTE:
If measured backlash is not within specified range, repeat the procedures for pinion driven gear set backlash adjustment and differential side bearing preload adjustment.

Backlash:
0.10 — 0.15 mm (0.0039 — 0.0059 in)



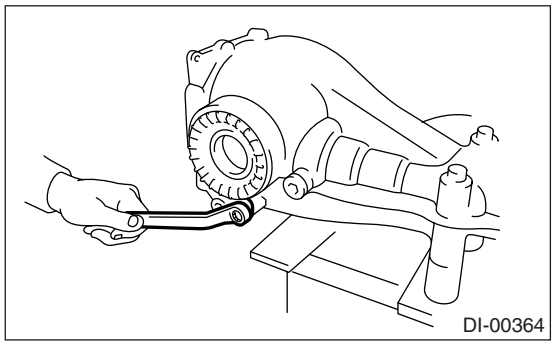
14) Draw a matching mark on both differential carrier and holder. Remove the holder side at a time. Replace in the original position after inserting an O-ring and applying grease to threaded portion.



(A) Alignment mark
(B) Holder

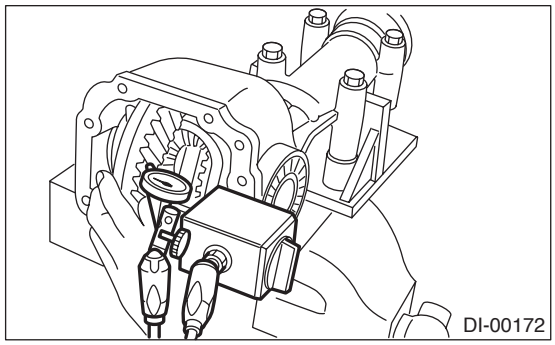
15) Tighten the bolt of lock plate to specified torque.

Tightening torque:
25 N·m (2.5 kgf-m, 18.1 ft-lb)



16) Recheck the hypoid driven gear to pinion backlash.

Backlash:
0.10 — 0.15 mm (0.0039 — 0.0059 in)

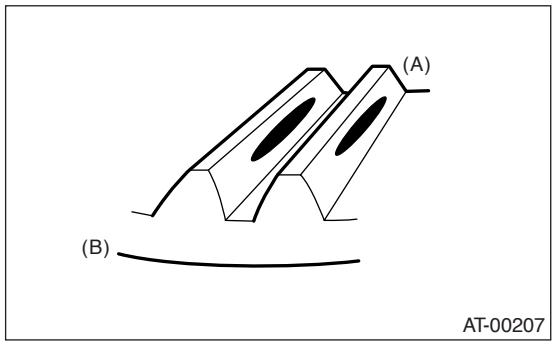


17) Checking and adjusting the tooth contact of hypoid driven gear
(1) Apply an even coat of red lead on both sides of three or four teeth on the hypoid driven gear. Check the contact pattern after rotating the hypoid driven gear several revolutions back and forth until a definite contact pattern appears on the hypoid driven gear.
(2) When the contact pattern is incorrect, readjust.

NOTE:
Be sure to wipe off red lead completely after adjustment is completed.

- Correct tooth contact

Checking item: Tooth contact pattern is slightly shifted toward toe side under no-load rotation. [When loaded, contact pattern moves toward heel.]

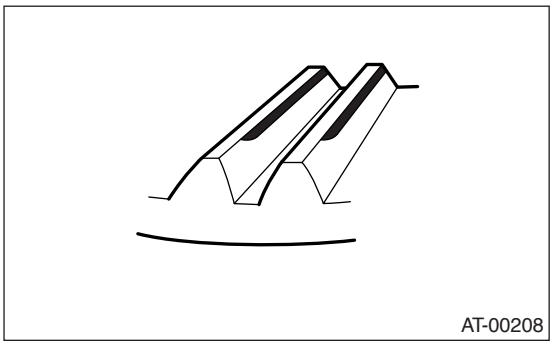


(A) Toe side
(B) Heel side

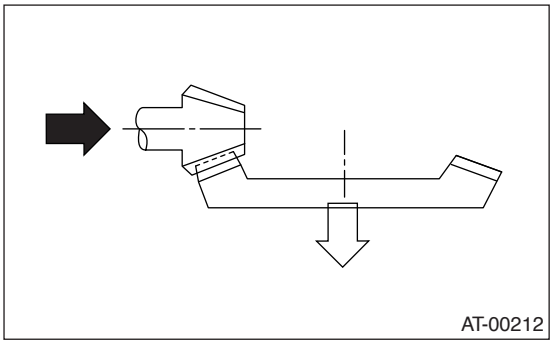
• Face contact

Checking item: Backlash is too large.

Contact pattern



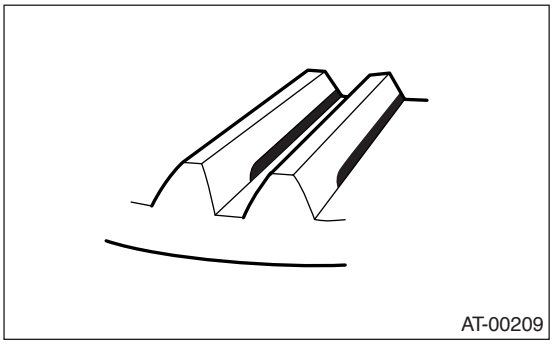
Corrective action: Increase thickness of drive pinion height adjusting washer in order to bring drive pinion close to hypoid driven gear.



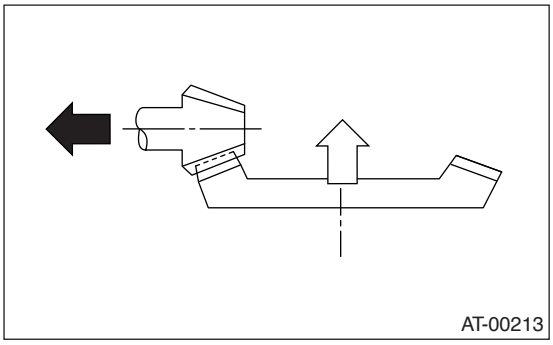
• Flank contact

Checking item: Backlash is too small.

Contact pattern



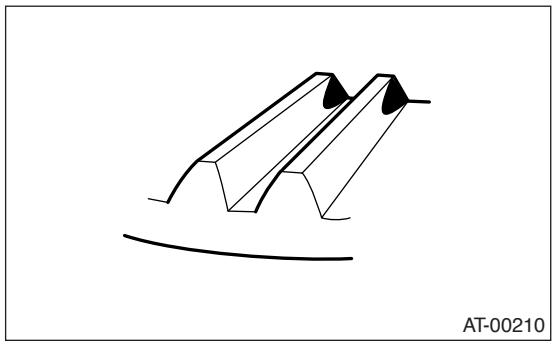
Corrective action: Reduce thickness of drive pinion height adjusting washer in order to bring drive pinion away from hypoid driven gear.



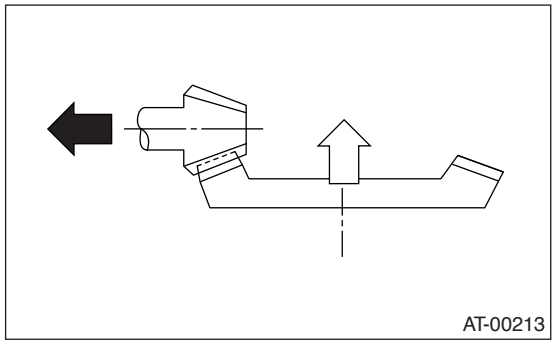
• Toe contact (inside end contact)

Checking item: Contact areas is small

Contact pattern



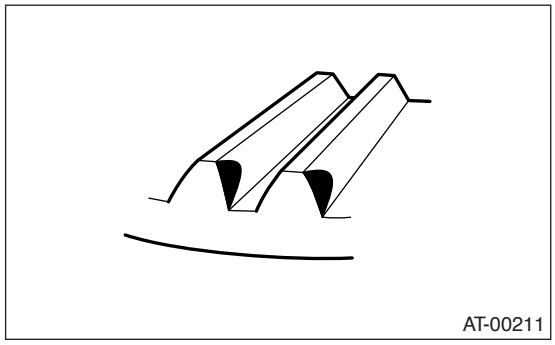
Corrective action: Reduce thickness of drive pinion height adjusting washer in order to bring drive pinion away from hypoid driven gear.



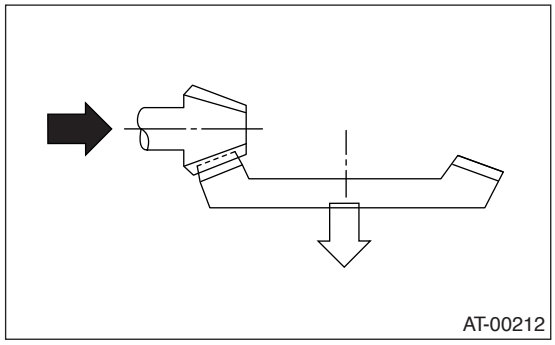
• Heel contact (outside end contact)

Checking item: Contact areas is small

Contact pattern

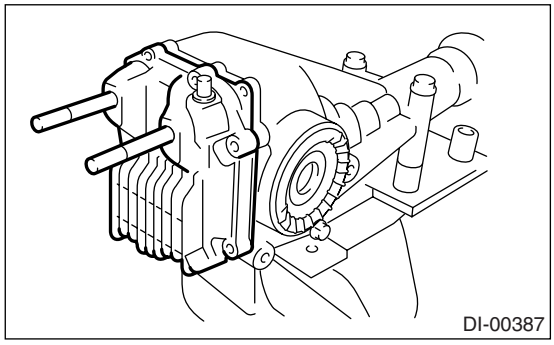


Corrective action: Increase thickness of drive pinion height adjusting washer in order to bring drive pinion close to hypoid driven gear.



18) If proper tooth contact is not obtained, once again adjust the drive pinion height and the differential side bearing preload (already mentioned) and the hypoid gear backlash.
19) Install the new gasket and rear cover to differential carrier and tighten the bolts to specified torque.

Tightening torque:
25 N·m (2.5 kgf-m, 18.1 ft-lb)



DI-00387

E: INSPECTION

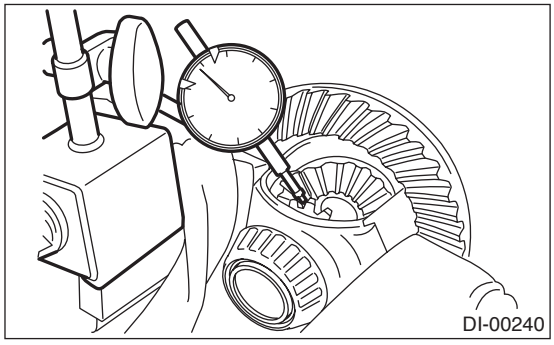
Wash all the disassembled parts clean, and examine them for wear, damage and other defects. Repair or replace the defective parts as necessary.
1) Hypoid driven gear and drive pinion
• If abnormal tooth contact is evident, find out the cause and adjust to give correct tooth contact. Replace the gear if excessively worn or incapable of adjustment.
• If crack, score or seizure is evident, replace as a set. Slight damage of tooth can be corrected by oil stone or the like.
2) Side gear and pinion mate gear
• Replace if crack, score or other defects are evident on tooth surface.
• Replace if thrust washer contacting surface is worn or seized. Slight damage of the surface can be corrected by oil stone or the like.
3) Bearings
Replace if seizure, peeling, wear, rust, dragging during rotation, noise or other defect is evident.
4) Thrust washers of side gear and pinion mate gear:
Replace if seizure, flaw, abnormal wear or other defect is evident.
5) Oil seal
Replace if deformed or damaged, and at every disassembling.
6) Differential carrier
Replace if the bearing bores are worn or damaged.
7) Differential case
Replace if its sliding surfaces are worn or cracked.
8) Companion flange
Replace if the oil seal lip contacting surfaces have flaws.

1. SIDE GEAR BACKLASH

Using a dial gauge, check the backlash of the side gear. (VA1-type only)

Side gear backlash:
0.05 — 0.15 mm (0.0020 — 0.0059 in)

If the side gear backlash is not within the specification, adjust it as specified by selecting side gear thrust washer.



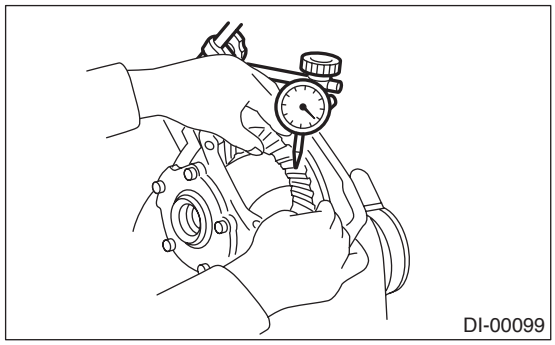
DI-00240

2. HYPOID DRIVEN GEAR BACKLASH

Using a dial gauge, check the backlash of hypoid driven gear.

Hypoid driven gear backlash:
0.10 — 0.15 mm (0.0039 — 0.0059 in)

If the hypoid driven gear backlash is not within the specification, adjust the side bearing preload or repair if necessary.



DI-00099

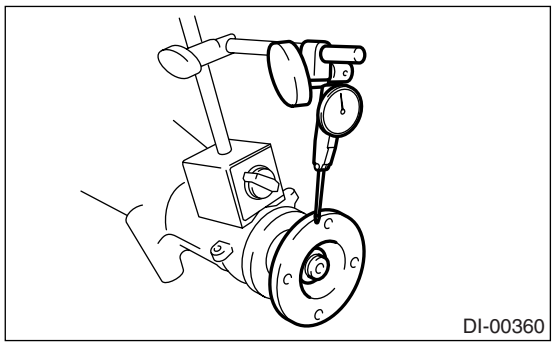
3. TOOTH CONTACT BETWEEN HYPOID DRIVEN GEAR AND DRIVE PINION

Inspect the tooth contact between hypoid driven gear and drive pinion. <Ref. to DI-55, ASSEMBLY, Rear Differential (VA-type).>

4. COMPANION FLANGE

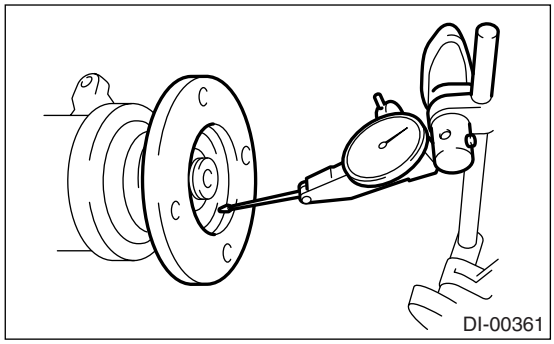
1) If rust or dirt is attached to the companion flange, remove them.
2) Set a dial gauge at a companion flange surface (mating surface of propeller shaft and companion flange), and then measure the companion flange runout.

Limit of runout:
0.08 mm (0.003 in)



3) Set the gauge inside of the companion flange, and measure the runout.

Limit of runout:
0.08 mm (0.003 in)



4) If either runout exceeds the limit, move the phase of companion flange and drive pinion 90° each, and find the point that the runout is within the limit.
5) If the runout exceeds the limit after changing the phase, replace the companion flange and recheck the runout.
6) If the runout exceeds the limit after replacing the companion flange, the drive pinion may be assembled incorrectly or bearing is faulty.

F: ADJUSTMENT

1. SIDE GEAR BACKLASH

Adjust the side gear backlash. (VA1-type)
<Ref. to DI-55, ASSEMBLY, Rear Differential (VA-type).>

2. HYPOID DRIVEN GEAR BACKLASH

Adjust hypoid driven gear backlash.
<Ref. to DI-55, ASSEMBLY, Rear Differential (VA-type).>

3. TOOTH CONTACT BETWEEN HYPOID DRIVEN GEAR AND DRIVE PINION

Adjust the tooth contact between hypoid driven gear and drive pinion gear.
<Ref. to DI-55, ASSEMBLY, Rear Differential (VA-type).>

6. Rear Differential Front Oil Seal

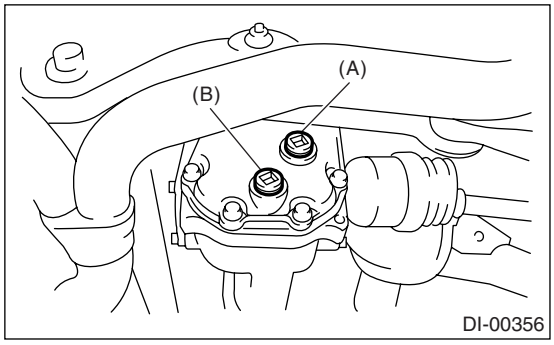
A: INSPECTION

Make sure that there is no leakage from front oil seal portion. If there is any leakage, replace the oil seal and inspect the propeller shaft.

B: REPLACEMENT

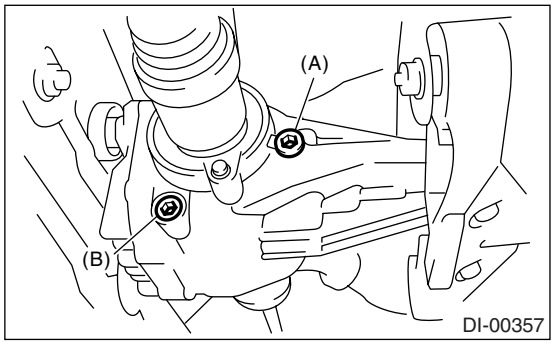
1) Disconnect the ground cable from battery.
2) Move the select lever or gear shift lever to neutral.
3) Release the parking brake.
4) Remove the oil drain plug, and drain gear oil.

• Except for VA2-type



(A) Filler plug
(B) Drain plug

• VA2-type



(A) Filler plug
(B) Drain plug

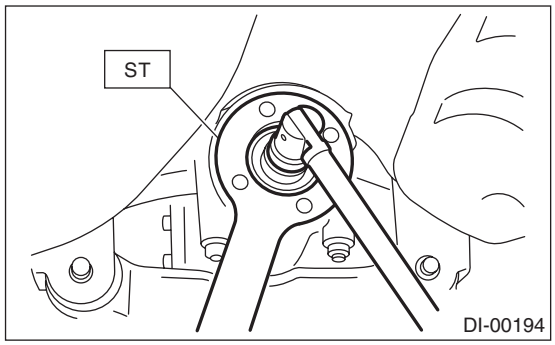
5) Install the oil drain plug.

NOTE:
• Apply liquid gasket to the oil drain plug for T-type.
• Use a new aluminum gasket for VA1-type.
• Use a new metal gasket for VA2-type.

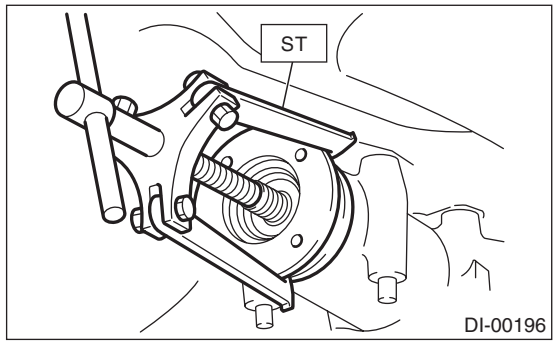
Liquid gasket:
THREE BOND 1105 (Part No. 004403010) or equivalent

Tightening torque:
T-type:
49 N·m (5.0 kgf-m, 36.2 ft-lb)
VA1-type:
34 N·m (3.5 kgf-m, 25.3 ft-lb)
For VA2-type:
29 N·m (3.0 kgf-m, 21.4 ft-lb)

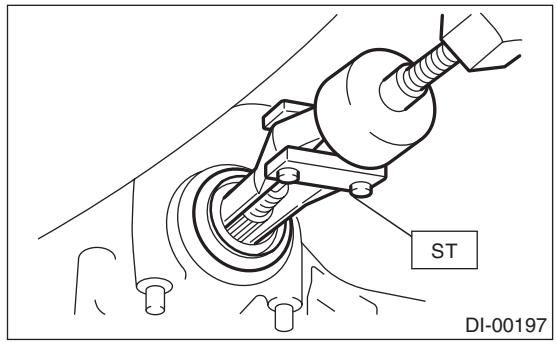
6) Jack-up the rear wheel and support the body with rigid racks.
7) Remove the rear exhaust pipe and muffler.
8) Remove the propeller shaft. <Ref. to DS-10, REMOVAL, Propeller Shaft.>
9) Remove the self-locking nut while holding the companion flange with ST.
ST 498427200 FLANGE WRENCH



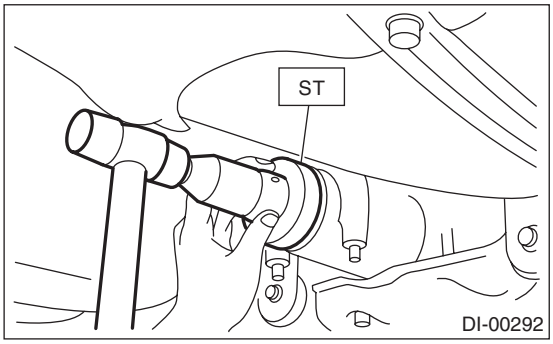
10) Extract the companion flange using ST.
ST 399703600 PULLER ASSY



11) Remove the oil seal using ST or screwdriver.
ST 398527700 PULLER ASSY



12) Install a new oil seal with ST.
ST 498447120 OIL SEAL INSTALLER



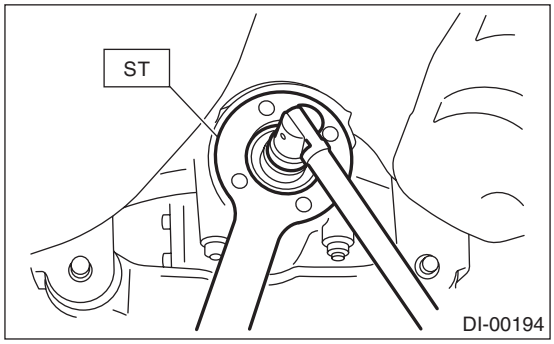
13) Install the companion flange.

NOTE:
Use a plastic hammer to install companion flange.

14) Tighten the self-locking nut within the specified torque range so that the turning resistance of companion flange becomes the same as that of before oil seal replacement.
ST 498427200 FLANGE WRENCH

NOTE:
Use a new self-locking nut.

Tightening torque:
T-type:
181 N·m (18.5 kgf-m, 134 ft-lb)
VA-type:
191 N·m (19.5 kgf-m, 141 ft-lb)



15) Hereafter, reassemble in the reverse order of disassembly.

7. Rear Differential Side Oil Seal

A: INSPECTION

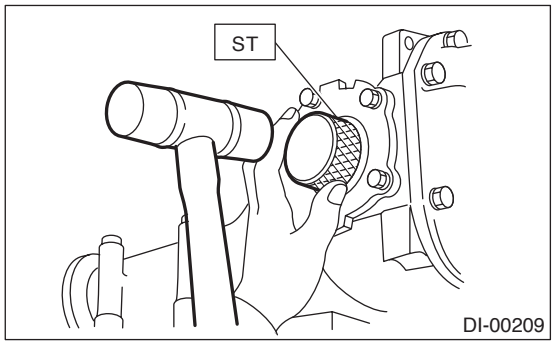
Make sure that there is no leakage from side oil seal. If there is any leakage, replace the oil seal.

B: REPLACEMENT

1) Remove the rear differential. <Ref. to DI-29, REMOVAL, Rear Differential (T-type).><Ref. to DI-46, REMOVAL, Rear Differential (VA-type).>
2) Remove the rear differential side oil seal using a screwdriver wrapped with vinyl tape to prevent the side retainer from scratches.
3) Using the ST, install the oil seal to the side retainer.

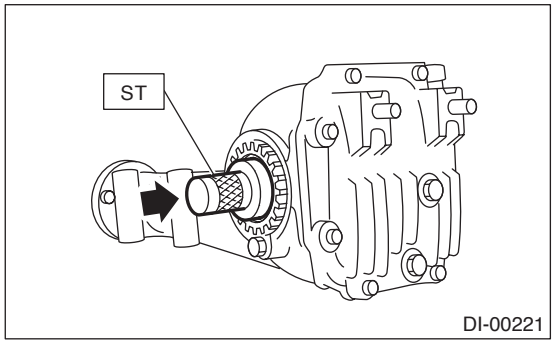
• T-type and VA2-type

ST 398437700 DRIFT



• VA1-type

ST 498447100 INSTALLER

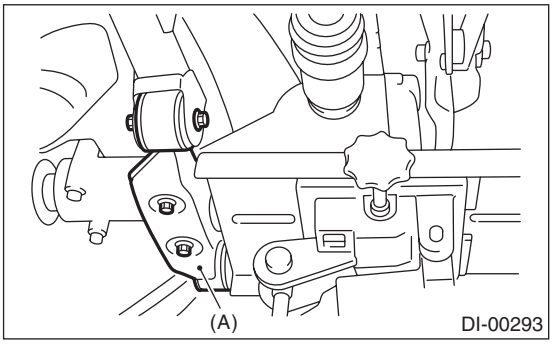


4) Install the rear differential. <Ref. to DI-30, INSTALLATION, Rear Differential (T-type).><Ref. to DI-47, INSTALLATION, Rear Differential (VA-type).>

8. Rear Differential Front Member

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Lift-up the vehicle.
3) Support the rear differential using transmission jack, and then remove the rear differential front member.

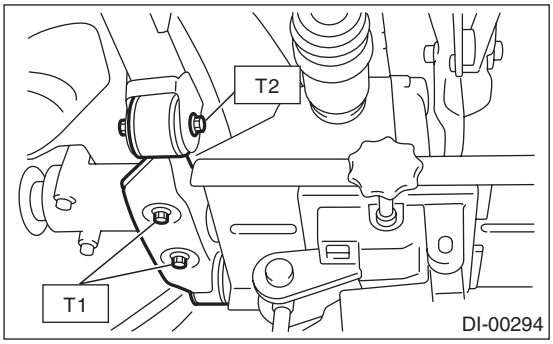


(A) Rear differential front member

B: INSTALLATION

Install the rear differential front member with a new self-locking nut.

Tightening torque:
T1: 52 N·m (5.3 kgf-m, 38 ft-lb)
T2: 110 N·m (11.2 kgf-m, 81 ft-lb)



C: INSPECTION

1) Check the rear differential front member for damage, bend and corrosion.
If damage, bend or corrosion is excessive, replace the rear differential front member.
2) Check the bushings of rear differential member for cracking, hardening and damage.
If cracking, hardening or damage is excessive, replace rear differential front member.

9. General Diagnostic Table

A: INSPECTION

Symptom or trouble	Possible cause	Remedy
1. Oil leakage	(1) Worn, scratched or incorrectly seated front or side oil seal. Scored, battered or excessively worn sliding surface of companion flange.	Correct or replace.
	(2) Clogged or damaged air breather.	Clean, repair or replace.
	(3) Loose bolts on differential spindle or side retainer, or incorrectly fitted O-ring.	Tighten the bolts to specified torque. Replace the O-ring.
	(4) Loose rear cover attaching bolts or damaged gasket.	Tighten the bolts to specified torque. Replace gasket and apply liquid gasket.
	(5) Loose oil filler or drain plug.	Retighten and apply liquid gasket.
	(6) Wear, damage or incorrectly fitting for spindle, side retainer and oil seal.	Correct or replace.
2. Seizure NOTE: Seized or damaged parts should be replaced, and also other parts should be thoroughly checked for any defect and should be repaired or replaced as required.	(1) Insufficient backlash for hypoid gear.	Readjust or replace.
	(2) Excessive preload for side, rear or front bearing.	Readjust or replace.
	(3) Insufficient or improper oil used.	Replace seized part and fill with specified oil to specified level.
3. Damage NOTE: Damaged parts should be replaced, and also other parts should be thoroughly checked for any defect and should be repaired or replaced as required.	(1) Improper backlash for hypoid gear.	Replace.
	(2) Insufficient or excessive preload for side, rear or front bearing.	Readjust or replace.
	(3) Excessive backlash for differential gear.	Replace gear or thrust washer.
	(4) Loose bolts and nuts such as hypoid driven gear bolt.	Retightening.
	(5) Damage due to overloading.	Replace.
4. Noises when starting or shifting gears NOTE: Noises may be caused by differential assembly, universal joint, wheel bearing, etc. Find out what is actually making noise before disassembling.	(1) Excessive backlash for hypoid gear.	Readjust.
	(2) Excessive backlash for differential gear.	Replace gear or thrust washer.
	(3) Insufficient preload for front or rear bearing.	Readjust.
	(4) Loose drive pinion nut.	Tighten to specified torque.
	(5) Loose bolts and nuts such as side bearing retainer attaching bolt.	Tighten to specified torque.
5. Noises when cornering	(1) Damaged differential gear.	Replace.
	(2) Excessive wear or damage of thrust washer.	Replace.
	(3) Broken pinion mate shaft.	Replace.
	(4) Seized or damaged side bearing.	Replace.

Symptom or trouble	Possible cause	Remedy
6. Gear noise NOTE: Since noises from engine, muffler, transmission, propeller shaft, wheel bearings, tires, and body are sometimes mistaken for noises from differential assembly, be careful in checking them. Inspection methods to locate noises include coasting, accelerating, cruising, and jacking-up all four wheels. Perform these inspections according to condition of trouble. When listening to noises, shift gears into four wheel drive and fourth speed position, trying to pick up only differential noise.	(1) Improper tooth contact of hypoid gear.	Readjust or replace hypoid gear set.
	(2) Improper backlash for hypoid gear.	Readjust.
	(3) Scored or chipped teeth of hypoid gear.	Replace hypoid gear set.
	(4) Seized hypoid gear.	Replace hypoid gear set.
	(5) Improper preload for front or rear bearings.	Readjust.
	(6) Seized, scored or chipped front or rear bearing.	Replace.
	(7) Seized, scored or chipped side bearing.	Replace.
	(8) Vibrating differential carrier.	Replace.

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

A: NOTE

For removal, installation and inspection, refer to “5MT” section. <Ref. to 5MT-44, Transfer Case and Extension Case Assembly.>

3. Transfer Clutch

A: NOTE

For removal, installation and inspection, refer to "4AT" or "5AT" section.
4AT model:
<Ref. to 4AT-86, Transfer Clutch.>
5AT model:
<Ref. to 5AT-74, Transfer Clutch.>

4. Extension Case

A: NOTE

For removal, installation and inspection, refer to “4AT” section. <Ref. to 4AT-82, Extension Case.>

5. Extension Case and Intermediate Case

A: NOTE

For removal, installation and inspection, refer to “5AT” section. <Ref. to 5AT-72, Extension Case & Intermediate Case.>

6. Oil Seal

A: NOTE

For replacement and inspection, refer to “4AT”, “5AT” or “5MT” section.
4AT model:
<Ref. to 4AT-50, Extension Case Oil Seal.> <Ref. to 4AT-51, Differential Side Retainer Oil Seal.>
5AT model:
<Ref. to 5AT-49, Extension Case Oil Seal.> <Ref. to 5AT-50, Differential Side Retainer Oil Seal.>
5MT model:
<Ref. to 5MT-39, Oil Seal.> <Ref. to 5MT-40, Differential Side Retainer Oil Seal.>

7. Transfer Drive Gear

A: NOTE

For removal, installation and inspection, refer to “5MT” section. <Ref. to 5MT-48, Transfer Drive Gear.>

8. Transfer Driven Gear

A: NOTE

For removal, installation and inspection, refer to “5MT” section. <Ref. to 5MT-50, Transfer Driven Gear.>

9. Reduction Drive Gear

A: NOTE

For removal, installation and inspection, refer to “4AT” section. <Ref. to 4AT-96, Reduction Drive Gear.>

10.Center Differential Carrier

A: NOTE

For removal, installation and inspection, refer to “4AT” or “5AT” section.
4AT model:
<Ref. to 4AT-98, Center Differential Carrier.>
5AT model:
<Ref. to 5AT-80, Center Differential Carrier.>

11.Reduction Driven Gear

A: NOTE

For removal, installation and inspection, refer to “4AT” or “5AT” section.
4AT model:
<Ref. to 4AT-94, Reduction Driven Gear.>
5AT model:
<Ref. to 5AT-78, Reduction Driven Gear.>

12.Center Differential

A: NOTE

For removal, installation and inspection, refer to “5MT” section. <Ref. to 5MT-52, Center Differential.>

13. Transfer Clutch Pressure Test

A: NOTE

For inspection, refer to “4AT” or “5AT” section.
4AT model:
<Ref. to 4AT-39, Transfer Clutch Pressure Test.>
5AT model:
<Ref. to 5AT-36, Transfer Clutch Pressure Test.>

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

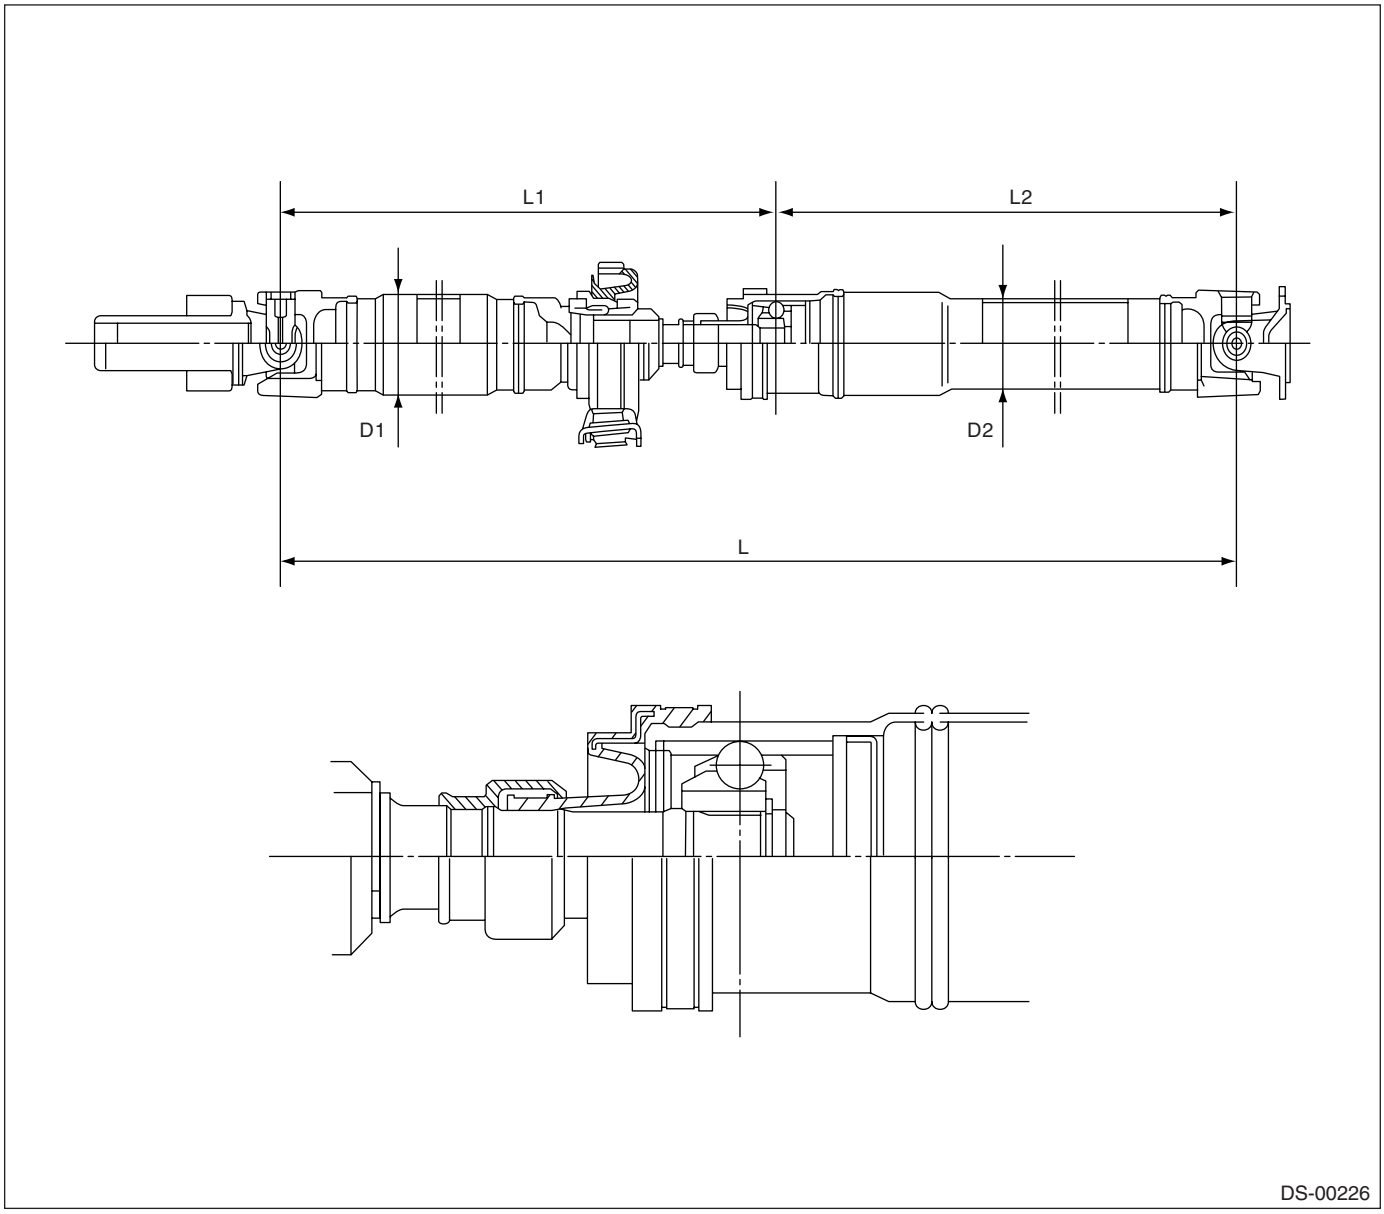
		Page
1.	General Description	2
2.	Propeller Shaft	10
3.	Front Axle	13
4.	Front Hub Unit Bearing	17
5.	Rear Hub Unit Bearing	19
6.	Front Drive Shaft	22
7.	Rear Drive Shaft	26
8.	General Diagnostic Table	30

1. General Description

A: SPECIFICATION

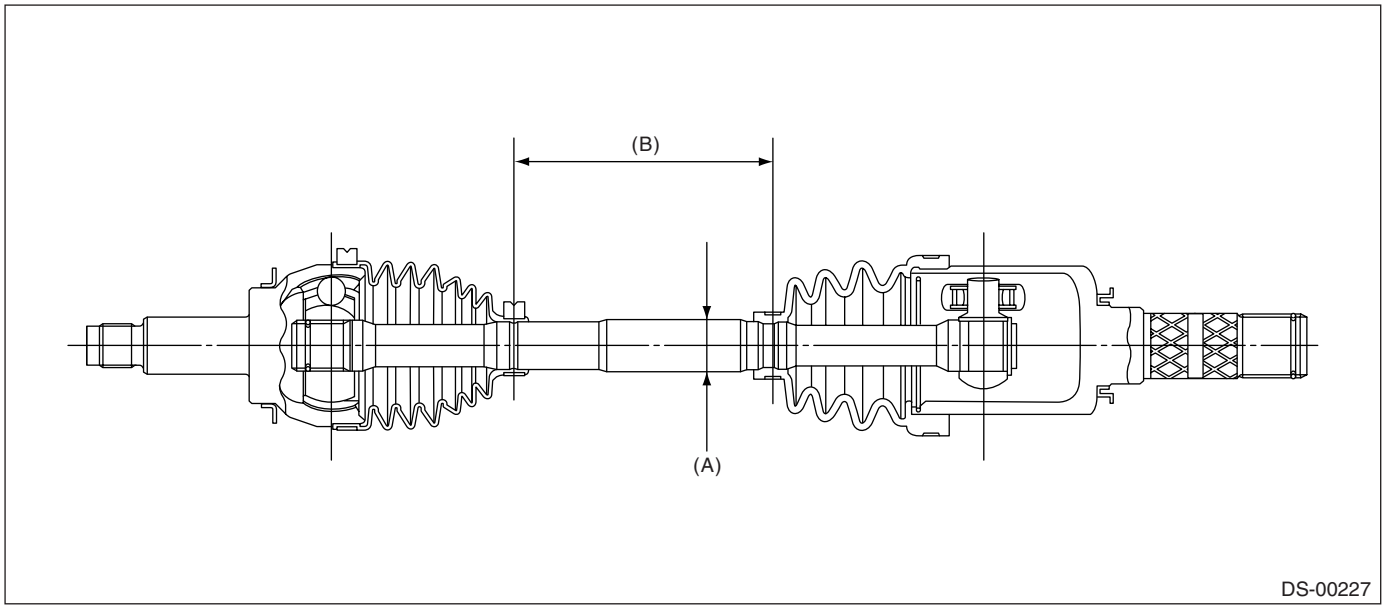
1. PROPELLER SHAFT

Model			5MT	4AT	5AT
Propeller shaft type			EDJ		
Propeller shaft length: L		mm (in)	1490 (58.66)	1430 (56.30)	1317 (51.85)
Front propeller shaft Joint-to-joint length: L_1		mm (in)	735 (28.9)	675 (26.6)	562 (22.1)
Rear propeller shaft Joint-to-Joint length: L_2		mm (in)	755 (29.7)		
Outer diameter of tube:	mm (in)	D_1	63.5 (2.50)		
		D_2	57.5 (2.26)		



2. FRONT DRIVE SHAFT ASSEMBLY

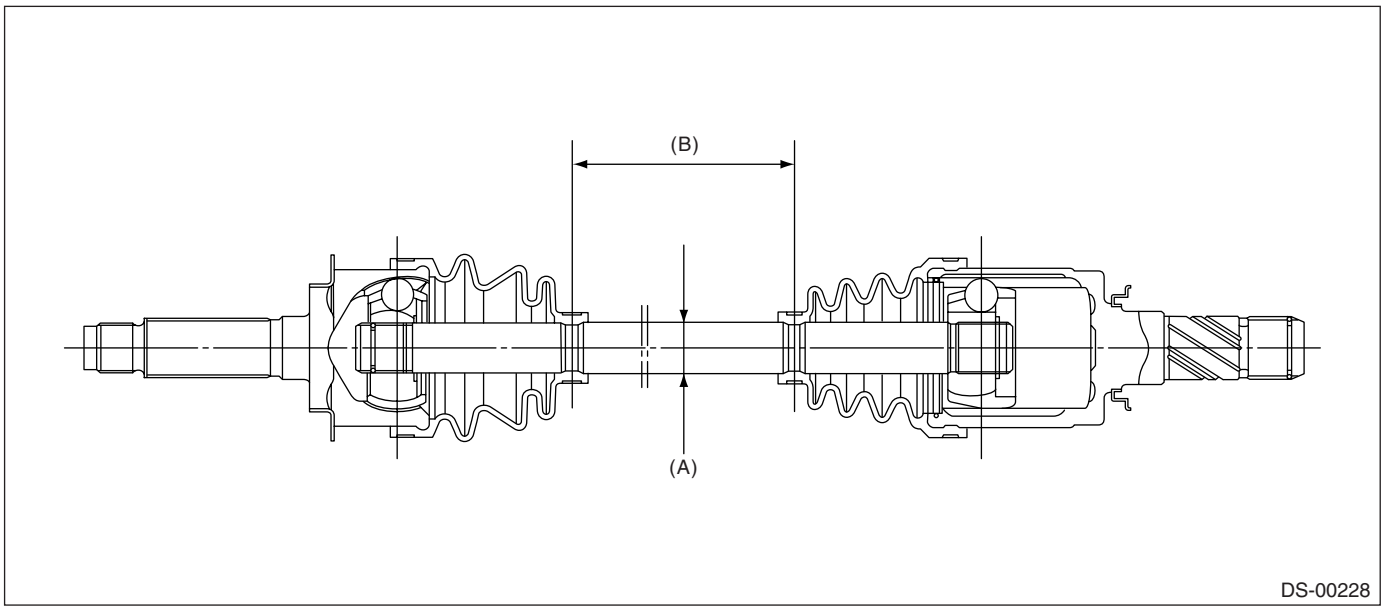
Model	Type of drive shaft	Axle diameter ϕ D mm (in)	Axle length L mm (in)
Turbo AT, 3.0 L	EBJ87+PTJ82	32 (1.3)	349.6 (13.76)
Except turbo AT, 3.0 L	EBJ87+PTJ82	26 (1.0)	349.6 (13.76)



(A) Axle diameter (B) Axle length

3. REAR DRIVE SHAFT ASSEMBLY

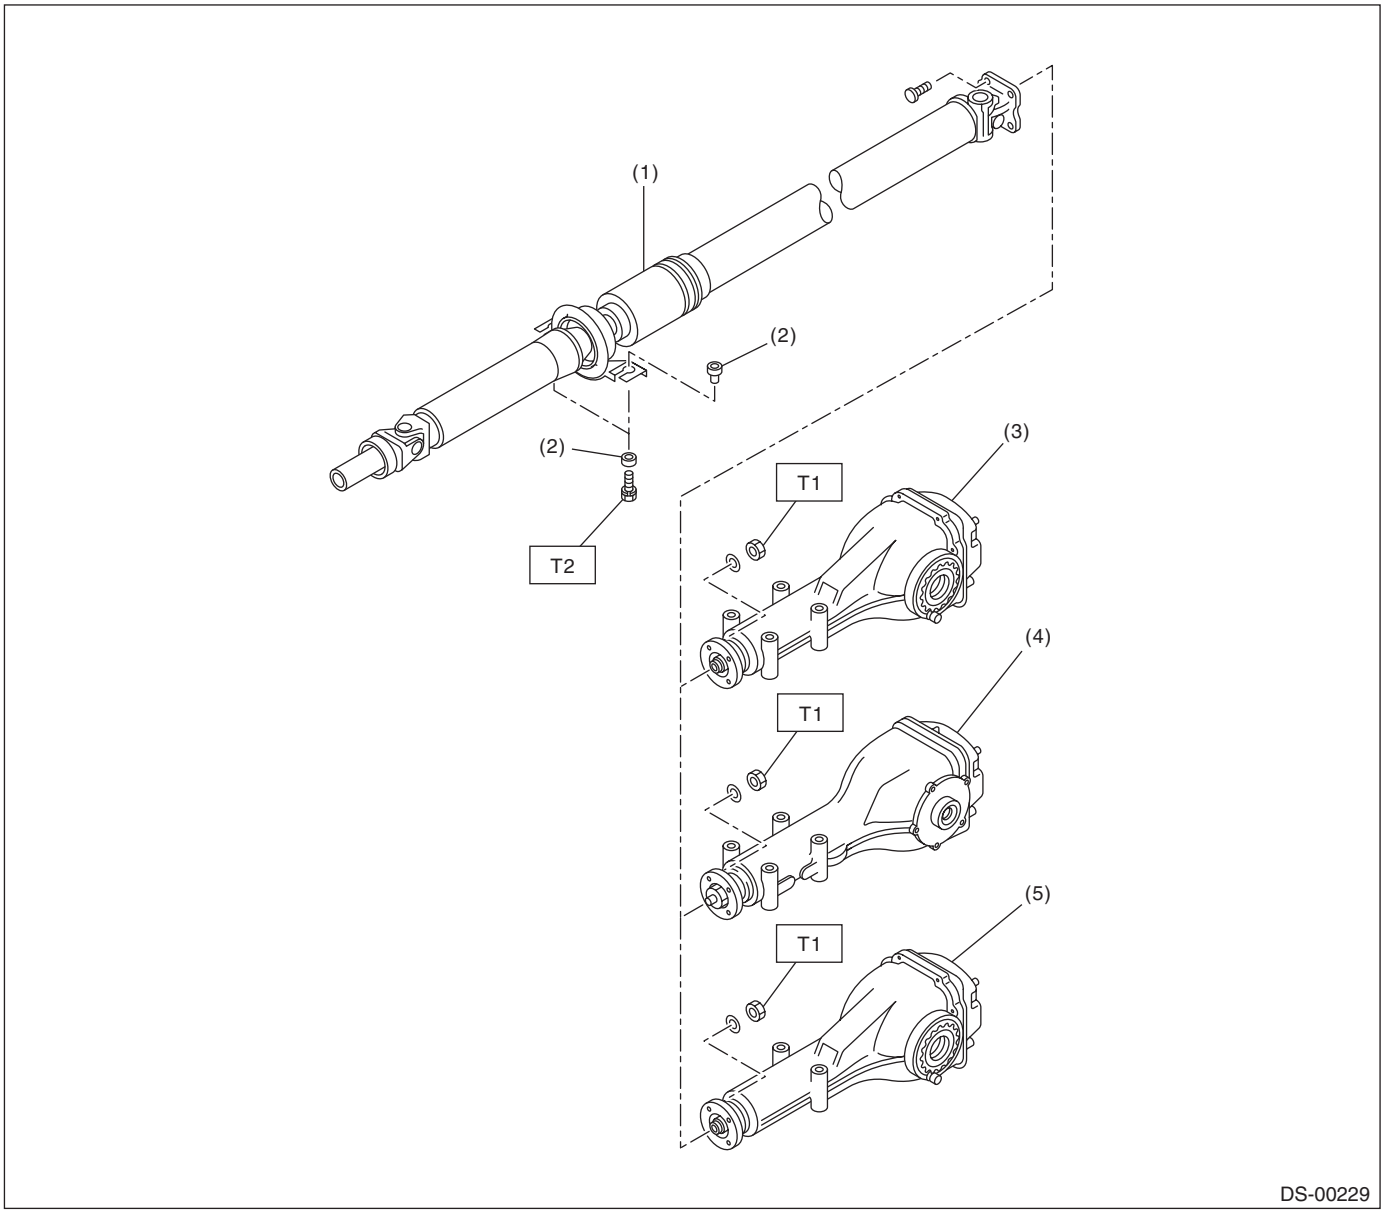
Model	Type of drive shaft	Axle diameter ϕ D mm (in)	Axle length L mm (in)
2.0 L Non-turbo AT	BJ75+DOJ75	22 (0.87)	366.5 (14.43)
Except 2.0 L Non-turbo AT	EBJ82+DOJ79	22 (0.87)	375.1 (14.77)



(A) Axle diameter (B) Axle length

B: COMPONENT

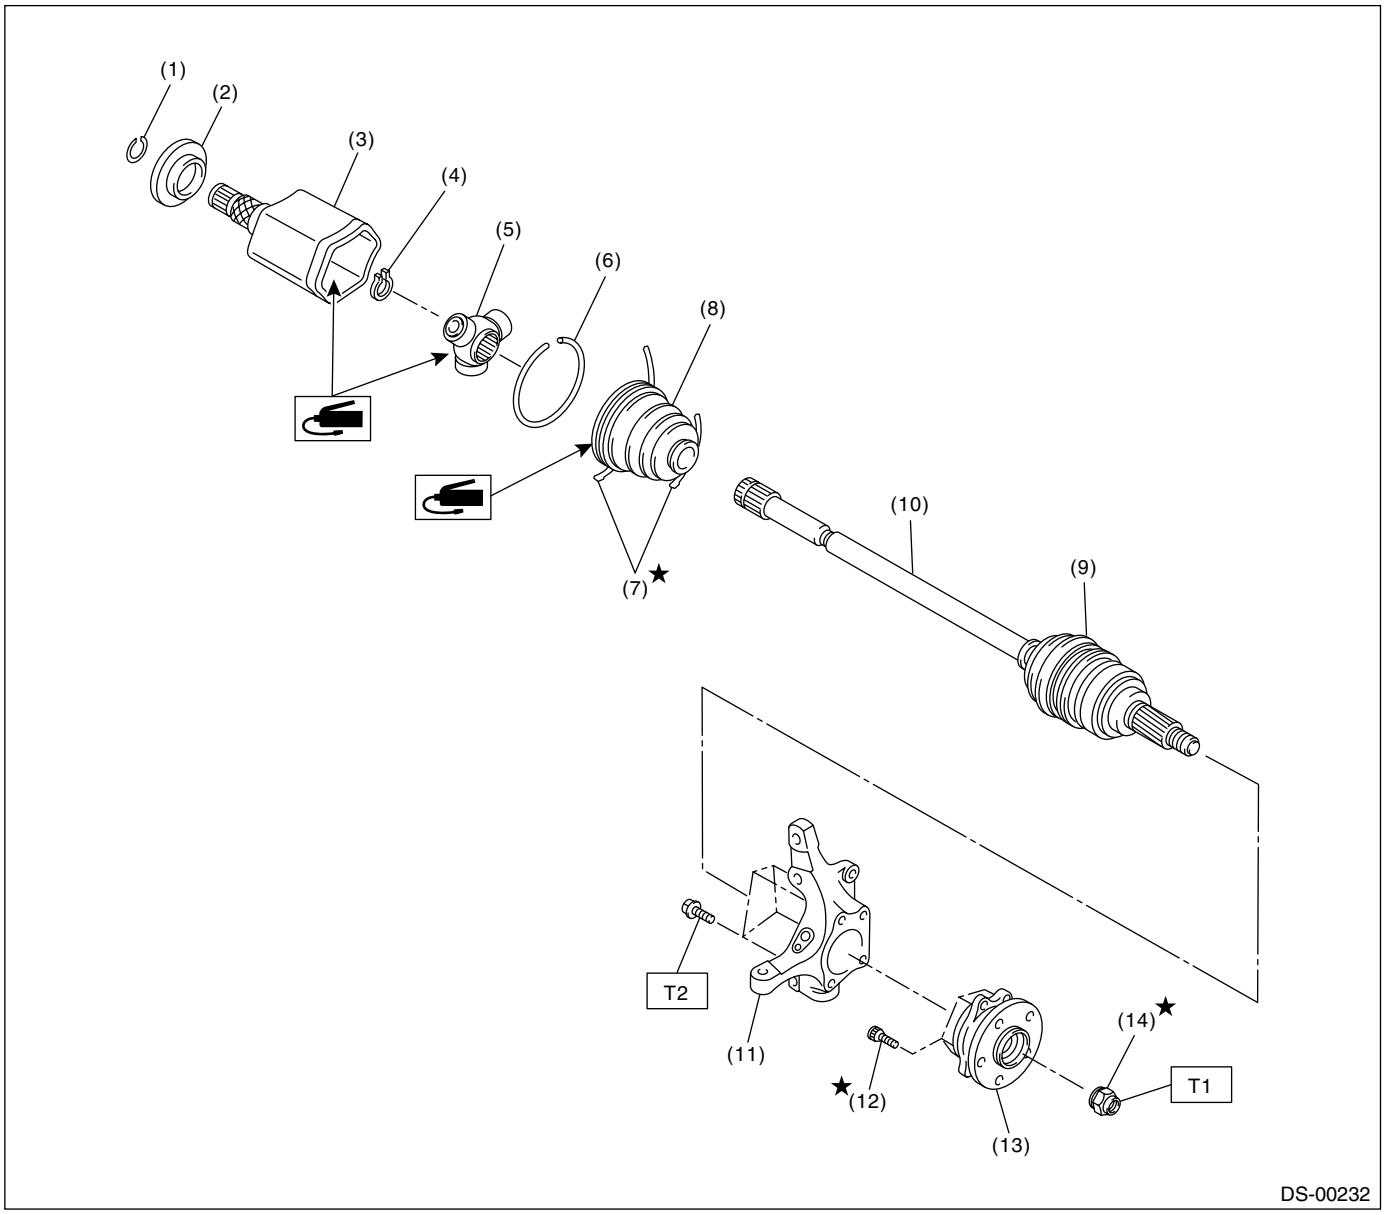
1. PROPELLER SHAFT



(1) Propeller shaft
(2) Bushing
(3) Rear differential (VA1-type)
(4) Rear differential (T-type)
(5) Rear differential (VA2-type)

Tightening torque: N·m (kgf-m, ft-lb)
T1: 31 (3.2, 23.1)
T2: 52 (5.3, 38.3)

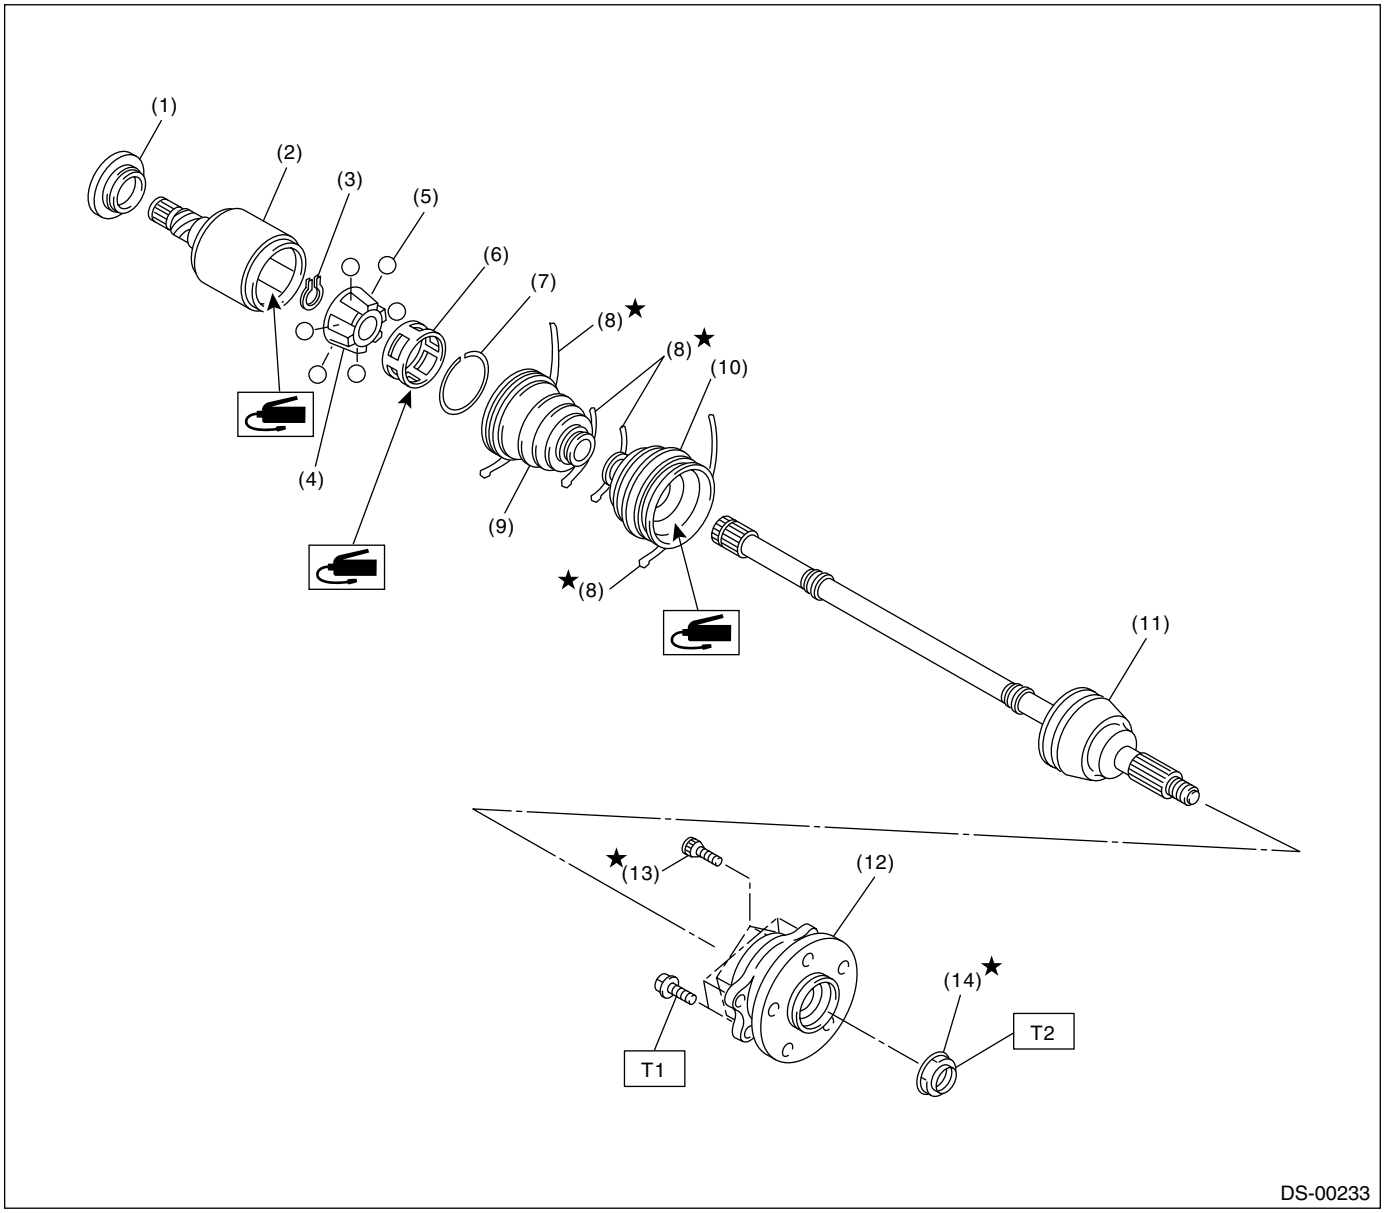
2. FRONT AXLE



(1) Spring pin
(2) Baffle plate
(3) Outer race (PTJ)
(4) Snap ring
(5) Trunnion
(6) Circlip
(7) Boot band
(8) Boot (PTJ)
(9) Boot (EBJ)
(10) EBJ shaft ASSY
(11) Housing
(12) Hub bolt
(13) Front hub unit bearing
(14) Axle nut

Tightening torque: N·m (kgf-m, ft-lb)
T1: 220 (22.4, 162)
T2: 65 (6.6, 47.9)

3. REAR AXLE



(1) Baffle plate (DOJ)
(2) Outer race (DOJ)
(3) Snap ring
(4) Inner race
(5) Ball
(6) Cage
(7) Snap ring
(8) Boot band
(9) Boot (DOJ)
(10) Boot (BJ)
(11) BJ shaft ASSY (2.0 L Non-turbo AT model)
EBJ shaft ASSY (Except 2.0 L Non-turbo AT model)
(12) Rear hub unit bearing
(13) Hub bolt
(14) Axle nut (olive color)

Tightening torque: N·m (kgf-m, ft-lb)
T1: 65 (6.6, 47.9)
T2: 190 (19.4, 140)

C: CAUTION

• Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
• Remove contamination including dirt and corrosion before removal, installation or disassembly.
• Keep the disassembled parts in order and protect them from dust and dirt.
• Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
• Be careful not to burn yourself, because each part on the vehicle is hot after running.
• Use SUBARU genuine grease etc. or the equivalent. Do not mix grease, etc. with that of another grade or from other manufacturers.
• Be sure to tighten fasteners including bolts and nuts to the specified torque.
• Place shop jacks or rigid racks at the specified points.
• Apply grease onto sliding or revolution surfaces before installation.
• Before installing snap rings, apply sufficient amount of grease to avoid damage and deformation.
• Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or shop cloth between the part and the vise.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-922431000	922431000	AXLE SHAFT INSTALLER	• Used for installing axle shaft into housing. • Used with ADAPTER (927390000).
 ST-925091000	925091000	BAND TIGHTENING TOOL	Used for tightening boot band. (A) Jig for band (B) Ratchet wrench
 ST-926470000	926470000	AXLE SHAFT PULLER	Used for removing axle shaft.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18675AA000	18675AA000	DIFFERENTIAL SIDE OIL SEAL INSTALLER	Used for installing differential side retainer oil seal.
 ST-927080000	927080000	HUB STAND	Used for assembling hub bolt in hub.
 ST-927140000	927140000	AXLE SHAFT PULLER PLATE	Same as plate 2 included in AXLE SHAFT PULLER (926470000).
 ST28099PA090	28099PA090	OIL SEAL PROTECTOR	• Used for installing rear drive shaft into rear differential. • For protecting oil seal.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST28399SA010	28399SA010	OIL SEAL PROTECTOR	• Used for installing front drive shaft into front differential. • For protecting oil seal.
 ST28399AG000	28399AG000 (New adopted tool)	HUB STAND	Used for extracting hub bolt.

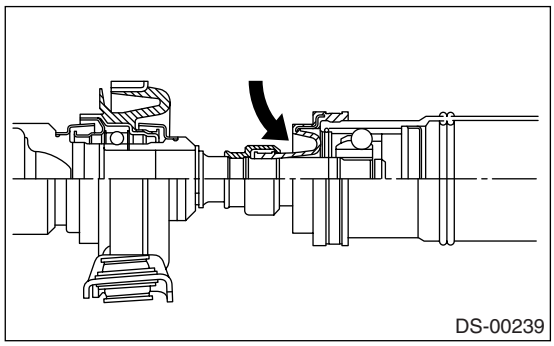
2. GENERAL TOOL

DESCRIPTION	REMARKS
Puller	Used for removing ball joint from knuckle arm.
Dial gauge	Used for inspecting propeller shaft run-out.
Extension cap	Used for preventing leak of gear oil or ATF.
Bar	Used for extracting drive shaft.

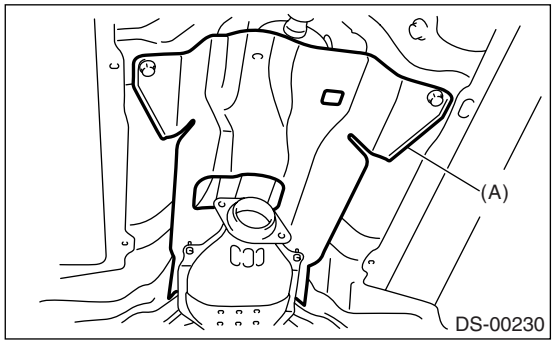
2. Propeller Shaft

A: REMOVAL

NOTE:
• Before removing propeller shaft, wrap metal parts with a cloth or rubber material.
• In case of DOJ type, before removing propeller shaft, wrap metal parts (installed at the rubber boot of center DOJ) with a cloth or rubber material, as shown in the figure. Rubber boot may be damaged due to interference with adjacent metal parts while bending the DOJ during removal.

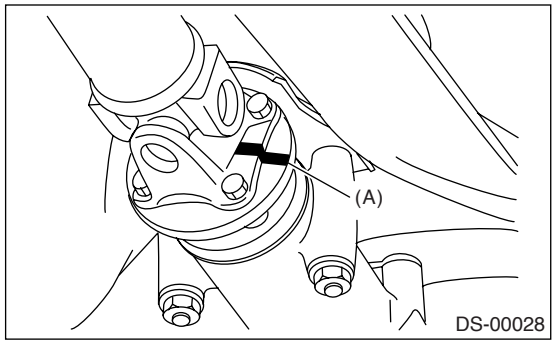


1) Disconnect the ground cable from battery.
2) Shift the select lever or gear shift lever to neutral.
3) Release the parking brake.
4) Lift-up the vehicle.
5) Remove the center exhaust pipe.
6) Remove the rear exhaust pipe and muffler.
7) Remove the heat shield cover.



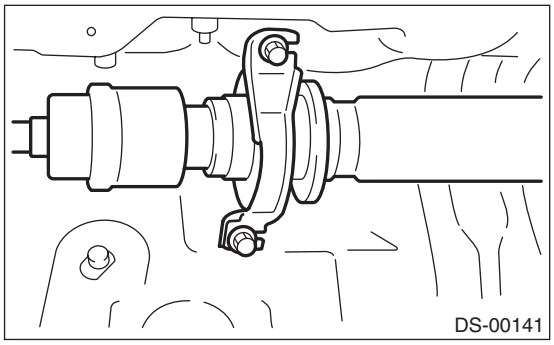
(A) Heat shield cover

8) Make matching marks on the flange yoke and rear differential before removal.



(A) Alignment mark

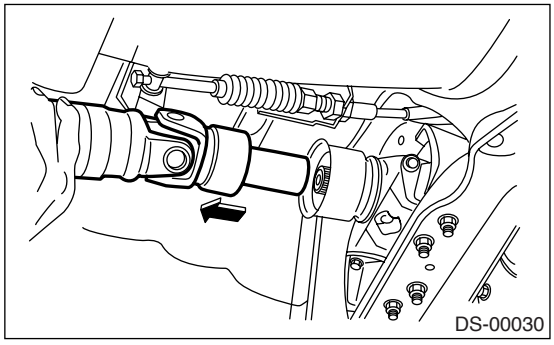
9) Remove the three bolts which hold propeller shaft to rear differential.
10) Remove the remaining bolt.
11) Remove the two bolts which hold center bearing to vehicle body.



12) Remove the propeller shaft from transmission.

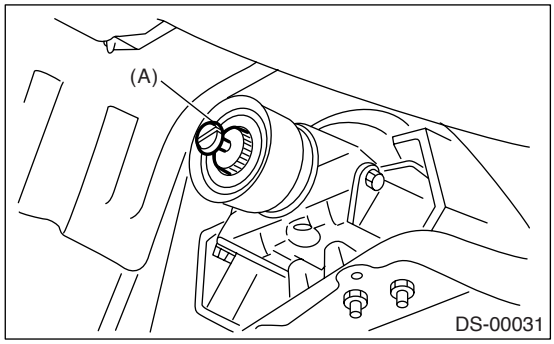
CAUTION:
• Be careful not to damage oil seals and frictional surface of sleeve yoke.
• Cover the center exhaust pipe with a cloth to keep off any ATF or oil spilled from transmission when removing propeller shaft.

NOTE:
Use a container to catch ATF or oil flowing from propeller shaft.



13) Install the extension cap to transmission.

NOTE:
If extension cap is not available, place vinyl bag over opening and fasten with string to prevent gear oil or ATF from leaking.

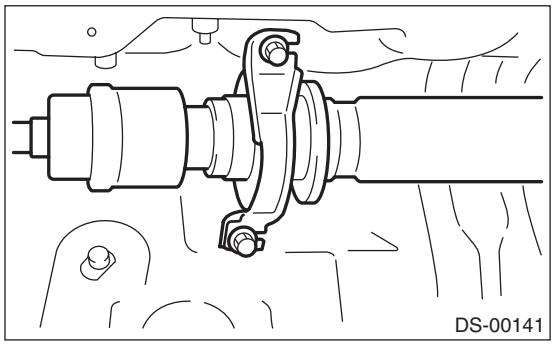


(A) Extension cap

B: INSTALLATION

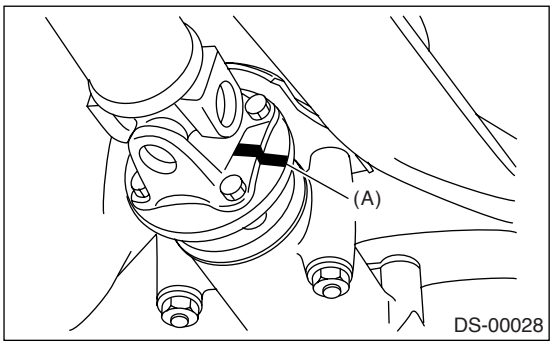
1) Insert the sleeve yoke into the transmission and attach center bearing to body.

Tightening torque:
52 N·m (5.3 kgf-m, 38.3 ft-lb)



2) Align the matching marks and connect the flange yoke and rear differential.

Tightening torque:
31 N·m (3.2 kgf-m, 23.1 ft-lb)



(A) Alignment mark

3) Install the heat shield cover.
4) Install the center exhaust pipe.
5) Install the rear exhaust pipe and muffler.
6) Lower the vehicle.
7) Connect the battery ground cable to battery.

C: INSPECTION

NOTE:
Do not disassemble propeller shaft. Check the following and replace if necessary.

- Tube surface for dents of cracks
- Splines for deformation or abnormal wear
- Joints for non-smooth operation or abnormal noise
- Center bearing for free play, noise or non-smooth operation.
- Oil seals for abnormal wear or damage
- Center bearing for breakage

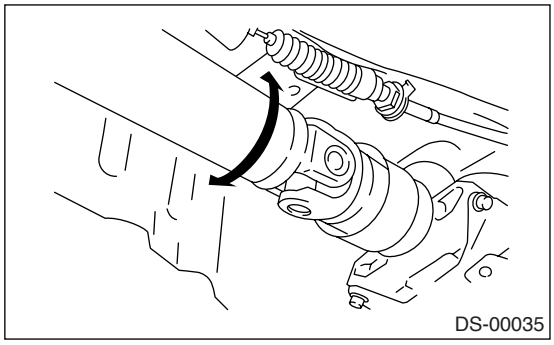
Check the following points with propeller shaft installed in vehicle.

1. JOINTS AND CONNECTIONS

1) Remove the center exhaust pipe.
2) Remove the heat shield cover.
3) Check for any looseness of the yoke flange mounting bolts which connect to rear differential and center bearing bracket mounting bolts.

2. SPLINES AND BEARING

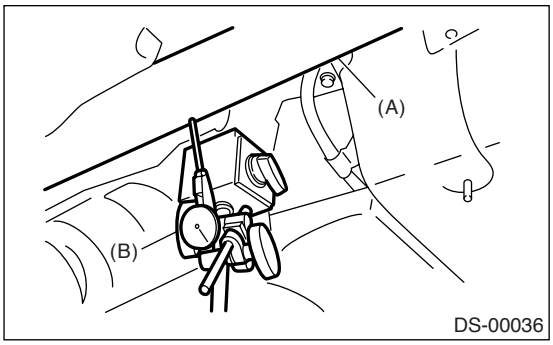
1) Remove the center exhaust pipe.
2) Remove the rear exhaust pipe and muffler.
3) Remove the heat shield cover.
4) Turn the propeller shaft by hand to see if abnormal free play exists at splines. Also move yokes to see if abnormal free play exists at spiders and bearings.



3. RUNOUT OF PROPELLER SHAFT

1) Remove the center exhaust pipe.
2) Remove the rear exhaust pipe and muffler.
3) Remove the heat shield cover.
4) Set the dial gauge with its indicator stem at center of propeller shaft tube.
5) Turn the propeller shaft slowly by hands to check for “runout” of propeller shaft.

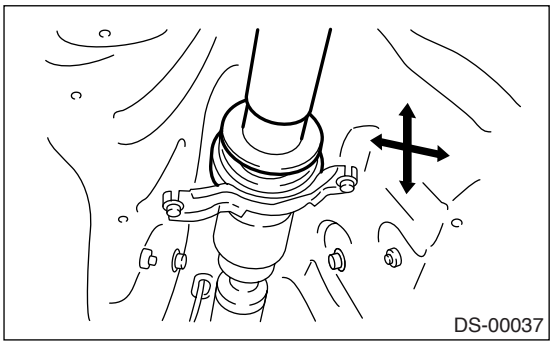
Runout:
Service limit 0.6 mm (0.024 in)



(A) Propeller shaft
(B) Dial gauge

4. CENTER BEARING FREE PLAY

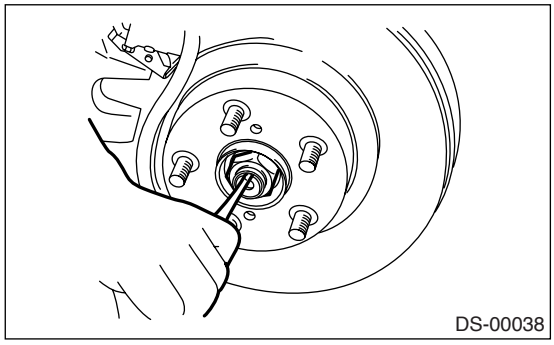
1) Remove the front and center exhaust pipe.
2) Remove the rear exhaust pipe and muffler.
3) Remove the heat shield cover.
4) Move the propeller shaft near center bearing up and down, and left and right with your hand to check for any abnormal bearing free play.



3. Front Axle

A: REMOVAL

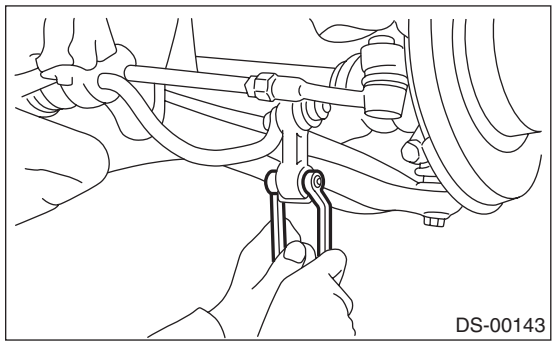
1) Disconnect the ground cable from battery.
2) Lift-up the vehicle and remove the front wheels.
3) Unlock the axle nut.



4) Remove the axle nut using a socket wrench while depressing the brake pedal.

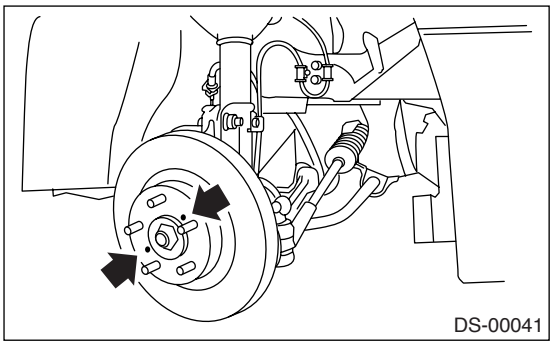
CAUTION:
Remove the wheel before loosening the axle nut. Failure to follow this rule may damage the wheel bearings.

5) Remove the stabilizer link.

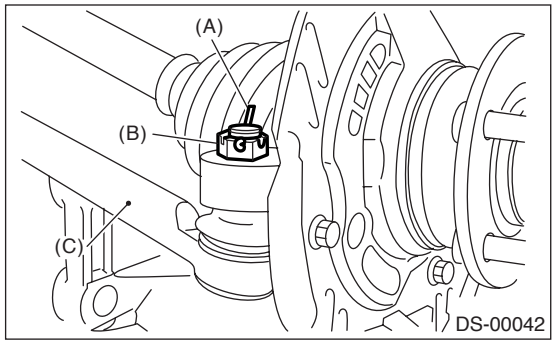


6) Remove the disc brake caliper from housing, and suspend it from strut using a wire.
7) Remove the disc rotor from hub.

NOTE:
If the disc rotor seizes up within hub, drive disc rotor out by installing an 8-mm bolt in screw hole on rotor.

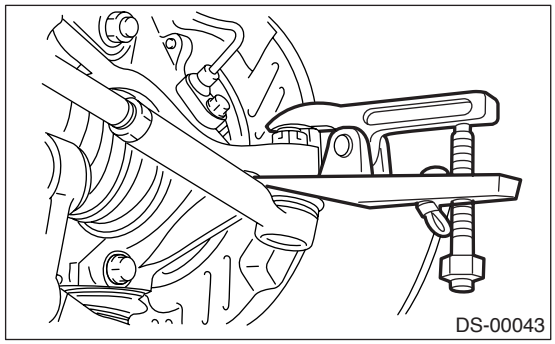


8) Remove the cotter pin and castle nut which secure tie-rod end to housing knuckle arm.

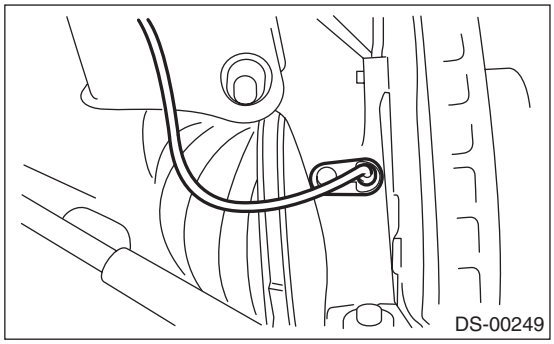


(A) Cotter pin
(B) Castle nut
(C) Tie-rod

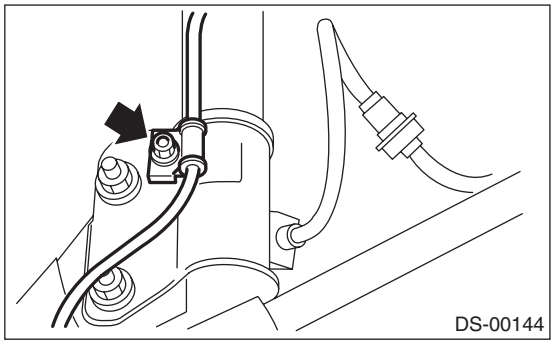
9) Using a puller, remove the tie-rod ball joint from knuckle arm.



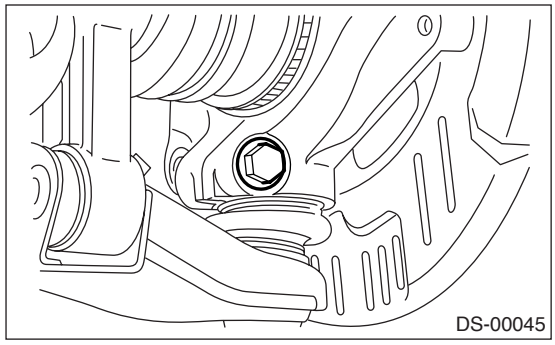
10) Remove the ABS wheel speed sensor assembly and harness.



11) Remove the bolts which secure sensor harness to strut.

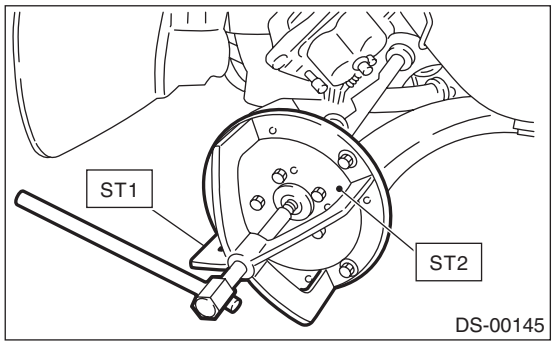


12) Remove the front arm ball joint from housing.

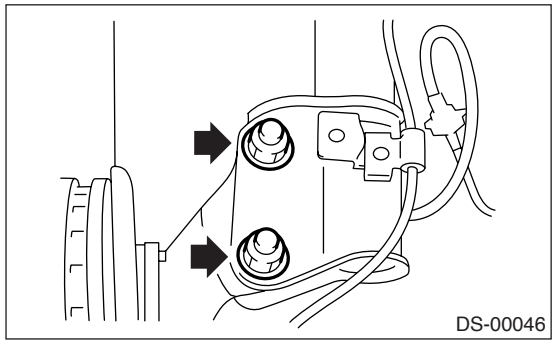


13) Remove the PTJ from transmission.
14) Remove the front drive shaft assembly from hub. If it is hard to remove, use STs.

ST1	926470000	AXLE SHAFT PULLER
ST2	927140000	AXLE SHAFT PULLER PLATE



15) After scribing an alignment mark on camber adjusting bolt head, remove the bolts which connect housing and strut, and disconnect the housing from strut.



B: INSTALLATION

1) While aligning the alignment mark on the camber adjusting bolt head, tighten the housing and strut using a new self-locking nut.

Tightening torque:
177 N·m (18.0 kgf-m, 130 ft-lb)

2) Install the front drive shaft. <Ref. to DS-22, INSTALLATION, Front Drive Shaft.>

3) Install the front arm ball joint to housing.

Tightening torque:
49 N·m (5.0 kgf-m, 36 ft-lb)

4) Install the ABS wheel speed sensor harness to strut.
5) Install the ABS wheel speed sensor on housing.

Tightening torque:
32 N·m (3.3 kgf-m, 23.9 ft-lb)

6) Install the disc rotor on hub.
7) Install the disc brake caliper on housing.

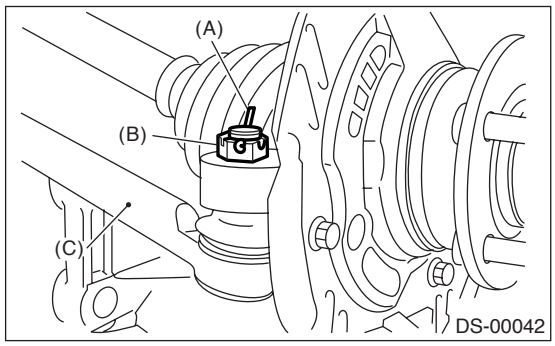
Tightening torque:
78 N·m (8.0 kgf-m, 57.9 ft-lb)

8) Install the stabilizer link.
9) Connect the tie-rod end ball joint to the knuckle arm with a castle nut.

Tightening torque:
27.0 N·m (2.75 kgf-m, 19.9 ft-lb)

CAUTION:
When connecting, do not hit the cap at bottom of tie-rod end with hammer.

10) Tighten the castle nut to specified torque and tighten further within 60° until the pin hole is aligned with the slot in nut. Bend the cotter pin to lock.



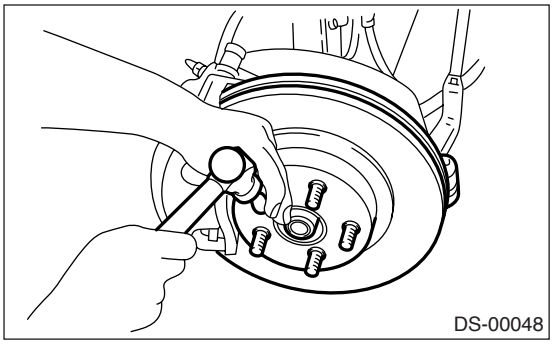
(A) Cotter pin
(B) Castle nut
(C) Tie-rod

11) While depressing the brake pedal, tighten a new axle nut (olive color) to specified torque and lock it securely.

Tightening torque:
220 N·m (22.4 kgf-m, 162 ft-lb)

CAUTION:
• Install the wheel after installation of axle nut. Failure to follow this rule may damage the wheel bearing.
• Be sure to tighten the axle nut to specified torque. Do not overtighten it as this may damage wheel bearing.

12) After tightening the axle nut, lock it securely.

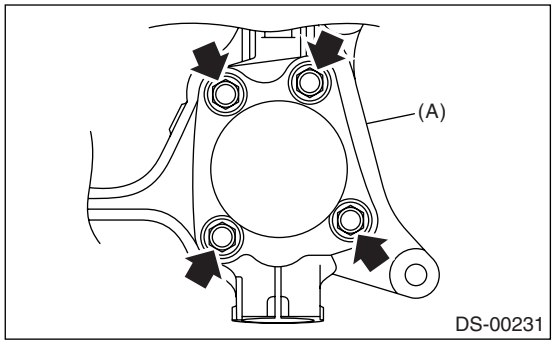


13) Install the wheel and tighten the wheel nuts to specified torque.

Tightening torque:
90 N·m (9.2 kgf-m, 66 ft-lb)

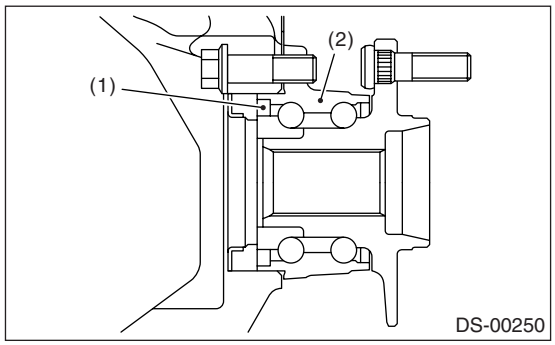
C: DISASSEMBLY

1) Remove the four bolts from housing, and remove the front hub unit bearing and disc cover.



(A) Housing

CAUTION:
• Do not get closer the tool which charged magnetism to magnetic encorder.
• Be careful not to damage the magnetic encoder.



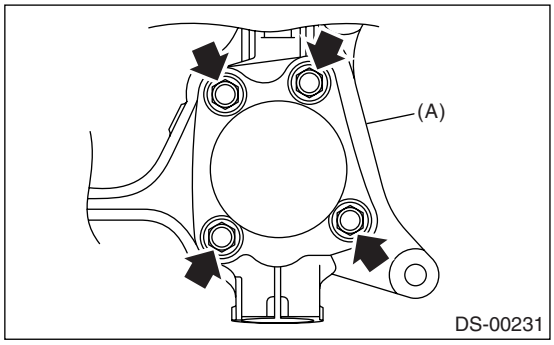
(1) Magnetic encoder
(2) Front hub unit bearing

2) Disassemble the front hub unit bearing. <Ref. to DS-18, DISASSEMBLY, Front Hub Unit Bearing.>

D: ASSEMBLY

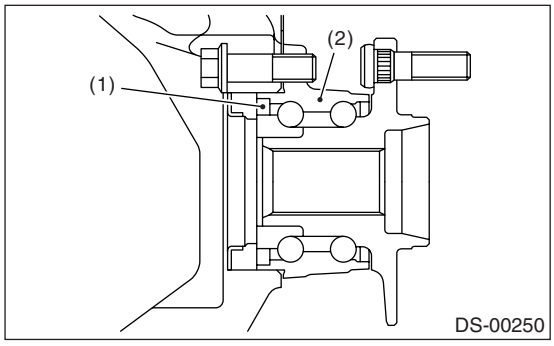
1) Assemble the front hub unit bearing. <Ref. to DS-18, ASSEMBLY, Front Hub Unit Bearing.>
2) Place the disc cover between housing and front hub unit, and tighten the four bolts.

Tightening torque:
65 N·m (6.6 kgf-m, 47.9 ft-lb)



(A) Housing

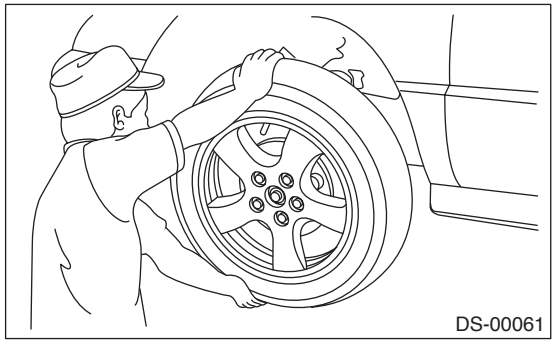
CAUTION:
• Do not get closer the tool which charged magnetism to magnetic encorder.
• Be careful not to damage the magnetic encoder.



(1) Magnetic encoder
(2) Front hub unit bearing

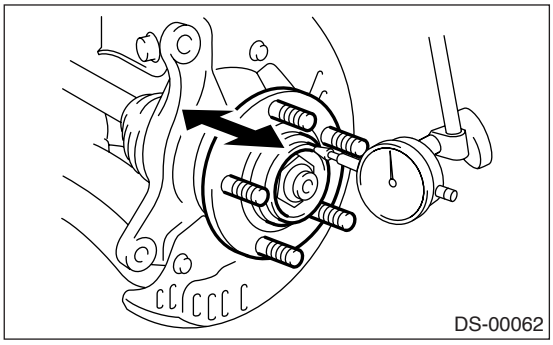
E: INSPECTION

1) Moving the front tire up and down by hand, check there is no backlash in bearing, and check the wheel rotates smoothly.



2) Inspect the lean of axis direction using a dial gauge. Replace the bearing if the load range exceeds the limitation.

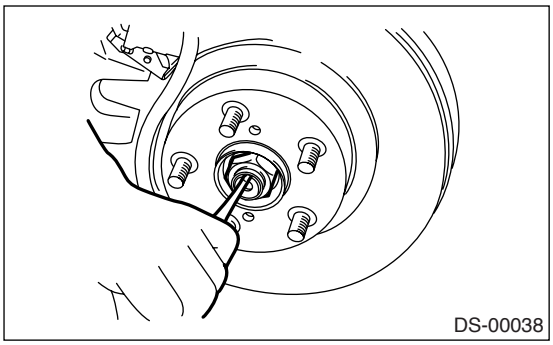
Service limit:
Maximum: 0.05 mm (0.0020 in)



4. Front Hub Unit Bearing

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Lift-up the vehicle and remove the front wheels.
3) Unlock the axle nut.

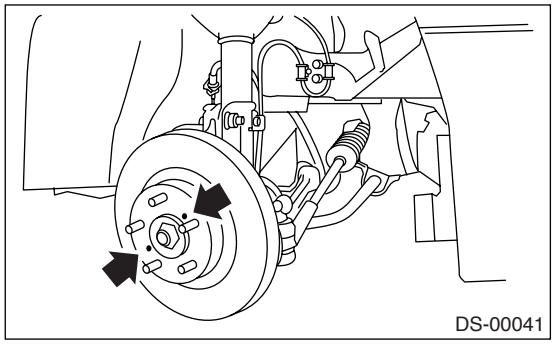


4) Remove the axle nut using a socket wrench while depressing the brake pedal.

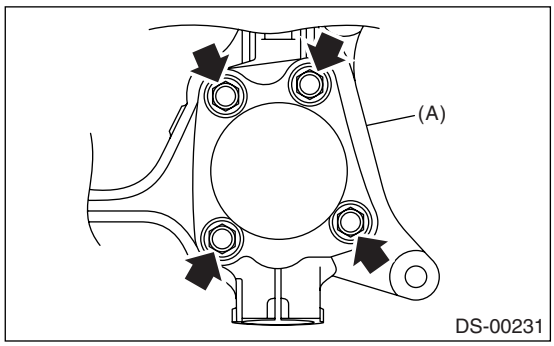
CAUTION:
Remove the wheel before loosening the axle nut. Failure to follow this rule may damage the wheel bearings.

5) Remove the disc brake caliper from housing, and suspend it from strut using a wire.
6) Remove the disc rotor from hub.

NOTE:
If the disc rotor seizes up within hub, drive disc rotor out by installing an 8-mm bolt in screw hole on rotor.

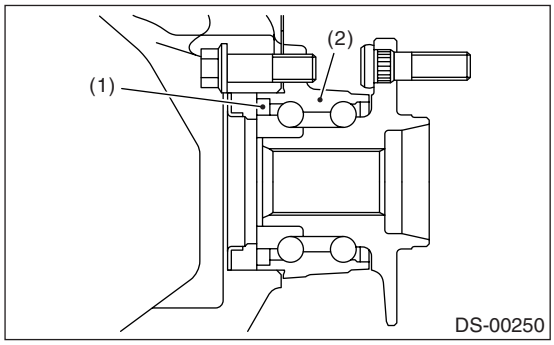


7) Remove four bolts from housing.



(A) Housing

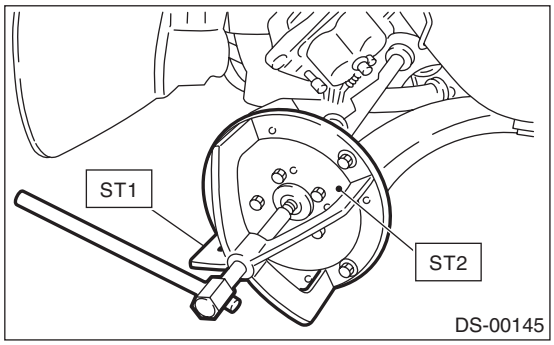
CAUTION:
• Do not get closer the tool which charged magnetism to magnetic encorder.
• Be careful not to damage the magnetic encoder.



(1) Magnetic encoder
(2) Front hub unit bearing

8) Remove the front hub unit bearing. If it is hard to remove, use STs.

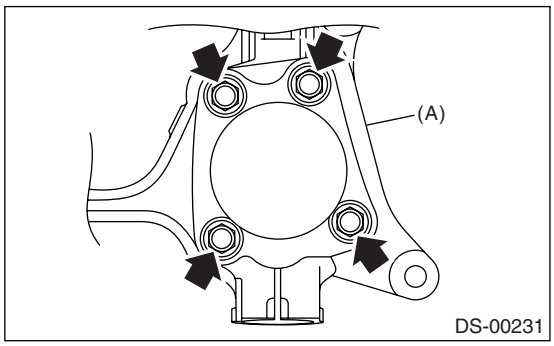
ST1	926470000	AXLE SHAFT PULLER
ST2	927140000	AXLE SHAFT PULLER PLATE



B: INSTALLATION

1) Place the disc cover between housing and front hub unit, and tighten the four bolts.

Tightening torque:
65 N·m (6.6 kgf-m, 47.9 ft-lb)



(A) Housing

2) Install the front drive shaft. <Ref. to DS-22, INSTALLATION, Front Drive Shaft.>
3) Tighten the axle nut temporarily.
4) Install the disc rotor on hub.
5) Install the disc brake caliper on the housing.

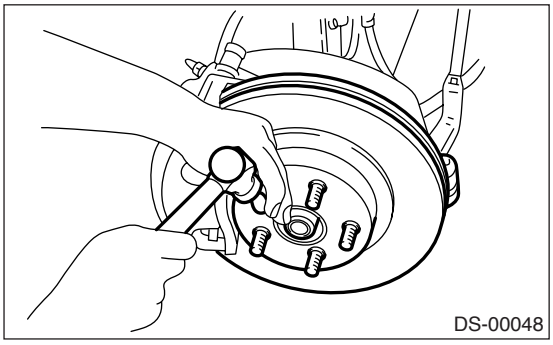
Tightening torque:
78 N·m (8.0 kgf-m, 57.9 ft-lb)

6) While depressing the brake pedal, tighten a new axle nut (olive color) to specified torque and lock it securely.

Tightening torque:
220 N·m (22.4 kgf-m, 162 ft-lb)

CAUTION:
• Install the wheel after installation of the axle nut. Failure to follow this rule may damage the wheel bearing.
• Be sure to tighten the axle nut to specified torque. Do not overtighten it as this may damage wheel bearing.

7) After tightening the axle nut, lock it securely.



8) Install the wheel and tighten the wheel nuts to specified torque.

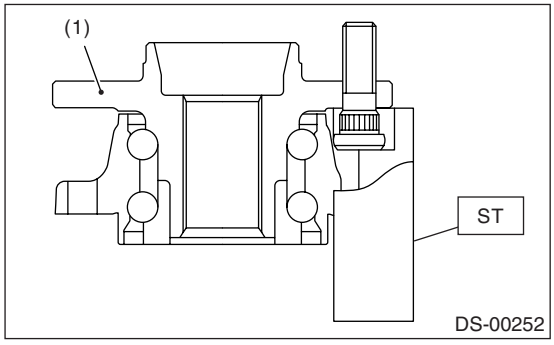
Tightening torque:
90 N·m (9.2 kgf-m, 66 ft-lb)

C: DISASSEMBLY

Using the ST and a hydraulic press, drive hub bolts out.
ST 28399AG000 HUB STAND

CAUTION:
• Be careful not to hammer the hub bolts. This may deform the hub.
• Do not reuse the hub bolt.

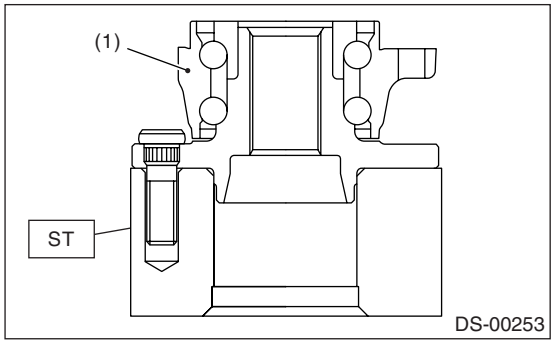
NOTE:
Since the hub unit bearing can not be disassembled, only hub bolts can be removed.



(1) Front hub unit bearing

D: ASSEMBLY

1) Attach the hub to ST securely.
ST 927080000 HUB STAND



(1) Front hub unit bearing

2) Using a press, press new hub bolts until their seating surfaces contact the hub.

NOTE:
Use 12 mm (0.47 in) dia. holes in HUB STAND to prevent bolts from tilting.

E: INSPECTION

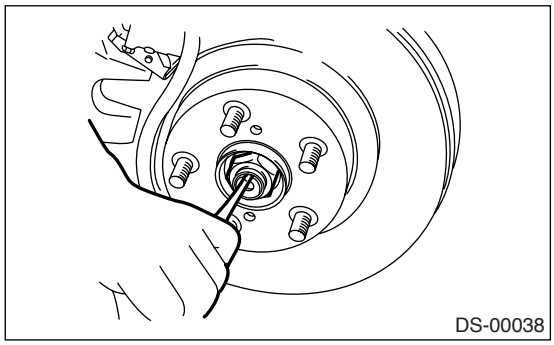
Refer to “FRONT AXLE” for inspection procedures. <Ref. to DS-15, INSPECTION, Front Axle.>

CAUTION:
If there is any fault in the bearing, replace hub unit bearing.

5. Rear Hub Unit Bearing

A: REMOVAL

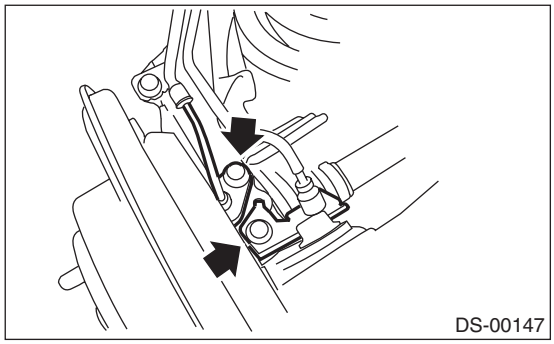
1) Disconnect the ground cable from battery.
2) Lift-up the vehicle, and then remove the rear wheels.
3) Unlock the axle nut.



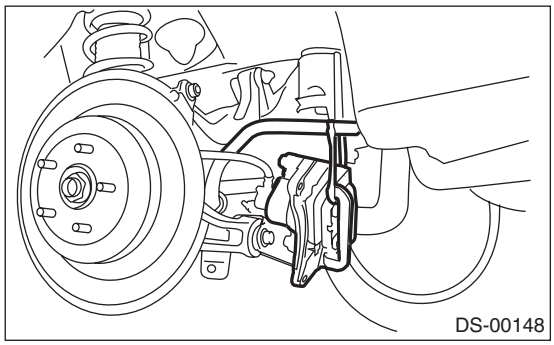
4) While applying the parking brake, remove the axle nut using the socket wrench.

CAUTION:
Remove the wheel before loosening the axle nut. Failure to follow this rule may damage the wheel bearings.

5) Release the parking brake.
6) Remove the rear ABS wheel speed sensor.



7) Remove the disc brake caliper from back plate, and suspend it from stabilizer using wire.

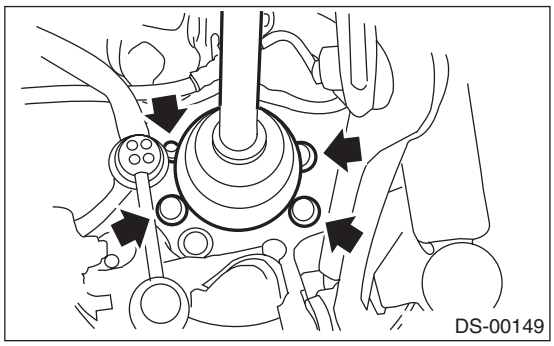


8) Remove the disc rotor from hub.

NOTE:
• Mark the mating surface of hub and disc rotor before removing the disc rotor to avoid confusing when installing.

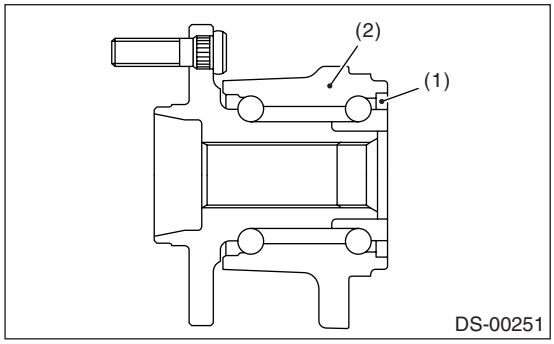
• If the disc rotor seizes up within hub, drive the disc rotor out by installing an 8-mm bolt in screw hole on rotor.

9) Remove the four bolts from rear arm.

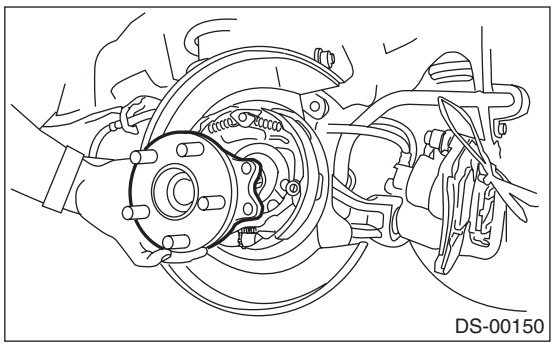


10) Remove the hub unit bearing.

CAUTION:
• Be careful not to damage the magnetic encoder.
• Do not get closer the tool which charged magnetism to magnetic encorder.

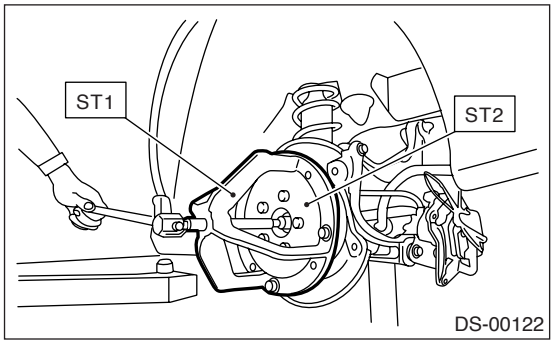


(1) Magnetic encoder
(2) Rear hub unit bearing



NOTE:
If it is hard to remove, use STs.

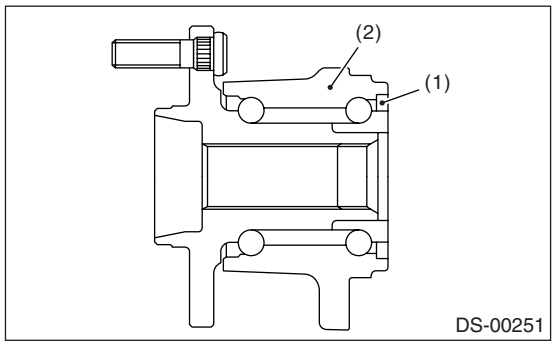
ST1	926470000	AXLE SHAFT PULLER
ST2	927140000	AXLE SHAFT PULLER PLATE



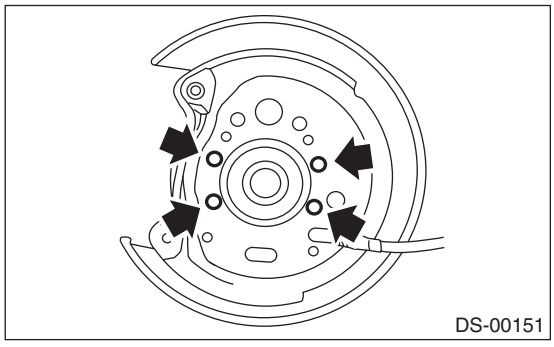
B: INSTALLATION

1) Aligning the hub unit bearing to the mounting hole of the back plate, install the hub unit assembly and back plate. Tighten the axle nut temporarily.

CAUTION:
• Be careful not to damage the magnetic encoder.
• Do not get closer the tool which charged magnetism to magnetic encorder.

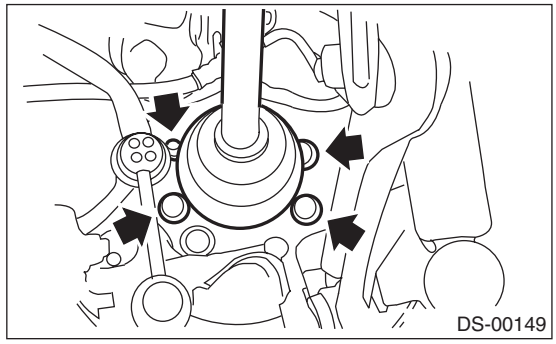


(1) Magnetic encoder
(2) Rear hub unit bearing



2) Tighten the four bolts to the back plate.

Tightening torque:
65 N·m (6.6 kgf-m, 47.9 ft-lb)

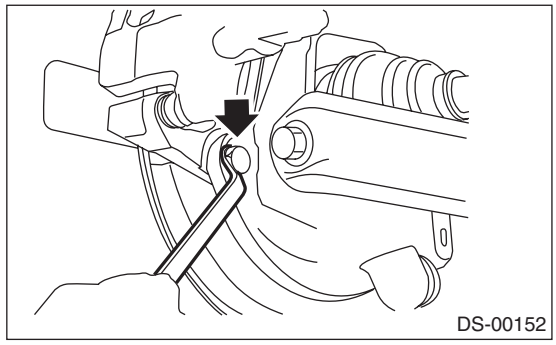


3) Remove the axle nut.
4) Draw the rear drive shaft into specified position.
5) Tighten the new axle nut temporarily.

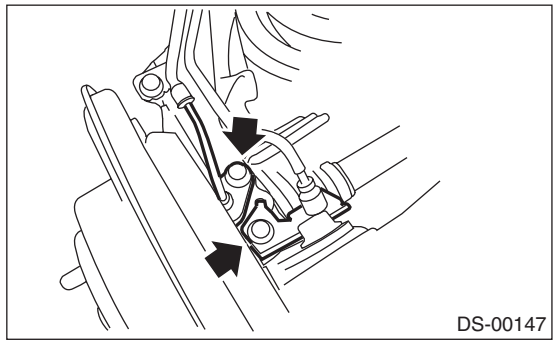
CAUTION:
Use a new axle nut (olive color).

6) Install the disc rotor on hub.
7) Install the disc brake caliper on back plate.

Tightening torque:
52 N·m (5.3 kgf-m, 38.3 ft-lb)



8) Install the rear ABS wheel speed sensor and brake cable bracket.



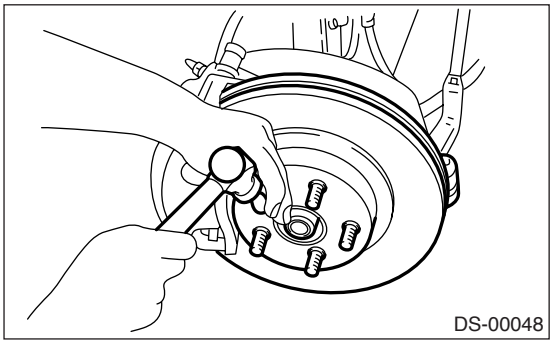
9) Adjust the parking brake lever stroke by turning adjuster. <Ref. to PB-5, ADJUSTMENT, Parking Brake Lever.>

10) While applying the parking brake and depressing the brake pedal, tighten a new axle nut (olive color) to the specified torque and lock it securely.

Tightening torque:
190 N·m (19.4 kgf-m, 140 ft-lb)

CAUTION:
• Install the wheel after installation of the axle nut. Failure to follow this rule may damage the wheel bearing.
• Be sure to tighten the axle nut to specified torque. Do not overtighten it as this may damage wheel bearing.

11) After tightening the axle nut, lock it securely.



DS-00048

12) Install the wheel and tighten the wheel nuts to specified torque.

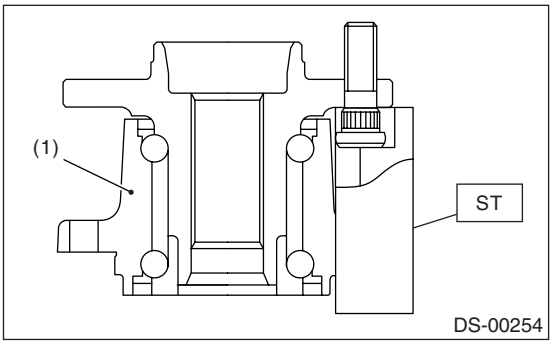
Tightening torque:
90 N·m (9.2 kgf-m, 66 ft-lb)

C: DISASSEMBLY

Using the ST and a hydraulic press, drive hub bolts out.
ST 28399AG000 HUB STAND

CAUTION:
• Be careful not to hammer the hub bolts. This may deform the hub.
• Do not reuse the hub bolt.

NOTE:
Since the hub unit bearing can not be disassembled, only hub bolts can be removed.

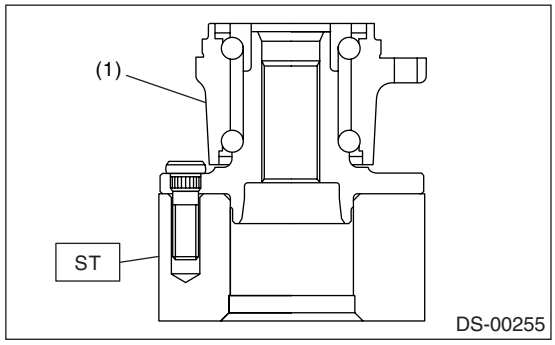


DS-00254

(1) Rear hub unit bearing

D: ASSEMBLY

1) Attach the hub to ST securely.
ST 927080000 HUB STAND



DS-00255

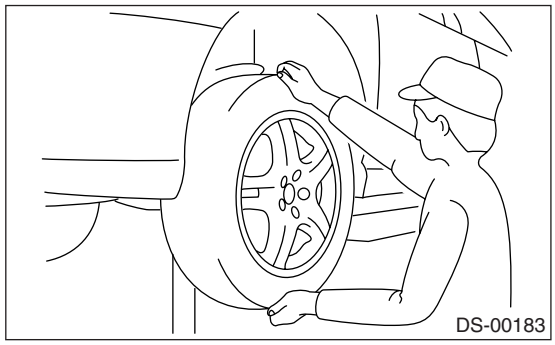
(1) Rear hub unit bearing

2) Using a press, press the new hub bolts until their seating surfaces contact the hub.

NOTE:
Use 12 mm (0.47 in) dia. holes in HUB STAND to prevent bolts from tilting.

E: INSPECTION

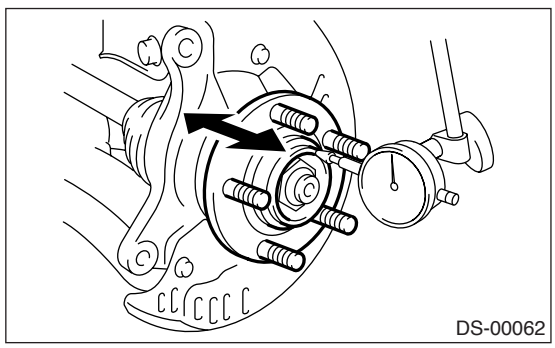
1) Moving the rear tire up and down by hand, check there is no backlash in bearing, and check the wheel rotates smoothly.



DS-00183

2) Inspect the lean of axis direction using a dial gauge. Replace the hub bearing if the lean range exceed the limitation.

Service limit:
Maximum: 0.05 mm (0.0020 in)

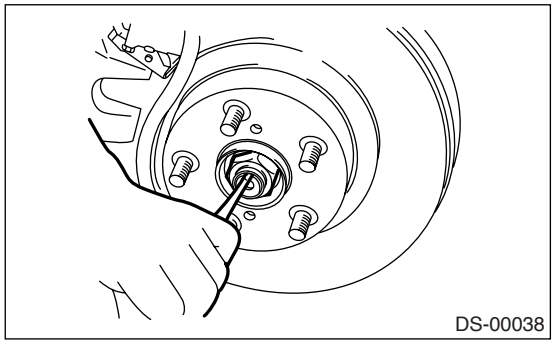


DS-00062

6. Front Drive Shaft

A: REMOVAL

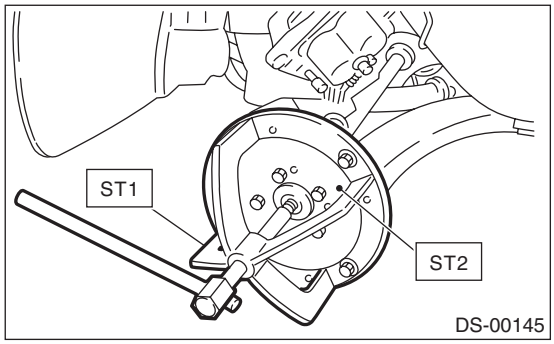
1) Disconnect the ground cable from battery.
2) Lift-up the vehicle and remove the front wheels.
3) Unlock the axle nut.



4) Remove the axle nut using a socket wrench while depressing the brake pedal.

CAUTION:
Remove the wheel before loosening the axle nut. Failure to follow this rule may damage the wheel bearings.

5) Remove the stabilizer link from front arm.
6) Disconnect the front arm from housing.
7) Remove the front drive shaft assembly. If it is hard to remove, use ST1 and ST2.
ST1 926470000 AXLE SHAFT PULLER
ST2 927140000 AXLE SHAFT PULLER PLATE



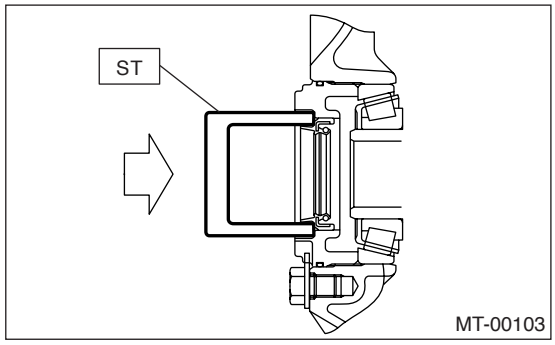
8) Using a bar, remove the front drive shaft from transmission.

CAUTION:
Be careful not to allow the bar to damage holder area.

B: INSTALLATION

1) Using the ST, replace the differential side retainer oil seal with a new one.
ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

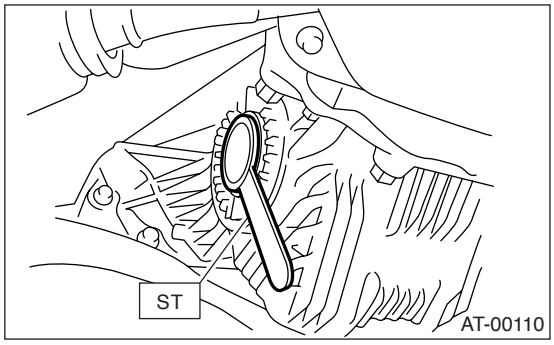
NOTE:
After pulling out the drive shaft, be sure to replace with a new oil seal.



2) Insert the EBJ into hub splines.
3) Draw the drive shaft into specified position.

CAUTION:
Do not hammer drive shaft when installing it.

4) Tighten the axle nut temporarily.
5) Using the ST, install the front drive shaft to transmission.
ST 28399SA010 OIL SEAL PROTECTOR



6) Connect the front arm to housing.

Tightening torque:
49 N·m (5.0 kgf-m, 36 ft-lb)

CAUTION:
Be sure to use a new self-locking nut.

7) Install the stabilizer bracket.
8) While depressing the brake pedal, tighten a new axle nut (olive color) to the specified torque and lock it securely.

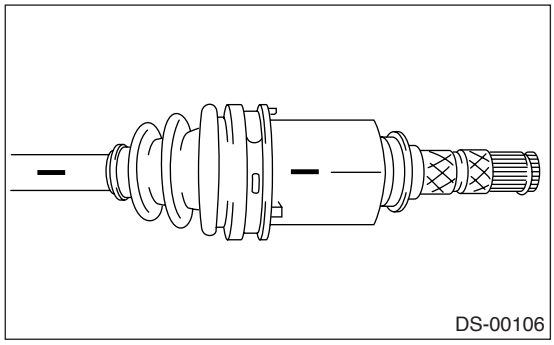
Tightening torque:
220 N·m (22.4 kgf-m, 162 ft-lb)

CAUTION:
• Install the wheel after installation of the axle nut. Failure to follow this rule may damage the wheel bearing.
• Be sure to tighten axle nut to specified torque. Do not overtighten it as this may damage wheel bearing.

9) After tightening axle nut, lock it securely.

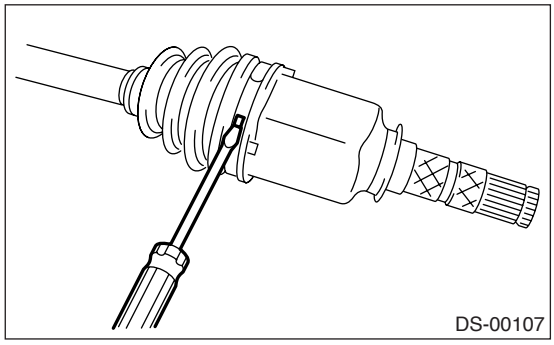
C: DISASSEMBLY

1) Place alignment marks on the shaft and outer race.

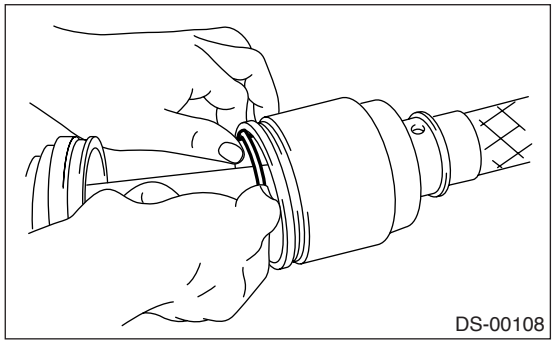


2) Remove the PTJ boot band and boot.

CAUTION:
Be careful not to damage boot.



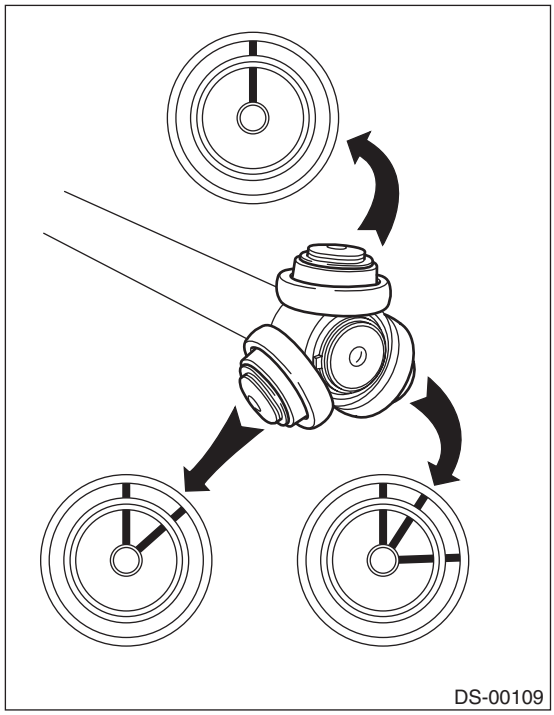
3) Remove the snap ring from PTJ outer race.



4) Remove the PTJ outer race from shaft assembly.
5) Wipe off grease.

CAUTION:
The grease is a special grease. Do not confuse with other greases.

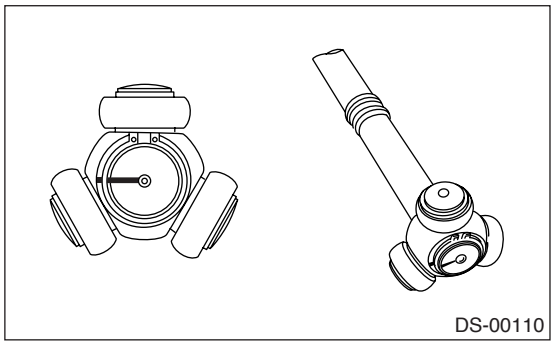
6) Place alignment marks on the roller kit and trunnion.



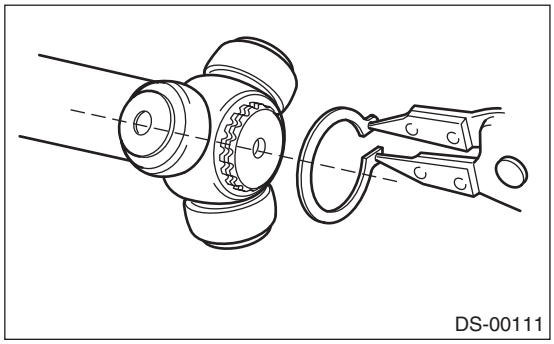
7) Remove the roller kit from trunnion.

CAUTION:
Be careful with the roller kit position.

8) Place alignment marks on the trunnion and shaft.



9) Remove the snap ring and trunnion.



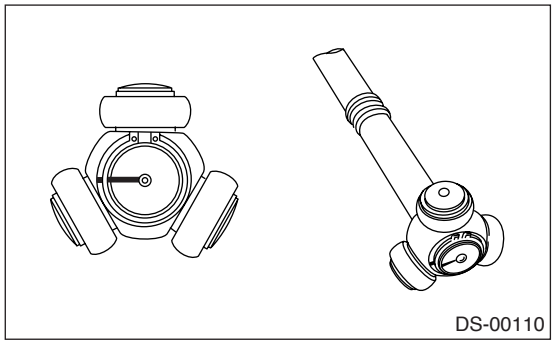
CAUTION:
Be sure to wrap shaft splines with vinyl tape to prevent boot from scratches.

10) Remove the PTJ boot.

NOTE:
Further disassembly of axle is impossible because the BJ cannot be disassembled.

D: ASSEMBLY

1) Place the PTJ boot at the center of shaft.
2) Align alignment marks and install the trunnion on the shaft.



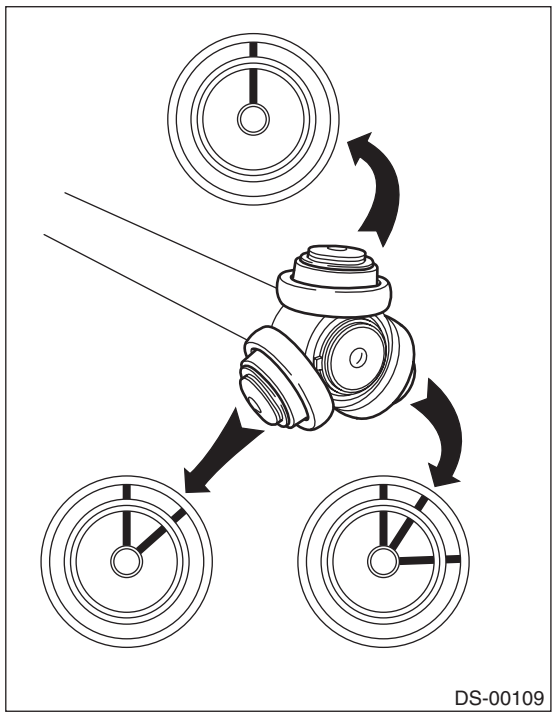
DS-00110

3) Install the snap ring to shaft.

CAUTION:
Confirm that the snap ring is completely fitted in shaft groove.

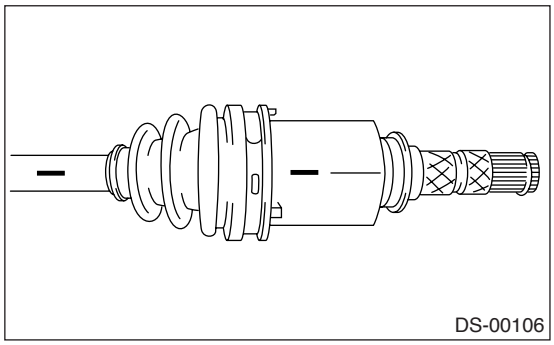
4) Fill 100 to 110 g (3.53 to 3.88 oz.) of specified grease into the interior of PTJ outer race.
5) Apply a thin coat of specified grease to the roller kit and trunnion.
6) Align alignment marks on roller kit and trunnion and install the roller kit.

CAUTION:
Be careful with the roller kit position.



DS-00109

7) Align alignment marks on the shaft and outer race, and install outer race.



DS-00106

8) Install the snap ring in the groove on PTJ outer race.

CAUTION:
Pull the shaft lightly and assure that the snap ring is completely fitted in the groove.

9) Apply an even coat of the specified grease 30 to 40 g (1.06 to 1.41 oz.) to the entire inner surface of boot.
10) Install the PTJ boot taking care not to twist it.

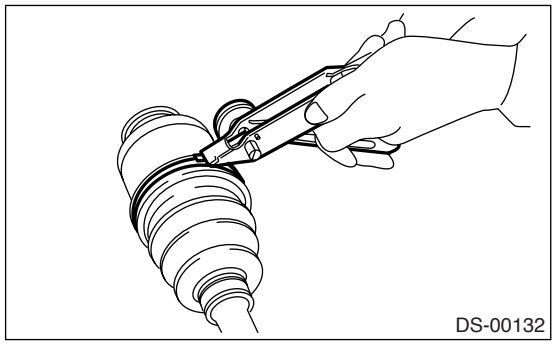
CAUTION:
• The large end of PTJ boot and the boot groove shall be cleaned completely so as to be free from grease and other substances.
• When installing PTJ boot, position outer race of PTJ at center of its travel.

11) Put a new band through the clip and wind twice in alignment with band groove of boot.
12) Pinch the end of band with pliers. Hold the clip and tighten securely.

NOTE:
When tightening boot, use care so that the air within the boot is appropriate.

13) Tighten the band using ST.
ST 925091000 BAND TIGHTENING TOOL

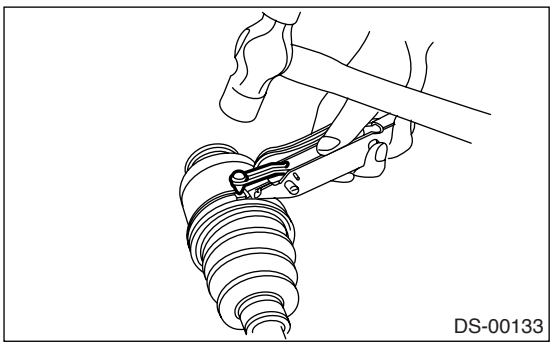
NOTE:
Tighten the band until it cannot be moved by hand.



DS-00132

14) Tap on the clip with the punch provided at the end of ST.
ST 925091000 BAND TIGHTENING TOOL

CAUTION:
Tap to an extent that the boot underneath is not damaged.



15) Cut off the band with an allowance of about 10 mm (0.39 in) left from the clip and bend this allowance over the clip.

CAUTION:
Be careful so that the end of the band is in close contact with clip.

16) Extend and retract the PTJ to provide equal grease coating.

E: INSPECTION

Check the removed parts for damage, wear, corrosion etc. If faulty, repair or replace.

- PTJ (pillow tripod joint)

Check for seizure, corrosion, damage, wear and excessive play.

- EBJ (high-efficiency compact ball fixed joint)

Check for seizure, corrosion, damage and excessive play.

- Shaft

Check for excessive bending, twisting, damage and wear.

- Boot

Check for wear, warping, breakage and scratches.

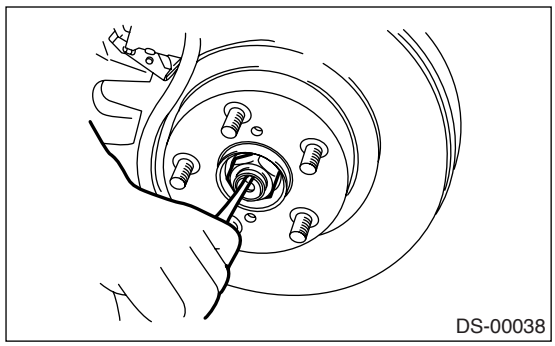
- Grease

Check for discoloration and fluidity.

7. Rear Drive Shaft

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Lift-up the vehicle, and then remove the rear wheels.
3) Unlock the axle nut.



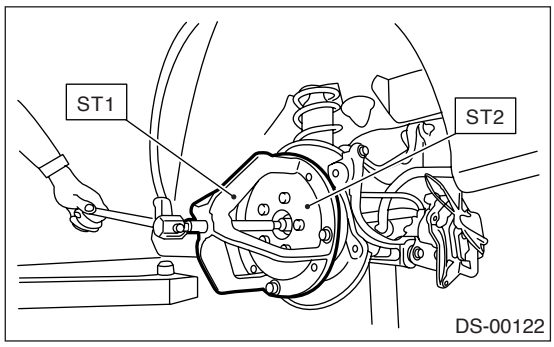
4) While applying the parking brake, remove the axle nut using the socket wrench.

CAUTION:
Remove the wheel before loosening the axle nut. Failure to follow this rule may damage the wheel bearings.

5) Remove the rear differential assembly.
• T-type
<Ref. to DI-29, REMOVAL, Rear Differential (T-type).>
• VA-type
<Ref. to DI-46, REMOVAL, Rear Differential (VA-type).>
6) Remove the axle nut and rear drive shaft. If it is hard to remove, use ST1 and ST2.

ST1	926470000	AXLE SHAFT PULLER
ST2	927140000	AXLE SHAFT PULLER PLATE

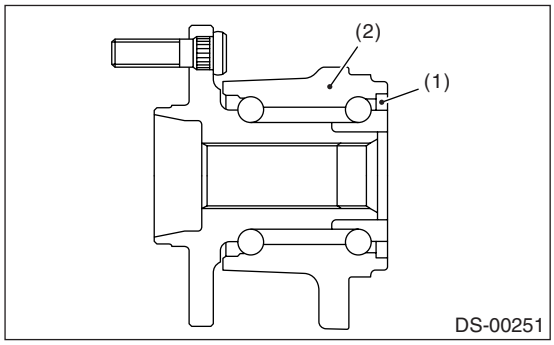
CAUTION:
• Do not hammer drive shaft when removing.
• Do not damage the oil seal and magnetic encoder.



B: INSTALLATION

1) Insert the BJ or EBJ into rear hub splines.

CAUTION:
• Be careful not to damage the magnetic encoder.
• Do not get closer the tool which charged magnetism to magnetic encorder.



(1) Magnetic encoder
(2) Rear hub unit bearing

2) Draw the rear drive shaft into specified position.

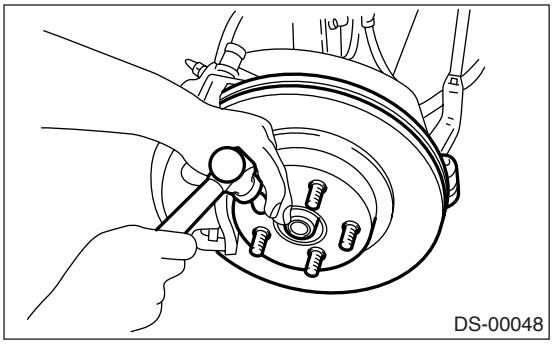
CAUTION:
Do not hammer drive shaft when installing it.

3) Tighten the axle nut temporarily.
4) Install the rear differential assembly.
• T-type
<Ref. to DI-30, INSTALLATION, Rear Differential (T-type).>
• VA-type
<Ref. to DI-47, INSTALLATION, Rear Differential (VA-type).>
5) While applying the parking brake and depressing the brake pedal, tighten a new axle nut (olive color) to specified torque and lock it securely.

Tightening torque:
190 N·m (19.4 kgf-m, 140 ft-lb)

CAUTION:
• Install the wheel after installation of the axle nut. Failure to follow this rule may damage the wheel bearing.
• Be sure to tighten the axle nut to specified torque. Do not overtighten it as this may damage wheel bearing.

6) Lock the axle nut securely.



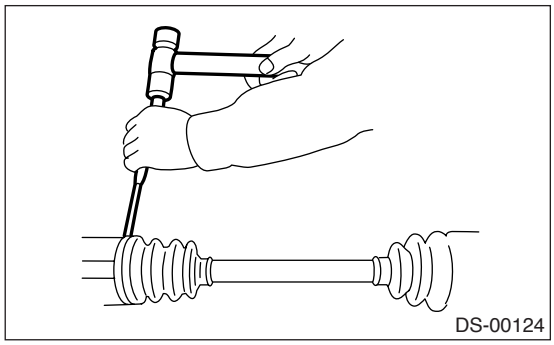
7) Install the wheel.

Tightening torque:
90 N·m (9.2 kgf-m, 66 ft-lb)

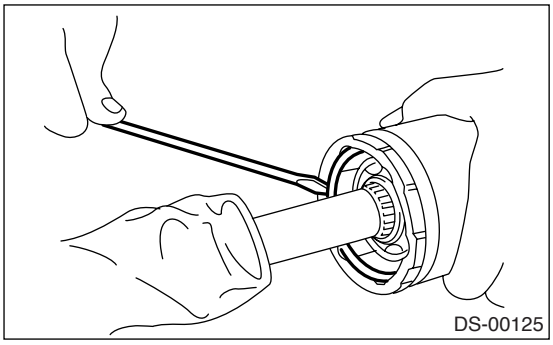
C: DISASSEMBLY

1) Straighten the bent claw of larger end of DOJ boot.
2) Loosen the band by means of screwdriver or pliers.

CAUTION:
Be careful not to damage boot.



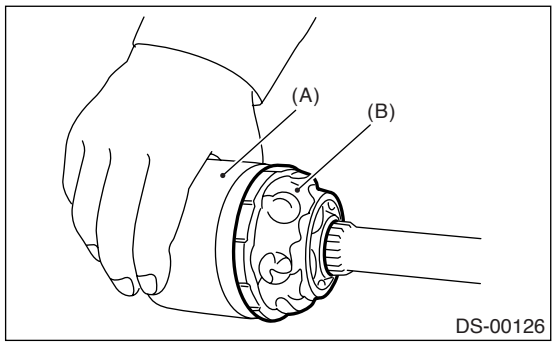
3) Remove the boot band on the small end of DOJ boot in the same manner.
4) Remove the larger end of DOJ boot from DOJ outer race.
5) Pry and remove the round circlip located at the neck of DOJ outer race with a screwdriver.



6) Take out the DOJ outer race from shaft assembly.
7) Wipe off the grease and take out balls.

CAUTION:
The grease is a special grease (grease for constant velocity joint). Do not confuse with other greases.

NOTE:
Disassemble exercising care not to lose balls (6 pcs).



(A) Outer race
(B) Grease

8) To remove the cage from inner race, turn the cage by a half pitch to the track groove of inner race and shift the cage.
9) Remove the snap ring, which fixes inner race to shaft, using pliers.
10) Take out the DOJ inner race.
11) Take off the DOJ cage from shaft and remove DOJ boot.

CAUTION:
Be sure to wrap shaft splines with vinyl tape to prevent boot from scratches.

12) Remove the BJ boot or EBJ boot in the same procedure as DOJ boot.

NOTE:
Further disassembly of axle is impossible because the BJ and EBJ cannot be disassembled.

D: ASSEMBLY

NOTE:
Use specified grease.

BJ side:
NTG2218-M (Part No. 28395AG010)

EBJ side:
NTG2218-M (Part No. 28395AG000)

DOJ side:
NKG205 (Part No. 28495AG000)

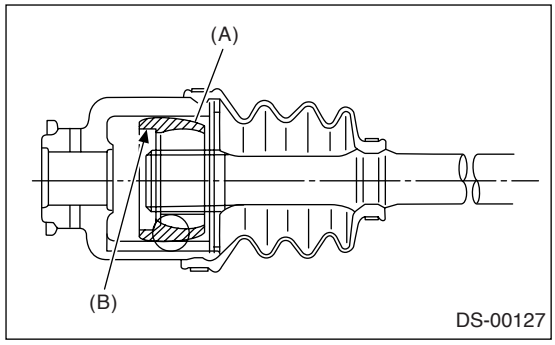
1) Install the BJ or EBJ boot in specified position, and fill it with 60 to 70 g (2.12 to 2.47 oz.) of specified grease.

2) Place the DOJ boot at the center of shaft.

CAUTION:
Be sure to wrap shaft splines with vinyl tape to prevent boot from scratches.

3) Insert the DOJ cage onto shaft.

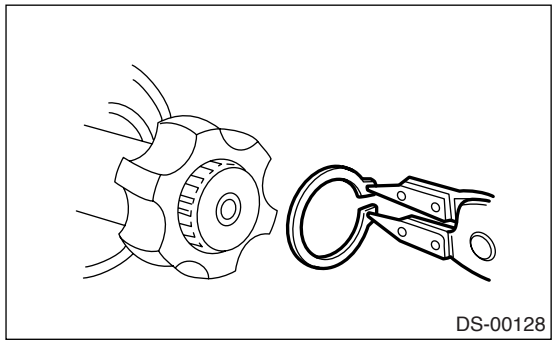
NOTE:
Insert the cage with the cut-out portion facing the shaft end, since the cage has an orientation.



(A) Cage
(B) Cutout

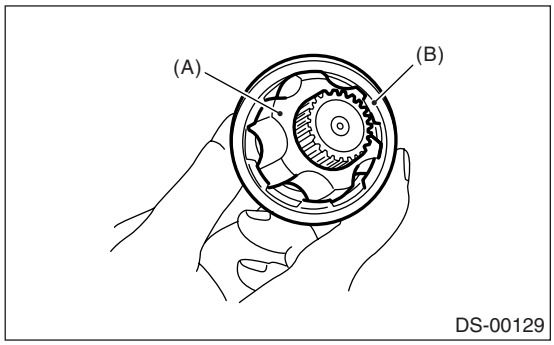
4) Install the DOJ inner race on shaft and fit the snap ring with pliers.

NOTE:
Confirm that the snap ring is completely fitted in the shaft groove.



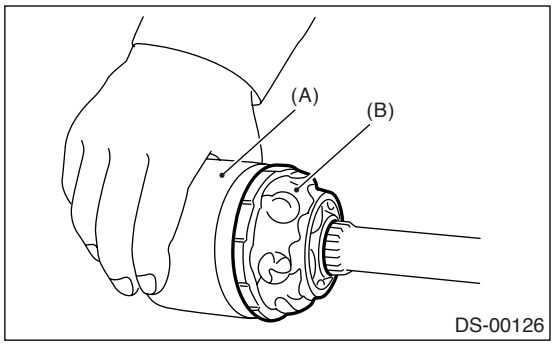
5) Install the cage to inner race fixed upon shaft.

NOTE:
Fit the cage with the protruded part aligned with the track on the inner race and then turn by a half pitch.



(A) Inner race
(B) Cage

6) Fill 80 to 90 g (2.82 to 3.17 oz.) of specified grease into the interior of DOJ outer race.
7) Apply a coat of specified grease to the cage pocket and six balls.
8) Insert six balls into the cage pocket.
9) Align the outer race track and ball positions, and place the shaft, inner race, cage and balls in the original positions and then fit outer race.

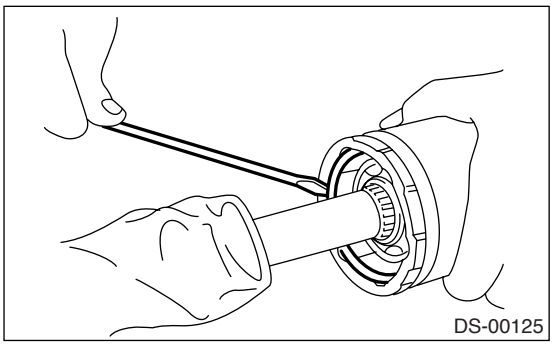


(A) Outer race
(B) Grease

10) Install the snap ring in the groove on DOJ outer race.

NOTE:
• Assure that the balls, cage and inner race are completely fitted in the outer race of DOJ.
• Use care not to place the matched position of snap ring in the ball groove of outer race.

• Pull the shaft lightly and assure that the circlip is completely fitted in the groove.



DS-00125

11) Apply an even coat of the specified grease [20 to 30 g (0.71 to 1.06 oz.)] to the entire inner surface of boot. Also apply grease to shaft.
12) Install the DOJ boot taking care not to twist it.

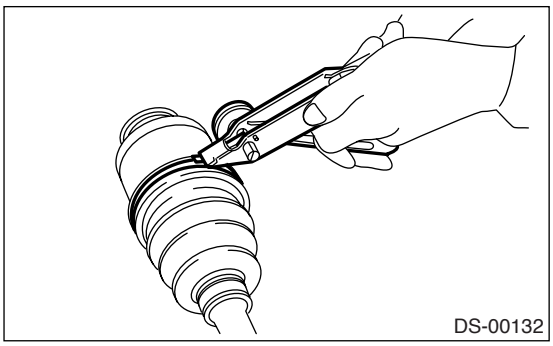
NOTE:
• The inside of the larger end of DOJ boot and the boot groove shall be cleaned so as to be free from grease and other substances.
• When installing DOJ boot, position outer race of DOJ at center of its travel.

13) Put a new band through the clip and wind twice in alignment with band groove of boot.
14) Pinch the end of band with pliers. Hold the clip and tighten securely.

NOTE:
When tightening boot, exercise care so that the air within the boot is appropriate.

15) Tighten the band by using ST.
ST 925091000 BAND TIGHTENING TOOL

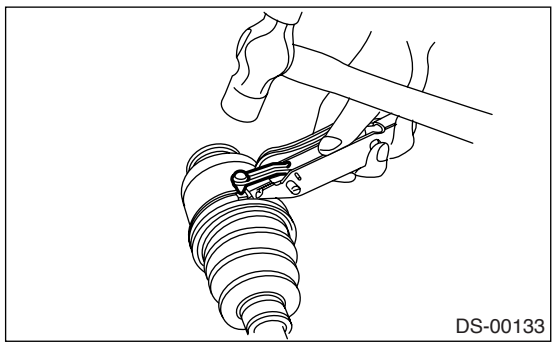
NOTE:
Tighten the band until it cannot be moved by hand.



DS-00132

16) Tap on the clip with the punch provided at the end of ST.
ST 925091000 BAND TIGHTENING TOOL

NOTE:
Tap to an extent that the boot underneath is not damaged.



DS-00133

17) Cut off the band with an allowance of about 10 mm (0.39 in) left from the clip and bend this allowance over the clip.

NOTE:
Be careful so that the end of the band is in close contact with clip.

18) Install the BJ boot or EBJ boot in the same procedure as DOJ boot.
19) Extend and retract the DOJ to provide equal grease coating.

E: INSPECTION

Check the removed parts for damage, wear, corrosion etc. Repair or replace if defective.
• DOJ (Double Offset Joint)
Check for seizure, corrosion, damage, wear and excessive play.
• EBJ (high-efficiency compact ball fixed joint)
Check for seizure, corrosion, damage, wear and excessive play.
• Shaft
Check for excessive bending, twisting, damage and wear.
• BJ (Bell Joint)
Check for seizure, corrosion, damage and excessive play.
• Boot
Check for wear, warping, breakage and scratches.
• Grease
Check for discoloration and fluidity.

8. General Diagnostic Table

A: INSPECTION

NOTE:
Vibration while cruising may be caused by an unbalanced tire, improper tire inflation pressure, improper wheel alignment, etc.

Symptom	Possible cause	Corrective action
Noise or vibration from propeller shaft	Center bearing	Check the center bearing. <Ref. to DS-12, CENTER BEARING FREE PLAY, INSPECTION, Propeller Shaft.>
	Runout of propeller shaft	Check the vibration of propeller shaft. <Ref. to DS-11, RUNOUT OF PROPELLER SHAFT, INSPECTION, Propeller Shaft.>
	Loose or free play of connection	Check joint and connector. <Ref. to DS-11, JOINTS AND CONNECTIONS, INSPECTION, Propeller Shaft.>
		Check splines and bearing. <Ref. to DS-11, SPLINES AND BEARING, INSPECTION, Propeller Shaft.>
Abnormal wheel vibration	Wheel is out of balance.	Check the wheel balance. <Ref. to WT-7, ADJUSTMENT, Wheel Balancing.>
	Front wheel alignment	Check the front wheel alignment. <Ref. to FS-8, INSPECTION, Wheel Alignment.>
	Rear wheel alignment	Check the rear wheel alignment. <Ref. to RS-8, INSPECTION, Wheel Alignment.>
	Front strut	Check the front strut. <Ref. to FS-24, INSPECTION, Front Strut.>
	Rear shock absorber	Check the rear shock absorber. <Ref. to RS-16, INSPECTION, Rear Shock Absorber.>
	Front drive shaft	Check the front drive shaft. <Ref. to DS-25, INSPECTION, Front Drive Shaft.>
	Rear drive shaft	Check the rear drive shaft. <Ref. to DS-29, INSPECTION, Rear Drive Shaft.>
	Front hub unit bearing	Check the front hub unit bearing. <Ref. to DS-18, INSPECTION, Front Hub Unit Bearing.>
	Rear hub unit bearing	Check the rear hub unit bearing. <Ref. to DS-21, INSPECTION, Rear Hub Unit Bearing.>
Noise from the underbody	Wheel is out of balance.	Check the wheel balance. <Ref. to WT-7, ADJUSTMENT, Wheel Balancing.>
	Front wheel alignment	Check the front wheel alignment. <Ref. to FS-8, INSPECTION, Wheel Alignment.>
	Rear wheel alignment	Check the rear wheel alignment. <Ref. to RS-8, INSPECTION, Wheel Alignment.>
	Front strut	Check the front strut. <Ref. to FS-24, INSPECTION, Front Strut.>
	Rear shock absorber	Check the rear shock absorber. <Ref. to RS-16, INSPECTION, Rear Shock Absorber.>

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

4. Front ABS Wheel Speed Sensor 13
5. Rear ABS Wheel Speed Sensor 15
6. Front Magnetic Encoder 16
7. Rear Magnetic Encoder 17
8. G Sensor 18

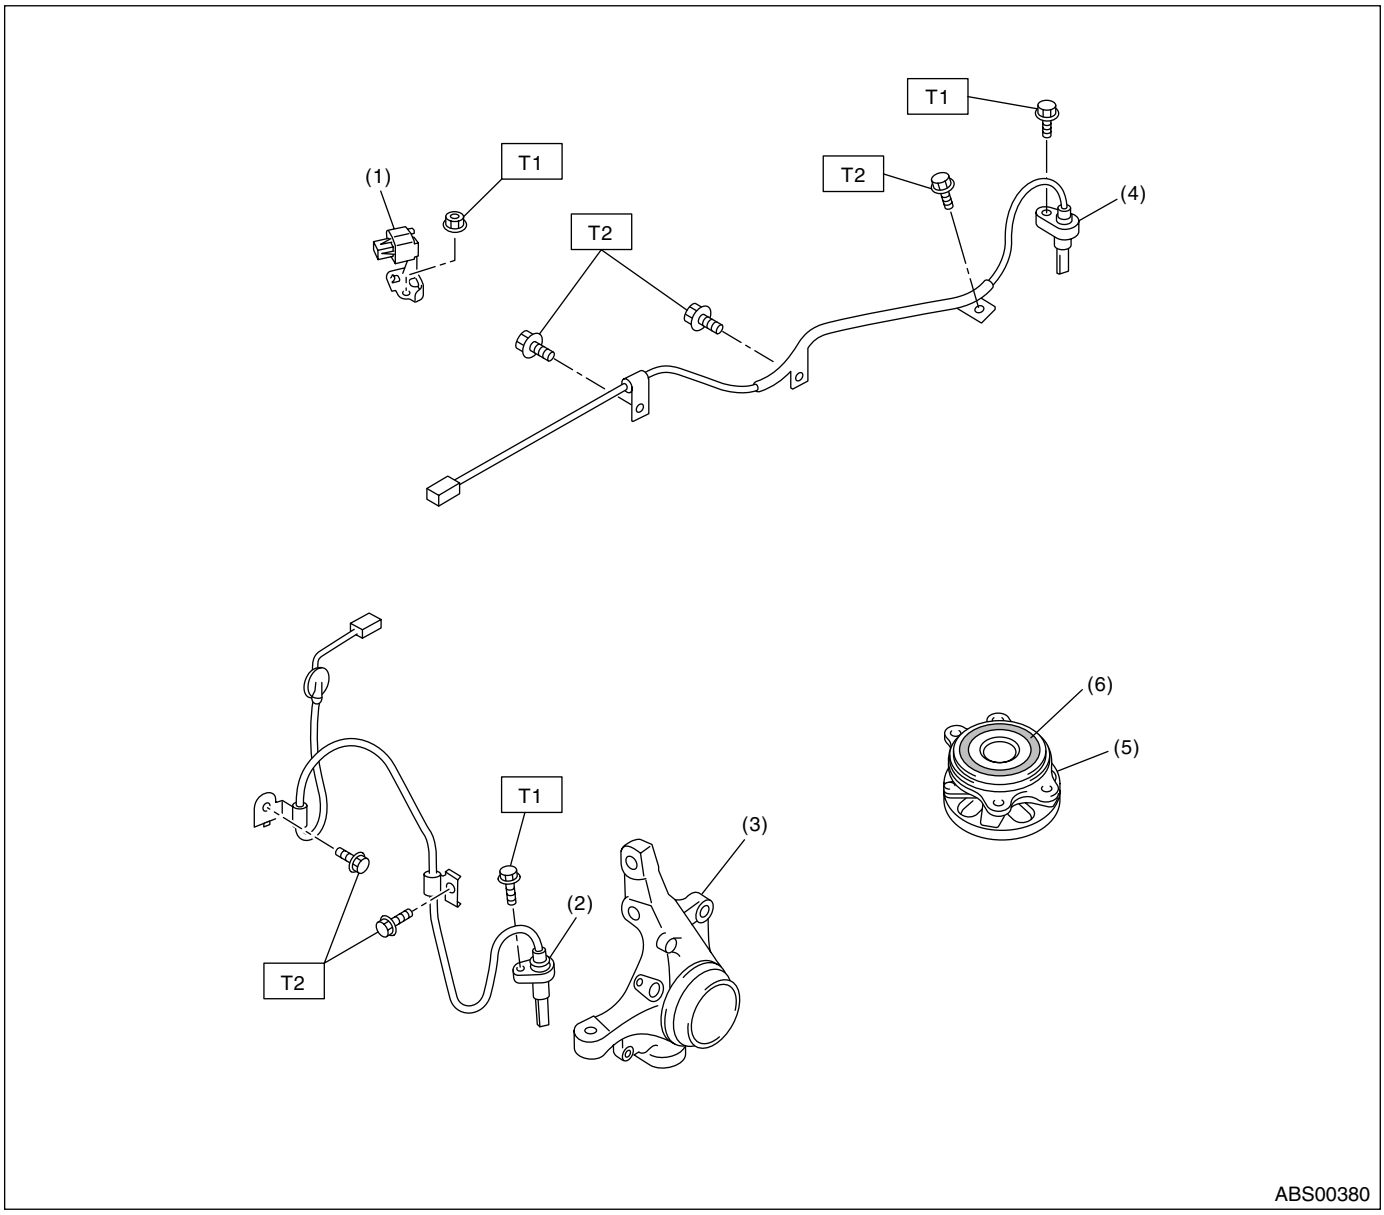
1. General Description

A: SPECIFICATION

Item				Standard value or identification
ABS wheel speed sensor	ABS wheel speed sensor gap (for reference)		Front	0.77 — 1.43 mm (0.030 — 0.056 in)
			Rear	0.64 — 1.56 mm (0.025 — 0.061 in)
	Marks of harness (Marks, Color)	Front	RH	K1 (White)
			LH	K2 (Yellow)
		Rear	RH	K5 (White)
			LH	K6 (Yellow)
G sensor	G sensor voltage			2.3±0.2 V
ABSCM&H/U identification	AT (Except for OUTBACK)			J1
	MT (Except for OUTBACK)			J2
	AT (OUTBACK)			J3
	MT (OUTBACK)			J4

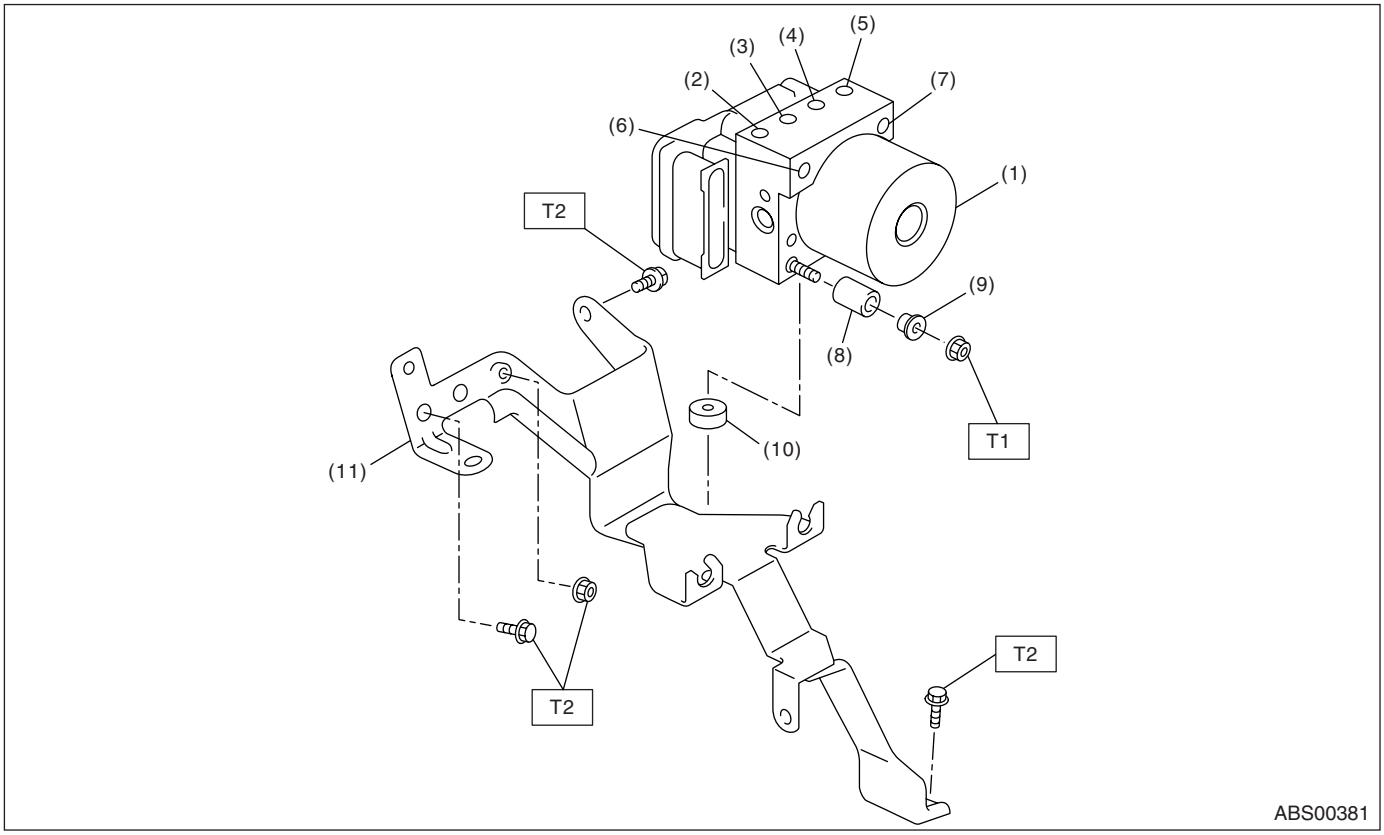
B: COMPONENT

1. ABS WHEEL SPEED SENSOR



(1)	G sensor	(4)	Rear ABS wheel speed sensor LH	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Front ABS wheel speed sensor LH	(5)	Hub unit bearing	***T1: 7.5 (0.76, 5.5)***
(3)	Front housing	(6)	Magnetic encoder	***T2: 33 (3.3, 24)***

2. ABS CONTROL MODULE AND HYDRAULIC CONTROL UNIT (ABSCM&H/U)



(1) ABS control module and hydraulic control unit (ABSCM&H/U)
(2) Front outlet RH
(3) Rear outlet LH
(4) Rear outlet RH
(5) Front outlet LH
(6) Primary inlet
(7) Secondary inlet
(8) Damper
(9) Spacer
(10) Damper
(11) Bracket

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.76, 5.5)
T2: 33 (3.3, 24)

C: CAUTION

• Wear work clothing, including a cap, protective goggles and protective shoes during operation.
• Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.
• Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
• Be careful not to burn yourself, because each part on the vehicle is hot after running.
• Be sure to tighten fasteners including bolts and nuts to the specified torque.
• Place shop jacks or rigid racks at the specified points.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST24082AA230	24082AA230	CARTRIDGE	Troubleshooting for electrical system.
ST22771AA030	22771AA030	SUBARU SELECT MONITOR KIT	Troubleshooting for electrical system. • English: 22771AA030 (Without printer) • German: 22771AA070 (Without printer) • French: 22771AA080 (Without printer) • Spanish: 22771AA090 (Without printer)

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and ampere.
Pressure gauge	Used for measuring oil pressure.
Oscilloscope	Used for measuring sensor.

2. ABS Control Module and Hydraulic Control Unit (ABSCM&H/U)

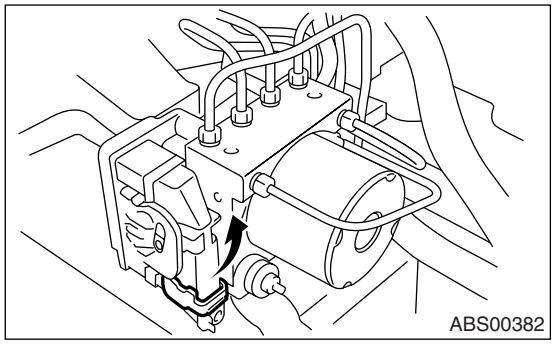
A: REMOVAL

1) Disconnect the ground cable from battery.
2) Use compressed air to get rid of water around the ABSCM&H/U.

NOTE:
When dust and dirt are attached to the terminal, they may cause poor contact.

3) Disconnect the ABSCM&H/U connector pulling up the lock lever.

CAUTION:
Do not pull the harness when disconnecting connector.

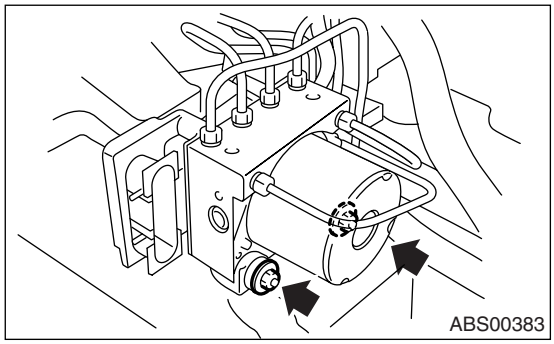


4) Remove the harness clip.
5) Disconnect the brake pipes from ABSCM&H/U.
6) Wrap the brake pipe using a vinyl bag not to spill the brake fluid on the vehicle body.

CAUTION:
When brake fluid is attached to the vehicle body, wash it off with water and wipe the water.

7) Remove the nuts and remove the ABSCM&H/U.

CAUTION:
• Do not drop or bump the ABSCM&H/U.
• Do not turn ABSCM&H/U upside down or place it sideways for storage.
• Be careful that no foreign objects are mixed in ABSCM&H/U.
• Be careful that no water enters inside the connectors.



8) Remove the ABSCM&H/U bracket.

B: INSTALLATION

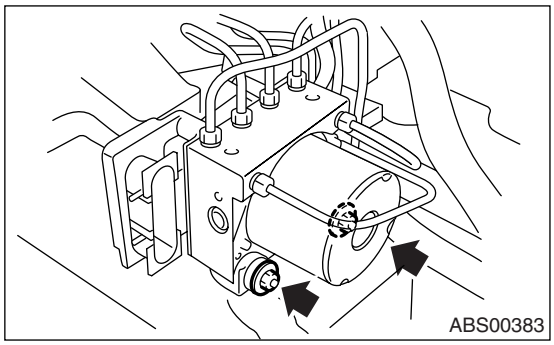
1) Install the ABSCM&H/U bracket.

Tightening torque:
33 N·m (3.3 kgf-m, 24 ft-lb)

2) Install the ABSCM&H/U aligning the groove of damper on ABSCM&H/U side with the pawl of bracket.

NOTE:
Check the identification mark of ABSCM&H/U.

Tightening torque:
7.5 N·m (0.76 kgf-m, 5.5 ft-lb)



3) Connect the brake pipes to their correct ABSCM&H/U positions.

Tightening torque:
15 N·m (1.5 kgf-m, 10.8 ft-lb)

4) Using a harness clip, secure the ABSCM&H/U harness to bracket.
5) Connect the connector to ABSCM&H/U.

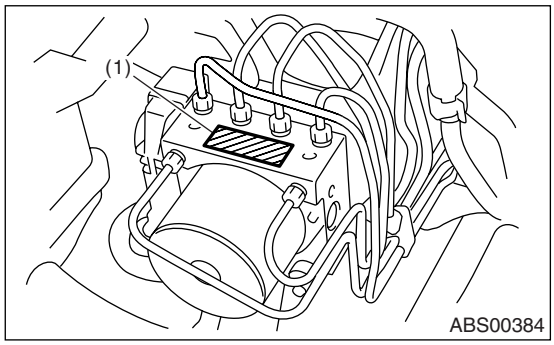
NOTE:
• Be sure to remove all foreign matters from inside the connector before connecting.
• Ensure the ABSCM&H/U connector is securely locked.

6) Bleed air from the brake system.

C: INSPECTION

1) Check the connected and fixed condition of connector.
2) Check the mark used for ABSCM&H/U identification.

Refer to “SPECIFICATION” for mark. <Ref. to ABS-2, SPECIFICATION, General Description.>



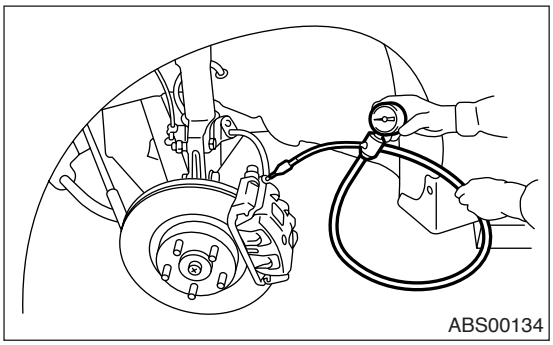
(1) Mark

1. CHECKING THE HYDRAULIC UNIT ABS OPERATION BY PRESSURE GAUGE

1) Lift-up the vehicle, and then remove the wheels.
2) Disconnect the air bleeder screws from the FL and FR caliper bodies.
3) Connect two pressure gauges to the FL and FR caliper bodies.

CAUTION:
• Pressure gauges used exclusively for brake fluid must be used.
• Do not use the pressure gauge for the measurement of transmission oil pressure since the piston seal may be expanded and deformed.

NOTE:
Wrap a sealing tape around the pressure gauge.



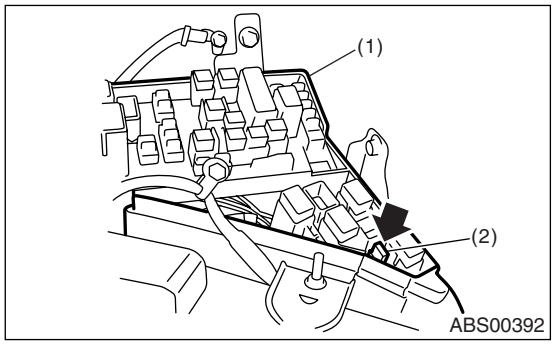
4) Bleed air from the pressure gauges and the FL and FR caliper bodies.
5) Perform ABS sequence control.
<Ref. to ABS-10, ABS Sequence Control.>
6) When the hydraulic unit begins to work, first the FL side performs decompression, holding and compression, and then the FR side performs decompression, holding and compression.
7) Read values indicated on the pressure gauge and check if the fluctuation of the values between decompression and compression meets the standard values. Depress the brake pedal and check that the kick-back is normal, and tightness is normal.

	Front wheel	Rear wheel
Initial value	3,500 kPa (36 kgf/cm^2, 511 psi)	3,500 kPa (36 kgf/cm^2, 511 psi)
When decompressed	500 kPa (5 kgf/cm^2, 73 psi) or less	500 kPa (5 kgf/cm^2, 73 psi) or less
When compressed	3,500 kPa (36 kgf/cm^2, 511 psi) or more	3,500 kPa (36 kgf/cm^2, 511 psi) or more

8) Remove the pressure gauges from the FL and FR caliper bodies.
9) Connect the air bleeder screws of the FL and FR caliper bodies.
10) Remove the air bleeder screws from the RL and RR caliper bodies.
11) Connect two pressure gauges to the RL and RR caliper bodies.
12) Bleed air from the brake system.
13) Bleed air from the pressure gauges and the RL and RR caliper bodies.
14) Perform ABS sequence control.
<Ref. to ABS-10, ABS Sequence Control.>
15) When the hydraulic unit begins to work, first the RR side performs decompression, holding and compression, and then the RL side performs decompression, holding and compression.
16) Read values indicated on the pressure gauge and check if the fluctuation of the values between decompression and compression meets the standard values. Depress the brake pedal and check that the kick-back is normal, and tightness is normal.
17) Remove the pressure gauge from the RL and RR caliper bodies.
18) Connect the air bleeder screws of the RL and RR caliper bodies.
19) Bleed air from the brake system.

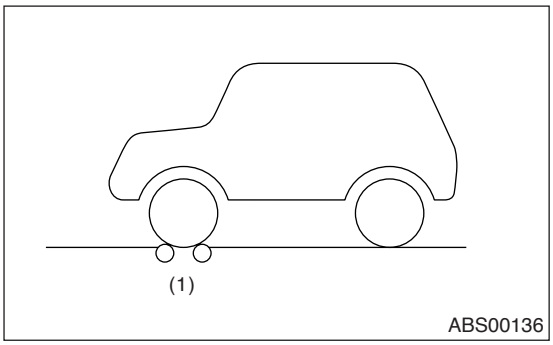
2. CHECKING THE HYDRAULIC UNIT ABS OPERATION WITH BRAKE TESTER

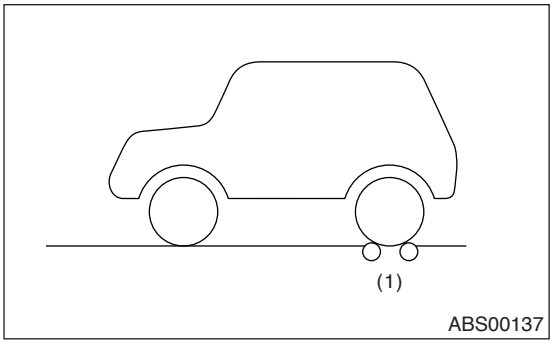
1) Install the spare fuse to the FWD connector located in the main fuse box for the model without AT VTD.



(1) Main fuse box
(2) FWD connector

2) Since the MT model and AT VTD model cannot cut off the AWD circuit forcibly, set the wheels other than measured one onto free rollers.
3) Prepare for the ABS sequence control.
<Ref. to ABS-10, ABS Sequence Control.>
4) Set the front wheels or rear wheels on the brake tester and set the select lever to “neutral”.





(1) Brake tester

5) Operate the brake tester.
6) Perform ABS sequence control.
<Ref. to ABS-10, ABS Sequence Control.>
7) When the hydraulic unit begins to work, check the following working sequence.

(1) The FL wheel performs decompression, holding and compression in sequence, and subsequently the FR wheel repeats the cycle.
(2) The RR wheel performs decompression, holding and compression in sequence, and subsequently the RL wheel repeats the cycle.

8) Read values indicated on the brake tester and check if the fluctuation of the values between decompression and compression meets the standard values.

	Front wheel	Rear wheel
Initial value	1,000 N (102 kgf, 225 lb)	1,000 N (102 kgf, 225 lb)
When decompressed	500 N (51 kgf, 112 lb) or less	500 N (51 kgf, 112 lb) or less
When compressed	1,000 N (102 kgf, 225 lb) or more	1,000 N (102 kgf, 225 lb) or more

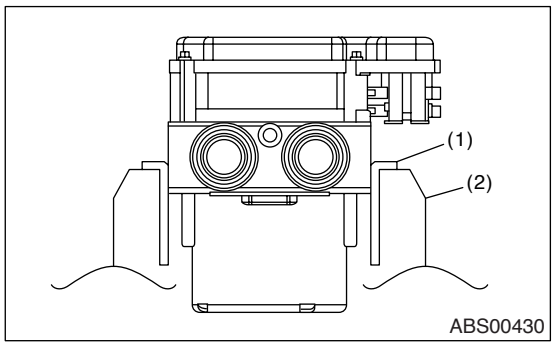
9) After the inspection, depress the brake pedal and check that it is not abnormally hard, and tightness is normal.

D: REPLACEMENT

CAUTION:
• Because the seal of ABSCM cannot be replaced, do not pull or peel it with lifting up.
• Because the screw part of H/U deteriorates in every replacement procedure, do not perform the replacement more than five times on it. When the malfunction is found though the replacement that performed is less than five times, replace the H/U body.
• Use new screws for installation of ABSCM.
• When the sealing surface of ABSCM or H/U is dirty or damaged and it cannot be removed or repaired, replace it with new one.

1) Remove the ABSCM&H/U. <Ref. to ABS-6, REMOVAL, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
2) To prevent entering foreign matter and brake fluid leakage, plug the oil pressure port of ABSCM&H/U using screw plug and etc.
3) Set the pump motor part of removed ABSCM&H/U faces down on a vise.

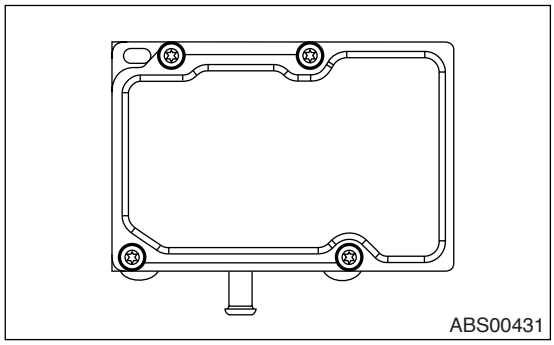
NOTE:
Before securing a part on a vice, place cushioning material such as wood blocks, aluminum plate or cloth between the part and vice.



(1) Aluminum plate or etc.
(2) Vise

4) Using TORX® bit T20, remove the four screws of ABSCM.

NOTE:
Always use new screws.



5) Slowly remove the ABSCM upward from H/U.

NOTE:
To prevent damaging of coil part, remove the ABSCM straightly from H/U.

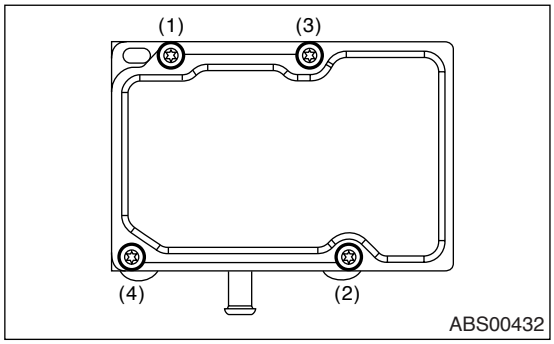
6) Ensure there are no dirt or damage on sealing surface of H/U.

CAUTION:
• Do not clean the ABSCM & H/U with applying compressed air.
• Do not repair the damages of H/U sealing surface using file or metal scraper. To remove the sealing, use resin scraper. Do not use the chemical materials (thinner and etc.).

7) Position the coil of new ABSCM to align H/U valve.
8) To prevent deforming of ABSCM housing cover, hold the corner of ABSCM and install it to the H/U without tilting.
9) Using TORX® bit T20, tighten the screws stepwise in the order of (1) through (4).

CAUTION:
Always use new screws.

Tightening torque:
1.5 N·m (0.15 kgf-m, 1.1 ft-lb)



10) Check that there is no foreign matter in aligning part between ABSCM and H/U.
11) Using TORX® bit T20, tighten the screws stepwise in the order of (1) through (4) again.

Tightening torque:
3 N·m (0.3 kgf-m, 2.2 ft-lb)

12) Check that there is no clearance in aligning part between ABSCM and H/U.
13) Install the ABSCM&H/U to vehicle.

3. ABS Sequence Control

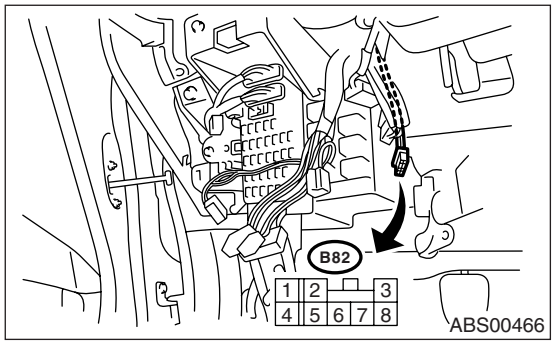
A: OPERATION

1) While the ABS sequence control is performed, the operation of the hydraulic unit can be checked using the brake tester or pressure gauge after the hydraulic unit solenoid valve operation.
2) ABS sequence control can be started by diagnosis connector or Subaru Select Monitor.

1. ABS SEQUENCE CONTROL WITH DIAGNOSIS CONNECTOR

NOTE:
In the event of any trouble, the ABS sequence control is not operated.

1) Turn the ignition switch to OFF at the vehicle stationary mode.
2) Take out the diagnosis connector from the inside of instrument panel lower cover on the driver's side, and connect one of ground terminal to connector terminal No. 8.



3) Turn the ignition switch to ON without depressing the brake pedal.
4) After the ABS warning light is turned off, perform the brake pedal operation as follows; press it within 3 seconds, → release it, → press it again, → release it again, → and then press it.

NOTE:
Engine must not start.

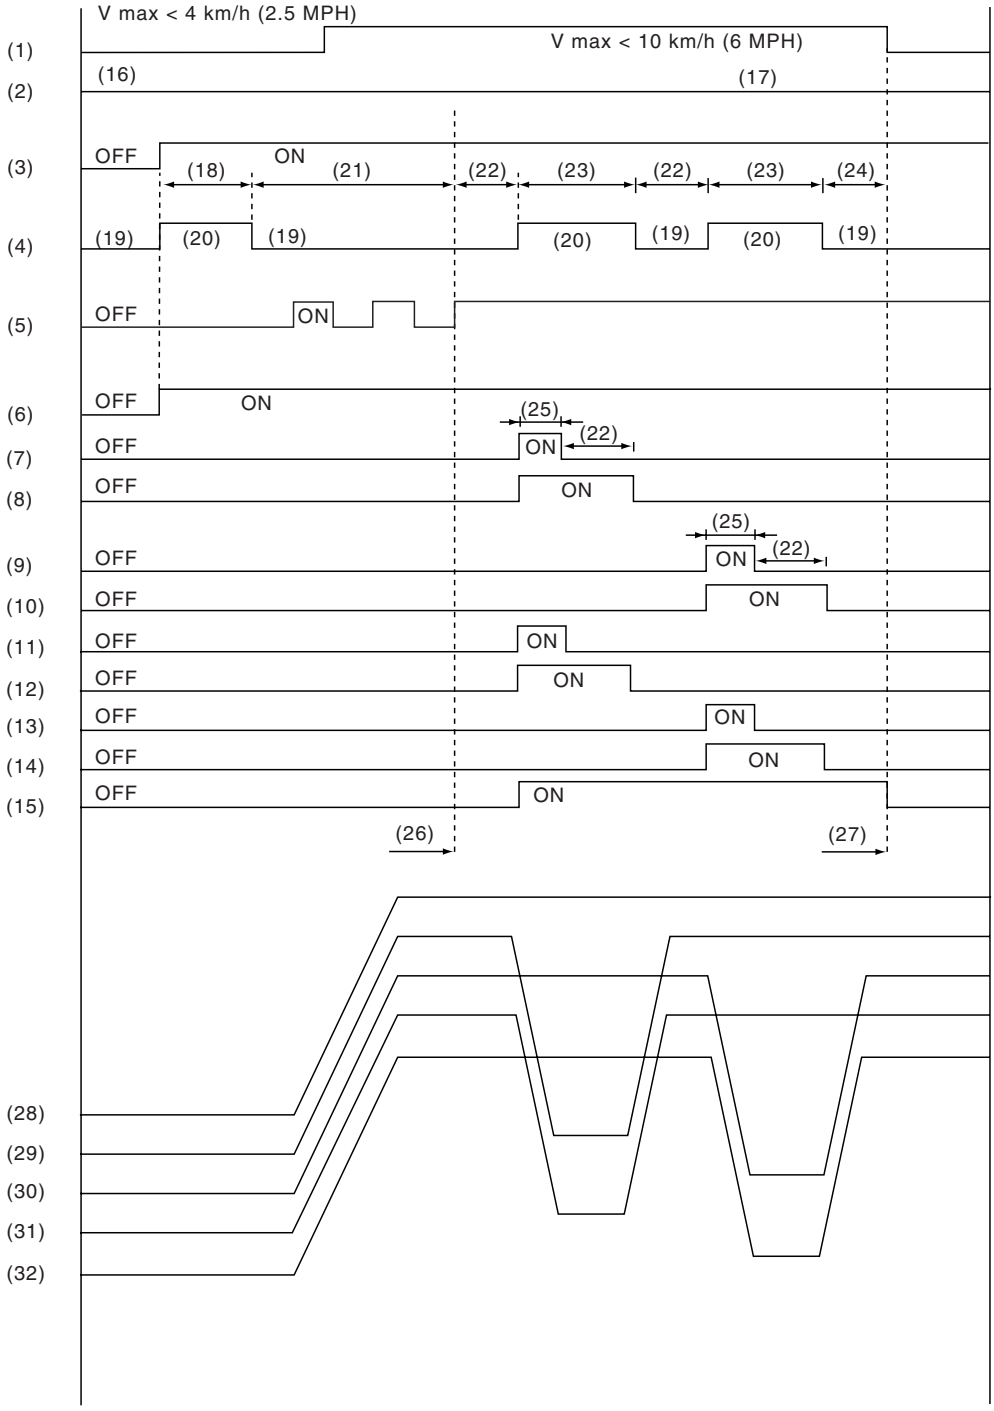
5) After completion of ABS sequence control, turn the ignition switch to OFF.

2. ABS SEQUENCE CONTROL WITH SUBARU SELECT MONITOR

NOTE:
In the event of any trouble, the ABS sequence control is not operated.

1) Connect the Subaru Select Monitor to data link connector under the driver's side instrument panel lower cover.
2) Turn the ignition switch to ON.
3) Set the Subaru Select Monitor switch to ON.
4) Set the Subaru Select Monitor to "Brake Control" mode.
5) When the "Function check sequence" is selected, the "ABS sequence control" will start.
6) Execute the following operations when the message "Press the brake pedal so that the brake pedal force is between 100 and 150 kgf" is displayed.
   (1) When the brake tester is used, press brake pedal pad with a force of 1,000 N (102 kgf, 225 lb).
   (2) When using the pressure gauge, press the brake pedal so as to make the pressure gauge indicate 3,500 kPa (36 kg/cm^2, 511 psi).
7) "Press the [YES] key" will be displayed. Press the [YES] key.
8) The brake line being operated is displayed on the Subaru Select Monitor.

3. CONDITIONS FOR ABS SEQUENCE CONTROL



ABS00385

(1) All wheel speed
(2) DL terminal
(3) Ignition key
(4) ABS warning light
(5) Stop light switch
(6) Valve relay
(7) FL decompression valve
(8) FL compression valve
(9) FR decompression valve
(10) FR compression valve
(11) RR decompression valve
(12) RR compression valve
(13) RL decompression valve
(14) RL compression valve
(15) Pump motor
(16) Diagnosis connector and connection
(17) When using the Subaru Select Monitor, both connection and non-connection of diagnosis connector are acceptable.
(18) 1.5 seconds
(19) Light OFF
(20) Light ON
(21) Within 3 seconds
(22) 1.0 second
(23) 1.4 seconds
(24) 0.6 second
(25) 0.4 second
(26) Point A
(27) Reset
(28) Master cylinder pressure
(29) FL wheel cylinder pressure
(30) FR wheel cylinder pressure
(31) RR wheel cylinder pressure
(32) RL wheel cylinder pressure

NOTE:
When using the Subaru Select Monitor, the control operation starts from point A. The patterns from ignition key ON to the point A show that operation is started by diagnosis connector. (However, it is required to turn the stop light switch to ON before point A.)

B: SPECIFICATION

1. CONDITIONS FOR COMPLETION OF ABS SEQUENCE CONTROL

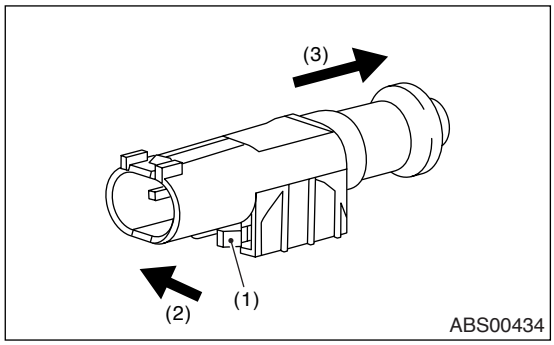
When the following conditions develop, the ABS sequence control stops and ABS operation is returned to the normal control mode.
1) When the speed of at least one wheel reaches 10 km/h (6 MPH).
2) When the diagnosis connector is disconnected. (Without Subaru Select Monitor)
3) When the brake pedal is released during ABS sequence control and the stop light switch goes OFF.
4) When the brake pedal is depressed after the ignition key is turned to ON, but before ABS warning light goes out. (Without Subaru Select Monitor)
5) When the ignition key is turned to ON, but the brake pedal is not depressed within 3 seconds after ABS warning light goes OFF. (Without Subaru Select Monitor)
6) After completion of ABS sequence control.
7) When malfunction is detected.

4. Front ABS Wheel Speed Sensor

A: REMOVAL

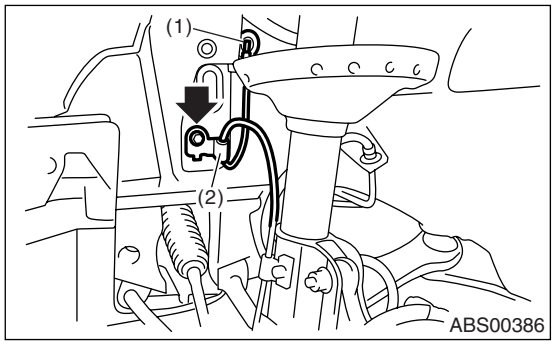
1) Disconnect the ground cable from battery.
2) Disconnect the ABS wheel speed sensor connector located next to the front strut mounting house in engine compartment.
3) Separate the sensor connector and vehicle securing clip. Apply force in the direction of (2) to unlock the pawl, and then slide the connector in the direction of (3). Pull out the connector to the tire side from grommet hole.

CAUTION:
Clip would break when removing the clip without separating sensor connector and clip.



(1) Pawl

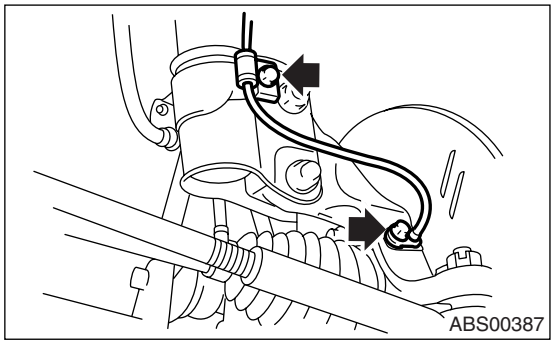
4) Remove the sensor harness bracket.



(1) To front ABS wheel speed sensor connector
(2) Sensor harness bracket

5) Remove the bolts which secure sensor harness to front strut.
6) Remove the front ABS wheel speed sensor from housing.

CAUTION:
- **Be careful not to damage the sensor portion.**
- **Do not apply excessive force to the sensor harness.**



B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:
Sensor:
7.5 N·m (0.76 kgf-m, 5.5 ft-lb)
Bracket:
33 N·m (3.3 kgf-m, 24 ft-lb)

CAUTION:
Be careful not to damage the sensor portion.

NOTE:
- Check the identification (mark) on the harness to make sure that no warp exists. (RH: K1 (White), LH: K2 (Yellow))
- Check if the harness is not pulled and does not come in contact with the suspension or body during steering wheel effort.

C: INSPECTION

1. INSPECTION WITH SUBARU SELECT MONITOR

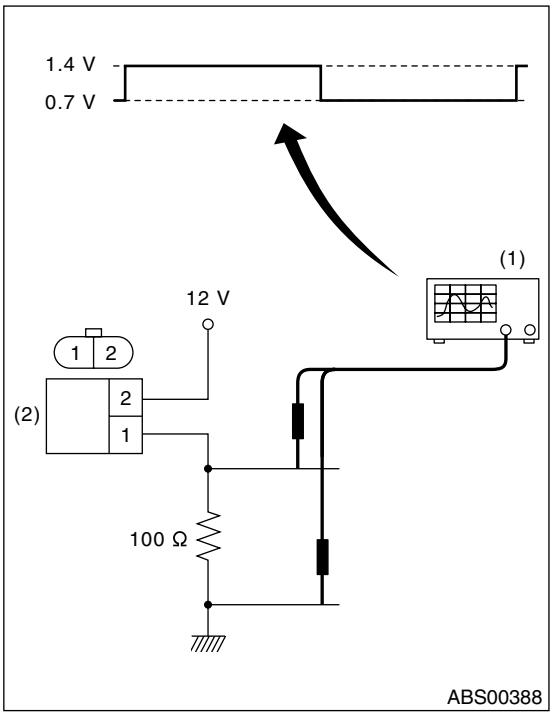
1) Connect the Subaru Select Monitor to data link connector.
2) Select {Current Data Display & Save}. Check if the speed indicated on the display change in response to the speedometer reading during acceleration/deceleration when the steering wheel is in the straight-ahead position.
3) If the speed indicated on the display does not change, check the ABS wheel speed sensor. <Ref. to ABS-13, ABS WHEEL SPEED SENSOR, INSPECTION, Front ABS Wheel Speed Sensor.>

2. ABS WHEEL SPEED SENSOR

1) Check the pole piece of the ABS wheel speed sensor for foreign particles or damage. If necessary, clean the pole piece or replace the ABS wheel speed sensor.

2) Charge a 12 V power supply to the No. 2 terminal of sensor connector as shown in the figure, and then install the resistance to No. 1 terminal. Rotate the wheel about 2.75 km/h (2 MPH) or equivalent, measure the voltage using oscilloscope.

Standard value of output voltage:
0.7 — 1.4 V



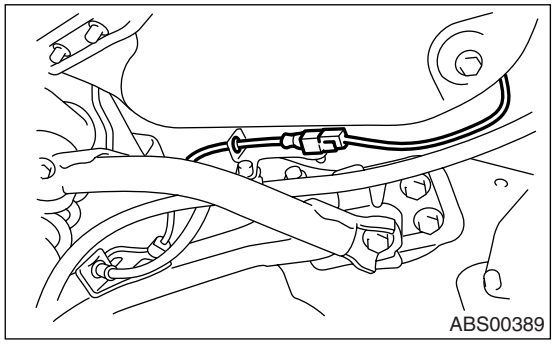
(1) Oscilloscope
(2) ABS wheel speed sensor

NOTE:
Check the ABS wheel speed sensor cable for discontinuity. If necessary, replace with a new one.

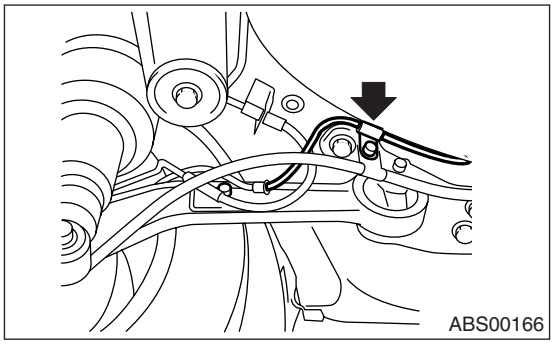
5. Rear ABS Wheel Speed Sensor

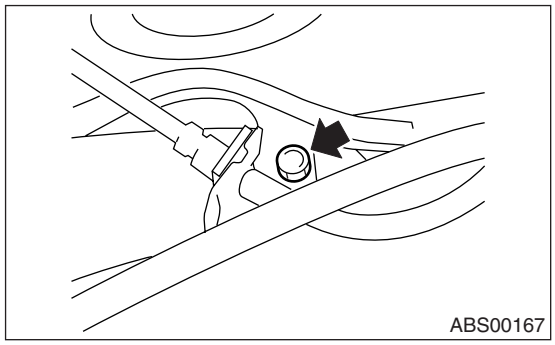
A: REMOVAL

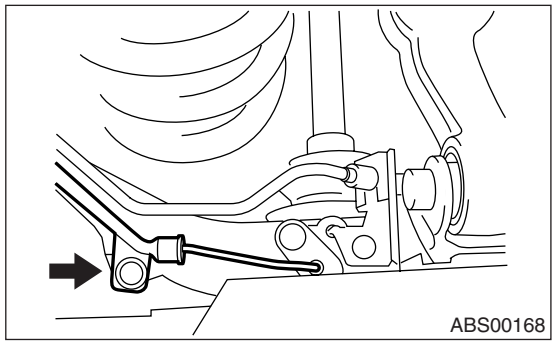
1) Disconnect the ground cable from battery.
2) Disconnect the connector from rear ABS wheel speed sensor.



3) Remove the sensor harness bracket from rear arm.

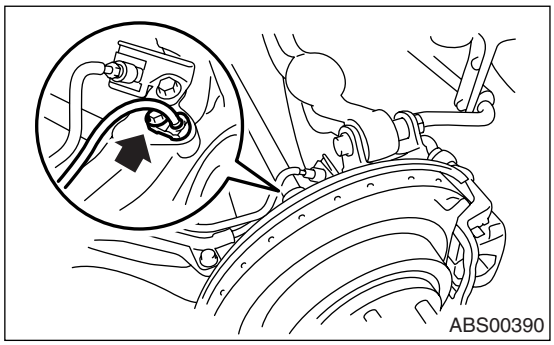






4) Remove the rear ABS wheel speed sensor from rear arm.

CAUTION:
• Be careful not to damage the sensor portion.
• Do not apply excessive force to the sensor harness.



B: INSTALLATION

Install in the reverse order of removal.

CAUTION:
Be careful not to damage the sensor portion.

Tightening torque:
Sensor:
7.5 N·m (0.76 kgf-m, 5.5 ft-lb)
Bracket:
33 N·m (3.3 kgf-m, 24 ft-lb)

NOTE:
Check the identification (mark) on the harness to make sure that no warp exists. (RH:K5(White), LH:K6(Yellow))

C: INSPECTION

1. ABS WHEEL SPEED SENSOR

<Ref. to ABS-13, ABS WHEEL SPEED SENSOR, INSPECTION, Front ABS Wheel Speed Sensor.>

6. Front Magnetic Encoder

A: REMOVAL

Refer to “Front Hub Bearing” for removal, because the front magnetic encoder is integrated with front hub bearing.
<Ref. to DS-17, REMOVAL, Front Hub Unit Bearing.>

B: INSTALLATION

Refer to “Front Hub Bearing” for installation, because the front magnetic encoder is integrated with front hub bearing.
<Ref. to DS-17, INSTALLATION, Front Hub Unit Bearing.>

C: INSPECTION

Visually check the magnetic encoder for any damage. If necessary, replace with a new hub unit bearing.

NOTE:
Replace the hub unit bearing with a new one if there is any defect found on the magnetic encoder, since the magnetic encoder is integrated with hub unit bearing assembly.

7. Rear Magnetic Encoder

A: REMOVAL

Refer to “Rear Hub Unit Bearing” for removal, because the rear magnetic encoder is integrated with rear hub unit bearing.
<Ref. to DS-19, REMOVAL, Rear Hub Unit Bearing.>

B: INSTALLATION

Refer to “Rear Hub Unit Bearing” for installation, because the rear magnetic encoder is integrated with rear hub unit bearing.
<Ref. to DS-20, INSTALLATION, Rear Hub Unit Bearing.>

C: INSPECTION

Visually check the magnetic encoder for any damage. If necessary, replace with a new hub unit bearing.

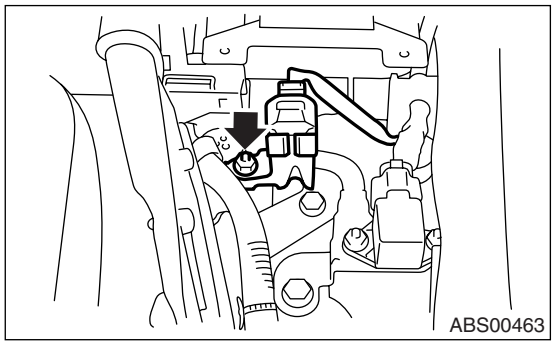
NOTE:
Replace the hub unit bearing with a new one if there is any defect found on the magnetic encoder, since the magnetic encoder is integrated with hub unit bearing assembly.

8. G Sensor

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the console box.
<Ref. to EI-53, REMOVAL, Console Box.>
3) Disconnect the connector from G sensor.
4) Remove the G sensor from body.

CAUTION:
• Do not drop or bump the G sensor.
• Since G sensor is a unit with the bracket, do not disassemble them.



B: INSTALLATION

Install in the reverse order of removal.

CAUTION:
Do not drop or bump the G sensor.

Tightening torque:
7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

C: INSPECTION

Step		Check	Yes	No
1	**CHECK G SENSOR.** 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Set the Subaru Select Monitor to the {Brake Control} mode. 4) Set the display in the {Current Data Display & Save} mode. 5) Read the G sensor output value.	Is the value −1.2 — 1.2 m/s^2 when the vehicle is in horizontal position?	Go to step **2.**	Repair the harness connector between G sensor and ABSCM&H/U. Or replace G sensor.
2	**CHECK G SENSOR.** 1) Remove the console box. 2) Remove the G sensor from vehicle. (Do not disconnect connector.) 3) Read the Subaru Select Monitor display.	Is the value 8.1 — 11.2 m/s^2 when G sensor is inclined forward to 90°?	Go to step **3.**	Repair the harness connector between G sensor and ABSCM&H/U. Or replace G sensor.
3	**CHECK G SENSOR.** Read the Subaru Select Monitor display.	Is the value −8.1 — −11.2 m/s^2 when G sensor is inclined backward to 90°?	G sensor is normal.	Repair the harness connector between G sensor and ABSCM&H/U. Or replace G sensor.

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

		Page
1.	Basic Diagnostic Procedure	2
2.	Check List for Interview	4
3.	General Description	8
4.	Electrical Component Location	10
5.	Control Module I/O Signal	12
6.	Subaru Select Monitor	15
7.	Read Diagnostic Trouble Code (DTC)	25
8.	Inspection Mode	26
9.	Clear Memory Mode	27
10.	ABS Warning Light / Brake Warning Light Illumination Pattern	28
11.	List of Diagnostic Trouble Code (DTC)	39
12.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	42
13.	General Diagnostic Table	82

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:
Remove foreign matters (dust, water, oil, etc.) from the ABSCM&H/U connector during removal and installation.

NOTE:
- To check harness for broken wires or short circuits, shake trouble spot or connector.
- Refer to “Check List for Interview”. <Ref. to ABS(diag)-4, Check List for Interview.>

	Step	Check	Yes	No
1	**CHECK PRE-INSPECTION.** 1) Ask the customer when and how the trouble occurred using interview checklist. <Ref. to ABS(diag)-4, Check List for Interview.> 2) Before performing diagnostics, check the component which might affect ABS problems. <Ref. to ABS(diag)-8, INSPECTION, General Description.>	Is the component that might influence the ABS problem normal?	Go to step **2.**	Repair or replace each unit.
2	**CHECK INDICATION OF DTC ON SCREEN.** 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON and Subaru Select Monitor to ON. NOTE: If the communication function of the Subaru Select Monitor cannot be executed normally, check the communication circuit. <Ref. to ABS(diag)-18, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.> 4) Read the DTC. <Ref. to ABS(diag)-25, OPERATION, Read Diagnostic Trouble Code (DTC).> 5) Record all DTCs and Freeze Frame Data.	Is DTC displayed?	Go to step **4.**	Go to step **3.**
3	**PERFORM THE GENERAL DIAGNOSTICS.** 1) Inspect using “General Diagnostic Table”. <Ref. to ABS(diag)-82, General Diagnostic Table.> 2) Perform clear memory mode. <Ref. to ABS(diag)-17, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.> 3) Perform the inspection mode. <Ref. to ABS(diag)-26, Inspection Mode.> 4) Read the DTC. <Ref. to ABS(diag)-15, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.> Check the DTC does not displayed.	Does the ABS warning light go off after turning the ignition switch to ON?	Finish the diagnosis.	Check in accordance with “Diagnostic Procedure for ABS”. <Ref. to ABS(diag)-21, WITHOUT DTC, INSPECTION, Subaru Select Monitor.>

Step		Check	Yes	No
4	**PERFORM THE DIAGNOSIS.** 1) Refer to the “List of Diagnostic Trouble Code (DTC)”. <Ref. to ABS(diag)-39, LIST, List of Diagnostic Trouble Code (DTC).> 2) Fix the wrong part. 3) Perform clear memory mode. <Ref. to ABS(diag)-17, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.> 4) Perform the inspection mode. <Ref. to ABS(diag)-26, Inspection Mode.> 5) Read the DTC. <Ref. to ABS(diag)-15, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>	Is DTC displayed?	Repeat step 1 to 4 until DTC is not shown.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

Check the following items about the vehicle's state.

1. STATE OF ABS WARNING LIGHT

ABS warning light comes on.	❑ Always ❑ Sometimes ❑ Only once ❑ Not come on • When / how long does it come on?		
Ignition key position	❑ LOCK ❑ ACC ❑ ON (before starting engine) ❑ START ❑ ON (after Engine starting, engine is running) ❑ ON (after Engine starting, engine is at a standstill)		
Timing	❑ Immediately after turning the ignition to ON ❑ Immediately after turning the ignition to START		
	❑ When accelerating	—	km/h
		—	MPH
	❑ When driving at a constant speed	km/h	MPH
	❑ When decelerating	—	km/h
		—	MPH
	❑ When turning to the right	Steering angle:	deg
		Steering time:	Sec.
	❑ When turning to the left	Steering angle:	deg
		Steering time:	Sec.
	❑ When operating other electrical parts		
	• Parts name: • Operating condition:		

2. STATE OF BRAKE WARNING LIGHT

Brake warning light comes on.	❑ Always ❑ Sometimes ❑ Only once ❑ Not come on ❑ When pulling the parking brake lever up. ❑ When releasing the parking brake lever down. • When / how long does it come on?
Ignition key position	❑ LOCK ❑ ACC ❑ ON (before starting engine) ❑ START ❑ ON (after Engine starting, engine is running) ❑ ON (after Engine starting, engine is at a standstill)

Timing	❑ Immediately after turning the ignition to ON ❑ Immediately after turning the ignition to START		
	❑ When accelerating	—	km/h
		—	MPH
	❑ When driving at a constant speed	km/h	MPH
	❑ When decelerating	—	km/h
		—	MPH
	❑ When turning to the right	Steering angle:	deg
		Steering time:	Sec.
	❑ When turning to the left	Steering angle:	deg
		Steering time:	Sec.
	❑ When operating other electrical parts		
	• Parts name: • Operating condition:		

3. SYMPTOMS

ABS operating condition	❑ Does not move.		
	❑ Operates only when applying an abrupt brake.	Vehicle speed:	km/h
			MPH
	• How to step on brake pedal:		
	a) Operating time:		Sec.
	b) Operating noise: ❑ Occurs. / ❑ Does not occur.		
	• What kind of noise?	❑ Knocking ❑ Gong gong ❑ Bong ❑ Buzz ❑ Gong gong buzz ❑ Others:	
	c) Reaction force of brake pedal		
		❑ Stick ❑ Weak pedal resistance ❑ Strong pedal resistance ❑ Others:	

Behavior of vehicle	a) Directional stability cannot be obtained or the steering refuses to work when applying brakes: ❑ Yes / ❑ No	
	• When:	❑ When turning to the right ❑ When turning to the left ❑ When spinning ❑ Others:
	a) Directional stability cannot be obtained or the steering refuses to work when accelerating: ❑ Yes / ❑ No	
	• When:	❑ When turning to the right ❑ When turning to the left ❑ When spinning ❑ Others:
	c) Poor brake performance: ❑ Yes / ❑ No	
	• What kind:	❑ Long braking/stopping distance ❑ Brakes lock or drag ❑ Long pedal stroke ❑ Pedal sticks. ❑ Others:
	d) Poor acceleration: ❑ Yes / ❑ No	
	• What kind:	❑ Not accelerate ❑ Engine stalls. ❑ Others:
	e) Occurrence of vibration: ❑ Yes / ❑ No	
	• Where • What kind:	
	f) Occurrence of noise: ❑ Yes / ❑ No	
	• Where • What kind:	
	g) Other troubles occurred: ❑ Yes / ❑ No	
	• What kind:	

4. CONDITIONS UNDER WHICH TROUBLE OCCURS

Environment	a) Weather	❑ Fine ❑ Cloudy ❑ Rainy ❑ Snowy ❑ Others:
	b) Ambient temperature	°C (°F)
	c) Road	❑ Inner city ❑ Suburbs ❑ Highway ❑ Local street ❑ Uphill ❑ Downhill ❑ Paved road ❑ Gravel road ❑ Muddy road ❑ Sandy place ❑ Others:
	d) Road surface	❑ Dried ❑ Wet ❑ Covered with fresh snow ❑ Covered with hardened snow ❑ Frozen slope ❑ Others:

Check List for Interview

Condition	a) Brakes	Deceleration:	G
		❑ Intermittent / ❑ Temporary	
	b) Accelerator	Acceleration:	G
		❑ Intermittent / ❑ Temporary	
	c) Vehicle speed	km/h	MPH
		❑ Advancing ❑ When accelerating ❑ When decelerating ❑ At low speed ❑ When turning ❑ Others:	
	d) Tire inflation pressure	Front RH tire:	kPa
		Front LH tire:	kPa
		Rear RH tire:	kPa
		Rear LH tire:	kPa
	e) Degree of wear	Front RH tire:	
		Front LH tire:	
		Rear RH tire:	
		Rear LH tire:	
	f) Genuine parts are used.: ❑ Yes / ❑ No		
	g) Tire chain is attached.: ❑ Yes / ❑ No		
	h) T-type tire is used.: ❑ Yes / ❑ No		
	i) Condition of suspension alignment:		
	j) Loading state:		
	k) Repair parts are used.: ❑ Yes / ❑ No		
	• Contents:		
	l) Others:		

3. General Description

A: CAUTION

1. SUPPLEMENTAL RESTRAINT SYSTEM "AIRBAG"

Airbag system wiring harness is routed near the ABS wheel speed sensor and ABSCM&H/U.

CAUTION:
• All airbag system wiring harness and connectors are colored yellow. Do not use the electrical test equipment on these circuits.
• Be careful not to damage the airbag system wiring harness when servicing the ABS wheel speed sensor and ABSCM&H/U.

B: INSPECTION

Before performing diagnosis, check the following items which might affect ABS problems.

1. BATTERY

Measure battery voltage and check electrolyte.

Standard voltage: 12 V or more

Specific gravity: More than 1.260

2. BRAKE FLUID

1) Check the brake fluid level.
2) Check the brake fluid for leaks.

3. HYDRAULIC UNIT

Check the hydraulic unit.
• With brake tester <Ref. to ABS-8, CHECKING THE HYDRAULIC UNIT ABS OPERATION WITH BRAKE TESTER, INSPECTION, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
• Without brake tester <Ref. to ABS-7, CHECKING THE HYDRAULIC UNIT ABS OPERATION BY PRESSURE GAUGE, INSPECTION, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>

4. BRAKE DRAG

Check for brake drag.

5. BRAKE PAD AND ROTOR

Check the brake pad and rotor.
• FRONT <Ref. to BR-18, INSPECTION, Front Brake Pad.> <Ref. to BR-19, INSPECTION, Front Disc Rotor.>
• REAR <Ref. to BR-25, INSPECTION, Rear Brake Pad.> <Ref. to BR-26, INSPECTION, Rear Disc Rotor.>

6. TIRE

Check the tire specifications, tire wear and air pressure. <Ref. to WT-2, SPECIFICATION, General Description.>

C: PREPARATION TOOL

1. SPECIAL TOOL

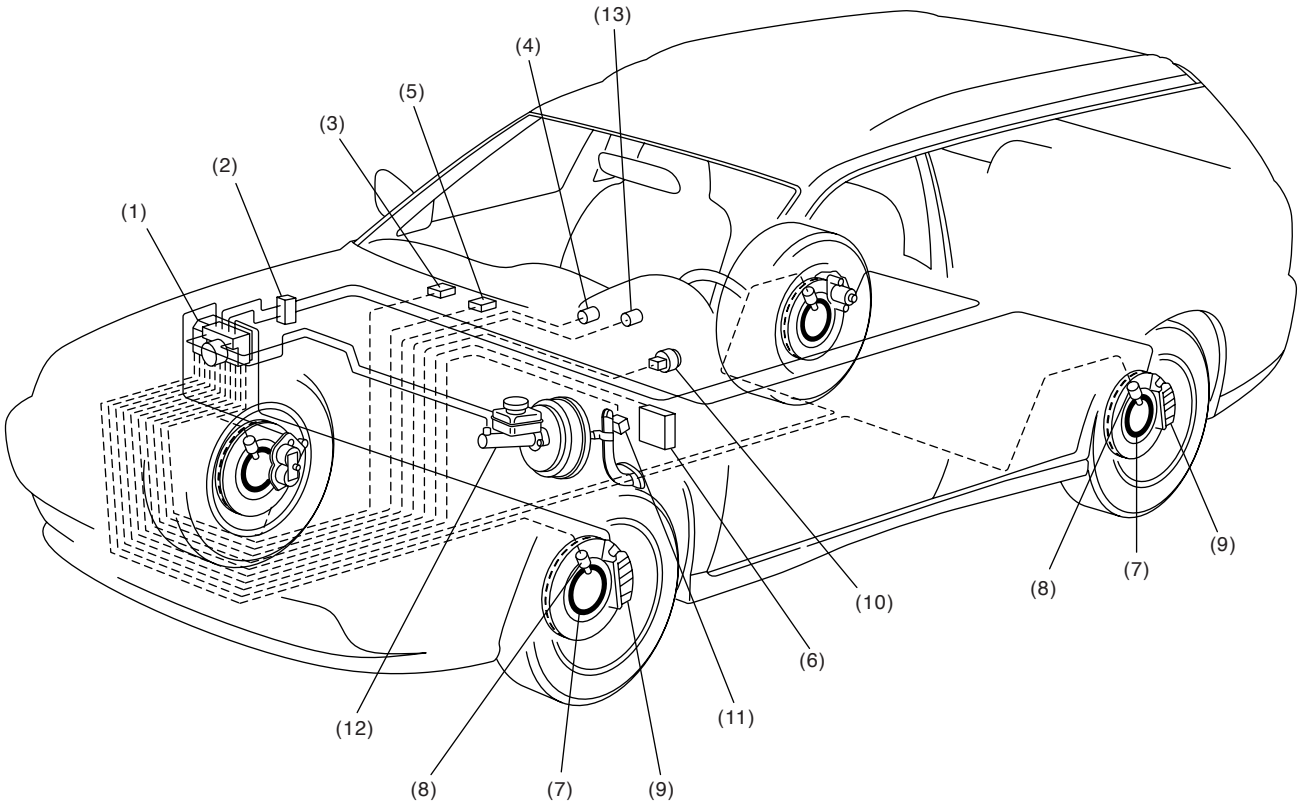
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST24082AA230	24082AA230	CARTRIDGE	Troubleshooting for electrical system.
ST22771AA030	22771AA030	SUBARU SELECT MONITOR KIT	Troubleshooting for electrical system. • English: 22771AA030 (Without printer) • German: 22771AA070 (Without printer) • French: 22771AA080 (Without printer) • Spanish: 22771AA090 (Without printer)

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and ampere.
Oscilloscope	Used for measuring sensor.

4. Electrical Component Location

A: LOCATION



(1) ABS control module and hydraulic control unit (ABSCM&H/U)
(2) Two-way connector
(3) Diagnosis connector (Used for ABS sequence control.)
(4) ABS warning light
(5) Data link connector (For Subaru Select Monitor)
(6) Transmission control module (TCM) (AT model)
(7) Magnetic encoder seal
(8) ABS wheel speed sensor
(9) Caliper body
(10) G sensor
(11) Stop light switch
(12) Master cylinder
(13) Brake and EBD warning light

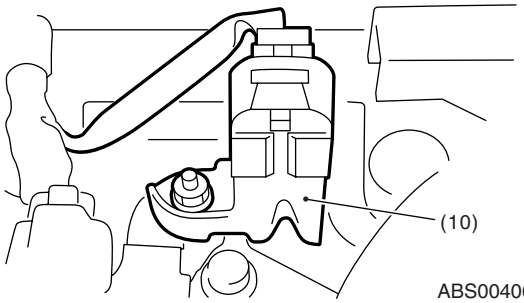
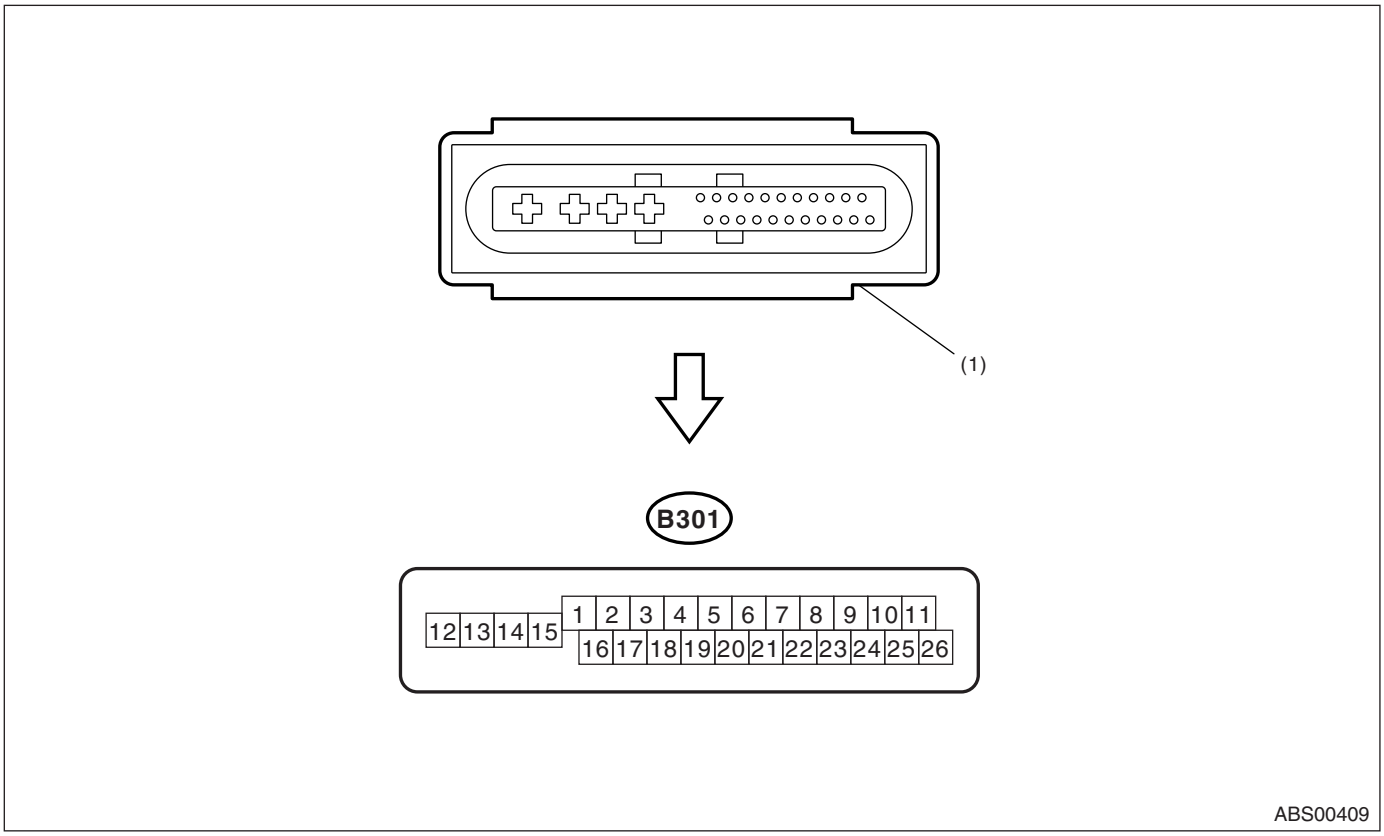
ABS00407



(10)
ABS00406

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION



(1) ABS control module and hydraulic control unit (ABSCM&H/U) connector

NOTE:
- Terminal numbers in ABSCM&H/U connector are as shown in the figure.
- ABS warning light is illuminates when the connector is removed from ABSCM&H/U.

Control Module I/O Signal

Description			Terminal No. (+) — (–)	Input/Output signal Measured value and measuring conditions
ABS wheel speed sensor (Wheel speed sensor)	Front LH wheel	Power supply	16 — 15	4.5 — 16.5 V
		Signal	1	5.9 — 16.8 mA: Rectangle waveform
	Front RH wheel	Power supply	5 — 15	4.5 — 16.5 V
		Signal	6	5.9 — 16.8 mA: Rectangle waveform
	Rear LH wheel	Power supply	2 — 15	4.5 — 16.5 V
		Signal	17	5.9 — 16.8 mA: Rectangle waveform
	Rear RH wheel	Power supply	3 — 15	4.5 — 16.5 V
		Signal	4	5.9 — 16.8 mA: Rectangle waveform
CAN communication line (+)			26	2.5 — 1.5 V pulse signal
CAN communication line (–)			11	3.5 — 2.5 V pulse signal
Valve relay power supply *1			14 — 15	10 — 15 V
Motor relay power supply *1			13 — 15	10 — 15 V
G sensor	Power supply		24 — 10	4.75 — 5.25 V
	Ground		10	—
	Output		21 — 10	2.1 — 2.5 V when the vehicle is on a level surface
Stop light switch *1			20 — 15	Less than 1.5 V when the stop light is OFF; otherwise, 10 — 15 V when the stop light is ON.
ABS warning light			22 — 15	After turning the ignition switch to ON, 10 — 15 V during 1.5 seconds and less than 1.5 V after 1.5 seconds passed.
Brake warning light (EBD warning light)			8 — 15	After turning the ignition switch to ON, 10 — 15 V during 1.5 seconds and less than 1.5 V after 1.5 seconds passed.
Subaru Select Monitor			7 — 15	Less than 1.5 V when no data is received. 0 ←→ 12 V pulse (in communication)
ABS diagnosis connector			25 — 15	When the ignition switch is ON, 10 — 15 V.
Power supply *1			18 — 15	When the ignition switch is ON, 10 — 15 V.
Grounding line			15	—
Vehicle speed output signal			23 — 15	0 ←→ 5 V pulse

*1: Measure the I/O signal voltage after removing the connector from the ABSCM&H/U terminal.

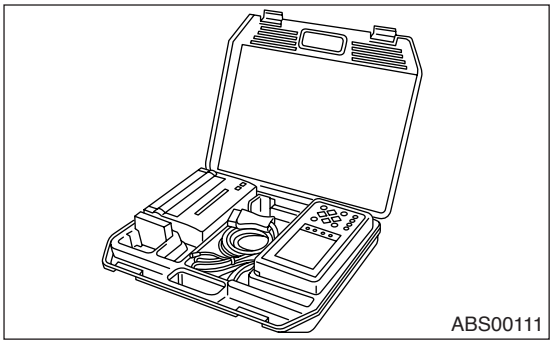
6. Subaru Select Monitor

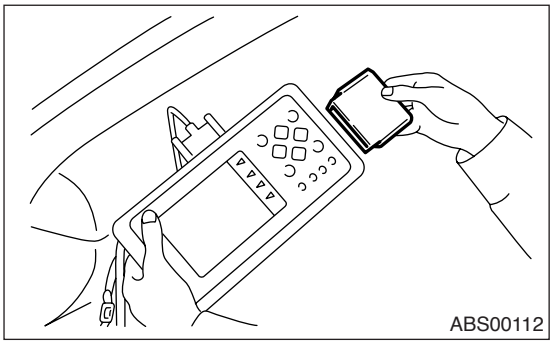
A: OPERATION

1. READ DIAGNOSTIC TROUBLE CODE (DTC)

1) Prepare the Subaru Select Monitor kit. <Ref. to ABS(diag)-9, SPECIAL TOOL, PREPARATION TOOL, General Description.>

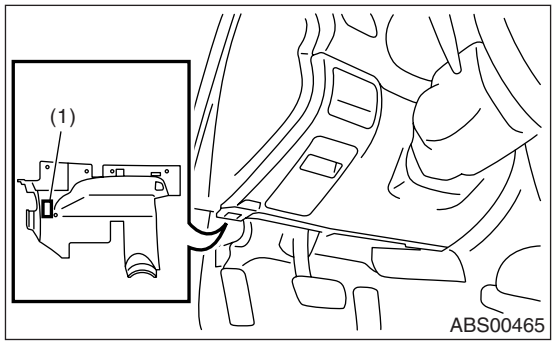


2) Connect the diagnosis cable to Subaru Select Monitor.
3) Insert the cartridge to Subaru Select Monitor. <Ref. to ABS(diag)-9, SPECIAL TOOL, PREPARATION TOOL, General Description.>



4) Connect the Subaru Select Monitor to data link connector.

(1) Data link connector is located in the lower portion of the instrument panel (on the driver's side).

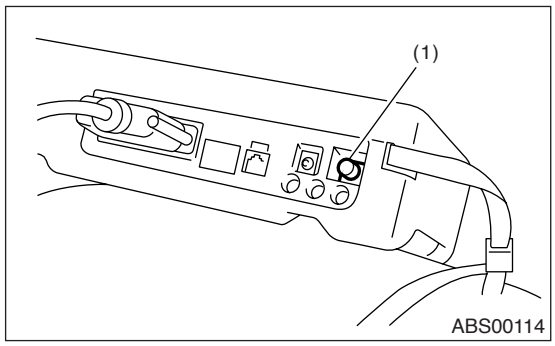


(1) Data link connector

(2) Connect the diagnosis cable to data link connector.

CAUTION:
Do not connect the scan tools except for Subaru Select Monitor.

5) Turn the ignition switch to ON (engine OFF) and turn the Subaru Select Monitor switch to ON.



(1) Power switch

6) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
7) On the «System Selection Menu» display screen, select the {Brake Control} and press the [YES] key.
8) Press the [YES] key after the {ABS} is displayed.
9) On the «ABS Diagnosis» display screen, select the {DTC Display} and press the [YES] key.

NOTE:
• For details concerning operation procedure, refer to the "SUBARU SELECT MONITOR OPERATION MANUAL".
• For details concerning DTCs, refer to the "List of Diagnostic Trouble Code (DTC)". <Ref. to ABS(diag)-39, List of Diagnostic Trouble Code (DTC).>
• DTCs are displayed up to three in detected order.
• If a particular DTC is not properly stored in memory (due to a drop in ABSCM&H/U power supply, etc.) on the occurrence of a problem, the DTC which is suffixed with a question mark "?" appears on the Subaru Select Monitor display. This shows it may be an unreliable reading.

10) If ABS and Subaru Select Monitor cannot communicate, check the communication circuit. <Ref. to ABS(diag)-18, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>

11) When DTC is not displayed, check the meter circuit or CAN communication circuit. <Ref. to ABS(diag)-21, WITHOUT DTC, INSPECTION, Subaru Select Monitor.>

Display	Contents to be monitored
Current	Indicate the latest DTC on the Subaru Select Monitor display.
Old	Indicate the latest DTC in previous trouble on the Subaru Select Monitor display.
Older	Indicate the latest DTC in second previous trouble on the Subaru Select Monitor display.
Before 3	Indicate the latest DTC in third previous trouble on the Subaru Select Monitor display.

2. READ CURRENT DATA

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Brake Control} and press the [YES] key.
3) Press the [YES] key after the {ABS} is displayed.
4) On the «Brake Control Diagnosis» screen, select the {Current Data Display/Save}, and then press the [YES] key.
5) On the «Data Display Menu» screen, select the data display style and press the [YES] key.
6) Using a scroll key, move the display screen up or down until necessary data is shown.
• A list of the support data is shown in the following table.

Display	Contents to be monitored	Unit of measure
FR Wheel Speed	Wheel speed detected by front ABS wheel speed sensor RH is displayed.	km/h or MPH
FL Wheel Speed	Wheel speed detected by front ABS wheel speed sensor LH is displayed.	km/h or MPH
RR Wheel Speed	Wheel speed detected by rear ABS wheel speed sensor RH is displayed.	km/h or MPH
RL Wheel Speed	Wheel speed detected by rear ABS wheel speed sensor LH is displayed.	km/h or MPH
BLS Signal	Brake ON/OFF is displayed.	ON or OFF
G Sensor	Vehicle acceleration detected by analog G sensor is displayed.	m/s (m/s^2)
Valve Relay Signal	Valve relay operation signal is displayed.	ON or OFF
ABS Warning Light	ON operation of the ABS warning light is displayed.	ON or OFF
EBD Warning Light	ON operation of the EBD warning light is displayed.	ON or OFF
Motor Relay Monitor	Motor relay monitor voltage is displayed.	V
IG power supply voltage	Voltage supplied to ABSCM&H/U is displayed.	V
ABS Control Flag	ABS control condition is displayed.	ON or OFF
ABS OK B Signal	ABS system normal/abnormal is displayed.	OK or NG

NOTE:
For details concerning operation procedure, refer to the “SUBARU SELECT MONITOR OPERATION MANUAL”.

3. CLEAR MEMORY MODE

1) On the «Main Menu» display screen, select the {2. Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Brake Control} and press the [YES] key.
3) Press the [YES] key after the {ABS} is displayed.
4) On the «Brake Control Diagnosis» display screen, select the {Clear Memory} and press the [YES] key.

Display	Contents to be monitored
Clear memory?	Function of clearing DTC.

5) When “Done” and “Turn ignition switch OFF” are shown on the display screen, turn the Subaru Select Monitor and ignition switch to OFF.

NOTE:
For details concerning operation procedure, refer to the “SUBARU SELECT MONITOR OPERATION MANUAL”.

4. ABS SEQUENCE CONTROL

Display	Contents to be monitored	Index No.
ABS sequence control	Operate the valve and pump motor continuously to perform the ABS sequence control.	<Ref. to ABS-10, ABS Sequence Control.>

5. FREEZE FRAME DATA

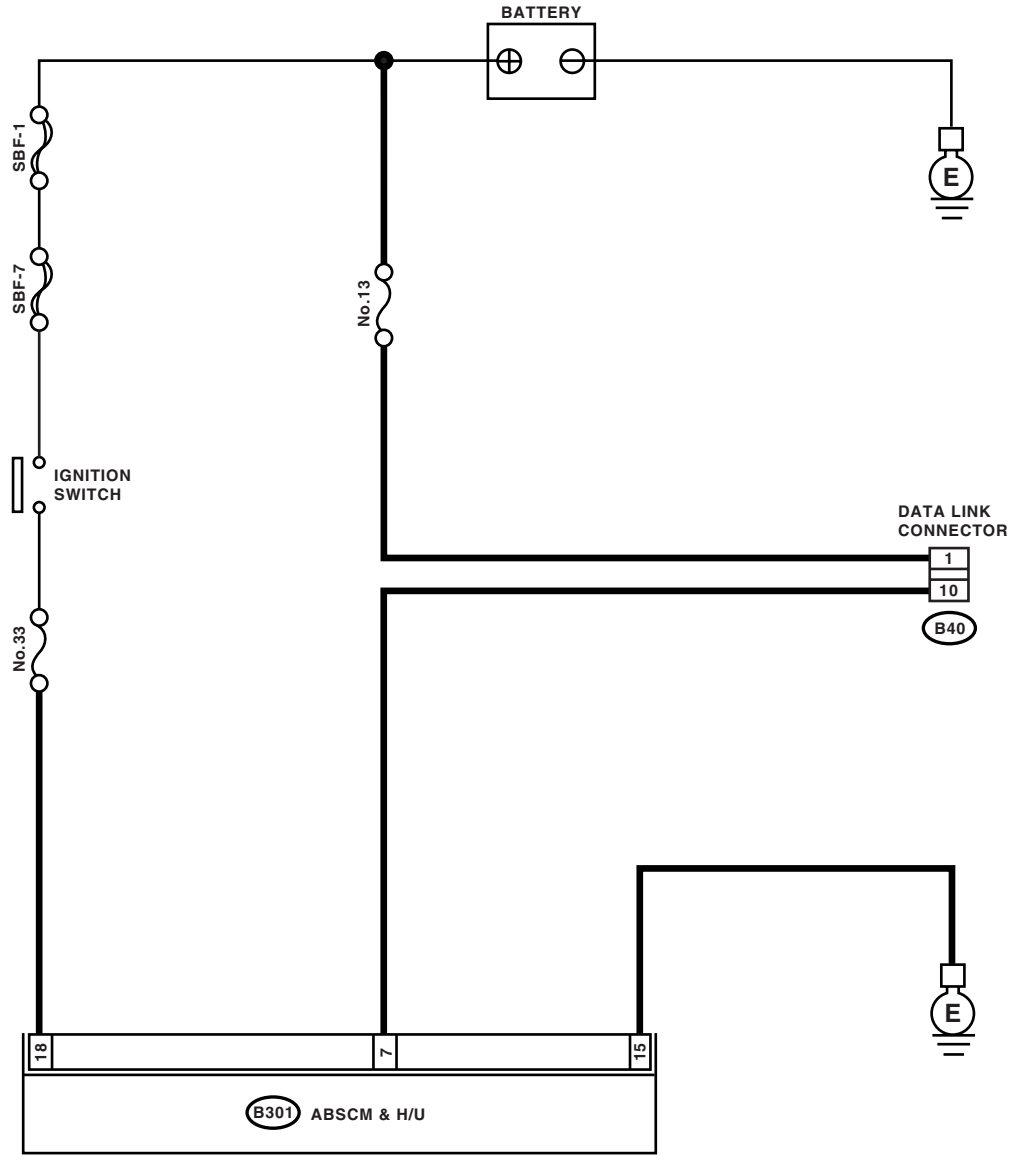
NOTE:
• Data stored at the time of trouble occurrence is shown on display.
• Each time trouble occurs, the latest information is stored in the freeze frame data in memory.
• Freeze frame data will be memorized up to three.
• If a Freeze Frame Data is not properly stored in memory (due to a drop in ABS control module power supply, etc.), the DTC which is suffixed with a question mark “?” appears on the Subaru Select Monitor display. This shows it may be an unreliable reading.

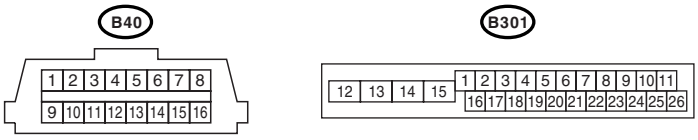
Display	Contents to be monitored
FR Wheel	Wheel speed detected by the Front ABS wheel speed sensor RH is displayed in km/h or MPH.
FL Wheel	Wheel speed detected by the Front ABS wheel speed sensor LH is displayed in km/h or MPH.
RR Wheel	Wheel speed detected by the Rear ABS wheel speed sensor RH is displayed in km/h or MPH.
RL Wheel	Wheel speed detected by the Rear ABS wheel speed sensor LH is displayed in km/h or MPH.
IG power supply voltage	Voltage supplied (V) to ABSCM&H/U is displayed.
G Sensor	Vehicle acceleration detected by analog G sensor is displayed.
Motor relay monitor	Motor relay condition is displayed.
BLS Signal	Brake ON/OFF is displayed.
Vehicle speed	Vehicle speed calculated by ABS control module is displayed.
ABS Control Flag	ABS control condition is displayed.
Power Supply Failure	Whether abnormal voltage occurred or not is displayed during malfunction.

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

DETECTING CONDITION:
Defective harness connector
TROUBLE SYMPTOM:
Communication is impossible between ABS and Subaru Select Monitor.
WIRING DIAGRAM:





ABS00411

	Step	Check	Yes	No
1	**CHECK IGNITION SWITCH.**	Does the ignition switch turn to ON?	Go to step **2.**	Turn the ignition switch to ON, and select ABS mode using Subaru Select Monitor.
2	**CHECK BATTERY.** 1) Turn the ignition switch to OFF. 2) Measure the battery voltage.	Is the voltage more than 11 V?	Go to step **3.**	Charge or replace the battery.
3	**CHECK BATTERY TERMINAL.**	Is there poor contact at battery terminal?	Repair or tighten the battery terminal.	Go to step **4.**
4	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to ON. 2) Using Subaru Select Monitor, check whether communication to other system can be executed normally.	Is the system name and model year displayed on Subaru Select Monitor?	Go to step **8.**	Go to step **5.**
5	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to OFF. 2) Disconnect the ABSCM&H/U connector. 3) Turn the ignition switch to ON. 4) Check whether communication to other systems can be executed normally.	Is the system name and model year displayed on Subaru Select Monitor?	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>	Go to step **6.**
6	**CHECK HARNESS CONNECTOR BETWEEN EACH CONTROL MODULE AND DATA LINK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect ABSCM&H/U, ECM and TCM. 3) Measure the resistance between data link connector and chassis ground. ***Connector & terminal*** ***(B40) No. 10 — Chassis ground:***	Is the resistance more than 1 MΩ?	Go to step **7.**	Repair the harness and connector between each control module and data link connector.
7	**CHECK OUTPUT SIGNAL FOR ABSCM&H/U.** 1) Turn the ignition switch to ON. 2) Measure the voltage between ABSCM&H/U and chassis ground. ***Connector & terminal*** ***(B40) No. 10 (+) — Chassis ground (−):***	Is the voltage less than 1 V?	Go to step **8.**	Repair the harness and connector between each control module and data link connector.
8	**CHECK HARNESS CONNECTOR BETWEEN ABSCM&H/U AND DATA LINK CONNECTOR.** Measure the resistance between ABSCM&H/U connector and data link connector. ***Connector & terminal*** ***(B301) No. 7 — (B40) No. 10:***	Is the resistance less than 0.5 Ω?	Go to step **9.**	Repair the harness and connector between ABSCM&H/U and data link connector.
9	**CHECK INSTALLATION OF ABSCM&H/U CONNECTOR.** Turn the ignition switch to OFF.	Is the ABSCM&H/U connector inserted into ABSCM&H/U until it is locked by clamps?	Go to step **10.**	Insert ABSCM&H/U connector into ABSCM&H/U.
10	**CHECK POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. (engine OFF) 2) Measure the ignition power supply voltage between ABSCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B301) No. 18 (+) — Chassis ground (−):***	Is the voltage 10 — 15 V?	Go to step **11.**	Repair the open circuit in harness between ABSCM&H/U and battery.

	Step	Check	Yes	No
11	**CHECK HARNESS CONNECTOR BETWEEN ABSCM&H/U AND CHASSIS GROUND.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ABSCM&H/U. 3) Measure the resistance of harness between ABSCM&H/U and chassis ground. ***Connector & terminal*** ***(B301) No. 15 — Chassis ground:***	Is the resistance less than 0.5 Ω?	Go to step **12.**	Repair the open circuit in harness between ABSCM&H/U and inhibitor side connector, and poor contact in coupling connector.
12	**CHECK POOR CONTACT IN CONNECTOR.**	Is there poor contact in control module power supply, ground circuit and data link connector?	Repair the connector.	Replace the ABSCM only. <Ref. to ABS-8, REPLACEMENT, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>

2. WITHOUT DTC

DETECTING CONDITION:

- Defective combination meter
- Open in harness

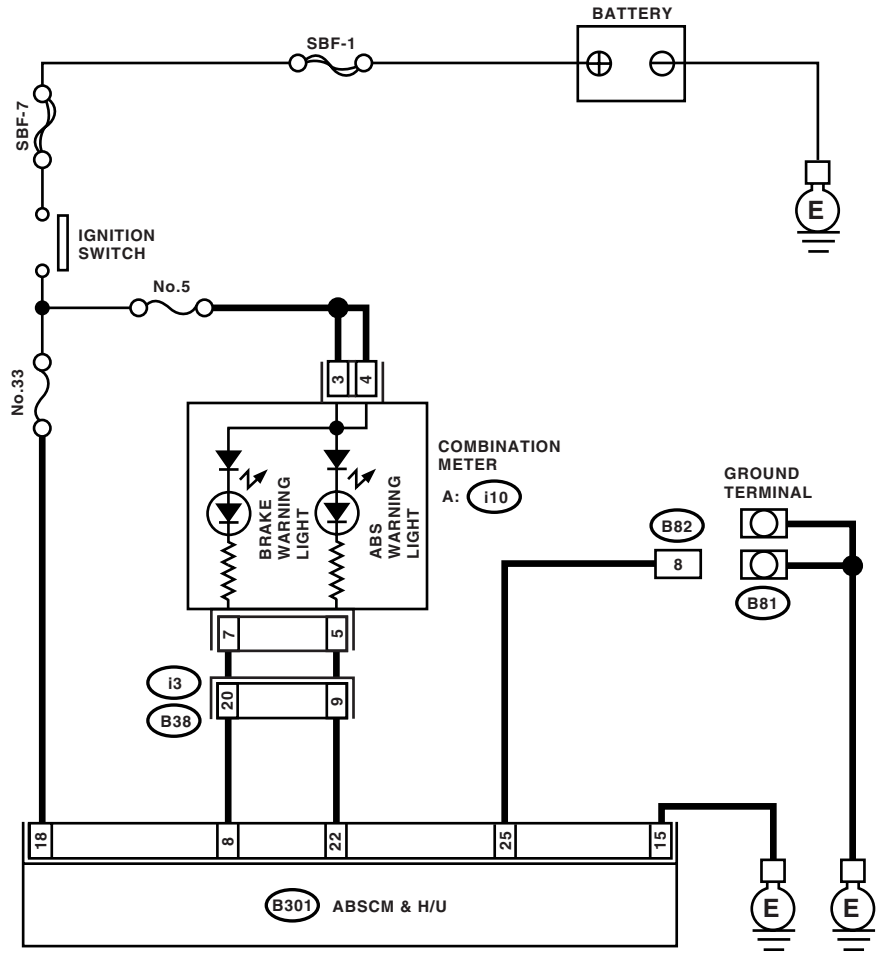
TROUBLE SYMPTOM:

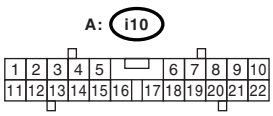
- ABS warning light does not go off.
- “NO TROUBLE CODE” will be displayed on the Subaru Select Monitor.

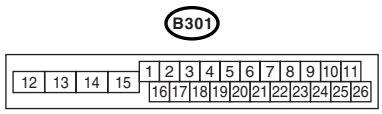
NOTE:
When the ABS warning light is OFF and “NO TROUBLE CODE” is displayed on Subaru Select Monitor, the system is in normal condition.

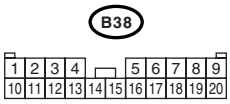
WIRING DIAGRAM:

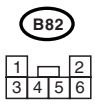
- LHD model





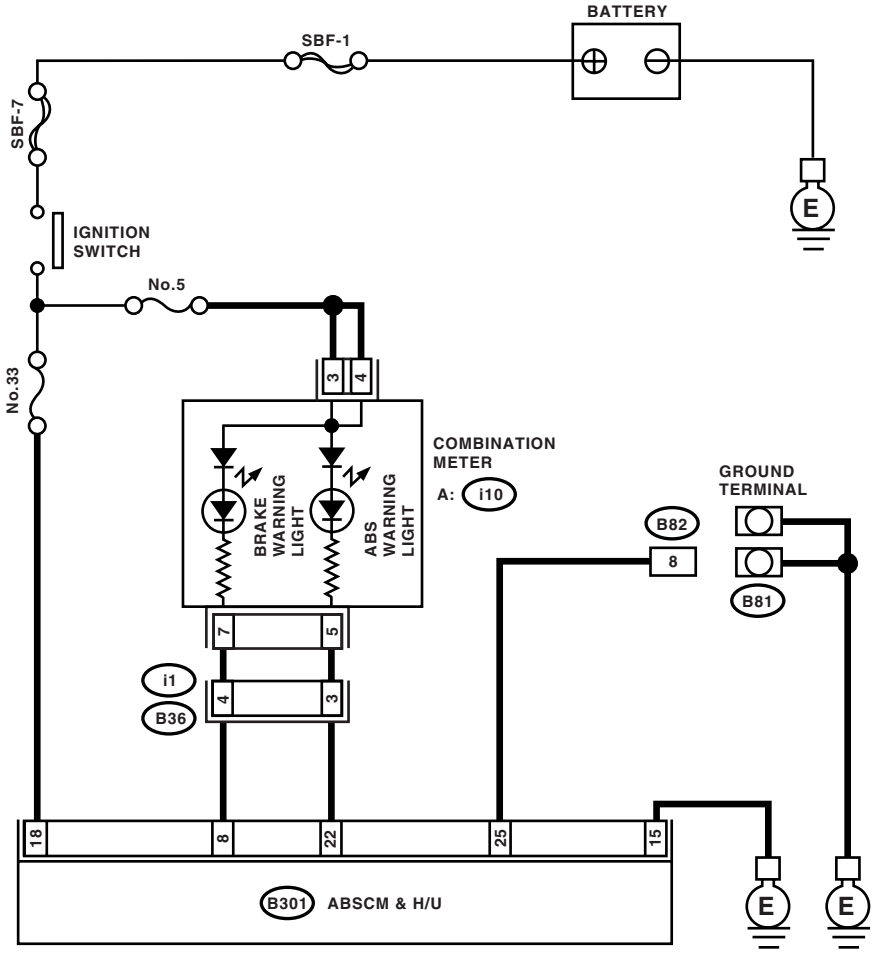


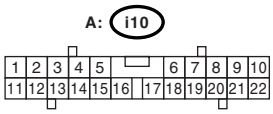


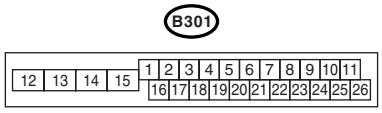


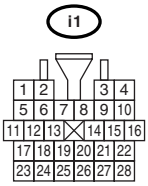
ABS00459

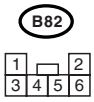
• RHD model











ABS00440

	Step	Check	Yes	No
1	**DATA CHECK SUBARU SELECT MONITOR.** 1) Select {Current Data Display & Save} in Subaru Select Monitor. 2) Read the condition of “ABS warning light”.	Is “ON” indicated?	Replace the ABSCM only. <Ref. to ABS-8, REPLACEMENT, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>	Go to step **2.**
2	**CHECK WIRING HARNESS.** Measure the resistance between ABSCM connector and combination meter connector. ***Connector & terminal*** ***(i10) No. 5 — (B301) No. 22:***	Is the resistance less than 0.5 Ω?	Go to step **3.**	Repair the harness and connector between ABSCM&H/U and combination meter connector.
3	**CHECK POOR CONTACT IN CONNECTOR.**	Is there poor contact in ABSCM connector and combination meter connector?	Repair the connector.	Check the combination meter.

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

For details about reading of DTCs, refer to “Subaru Select Monitor”. <Ref. to ABS(diag)-15, Subaru Select Monitor.>

8. Inspection Mode

A: PROCEDURE

Reproduce the malfunction occurrence condition as possible.
Drive the vehicle at a speed more than 40 km/h (25 MPH) for at least one minute.

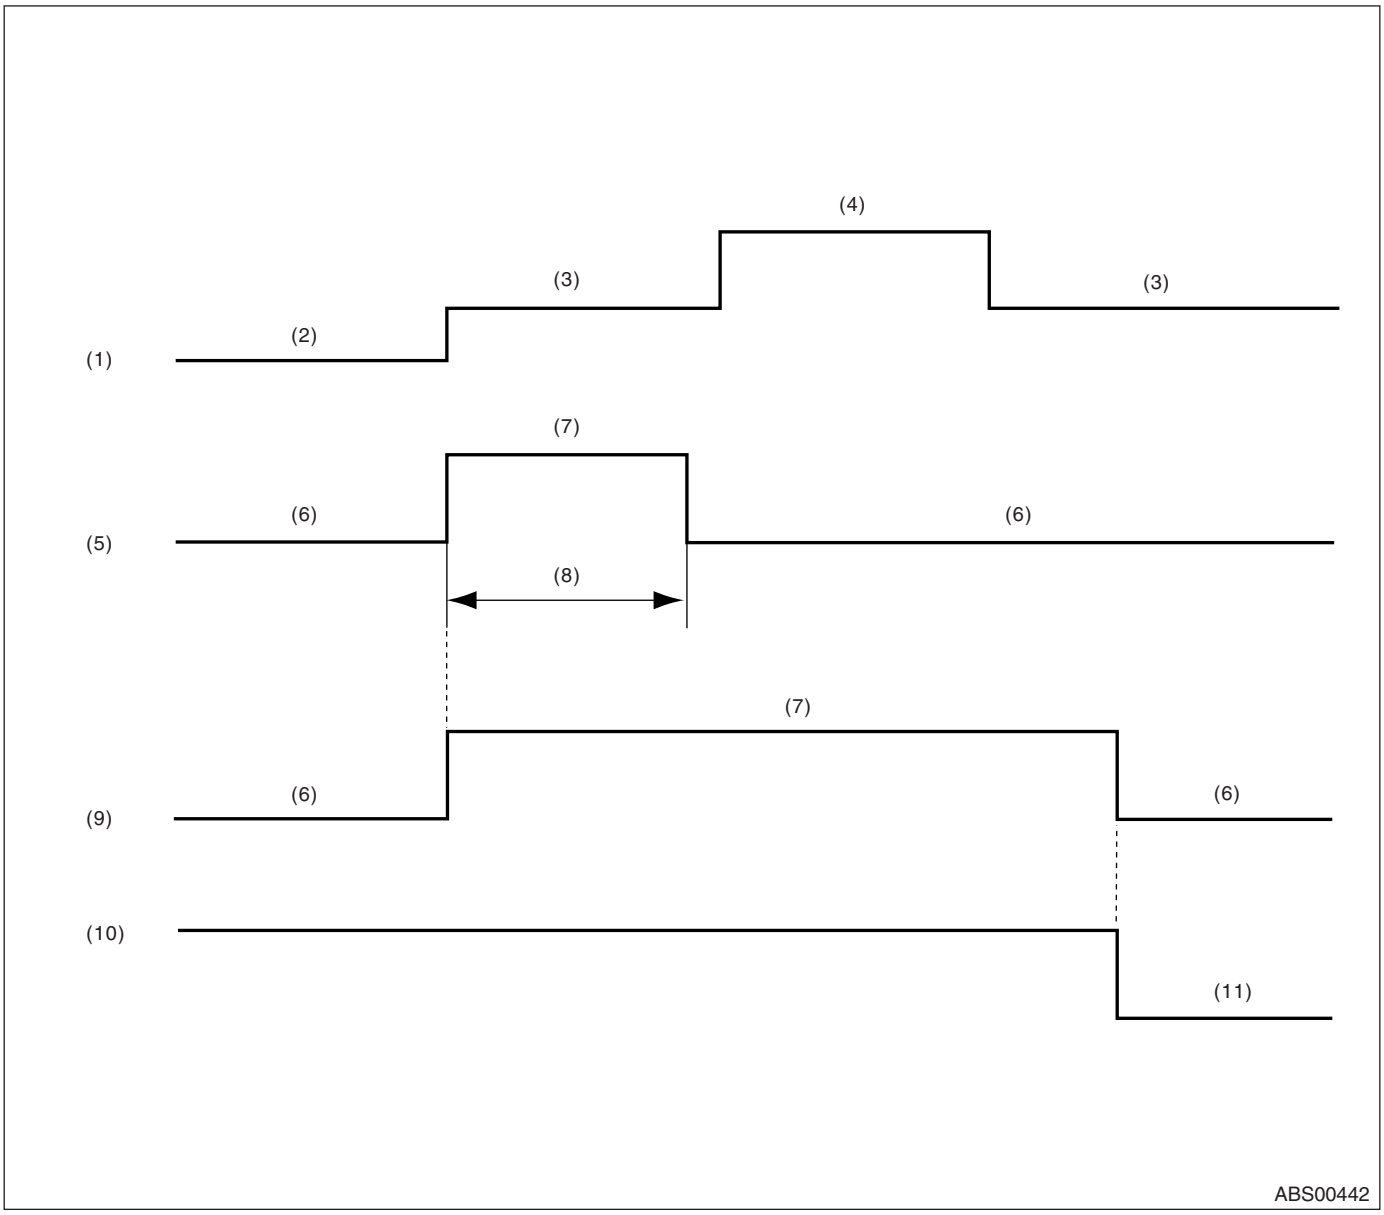
9. Clear Memory Mode

A: OPERATION

For details concerning DTC clear operation, refer to “Subaru Select Monitor”. <Ref. to ABS(diag)-15, Subaru Select Monitor.>

10.ABS Warning Light / Brake Warning Light Illumination Pattern

A: INSPECTION



(1) Ignition switch
(2) OFF
(3) ON
(4) Start
(5) ABS warning light
(6) Light OFF
(7) Light ON
(8) 1.5 seconds
(9) Brake warning light (EBD warning light)
(10) Parking brake
(11) Released

ABS Warning Light / Brake Warning Light Illumination Pattern

1) When the ABS warning light and brake warning light do not illuminate in accordance with this illumination pattern, there must be an electrical malfunction.
2) When ABS warning light remains constantly OFF, check the combination meter circuit. <Ref. to ABS(diag)-30, ABS WARNING LIGHT DOES NOT COME ON, ABS Warning Light / Brake Warning Light Illumination Pattern.>
3) When ABS warning light does not go off, check the combination meter circuit. <Ref. to ABS(diag)-33, ABS WARNING LIGHT DOES NOT GO OFF, ABS Warning Light / Brake Warning Light Illumination Pattern.>
4) When brake warning light does not go off, check the brake warning light circuit, combination meter circuit. <Ref. to ABS(diag)-36, BRAKE WARNING LIGHT DOES NOT GO OFF, ABS Warning Light / Brake Warning Light Illumination Pattern.>

NOTE:
Even though the ABS warning light does not go off after 1.5 seconds from ABS warning light illumination, the ABS function operates normally when the warning light goes off while driving at approximately 12km/h (7 MPH). However, the ABS function does not operate while the ABS warning light is illuminated.

B: ABS WARNING LIGHT DOES NOT COME ON

DETECTING CONDITION:

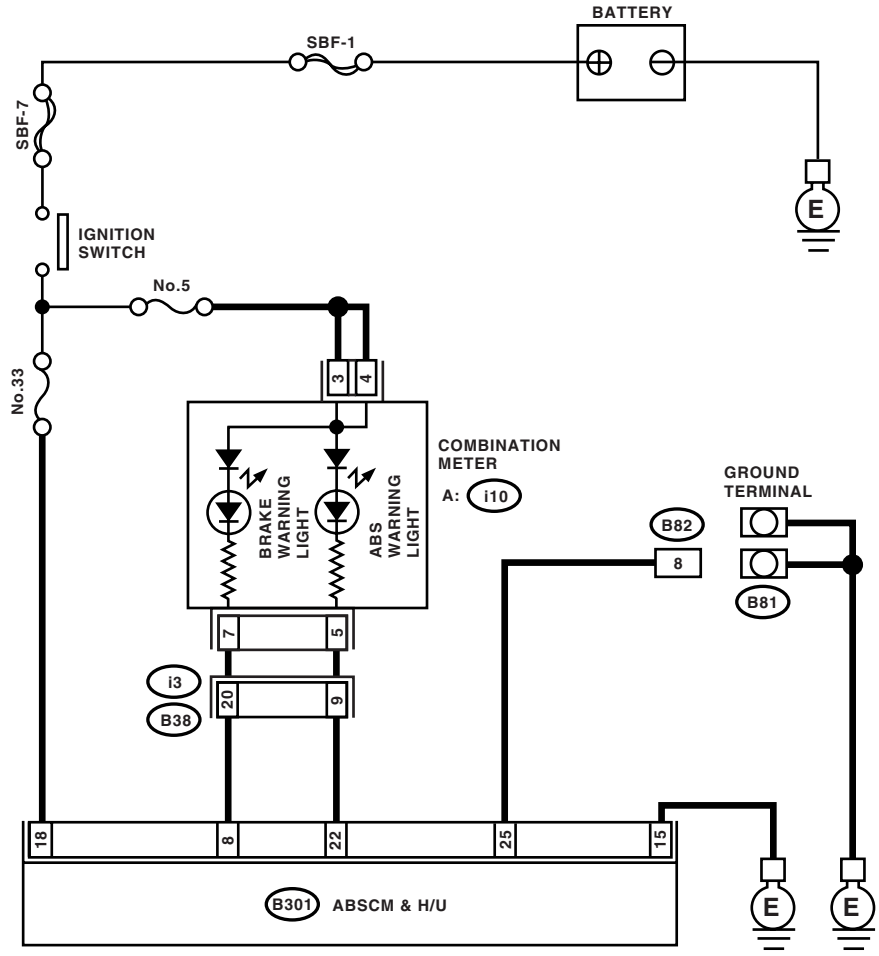
- Defective combination meter
- Defective harness

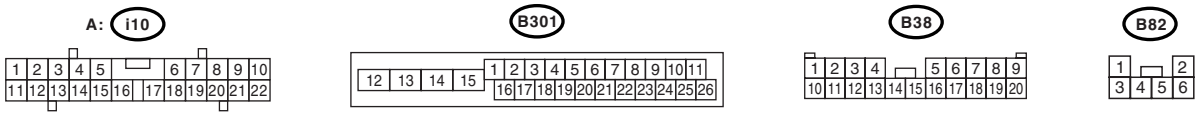
TROUBLE SYMPTOM:

When the ignition switch is turned to ON (engine OFF), ABS warning light does not come on.

WIRING DIAGRAM:

- LHD model

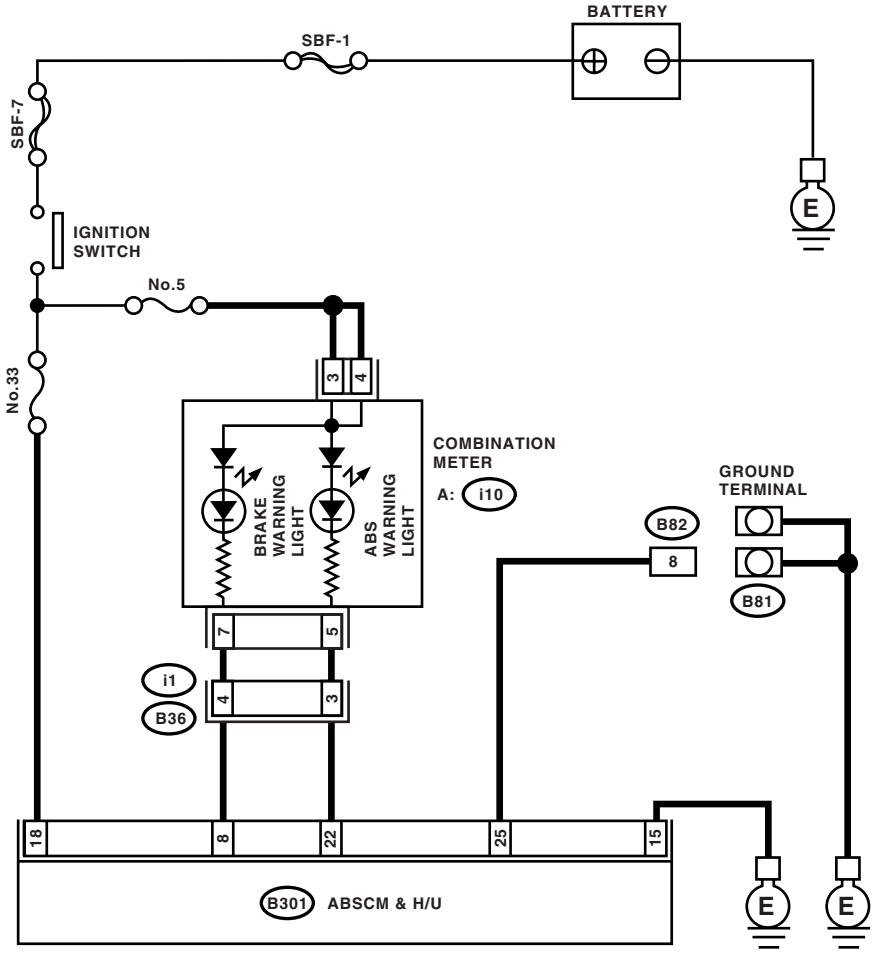


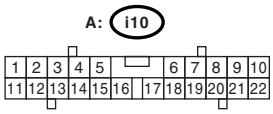


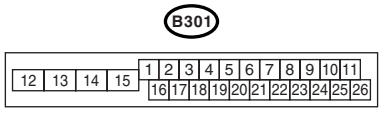
ABS00459

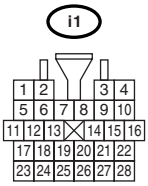
ABS Warning Light / Brake Warning Light Illumination Pattern

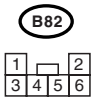
- RHD model











ABS00440

ABS Warning Light / Brake Warning Light Illumination Pattern

	Step	Check	Yes	No
1	**CHECK ILLUMINATION OF OTHER LIGHTS.** Turn the ignition switch to ON. (engine OFF)	Do other warning lights illuminate?	Go to step **2.**	Check the combination meter.
2	**READ DTC.** Read the DTC. <Ref. to ABS(diag)-25, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step **3.**
3	**CHECK GROUND SHORT OF HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector (B301) from ABSCM&H/U. 3) Disconnect the connector (i10) from the combination meter. 4) Measure the resistance between ABSCM connector and chassis ground. ***Connector & terminal*** ***(B301) No. 22 — Chassis ground:***	Is the resistance more than 1 MΩ?	Go to step **4.**	Repair the harness and connector between ABSCM&H/U and combination meter connector.
4	**CHECK ABSCM.** 1) Connect the connector (B301) to the ABSCM&H/U. 2) Turn the ignition to ON. 3) Immediately after turning ignition switch to ON (within 1.5 seconds), measure the resistance of harness between the combination meter connector and chassis ground. ***Connector & terminal*** ***(i10) No. 5 — Chassis ground:***	Is the resistance more than 1 MΩ?	Check the combination meter.	Replace the ABSCM only. <Ref. to ABS-8, REPLACEMENT, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>

C: ABS WARNING LIGHT DOES NOT GO OFF

DETECTING CONDITION:

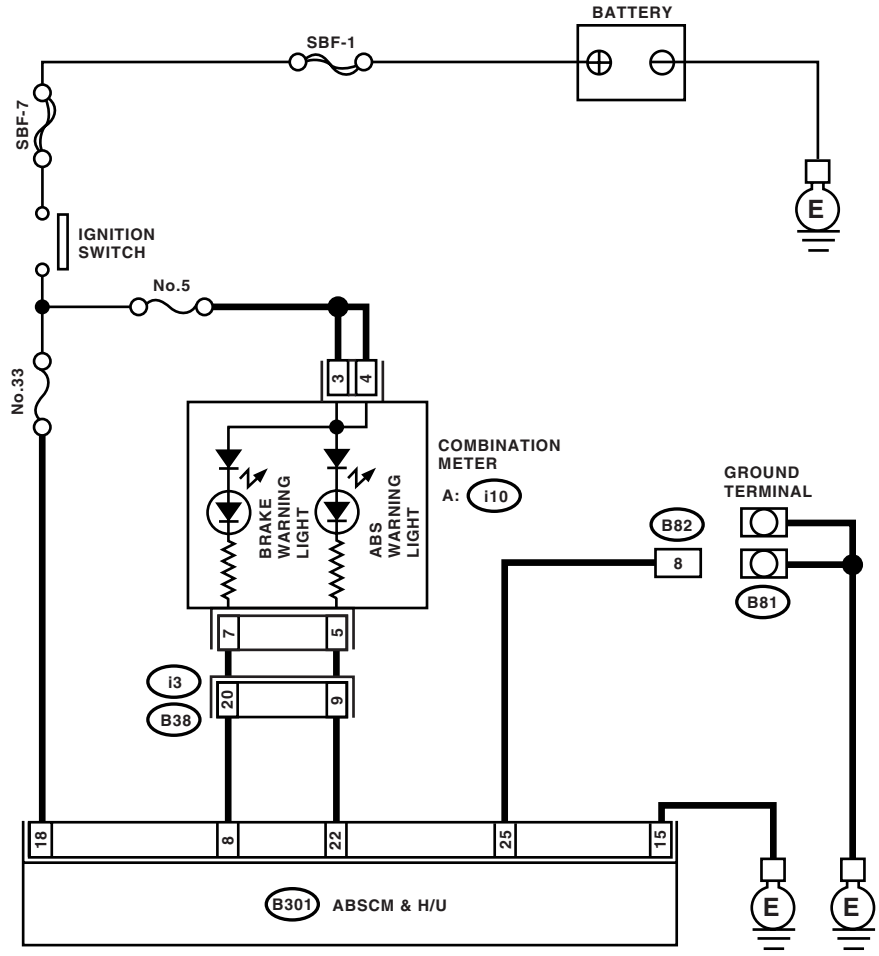
- Defective combination meter
- Open in harness

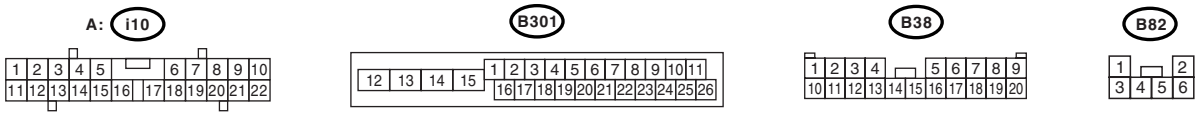
TROUBLE SYMPTOM:

When starting the engine, the ABS warning light is kept on.

WIRING DIAGRAM:

- LHD model

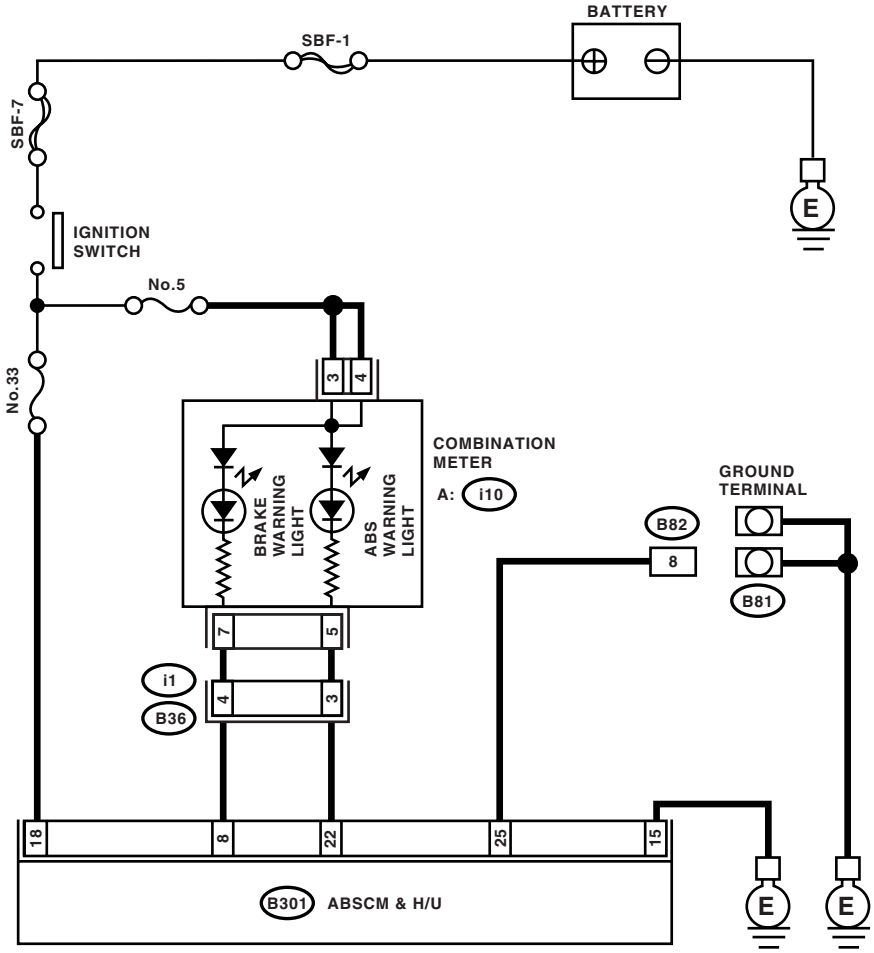


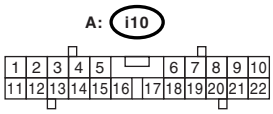


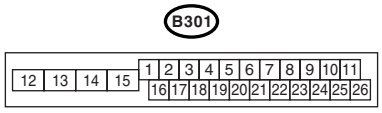
ABS00459

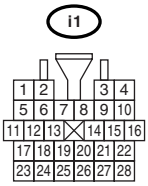
ABS Warning Light / Brake Warning Light Illumination Pattern

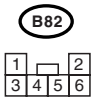
- RHD model











ABS00440

	Step	Check	Yes	No
1	**READ DTC.** Read the DTC. <Ref. to ABS(diag)-25, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step **2.**
2	**CHECK WIRING HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector (B301) from ABSCM&H/U. 3) Disconnect the connector (i10) from the combination meter. 4) Measure the resistance between ABSCM connector and combination meter connector. ***Connector & terminal*** ***(B301) No. 22 — (i10) No. 5:***	Is the resistance less than 0.5 Ω?	Go to step **3.**	Repair the harness and connector between ABSCM&H/U and combination meter connector.
3	**CHECK POOR CONTACT IN CONNECTOR.** Check poor contact in all connectors.	Is there poor contact?	Repair the connector.	Go to step **4.**
4	**CHECK ABSCM.** 1) Connect the connector (B301) to the ABSCM&H/U. 2) Turn the ignition switch to ON. 3) Measure the resistance between combination meter connector and chassis ground. ***Connector & terminal*** ***(i10) No. 5 — Chassis ground:***	Is the resistance less than 0.5 Ω?	Check the combination meter.	Replace the ABSCM only. <Ref. to ABS-8, REPLACEMENT, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>

D: BRAKE WARNING LIGHT DOES NOT GO OFF

DETECTING CONDITION:

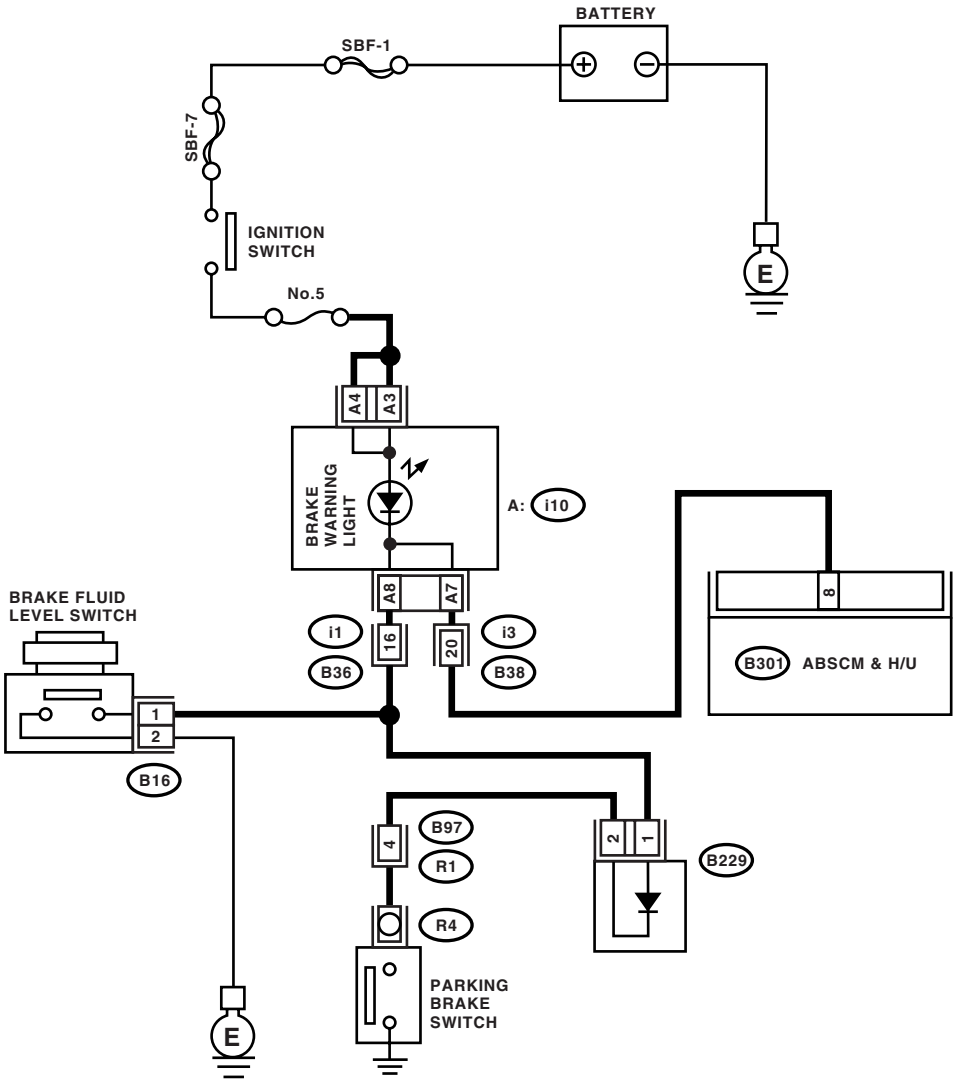
- Brake warning light circuit is shorted.
- Defective sensor/connector

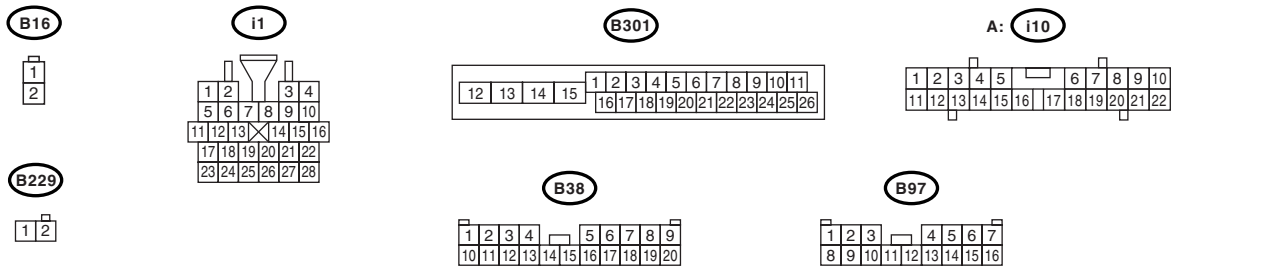
TROUBLE SYMPTOM:

After starting the engine, the brake warning light is kept on though the parking lever is released.

WIRING DIAGRAM:

- LHD model

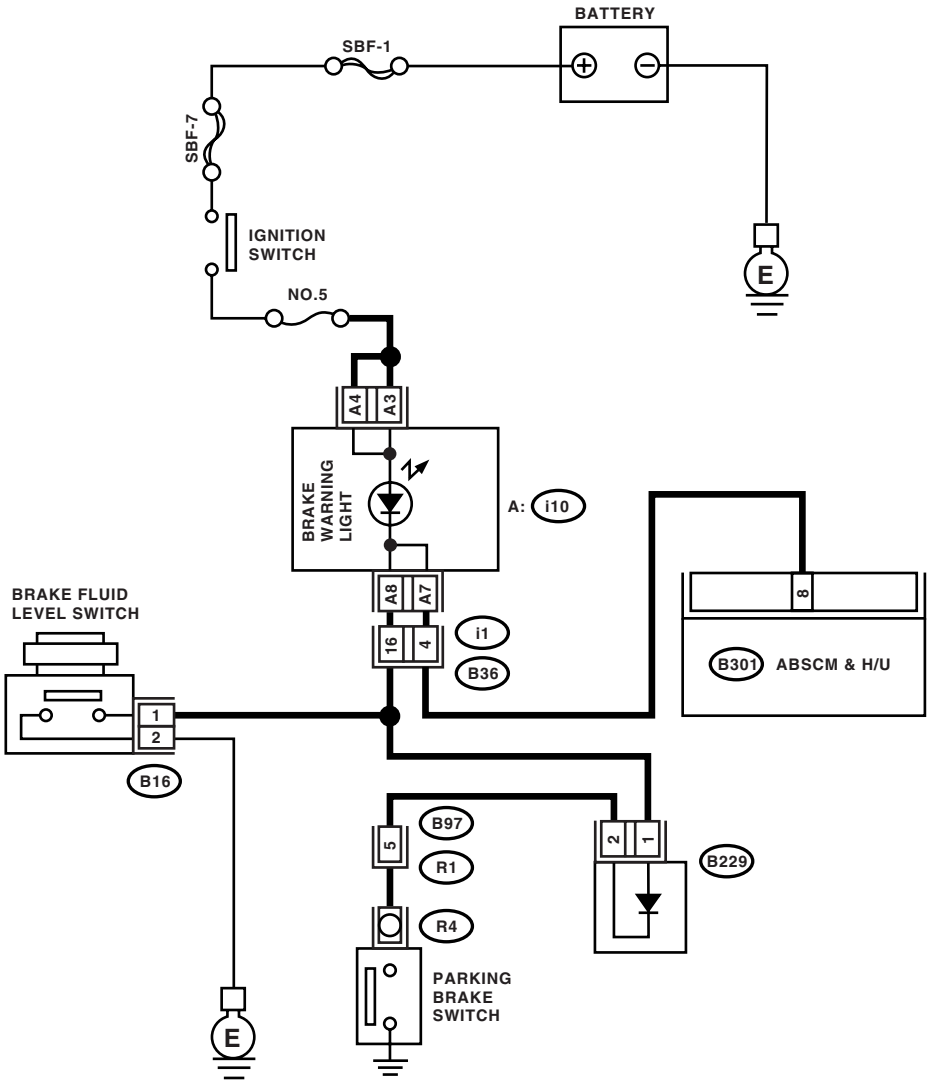


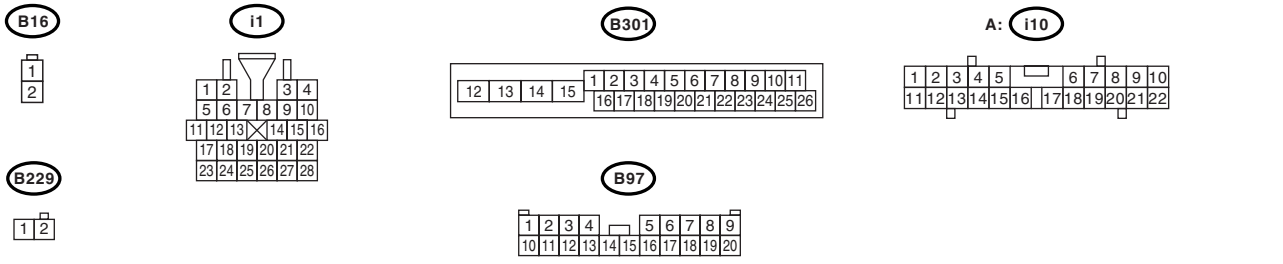


ABS00460

ABS Warning Light / Brake Warning Light Illumination Pattern

- RHD model





ABS00412

ABS Warning Light / Brake Warning Light Illumination Pattern

	Step	Check	Yes	No
1	**CHECK INSTALLATION OF ABSCM&H/U CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Check that the ABSCM&H/U connector is inserted to ABSCM&H/U until the clamp locks onto it.	Is the connector correctly inserted?	Go to step **2.**	Insert the ABSCM&H/U connector until the clamp locks onto it.
2	**READ DTC.** Read the DTC. <Ref. to ABS(diag)-25, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step **3.**
3	**CHECK THE BRAKE FLUID AMOUNT.** Check the amount of brake fluid in the reservoir tank of master cylinder.	Is the amount of brake fluid between the lines of MAX and MIN?	Go to step **4.**	Replenish brake fluid to the specified value.
4	**CHECK BRAKE FLUID LEVEL SWITCH.** 1) Disconnect the level switch connector (B16) from master cylinder. 2) Measure the resistance of master cylinder terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance more than 1 MΩ?	Go to step **5.**	Replace the master cylinder.
5	**CHECK PARKING BRAKE SWITCH.** 1) Disconnect the connector (R4) from parking brake switch. 2) Release the parking brake. 3) Measure the resistance between parking brake switch terminal and chassis ground.	Is the resistance more than 1 MΩ?	Go to step **6.**	Replace the parking brake switch.
6	**CHECK GROUND SHORT OF HARNESS.** 1) Disconnect the connector (i10) from combination meter. 2) Measure the resistance between combination meter connector and chassis ground. ***Connector & terminal*** ***(i10) No. 8 — Chassis ground:***	Is the resistance more than 1 MΩ?	Go to step **7.**	Repair the harness connector between combination meter and parking brake switch.
7	**CHECK HARNESS.** 1) Disconnect the connector (B301) from ABSCM&H/U. 2) Disconnect the connector (i10) from the combination meter. 3) Measure the resistance between ABSCM&H/U connector and combination meter connector. ***Connector & terminal*** ***(B301) No. 8 — (i10) No. 7:***	Is the resistance less than 0.5 Ω?	Go to step **8.**	Repair harness between ABSCM&H/U and combination meter connector.
8	**CHECK POOR CONTACT IN CONNECTOR.** Check poor contact in all connectors.	Is there poor contact?	Repair the connector.	Go to step **9.**
9	**CHECK ABSCM.** 1) Connect the connector to the ABSCM&H/U. 2) Turn the ignition switch to ON. 3) Measure the resistance between combination meter connector and chassis ground. ***Connector & terminal*** ***(i10) No. 7 — Chassis ground:***	Is the resistance less than 0.5 Ω?	Check the combination meter.	Replace the ABSCM only. <Ref. to ABS-8, REPLACEMENT, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>

11.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Content of diagnosis		Display	Reference target
C0101	ABS wheel speed sensor malfunction (Broken wire, short)	Rear ABS wheel speed sensor RH	Rear Right ABS Sensor Circuit Open or Shorted Battery	<Ref. to ABS(diag)-42, DTC C0101 ABS WHEEL SPEED SENSOR RR MALFUNCTION (BROKEN WIRE, INPUT VOLTAGE TOO HIGH), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C0102		Rear ABS wheel speed sensor LH	Rear Left ABS Sensor Circuit Open or Shorted Battery	<Ref. to ABS(diag)-42, DTC C0102 ABS WHEEL SPEED SENSOR RL MALFUNCTION (BROKEN WIRE, INPUT VOLTAGE TOO HIGH), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C0103		Front ABS wheel speed sensor RH	Front Right ABS Sensor Circuit Open or Shorted Battery	<Ref. to ABS(diag)-42, DTC C0103 ABS WHEEL SPEED SENSOR FR MALFUNCTION (BROKEN WIRE, INPUT VOLTAGE TOO HIGH), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C0104		Front ABS wheel speed sensor LH	Front Left ABS Sensor Circuit Open or Shorted Battery	<Ref. to ABS(diag)-43, DTC C0104 ABS WHEEL SPEED SENSOR FL MALFUNCTION (BROKEN WIRE, INPUT VOLTAGE TOO HIGH), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C0105	ABS wheel speed sensor malfunction (ABS wheel speed sensor abnormal signal)	Abnormal signal of rear ABS wheel speed sensor RH	Rear Right ABS Sensor Signal	<Ref. to ABS(diag)-46, DTC C0105 ABS WHEEL SPEED SENSOR RR MALFUNCTION (ABS WHEEL SPEED SENSOR ABNORMAL SIGNAL), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C0106		Abnormal signal of rear ABS wheel speed sensor LH	Rear Left ABS Sensor Signal	<Ref. to ABS(diag)-46, DTC C0106 ABS WHEEL SPEED SENSOR RL MALFUNCTION (ABS WHEEL SPEED SENSOR ABNORMAL SIGNAL), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C0107		Abnormal signal of front ABS wheel speed sensor RH	Front Right ABS Sensor Signal	<Ref. to ABS(diag)-46, DTC C0107 ABS WHEEL SPEED SENSOR FR MALFUNCTION (ABS WHEEL SPEED SENSOR ABNORMAL SIGNAL), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C0108		Abnormal signal of front ABS wheel speed sensor LH	Front Left ABS Sensor Signal	<Ref. to ABS(diag)-47, DTC C0108 ABS WHEEL SPEED SENSOR FL MALFUNCTION (ABS WHEEL SPEED SENSOR ABNORMAL SIGNAL), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C0109	Power voltage malfunction		Power Supply Voltage Failure	<Ref. to ABS(diag)-65, DTC C0109 POWER VOLTAGE MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C0110	ABS control module malfunction		ECM	<Ref. to ABS(diag)-63, DTC C0110 ABS CONTROL MODULE MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C0111	Motor/motor relay on failure		Motor and Motor Relay	<Ref. to ABS(diag)-71, DTC C0111 MOTOR/MOTOR RELAY MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C0114	Valve relay on failure		Valve Relay	<Ref. to ABS(diag)-69, DTC C0114 VALVE RELAY MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

List of Diagnostic Trouble Code (DTC)

DTC	Content of diagnosis		Display	Reference target
C0115	ABS wheel speed sensor malfunction (ABS wheel speed sensor abnormal signal)	Abnormal ABS wheel speed sensor on any one of four sensors	Any One of Four ABS Sensors Signal	<Ref. to ABS(diag)-51, DTC C0115 ABS WHEEL SPEED SENSOR SIGNAL MALFUNCTION IN ONE OF FOUR WHEELS, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C0116	Stop light switch signal circuit malfunction		Brake Light Switch	<Ref. to ABS(diag)-74, DTC C0116 FAULTY STOP LIGHT SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C0118	Faulty G sensor output voltage		G Sensor Failure	<Ref. to ABS(diag)-76, DTC C0118 G SENSOR OUTPUT VOLTAGE MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C0119	Abnormal G sensor output voltage		G Sensor Signal	<Ref. to ABS(diag)-79, DTC C0119 G SENSOR OUTPUT VOLTAGE MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C0120	Inlet valve malfunction in hydraulic unit	Front inlet valve LH	FL Hold Valve malfunction	<Ref. to ABS(diag)-55, DTC C0120 FRONT INLET SOLENOID VALVE LH MALFUNCTION IN ABS CONTROL MODULE AND HYDRAULIC CONTROL UNIT (ABSCM&H/U), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C0121	Outlet valve malfunction in hydraulic unit	Front outlet valve LH	FL Pressure Reducing Valve malfunction	<Ref. to ABS(diag)-59, DTC C0121 FRONT OUTLET SOLENOID VALVE LH MALFUNCTION IN ABS CONTROL MODULE AND HYDRAULIC CONTROL UNIT (ABSCM&H/U), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C0122	Inlet valve malfunction in hydraulic unit	Front inlet valve RH	FR Hold Valve malfunction	<Ref. to ABS(diag)-55, DTC C0122 FRONT INLET SOLENOID VALVE RH MALFUNCTION IN ABS CONTROL MODULE AND HYDRAULIC CONTROL UNIT (ABSCM&H/U), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C0123	Outlet valve malfunction in hydraulic unit	Front outlet valve RH	FR Pressure Reducing Valve malfunction	<Ref. to ABS(diag)-59, DTC C0123 FRONT OUTLET SOLENOID VALVE RH MALFUNCTION IN ABS CONTROL MODULE AND HYDRAULIC CONTROL UNIT (ABSCM&H/U), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C0124	Inlet valve malfunction in hydraulic unit	Rear inlet valve LH	RL Hold Valve malfunction	<Ref. to ABS(diag)-55, DTC C0124 REAR INLET SOLENOID VALVE LH MALFUNCTION IN ABS CONTROL MODULE AND HYDRAULIC CONTROL UNIT (ABSCM&H/U), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C0125	Outlet valve malfunction in hydraulic unit	Rear outlet valve LH	RL Pressure Reducing Valve malfunction	<Ref. to ABS(diag)-59, DTC C0125 REAR OUTLET SOLENOID VALVE LH MALFUNCTION IN ABS CONTROL MODULE AND HYDRAULIC CONTROL UNIT (ABSCM&H/U), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C0126	Inlet valve malfunction in hydraulic unit	Rear inlet valve RH	RR Hold Valve malfunction	<Ref. to ABS(diag)-56, DTC C0126 REAR INLET SOLENOID VALVE RH MALFUNCTION IN ABS CONTROL MODULE AND HYDRAULIC CONTROL UNIT (ABSCM&H/U), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Content of diagnosis		Display	Reference target
C0127	Outlet valve malfunction in hydraulic unit	Rear outlet valve RH	RR Pressure Reducing Valve malfunction	<Ref. to ABS(diag)-60, DTC C0127 REAR OUTLET SOLENOID VALVE RH MALFUNCTION IN ABS CONTROL MODULE AND HYDRAULIC CONTROL UNIT (ABSCM&H/U), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C0140	CAN communication malfunction		Improper CAN communication	<Ref. to ABS(diag)-68, DTC C0140 CAN COMMUNICATION MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

12.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC C0101 ABS WHEEL SPEED SENSOR RR MALFUNCTION (BROKEN WIRE, INPUT VOLTAGE TOO HIGH)

NOTE:
For the diagnostic procedure, refer to DTC C0104. <Ref. to ABS(diag)-43, DTC C0104 ABS WHEEL SPEED SENSOR FL MALFUNCTION (BROKEN WIRE, INPUT VOLTAGE TOO HIGH), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

B: DTC C0102 ABS WHEEL SPEED SENSOR RL MALFUNCTION (BROKEN WIRE, INPUT VOLTAGE TOO HIGH)

NOTE:
For the diagnostic procedure, refer to DTC C0104. <Ref. to ABS(diag)-43, DTC C0104 ABS WHEEL SPEED SENSOR FL MALFUNCTION (BROKEN WIRE, INPUT VOLTAGE TOO HIGH), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

C: DTC C0103 ABS WHEEL SPEED SENSOR FR MALFUNCTION (BROKEN WIRE, INPUT VOLTAGE TOO HIGH)

NOTE:
For the diagnostic procedure, refer to DTC C0104. <Ref. to ABS(diag)-43, DTC C0104 ABS WHEEL SPEED SENSOR FL MALFUNCTION (BROKEN WIRE, INPUT VOLTAGE TOO HIGH), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

D: DTC C0104 ABS WHEEL SPEED SENSOR FL MALFUNCTION (BROKEN WIRE, INPUT VOLTAGE TOO HIGH)

DTC DETECTING CONDITION:

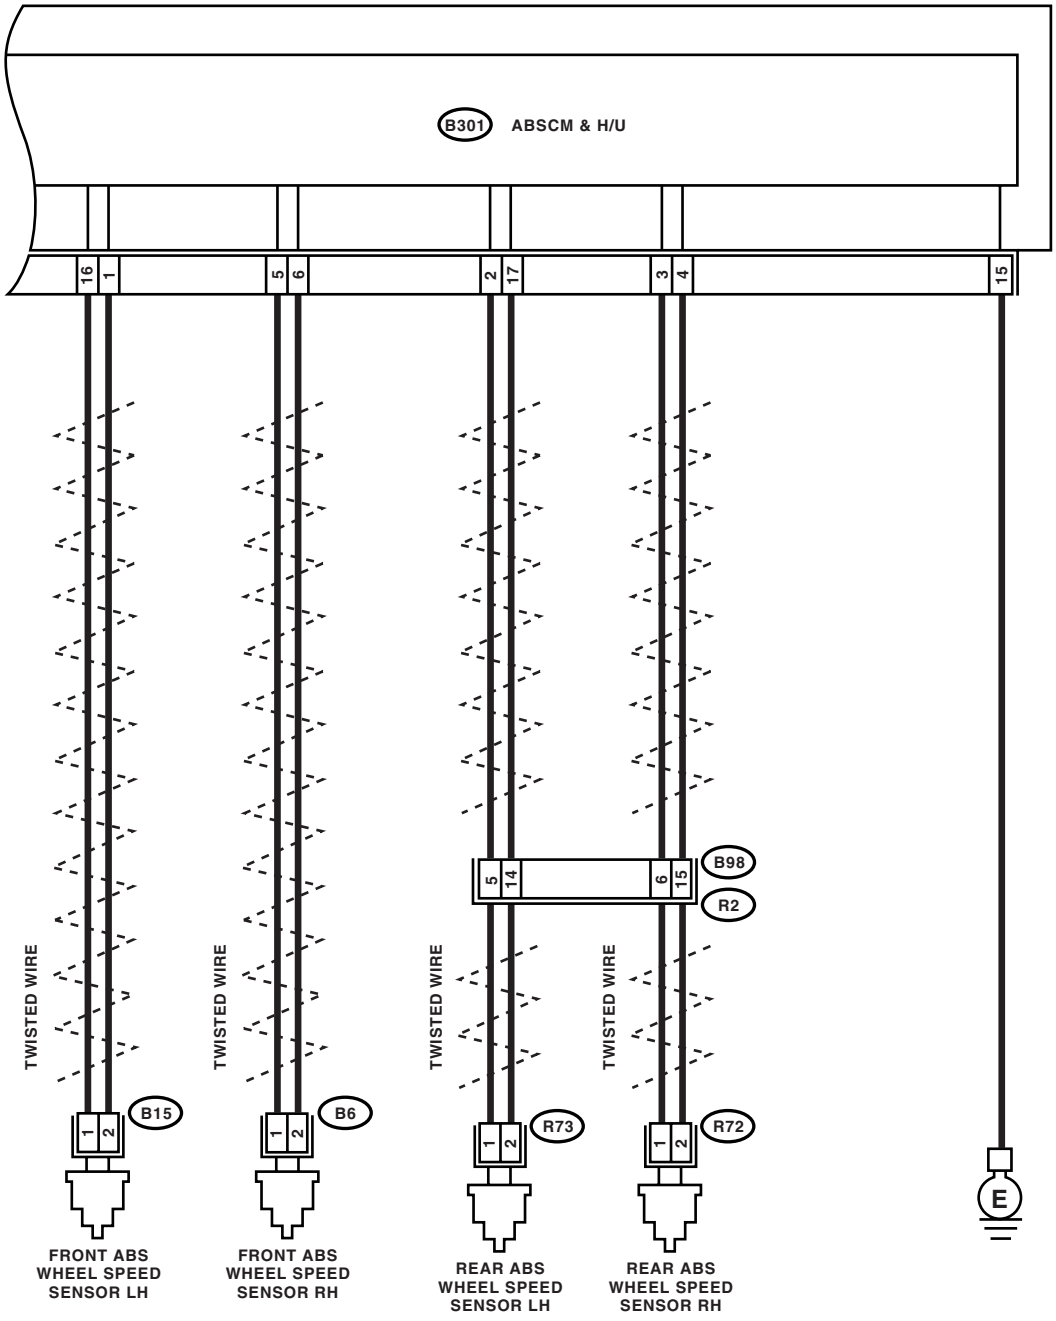
- Defective ABS wheel speed sensor (broken wire, input voltage too high)
- Defective harness connector

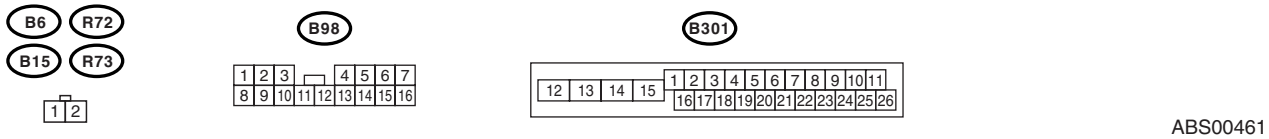
TROUBLE SYMPTOM:

ABS does not operate.

WIRING DIAGRAM:

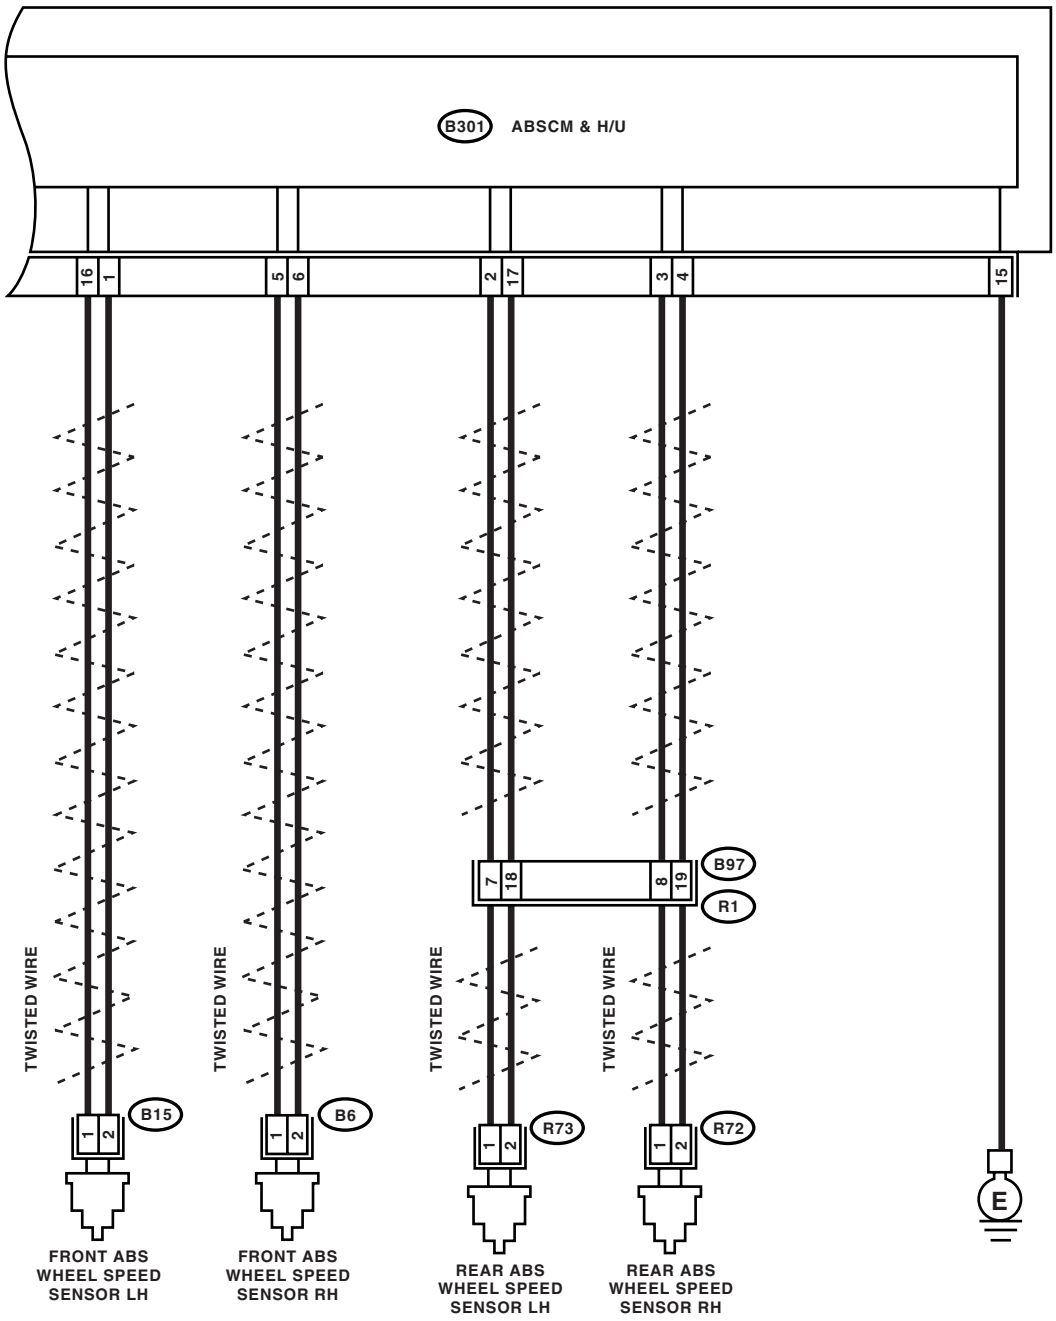
- LHD model

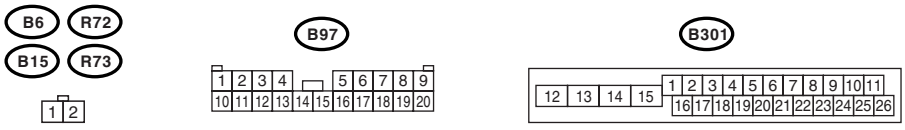




ABS00461

- RHD model





ABS00413

	Step	Check	Yes	No
1	**CHECK POOR CONTACT IN CONNECTOR.** Check the poor contact between ABSCM&H/U and ABS wheel speed sensor.	Is there poor contact?	Repair the connector.	Go to step **2.**
2	**CHECK HARNESS CONNECTOR BETWEEN ABSCM&H/U AND ABS WHEEL SPEED SENSOR.** 1) Disconnect the connector (B301) from ABSCM&H/U. 2) Disconnect the connector from ABS wheel speed sensor. 3) Measure the resistance between ABSCM&H/U connector and ABS wheel speed sensor connector. ***Connector & terminal*** ***DTC C0101*** ***(B301) No. 3 — (R72) No. 1:*** ***(B301) No. 4 — (R72) No. 2:*** ***DTC C0102*** ***(B301) No. 2 — (R73) No. 1:*** ***(B301) No. 17 — (R73) No. 2:*** ***DTC C0103*** ***(B301) No. 5 — (B6) No. 1:*** ***(B301) No. 6 — (B6) No. 2:*** ***DTC C0104*** ***(B301) No. 16 — (B15) No. 1:*** ***(B301) No. 1 — (B15) No. 2:***	Is the resistance less than 0.5 Ω?	Go to step **3.**	Repair the harness connector between ABSCM&H/U and ABS wheel speed sensor.
3	**CHECK GROUND SHORT OF HARNESS.** Measure the resistance between ABSCM&H/U connector and chassis ground. ***Connector & terminal*** ***DTC C0101*** ***(B301) No. 4 — Chassis ground:*** ***DTC C0102*** ***(B301) No. 17 — Chassis ground:*** ***DTC C0103*** ***(B301) No. 6 — Chassis ground:*** ***DTC C0104*** ***(B301) No. 1 — Chassis ground:***	Is the resistance more than 1 MΩ?	Go to step **4.**	Repair the harness connector between ABSCM&H/U and ABS wheel speed sensor.
4	**CHECK ABS WHEEL SPEED SENSOR POWER SUPPLY CIRCUIT.** 1) Connect the ABSCM&H/U connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between ABS wheel speed sensor connector and chassis ground. ***Connector & terminal*** ***DTC C0101*** ***(R72) No. 1 — Chassis ground (–):*** ***DTC C0102*** ***(R73) No. 1 — Chassis ground (–):*** ***DTC C0103*** ***(B6) No. 1 (+) — Chassis ground (–):*** ***DTC C0104*** ***(B15) No. 1 (+) — Chassis ground (–):***	Is the voltage 5 — 16 V?	Go to step **6.**	Go to step **5.**

	Step	Check	Yes	No
5	**CHECK ABSCM&H/U POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the ABSCM&H/U connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between ABSCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B301) No. 18 (+) — (B301) No. 15 (–):***	Is the voltage 10 — 15 V?	Go to step **7.**	Check the generator, battery, ABSCM&H/U power circuit.
6	**CHECK ABS WHEEL SPEED SENSOR SIGNAL.** 1) Install the ABS wheel speed sensor. 2) Prepare an oscilloscope. 3) Check ABS wheel speed sensor. <Ref. to ABS-13, ABS WHEEL SPEED SENSOR, INSPECTION, Front ABS Wheel Speed Sensor.>	Is the pattern the same waveform as shown in the figure?	Go to step **7.**	Replace the speed sensor.
7	**CHECK ABSCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. <Ref. to ABS(diag)-17, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.> 4) Read the DTC.	Is the same DTC displayed?	Replace the ABSCM only. <Ref. to ABS-8, REPLACEMENT, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>	Go to step **8.**
8	**CHECK ANY OTHER DTC ON DISPLAY.**	Is any other DTC displayed?	Perform the diagnosis according to DTC.	It results from a temporary noise interference.

E: DTC C0105 ABS WHEEL SPEED SENSOR RR MALFUNCTION (ABS WHEEL SPEED SENSOR ABNORMAL SIGNAL)

NOTE:
For the diagnostic procedure, refer to DTC C0108. <Ref. to ABS(diag)-47, DTC C0108 ABS WHEEL SPEED SENSOR FL MALFUNCTION (ABS WHEEL SPEED SENSOR ABNORMAL SIGNAL), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

F: DTC C0106 ABS WHEEL SPEED SENSOR RL MALFUNCTION (ABS WHEEL SPEED SENSOR ABNORMAL SIGNAL)

NOTE:
For the diagnostic procedure, refer to DTC C0108. <Ref. to ABS(diag)-47, DTC C0108 ABS WHEEL SPEED SENSOR FL MALFUNCTION (ABS WHEEL SPEED SENSOR ABNORMAL SIGNAL), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

G: DTC C0107 ABS WHEEL SPEED SENSOR FR MALFUNCTION (ABS WHEEL SPEED SENSOR ABNORMAL SIGNAL)

NOTE:
For the diagnostic procedure, refer to DTC C0108. <Ref. to ABS(diag)-47, DTC C0108 ABS WHEEL SPEED SENSOR FL MALFUNCTION (ABS WHEEL SPEED SENSOR ABNORMAL SIGNAL), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

H: DTC C0108 ABS WHEEL SPEED SENSOR FL MALFUNCTION (ABS WHEEL SPEED SENSOR ABNORMAL SIGNAL)

DTC DETECTING CONDITION:

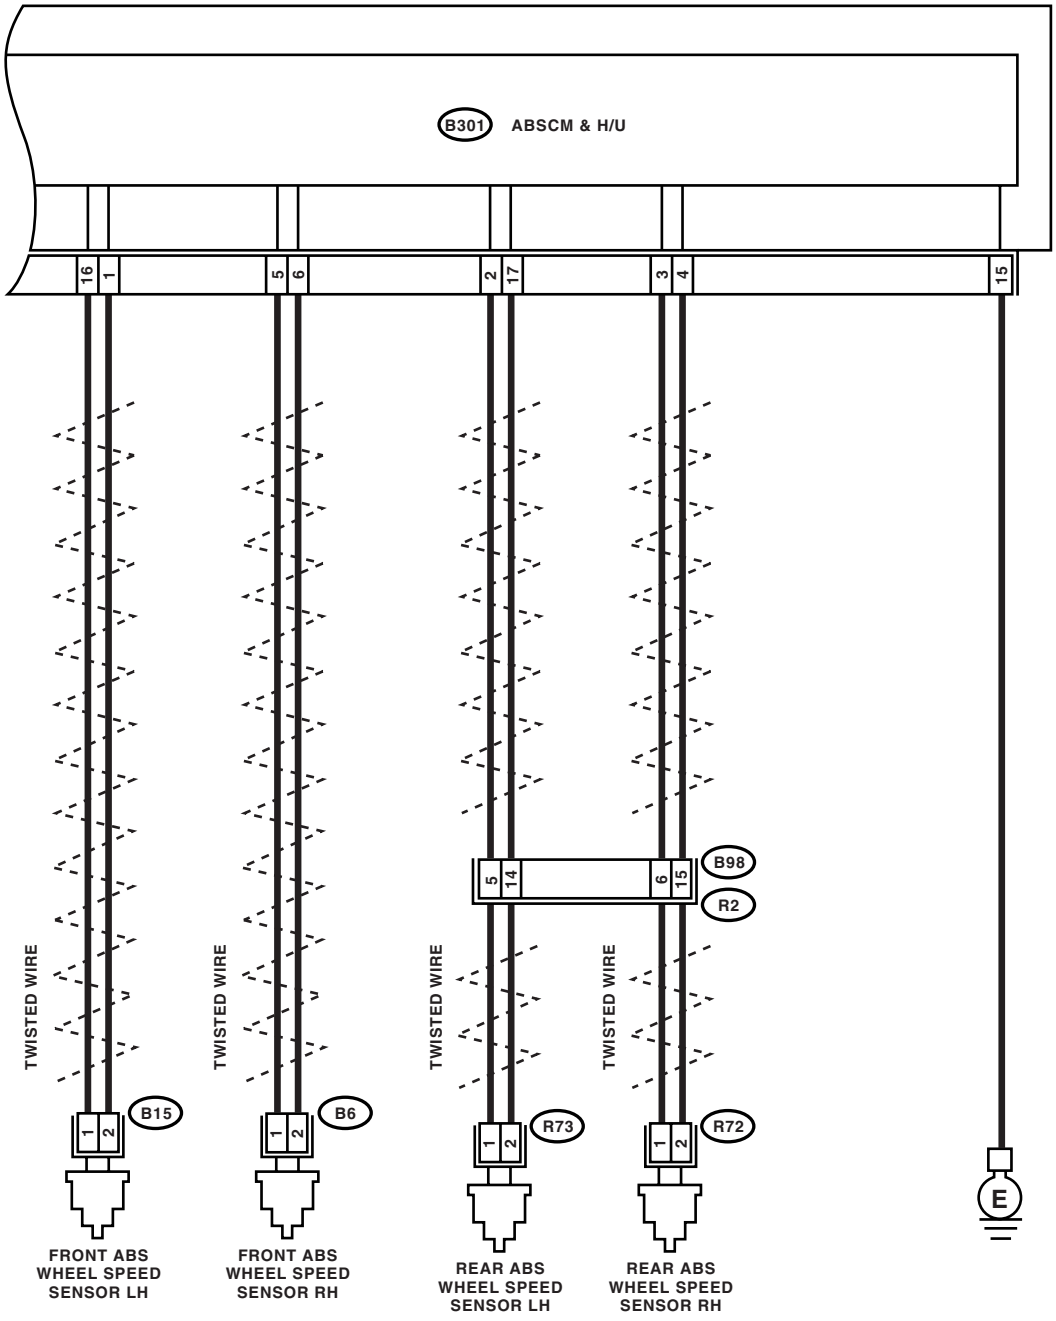
- Defective ABS wheel speed sensor signal (noise, abnormal signal, etc.)
- Defective harness connector

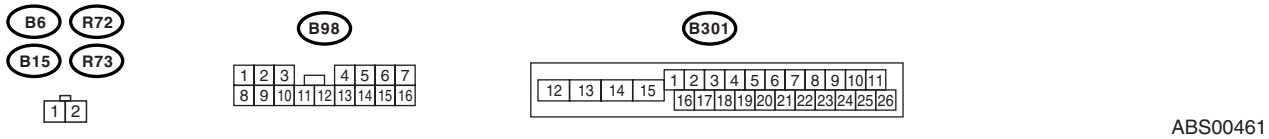
TROUBLE SYMPTOM:

ABS does not operate.

WIRING DIAGRAM:

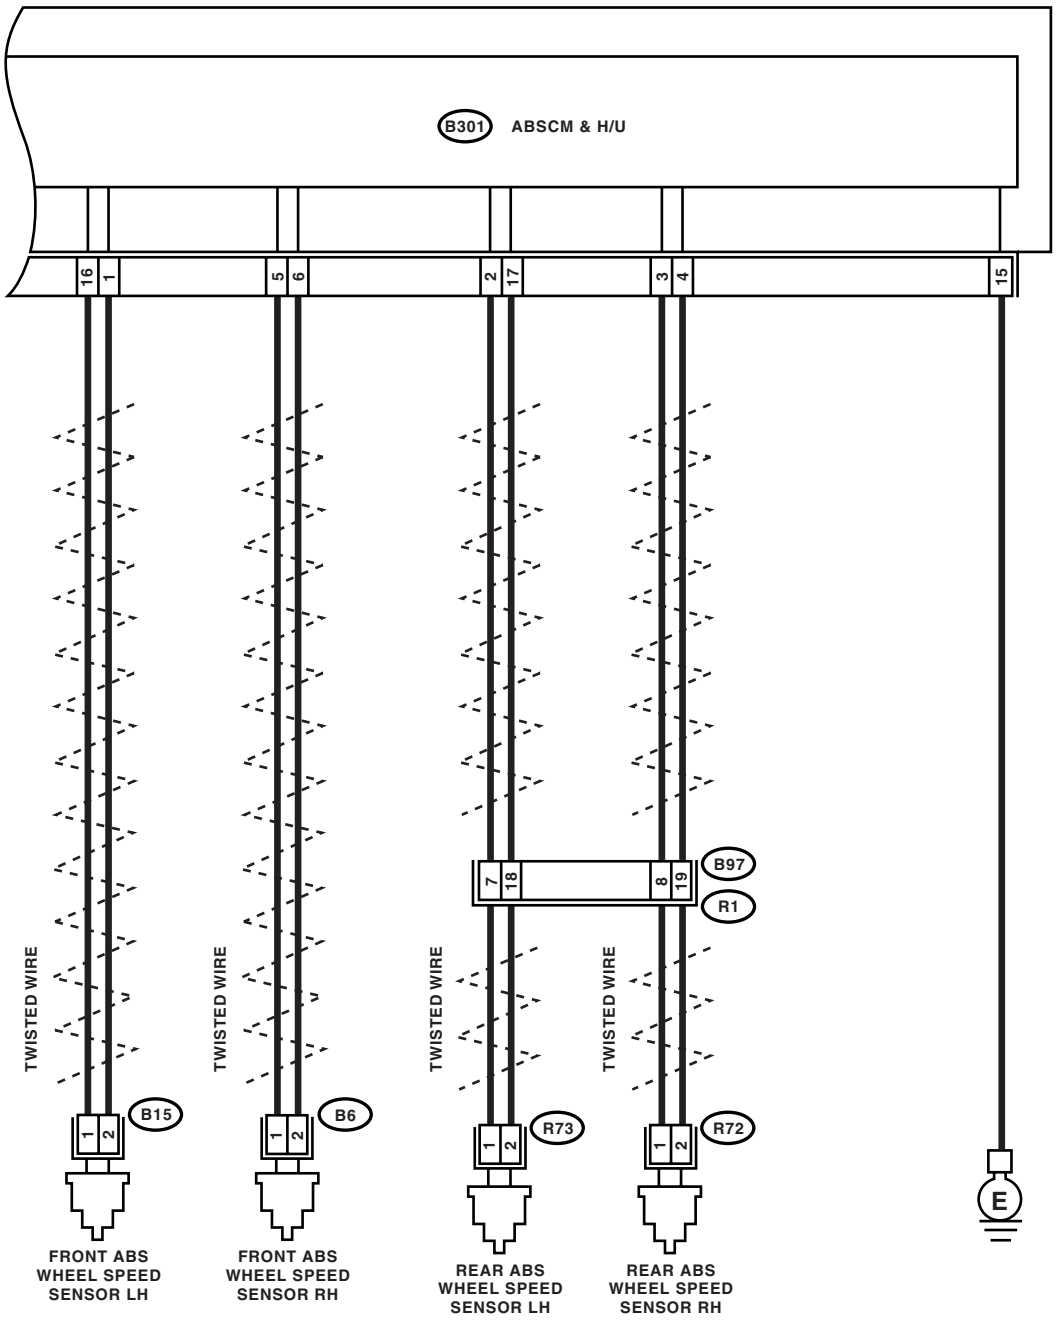
- LHD model

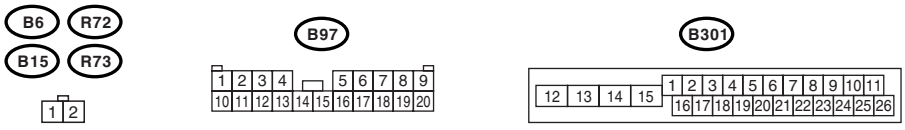




ABS00461

• RHD model





ABS00413

	Step	Check	Yes	No
1	**CHECK OUTPUT OF ABS WHEEL SPEED SENSOR USING SUBARU SELECT MONITOR.** 1) Select {Current Data Display & Save} in Subaru Select Monitor. 2) Read the ABS wheel speed sensor output corresponding to the faulty wheel in Subaru Select Monitor data display mode.	Does the speed indicated on the display change in response to the speedometer reading during acceleration/deceleration when the steering wheel is in the straight-ahead position?	Go to step **2.**	Go to step **7.**
2	**CHECK POOR CONTACT IN CONNECTOR.** Turn the ignition switch to OFF.	Is there poor contact in connectors between ABSCM&H/U and ABS wheel speed sensor?	Repair the connector.	Go to step **3.**
3	**CHECK SOURCES OF SIGNAL NOISE.** Make sure the car phone, radio wave device like radio and etc., electric components are installed correctly.	Is the car phone, radio wave device like radio and etc., electric components installed correctly?	Go to step **4.**	Install the radio wave device and electric components properly.
4	**CHECK SOURCES OF SIGNAL NOISE.** Check that the noise sources are (such as an antenna) installed near the sensor harness.	Is the noise sources installed?	Install the noise sources apart from the sensor harness.	Go to step **5.**
5	**CHECK ABSCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. <Ref. to ABS(diag)-17, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.> 4) Read the DTC.	Is the same DTC displayed?	Replace the ABSCM only. <Ref. to ABS-8, REPLACEMENT, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>	Go to step **6.**
6	**CHECK ANY OTHER DTC ON DISPLAY.**	Is any other DTC displayed?	Perform the diagnosis according to DTC.	It results from a temporary noise interference.
7	**CHECK INSTALLATION OF ABS WHEEL SPEED SENSOR.**	Is the ABS wheel speed sensor installation bolt tightened 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)?	Go to step **8.**	Tighten the ABS wheel speed sensor installation bolts.
8	**CHECK ABS WHEEL SPEED SENSOR SIGNAL.** 1) Install the ABS wheel speed sensor. 2) Prepare an oscilloscope. 3) Check ABS wheel speed sensor. <Ref. to ABS-13, ABS WHEEL SPEED SENSOR, INSPECTION, Front ABS Wheel Speed Sensor.>	Does the oscilloscope indicate the waveform pattern like shown in the figure when the tire is slowly turned? Does the oscilloscope indication repeat the waveform pattern like shown in the figure when the tire is slowly turned in equal speed for more one rotation?	Go to step **10.**	Go to step **9.**
9	**CHECK ABS WHEEL SPEED SENSOR AND MAGNETIC ENCODER.**	Is there foreign particles, breakage or damage in the pole piece of ABS wheel speed sensor or magnetic encoder?	Remove dirt completely. Replace the ABS wheel speed sensor or magnetic encoder as a unit with hub unit bearing when it is broken or damaged.	Go to step **10.**
10	**CHECK SOURCES OF SIGNAL NOISE.** Make sure the car phone, radio wave device like CB and etc., electric components are installed correctly.	Is the car phone, radio wave device like radio and etc., electric components installed correctly?	Go to step **11.**	Install the radio wave device and electric components properly.

	Step	Check	Yes	No
11	**CHECK SOURCES OF SIGNAL NOISE.** Check if the noise sources are (such as an antenna) installed near the sensor harness.	Are noise sources installed?	Go to step **12.**	Install the noise sources apart from the sensor harness.
12	**CHECK ABSCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. <Ref. to ABS(diag)-17, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.> 4) Read the DTC.	Is the same DTC displayed?	Replace the ABSCM only. <Ref. to ABS-8, REPLACEMENT, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>	Go to step **13.**
13	**CHECK ANY OTHER DTC ON DISPLAY.**	Is any other DTC displayed?	Perform the diagnosis according to DTC.	It results from a temporary noise interference. NOTE: Though ABS warning light remains to illuminate at this time, it is normal. Drive the vehicle at more than 12 km/h (7 MPH) in order to make ABS warning light go off. Be sure to drive the vehicle and check the warning light goes off.

I: DTC C0115 ABS WHEEL SPEED SENSOR SIGNAL MALFUNCTION IN ONE OF FOUR WHEELS

DTC DETECTING CONDITION:

- Defective ABS wheel speed sensor signal (noise, abnormal signal, etc.)
- Defective magnetic encoder
- When a wheel is turned freely for a long time

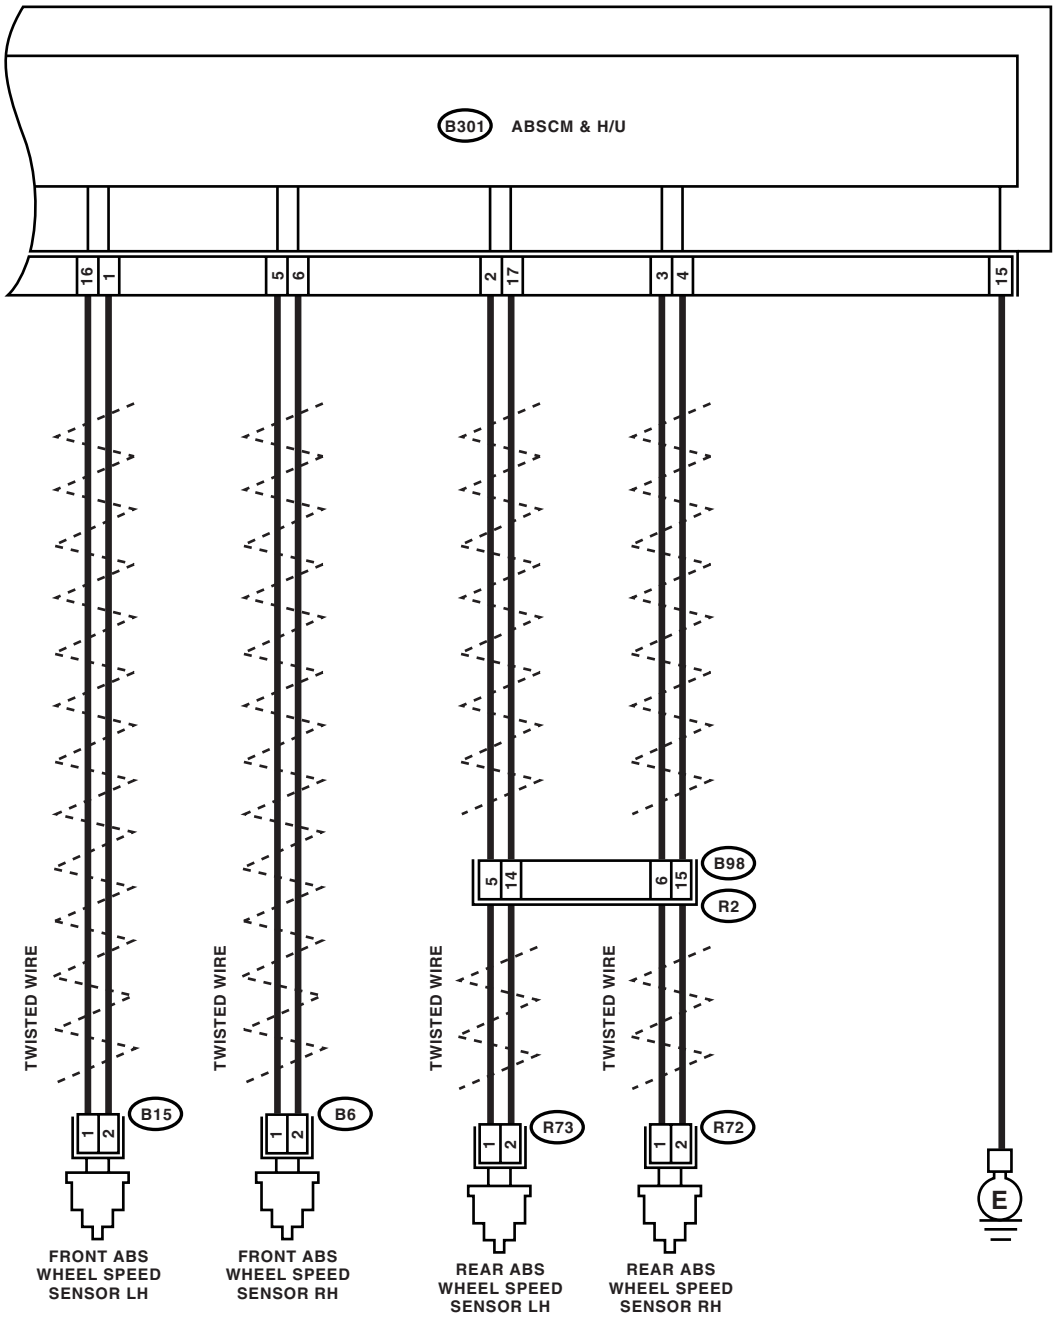
TROUBLE SYMPTOM:

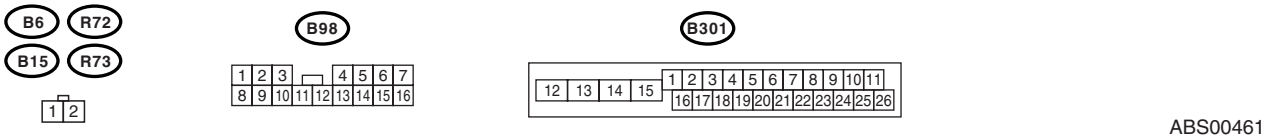
- ABS does not operate.
- EBD does not operate.

NOTE:
Brake warning light comes on as well as ABS warning light.

WIRING DIAGRAM:

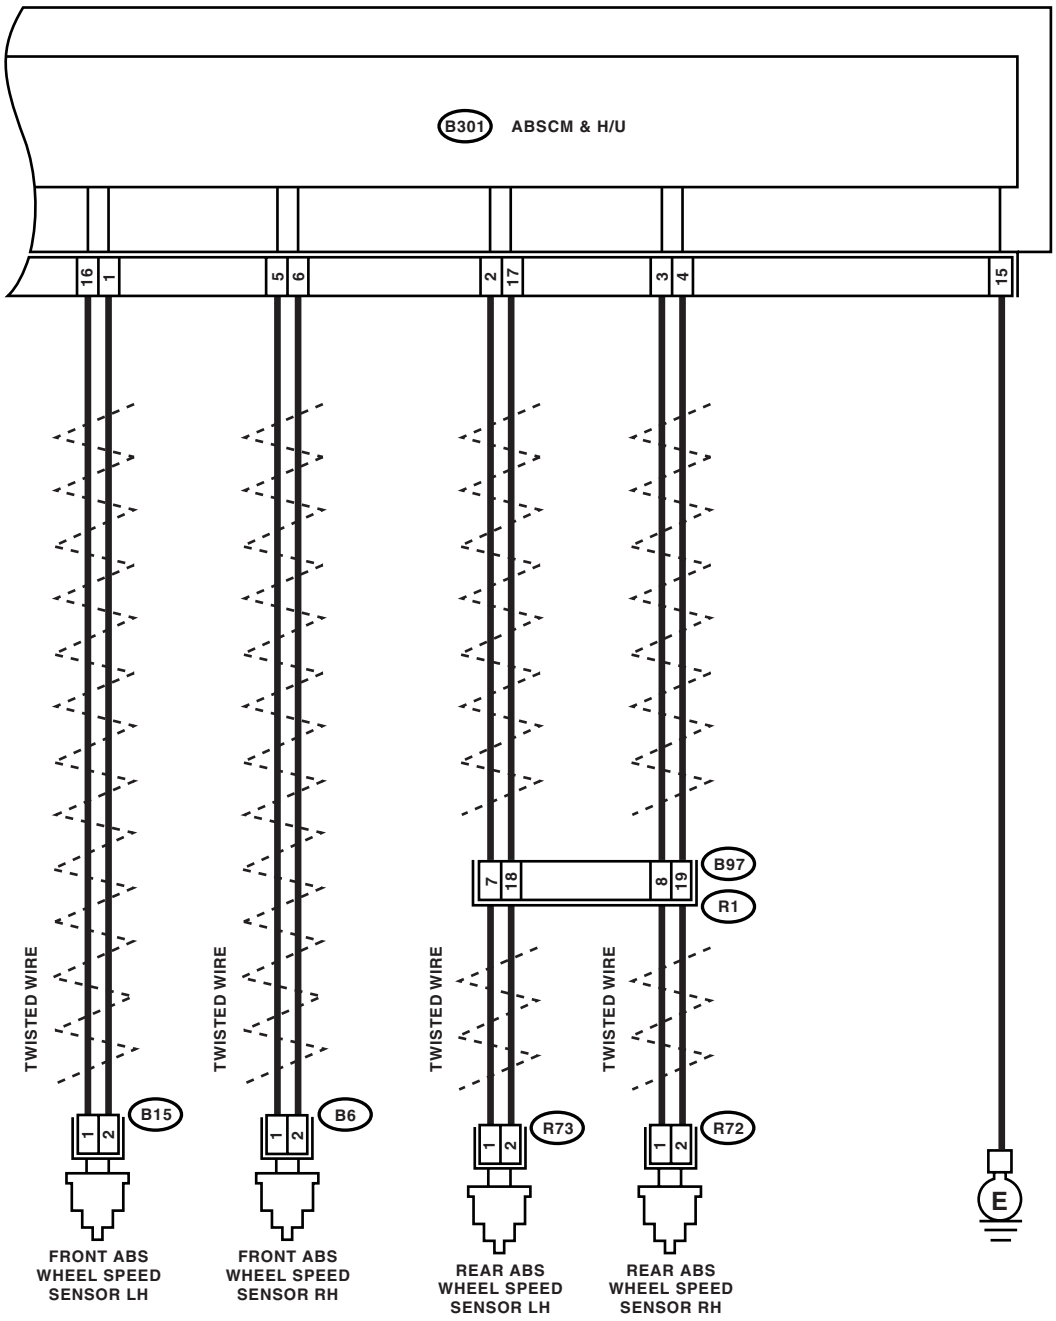
- LHD model

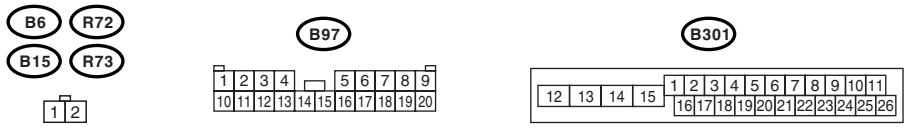




ABS00461

• RHD model





ABS00413

	Step	Check	Yes	No
1	**WHETHER A WHEEL TURNED FREELY OR NOT.** Check if the wheels have been turned freely for more than one minute, such as when the vehicle is jacked-up, under full-lock cornering or when the wheels are not in contact with road surface.	Did the wheels turn freely?	ABS is normal. Erase the memory. NOTE: When the wheels turn freely for a long time, such as when the vehicle is towed or jacked-up, or when steering wheel is continuously turned all the way, this diagnostic trouble code may sometimes occur.	Go to step **2.**
2	**CHECK TIRE SPECIFICATIONS.** Turn the ignition switch to OFF.	Are the tire specifications correct?	Go to step **3.**	Replace the tire.
3	**CHECK WEAR OF TIRE.**	Is the tire worn excessively?	Replace the tire.	Go to step **4.**
4	**CHECK TIRE INFLATION PRESSURE.**	Is the tire pressure correct?	Go to step **5.**	Adjust the tire pressure.
5	**CHECK INSTALLATION OF ABS WHEEL SPEED SENSOR.**	Is the ABS wheel speed sensor installation bolt tightened 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)? (four of them)	Go to step **6.**	Tighten the ABS wheel speed sensor installation bolts.
6	**CHECK ABS WHEEL SPEED SENSOR SIGNAL.** 1) Install the ABS wheel speed sensor. 2) Prepare an oscilloscope. 3) Check ABS wheel speed sensor. <Ref. to ABS-13, ABS WHEEL SPEED SENSOR, INSPECTION, Front ABS Wheel Speed Sensor.>	Does the oscilloscope indicate the waveform pattern like shown in the figure when the tire is slowly turned? Does the oscilloscope indication repeat the waveform pattern like shown in the figure when the tire is slowly turned in equal speed for more one rotation?	Go to step **8.**	Go to step **7.**
7	**CHECK ABS WHEEL SPEED SENSOR AND MAGNETIC ENCODER.**	Is there foreign particles, breakage or damage in the pole piece of ABS wheel speed sensor or magnetic encoder?	Remove dirt completely. Replace the ABS wheel speed sensor or magnetic encoder as a unit with hub unit bearing when it is broken or damaged.	Go to step **8.**
8	**CHECK ABSCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. <Ref. to ABS(diag)-17, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.> 4) Read the DTC.	Is the same DTC displayed?	Replace the ABSCM only. <Ref. to ABS-8, REPLACEMENT, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>	Go to step **9.**

	Step	Check	Yes	No
9	**CHECK ANY OTHER DTC ON DISPLAY.**	Is any other DTC displayed?	Perform the diagnosis according to DTC.	It results from a temporary noise interference. NOTE: Though ABS warning light remains to illuminate at this time, it is normal. Drive the vehicle at more than 12 km/h (7 MPH) in order to make ABS warning light go off. Be sure to drive the vehicle and check the warning light goes off.

J: DTC C0120 FRONT INLET SOLENOID VALVE LH MALFUNCTION IN ABS CONTROL MODULE AND HYDRAULIC CONTROL UNIT (ABSCM&H/U)

NOTE:
For the diagnostic procedure, refer to DTC C0126. <Ref. to ABS(diag)-56, DTC C0126 REAR INLET SOLENOID VALVE RH MALFUNCTION IN ABS CONTROL MODULE AND HYDRAULIC CONTROL UNIT (ABSCM&H/U), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

K: DTC C0122 FRONT INLET SOLENOID VALVE RH MALFUNCTION IN ABS CONTROL MODULE AND HYDRAULIC CONTROL UNIT (ABSCM&H/U)

NOTE:
For the diagnostic procedure, refer to DTC C0126. <Ref. to ABS(diag)-56, DTC C0126 REAR INLET SOLENOID VALVE RH MALFUNCTION IN ABS CONTROL MODULE AND HYDRAULIC CONTROL UNIT (ABSCM&H/U), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

L: DTC C0124 REAR INLET SOLENOID VALVE LH MALFUNCTION IN ABS CONTROL MODULE AND HYDRAULIC CONTROL UNIT (ABSCM&H/U)

NOTE:
For the diagnostic procedure, refer to DTC C0126. <Ref. to ABS(diag)-56, DTC C0126 REAR INLET SOLENOID VALVE RH MALFUNCTION IN ABS CONTROL MODULE AND HYDRAULIC CONTROL UNIT (ABSCM&H/U), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

M: DTC C0126 REAR INLET SOLENOID VALVE RH MALFUNCTION IN ABS CONTROL MODULE AND HYDRAULIC CONTROL UNIT (ABSCM&H/U)

DTC DETECTING CONDITION:

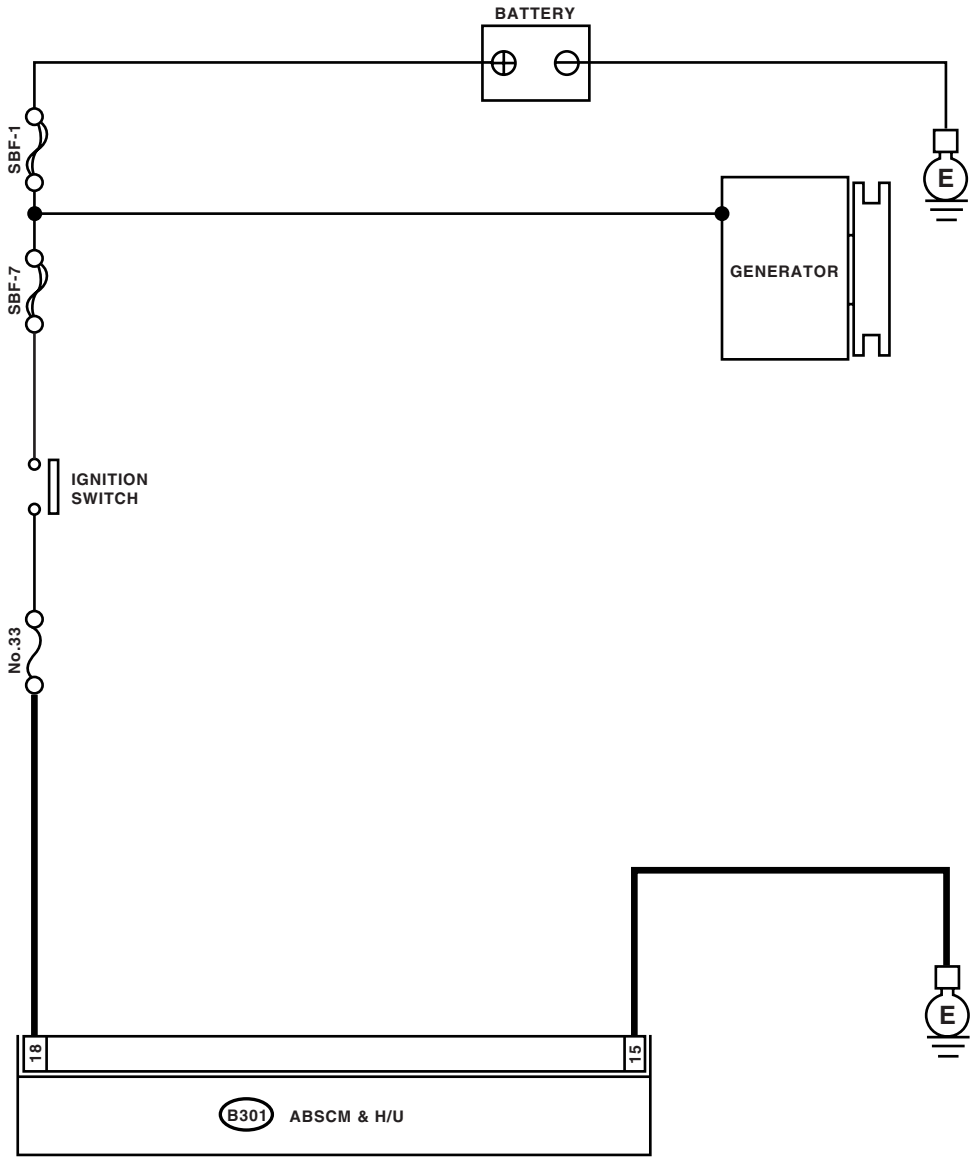
- Defective harness connector
- Defective inlet solenoid valve in ABSCM&H/U

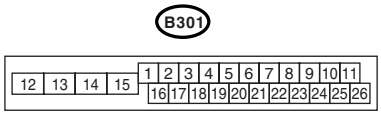
TROUBLE SYMPTOM:

- ABS does not operate.
- EBD does not operate.

NOTE:
Brake warning light comes on as well as ABS warning light.

WIRING DIAGRAM:





ABS00414

	Step	Check	Yes	No
1	**CHECK INPUT VOLTAGE OF ABSCM&H/U.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ABSCM&H/U. 3) Run the engine at idle. 4) Measure the voltage between ABSCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B301) No. 18 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **2.**	Repair the ABSCM&H/U power circuit.
2	**CHECK GROUND CIRCUIT OF ABSCM&H/U.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between ABSCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B301) No. 15 — Chassis ground:***	Is the resistance less than 0.5 Ω?	Go to step **3.**	Repair the ABSCM&H/U ground harness.
3	**CHECK POOR CONTACT IN CONNECTOR.**	Is there poor contact in connector between generator, battery and ABSCM&H/U?	Repair the connector.	Go to step **4.**
4	**CHECK ABSCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. 4) Read the DTC.	Is the same DTC displayed?	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>	Go to step **5.**
5	**CHECK ANY OTHER DTC ON DISPLAY.**	Is any other DTC displayed?	Inspect the DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to ABS(diag)-39, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

N: DTC C0121 FRONT OUTLET SOLENOID VALVE LH MALFUNCTION IN ABS CONTROL MODULE AND HYDRAULIC CONTROL UNIT (ABSCM&H/U)

NOTE:
For the diagnostic procedure, refer to DTC C0127. <Ref. to ABS(diag)-60, DTC C0127 REAR OUTLET SOLENOID VALVE RH MALFUNCTION IN ABS CONTROL MODULE AND HYDRAULIC CONTROL UNIT (ABSCM&H/U), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

O: DTC C0123 FRONT OUTLET SOLENOID VALVE RH MALFUNCTION IN ABS CONTROL MODULE AND HYDRAULIC CONTROL UNIT (ABSCM&H/U)

NOTE:
For the diagnostic procedure, refer to DTC C0127. <Ref. to ABS(diag)-60, DTC C0127 REAR OUTLET SOLENOID VALVE RH MALFUNCTION IN ABS CONTROL MODULE AND HYDRAULIC CONTROL UNIT (ABSCM&H/U), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

P: DTC C0125 REAR OUTLET SOLENOID VALVE LH MALFUNCTION IN ABS CONTROL MODULE AND HYDRAULIC CONTROL UNIT (ABSCM&H/U)

NOTE:
For the diagnostic procedure, refer to DTC C0127. <Ref. to ABS(diag)-60, DTC C0127 REAR OUTLET SOLENOID VALVE RH MALFUNCTION IN ABS CONTROL MODULE AND HYDRAULIC CONTROL UNIT (ABSCM&H/U), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Q: DTC C0127 REAR OUTLET SOLENOID VALVE RH MALFUNCTION IN ABS CONTROL MODULE AND HYDRAULIC CONTROL UNIT (ABSCM&H/U)

DTC DETECTING CONDITION:

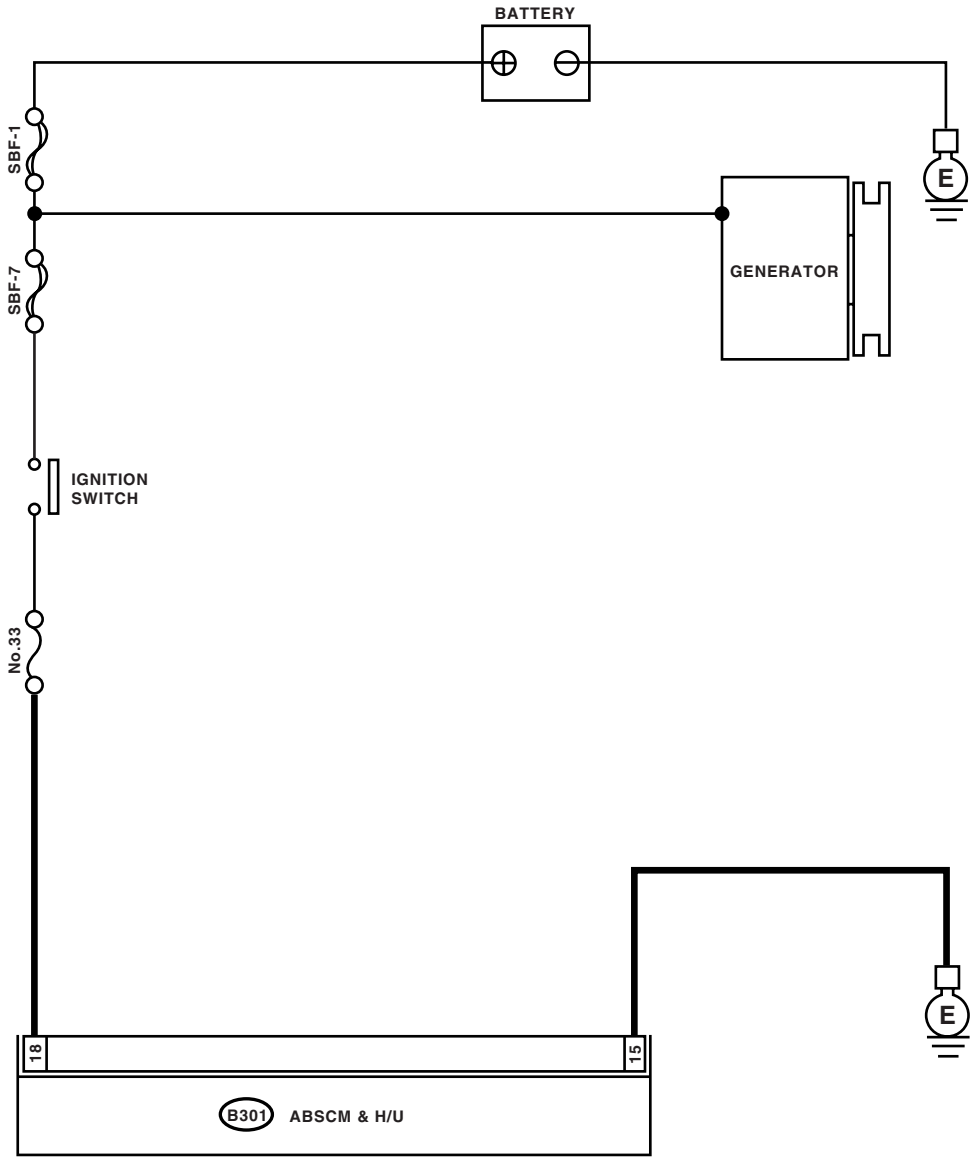
- Defective harness connector
- Defective outlet solenoid valve in ABSCM&H/U

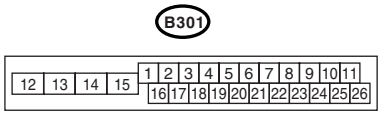
TROUBLE SYMPTOM:

- ABS does not operate.
- EBD does not operate.

NOTE:
Brake warning light comes on as well as ABS warning light.

WIRING DIAGRAM:





ABS00414

	Step	Check	Yes	No
1	**CHECK INPUT VOLTAGE OF ABSCM&H/U.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ABSCM&H/U. 3) Run the engine at idle. 4) Measure the voltage between ABSCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B301) No. 18 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **2.**	Repair the ABSCM&H/U power circuit.
2	**CHECK GROUND CIRCUIT OF ABSCM&H/U.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between ABSCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B301) No. 15 — Chassis ground:***	Is the resistance less than 0.5 Ω?	Go to step **3.**	Repair the ABSCM&H/U ground harness.
3	**CHECK POOR CONTACT IN CONNECTOR.**	Is there poor contact in connector between generator, battery and ABSCM&H/U?	Repair the connector.	Go to step **4.**
4	**CHECK ABSCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. 4) Read the DTC.	Is the same DTC displayed?	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>	Go to step **5.**
5	**CHECK ANY OTHER DTC ON DISPLAY.**	Is any other DTC displayed?	Inspect the DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to ABS(diag)-39, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

R: DTC C0110 ABS CONTROL MODULE MALFUNCTION

DTC DETECTING CONDITION:

Defective ABSCM&H/U

TROUBLE SYMPTOM:

- ABS does not operate.
- EBD does not operate.

NOTE:

Brake warning light comes on as well as ABS warning light.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK GROUND CIRCUIT OF ABSCM&H/U.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ABSCM&H/U. 3) Measure the resistance between ABSCM&H/U and chassis ground. ***Connector & terminal*** ***(B301) No. 15 — Chassis ground:***	Is the resistance less than 0.5 Ω?	Go to step **2.**	Repair the ABSCM&H/U ground harness.
2	**CHECK POOR CONTACT IN CONNECTOR.**	Is there poor contact in connectors between battery, ignition switch and ABSCM&H/U?	Repair the connector.	Go to step **3.**
3	**CHECK SOURCES OF SIGNAL NOISE.**	Is the car telephone or the radio properly installed?	Go to step **4.**	Properly install the car telephone or the wireless transmitter.
4	**CHECK SOURCES OF SIGNAL NOISE.**	Are noise sources (such as an antenna) installed near the sensor harness?	Install the noise sources apart from the sensor harness.	Go to step **5.**
5	**CHECK ABSCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the ABSCM only. <Ref. to ABS-8, REPLACEMENT, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>	Go to step **6.**
6	**CHECK ANY OTHER DTC ON DISPLAY.**	Is any other DTC displayed?	Inspect the DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to ABS(diag)-39, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

S: DTC C0109 POWER VOLTAGE MALFUNCTION

DTC DETECTING CONDITION:

Power voltage of the ABSCM&H/U is too low or too high.

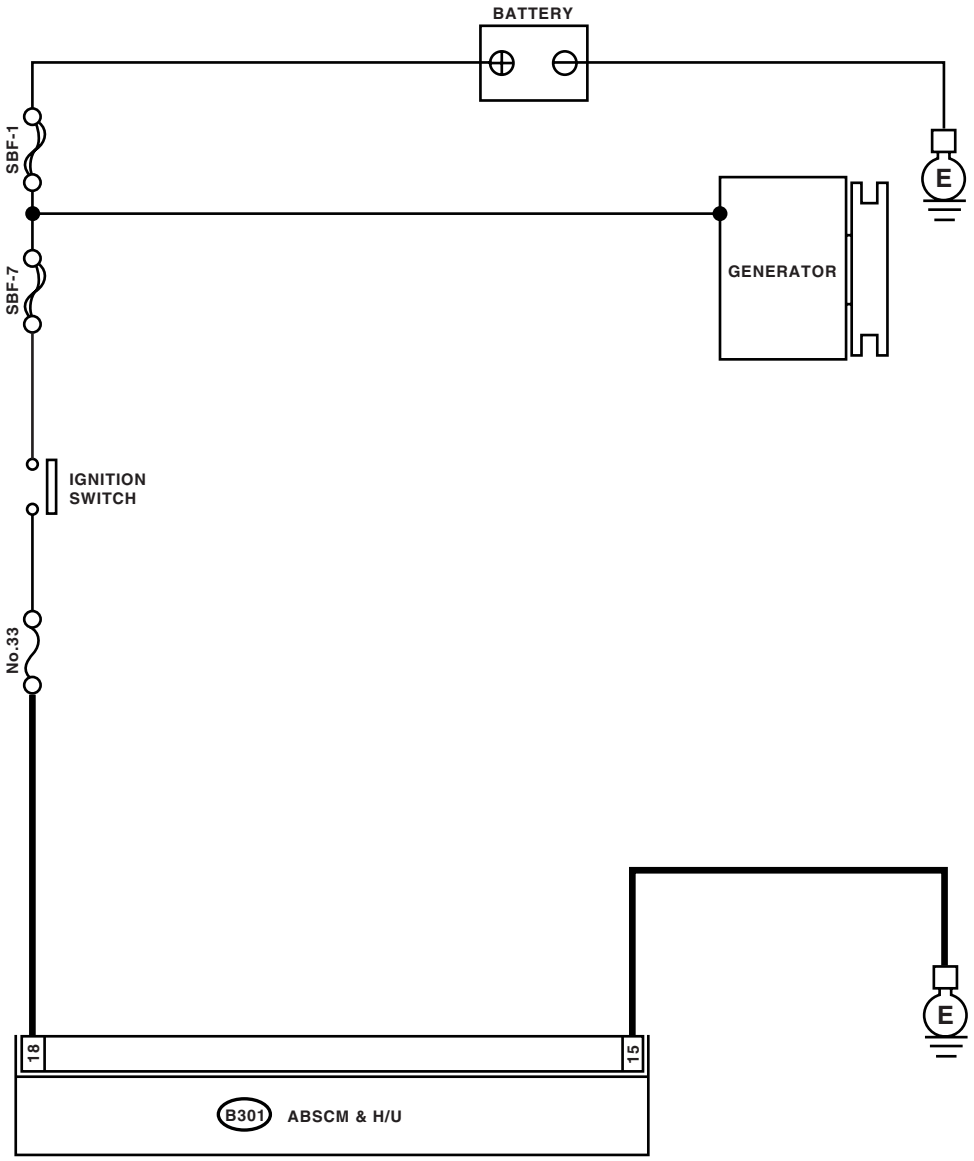
TROUBLE SYMPTOM:

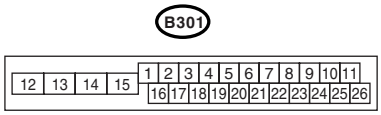
- ABS does not operate.
- EBD may not operate.

NOTE:

If EBD does not operate, brake warning light comes on as well as ABS warning light. Both warning lights go off if voltage returns.

WIRING DIAGRAM:





ABS00414

	Step	Check	Yes	No
1	**CHECK GENERATOR.** 1) Start the engine. 2) Run the engine at idle after warming up. 3) Measure the voltage between generator B terminal and chassis ground. ***Terminals*** ***Generator B terminal (+) — Chassis ground (−):***	Is the voltage 10 — 15 V?	Go to step **2.**	Repair the generator.
2	**CHECK BATTERY TERMINAL.** Turn the ignition switch to OFF.	Are the positive and negative battery terminals clamped tightly?	Go to step **3.**	Tighten the terminal.
3	**CHECK INPUT VOLTAGE OF ABSCM&H/U.** 1) Disconnect the connector from ABSCM&H/U. 2) Run the engine at idle. 3) Operate the devices such as headlights, air conditioner, defogger, etc. which produce much electrical loading. 4) Measure the voltage between ABSCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B301) No. 18 (+) — Chassis ground (−):***	Is the voltage 10 — 15 V?	Go to step **4.**	Repair the ABSCM&H/U power circuit.
4	**CHECK GROUND CIRCUIT OF ABSCM&H/U.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between ABSCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B301) No. 15 — Chassis ground:***	Is the resistance less than 0.5 Ω?	Go to step **5.**	Repair the ABSCM&H/U ground harness.
5	**CHECK POOR CONTACT IN CONNECTOR.**	Is there poor contact in connector between generator, battery and ABSCM&H/U?	Repair the connector.	Go to step **6.**
6	**CHECK ABSCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the ABSCM only. <Ref. to ABS-8, REPLACEMENT, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>	Go to step **7.**
7	**CHECK ANY OTHER DTC ON DISPLAY.**	Is any other DTC displayed?	Inspect the DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to ABS(diag)-39, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

T: DTC C0140 CAN COMMUNICATION MALFUNCTION

DTC DETECTING CONDITION:

Defective CAN communication

TROUBLE SYMPTOM:

Possibly the vehicle speed cannot output on CAN.

	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-24, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is there any fault in LAN system?	Repair it according to DTC of LAN system.	Replace the ABSCM only. <Ref. to ABS-8, REPLACEMENT, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>

U: DTC C0114 VALVE RELAY MALFUNCTION

DTC DETECTING CONDITION:

Defective valve relay

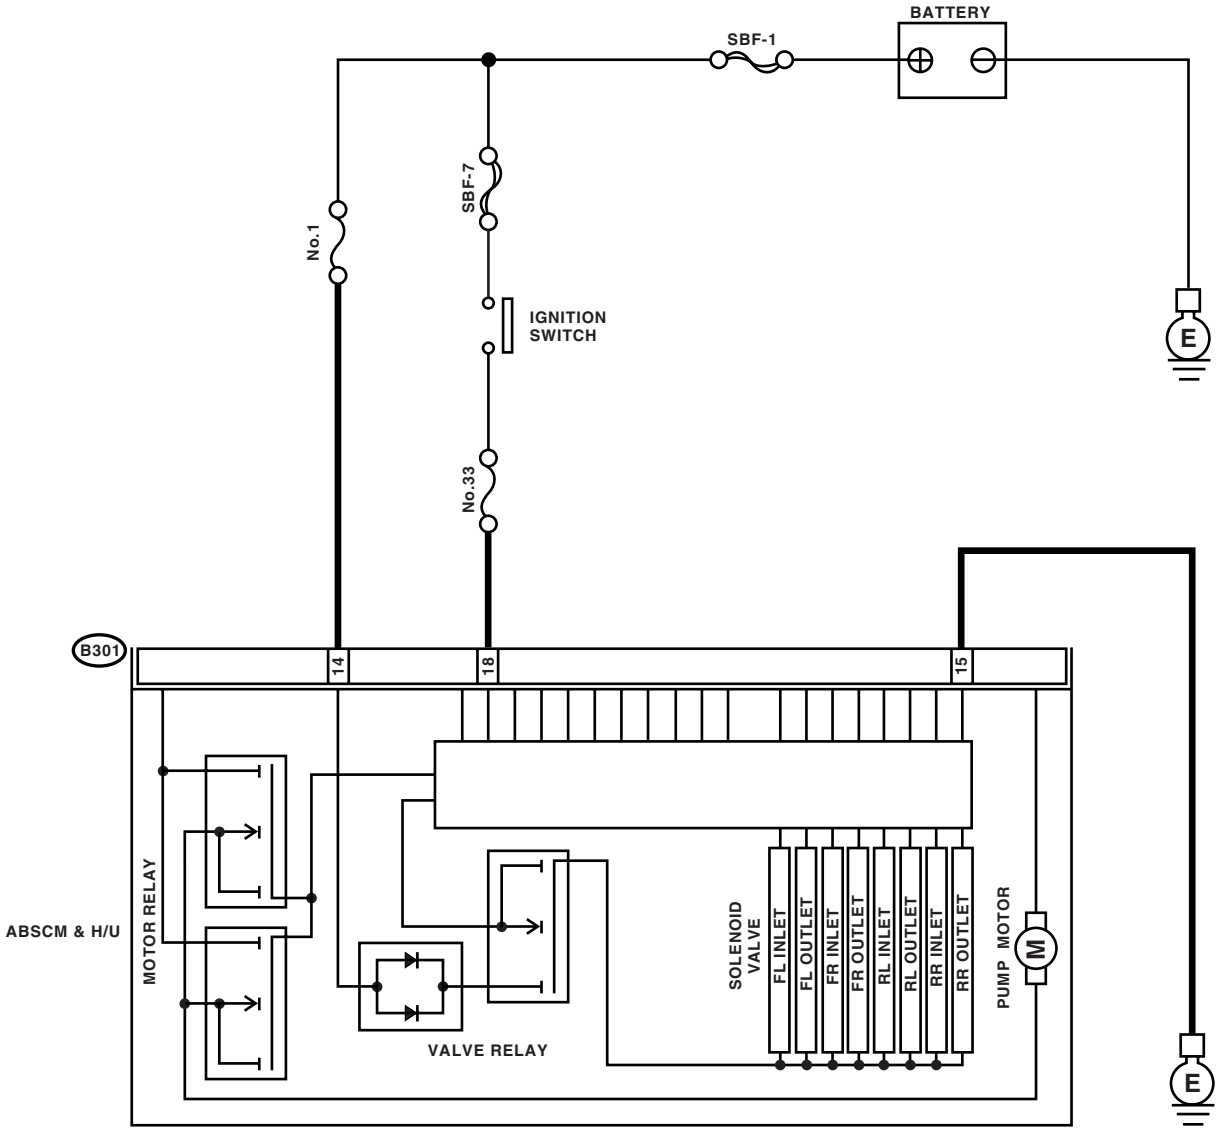
TROUBLE SYMPTOM:

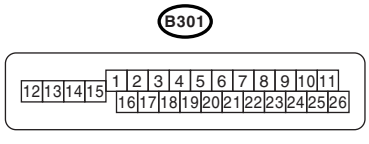
- ABS does not operate.
- EBD does not operate depending on the trouble contents.

NOTE:

Brake warning light comes on as well as ABS warning light when EBD does not operate.

WIRING DIAGRAM:





ABS00416

	Step	Check	Yes	No
1	**CHECK INPUT VOLTAGE OF ABSCM&H/U.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ABSCM&H/U. 3) Run the engine at idle. 4) Measure the voltage between ABSCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B301) No. 18 (+) — Chassis ground (–):*** ***(B301) No. 14 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **2.**	Repair the harness connector between battery and ABSCM&H/U.
2	**CHECK GROUND CIRCUIT OF ABSCM&H/U.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between ABSCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B301) No. 15 — Chassis ground:***	Is the resistance less than 0.5 Ω?	Go to step **3.**	Repair the ABSCM&H/U ground harness.
3	**CHECK VALVE RELAY IN ABSCM&H/U.** Measure the resistance between ABSCM&H/U terminals. ***Terminals*** ***No. 14 — No. 15:***	Is the resistance more than 1 MΩ?	Go to step **4.**	Replace the ABSCM only. <Ref. to ABS-8, REPLACEMENT, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
4	**CHECK POOR CONTACT IN CONNECTOR.**	Is there poor contact in connector between generator, battery and ABSCM&H/U?	Repair the connector.	Go to step **5.**
5	**CHECK ABSCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the ABSCM only. <Ref. to ABS-8, REPLACEMENT, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>	Go to step **6.**
6	**CHECK ANY OTHER DTC ON DISPLAY.**	Is any other DTC displayed?	Inspect the DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to ABS(diag)-39, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

V: DTC C0111 MOTOR/MOTOR RELAY MALFUNCTION

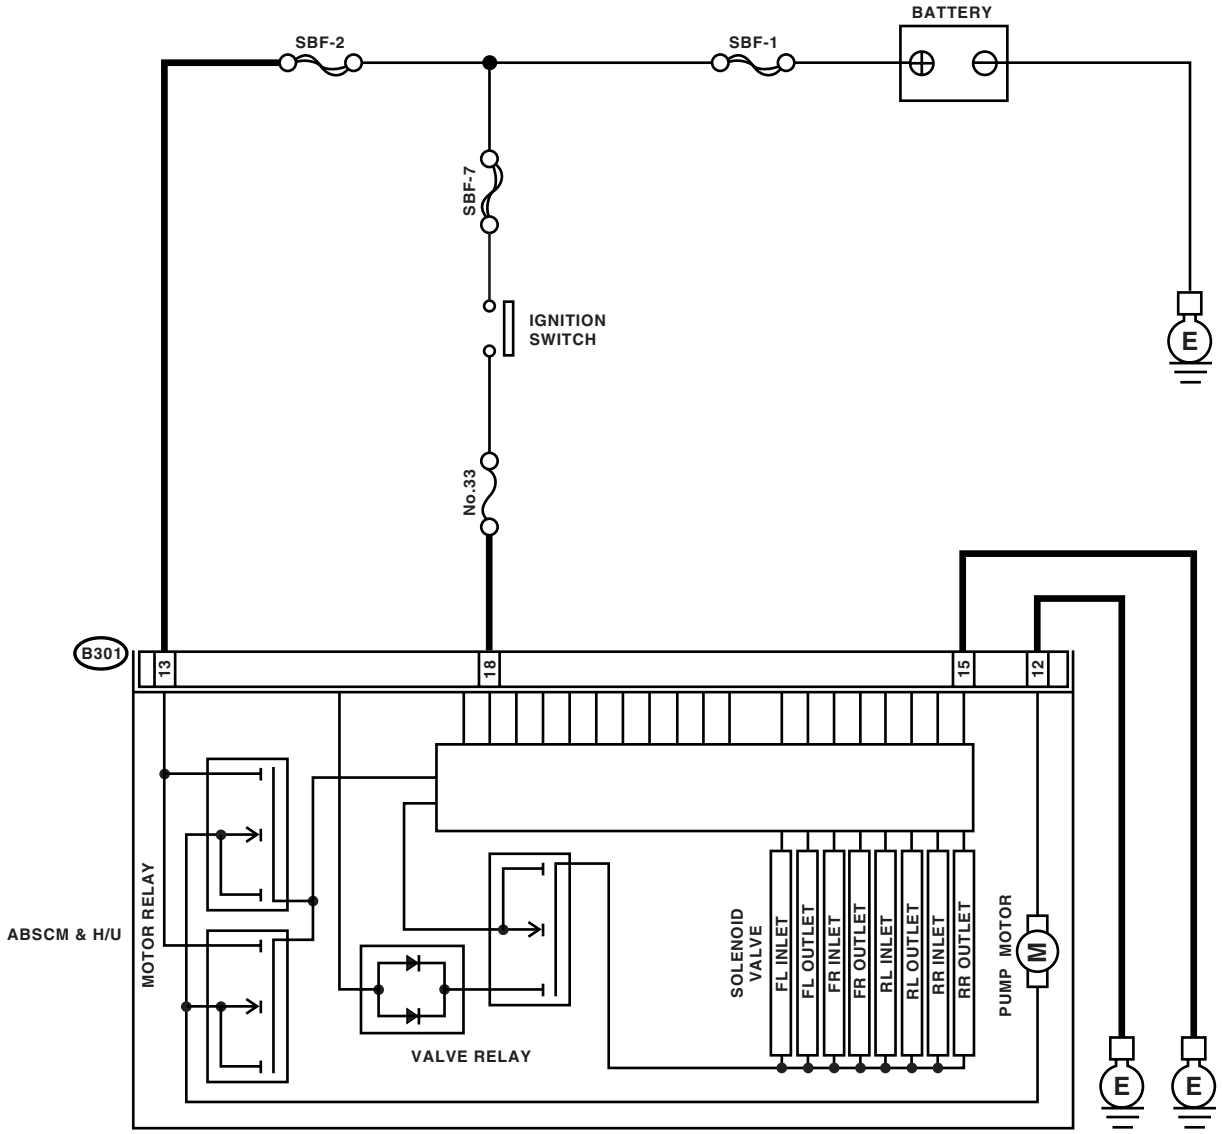
DTC DETECTING CONDITION:

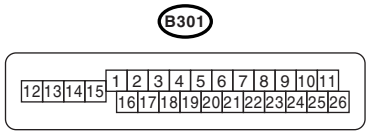
- Defective motor
- Defective motor relay
- Defective harness connector

TROUBLE SYMPTOM:

ABS does not operate.

WIRING DIAGRAM:





ABS00417

	Step	Check	Yes	No
1	**CHECK INPUT VOLTAGE OF ABSCM&H/U.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ABSCM&H/U. 3) Turn the ignition switch to ON. 4) Measure the voltage between ABSCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B301) No. 13 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **2.**	Repair the harness connector between battery and ABSCM&H/U.
2	**CHECK GROUND CIRCUIT OF MOTOR.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between ABSCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B301) No. 12 — Chassis ground:***	Is the resistance less than 0.5 Ω?	Go to step **3.**	Repair the ABSCM&H/U ground harness.
3	**CHECK INPUT VOLTAGE OF ABSCM&H/U.** 1) Run the engine at idle. 2) Measure the voltage between ABSCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B301) No. 18 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **4.**	Repair the harness connector between battery, ignition switch and ABSCM&H/U.
4	**CHECK GROUND CIRCUIT OF ABSCM&H/U.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between ABSCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B301) No. 15 — Chassis ground:***	Is the resistance less than 0.5 Ω?	Go to step **5.**	Repair the ABSCM&H/U ground harness.
5	**CHECK MOTOR OPERATION.** Operate the ABS sequence control. <Ref. to ABS-10, ABS Sequence Control.> NOTE: Use the diagnosis connector to operate the ABS sequence control.	Can the motor revolution noise (buzz) be heard when carrying out the ABS sequence control?	Go to step **6.**	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
6	**CHECK POOR CONTACT IN CONNECTOR.** Turn the ignition switch to OFF.	Is there poor contact in connector between generator, battery and ABSCM&H/U?	Repair the connector.	Go to step **7.**
7	**CHECK ABSCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. 4) Read the DTC.	Is the same DTC displayed?	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>	Go to step **8.**

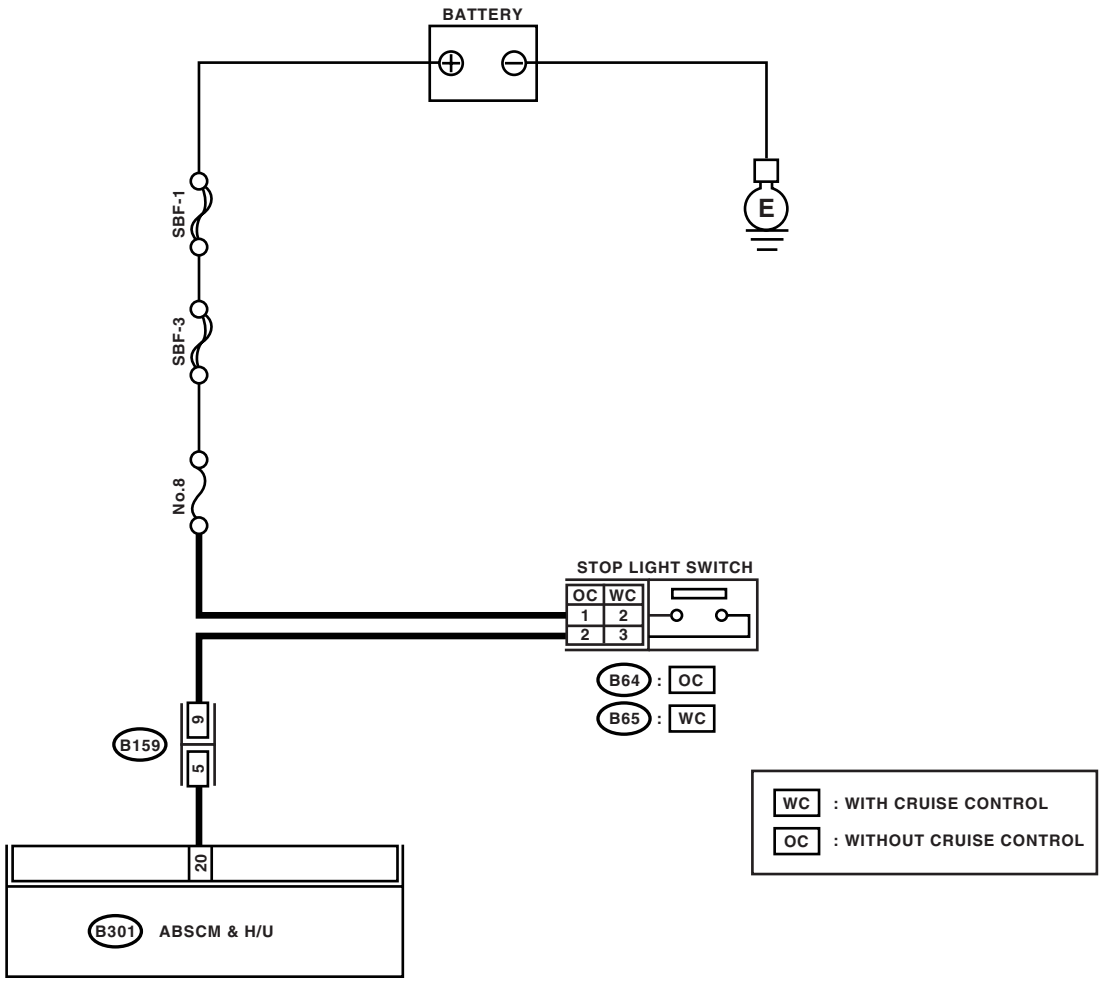
Step		Check	Yes	No
8	**CHECK ANY OTHER DTC ON DISPLAY.**	Is any other DTC displayed?	Inspect the DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to ABS(diag)-39, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs. NOTE: Though ABS warning light remains to illuminate at this time, it is normal. Drive the vehicle at more than 12 km/h (7 MPH) in order to make ABS warning light go off. Be sure to drive the vehicle and check the warning light goes off.

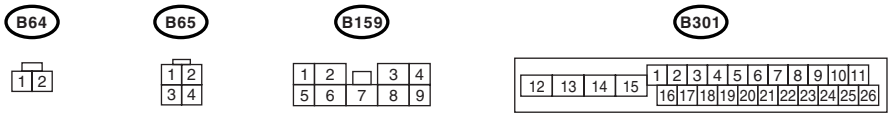
W: DTC C0116 FAULTY STOP LIGHT SWITCH

DTC DETECTING CONDITION:

Defective stop light switch

WIRING DIAGRAM:





ABS00462

	Step	Check	Yes	No
1	**CHECK OUTPUT OF STOP LIGHT SWITCH USING SUBARU SELECT MONITOR.** 1) Select {Current Data Display & Save} in Subaru Select Monitor. 2) Release the brake pedal. 3) Read the stop light switch signal in Subaru Select Monitor.	Is "OFF" displayed on the display?	Go to step **2.**	Go to step **3.**
2	**CHECK OUTPUT OF STOP LIGHT SWITCH USING SUBARU SELECT MONITOR.** 1) Depress the brake pedal. 2) Read the stop light switch output in Subaru Select Monitor.	Is "ON" displayed on the display?	Go to step **5.**	Go to step **3.**
3	**CHECK IF STOP LIGHTS COME ON.** Depress the brake pedal.	Does the stop light illuminate?	Go to step **4.**	Repair the stop lights circuit.
4	**CHECK OPEN CIRCUIT IN HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ABSCM&H/U. 3) Depress the brake pedal. 4) Measure the voltage between ABSCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B301) No. 20 (+) — Chassis ground (−):***	Is the voltage 10 — 15 V?	Go to step **5.**	Repair harness between stop light switch and ABSCM&H/U connector.
5	**CHECK POOR CONTACT IN CONNECTOR.**	Is there poor contact in connector between stop light switch and ABSCM&H/U?	Go to step **6.**	Repair the connector.
6	**CHECK ABSCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the ABSCM only. <Ref. to ABS-8, REPLACEMENT, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>	Go to step **7.**
7	**CHECK ANY OTHER DTC ON DISPLAY.**	Is any other DTC displayed?	Inspect the DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to ABS(diag)-39, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

X: DTC C0118 G SENSOR OUTPUT VOLTAGE MALFUNCTION

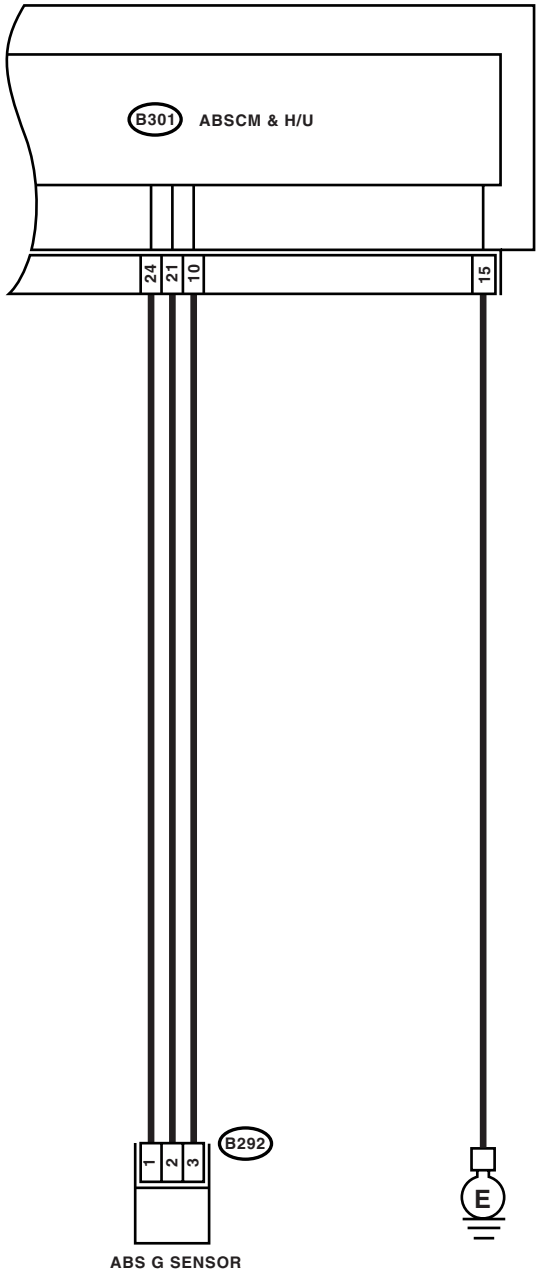
DTC DETECTING CONDITION:

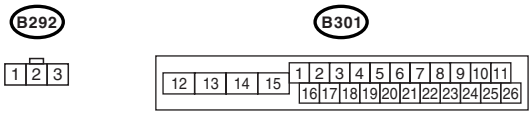
Defective G sensor

TROUBLE SYMPTOM:

ABS does not operate.

WIRING DIAGRAM:





ABS00419

	Step	Check	Yes	No
1	**CHECK OUTPUT OF G SENSOR USING SUBARU SELECT MONITOR.** 1) Select {Current Data Display & Save} in Subaru Select Monitor. 2) Read the G sensor output on Subaru Select Monitor.	Is the reading indicated on display –1.2 — 1.2 m/s when G sensor is horizontal?	Go to step **2.**	Go to step **5.**
2	**CHECK POOR CONTACT IN CONNECTOR.**	Is there poor contact in connector between ABSCM&H/U and G sensor?	Repair the connector.	Go to step **3.**
3	**CHECK ABSCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the ABSCM only. <Ref. to ABS-8, REPLACEMENT, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>	Go to step **4.**
4	**CHECK ANY OTHER DTC ON DISPLAY.**	Is any other DTC displayed?	Inspect the DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to ABS(diag)-39, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.
5	**CHECK INPUT VOLTAGE OF G SENSOR.** 1) Turn the ignition switch to OFF. 2) Remove the console box. 3) Remove the G sensor from vehicle. (Do not disconnect connector.) 4) Turn the ignition switch to ON. 5) Measure the voltage between G sensor connector terminals. ***Connector & terminal*** ***(B292) No. 1 (+) — No. 3 (–):***	Is the voltage 4.75 — 5.25 V?	Go to step **6.**	Repair the harness connector between G sensor and ABSCM&H/U.
6	**CHECK OPEN CIRCUIT IN G SENSOR OUTPUT HARNESS AND GROUND HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ABSCM&H/U. 3) Measure the resistance between ABSCM&H/U connector terminals. ***Connector & terminal*** ***(B301) No. 21 — No. 10:***	Is the resistance 1.8 — 2.4 kΩ?	Go to step **7.**	Repair the harness connector between G sensor and ABSCM&H/U.
7	**CHECK GROUND SHORT IN G SENSOR OUTPUT HARNESS.** 1) Disconnect the connector from G sensor. 2) Measure the resistance between ABSCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B301) No. 21 — Chassis ground:***	Is the resistance more than 1 MΩ?	Go to step **8.**	Repair the harness between G sensor and ABSCM&H/U.
8	**CHECK G SENSOR.** 1) Connect the connector to G sensor. 2) Connect the connector to ABSCM&H/U. 3) Turn the ignition switch to ON. 4) Measure the voltage between G sensor connector terminals. ***Connector & terminal*** ***(B292) No. 2 (+) — No. 3 (–):***	Is the voltage 2.1 — 2.5 V when G sensor is on a level?	Go to step **9.**	Replace G sensor. <Ref. to ABS-18, G Sensor.>

	Step	Check	Yes	No
9	**CHECK G SENSOR.** Measure the voltage between G sensor connector terminals. ***Connector & terminal*** ***(B292) No. 2 (+) — No. 3 (–):***	Is the voltage 3.6 — 4.1 V when G sensor is inclined forwards to 90°?	Go to step **10.**	Replace G sensor. <Ref. to ABS-18, G Sensor.>
10	**CHECK G SENSOR.** Measure the voltage between G sensor connector terminals. ***Connector & terminal*** ***(B292) No. 2 (+) — No. 3 (–):***	Is the voltage 0.5 — 1.0 V when G sensor is inclined backward to 90°?	Go to step **11.**	Replace G sensor. <Ref. to ABS-18, G Sensor.>
11	**CHECK POOR CONTACT IN CONNECTOR.** Turn the ignition switch to OFF.	Is there poor contact in connector between ABSCM&H/U and G sensor?	Repair the connector.	Go to step **12.**
12	**CHECK ABSCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the ABSCM only. <Ref. to ABS-8, REPLACEMENT, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>	Go to step **13.**
13	**CHECK ANY OTHER DTC ON DISPLAY.**	Is any other DTC displayed?	Inspect the DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to ABS(diag)-39, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

Y: DTC C0119 G SENSOR OUTPUT VOLTAGE MALFUNCTION

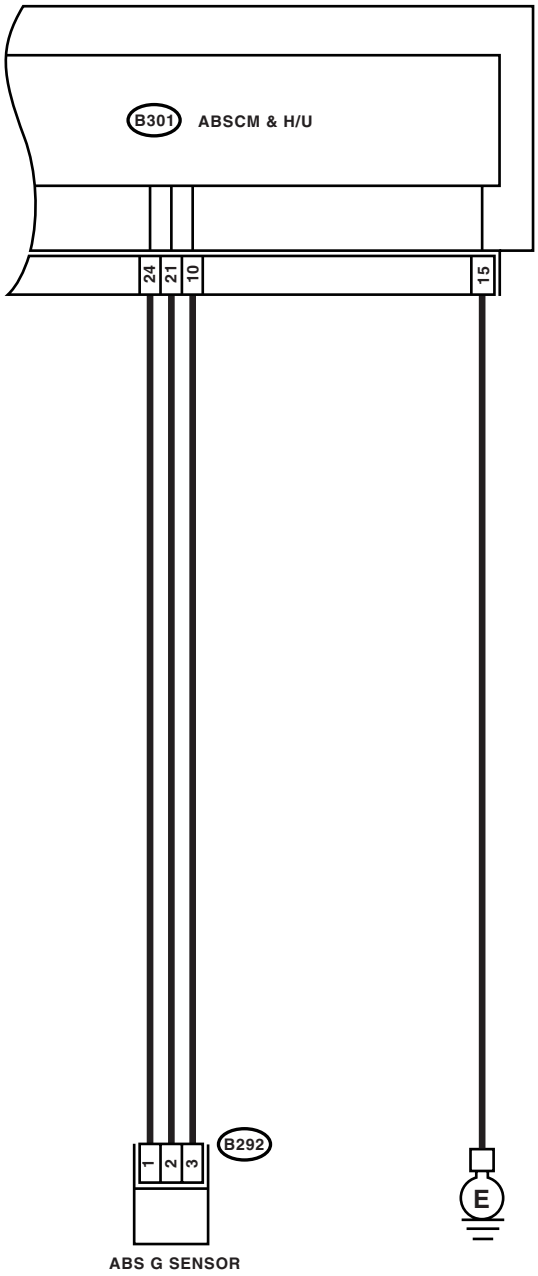
DTC DETECTING CONDITION:

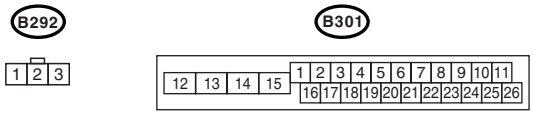
Defective G sensor output signal

TROUBLE SYMPTOM:

ABS does not operate.

WIRING DIAGRAM:





ABS00419

	Step	Check	Yes	No
1	**WHETHER A WHEEL TURNED FREELY OR NOT.**	Have the wheels been turned freely when the vehicle is lifted up or drove on a rolling road?	ABS is normal. Erase the memory.	Go to step **2.**
2	**CHECK OUTPUT OF G SENSOR USING SUBARU SELECT MONITOR.** 1) Select {Current Data Display & Save} in Subaru Select Monitor. 2) Read the Subaru Select Monitor display.	Is the reading indicated on display −1.2 — 1.2 m/s when G sensor is on a level?	Go to step **3.**	Go to step **8.**
3	**CHECK OUTPUT OF G SENSOR USING SUBARU SELECT MONITOR.** 1) Turn the ignition switch to OFF. 2) Remove the console box. 3) Remove the G sensor from vehicle. (Do not disconnect connector.) 4) Turn the ignition switch to ON. 5) Select {Current Data Display & Save} in Subaru Select Monitor. 6) Read the Subaru Select Monitor display.	Is the reading indicated on display 8.1 — 11.2 m/s when G sensor is inclined forward to 90°?	Go to step **4.**	Replace G sensor. <Ref. to ABS-18, G Sensor.>
4	**CHECK OUTPUT OF G SENSOR USING SUBARU SELECT MONITOR.** Read the Subaru Select Monitor display.	Is the reading indicated on display −8.1 — −11.2 m/s when G sensor is inclined backward to 90°?	Go to step **5.**	Replace G sensor. <Ref. to ABS-18, G Sensor.>
5	**CHECK POOR CONTACT IN CONNECTOR.** Turn the ignition switch to OFF.	Is there poor contact in connector between ABSCM&H/U and G sensor?	Repair the connector.	Go to step **6.**
6	**CHECK ABSCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the ABSCM only. <Ref. to ABS-8, REPLACEMENT, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>	Go to step **7.**
7	**CHECK ANY OTHER DTC ON DISPLAY.**	Is any other DTC displayed?	Inspect the DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to ABS(diag)-39, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.
8	**CHECK OPEN CIRCUIT IN G SENSOR OUTPUT HARNESS AND GROUND HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ABSCM&H/U. 3) Measure the resistance between ABSCM&H/U connector terminals. ***Connector & terminal*** ***(B301) No. 21 — No. 10:***	Is the resistance 1.8 — 2.4 kΩ?	Go to step **9.**	Repair the harness connector between G sensor and ABSCM&H/U.
9	**CHECK GROUND SHORT OF HARNESS.** Measure the resistance between ABSCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B301) No. 21 — Chassis ground:***	Is the resistance more than 1 MΩ?	Go to step **10.**	Repair the harness connector between G sensor and ABSCM&H/U.

	Step	Check	Yes	No
10	**CHECK G SENSOR.** 1) Remove the console box. 2) Remove the G sensor from vehicle. 3) Connect the connector to G sensor. 4) Connect the connector to ABSCM&H/U. 5) Turn the ignition switch to ON. 6) Measure the voltage between G sensor connector terminals. ***Connector & terminal*** ***(B292) No. 2 (+) — No. 3 (–):***	Is the voltage 2.1 — 2.5 V when G sensor is on a level?	Go to step **11.**	Replace G sensor. <Ref. to ABS-18, G Sensor.>
11	**CHECK G SENSOR.** Measure the voltage between G sensor connector terminals. ***Connector & terminal*** ***(B292) No. 2 (+) — No. 3 (–):***	Is the voltage 3.6 — 4.1 V when G sensor is inclined forwards to 90°?	Go to step **12.**	Replace G sensor. <Ref. to ABS-18, G Sensor.>
12	**CHECK G SENSOR.** Measure the voltage between G sensor connector terminals. ***Connector & terminal*** ***(B292) No. 2 (+) — No. 3 (–):***	Is the voltage 0.5 — 1.0 V when G sensor is inclined backward to 90°?	Go to step **13.**	Replace G sensor. <Ref. to ABS-18, G Sensor.>
13	**CHECK ABSCM&H/U.** 1) Turn the ignition switch to OFF. 2) Connect all the connectors. 3) Erase the memory. 4) Perform the inspection mode. 5) Read the DTC.	Is the same DTC displayed?	Replace the ABSCM only. <Ref. to ABS-8, REPLACEMENT, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>	Go to step **14.**
14	**CHECK ANY OTHER DTC ON DISPLAY.**	Is any other DTC displayed?	Inspect the DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to ABS(diag)-39, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

13.General Diagnostic Table

A: INSPECTION

Symptom		Problem parts
Vehicle instability during braking	Vehicle is pulled to either right or left side.	• ABSCM&H/U (solenoid valve) • ABS wheel speed sensor • Brake (caliper, piston and pads) • Wheel Alignment • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections • Road surface (uneven, camber)
	Vehicle spins.	• ABSCM&H/U (solenoid valve) • ABS wheel speed sensor • Brake (pads) • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections
Poor brake performance	Long braking/stopping distance	• ABSCM&H/U (solenoid valve) • Brake (pads) • Air in brake line • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections
	Wheel locks.	• ABSCM&H/U (solenoid valve, motor) • ABS wheel speed sensor • Incorrect wiring or piping connections
	Brake drag	• ABSCM&H/U (solenoid valve) • ABS wheel speed sensor • Master cylinder • Brake (caliper and piston) • Parking Brake • Axle and wheels • Brake pedal play
	Long brake pedal stroke	• Air in brake line • Brake pedal play
	Vehicle vertical pitching	• Suspension play or fatigue (reduced damping) • Incorrect wiring or piping connections • Road surface (uneven)
	Unstable or uneven braking	• ABSCM&H/U (solenoid valve) • ABS wheel speed sensor • Brake (caliper, piston and pads) • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections • Road surface (uneven)
Vibration and/or noise (while driving on slippery roads)	Excessive pedal vibration	• Incorrect wiring or piping connections • Road surface (uneven)
	Noise from ABSCM&H/U	• ABSCM&H/U (mount bushing) • ABS wheel speed sensor • Brake line
	Noise from front of vehicle	• ABSCM&H/U (mount bushing) • ABS wheel speed sensor • Master cylinder • Brake (caliper, piston, pads and rotor) • Brake line • Brake booster and check valve • Suspension play or fatigue
	Noise from rear of vehicle	• ABS wheel speed sensor • Brake (caliper, piston, pads and rotor) • Parking Brake • Brake line • Suspension play or fatigue

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

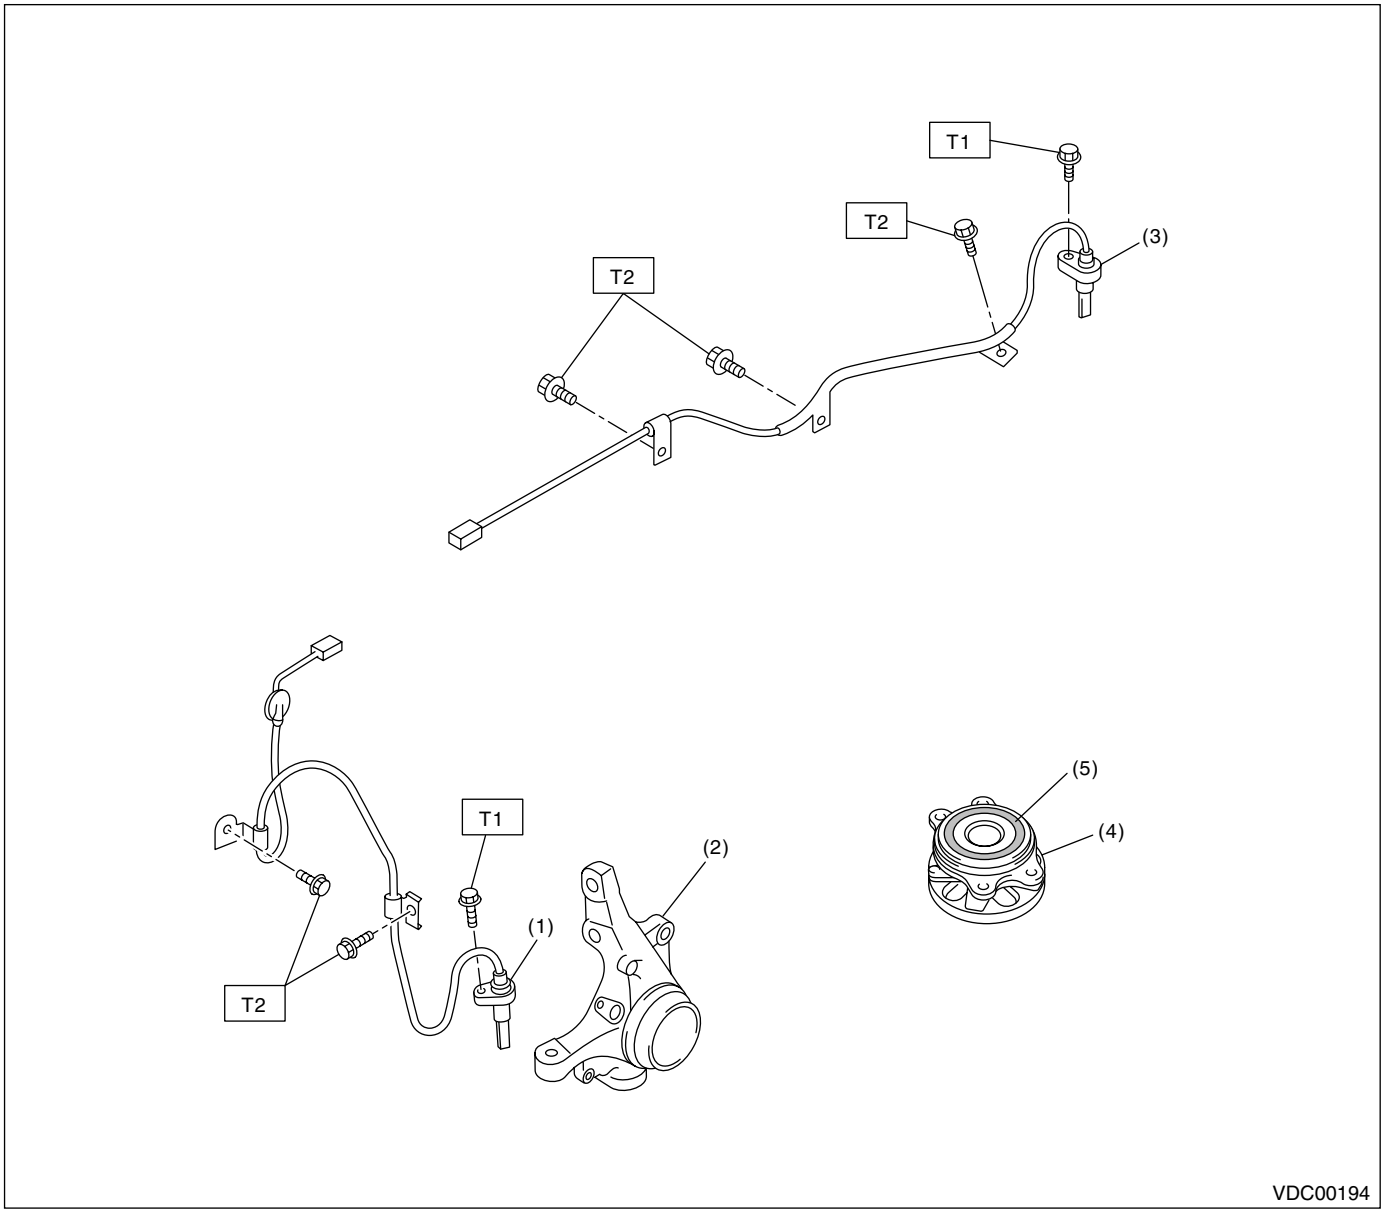
1. General Description

A: SPECIFICATION

Item				Standard values or identification
ABS wheel speed sensor	ABS wheel speed sensor gap (for reference)	Front		0.77 — 1.43 mm (0.030 — 0.056 in)
		Rear		0.64 — 1.56 mm (0.025 — 0.061 in)
	Marks of harness (Marks, Color)	Front	RH	K1 (White)
			LH	K2 (Yellow)
		Rear	RH	K5 (White)
			LH	K6 (Yellow)
Yaw rate & lateral G sensor	Lateral G sensor voltage			2.5±0.2 V
Marks of VDCCM&H/U		Wagon 2.5 i		G3
		Sedan 2.5 i		G9
		Wagon 3.0 R		G4
		Sedan 3.0 R		GA
		OUTBACK 3.0 R		G2

B: COMPONENT

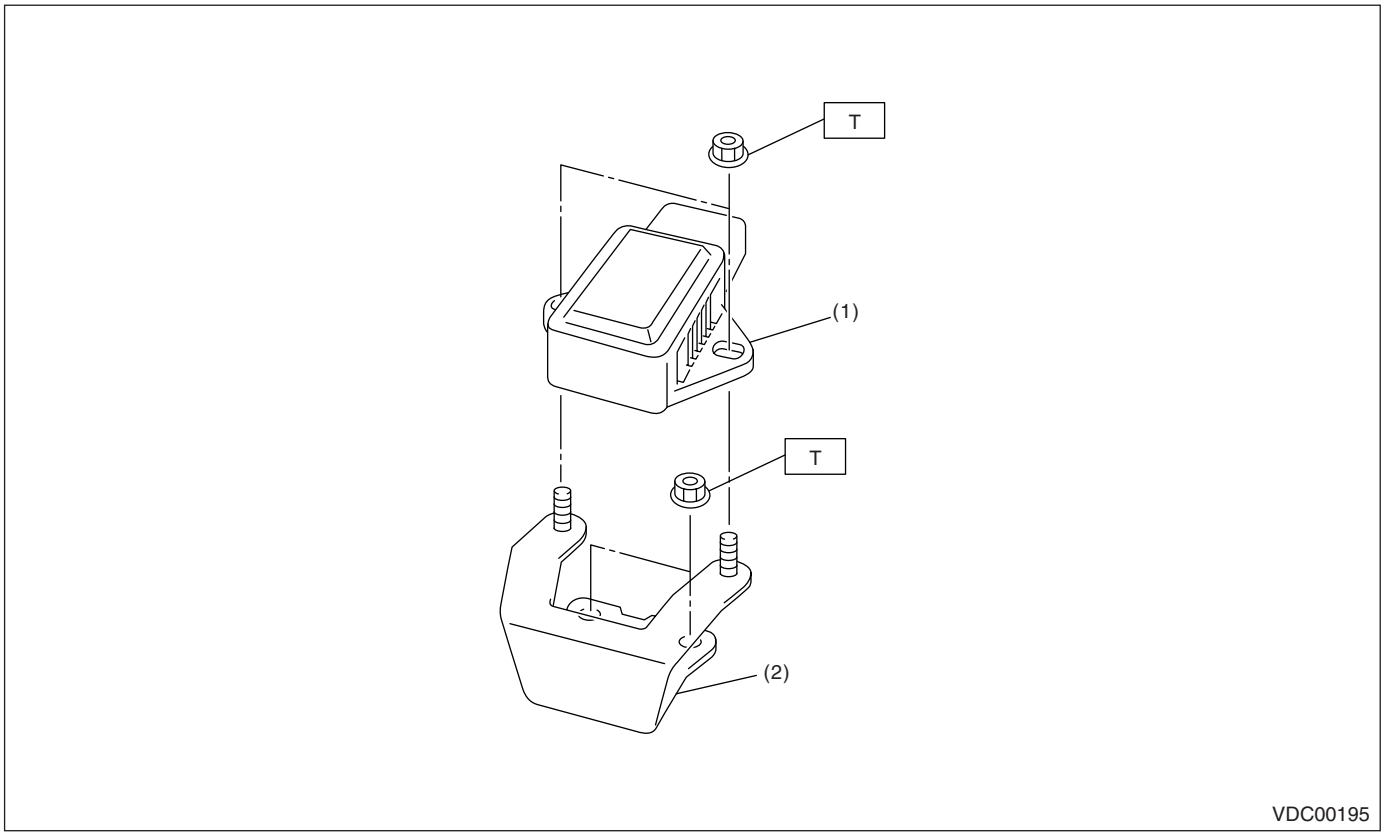
1. ABS WHEEL SPEED SENSOR



(1) Front ABS wheel speed sensor
(2) Front housing
(3) Rear ABS wheel speed sensor
(4) Hub unit bearing
(5) Magnetic encoder

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.76, 5.5)
T2: 33 (3.4, 24)

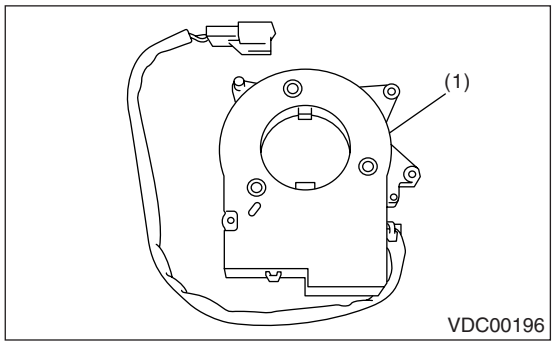
2. YAW RATE & LATERAL G SENSOR



(1) Yaw rate & lateral G sensor (2) Bracket

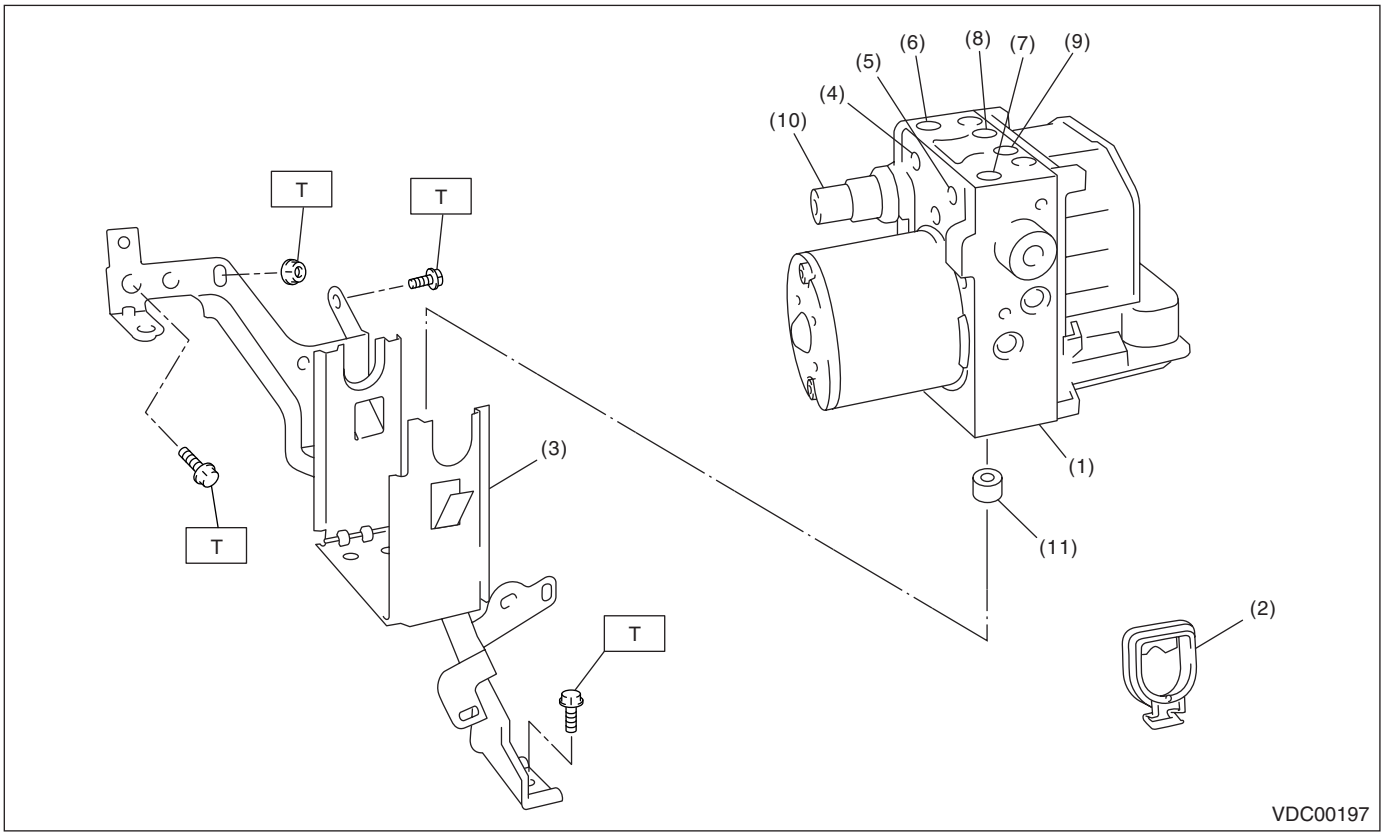
Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.76, 5.5)

3. STEERING ANGLE SENSOR



(1) Steering angle sensor

4. VDC CONTROL MODULE & HYDRAULIC CONTROL UNIT (VDCCM&H/U)



(1) VDC control module and hydraulic control unit (VDCCM&H/U)
(2) Clip
(3) Bracket
(4) Rear RH outlet
(5) Rear LH outlet
(6) Secondary inlet
(7) Primary inlet
(8) Front LH outlet
(9) Front RH outlet
(10) Pressure sensor
(11) Damper

Tightening torque: N·m (kgf-m, ft-lb)
T: 33 (3.4, 24)

C: CAUTION

• Wear work clothing, including a cap, protective goggles and protective shoes during operation.
• Remove contamination including dirt and corrosion before removal, installation or disassembly.
• Keep the disassembled parts in order and protect them from dust and dirt.
• Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.
• Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
• Be careful not to burn yourself, because each part on the vehicle is hot after running.
• Be sure to tighten fasteners including bolts and nuts to the specified torque.
• Place shop jacks or rigid racks at the specified points.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST24082AA230	24082AA230	CARTRIDGE	Troubleshooting for electrical system.
ST22771AA030	22771AA030	SUBARU SELECT MONITOR KIT	Troubleshooting for electrical system. • English: 22771AA030 (Without printer) • German: 22771AA070 (Without printer) • French: 22771AA080 (Without printer) • Spanish: 22771AA090 (Without printer)

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and ampere.
Pressure gauge	Used for measuring oil pressure.
Oscilloscope	Used for measuring sensor.

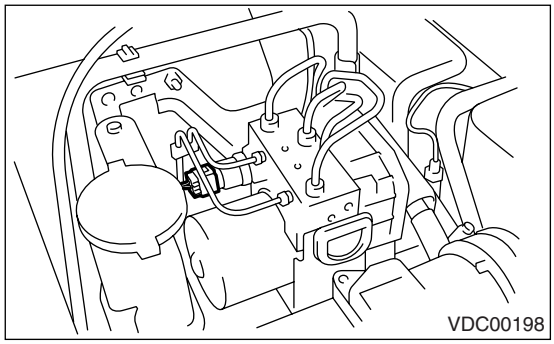
2. VDC Control Module & Hydraulic Control Unit (VDCCM&H/U)

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Use compressed air to get rid of water and dust around the VDCCM&H/U.

NOTE:
When dust and dirt are attached to the terminal, they may cause poor contact.

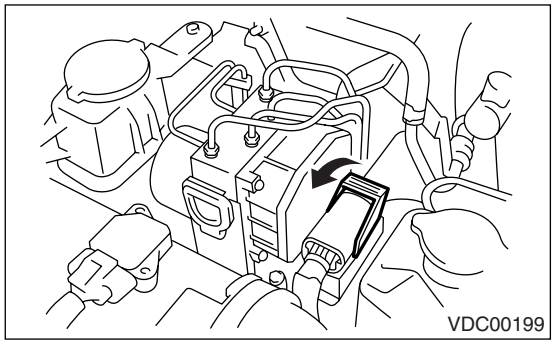
3) Disconnect the pressure sensor connector.



VDC00198

4) Disconnect the VDCCM&H/U connector with pulling up the lock lever.

CAUTION:
Do not pull the harness when disconnecting connector.

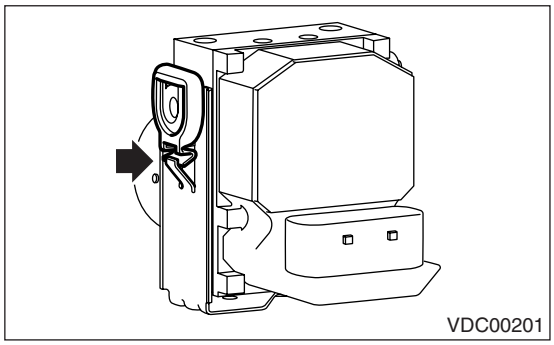


VDC00199

5) Disconnect the brake pipes from VDCCM&H/U.
6) Wrap the brake pipe using a vinyl bag not to spill the brake fluid on the vehicle body.

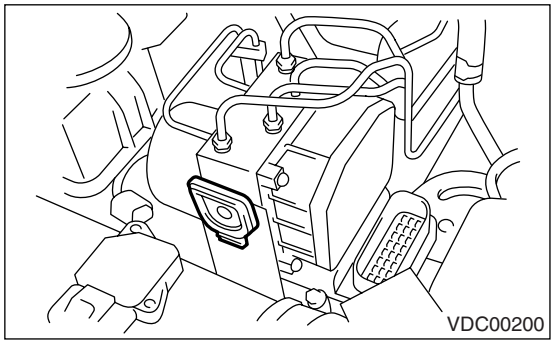
CAUTION:
When the brake fluid is attached to vehicle body, wash it off with water and wipe the water.

7) Remove the clips, and then remove the VDCCM&H/U.



VDC00201

CAUTION:
• VDCCM&H/U cannot be disassembled. Do not attempt to loosen the bolts and nuts.
• Do not drop or bump the VDCCM&H/U.
• Do not turn VDCCM&H/U upside down or place it sideways for storage.
• Be careful that no foreign objects are mixed in VDCCM&H/U.
• Be careful that no water enters connectors.



VDC00200

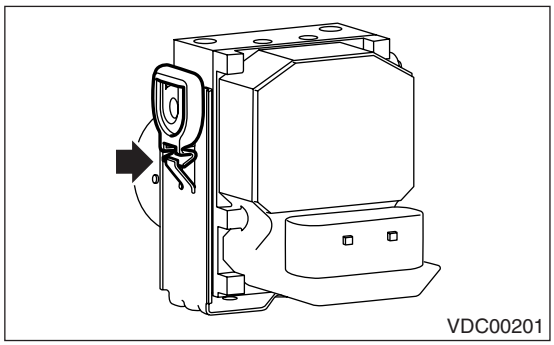
8) Remove the VDCCM&H/U bracket.

B: INSTALLATION

1) Install the VDCCM&H/U bracket.

Tightening torque:
33 N·m (3.3 kgf-m, 24 ft-lb)

2) Install the VDCCM&H/U to bracket.
3) Install the clip.



VDC00201

NOTE:
Hook the clip on the pawl of bracket securely.

4) Connect the brake pipes to their specified VDCCM&H/U positions.

Tightening torque:
15 N·m (1.5 kgf-m, 11.1 ft-lb)

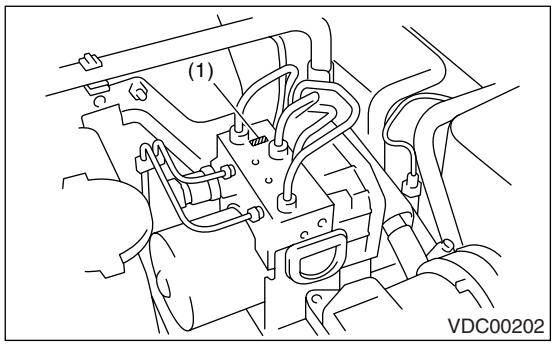
5) Connect the connector to VDCCM&H/U.

NOTE:
• Be sure to remove all foreign matters from inside the connector before connecting.
• Ensure that the VDCCM&H/U connector is securely locked.

6) Connect the pressure sensor connector.
7) Bleed air from the brake system.

C: INSPECTION

1) Check the connected and fixed condition of connector.
2) Check the mark used for VDCCM&H/U identification.
Refer to "SPECIFICATION" for mark. <Ref. to VDC-2, SPECIFICATION, General Description.>



(1) Mark

1. CHECKING THE HYDRAULIC UNIT ABS OPERATION BY PRESSURE GAUGE

<Ref. to ABS-7, CHECKING THE HYDRAULIC UNIT ABS OPERATION BY PRESSURE GAUGE, INSPECTION, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>

2. CHECKING THE HYDRAULIC UNIT ABS OPERATION WITH BRAKE TESTER

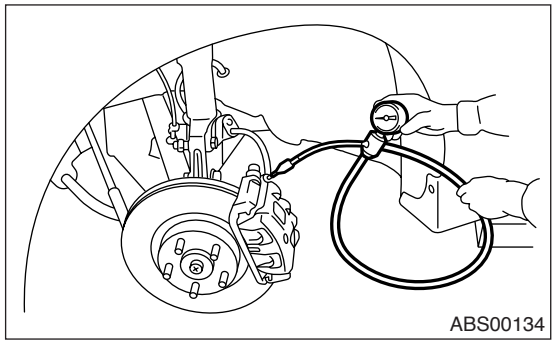
<Ref. to ABS-8, CHECKING THE HYDRAULIC UNIT ABS OPERATION WITH BRAKE TESTER, INSPECTION, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>

3. CHECKING THE HYDRAULIC UNIT VDC OPERATION BY PRESSURE GAUGE

1) Lift-up the vehicle, and then remove the wheels.
2) Remove the air bleeder screws from the FL and FR caliper bodies.
3) Connect two pressure gauges to the FL and FR caliper bodies.

CAUTION:
• Pressure gauges used exclusively for brake fluid must be used.
• Do not use the pressure gauge for the measurement of transmission oil pressure since the piston seal may be expanded and deformed.

NOTE:
Wrap a sealing tape around the pressure gauge.



4) Bleed air from the pressure gauges.
5) Perform VDC sequence control.
<Ref. to VDC-11, VDC Sequence Control.>
6) When the hydraulic unit begins to work, first the FL side performs compression, holding, and decompression, and then the FR side performs compression, holding, and decompression.
7) Read values indicated on the pressure gauge and check if the fluctuation of the values between decompression and compression meets the standard values. Depress the brake pedal and check that it is not abnormally hard, and tightness is normal.

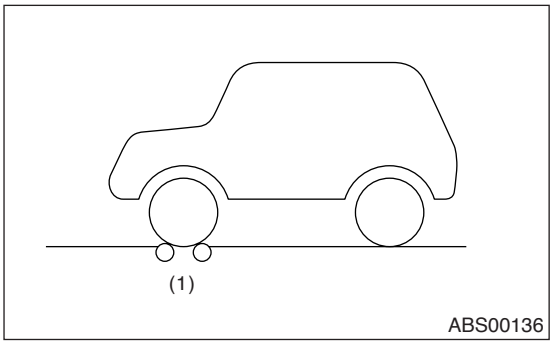
	Front wheel	Rear wheel
When compressed	3,000 kPa (31 kgf/cm^2, 441 psi) or more	2,000 kPa (20 kgf/cm^2, 284 psi) or more
When decompressed	500 kPa (5 kgf/cm^2, 73 psi) or less	500 kPa (5 kgf/cm^2, 73 psi) or less

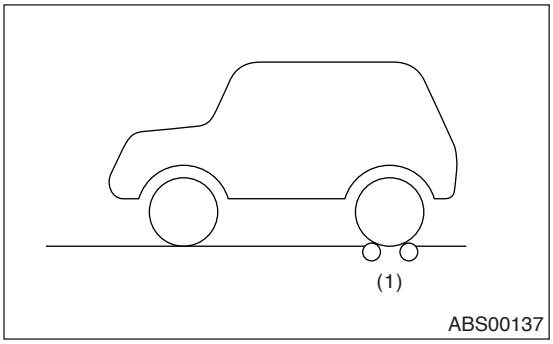
8) Disconnect the pressure gauges from FL and FR caliper bodies.
9) Install the air bleeder screws of FL and FR caliper bodies.
10) Remove the air bleeder screws from the RL and RR caliper bodies.
11) Connect two pressure gauges to the RL and RR caliper bodies.
12) Bleed air from the pressure gauges and the RL and RR caliper bodies.
13) Perform VDC sequence control.
<Ref. to VDC-11, VDC Sequence Control.>

14) When the hydraulic unit begins to work, first the RR side performs compression, holding, and decompression, and then the RL side performs compression, holding, and decompression.
15) Read the values indicated on the pressure gauges and check it within specified. Depress the brake pedal and check that it is not abnormally hard, and tightness is normal.
16) Disconnect the pressure gauge from the RL and RR caliper bodies.
17) Install the air bleeder screws of RL and RR caliper bodies.
18) Bleed air from the brake line.

4. CHECK HYDRAULIC UNIT VDC OPERATION WITH BRAKE TESTER

1) Set the wheels other than the measured one on free rollers.
2) Prepare for operating the VDC sequence control.
<Ref. to VDC-11, VDC Sequence Control.>
3) Set the front wheels or rear wheels on the brake tester and set the select lever position to “N” range.





(1) Brake tester

4) Operate the brake tester.
5) Perform VDC sequence control.
<Ref. to VDC-11, VDC Sequence Control.>
6) When the hydraulic unit begins to work; check the following working sequence.
(1) The FL wheel performs compression, holding and decompression in sequence, and subsequently the FR wheel repeats the cycle.
(2) The RR wheel performs compression, holding and decompression in sequence, and subsequently the RL wheel repeats the cycle.
7) Read values indicated on the brake tester and check if the fluctuation of the values between decompression and compression meets the standard values.

	Front wheel	Rear wheel
When compressed	2,000 N (203 kgf, 447 lb) or more	1,000 N (102 kgf, 225 lb) or more
When decompressed	500 N (51 kgf, 112 lb) or less	500 N (51 kgf, 112 lb) or less

8) After the inspection, depress the brake pedal and check that it is not abnormally hard, and tightness is normal.

D: ADJUSTMENT

When the following replacement, removal and installation is performed, be sure to perform the centering setting of steering angle sensor and zero point setting of yaw rate & lateral G sensor.
- VDCCM&H/U
- Steering angle sensor
- Yaw rate & lateral G sensor
- Steering wheel parts (Including airbag)
- Suspension parts
- Wheel alignment adjustment

1) Park the vehicle straight on a level surface. (Engine operation on “P” or “N” range)
2) Check that steering wheels are positioned in center. (When the center position is not correct, adjust the wheel alignment.)
3) Set the Subaru Select Monitor to vehicle, select the {Set up mode for Neutral of Steering Angle Sensor & Lateral G Sensor 0 point} on «Function check sequence» display. (Follow the step on display.)
4) On the «Brake Control System» display screen, select the {Current Data Display & Save}, and check that the steering angle sensor is displayed “0 deg”.
5) When the “0 deg” is not displayed, repeat the above steps and check that the “0 deg” is displayed.
6) Drive the vehicle for 10 minutes, and check that the ABS and VDC warning light is not illuminated.
7) Check that the unnecessary operation of VDC, or losing control of steering is not occurred. And when the malfunction occurred, repeat the above steps.

3. ABS Sequence Control

A: OPERATION

<Ref. to ABS-10, OPERATION, ABS Sequence Control.>

1. ABS SEQUENCE CONTROL WITH DIAGNOSIS CONNECTOR

<Ref. to ABS-10, ABS SEQUENCE CONTROL WITH DIAGNOSIS CONNECTOR, OPERATION, ABS Sequence Control.>

2. ABS SEQUENCE CONTROL WITH SUBARU SELECT MONITOR

<Ref. to ABS-10, ABS SEQUENCE CONTROL WITH SUBARU SELECT MONITOR, OPERATION, ABS Sequence Control.>

3. CONDITIONS FOR ABS SEQUENCE CONTROL

<Ref. to ABS-11, CONDITIONS FOR ABS SEQUENCE CONTROL, OPERATION, ABS Sequence Control.>

B: SPECIFICATION

1. CONDITIONS FOR COMPLETION OF ABS SEQUENCE CONTROL

<Ref. to ABS-12, CONDITIONS FOR COMPLETION OF ABS SEQUENCE CONTROL, SPECIFICATION, ABS Sequence Control.>

4. VDC Sequence Control

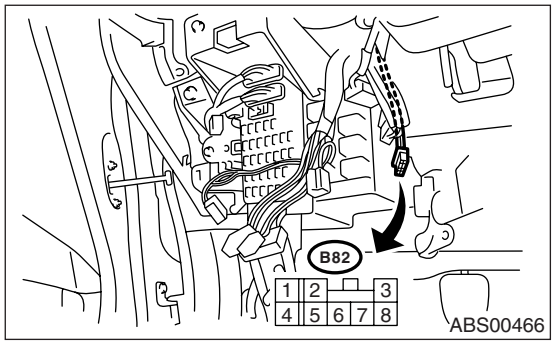
A: OPERATION

1) While the VDC sequence control is performed, the operation of the hydraulic unit can be checked using the brake tester or pressure gauge after the hydraulic unit solenoid valve is operated.
2) VDC sequence control can be started by diagnosis connector or Subaru Select Monitor.

1. VDC SEQUENCE CONTROL WITH DIAGNOSIS CONNECTOR

NOTE:
In the event of any trouble, the VDC sequence control is not operated.

1) Turn the ignition switch to OFF at the vehicle stationary mode.
2) Take out the diagnosis connector from the inside of instrument panel lower cover on the driver's side and connect one of the ground terminals to connector terminal No. 8.



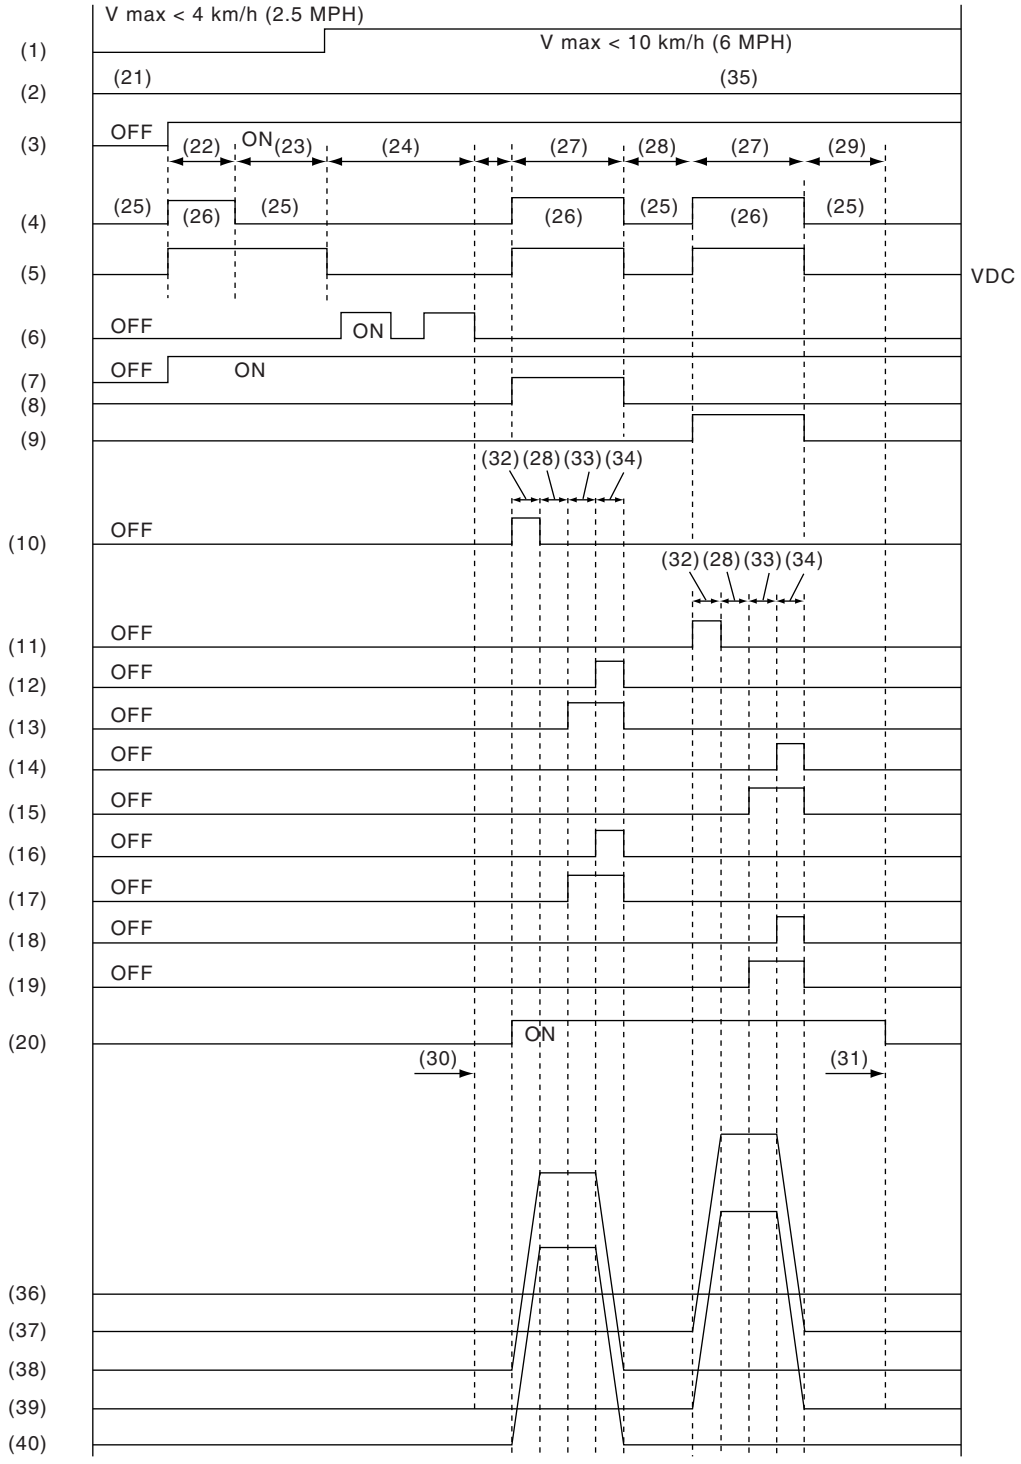
3) Turn the ignition switch to ON and start the engine immediately without pressing the brake pedal.
4) After VDC warning light goes out and starting the engine, perform the brake pedal operation as follows; depress it within 3 seconds, → release it, → depress it again, → release it again.
5) After completion of VDC sequence control, turn the ignition switch to OFF.

2. VDC SEQUENCE CONTROL WITH SUBARU SELECT MONITOR

NOTE:
In the event of any trouble, the sequence control may not be operative.

1) Connect the Subaru Select Monitor to data link connector under the driver's side instrument panel lower cover.
2) Turn the ignition switch to ON.
3) Set the Subaru Select Monitor switch to ON.
4) Set the Subaru Select Monitor to the "Brake Control" mode.
5) When the "VDC Inspection Mode" is selected from the "Function check sequence" menu, the "VDC sequence control" will start.
6) Since "Press the [YES] key" is displayed, press the YES key.
7) Operation points will be displayed on the Subaru Select Monitor.

3. CONDITIONS FOR VDC SEQUENCE CONTROL



VDC00203

(1) All wheel speed
(2) DL terminal
(3) Ignition key
(4) ABS warning light
(5) VDC warning light
(6) Stop light switch
(7) Valve relay
(8) VDC switching valve 1 FL
(9) VDC switching valve 1 FR
(10) VDC switching valve 2 FL
(11) VDC switching valve 2 FR
(12) FL decompression valve
(13) FL compression valve
(14) FR decompression valve
(15) FR compression valve
(16) RR decompression valve
(17) RR compression valve
(18) RL decompression valve
(19) RL compression valve
(20) Pump motor
(21) Diagnosis connector and connection
(22) 1.5 sec.
(23) Approx. 3 sec.
(24) Within 3 sec.
(25) Light OFF
(26) Light ON
(27) 3.4 sec.
(28) 1 sec.
(29) 1.6 sec.
(30) Point A
(31) Reset
(32) 0.8 sec.
(33) 1.2 sec.
(34) 0.4 sec.
(35) When using the Subaru Select Monitor, both connection and non-connection of diagnosis connector are acceptable.
(36) Master cylinder pressure
(37) FR wheel cylinder pressure
(38) FL wheel cylinder pressure
(39) RL wheel cylinder pressure
(40) RR wheel cylinder pressure

NOTE:
When using the Subaru Select Monitor, the control operation starts from point A. The patterns from ignition key ON to the point A show that operation is started by diagnosis connector.

B: SPECIFICATION

1. CONDITIONS FOR COMPLETION OF VDC SEQUENCE CONTROL

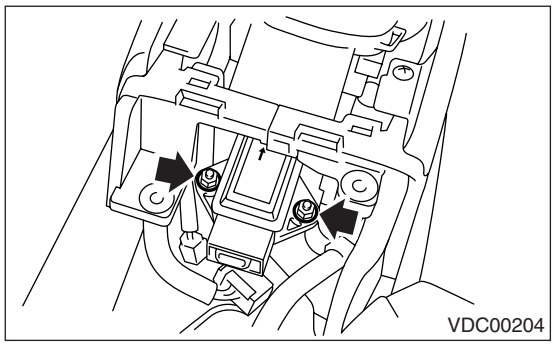
When the following conditions develop, the VDC sequence control stops and VDC operation is returned to the normal control mode.
1) When the speed of at least one wheel reaches 10 km/h (6 MPH).
2) When the diagnosis connector is disconnected. (Without Subaru Select Monitor)
3) When the brake pedal is pressed during sequence control and the stop light switch is set to ON.
4) When the brake pedal is pressed after the ignition key is turned to ON, and before VDC warning light goes out. (Without Subaru Select Monitor)
5) Turn the ignition key to ON and when 3 seconds or more have elapsed after the VDC warning light goes OFF.
6) After completion of VDC sequence control.
7) When malfunction is detected.

5. Yaw Rate & Lateral G Sensor

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the console box.
<Ref. to EI-53, Console Box.>
3) Disconnect the connector from the yaw rate & lateral G sensor.
4) Remove the yaw rate & lateral G sensor.

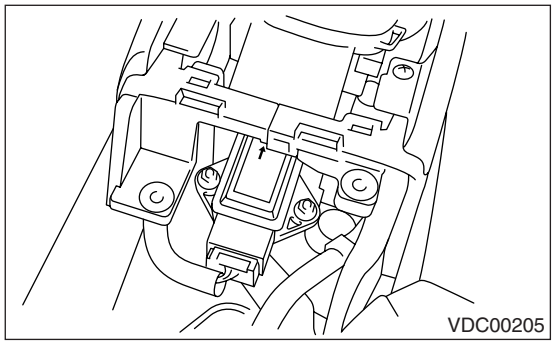
CAUTION:
Do not drop or bump the yaw rate & lateral G sensor.



B: INSTALLATION

Install in the reverse order of removal.

NOTE:
Install the yaw rate & lateral G sensor to body with directing the arrow mark on sensors to vehicle front.



Tightening torque:
7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

CAUTION:
After completion of installation, set the following two positions.
• Positioning to the center of steering angle sensor
• Positioning of the yaw rate & lateral G sensor to zero
The above procedure is required VDCCM&H/U to identify the vehicle position afterward. For the setting procedure of step 2 above, refer to "VDC Control Module & Hydraulic Control Unit". <Ref. to VDC-9, ADJUSTMENT, VDC Control Module & Hydraulic Control Unit (VDC-CM&H/U).>

C: INSPECTION

1. YAW RATE & LATERAL G SENSOR SIGNAL

	Step	Check	Yes	No
1	**CHECK YAW RATE & LATERAL G SENSOR.** 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor connector to data link connector. 3) Turn the ignition switch to ON. 4) Set the Subaru Select Monitor connector to the {Brake Control} mode. 5) Select {Current Data Display & Save}. 6) Read the output voltage of yaw rate & lateral G sensor.	Are the indicated values when the vehicle is placed horizontally Lateral G sensor: −1.5 — 1.5 m/s Yaw rate sensor: −4 — 4 deg/s?	Go to step **2.**	Repair the harness connector between yaw rate & lateral G sensor and VDCCM&H/U. Or replace the yaw rate & lateral G sensor.
2	**CHECK LATERAL G SENSOR.** 1) Remove the console box. 2) Remove the yaw rate & lateral G sensor from vehicle. (Do not disconnect the connector.) 3) Read the display of Subaru Select Monitor. NOTE: When the yaw rate & lateral G sensor is moved with its power supply on, DTC of yaw rate & lateral G sensor may be recorded.	Is the value 6.8 — 12.8 m/s when the yaw rate & lateral G sensor are inclined rightward to 90°?	Go to step **3.**	Repair the harness connector between yaw rate & lateral G sensor and VDCCM&H/U. Or replace the yaw rate & lateral G sensor.
3	**CHECK LATERAL G SENSOR.** Read the display of Subaru Select Monitor. NOTE: When the yaw rate & lateral G sensor is moved with its power supply on, DTC of yaw rate & lateral G sensor may be recorded.	Is the value −6.8 — −12.8 m/s when the yaw rate & lateral G sensor are inclined leftward to 90°?	Yaw rate & lateral G sensor is normal.	Repair the harness connector between yaw rate & lateral G sensor and VDCCM&H/U. Or replace the yaw rate & lateral G sensor.

6. Steering Angle Sensor

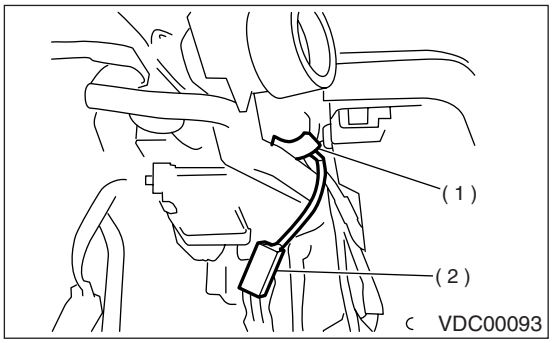
A: REPLACEMENT

CAUTION:
• Do not perform the removal except when the replacement.
• When replacing more than three times, replace the combination switch as assembly to protect screw part.

1) Set the steering wheel in a wheel-forward position.
2) Disconnect the ground cable from battery.
3) Remove the airbag module.
<Ref. to AB-14, REMOVAL, Driver's Airbag Module.>

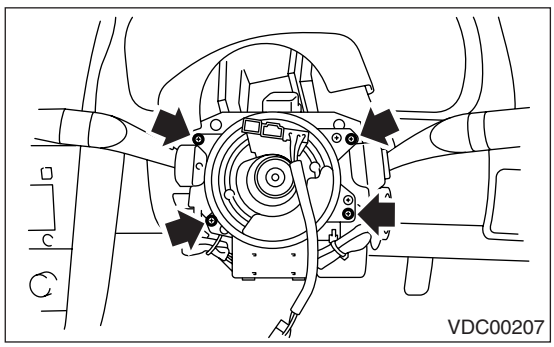
WARNING:
Always refer to "Airbag System" when performing the airbag module repair service.
<Ref. to AB-4, CAUTION, General Description.>

4) Remove the steering wheel.
<Ref. to PS-20, REMOVAL, Steering Wheel.>
5) Remove the screws and detach the steering column lower cover.
6) Remove the two screws securing the steering column upper cover.
7) Unlock the harness band and disconnect the connector of steering angle sensor.

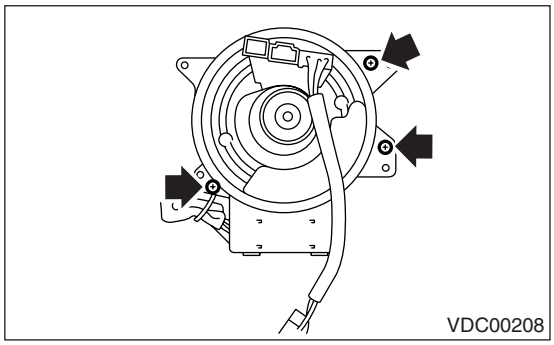


(1) Harness band
(2) Connector

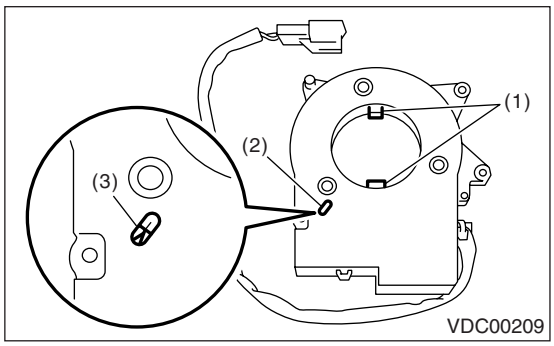
8) Remove the screws which secure the roll connector to steering column.



9) Remove the steering angle sensor from roll connector.



10) Turn the protrusion portion of new steering angle sensor to match the alignment mark of inspection hole.

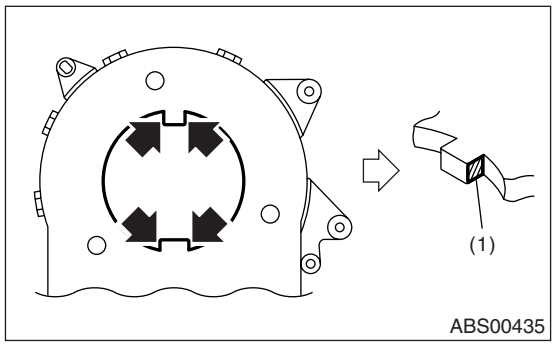


(1) Protrusion portion
(2) Inspection hole
(3) Alignment mark

CAUTION:
Be careful not to allow foreign particles to enter from inspection hole.

11) Align the center of roll connector.
<Ref. to AB-23, INSTALLATION, Roll Connector.>

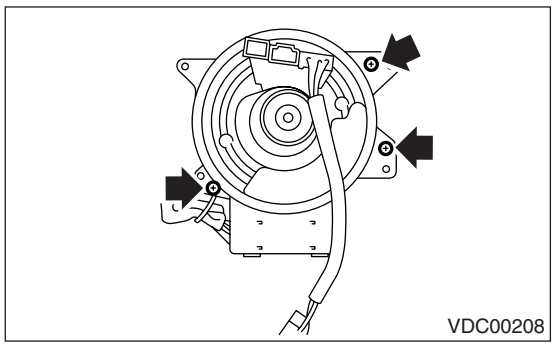
12) Apply thin coat of grease which is enclosed with new part to the protruding parts (four) of steering angle sensor.



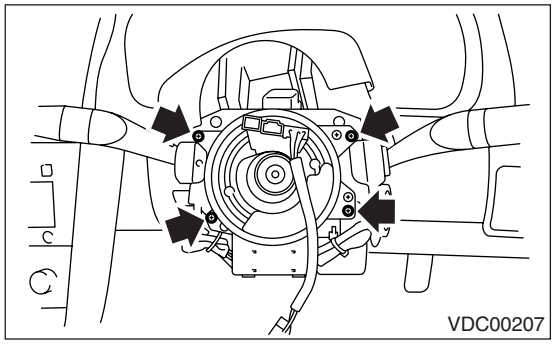
(1) Apply grease.

13) Align the position of protrusion portion and install the roll connector to the steering angle sensor.

Tightening torque:
0.5 N·m (0.05 kgf-m, 0.36 ft-lb)



14) Install the roll connector to combination switch.



15) Install the steering wheel.
<Ref. to PS-20, INSTALLATION, Steering Wheel.>

Tightening torque:
44 N·m (4.5 kgf-m, 32.5 ft-lb)

16) Install the airbag module to steering wheel.
<Ref. to AB-14, INSTALLATION, Driver's Airbag Module.>

WARNING:
Always refer to "Airbag System" before performing the service operation.
<Ref. to AB-4, CAUTION, General Description.>

17) Connect the battery ground cable to battery.

CAUTION:
After completion of installation, adjust the following two positions.
• Positioning to the center of steering angle sensor
• Positioning of the yaw rate & lateral G sensor to zero
The above procedure is required for VDCCM to identify the vehicle position afterward. For the setting procedure of step 2 above, refer to "VDC Control Module & Hydraulic Control Unit". <Ref. to VDC-9, ADJUSTMENT, VDC Control Module & Hydraulic Control Unit (VDC-CM&H/U).>

7. Front ABS Wheel Speed Sensor

A: NOTE

For the vehicle equipped with VDC, it has the same ABS wheel speed sensor as installed to the vehicle equipped with ABS. For removal, installation and inspection procedure, refer to ABS section.
<Ref. to ABS-13, Front ABS Wheel Speed Sensor.>

8. Rear ABS Wheel Speed Sensor

A: NOTE

For the vehicle equipped with VDC, it has the same ABS wheel speed sensor as installed to the vehicle equipped with ABS. For removal, installation and inspection procedure, refer to ABS section.
<Ref. to ABS-15, Rear ABS Wheel Speed Sensor.>

9. Front Magnetic Encoder

A: NOTE

For the vehicle equipped with VDC, it has the same magnetic encoder as installed to the vehicle equipped with ABS. For removal, installation and inspection procedure, refer to ABS section.
<Ref. to ABS-16, Front Magnetic Encoder.>

10.Rear Magnetic Encoder

A: NOTE

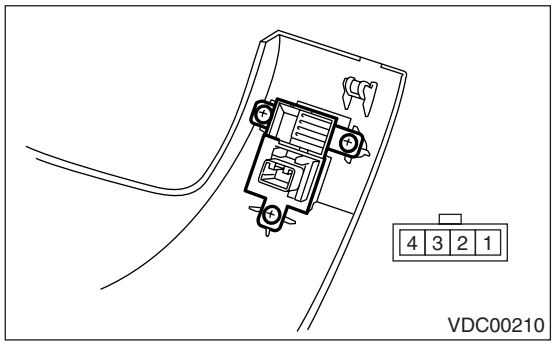
For the vehicle equipped with VDC, it has the same magnetic encoder as installed to the vehicle equipped with ABS. For removal, installation and inspection procedure, refer to ABS section.
<Ref. to ABS-17, Rear Magnetic Encoder.>

11.VDC OFF Switch

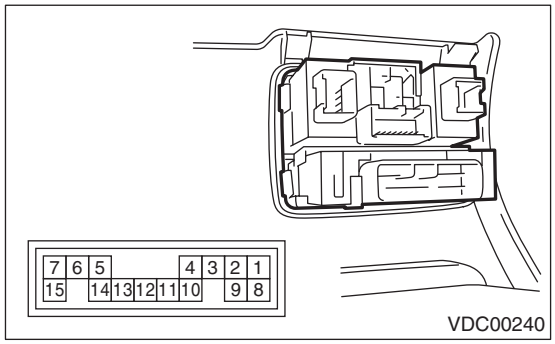
A: REMOVAL

1) Remove the instrument panel lower cover.
2) Remove the screws, and then remove the VDC OFF switch.

• RHD model



• LHD model



B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Measure the resistance between VDC OFF switch terminals.

• RHD model

Switch position	Terminal No.	Standard
OFF	2 — 3	More than 1 MΩ
ON	2 — 3	Less than 1 Ω

• LHD model

Switch position	Terminal No.	Standard
OFF	2 — 15	More than 1 MΩ
ON	2 — 15	Less than 1 Ω

If NG, replace the VDC OFF switch.

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

13.	General Diagnostic Table	132

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:
When the Subaru Select Monitor is communicating (except when displaying the data), the ABS warning light flashes and VDC warning light illuminates in the combination meter. Do not communicate with the Subaru Select Monitor while driving, because the ABS and VDC functions are disabled. Carefully drive the vehicle, when you have to communicate with the Subaru Select Monitor. When the data is displayed by the {Current Data Display & Save} menu, both the ABS and VDC warning lights are turned off and ABS and VDC functions are enabled.

NOTE:
- To check the harness for broken wires or short circuits, shake problem spot or connector.
- Refer to “Check List for Interview”. <Ref. to VDC(diag)-4, Check List for Interview.>

	Step	Check	Yes	No
1	**CHECK PRE-INSPECTION.** 1) Ask the customer when and how the trouble occurred using the interview checklist. <Ref. to VDC(diag)-4, Check List for Interview.> 2) Before performing diagnostics, check the component which might affect VDC problems. <Ref. to VDC(diag)-8, INSPECTION, General Description.>	Is the component that might influence the VDC problem normal?	Go to step **2.**	Repair or replace each component.
2	**CHECK INDICATION OF DTC.** 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON, and the Subaru Select Monitor switch to ON. 4) Read the DTC. <Ref. to VDC(diag)-22, OPERATION, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed normally, check the communication circuit. <Ref. to VDC(diag)-19, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.> 5) Record all DTCs and freeze frame data.	Is DTC displayed?	Go to step **4.**	Go to step **3.**
3	**PERFORM GENERAL DIAGNOSTICS.** 1) Inspect using “General Diagnostic Table”. <Ref. to VDC(diag)-132, INSPECTION, General Diagnostic Table.> 2) Perform the clear memory mode. <Ref. to VDC(diag)-24, OPERATION, Clear Memory Mode.> 3) Perform the inspection mode. <Ref. to VDC(diag)-23, PROCEDURE, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-22, OPERATION, Read Diagnostic Trouble Code (DTC).> 5) Check the DTC does not displayed.	Do the VDC warning light and ABS warning light go off after starting the engine?	Finish the diagnosis.	Check the combination meter circuit. <Ref. to VDC(diag)-30, ABS WARNING LIGHT DOES NOT GO OFF, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-33, VDC WARNING LIGHT AND VDC OFF INDICATOR LIGHT DO NOT GO OFF, Warning Light Illumination Pattern.>

	Step	Check	Yes	No
4	**PERFORM DIAGNOSIS.** 1) Refer to “List of Diagnostic Trouble Code (DTC)”. NOTE: For the DTC list, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to VDC(diag)-37, LIST, List of Diagnostic Trouble Code (DTC).> 2) Fix the wrong part. 3) Perform the clear memory mode. <Ref. to VDC(diag)-24, OPERATION, Clear Memory Mode.> 4) Perform the inspection mode. <Ref. to VDC(diag)-23, PROCEDURE, Inspection Mode.> 5) Read the DTC. <Ref. to VDC(diag)-22, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Repeat step 4 until DTC is not shown.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

Check the following items about the vehicle's state.

1. STATE OF ABS WARNING LIGHT

ABS warning light come on.	❑ Always ❑ Sometimes ❑ Only once ❑ Not come on • When / How long does it come on?		
Ignition key position	❑ LOCK ❑ ACC ❑ ON (before starting engine) ❑ START ❑ ON (after engine starting, engine is running) ❑ ON (after engine starting, engine is at a standstill)		
Timing	❑ Immediately after turning the ignition switch to ON ❑ Immediately after turning the ignition switch to START		
	❑ When accelerating	—	km/h
		—	MPH
	❑ When driving at a constant speed	km/h	MPH
	❑ When decelerating	—	km/h
		—	MPH
	❑ When turning to the right	Steering angle:	deg
		Steering time:	Sec.
	❑ When turning to the left	Steering angle:	deg
		Steering time:	Sec.
	❑ When operating other electrical parts		
	• Part name: • Operating condition:		

2. STATE OF VDC WARNING LIGHT AND VDC OFF INDICATOR LIGHT

VDC warning light and VDC OFF indicator light come on.	❑ Always ❑ Sometimes ❑ Only once ❑ Not come on • When / How long does it come on?		
Ignition key position	❑ LOCK ❑ ACC ❑ ON (before starting engine) ❑ START ❑ ON (after engine starting, engine is running) ❑ ON (after engine starting, engine is at a standstill)		
Timing	❑ Immediately after turning the ignition switch to ON ❑ Immediately after turning the ignition switch to START		
	❑ When accelerating	—	km/h
		—	MPH
	❑ When driving at a constant speed	km/h	MPH
	❑ When decelerating	—	km/h
		—	MPH
	❑ When turning to the right	Steering angle:	deg
		Steering time:	Sec.
	❑ When turning to the left	Steering angle:	deg
		Steering time:	Sec.
	❑ When operating other electrical parts		
	• Part name: • Operating condition:		

3. STATE OF VDC INDICATOR LIGHT

VDC operation indicator light comes on.	❑ Always ❑ Sometimes ❑ Only once ❑ Not come on • When / How long does it come on?		
Ignition key position	❑ LOCK ❑ ACC ❑ ON (before starting engine) ❑ START ❑ ON (after engine starting, engine is running) ❑ ON (after engine starting, engine is at a standstill)		
Timing	❑ Immediately after turning the ignition switch to ON ❑ Immediately after turning the ignition switch to START		
	❑ When accelerating	—	km/h
		—	MPH
	❑ When driving at a constant speed	km/h	MPH
	❑ When decelerating	—	km/h
		—	MPH
	❑ When turning to the right	Steering angle:	deg
		Steering time:	Sec.
	❑ When turning to the left	Steering angle:	deg
		Steering time:	Sec.
	❑ When operating other electrical parts		
	• Part name: • Operating condition:		

4. CONDITIONS UNDER WHICH TROUBLE OCCURS

Environment	a) Weather	❑ Fine ❑ Cloudy ❑ Rainy ❑ Snowy ❑ Others:
	b) Ambient temperature	°C (°F)
	c) Road	❑ Inner city ❑ Suburbs ❑ Highway ❑ Local street ❑ Uphill ❑ Downhill ❑ Paved road ❑ Gravel road ❑ Muddy road ❑ Sandy place ❑ Straight road ❑ Sharp curve ❑ Gentle curve ❑ S-curve ❑ Road with a slope on both sides ❑ Others:
	d) Road surface	❑ Dried ❑ Wet ❑ Covered with fresh snow ❑ Covered with hardened snow ❑ Frozen slope ❑ Others:

Condition	a) Brakes	Deceleration:	G
		❑ continuous / ❑ intermittent	
	b) Accelerator	Acceleration:	G
		❑ continuous / ❑ intermittent	
	c) Vehicle speed	km/h	MPH
		❑ Advancing ❑ When accelerating ❑ When decelerating ❑ At low speed ❑ When turning ❑ Others:	
	d) Tire inflation pressure	Front RH tire:	kPa
		Front LH tire:	kPa
		Rear RH tire:	kPa
		Rear LH tire:	kPa
	e) Degree of wear	Front RH tire:	
		Front LH tire:	
		Rear RH tire:	
		Rear LH tire:	
	f) Steering wheel	❑ Sharp turning ❑ Gentle turning ❑ Straight forward motion ❑ Gentle return ❑ Sharp return	
	g) Tire/Wheel size	❑ Specified size ❑ Except specification ( )	
	h) Tire variation	❑ Summer tire ❑ Studless tire (Brand:)	
	i) Tire chains are fitted: ❑ Yes / ❑ No		
	j) T-type tire is used: ❑ Yes / ❑ No		
	k) Condition of suspension alignment:		
	l) Loading state:		
	m) Repair parts are used: ❑ Yes / ❑ No		
	• Contents:		
	n) Others:		

3. General Description

A: CAUTION

1. SUPPLEMENTAL RESTRAINT SYSTEM "AIRBAG"

Airbag system wiring harness is routed near the ABS wheel speed sensor and VDCCM&H/U.

CAUTION:
• All airbag system wiring harness and connectors are colored yellow. Do not use the electrical test equipment on these circuits.
• Be careful not to damage the airbag system wiring harness when servicing the ABS wheel speed sensor and VDCCM&H/U.

B: INSPECTION

Before performing diagnosis, check the following items which might affect VDC problems.

1. BATTERY

Measure battery voltage and check electrolyte.

Standard voltage: 12 V or more

Specific gravity: More than 1.260

2. BRAKE FLUID

1) Check the brake fluid level.
2) Check the brake fluid for leaks.

3. HYDRAULIC UNIT

Check the hydraulic unit.
• With brake tester <Ref. to VDC-8, CHECKING THE HYDRAULIC UNIT ABS OPERATION WITH BRAKE TESTER, INSPECTION, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>
• Without brake tester <Ref. to VDC-8, CHECKING THE HYDRAULIC UNIT ABS OPERATION BY PRESSURE GAUGE, INSPECTION, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>

4. BRAKE DRAG

Check for brake drag.

5. BRAKE PAD AND ROTOR

Check the brake pad and rotor.
• FRONT <Ref. to BR-18, INSPECTION, Front Brake Pad.> <Ref. to BR-19, INSPECTION, Front Disc Rotor.>
• REAR <Ref. to BR-25, INSPECTION, Rear Brake Pad.> <Ref. to BR-26, INSPECTION, Rear Disc Rotor.>

6. TIRE

Check the tire specifications, tire wear and air pressure. <Ref. to WT-2, SPECIFICATION, General Description.>

C: PREPARATION TOOL

1. SPECIAL TOOL

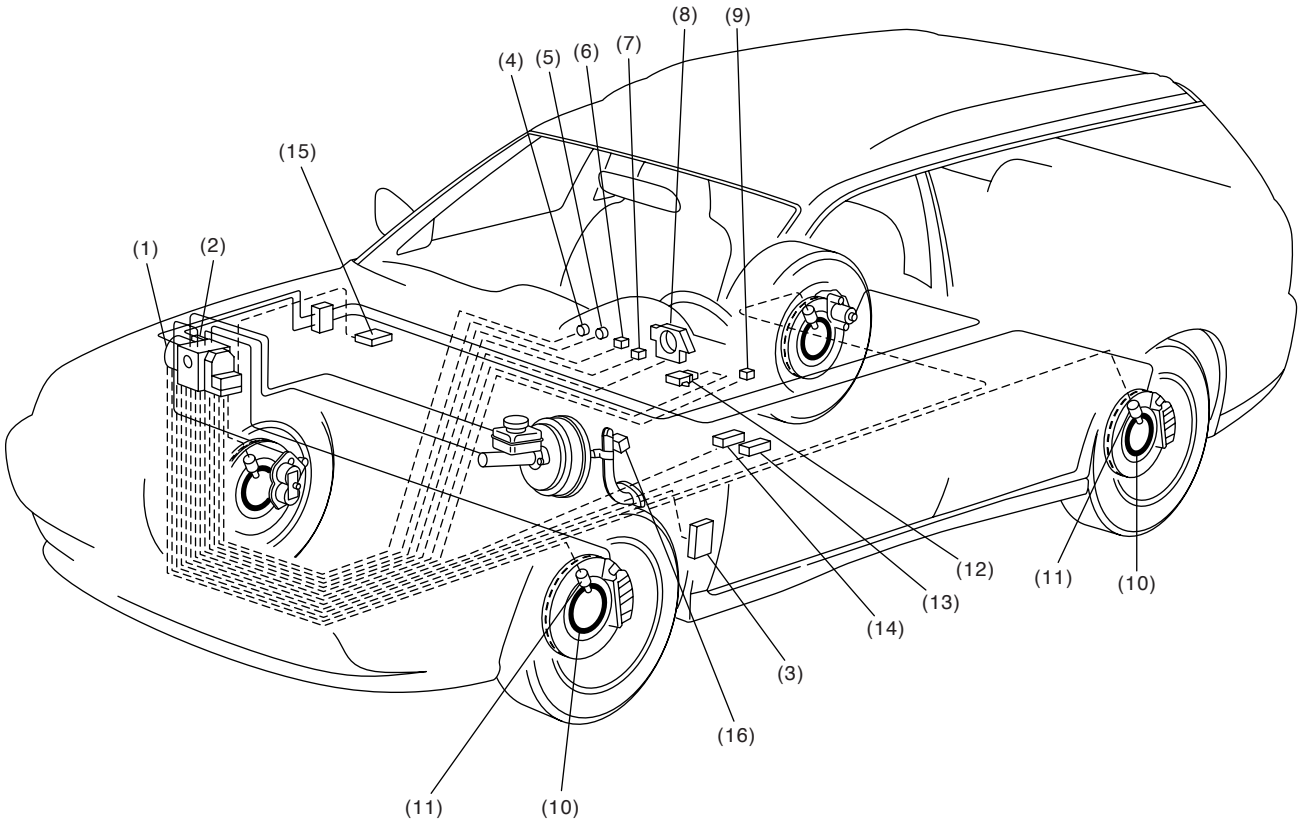
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST24082AA230	24082AA230	CARTRIDGE	Troubleshooting for electrical system.
ST22771AA030	22771AA030	SUBARU SELECT MONITOR KIT	Troubleshooting for electrical system. • English: 22771AA030 (Without printer) • German: 22771AA070 (Without printer) • French: 22771AA080 (Without printer) • Spanish: 22771AA090 (Without printer)

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Oscilloscope	Used for measuring sensor.

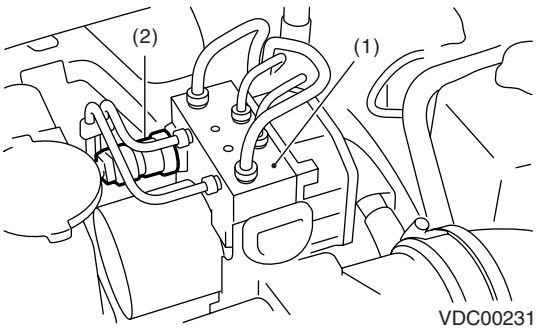
4. Electrical Component Location

A: LOCATION

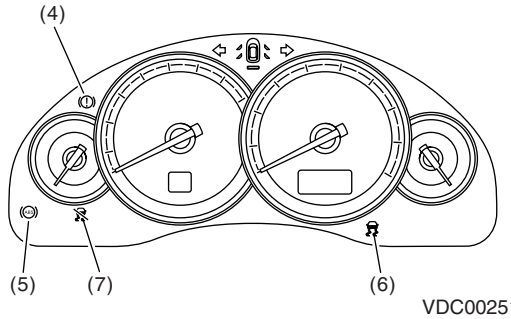


VDC00241

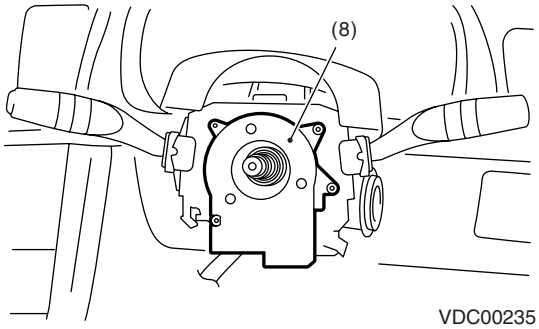
(1) VDC control module and hydraulic control unit (VDCCM&H/U)
(2) Pressure sensor
(3) Transmission control module (TCM)
(4) Brake warning light (EBD warning light)
(5) ABS warning light
(6) VDC indicator light
(7) VDC warning light and VDC OFF indicator light
(8) Steering angle sensor
(9) VDC OFF switch
(10) Magnetic encoder
(11) ABS wheel speed sensor
(12) Yaw rate & lateral G sensor
(13) Data link connector
(14) Diagnosis connector (Used for ABS sequence control)
(15) Engine control module (ECM)
(16) Stop light switch



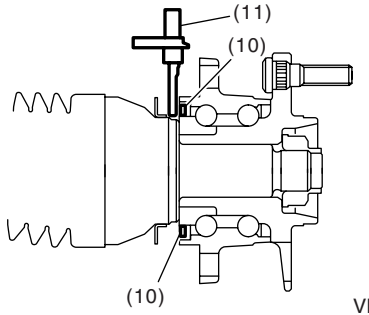
VDC00231



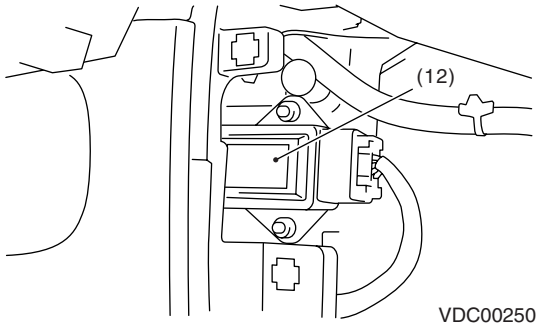
VDC00251



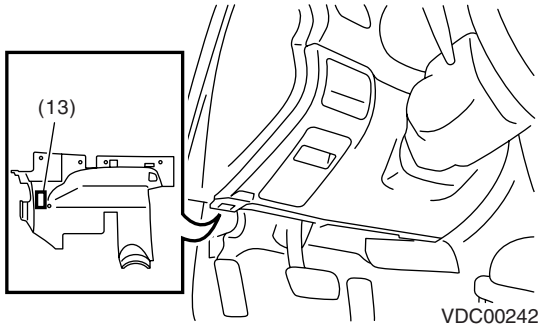
VDC00235



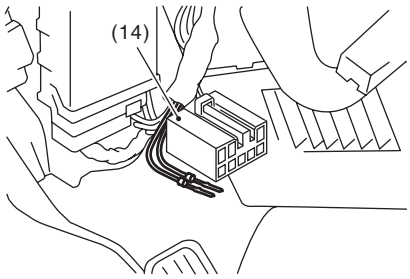
VDC00234



VDC00250



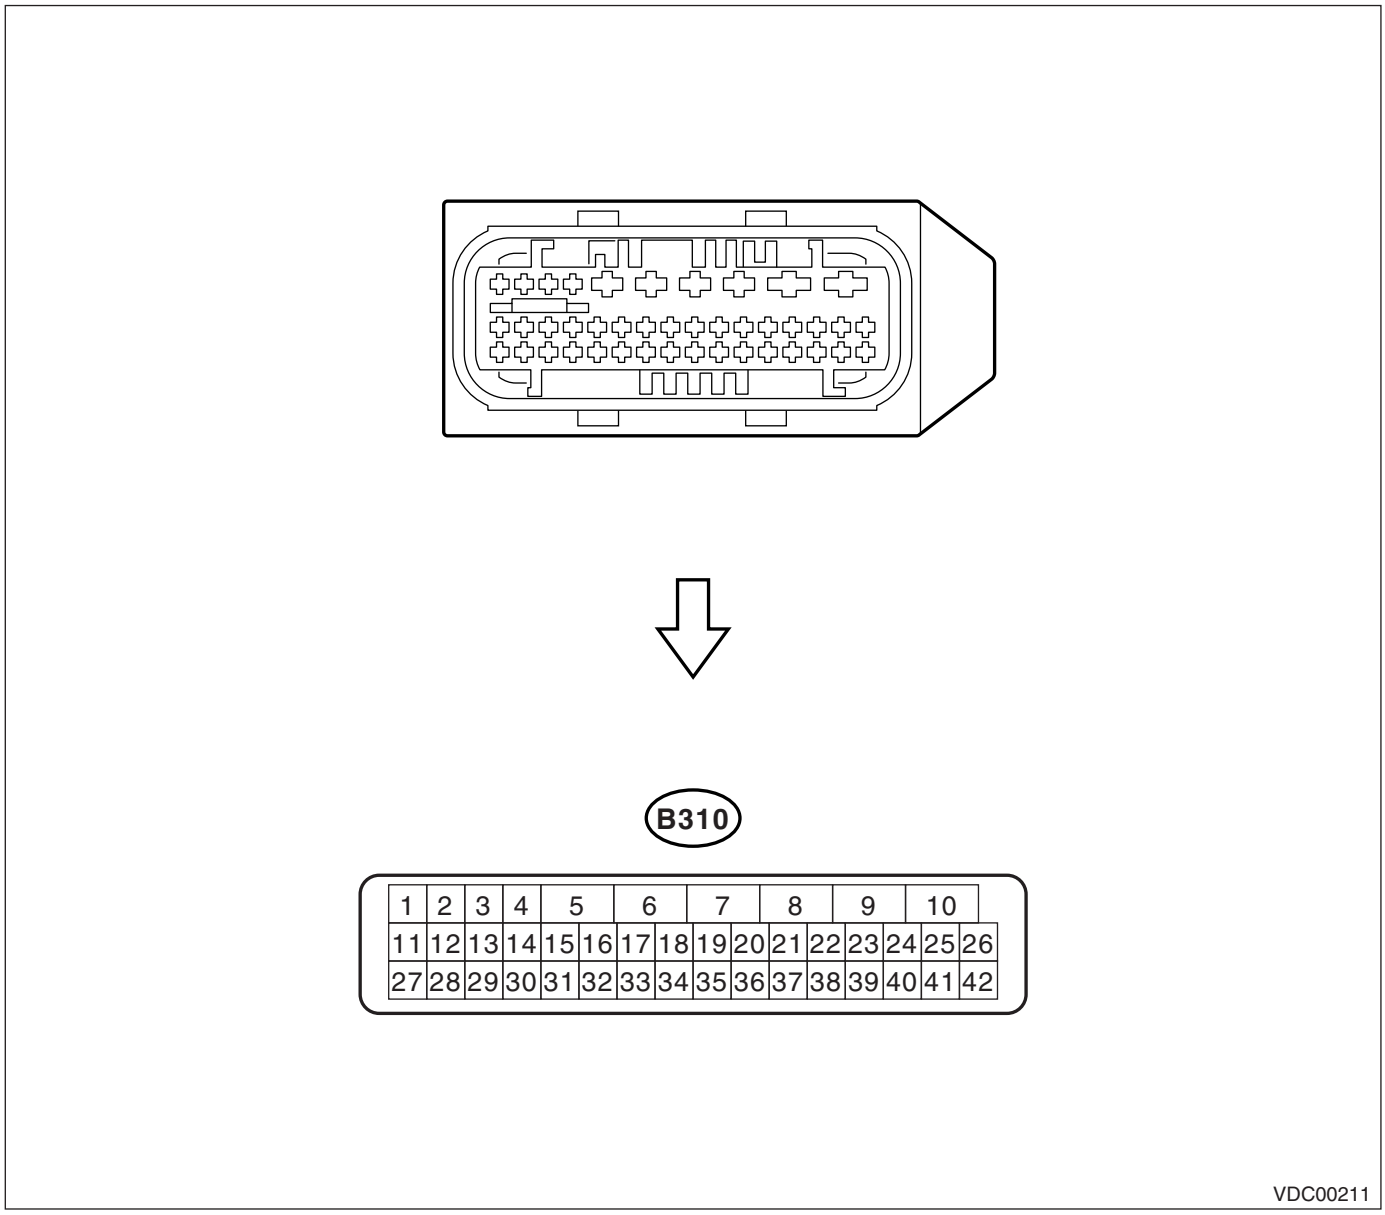
VDC00242



VDC00230

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION



NOTE:
• Terminal numbers in VDCCM&H/U connector are as shown in the figure.
• When the connector is removed from VDCCM&H/U, the ABS warning light and VDC warning light illuminate.

Content			Terminal No. (+) — (–)	Input/Output signal Measured value and measuring conditions
Power supply			14 — 6	When the ignition switch is ON, 10 — 15 V.
ABS wheel speed sensor	Front LH wheel	Power supply	41 — 6	4.5 — 16.5 V
		Signal	25	5.9 — 16.8 mA: Rectangle waveform
	Front RH wheel	Power supply	22 — 6	4.5 — 16.5 V
		Signal	21	5.9 — 16.8 mA: Rectangle waveform
	Rear LH wheel	Power supply	24 — 6	4.5 — 16.5 V
		Signal	40	5.9 — 16.8 mA: Rectangle waveform
	Rear RH wheel	Power supply	23 — 6	4.5 — 16.5 V
		Signal	38	5.9 — 16.8 mA: Rectangle waveform
Yaw rate & lateral G sensor	Output (Lateral G sensor)		3 — 16	When the vehicle is on level, 2.35 — 2.65 V.
	Power supply		30 — 16	When the ignition switch is ON, 8 — 16 V.
	Output (Yaw rate sensor)		28 — 16	Waveform <Ref. to VDC(diag)-15, WAVEFORM, MEASUREMENT, Control Module I/O Signal.>
	Standard (Yaw rate sensor)		1 — 16	2.1 — 2.9 V
	Test		2 — 16	5 — 1 V cycle for 40 ms pulse signal. <Ref. to VDC(diag)-15, WAVEFORM, MEASUREMENT, Control Module I/O Signal.>
	Ground		16	—
CAN communication line (+)			13	2.5 — 1.5 V pulse signal
CAN communication line (–)			29	3.5 — 2.5 V pulse signal
Valve relay power supply			5 — 6	When the ignition switch is ON, 10 — 15 V.
Motor relay power supply			9 — 10	When the ignition switch is ON, 10 — 15 V.
Pressure sensor	Power supply		27 — 12	When the ignition switch is ON, 4.75 — 5.25 V.
	Output voltage		11 — 12	0.48 — 0.72 V (when releasing the brake pedal)
	Ground		12	—
ABS warning light			35 — 6	After turning the ignition switch to ON, 10 — 15 V during 1.5 seconds and less than 1.5 V after 1.5 seconds passed.
Brake warning light (EBD warning light)			20 — 6	After turning the ignition switch to ON, 10 — 15 V during 1.5 seconds and less than 1.5 V after 1.5 seconds passed.
Stop light switch			37 — 6	Less than 1.5 V when the stop light is OFF; otherwise, 10 — 15 V when the stop light is ON.
Diagnosis connector			17	When the ignition switch is ON, 10 — 15 V.
Subaru Select Monitor			26 — 6	0 ←→ 12 V pulse (in communication)
Vehicle speed output signal			36	0 ←→ 5 V pulse
Ground			6	—

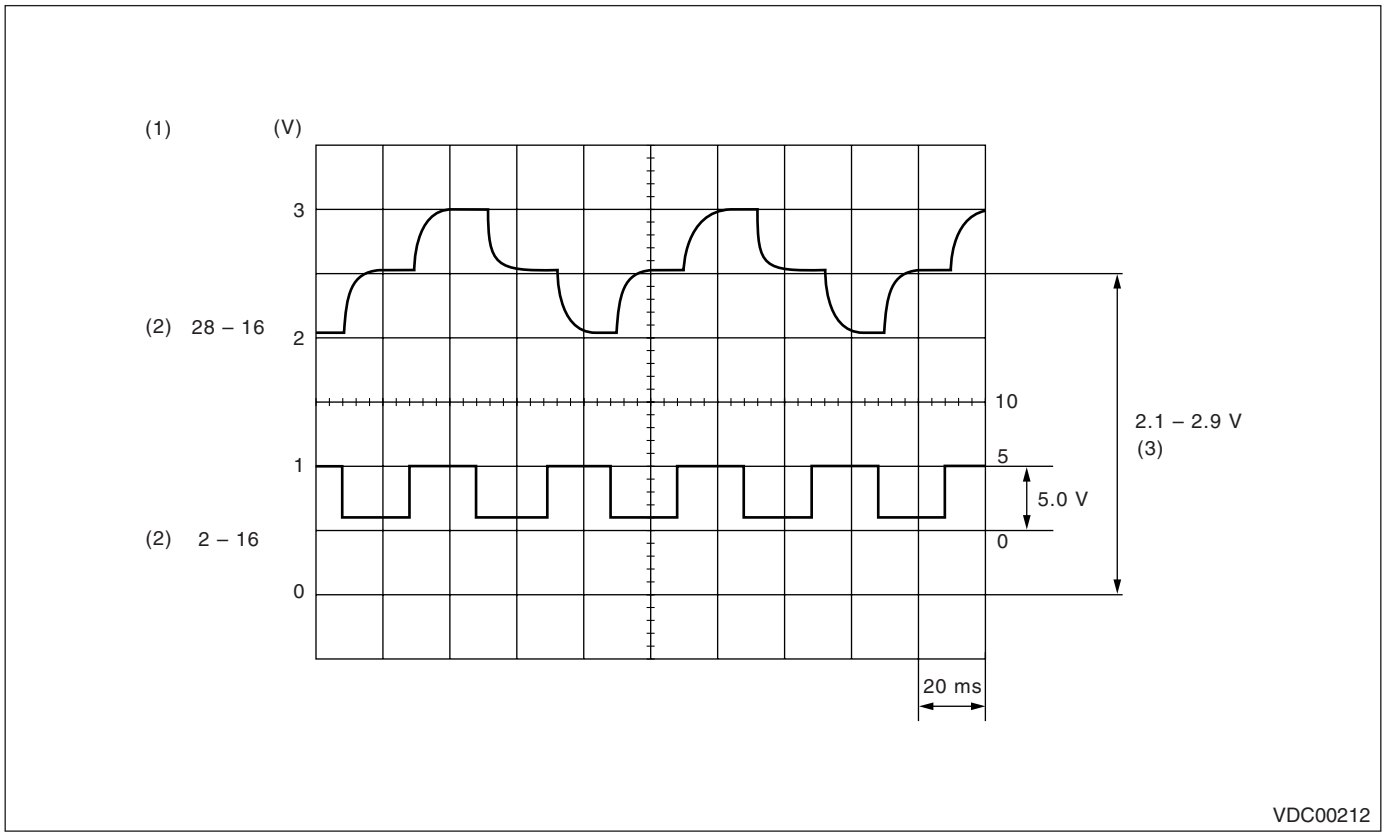
(39) Front ABS wheel speed sensor RH
(40) Rear ABS wheel speed sensor LH
(41) Rear ABS wheel speed sensor RH

C: MEASUREMENT

Measure input and output signal voltage.

1. WAVEFORM



(1) Yaw rate sensor
(2) Terminal No.
(3) Vehicle is at a standstill.

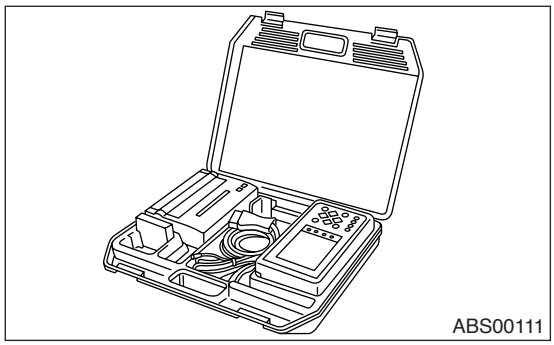
6. Subaru Select Monitor

A: OPERATION

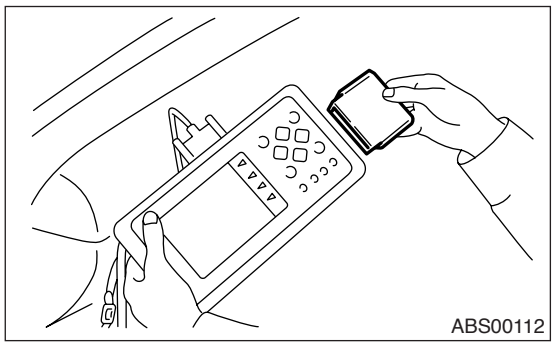
CAUTION:
When the Subaru Select Monitor is communicating (except when displaying the data), the ABS warning light flashes and VDC warning light illuminates in the combination meter. Do not communicate with the Subaru Select Monitor while driving, because the ABS and VDC functions are disabled. Carefully drive the vehicle, when you have to communicate with the Subaru Select Monitor. When the data is displayed by the {Current Data Display & Save} menu, both the ABS and VDC warning lights are turned off and ABS and VDC functions are enabled.

1. READ DIAGNOSTIC TROUBLE CODE (DTC)

1) Prepare the Subaru Select Monitor kit. <Ref. to VDC(diag)-9, SPECIAL TOOL, PREPARATION TOOL, General Description.>

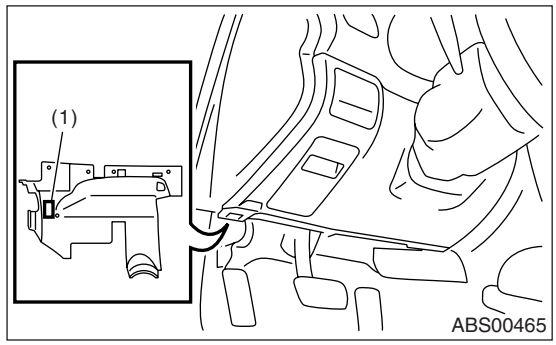


2) Connect the diagnosis cable to Subaru Select Monitor.
3) Insert the cartridge to Subaru Select Monitor. <Ref. to VDC(diag)-9, SPECIAL TOOL, PREPARATION TOOL, General Description.>



4) Connect the Subaru Select Monitor to data link connector.

(1) Data link connector is located in the lower portion of instrument panel (on the driver's side).

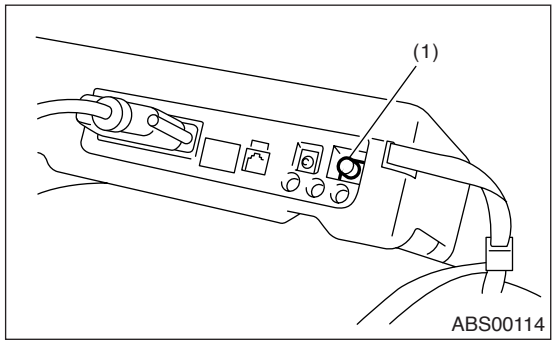


(1) Data link connector

(2) Connect the diagnosis cable to data link connector.

CAUTION:
Do not connect the scan tools except for Subaru Select Monitor.

5) Turn the ignition switch to ON (engine OFF) and turn the Subaru Select Monitor switch to ON.



(1) Power switch

6) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
7) On the «System Selection Menu» display screen, select the {Brake Control} and press the [YES] key.
8) Press the [YES] key after the {VDC AWD AT} is displayed.
9) On the «VDC Diagnosis» display screen, select the {Diagnostic Code(s) Display}, and then press the [YES] key.

NOTE:
• For details concerning operation procedure, refer to "SUBARU SELECT MONITOR OPERATION MANUAL".
• For details concerning DTCs, refer to "List of Diagnostic Trouble Code (DTC)". <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>
• DTCs are displayed up to three in detected order.

• If a particular DTC is not properly stored in memory (due to a drop in VDCCM&H/U power supply, etc.) on the occurrence of a problem, the DTC which is suffixed with a question mark "?" appears on the Subaru Select Monitor display. This shows it may be an unreliable reading.

10) If VDC and Subaru Select Monitor cannot communicate, check the communication circuit. <Ref. to VDC(diag)-19, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>

Display	Contents to be monitored
Current	Indicate the latest DTC on the Subaru Select Monitor display.
Old	Indicate the latest DTC in previous trouble on the Subaru Select Monitor display.
Older	Indicate the latest DTC in second previous trouble on the Subaru Select Monitor display.
Before 3	Indicate the latest DTC in third previous trouble on the Subaru Select Monitor display.

2. READ CURRENT DATA

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Brake Control} and press the [YES] key.
3) Press the [YES] key after {VDC 4WD AT} is displayed.
4) On the «Brake Control Diagnosis» display screen, select the {Current Data Display/Save}, and then press the [YES] key.
5) On the «Data Display Menu» display screen, select the display method, and press the [YES] key.
6) Using a scroll key, scroll the display screen up or down until necessary data is shown.
• A list of the support data is shown in the following table.

Display	Contents to be monitored	Unit of measure
FR Wheel Speed	Wheel speed detected by front ABS wheel speed sensor RH is displayed.	km/h or MPH
FL Wheel Speed	Wheel speed detected by front ABS wheel speed sensor LH is displayed.	km/h or MPH
RR Wheel Speed	Wheel speed detected by rear ABS wheel speed sensor RH is displayed.	km/h or MPH
RL Wheel Speed	Wheel speed detected by rear ABS wheel speed sensor LH is displayed.	km/h or MPH
Steering Angle Sensor	Steering angle detected by steering angle sensor is displayed.	deg
Yaw Rate Sensor	Vehicle angular speed detected by yaw rate sensor is displayed.	deg/s
Pressure Sensor	Brake fluid pressure detected by pressure sensor is displayed.	bar
Lateral G Sensor	Vehicle lateral acceleration detected by lateral G sensor is displayed.	m/s (m/s^2)
IG power supply voltage	Voltage supplied to VDCCM&H/U is displayed.	V
EMA signal	Engine control command signal is displayed.	1 or 0
TCS Operation Light	TCS operation condition is displayed.	ON or OFF
VDC Operation Light	VDC operation condition is displayed.	ON or OFF
VDC OFF Light	ON/OFF condition of VDC OFF indicator light is displayed.	ON or OFF
EBD Warning Light	ON operation of the EBD warning light is displayed.	ON or OFF
ABS Warning Light	ON operation of the ABS warning light is displayed.	ON or OFF
VDC Warning Light	ON operation of the VDC warning light is displayed.	ON or OFF
VDC OK-B signal	Malfunction of VDC sensor (except for vehicle speed sensor) is displayed.	1 or 0
Valve Relay Signal	Valve relay operation signal is displayed.	ON or OFF
Motor Relay Signal	Motor relay operation signal is displayed.	ON or OFF
Motor Relay Monitor	Motor relay monitor signal is displayed.	ON or OFF
PATA Signal	Operation condition of VDC OFF switch is displayed.	ON or OFF
BLS Signal	Brake ON/OFF is displayed.	ON or OFF
Gear position	Present gear position is displayed.	—
Engine Speed	Current engine speed is displayed.	rpm
PW Signal	Acceleration opening is displayed.	%

NOTE:
For details concerning operation procedure, refer to “SUBARU SELECT MONITOR OPERATION MANUAL”.

3. CLEAR MEMORY MODE

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Brake Control} and press the [YES] key.
3) Press the [YES] key after {VDC 4WD AT} is displayed.
4) On the «Brake Control Diagnosis» display screen, select the {Memory Clear} and press the [YES] key.

Display	Contents to be monitored
Clear memory?	DTC deleting function

5) When “Done” and “Turn ignition switch OFF” are shown on the display screen, turn the Subaru Select Monitor and ignition switch to OFF.

NOTE:
For details concerning operation procedure, refer to “SUBARU SELECT MONITOR OPERATION MANUAL”.

4. ABS SEQUENCE CONTROL

Display	Contents to be monitored	Reference target
ABS sequence control	Operate the valve and pump motor continuously to perform the ABS sequence control.	<Ref. to ABS-10, ABS Sequence Control.>
VDC confirmation mode	Operate the valve and pump motor continuously to perform the VDC sequence control.	<Ref. to VDC-11, VDC Sequence Control.>

5. FREEZE FRAME DATA

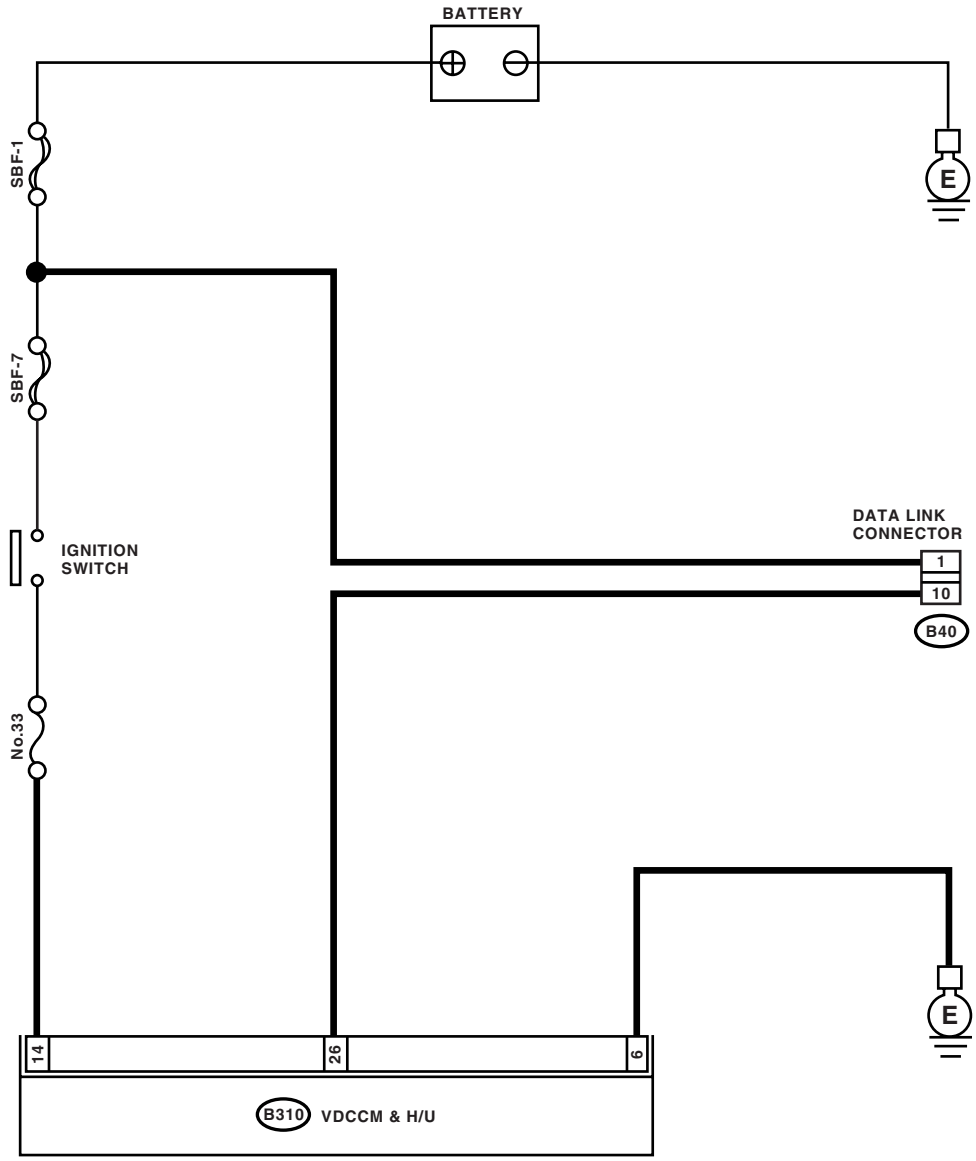
NOTE:
• Data stored at the time of trouble occurrence is shown on display.
• Each time trouble occurs, the latest information is stored in the freeze frame data in memory.
• If a freeze frame data is not properly stored in memory (due to a drop in VDC control module power supply, etc.), the DTC which is suffixed with a question mark “?” appears on the Subaru Select Monitor display. This shows it may be an unreliable reading.

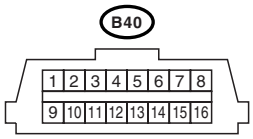
Display	Contents to be monitored
Steering angle sensor	Steering angle detected by steering angle sensor is displayed.
Yaw rate sensor	Vehicle angular speed detected by yaw rate sensor is displayed.
Lateral G sensor	Vehicle lateral acceleration detected by lateral G sensor is displayed.
Pressure sensor	Brake fluid pressure detected by pressure sensor is displayed.
Vehicle Speed	Vehicle speed calculated by VDC control module is displayed.
FR Wheel Speed	Wheel speed detected by front ABS wheel speed sensor RH is displayed in km/h or MPH.
FL Wheel Speed	Wheel speed detected by front ABS wheel speed sensor LH is displayed in km/h or MPH.
RR Wheel Speed	Wheel speed detected by rear ABS wheel speed sensor RH is displayed in km/h or MPH.
RL Wheel Speed	Wheel speed detected by rear ABS wheel speed sensor LH is displayed in km/h or MPH.
Required torque	Engine required torque is displayed.
Current torque	Current engine torque on malfunction occurrence is displayed.
Target torque	Engine target torque is displayed.
PW signal	Acceleration opening is displayed.
Engine Speed	Engine speed on malfunction occurrence is displayed.
Gear position	Gear position on malfunction occurrence is displayed.
IG power supply voltage	Voltage supplied to VDC control module is displayed.
Absolute angle recognition flag	Whether the absolute angle was determined is displayed.
Decreasing required torque	Whether the torque decrease is required to engine is displayed.
EMA signal	Engine control command signal is displayed.
VDC O control flag	VDC oversteer control condition is displayed.
VDC U control flag	VDC understeer control condition is displayed.
BMR control flag	Brake control condition is displayed.
AMR control flag	Engine control condition is displayed.
ABS control flag	ABS control condition is displayed.
VDC OFF light	ON/OFF condition of VDC OFF indicator light is displayed.
Valve Relay Signal	Valve relay operation signal is displayed.
Motor Relay Monitor	Motor relay monitor signal is displayed.
BLS signal	Brake ON/OFF is displayed.

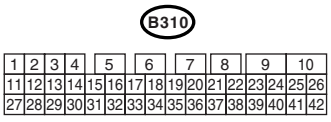
B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

DETECTING CONDITION:
Defective harness connector
TROUBLE SYMPTOM:
Communication is impossible between VDC and Subaru Select Monitor.
WIRING DIAGRAM:







VDC00244

	Step	Check	Yes	No
1	**CHECK IGNITION SWITCH.**	Is the ignition switch ON?	Go to step **2.**	Turn the ignition switch to ON, and select VDC mode using Subaru Select Monitor.
2	**CHECK BATTERY.** 1) Turn the ignition switch to OFF. 2) Measure the battery voltage.	Is the voltage more than 11 V?	Go to step **3.**	Charge or replace the battery.
3	**CHECK BATTERY TERMINAL.**	Is there poor contact at battery terminal?	Repair or tighten the battery terminal.	Go to step **4.**
4	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check whether communication to other system can be executed normally.	Are the system name and model year displayed on Subaru Select Monitor?	Go to step **8.**	Go to step **5.**
5	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to OFF. 2) Disconnect the VDCCM&H/U connector. 3) Turn the ignition switch to ON. 4) Check whether communication to other systems can be executed normally.	Are the system name and model year displayed on Subaru Select Monitor?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>	Go to step **6.**
6	**CHECK HARNESS CONNECTOR BETWEEN EACH CONTROL MODULE AND DATA LINK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the VDCCM&H/U, ECM and TCM. 3) Measure the resistance between data link connector and chassis ground. ***Connector & terminal*** ***(B40) No. 10 — Chassis ground:***	Is the resistance more than 1 MΩ?	Go to step **7.**	Repair the harness and connector between each control module and data link connector.
7	**CHECK OUTPUT SIGNAL FOR VDCCM&H/U.** 1) Turn the ignition switch to ON. 2) Measure the voltage between VDCCM&H/U and chassis ground. ***Connector & terminal*** ***(B40) No. 10 (+) — Chassis ground (−):***	Is the voltage less than 1 V?	Go to step **8.**	Repair the harness and connector between each control module and data link connector.
8	**CHECK HARNESS CONNECTOR BETWEEN VDCCM&H/U AND DATA LINK CONNECTOR.** Measure the resistance between VDCCM&H/U connector and data link connector. ***Connector & terminal*** ***(B310) No. 26 — (B40) No. 10:***	Is the resistance less than 0.5 Ω?	Go to step **9.**	Repair the harness and connector between VDCCM&H/U and data link connector.
9	**CHECK INSTALLATION OF VDCCM&H/U CONNECTOR.** Turn the ignition switch to OFF.	Is the VDCCM&H/U connector inserted into VDCCM&H/U until the clamp locks onto it?	Go to step **10.**	Insert the VDCCM&H/U connector into VDCCM&H/U.

	Step	Check	Yes	No
10	**CHECK POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. (engine OFF) 2) Measure the ignition power supply voltage between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 14 (+) — Chassis ground (−):***	Is the voltage 10 — 15 V?	Go to step **11.**	Repair the open circuit in harness between VDCCM&H/U and battery.
11	**CHECK HARNESS CONNECTOR BETWEEN VDCCM&H/U AND CHASSIS GROUND.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from VDCCM&H/U. 3) Measure the resistance of harness between VDCCM&H/U and chassis ground. ***Connector & terminal*** ***(B310) No. 6 — Chassis ground:***	Is the resistance less than 0.5 Ω?	Go to step **12.**	Repair the open circuit in harness between VDCCM&H/U and inhibitor side connector, and poor contact in coupling connector.
12	**CHECK POOR CONTACT IN CONNECTOR.**	Is there poor contact in control module power supply, ground circuit and data link connector?	Repair the connector.	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

For details concerning DTC reading procedure, refer to “Subaru Select Monitor”. <Ref. to VDC(diag)-16, Subaru Select Monitor.>

8. Inspection Mode

A: PROCEDURE

Reproduce the malfunction occurrence condition as possible.
Drive the vehicle at least ten minutes.

NOTE:
Make sure the vehicle is not dragged to one side under usual driving condition.

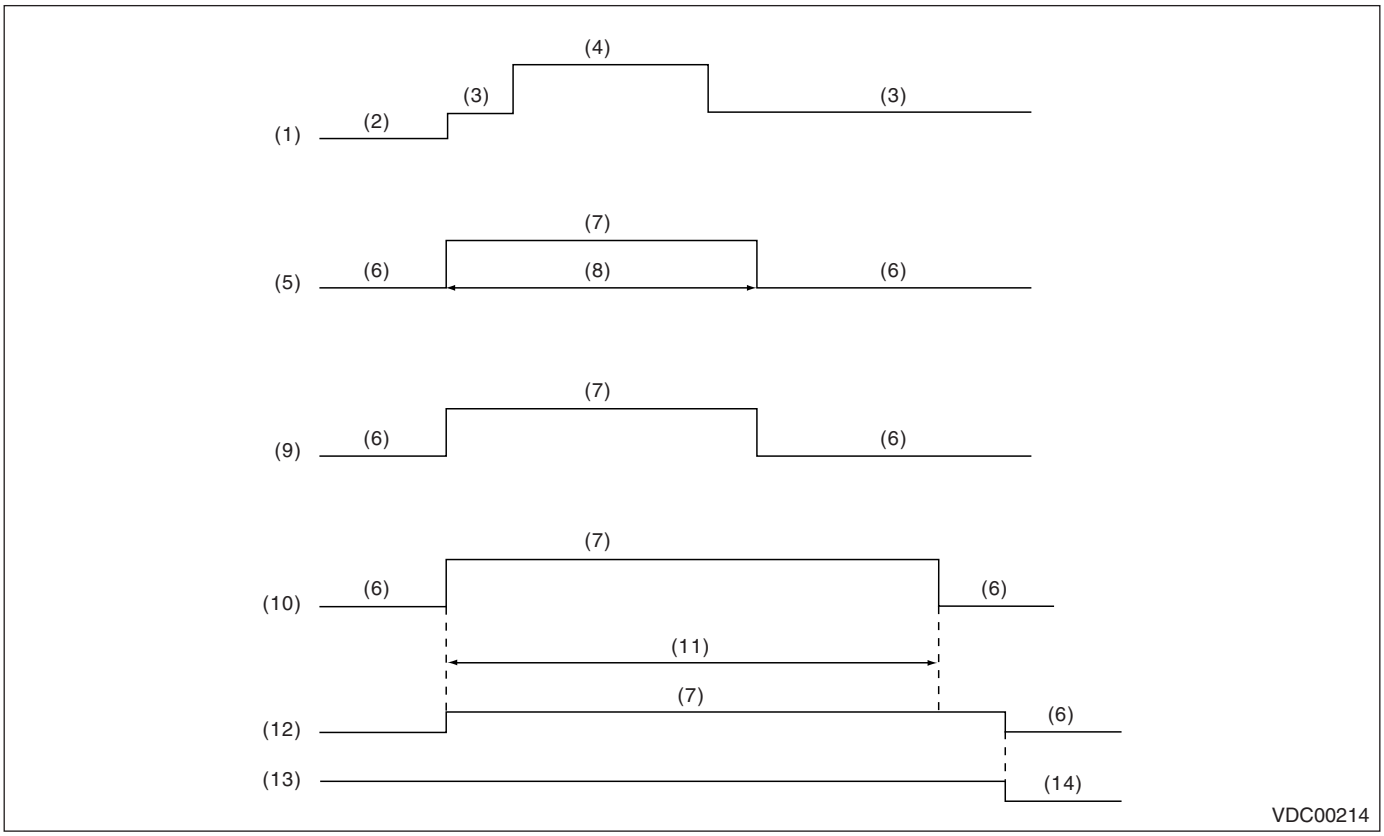
9. Clear Memory Mode

A: OPERATION

For details concerning DTC clear operation, refer to “Subaru Select Monitor”. <Ref. to VDC(diag)-16, Subaru Select Monitor.>

10.Warning Light Illumination Pattern

A: INSPECTION



(1) Ignition switch
(2) OFF
(3) ON
(4) Engine start
(5) ABS warning light
(6) Light OFF
(7) Light ON
(8) 1.5 sec.
(9) VDC indicator light
(10) VDC warning light and VDC OFF indicator light
(11) Several seconds (depending on engine coolant temperature)
(12) Brake warning light (EBD warning light)
(13) Parking brake
(14) Released

1) When warning lights or indicator lights do not illuminate in accordance with this illumination pattern, there must be an electrical malfunction.
2) When warning lights or indicator lights remain constantly OFF, check the combination meter circuit or CAN communication circuit. <Ref. to VDC(diag)-26, VDC WARNING LIGHT, VDC OFF INDICATOR LIGHT AND VDC INDICATOR LIGHT DO NOT COME ON, Warning Light Illumination Pattern.>
3) When ABS warning light does not go off, check the combination meter circuit. <Ref. to VDC(diag)-30, ABS WARNING LIGHT DOES NOT GO OFF, Warning Light Illumination Pattern.>
4) When the VDC indicator light, VDC warning light and VDC OFF indicator light do not go off, check the combination meter circuit or CAN communication circuit. <Ref. to VDC(diag)-32, VDC INDICATOR LIGHT DOES NOT GO OFF, Warning Light Illumination Pattern.>

NOTE:
• Even though the ABS warning light does not go off after 1.5 seconds from ABS warning light illumination, the ABS system operates normally when the warning light goes off while driving at approximately 12 km/h (7 MPH). However, the ABS system does not work while the ABS warning light is illuminated.
• It may take several minutes before VDC warning light and VDC OFF indicator light goes off if the vehicle is parked under low temperature for a specified time. This is not defective because it is resulted from low engine coolant temperature.

• With the vehicle jack-up/lift-up or set on free rollers, when the wheels lock or spin after starting the engine, ABS warning light, VDC warning light and VDC OFF indicator light may illuminate because VDCCM&H/U detects the abnormal conditions from ABS wheel speed sensors. In this case, this is not a malfunction. Perform the clear memory mode.

B: VDC WARNING LIGHT, VDC OFF INDICATOR LIGHT AND VDC INDICATOR LIGHT DO NOT COME ON

DETECTING CONDITION:

• Defective combination meter
• Defective CAN communication

TROUBLE SYMPTOM:

When the ignition switch is turned to ON (engine OFF), VDC indicator light, VDC warning light and VDC OFF indicator light do not come on.

NOTE:
When pressing VDC OFF switch for more than 10 seconds, VDC OFF indicator light goes off and cannot operate any more. When turning the ignition switch from OFF to ON, the OFF operation enabled status is restored.

	Step	Check	Yes	No
1	**CHECK OTHER INDICATOR LIGHT.** Turn the ignition switch to ON.	Does other indicator light illuminate soon after “ON”?	Go to step **2.**	Perform the self-diagnosis of combination meter.
2	**CHECK VDCCM.** When the engine does not start, display the current data of VDCCM using Subaru Select Monitor.	Is “VDC warning light” output set to “ON”?	Go to step **3.**	Replace the VDCCM.
3	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-24, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system.	Go to step **4.**
4	**CHECK COMBINATION METER.** Check the combination meter.	Is combination meter OK?	Replace the VDCCM&H/U.	Repair the combination meter assembly.

C: ABS WARNING LIGHT DOES NOT COME ON

DETECTING CONDITION:

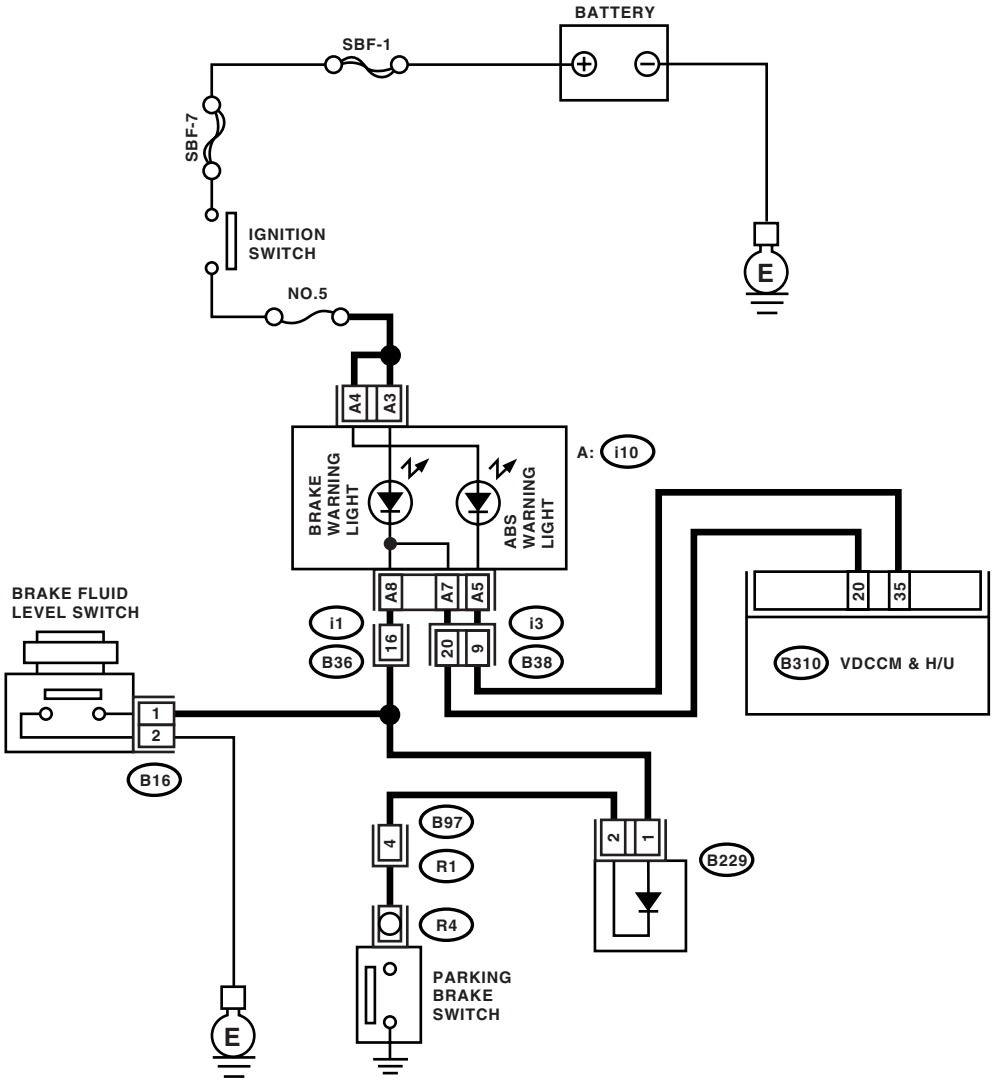
- Defective combination meter
- Defective harness

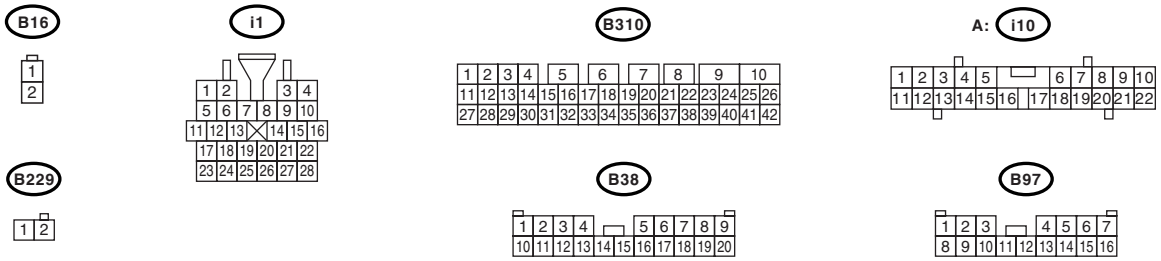
TROUBLE SYMPTOM:

When the ignition switch is turned to ON (engine OFF), ABS warning light does not come on.

WIRING DIAGRAM:

- LHD model

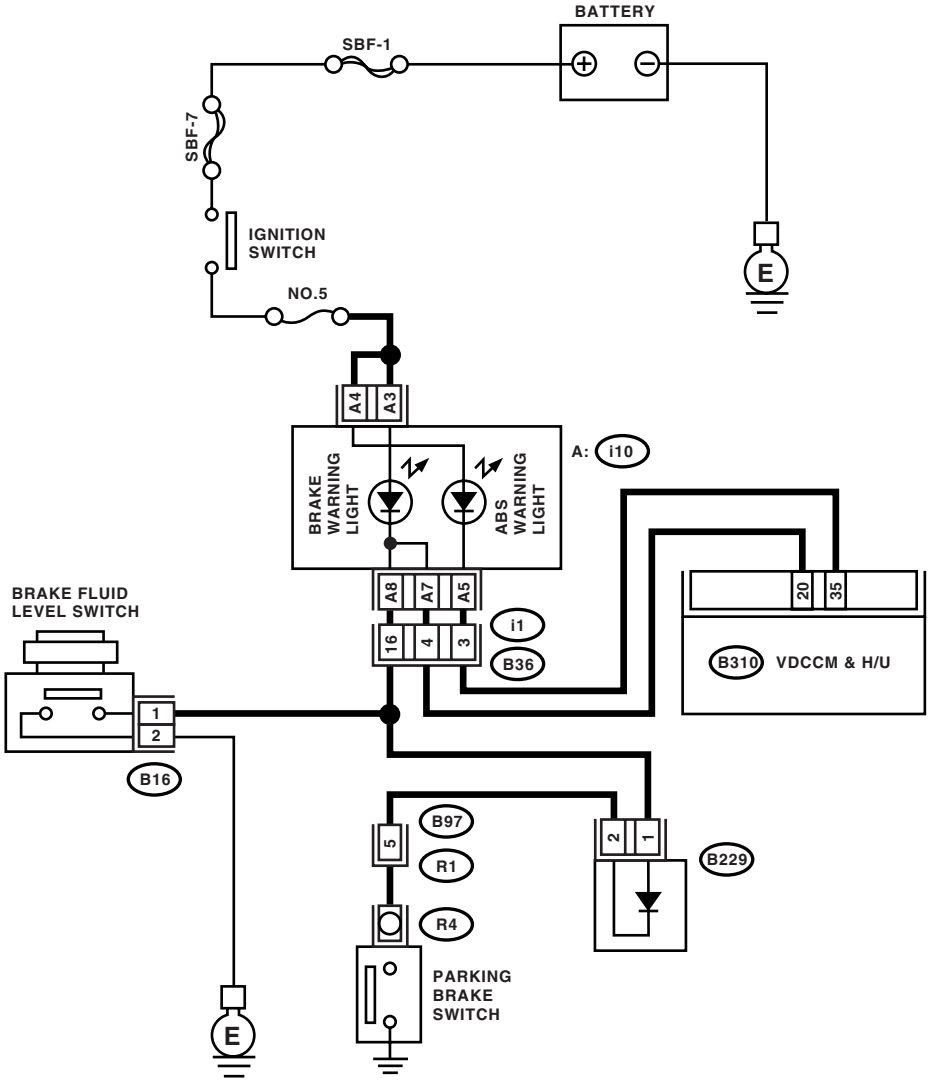


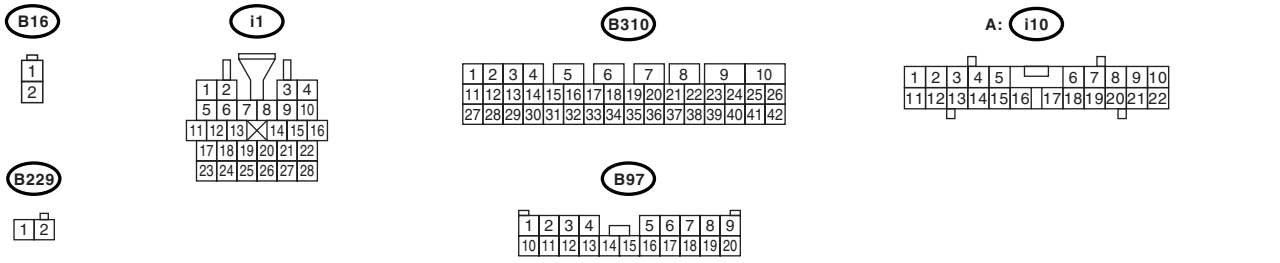


VDC00245

Warning Light Illumination Pattern

- RHD model





VDC00238

	Step	Check	Yes	No
1	**CHECK OTHER LIGHTS TURN ON.** Turn the ignition switch to ON. (engine OFF)	Do other warning lights illuminate?	Go to step **2.**	Check the combination meter.
2	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-22, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step **3.**
3	**CHECK GROUND SHORT CIRCUIT OF HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector (B310) from VDCCM&H/U. 3) Disconnect the connector (i10) from combination meter. 4) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 35 — Chassis ground:***	Is the resistance more than 1 MΩ?	Go to step **4.**	Repair the harness connector between VDCCM&H/U and combination meter.
4	**CHECK VDCCM.** 1) Connect the connector (B310) to VDCCM&H/U. 2) Turn the ignition switch to ON. 3) Measure the resistance between the combination meter connector and chassis ground soon after the ignition switch is turned to ON (within 1.5 seconds). ***Connector & terminal*** ***(i10) No. A5 — Chassis ground:***	Is the resistance more than 1 MΩ?	Check the combination meter.	Replace VDCCM&H/U.

D: ABS WARNING LIGHT DOES NOT GO OFF

DETECTING CONDITION:

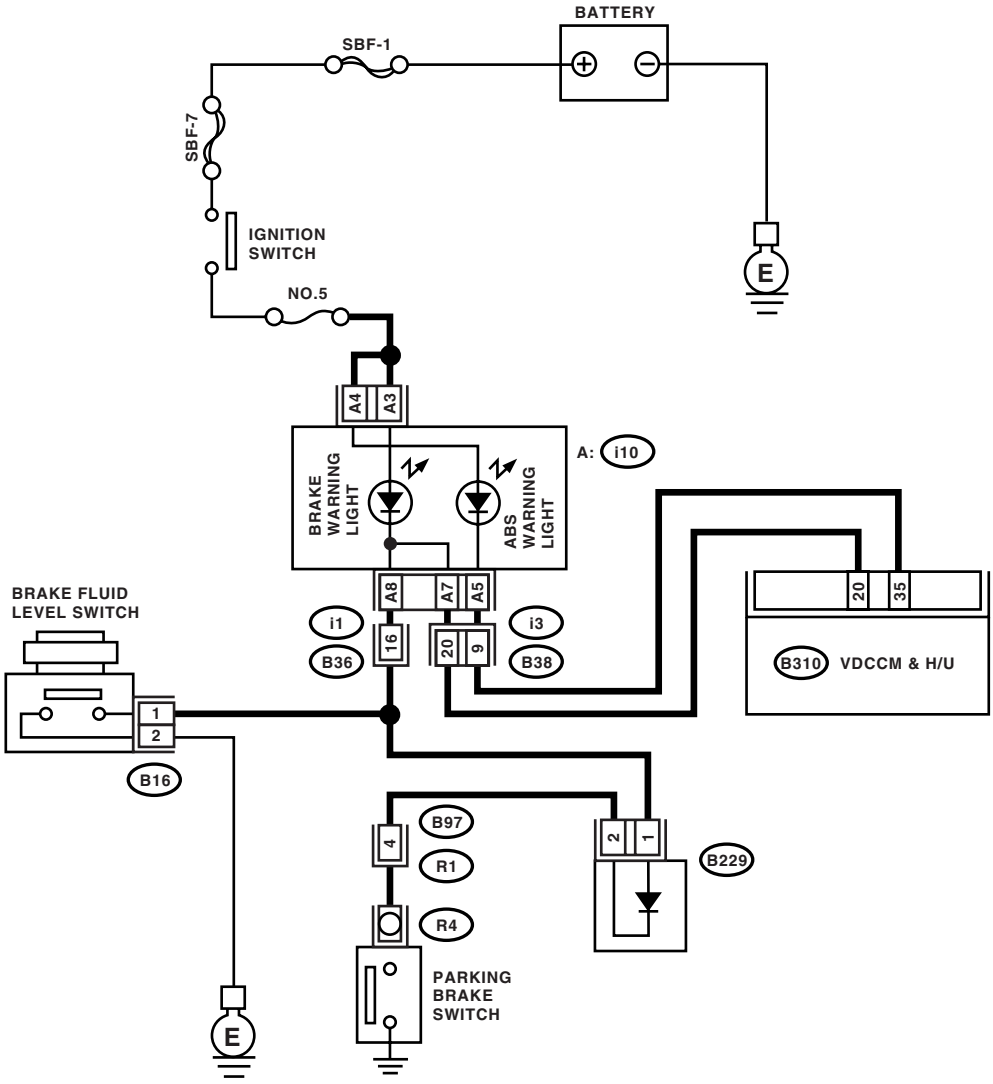
- Defective combination meter
- Open in harness

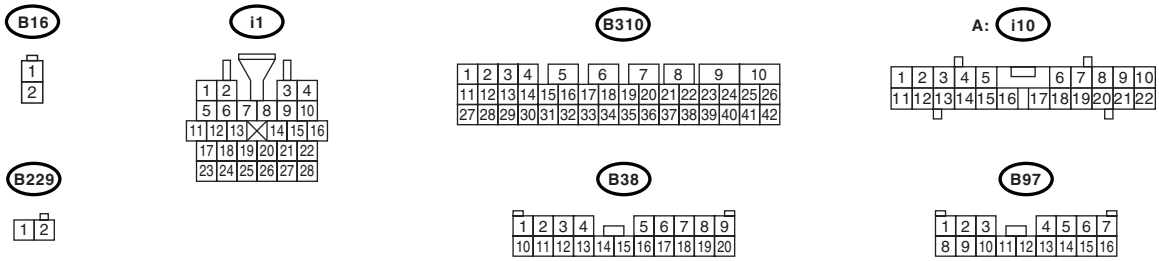
TROUBLE SYMPTOM:

When starting the engine, the ABS warning light is kept ON.

WIRING DIAGRAM:

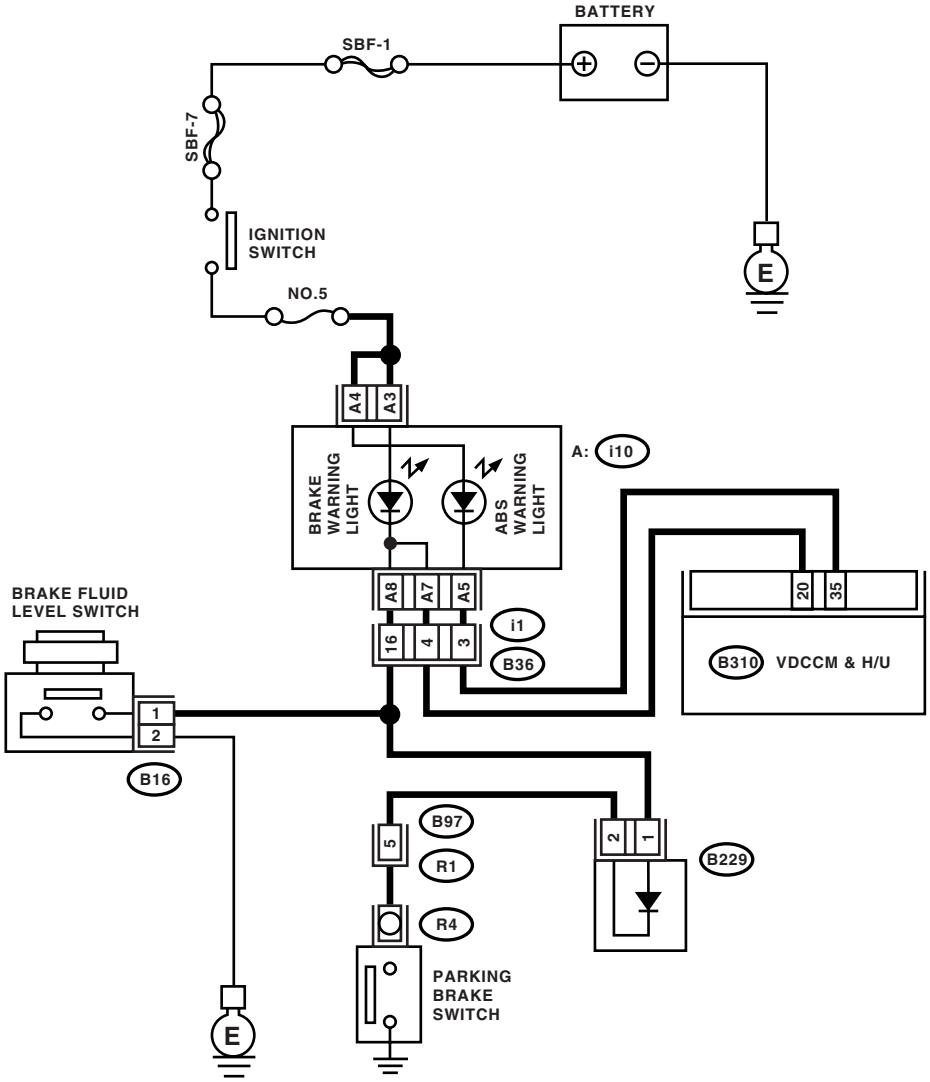
- LHD model

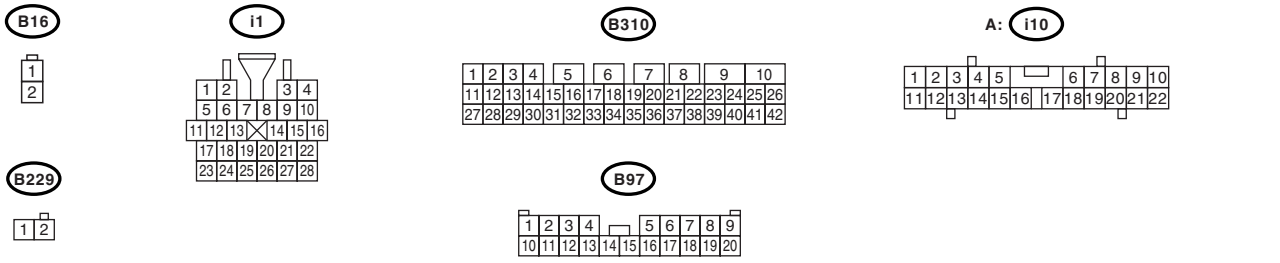




VDC00245

• RHD model





VDC00238

	Step	Check	Yes	No
1	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-22, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step **2.**
2	**CHECK WIRING HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector (B310) from VDCCM&H/U. 3) Disconnect the connector (i10) from combination meter. 4) Measure the resistance between VDCCM&H/U connector and combination meter connector. ***Connector & terminal*** ***(B310) No. 35 — (i10) No. A5:***	Is the resistance less than 0.5 Ω?	Go to step **3.**	Repair the harness connector between VDCCM&H/U and combination meter.
3	**CHECK POOR CONTACT IN CONNECTOR.** Check poor contact in all connectors.	Is there poor contact?	Repair the connector.	Go to step **4.**
4	**CHECK VDCCM.** 1) Connect the connector to VDCCM&H/U (B310). 2) Turn the ignition switch to ON. 3) Measure the resistance between combination meter connector and chassis ground. ***Connector & terminal*** ***(i10) No. A5 — Chassis ground:***	Is the resistance less than 0.5 Ω?	Check the combination meter.	Replace the VDCCM&H/U.

E: VDC INDICATOR LIGHT DOES NOT GO OFF

DETECTING CONDITION:

- Defective combination meter
- Defective CAN communication

TROUBLE SYMPTOM:

When starting the engine, VDC indicator light is kept ON.

	Step	Check	Yes	No
1	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-22, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step **2.**
2	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-24, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system.	Go to step **3.**
3	**CHECK COMBINATION METER.** Check the combination meter.	Is combination meter OK?	Replace the VDCCM&H/U.	Repair the combination meter.

F: VDC WARNING LIGHT AND VDC OFF INDICATOR LIGHT DO NOT GO OFF

DETECTING CONDITION:

- Defective combination meter
- Defective CAN communication
- Defective engine
- VDC OFF switch is shorted.

TROUBLE SYMPTOM:

When starting the engine, VDC OFF indicator light is kept ON.

NOTE:
When pressing the VDC OFF switch for more than 10 seconds, the VDC OFF indicator light goes off and cannot operate any more. When turning the ignition switch from OFF to ON, the OFF operation enabled status is restored.

	Step	Check	Yes	No
1	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-22, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step **2.**
2	**CHECK ENGINE.**	Does the malfunction indicator light illuminate?	Repair the engine.	Go to step **3.**
3	**CHECK ENGINE COOLANT.** Warm up the engine and check if VDC warning light and VDC OFF indicator light illumination condition changes.	When the engine coolant temperature is too low, VDC warning light and VDC OFF indicator light illuminate. Does the lights go off when the engine is warmed-up?	Normal Operation	Go to step **4.**
4	**CHECK VDC OFF SWITCH.** Remove and check VDC OFF switch.	Is VDC OFF switch normal?	Go to step **5.**	Replace the VDC OFF switch.
5	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-24, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system.	Go to step **6.**
6	**CHECK COMBINATION METER.** Check the combination meter.	Is combination meter OK?	Replace the VDCCM&H/U.	Repair the combination meter.

G: BRAKE WARNING LIGHT DOES NOT GO OFF

DETECTING CONDITION:

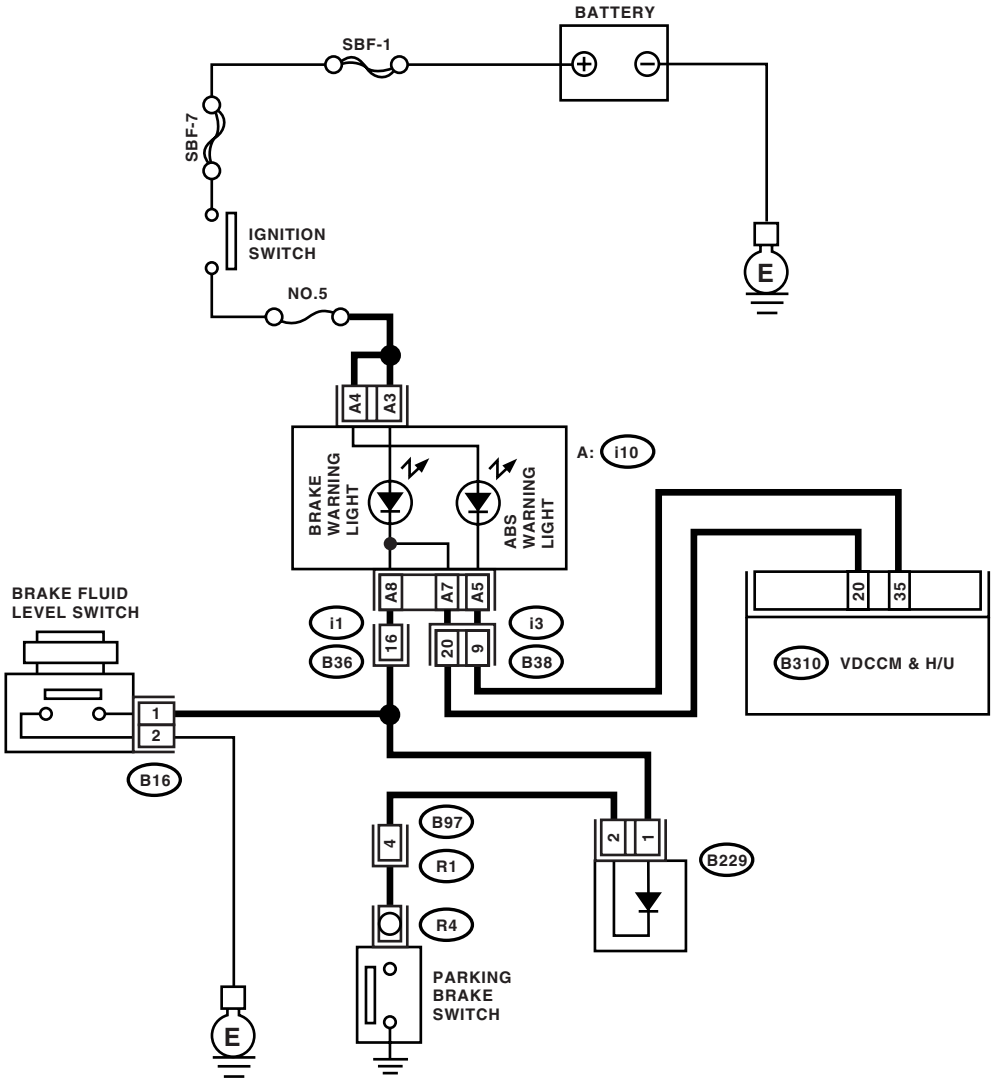
- Brake warning light circuit is shorted.
- Defective sensor/connector

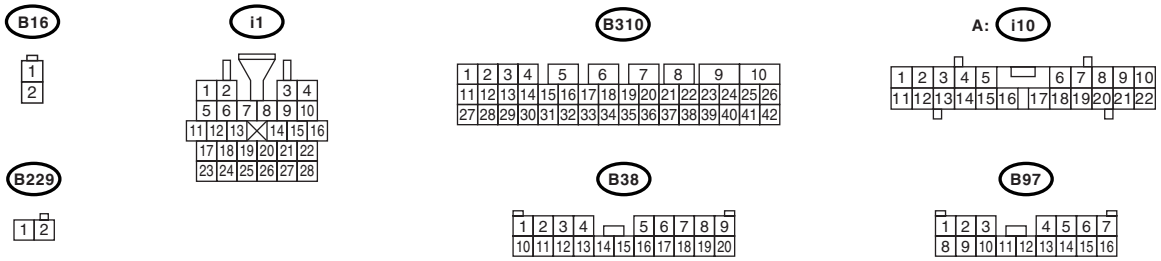
TROUBLE SYMPTOM:

After starting the engine, the brake warning light is kept on though the parking lever is released.

WIRING DIAGRAM:

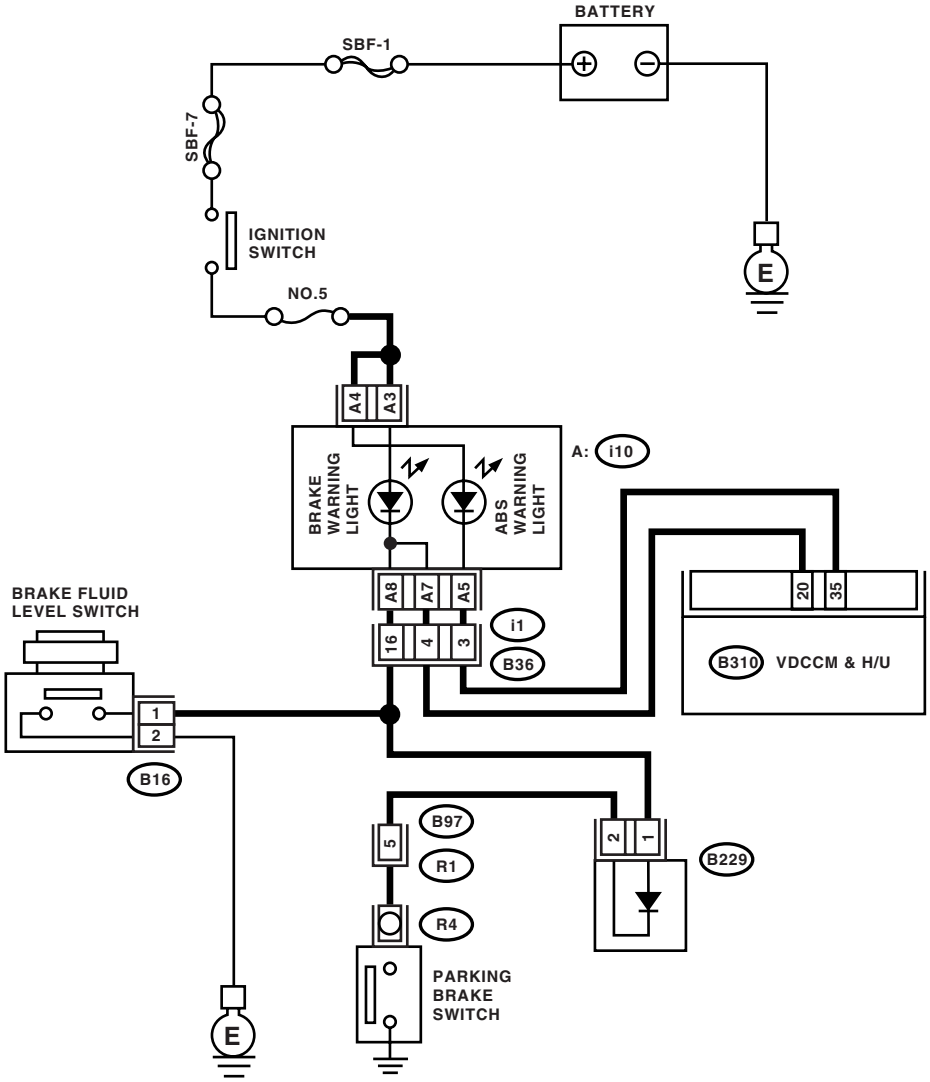
- LHD model

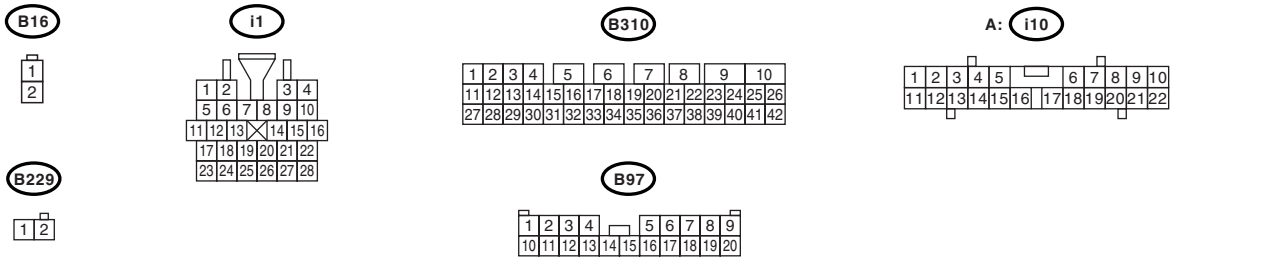




VDC00245

• RHD model





VDC00238

	Step	Check	Yes	No
1	**CHECK INSTALLATION OF VDCCM&H/U CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Check that VDCCM&H/U connector is inserted until it is locked by clamp.	Is the connector firmly inserted?	Go to step **2.**	Insert the VDCCM&H/U connector until it is locked by clamp.
2	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-22, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step **3.**
3	**CHECK BRAKE FLUID AMOUNT.** Check the amount of brake fluid in the reservoir tank of master cylinder.	Is the amount of brake fluid between the lines of “MAX” and “MIN”?	Go to step **4.**	Replenish brake fluid to the specified value.
4	**CHECK BRAKE FLUID LEVEL SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the level switch connector (B16) from master cylinder. 3) Measure the resistance of master cylinder terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance more than 1 MΩ?	Go to step **5.**	Replace the master cylinder.
5	**CHECK PARKING BRAKE SWITCH.** 1) Disconnect the connector (R4) from parking brake switch. 2) Release the parking brake. 3) Measure the resistance between parking brake switch terminal and chassis ground.	Is the resistance more than 1 MΩ?	Go to step **6.**	Replace the parking brake switch.
6	**CHECK GROUND SHORT OF HARNESS.** 1) Disconnect the connector (i10) from combination meter. 2) Measure the resistance between combination meter connector and chassis ground. ***Connector & terminal*** ***(i10) No. A7 — Chassis ground:***	Is the resistance more than 1 MΩ?	Go to step **7.**	Repair the harness connector between combination meter brake fluid level switch and parking brake switch.
7	**CHECK HARNESS CONNECTOR.** 1) Disconnect the connector (B310) from VDCCM&H/U. 2) Disconnect the connector (i10) from combination meter. 3) Measure the resistance between VDCCM&H/U connector and combination connector. ***Connector & terminal*** ***(B310) No. 20 — (i10) No. A7:***	Is the resistance less than 0.5 Ω?	Go to step **8.**	Repair the harness connector between VDCCM&H/U and combination meter.
8	**CHECK POOR CONTACT IN CONNECTOR.** Check poor contact in all connectors.	Is there poor contact?	Repair the connector.	Go to step **9.**
9	**CHECK VDCCM.** 1) Connect the connector (B310) to VDCCM&H/U. 2) Turn the ignition to ON. 3) Measure the resistance between combination meter connector and chassis ground. ***Connector & terminal*** ***(i10) No. A7 — Chassis ground:***	Is the resistance less than 0.5 Ω?	Check the combination meter.	Replace the VDCCM&H/U.

11.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Detailed code	Display	Content of diagnosis	Reference target
C0021	698XH	FR sensor power supply failure	Abnormal power supply of front ABS wheel speed sensor RH	<Ref. to VDC(diag)-43, DTC C0021 FRONT ABS WHEEL SPEED SENSOR RH POWER SUPPLY MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
	6A0XH	Front Right ABS Sensor Circuit Open or Shorted Battery	Open/high input of front ABS wheel speed sensor RH	<Ref. to VDC(diag)-46, DTC C0021 OPEN/HIGH INPUT OF FRONT ABS WHEEL SPEED SENSOR RH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C0022	68CXH 68EXH 690XH 694XH 696XH	Front Right ABS Sensor Signal	Front ABS wheel speed sensor RH signal malfunction	<Ref. to VDC(diag)-51, DTC C0022 FRONT ABS WHEEL SPEED SENSOR RH SIGNAL MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C0023	618XH	FL sensor power supply failure	Front ABS wheel speed sensor LH power supply malfunction	<Ref. to VDC(diag)-43, DTC C0023 FRONT ABS WHEEL SPEED SENSOR LH POWER SUPPLY MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
	620XH	Front Left ABS Sensor Circuit Open or Shorted Battery	Open/high input of front ABS wheel speed sensor LH	<Ref. to VDC(diag)-46, DTC C0023 OPEN/HIGH INPUT OF FRONT ABS WHEEL SPEED SENSOR LH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C0024	60CXH 60EXH 610XH 614XH 616XH	Front Left ABS Sensor Signal	Front ABS wheel speed sensor LH signal malfunction	<Ref. to VDC(diag)-51, DTC C0024 FRONT ABS WHEEL SPEED SENSOR LH SIGNAL MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C0025	658XH	RR sensor power supply failure	Rear ABS wheel speed sensor RH power supply malfunction	<Ref. to VDC(diag)-43, DTC C0025 REAR ABS WHEEL SPEED SENSOR RH POWER SUPPLY MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
	660XH	Rear Right ABS Sensor Circuit Open or Shorted Battery	Open/high input of rear ABS wheel speed sensor RH	<Ref. to VDC(diag)-46, DTC C0025 OPEN/HIGH INPUT OF REAR ABS WHEEL SPEED SENSOR RH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C0026	64CXH 64EXH 650XH 654XH 656XH	Rear Right ABS Sensor Signal	Rear ABS wheel speed sensor RH signal malfunction	<Ref. to VDC(diag)-51, DTC C0026 REAR ABS WHEEL SPEED SENSOR RH SIGNAL MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C0027	6D8XH	RL sensor power supply failure	Rear ABS wheel speed sensor LH power supply malfunction	<Ref. to VDC(diag)-44, DTC C0027 REAR ABS WHEEL SPEED SENSOR LH POWER SUPPLY MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
	6E0XH	Rear Left ABS Sensor Circuit Open or Shorted Battery	Open/high input of rear ABS wheel speed sensor LH	<Ref. to VDC(diag)-47, DTC C0027 OPEN/HIGH INPUT OF REAR ABS WHEEL SPEED SENSOR LH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C0028	6CCXH 6CEXH 6D0XH 6D4XH 6D6XH	Rear Left ABS Sensor Signal	Rear ABS wheel speed sensor LH signal malfunction	<Ref. to VDC(diag)-52, DTC C0028 REAR ABS WHEEL SPEED SENSOR LH SIGNAL MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

12. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC C0021 FRONT ABS WHEEL SPEED SENSOR RH POWER SUPPLY MALFUNCTION

NOTE:
For the diagnostic procedure, refer to DTC C0027 “REAR ABS WHEEL SPEED SENSOR LH POWER SUPPLY MALFUNCTION”. <Ref. to VDC(diag)-44, DTC C0027 REAR ABS WHEEL SPEED SENSOR LH POWER SUPPLY MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

B: DTC C0023 FRONT ABS WHEEL SPEED SENSOR LH POWER SUPPLY MALFUNCTION

NOTE:
For the diagnostic procedure, refer to DTC C0027 “REAR ABS WHEEL SPEED SENSOR LH POWER SUPPLY MALFUNCTION”. <Ref. to VDC(diag)-44, DTC C0027 REAR ABS WHEEL SPEED SENSOR LH POWER SUPPLY MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

C: DTC C0025 REAR ABS WHEEL SPEED SENSOR RH POWER SUPPLY MALFUNCTION

NOTE:
For the diagnostic procedure, refer to DTC C0027 “REAR ABS WHEEL SPEED SENSOR LH POWER SUPPLY MALFUNCTION”. <Ref. to VDC(diag)-44, DTC C0027 REAR ABS WHEEL SPEED SENSOR LH POWER SUPPLY MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

D: DTC C0027 REAR ABS WHEEL SPEED SENSOR LH POWER SUPPLY MALFUNCTION

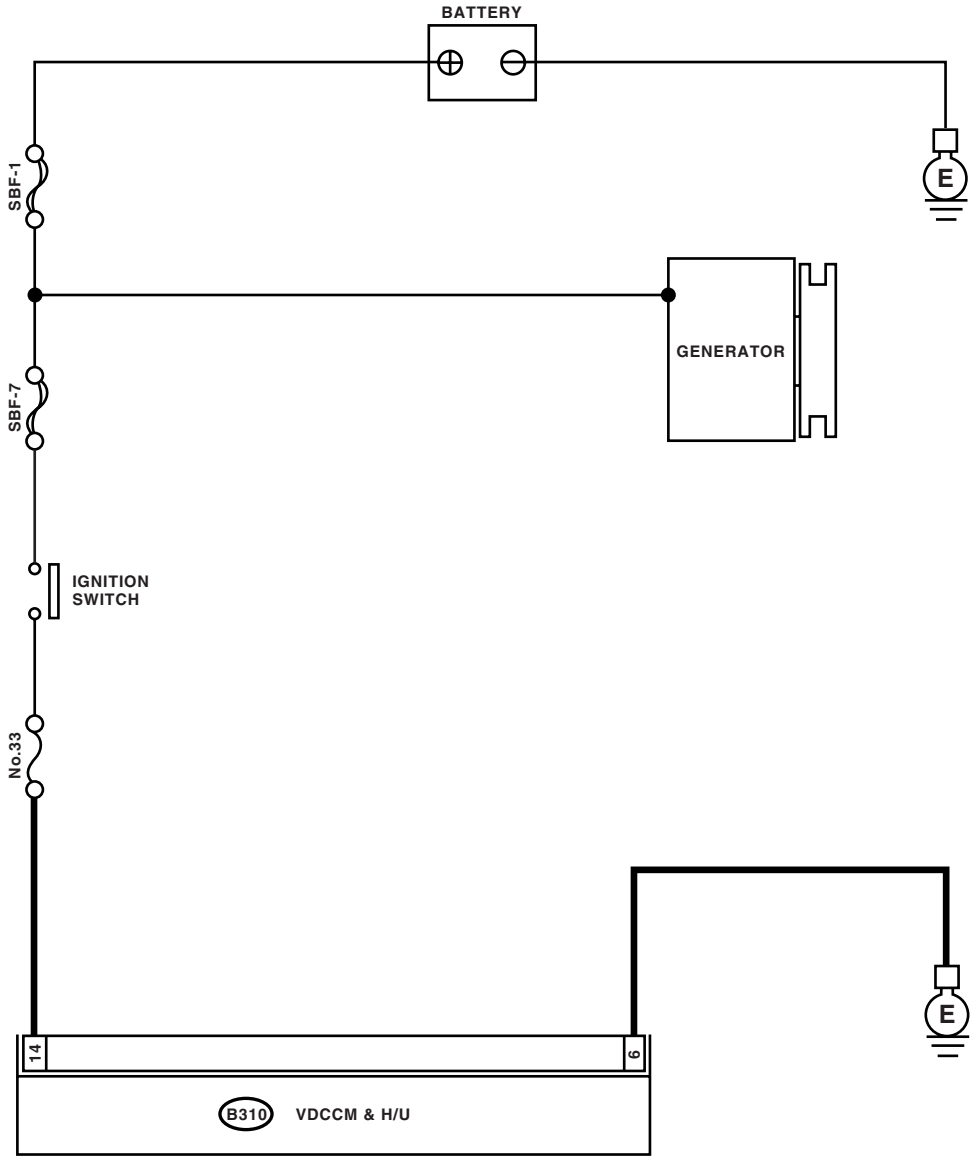
DTC DETECTING CONDITION:

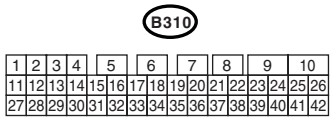
Defective ABS wheel speed sensor

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

WIRING DIAGRAM:





VDC00216

	Step	Check	Yes	No
1	**CHECK POOR CONTACT IN CONNECTOR.** Check if there is poor contact in VDCCM&H/U power supply circuit.	Is there poor contact?	Repair the connector.	Go to step **2.**
2	**CHECK VDCCM&H/U POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the VDCCM&H/U connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between VDCCM&H/U connector terminals. ***Terminals*** ***(B310) No. 14 (+) — (B310) No. 6 (–):***	Is the voltage 10 — 15 V?	Go to step **3.**	Check the generator, battery and VDCCM&H/U power supply circuit.
3	**CHECK VDCCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U.	Go to step **4.**
4	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC.	It results from a temporary noise interference.

E: DTC C0021 OPEN/HIGH INPUT OF FRONT ABS WHEEL SPEED SENSOR RH

NOTE:
For the diagnostic procedure, refer to DTC C0027 “OPEN/HIGH INPUT OF REAR ABS WHEEL SPEED SENSOR LH”. <Ref. to VDC(diag)-47, DTC C0027 OPEN/HIGH INPUT OF REAR ABS WHEEL SPEED SENSOR LH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

F: DTC C0023 OPEN/HIGH INPUT OF FRONT ABS WHEEL SPEED SENSOR LH

NOTE:
For the diagnostic procedure, refer to DTC C0027 “OPEN/HIGH INPUT OF REAR ABS WHEEL SPEED SENSOR LH”. <Ref. to VDC(diag)-47, DTC C0027 OPEN/HIGH INPUT OF REAR ABS WHEEL SPEED SENSOR LH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

G: DTC C0025 OPEN/HIGH INPUT OF REAR ABS WHEEL SPEED SENSOR RH

NOTE:
For the diagnostic procedure, refer to DTC C0027 “OPEN/HIGH INPUT OF REAR ABS WHEEL SPEED SENSOR LH”. <Ref. to VDC(diag)-47, DTC C0027 OPEN/HIGH INPUT OF REAR ABS WHEEL SPEED SENSOR LH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

H: DTC C0027 OPEN/HIGH INPUT OF REAR ABS WHEEL SPEED SENSOR LH

DTC DETECTING CONDITION:

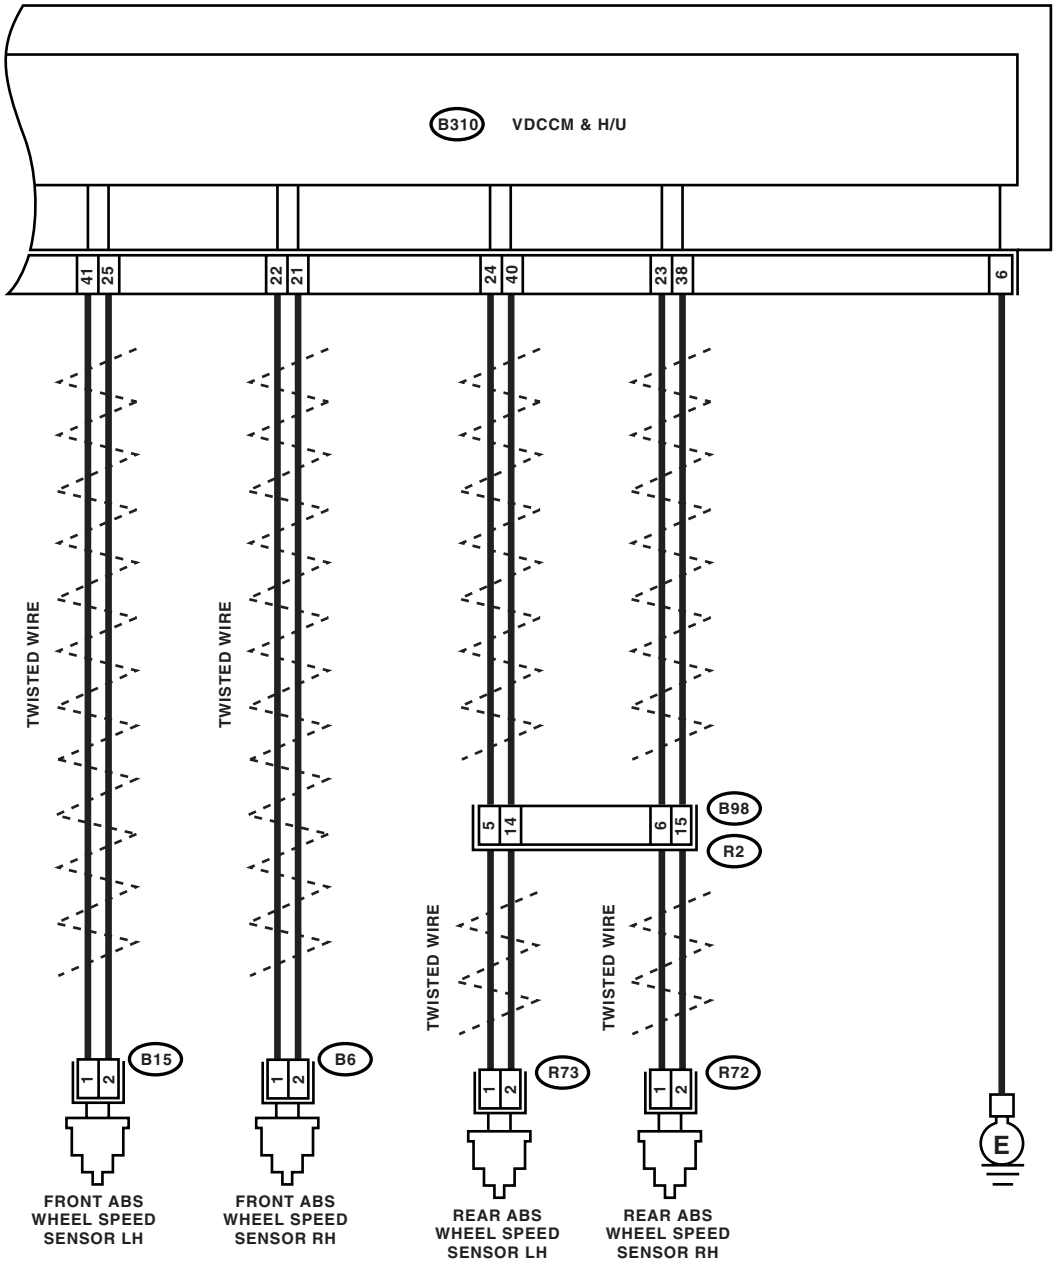
- Defective ABS wheel speed sensor (broken wire, input voltage too high)
- Defective harness connector

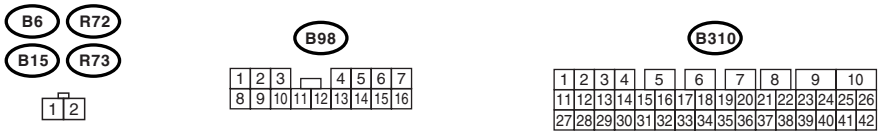
TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

WIRING DIAGRAM:

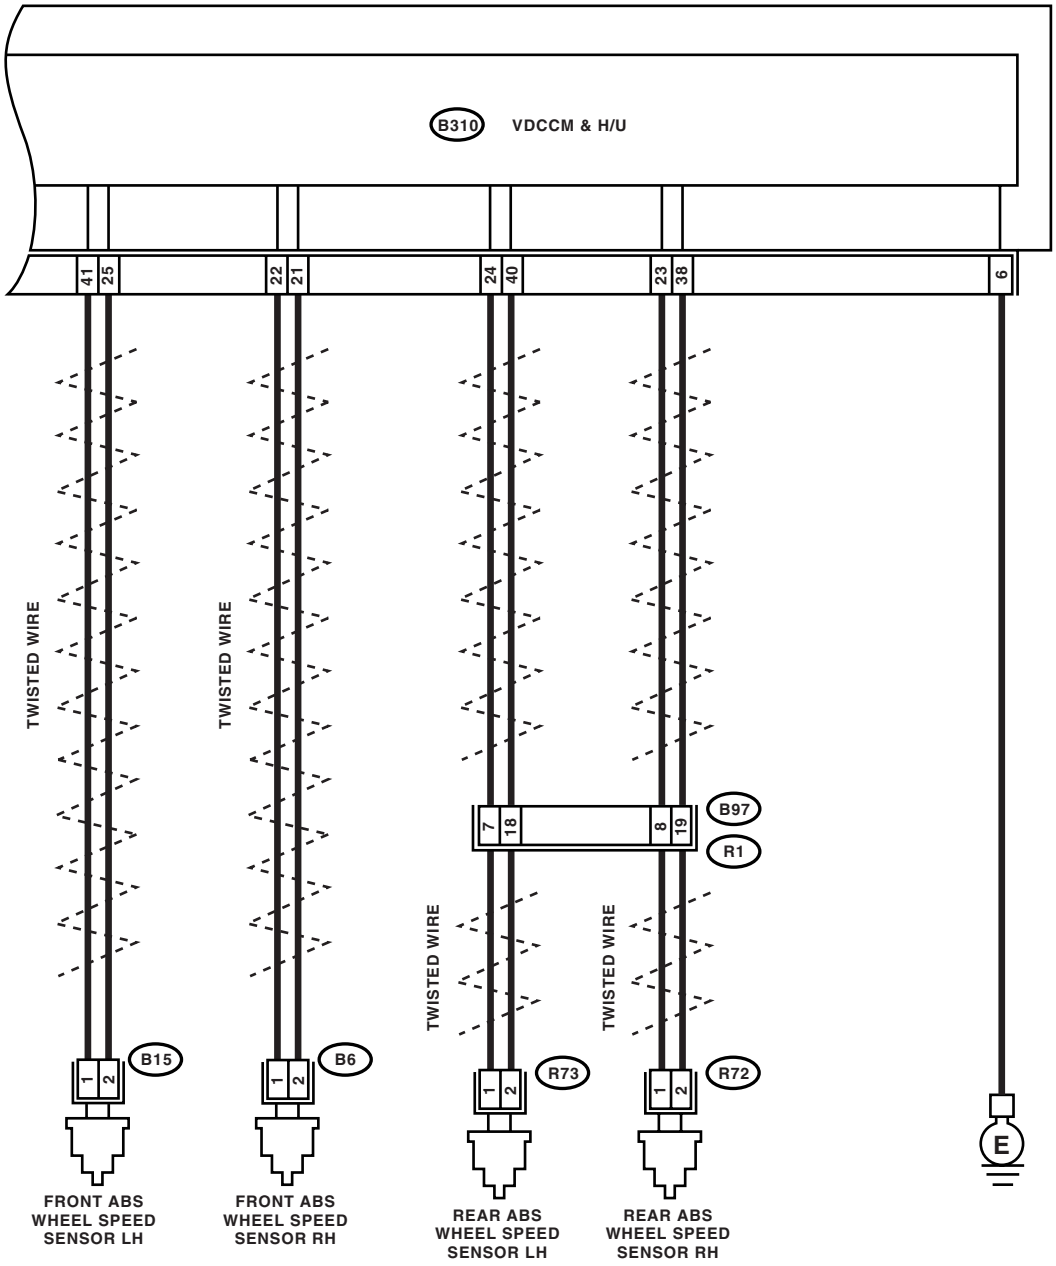
- LHD model

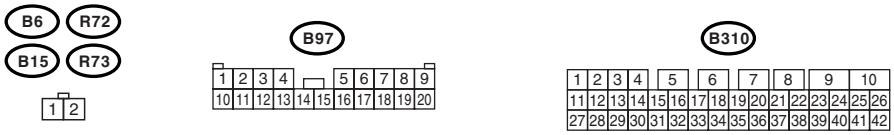




VDC00246

• RHD model





VDC00215

	Step	Check	Yes	No
1	**CHECK POOR CONTACT IN CONNECTOR.** Check if there is poor contact between VDCCM&H/U and ABS wheel speed sensor.	Is there poor contact?	Repair the connector.	Go to step **2.**
2	**CHECK HARNESS CONNECTOR BETWEEN VDCCM&H/U AND ABS WHEEL SPEED SENSOR.** 1) Disconnect the connector (B310) from VDCCM&H/U. 2) Disconnect the connector from ABS wheel speed sensor. 3) Measure the resistance between VDCCM&H/U connector and ABS wheel speed sensor connector. ***Connector & terminal*** ***DTC C0021*** ***(B310) No. 22 — (B6) No. 1:*** ***(B310) No. 21 — (B6) No. 2:*** ***DTC C0023*** ***(B310) No. 41 — (B15) No. 1:*** ***(B310) No. 25 — (B15) No. 2:*** ***DTC C0025*** ***(B310) No. 23 — (R72) No. 1:*** ***(B310) No. 38 — (R72) No. 2:*** ***DTC C0027*** ***(B310) No. 24 — (R73) No. 1:*** ***(B310) No. 40 — (R73) No. 2:***	Is the resistance less than 0.5 Ω?	Go to step **3.**	Repair the harness connector between VDCCM&H/U and ABS wheel speed sensor.
3	**CHECK GROUND SHORT OF HARNESS.** Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***DTC C0021*** ***(B310) No. 21 — Chassis ground:*** ***DTC C0023*** ***(B310) No. 25 — Chassis ground:*** ***DTC C0025*** ***(B310) No. 38 — Chassis ground:*** ***DTC C0027*** ***(B310) No. 40 — Chassis ground:***	Is the resistance more than 1 MΩ?	Go to step **4.**	Repair the harness connector between VDCCM&H/U and ABS wheel speed sensor.
4	**CHECK ABS WHEEL SPEED SENSOR POWER SUPPLY CIRCUIT.** 1) Connect the VDCCM&H/U connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between ABS wheel speed sensor connector and chassis ground. ***Connector & terminal*** ***DTC C0021*** ***(B6) No. 1 (+) — Chassis ground (−):*** ***DTC C0023*** ***(B15) No. 1 (+) — Chassis ground (−):*** ***DTC C0025*** ***(R72) No. 1 (+) — Chassis ground (−):*** ***DTC C0027*** ***(R73) No. 1 (+) — Chassis ground (−):***	Is the voltage 5 — 16 V?	Go to step **6.**	Go to step **5.**

	Step	Check	Yes	No
5	**CHECK VDCCM&H/U POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the VDCCM&H/U connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between VDCCM&H/U connector terminals. ***Connector & terminal*** ***(B310) No. 14 (+) — (B310) No. 6 (–):***	Is the voltage 10 — 15 V?	Go to step **7.**	Check the generator, battery and VDCCM&H/U power supply circuit.
6	**CHECK ABS WHEEL SPEED SENSOR SIGNAL.** 1) Install the ABS wheel speed sensor. 2) Prepare an oscilloscope. 3) Check the ABS wheel speed sensor. <Ref. to ABS-15, ABS WHEEL SPEED SENSOR, INSPECTION, Rear ABS Wheel Speed Sensor.>	Is waveform pattern same as shown in the figure.	Go to step **7.**	Replace the ABS wheel speed sensor.
7	**CHECK VDCCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. <Ref. to VDC(diag)-23, PROCEDURE, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>	Go to step **8.**
8	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC.	It results from a temporary noise interference.

I: DTC C0022 FRONT ABS WHEEL SPEED SENSOR RH SIGNAL MALFUNCTION

NOTE:
For the diagnostic procedure, refer to DTC C0028 “REAR ABS WHEEL SPEED SENSOR LH SIGNAL MALFUNCTION”. <Ref. to VDC(diag)-52, DTC C0028 REAR ABS WHEEL SPEED SENSOR LH SIGNAL MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

J: DTC C0024 FRONT ABS WHEEL SPEED SENSOR LH SIGNAL MALFUNCTION

NOTE:
For the diagnostic procedure, refer to DTC C0028 “REAR ABS WHEEL SPEED SENSOR LH SIGNAL MALFUNCTION”. <Ref. to VDC(diag)-52, DTC C0028 REAR ABS WHEEL SPEED SENSOR LH SIGNAL MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

K: DTC C0026 REAR ABS WHEEL SPEED SENSOR RH SIGNAL MALFUNCTION

NOTE:
For the diagnostic procedure, refer to DTC C0028 “REAR ABS WHEEL SPEED SENSOR LH SIGNAL MALFUNCTION”. <Ref. to VDC(diag)-52, DTC C0028 REAR ABS WHEEL SPEED SENSOR LH SIGNAL MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

L: DTC C0028 REAR ABS WHEEL SPEED SENSOR LH SIGNAL MALFUNCTION

DTC DETECTING CONDITION:

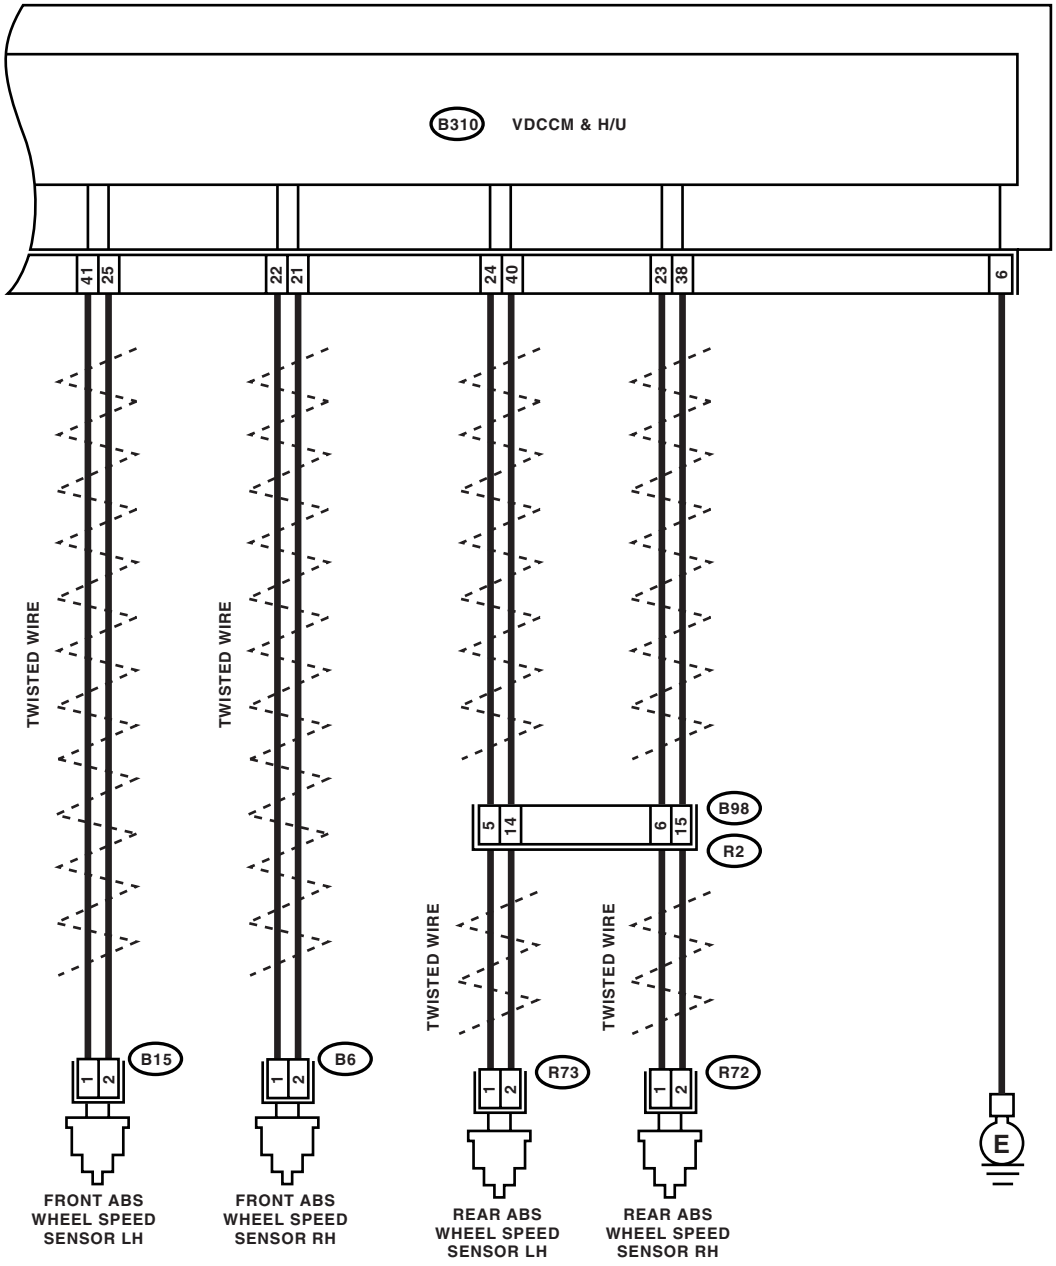
- Defective ABS wheel speed sensor signal (noise, irregular signal, etc.)
- Defective harness connector

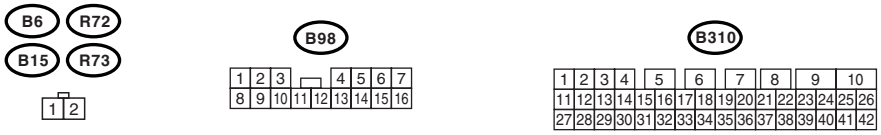
TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

WIRING DIAGRAM:

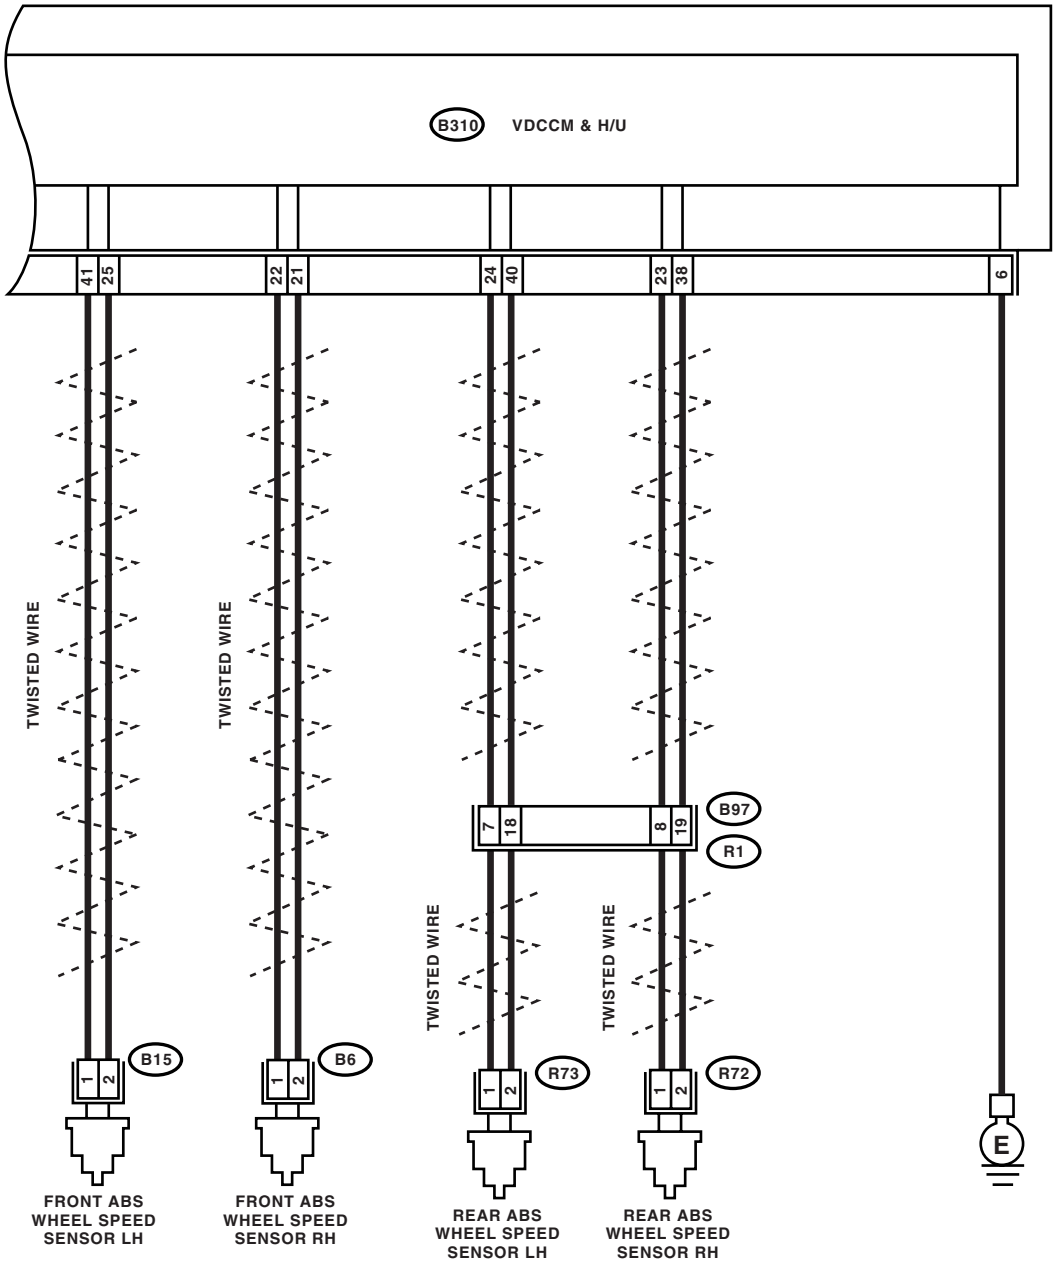
- LHD model

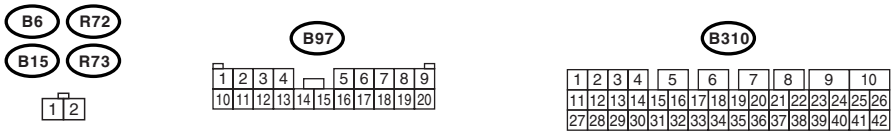




VDC00246

• RHD model





VDC00215

	Step	Check	Yes	No
1	**CHECK OUTPUT OF ABS WHEEL SPEED SENSOR USING SUBARU SELECT MONITOR.** 1) Select {Current Data Display & Save} in Subaru Select Monitor. 2) Read the ABS wheel speed sensor output corresponding to the faulty wheel in Subaru Select Monitor data display mode.	Does the speed indicated on the display change in response to the speedometer reading during acceleration/deceleration when the steering wheel is in the straight-ahead position?	Go to step **2.**	Go to step **7.**
2	**CHECK POOR CONTACT IN CONNECTOR.** Turn the ignition switch to OFF.	Is there poor contact in connectors between VDCCM&H/U and ABS wheel speed sensor?	Repair the connector.	Go to step **3.**
3	**CHECK SOURCES OF SIGNAL NOISE.** Make sure the car phone, radio wave device like radio and etc., or electric device are installed correctly.	Are the car phone, radio wave device like radio and etc., or electric device installed correctly?	Go to step **4.**	Install the radio wave device and electric device properly.
4	**CHECK SOURCES OF SIGNAL NOISE.** Check if the noise sources (such as an antenna) are installed near the sensor harness.	Are noise sources installed?	Install the noise sources apart from the sensor harness.	Go to step **5.**
5	**CHECK VDCCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. <Ref. to VDC(diag)-23, PROCEDURE, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>	Go to step **6.**
6	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC.	It results from a temporary noise interference.
7	**CHECK INSTALLATION OF ABS WHEEL SPEED SENSOR.**	Is the ABS wheel speed sensor installation bolt tightened 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)?	Go to step **8.**	Tighten the ABS wheel speed sensor installation bolts.
8	**CHECK ABS WHEEL SPEED SENSOR SIGNAL.** 1) Install the ABS wheel speed sensor. 2) Prepare an oscilloscope. 3) Check ABS wheel speed sensor. <Ref. to ABS-13, ABS WHEEL SPEED SENSOR, INSPECTION, Front ABS Wheel Speed Sensor.>	Is the oscilloscope pattern the same waveform as shown in the figure when the tire is rotated? Is the pattern as shown in the figure displayed regularly in the oscilloscope when the tire is slowly rotated more than one revolution with even speed?	Go to step **9.**	Go to step **13.**
9	**CHECK ABS WHEEL SPEED SENSOR OR MAGNETIC ENCODER.**	Are there foreign materials, breakage or damage in the protrusion of ABS wheel speed sensor or magnetic encoder?	Remove dirt thoroughly. Replace the ABS wheel speed sensor or magnetic encoder as a unit with hub unit bearing when it is broken or damaged.	Go to step **10.**
10	**CHECK SOURCES OF SIGNAL NOISE.** Make sure the car phone, radio wave device like radio and etc., or electric device are installed correctly.	Is the car phone, radio wave device like radio and etc., or electric device installed correctly?	Go to step **11.**	Install the radio wave device and electric device properly.
11	**CHECK SOURCES OF SIGNAL NOISE.** Check if the noise sources are (such as an antenna) installed near the sensor harness.	Are noise sources installed?	Go to step **12.**	Install the noise sources apart from the sensor harness.

	Step	Check	Yes	No
12	**CHECK VDCCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. <Ref. to VDC(diag)-23, PROCEDURE, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>	Go to step **13.**
13	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC.	It results from a temporary noise interference. NOTE: Though the ABS warning light remains on at this time, it is normal. Drive the vehicle at more than 12 km/h (7 MPH) in order to turn ABS warning light off. Be sure to drive the vehicle and check the warning light goes off.

M: DTC C0029 ABS WHEEL SPEED SENSOR SIGNAL MALFUNCTION IN ONE OF FOUR WHEELS

DTC DETECTING CONDITION:

- Defective ABS wheel speed sensor signal (noise, irregular signal, etc.)
- Defective magnetic encoder
- When a wheel is turned freely for a long time

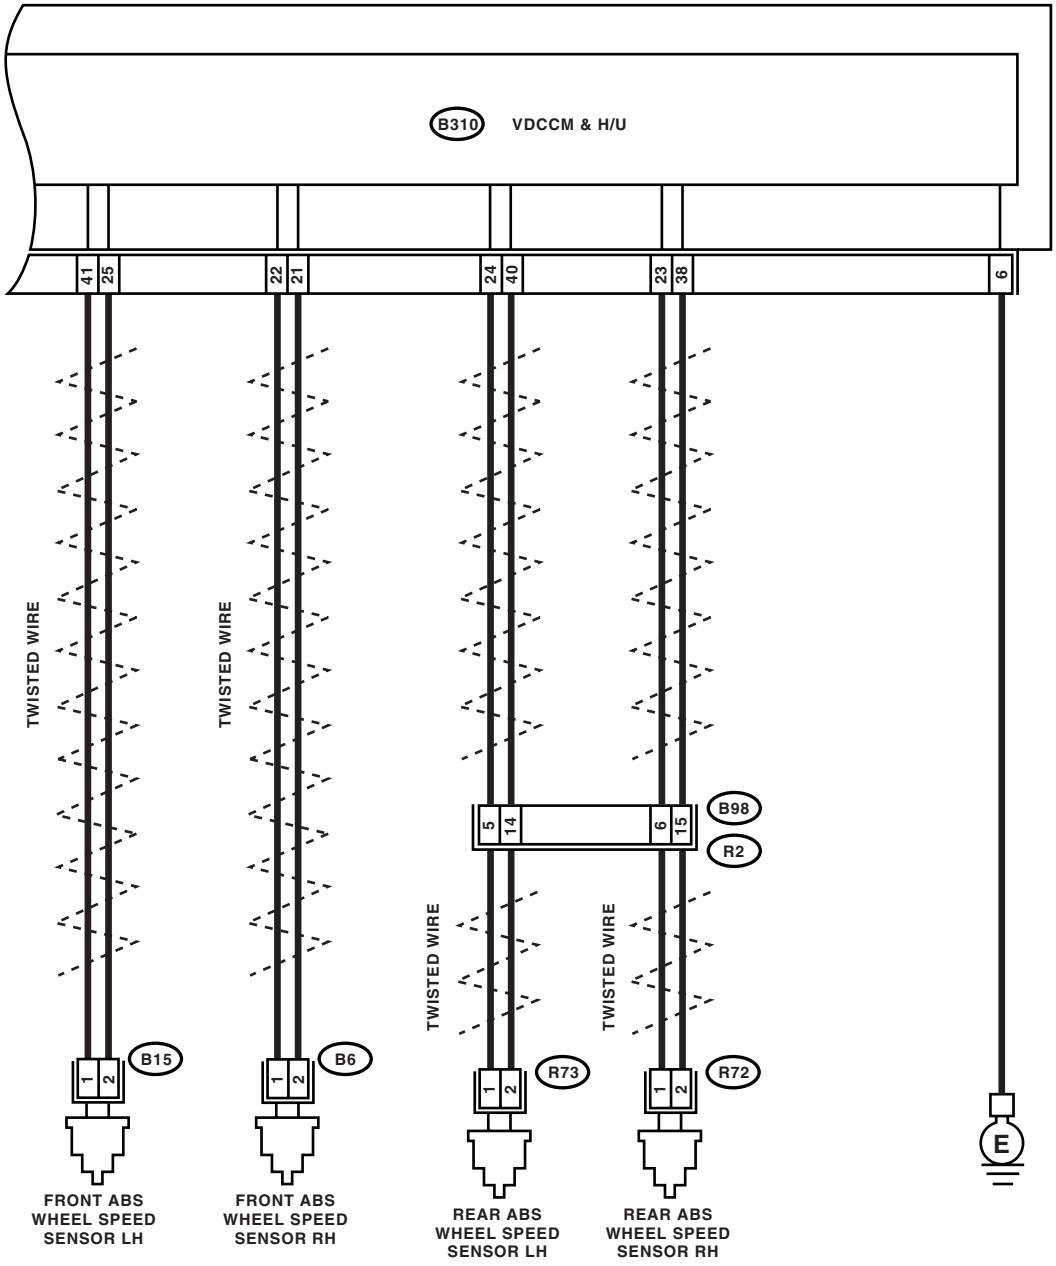
TROUBLE SYMPTOM:

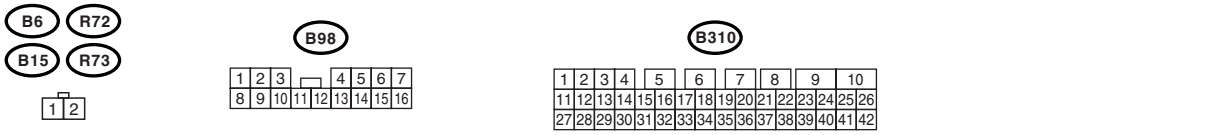
- ABS does not operate.
- VDC does not operate.
- EBD may not operate.

NOTE:
Brake warning light comes on as well as ABS warning light when EBD does not operate.

WIRING DIAGRAM:

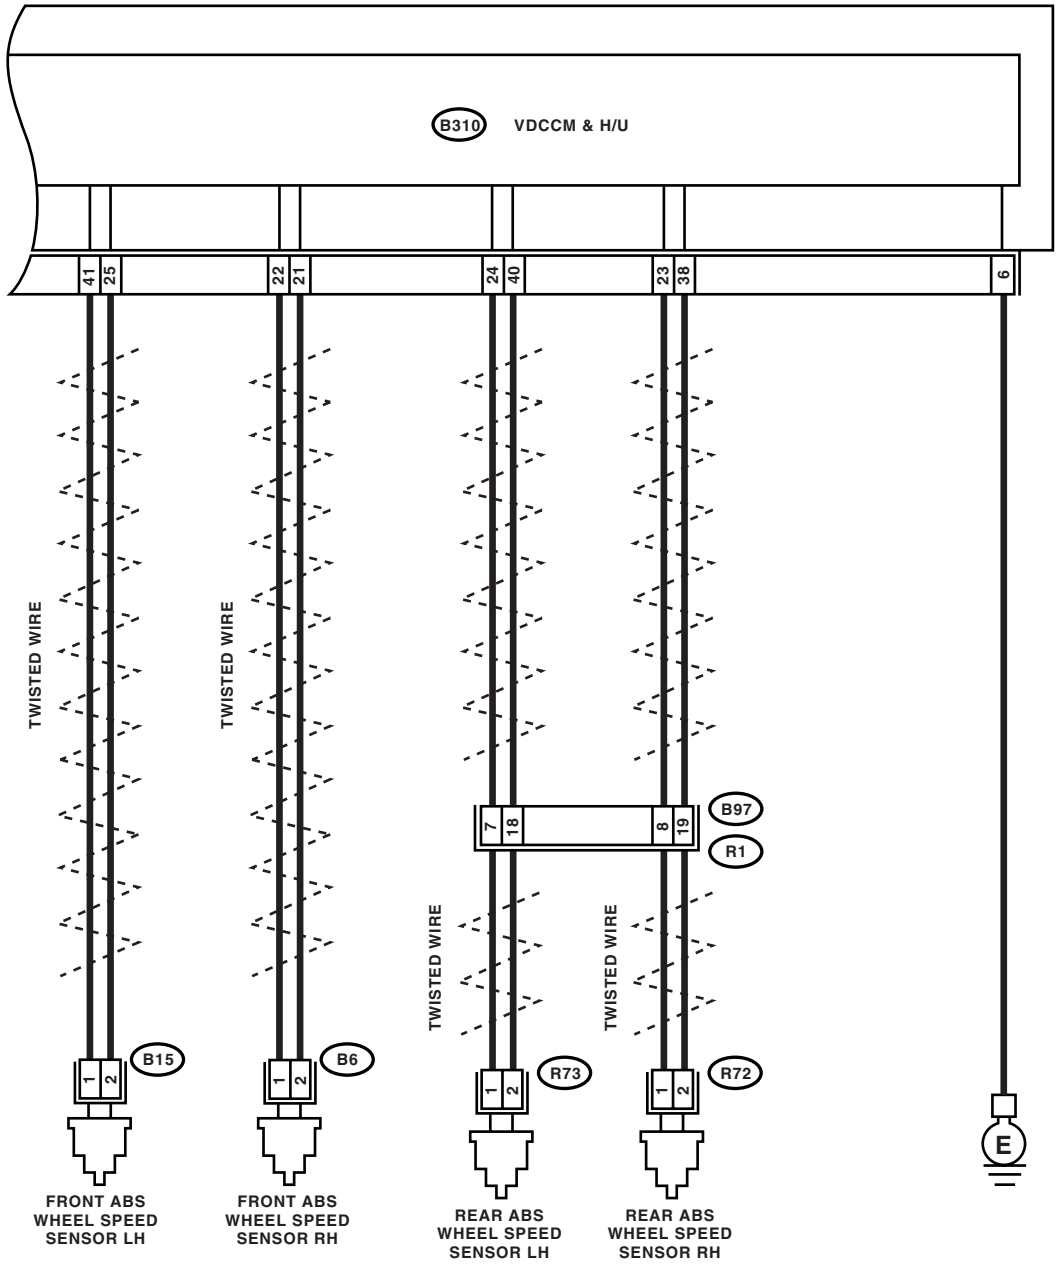
- LHD model

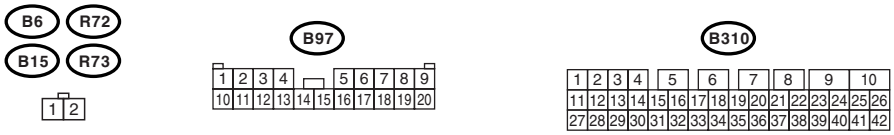




VDC00246

• RHD model





VDC00215

	Step	Check	Yes	No
1	**WHETHER A WHEEL TURNED FREELY OR NOT.** Check if the wheels have been turned freely for more than one minute, such as when the vehicle is jacked-up, under full-lock cornering or when the wheels are not in contact with road surface.	Did the wheels turn freely?	VDC is normal. Erase the memory. NOTE: When the wheels turn freely for a long time, such as when the vehicle is towed or jacked-up, or when steering wheel is continuously turned all the way, this diagnostic trouble code may sometimes occur.	Go to step **2.**
2	**CHECK TIRE SPECIFICATIONS.** Turn the ignition switch to OFF.	Are the tire specifications correct?	Go to step **3.**	Replace the tire.
3	**CHECK WEAR OF TIRE.**	Is the tire worn excessively?	Replace the tire.	Go to step **4.**
4	**CHECK TIRE INFLATION PRESSURE.**	Is the tire pressure correct?	Go to step **5.**	Adjust the tire pressure.
5	**CHECK INSTALLATION OF ABS WHEEL SPEED SENSOR.**	Are the ABS wheel speed sensor installation bolts tightened to 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)? (For four wheels)	Go to step **6.**	Tighten the ABS wheel speed sensor installation bolts.
6	**CHECK ABS WHEEL SPEED SENSOR SIGNAL.** 1) Install the ABS wheel speed sensor. 2) Prepare an oscilloscope. 3) Check the ABS wheel speed sensor. <Ref. to ABS-13, ABS WHEEL SPEED SENSOR, INSPECTION, Front ABS Wheel Speed Sensor.>	Is the oscilloscope pattern the same waveform as shown in the figure when the tire is rotated? Is the pattern as shown in the figure displayed regularly in the oscilloscope when the tire is slowly rotated more than one revolution with even speed?	Go to step **8.**	Go to step **7.**
7	**CHECK ABS WHEEL SPEED SENSOR OR MAGNETIC ENCODER.**	Are there foreign materials, breakage or damage in the protrusion of ABS wheel speed sensor or magnetic encoder?	Remove dirt thoroughly. Replace the ABS wheel speed sensor or magnetic encoder as a unit with hub unit bearing if there is breakage or damage.	Go to step **8.**
8	**CHECK VDCCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. <Ref. to VDC(diag)-23, PROCEDURE, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>	Go to step **9.**

Step		Check	Yes	No
9	CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC.	It results from a temporary noise interference. NOTE: Though the ABS warning light remains on at this time, it is normal. Drive the vehicle at more than 12 km/h (7 MPH) in order to turn off the ABS warning light. Be sure to drive the vehicle and check the warning light goes off.

N: DTC C0031 FRONT INLET SOLENOID VALVE RH MALFUNCTION IN VDC-CM&H/U

NOTE:
For the diagnostic procedure, refer to DTC C0064 “PRIMARY SUCTION VALVE MALFUNCTION IN VDC-CM&H/U”. <Ref. to VDC(diag)-63, DTC C0064 PRIMARY SUCTION VALVE MALFUNCTION IN VDC-CM&H/U, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

O: DTC C0032 FRONT OUTLET SOLENOID VALVE RH MALFUNCTION IN VDC-CM&H/U

NOTE:
For the diagnostic procedure, refer to DTC C0064 “PRIMARY SUCTION VALVE MALFUNCTION IN VDC-CM&H/U”. <Ref. to VDC(diag)-63, DTC C0064 PRIMARY SUCTION VALVE MALFUNCTION IN VDC-CM&H/U, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

P: DTC C0033 FRONT INLET SOLENOID VALVE LH MALFUNCTION IN VDC-CM&H/U

NOTE:
For the diagnostic procedure, refer to DTC C0064 “PRIMARY SUCTION VALVE MALFUNCTION IN VDC-CM&H/U”. <Ref. to VDC(diag)-63, DTC C0064 PRIMARY SUCTION VALVE MALFUNCTION IN VDC-CM&H/U, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Q: DTC C0034 FRONT OUTLET SOLENOID VALVE LH MALFUNCTION IN VDC-CM&H/U

NOTE:
For the diagnostic procedure, refer to DTC C0064 “PRIMARY SUCTION VALVE MALFUNCTION IN VDC-CM&H/U”. <Ref. to VDC(diag)-63, DTC C0064 PRIMARY SUCTION VALVE MALFUNCTION IN VDC-CM&H/U, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

R: DTC C0035 REAR INLET SOLENOID VALVE RH MALFUNCTION IN VDC-CM&H/U

NOTE:
For the diagnostic procedure, refer to DTC C0064 “PRIMARY SUCTION VALVE MALFUNCTION IN VDC-CM&H/U”. <Ref. to VDC(diag)-63, DTC C0064 PRIMARY SUCTION VALVE MALFUNCTION IN VDC-CM&H/U, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

S: DTC C0036 REAR OUTLET SOLENOID VALVE RH MALFUNCTION IN VDC-CM&H/U

NOTE:
For the diagnostic procedure, refer to DTC C0064 “PRIMARY SUCTION VALVE MALFUNCTION IN VDC-CM&H/U”. <Ref. to VDC(diag)-63, DTC C0064 PRIMARY SUCTION VALVE MALFUNCTION IN VDC-CM&H/U, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

T: DTC C0037 REAR INLET SOLENOID VALVE LH MALFUNCTION IN VDC-CM&H/U

NOTE:
For the diagnostic procedure, refer to DTC C0064 “PRIMARY SUCTION VALVE MALFUNCTION IN VDC-CM&H/U”. <Ref. to VDC(diag)-63, DTC C0064 PRIMARY SUCTION VALVE MALFUNCTION IN VDC-CM&H/U, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

U: DTC C0038 REAR OUTLET SOLENOID VALVE LH MALFUNCTION IN VDC-CM&H/U

NOTE:
For the diagnostic procedure, refer to DTC C0064 “PRIMARY SUCTION VALVE MALFUNCTION IN VDC-CM&H/U”. <Ref. to VDC(diag)-63, DTC C0064 PRIMARY SUCTION VALVE MALFUNCTION IN VDC-CM&H/U, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

V: DTC C0061 SECONDARY CUT VALVE MALFUNCTION IN VDCCM&H/U

NOTE:
For the diagnostic procedure, refer to DTC C0064 “PRIMARY SUCTION VALVE MALFUNCTION IN VDC-CM&H/U”. <Ref. to VDC(diag)-63, DTC C0064 PRIMARY SUCTION VALVE MALFUNCTION IN VDC-CM&H/U, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

W: DTC C0062 PRIMARY CUT VALVE MALFUNCTION IN VDCCM&H/U

NOTE:
For the diagnostic procedure, refer to DTC C0064 “PRIMARY SUCTION VALVE MALFUNCTION IN VDC-CM&H/U”. <Ref. to VDC(diag)-63, DTC C0064 PRIMARY SUCTION VALVE MALFUNCTION IN VDC-CM&H/U, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

X: DTC C0063 SECONDARY SUCTION VALVE MALFUNCTION IN VDCCM&H/U

NOTE:
For the diagnostic procedure, refer to DTC C0064 “PRIMARY SUCTION VALVE MALFUNCTION IN VDC-CM&H/U”. <Ref. to VDC(diag)-63, DTC C0064 PRIMARY SUCTION VALVE MALFUNCTION IN VDC-CM&H/U, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Y: DTC C0064 PRIMARY SUCTION VALVE MALFUNCTION IN VDCCM&H/U

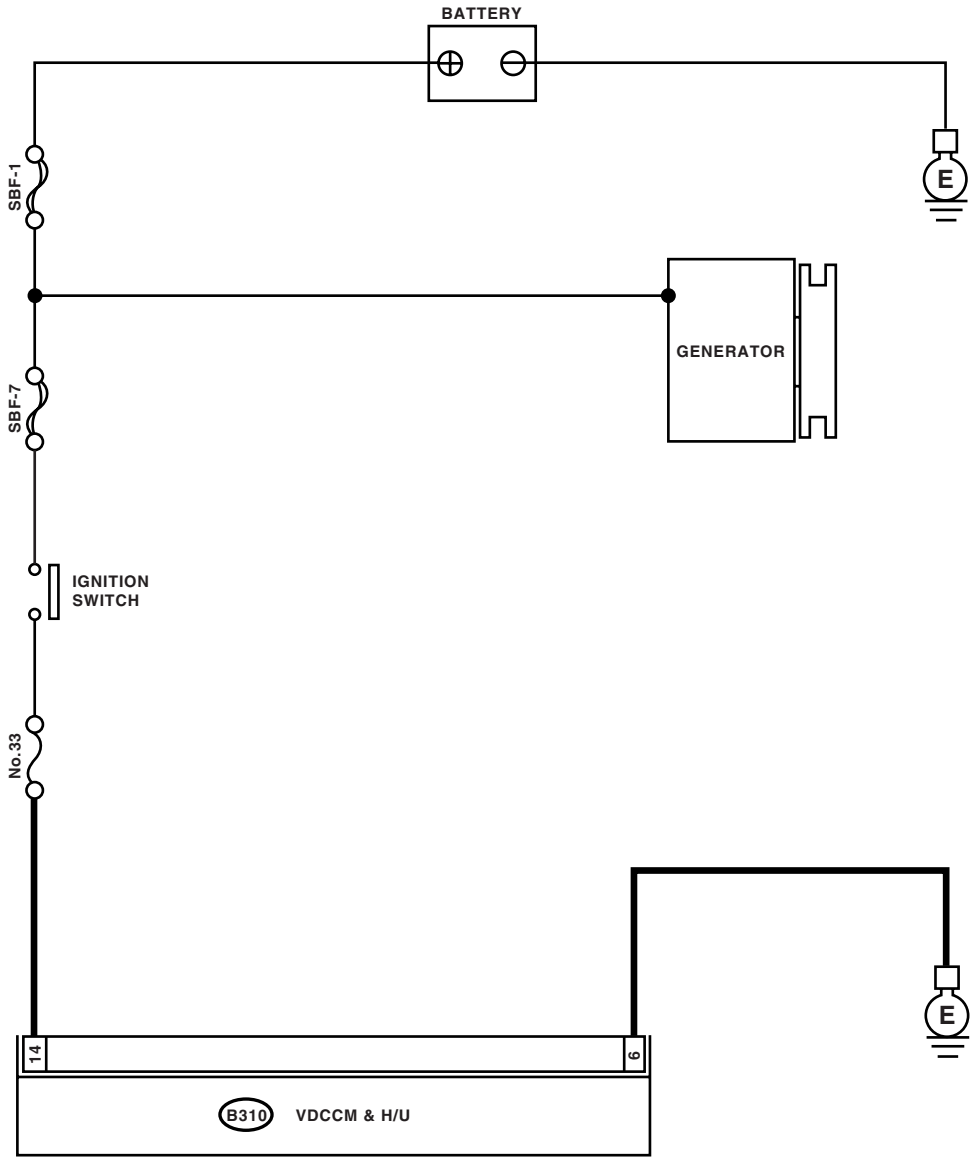
DTC DETECTING CONDITION:

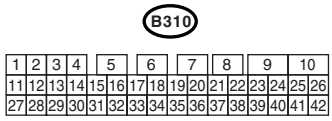
- Defective harness connector
- Defective VDCH/U solenoid valve

TROUBLE SYMPTOM:

- ABS does not operate.
- EBD does not operate.
- VDC does not operate.

WIRING DIAGRAM:





VDC00216

	Step	Check	Yes	No
1	**CHECK INPUT VOLTAGE FOR VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from VDCCM&H/U. 3) Run the engine at idle. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 14 (+) — Chassis ground (−):***	Is the voltage 10 — 15 V?	Go to step **2.**	Repair the power supply circuit.
2	**CHECK GROUND CIRCUIT FOR VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 6 — Chassis ground:***	Is the resistance less than 0.5 Ω?	Go to step **3.**	Repair the VDCCM&H/U ground harness.
3	**CHECK POOR CONTACT IN CONNECTORS.**	Is there poor contact in connector between generator, battery and VDCCM&H/U?	Repair the connector.	Go to step **4.**
4	**CHECK VDCCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>	Go to step **5.**
5	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC.	Temporary poor contact occurs.

Z: DTC C0041 VDC CONTROL MODULE MALFUNCTION

DTC DETECTING CONDITION:

Defective VDCCM&H/U

TROUBLE SYMPTOM:

- ABS does not operate.
- EBD does not operate.
- VDC does not operate.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK GROUND CIRCUIT FOR VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from VDCCM&H/U. 3) Measure the resistance between VDCCM&H/U and chassis ground. ***Connector & terminal*** ***(B310) No. 6 — Chassis ground:***	Is the resistance less than 0.5 Ω?	Go to step **2.**	Repair the VDCCM&H/U ground harness.
2	**CHECK POOR CONTACT IN CONNECTORS.**	Is there poor contact in connectors between battery, ignition switch and VDCCM&H/U?	Repair the connector.	Go to step **3.**
3	**CHECK SOURCES OF SIGNAL NOISE.**	Is the car phone or radio properly installed?	Go to step **4.**	Install the car phone or radio properly.
4	**CHECK SOURCES OF SIGNAL NOISE.**	Are noise sources (such as an antenna) installed near the sensor harness?	Install the noise sources apart from the sensor harness.	Go to step **5.**
5	**CHECK VDCCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>	Go to step **6.**
6	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

AA:DTC C0042 POWER VOLTAGE MALFUNCTION

DTC DETECTING CONDITION:

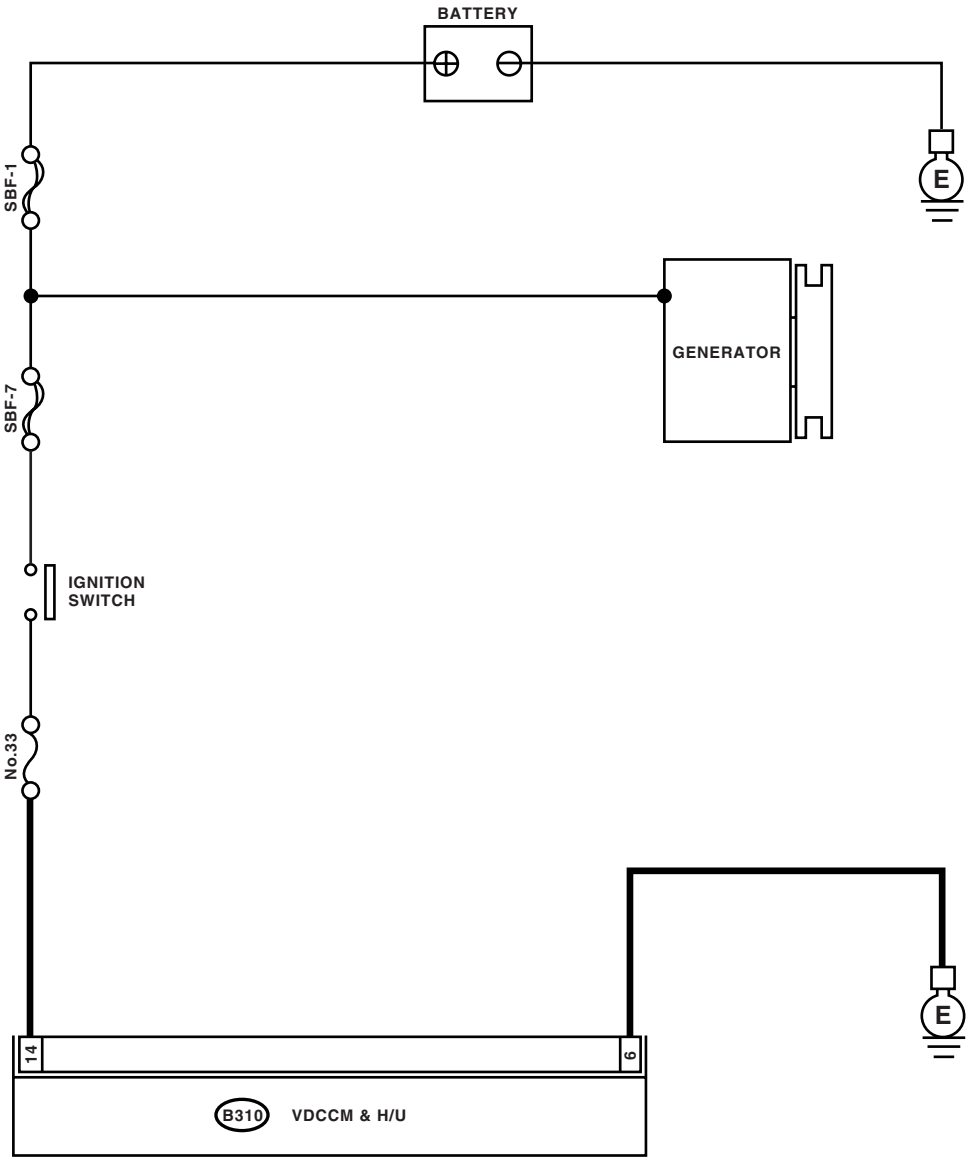
Defective VDCCM&H/U power voltage

TROUBLE SYMPTOM:

- ABS does not operate.
- EBD may not operate.
- VDC does not operate.

NOTE:
Warning lights go off if voltage returns.

WIRING DIAGRAM:



B310

1	2	3	4	5	6	7	8	9	10					
11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26

VDC00216

	Step	Check	Yes	No
1	**CHECK GENERATOR.** 1) Start the engine. 2) Run the engine at idle after warming up. 3) Measure the voltage between generator B terminal and chassis ground. ***Terminals*** ***Generator B terminal (+) — Chassis ground (−):***	Is the voltage 10 — 15 V?	Go to step **2.**	Repair the generator. <Ref. to SC(H4SO 2.0)-14, Generator.>
2	**CHECK BATTERY TERMINAL.** Turn the ignition switch to OFF.	Are the positive and negative battery terminals clamped tightly?	Go to step **3.**	Tighten the terminal.
3	**CHECK INPUT VOLTAGE FOR VDCCM&H/U.** 1) Disconnect the connector from VDCCM&H/U. 2) Run the engine at idle. 3) Operate the devices such as headlights, air conditioner, defogger, etc. which produce much electrical loading. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 14 (+) — Chassis ground (−):***	Is the voltage 10 — 15 V?	Go to step **4.**	Repair the power supply circuit.
4	**CHECK GROUND CIRCUIT FOR VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 6 — Chassis ground:***	Is the resistance less than 0.5 Ω?	Go to step **5.**	Repair the VDCCM&H/U ground harness.
5	**CHECK POOR CONTACT IN CONNECTORS.**	Is there poor contact in connector between generator, battery and VDCCM&H/U?	Repair the connector.	Go to step **6.**
6	**CHECK VDCCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>	Go to step **7.**
7	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

AB:DTC C0042 ABS WHEEL SPEED SENSOR POWER MALFUNCTION

NOTE:
For the diagnostic procedure, refer to DTC C0042 “POWER VOLTAGE MALFUNCTION”. <Ref. to VDC(diag)-67, DTC C0042 POWER VOLTAGE MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AC:DTC C0044 AT COMMUNICATION

DTC DETECTING CONDITION:
No CAN signal from TCM.
TROUBLE SYMPTOM:
- ABS does not operate.
- VDC does not operate.

	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-24, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system.	Go to step **2.**
2	**CHECK POOR CONTACT IN CONNECTORS.**	Is there poor contact in TCM connector?	Repair the connector.	Go to step **3.**
3	**CHECK TCM.**	Is the TCM normal?	Go to step **4.**	Replace the TCM. <Ref. to 4AT-65, Transmission Control Module (TCM).> <Ref. to 5AT-61, Transmission Control Module (TCM).>
4	**CHECK VDCCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U.	Go to step **5.**
5	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC.	It results from a temporary noise interference.

AD:DTC C0045 DIFFERENT VDC CONTROL MODULE SPECIFICATION

DTC DETECTING CONDITION:

Different control module specification

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

	Step	Check	Yes	No
1	**CHECK VDCCM&H/U SPECIFICATION.** Check the identification mark of VDCCM&H/U. ***Identification mark of VDCCM&H/U*** ***OUTBACK 3.0 R: G2*** ***Wagon model 2.5 i: G3*** ***Wagon model 3.0 R: G4*** ***Sedan model 2.5 i: G9*** ***Sedan model 3.0 R: GA***	Is the identification mark of VDCCM&H/U the same as vehicle specification?	Go to step **2.**	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>
2	**CHECK TCM SPECIFICATION.** Check the TCM specification.	Is the specification of TCM same as vehicle specification?	Go to step **3.**	Replace the TCM. <Ref. to 4AT-65, Transmission Control Module (TCM).> <Ref. to 5AT-61, Transmission Control Module (TCM).>
3	**CHECK AT SYSTEM.** 1) Start the engine. 2) Check the DTC in AT system.	Is DTC of AT system displayed?	Repair the AT system.	Go to step **4.**
4	**CHECK ECM SPECIFICATION.** Check the ECM specification.	Is the specification of ECM same as vehicle specification?	Go to step **5.**	Replace the ECM. <Ref. to FU(H4SO 2.0)-34, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-35, Engine Control Module (ECM).> <Ref. to FU(H6DO)-34, Engine Control Module (ECM).>
5	**CHECK VDCCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U.	Go to step **6.**
6	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC.	It results from a temporary noise interference.

AE:DTC C0045 AT CONTROL MODULE MALFUNCTION

DTC DETECTING CONDITION:

Defective TCM

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

	Step	Check	Yes	No
1	**CHECK AT SYSTEM.** 1) Start the engine. 2) Check the DTC in AT system.	Is DTC of AT system displayed?	Repair the AT system.	Go to step **2.**
2	**CHECK VDCCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U.	Go to step **3.**
3	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC.	It results from a temporary noise interference.

AF:DTC C0047 IMPROPER CAN COMMUNICATION

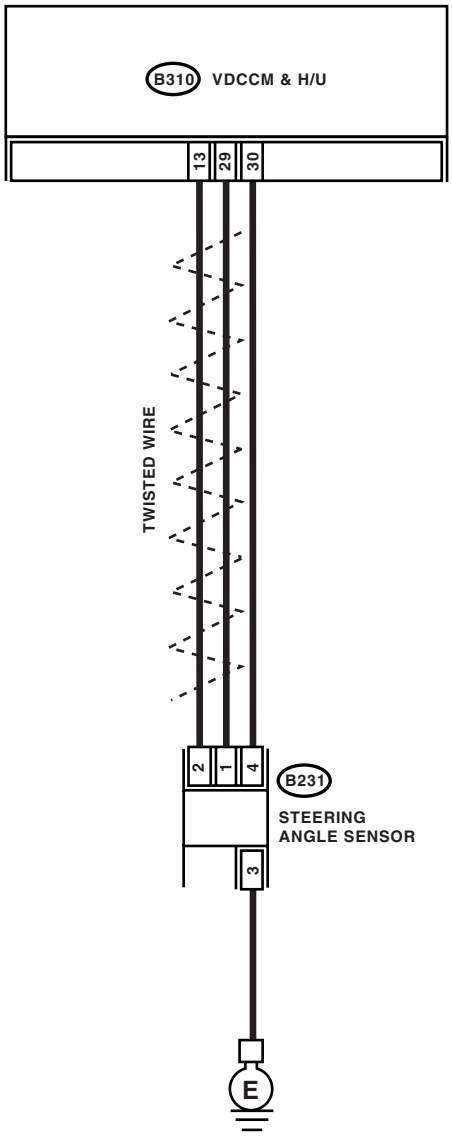
DTC DETECTING CONDITION:

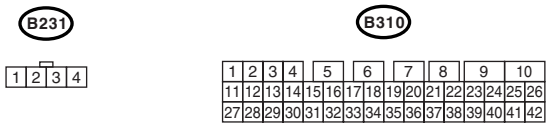
CAN communication line circuit is open or shorted.

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

WIRING DIAGRAM:





VDC00247

	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-24, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system.	Go to step **2.**
2	**CHECK POOR CONTACT IN CONNECTORS.**	Is there poor contact in VDCCM&H/U connector?	Repair the connector.	Go to step **3.**
3	**CHECK VDCCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>	Temporary poor contact occurs.

AG:DTC C0051 VALVE RELAY OFF MALFUNCTION

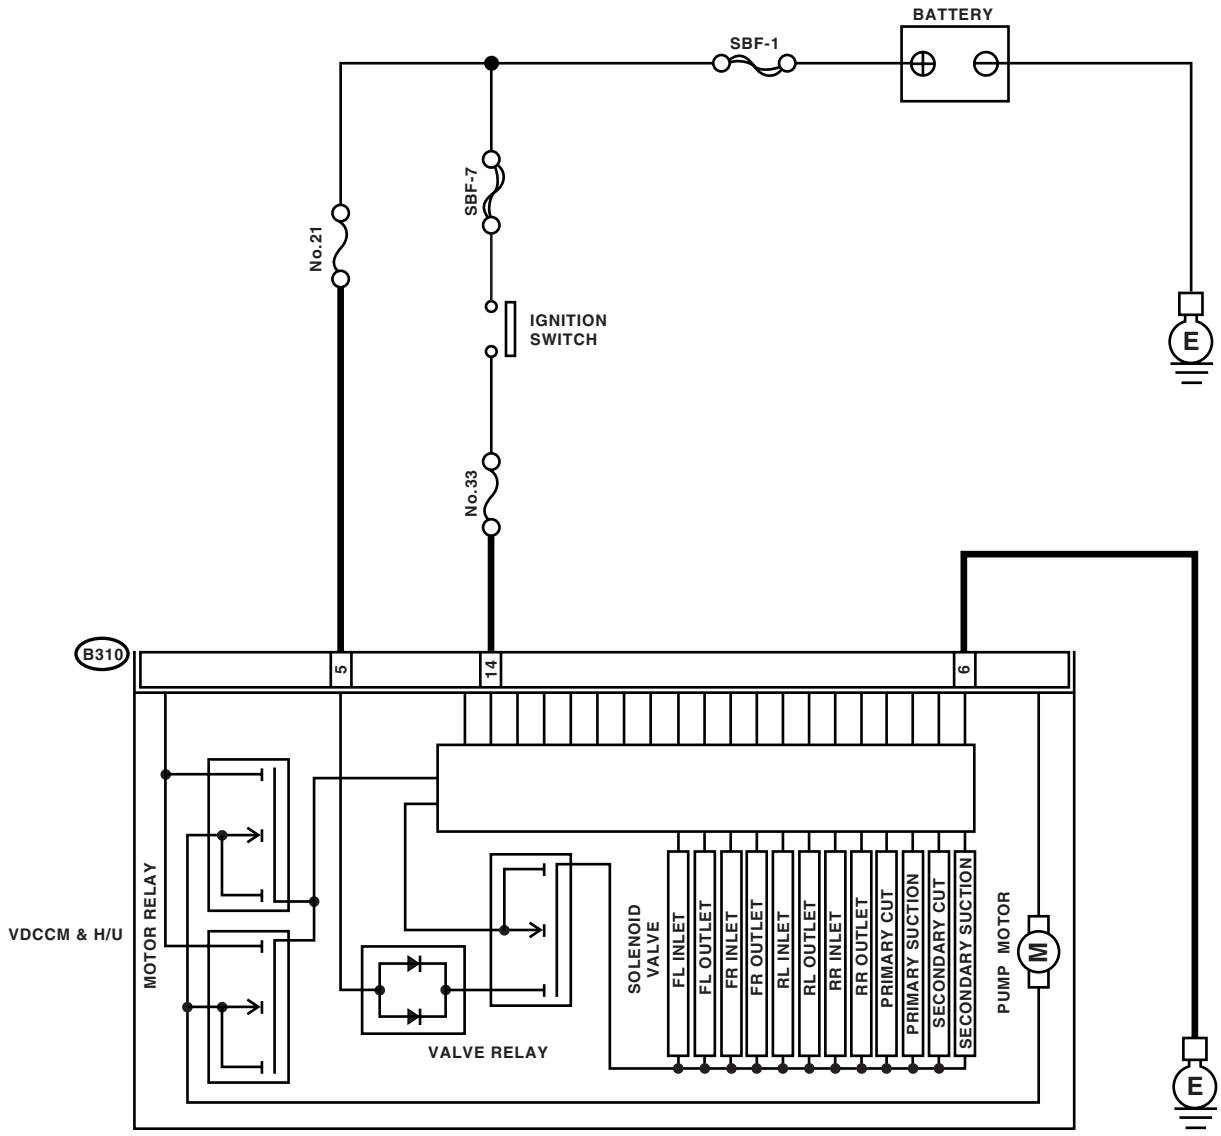
DTC DETECTING CONDITION:

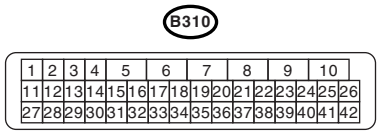
Defective valve relay

TROUBLE SYMPTOM:

- ABS does not operate.
- EBD does not operate.
- VDC does not operate.

WIRING DIAGRAM:





VDC00219

	Step	Check	Yes	No
1	**CHECK INPUT VOLTAGE FOR VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from VDCCM&H/U. 3) Run the engine at idle. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 5 (+) — Chassis ground (−):***	Is the voltage 10 — 15 V?	Go to step **2.**	Repair the harness connector between battery and VDCCM&H/U.
2	**CHECK GROUND CIRCUIT FOR VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 6 — Chassis ground:***	Is the resistance less than 0.5 Ω?	Go to step **3.**	Repair the VDCCM&H/U ground harness.
3	**CHECK POOR CONTACT IN CONNECTORS.**	Is there poor contact in connector between generator, battery and VDCCM&H/U?	Repair the connector.	Go to step **4.**
4	**CHECK VDCCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>	Go to step **5.**
5	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC.	Temporary poor contact occurs.

AH:DTC C0051 VALVE RELAY MALFUNCTION

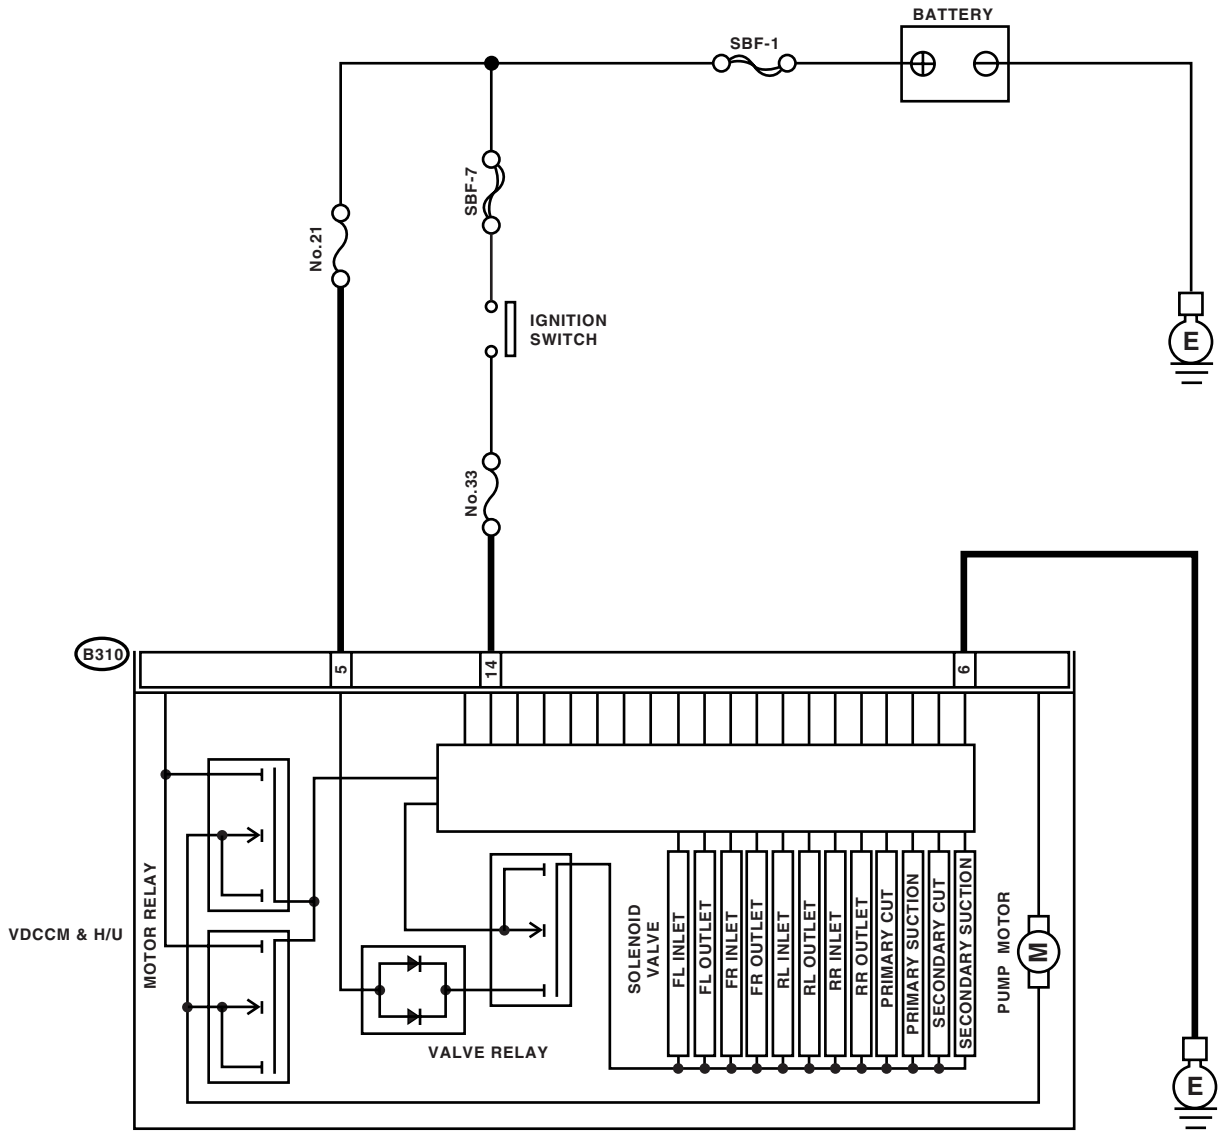
DTC DETECTING CONDITION:

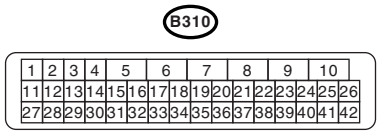
Defective valve relay

TROUBLE SYMPTOM:

- ABS does not operate.
- EBD does not operate.
- VDC does not operate.

WIRING DIAGRAM:





VDC00219

	Step	Check	Yes	No
1	**CHECK INPUT VOLTAGE FOR VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from VDCCM&H/U. 3) Run the engine at idle. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 14 (+) —Chassis ground (–):*** ***(B310) No. 5 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **2.**	Repair the power supply circuit.
2	**CHECK INPUT VOLTAGE FOR VDCCM&H/U.** Calculate the voltage difference measured in step 1. A:(B310) No. 14 (+) — Chassis ground (–): B:(B310) No. 5 (+) — Chassis ground (–):	Is the voltage difference between A and B more than 2 V?	Repair the power supply circuit.	Go to step **3.**
3	**CHECK GROUND CIRCUIT FOR VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 6 — Chassis ground:***	Is the resistance less than 0.5 Ω?	Go to step **4.**	Repair the VDCCM&H/U ground harness.
4	**CHECK VALVE RELAY FOR VDCCM&H/U.** Measure the resistance between VDCCM&H/U connector terminals. ***Connector & terminal*** ***(B310) No. 5 — (B310) No. 6:***	Is the resistance more than 1 MΩ?	Go to step **5.**	Replace the VDCCM&H/U.
5	**CHECK POOR CONTACT IN CONNECTORS.**	Is there poor contact in connector between generator, battery and VDCCM&H/U?	Repair the connector.	Go to step **6.**
6	**CHECK VDCCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>	Go to step **7.**
7	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC.	Temporary poor contact occurs.

AI: DTC C0051 VALVE RELAY TEST MALFUNCTION

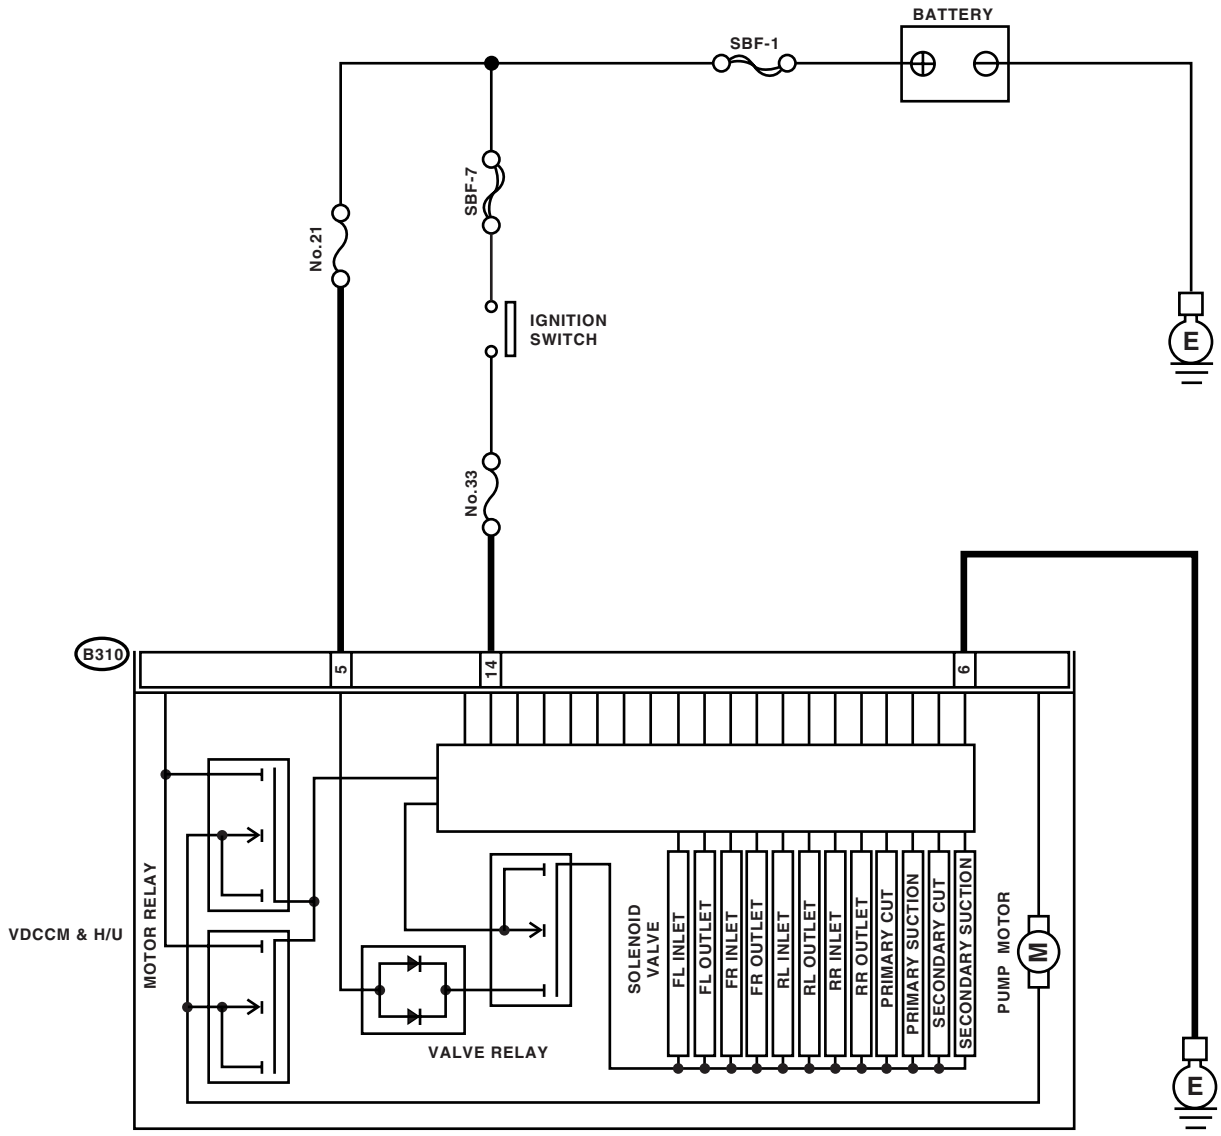
DTC DETECTING CONDITION:

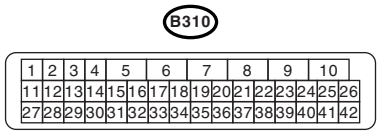
Defective valve relay

TROUBLE SYMPTOM:

- ABS does not operate.
- EBD does not operate.
- VDC does not operate.

WIRING DIAGRAM:





VDC00219

	Step	Check	Yes	No
1	**CHECK INPUT VOLTAGE FOR VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from VDCCM&H/U. 3) Run the engine at idle. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 5 (+) — Chassis ground (−):***	Is the voltage 10 — 15 V?	Go to step **2.**	Repair the power supply circuit in VDCCM&H/U.
2	**CHECK GROUND CIRCUIT FOR VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 6 — Chassis ground:***	Is the resistance less than 0.5 Ω?	Go to step **3.**	Repair the ground circuit in VDCCM&H/U.
3	**CHECK VALVE RELAY FOR VDCCM&H/U.** Measure the resistance between VDCCM&H/U connector terminals. ***Connector & terminal*** ***(B310) No. 5 — (B310) No. 6:***	Is the resistance more than 1 MΩ?	Go to step **4.**	Replace the H/U.
4	**CHECK POOR CONTACT IN CONNECTORS.**	Is there poor contact in connector between generator, battery and VDCCM&H/U?	Repair the connector.	Go to step **5.**
5	**CHECK VDCCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>	Go to step **6.**
6	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC.	Temporary poor contact occurs.

AJ:DTC C0051 VALVE RELAY ON MALFUNCTION

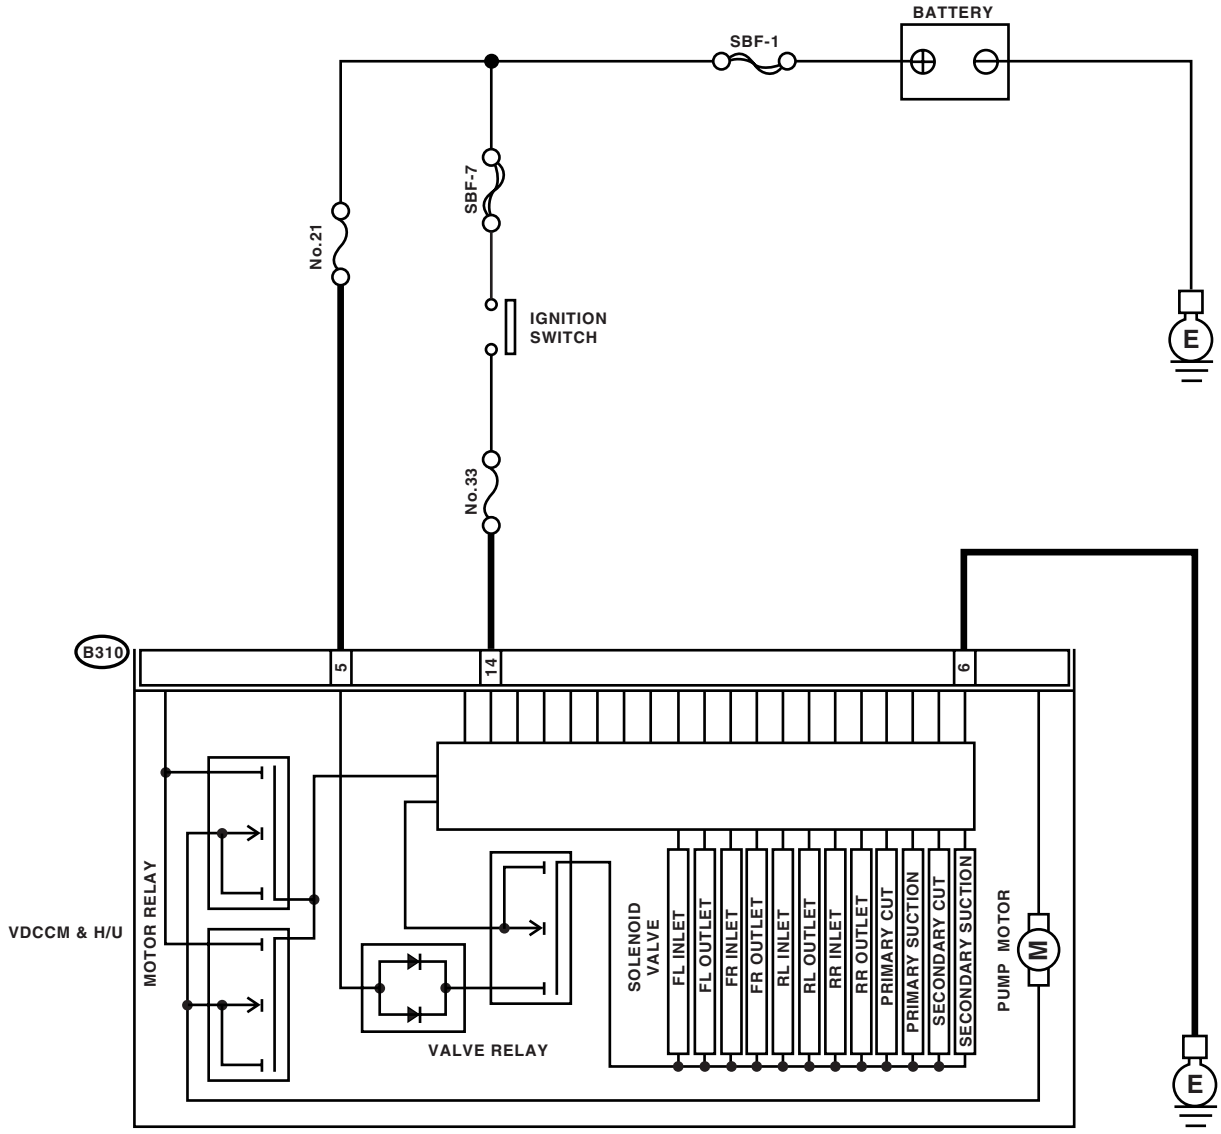
DTC DETECTING CONDITION:

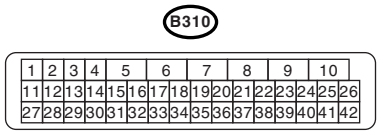
Defective valve relay

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.
- EBD may not operate.

WIRING DIAGRAM:





VDC00219

	Step	Check	Yes	No
1	**CHECK VALVE RELAY FOR VDCCM&H/U.** 1) Disconnect the connector from VDCCM&H/U. 2) Measure the resistance between VDCCM&H/U connector terminals. ***Terminals*** ***No. 5 — No. 6:***	Is the resistance more than 1 MΩ?	Go to step **2.**	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>
2	**CHECK POOR CONTACT IN CONNECTORS.**	Is there poor contact in connector between generator, battery and VDCCM&H/U?	Repair the connector.	Go to step **3.**
3	**CHECK VDCCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>	Go to step **4.**
4	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

AK:DTC C0052 MOTOR/MOTOR RELAY MALFUNCTION

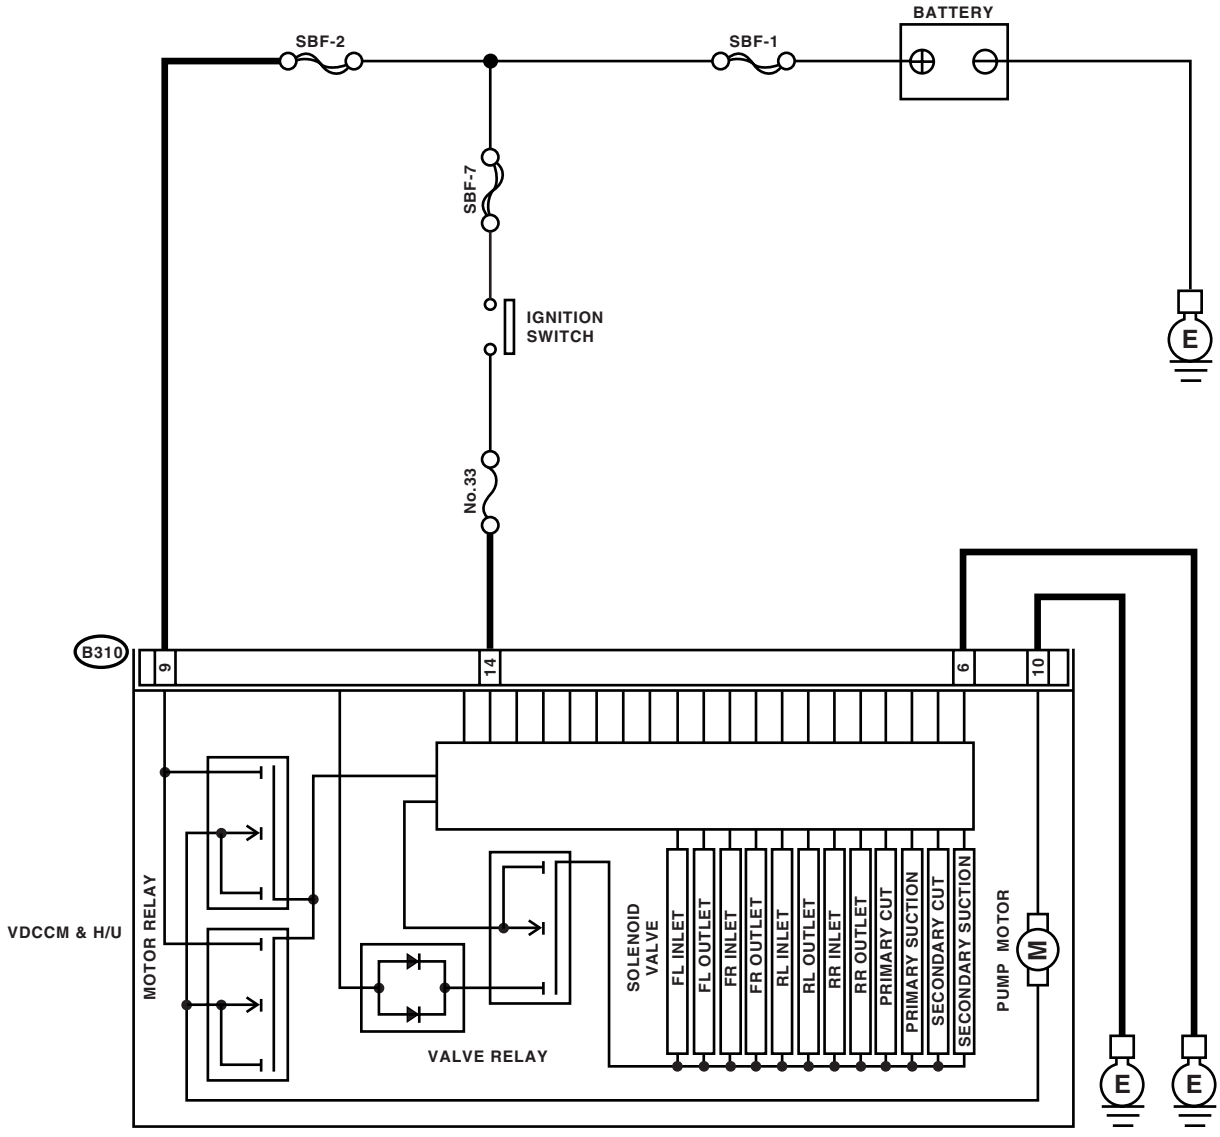
DTC DETECTING CONDITION:

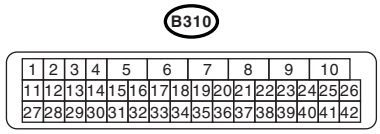
- Defective motor and motor relay
- Defective harness connector

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.
- EBD may not operate.

WIRING DIAGRAM:





VDC00220

	Step	Check	Yes	No
1	**CHECK INPUT VOLTAGE FOR VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from VDCCM&H/U. 3) Turn the ignition switch to ON. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 9 (+) — Chassis ground (−):*** ***(B310) No. 14 (+) — Chassis ground (−):***	Is the voltage 10 — 15 V?	Go to step **2.**	Repair the power supply circuit in VDCCM&H/U.
2	**CHECK GROUND CIRCUIT FOR VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 6 — Chassis ground:*** ***(B310) No. 10 — Chassis ground:***	Is the resistance less than 0.5 Ω?	Go to step **3.**	Repair the VDCCM&H/U ground harness.
3	**CHECK MOTOR RELAY FOR VDCCM&H/U.** Measure the resistance between VDCCM&H/U connector terminals. ***Terminals*** ***No. 9 — No. 10:***	Is the resistance more than 1 MΩ?	Go to step **4.**	Replace the VDCCM&H/U.
4	**CHECK MOTOR OPERATION.** Operate the sequence control.	Is the motor revolution noise (buzz) heard when carrying out the sequence control?	Go to step **5.**	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>
5	**CHECK POOR CONTACT IN CONNECTORS.** Turn the ignition switch to OFF.	Is there poor contact in connector between generator, battery and VDCCM&H/U?	Repair the connector.	Go to step **6.**
6	**CHECK VDCCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>	Go to step **7.**
7	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs. NOTE: Though the ABS warning light remains on at this time, it is normal. Drive the vehicle at more than 12 km/h (7 MPH) in order to turn ABS warning light off. Be sure to drive the vehicle and check the warning light goes off.

AL:DTC C0052 MOTOR/MOTOR RELAY OFF MALFUNCTION

DTC DETECTING CONDITION:

- Defective motor relay
- Defective harness connector

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.
- EBD may not operate.

NOTE:
For the diagnostic procedure, refer to DTC C0052 “MOTOR/MOTOR RELAY MALFUNCTION” <Ref. to VDC(diag)-83, DTC C0052 MOTOR/MOTOR RELAY MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AM:DTC C0052 MOTOR/MOTOR RELAY ON MALFUNCTION

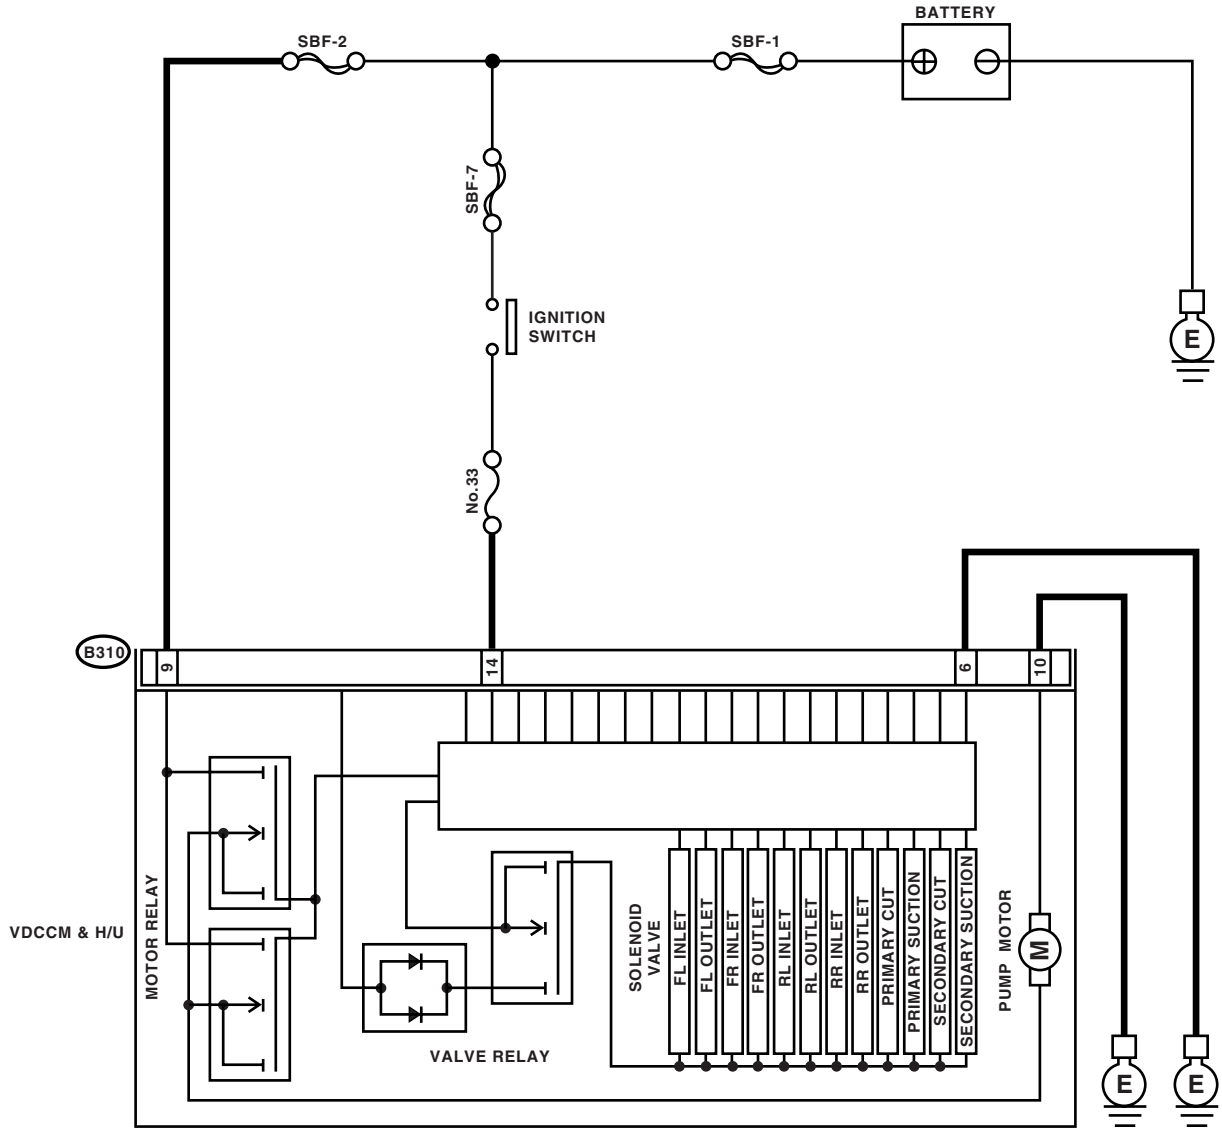
DTC DETECTING CONDITION:

- Defective motor relay
- Defective harness connector

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.
- EBD may not operate.

WIRING DIAGRAM:



B310

1	2	3	4	5			6			7			8			9			10							
11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26

VDC00220

	Step	Check	Yes	No
1	**CHECK MOTOR RELAY FOR VDCCM&H/U.** 1) Disconnect the connector from VDCCM&H/U. 2) Measure the resistance between VDCCM&H/U connector terminals. ***Terminals*** ***No. 9 — No. 10:***	Is the resistance more than 1 MΩ?	Go to step **2.**	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>
2	**CHECK VDCCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>	Go to step **3.**
3	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs. NOTE: Though the ABS warning light remains on at this time, it is normal. Drive the vehicle at more than 12 km/h (7 MPH) in order to turn ABS warning light off. Be sure to drive the vehicle and check the warning light goes off.

AN:DTC C0052 MOTOR

DTC DETECTING CONDITION:

- Defective motor
- Defective motor relay
- Defective harness connector

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.
- EBD may not operate.

NOTE:
For the diagnostic procedure, refer to DTC C0052 “MOTOR/MOTOR RELAY MALFUNCTION” <Ref. to VDC(diag)-83, DTC C0052 MOTOR/MOTOR RELAY MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AO:DTC C0054 BLS OPEN CIRCUIT

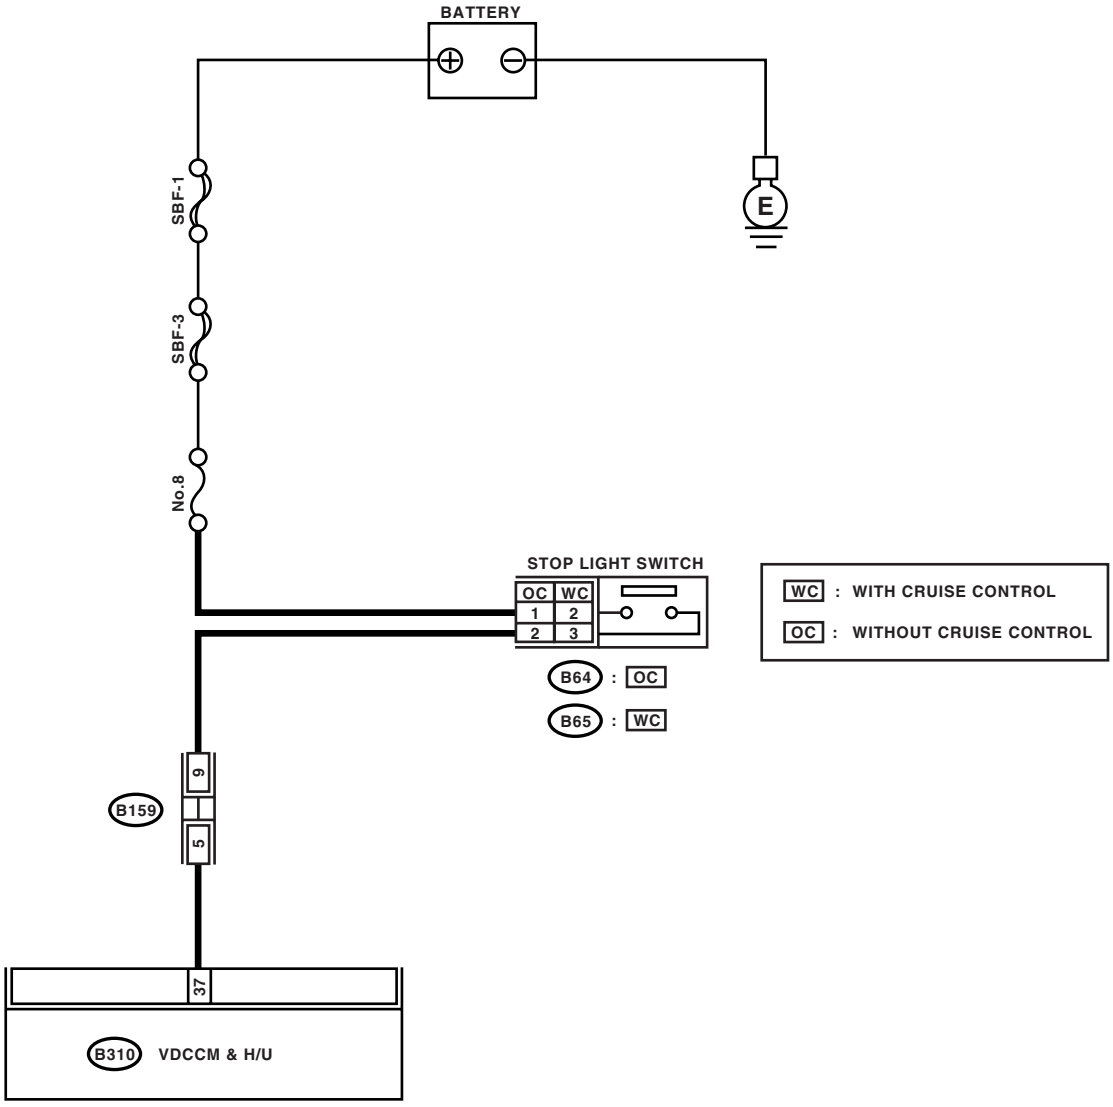
DTC DETECTING CONDITION:

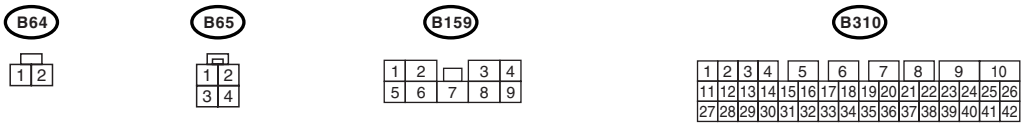
Defective stop light switch

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

WIRING DIAGRAM:





VDC00221

	Step	Check	Yes	No
1	**CHECK OUTPUT OF STOP LIGHT SWITCH WITH SUBARU SELECT MONITOR.** 1) Select {Current Data Display & Save} in Subaru Select Monitor. 2) Release the brake pedal. 3) Read the stop light switch output in Subaru Select Monitor.	Is OFF displayed on the display?	Go to step **2.**	Go to step **3.**
2	**CHECK OUTPUT OF STOP LIGHT SWITCH WITH SUBARU SELECT MONITOR.** 1) Depress the brake pedal. 2) Read the stop light switch output in Subaru Select Monitor.	Is ON displayed on the display?	Go to step **5.**	Go to step **3.**
3	**CHECK IF STOP LIGHTS COME ON.** Depress the brake pedal.	Does the stop light illuminate?	Go to step **4.**	Repair the stop lights circuit.
4	**CHECK OPEN CIRCUIT OF HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from VDCCM&H/U. 3) Depress the brake pedal. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 37 (+) — Chassis ground (−):***	Is the voltage 10 — 15 V?	Go to step **5.**	Repair the harness between stop light switch and VDCCM&H/U connector.
5	**CHECK POOR CONTACT IN CONNECTORS.**	Is there poor contact in connector between stop light switch and VDCCM&H/U?	Go to step **6.**	Repair the connector.
6	**CHECK VDCCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>	Go to step **7.**
7	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC.	Temporary poor contact occurs.

AP:DTC C0054 BLS ON MALFUNCTION

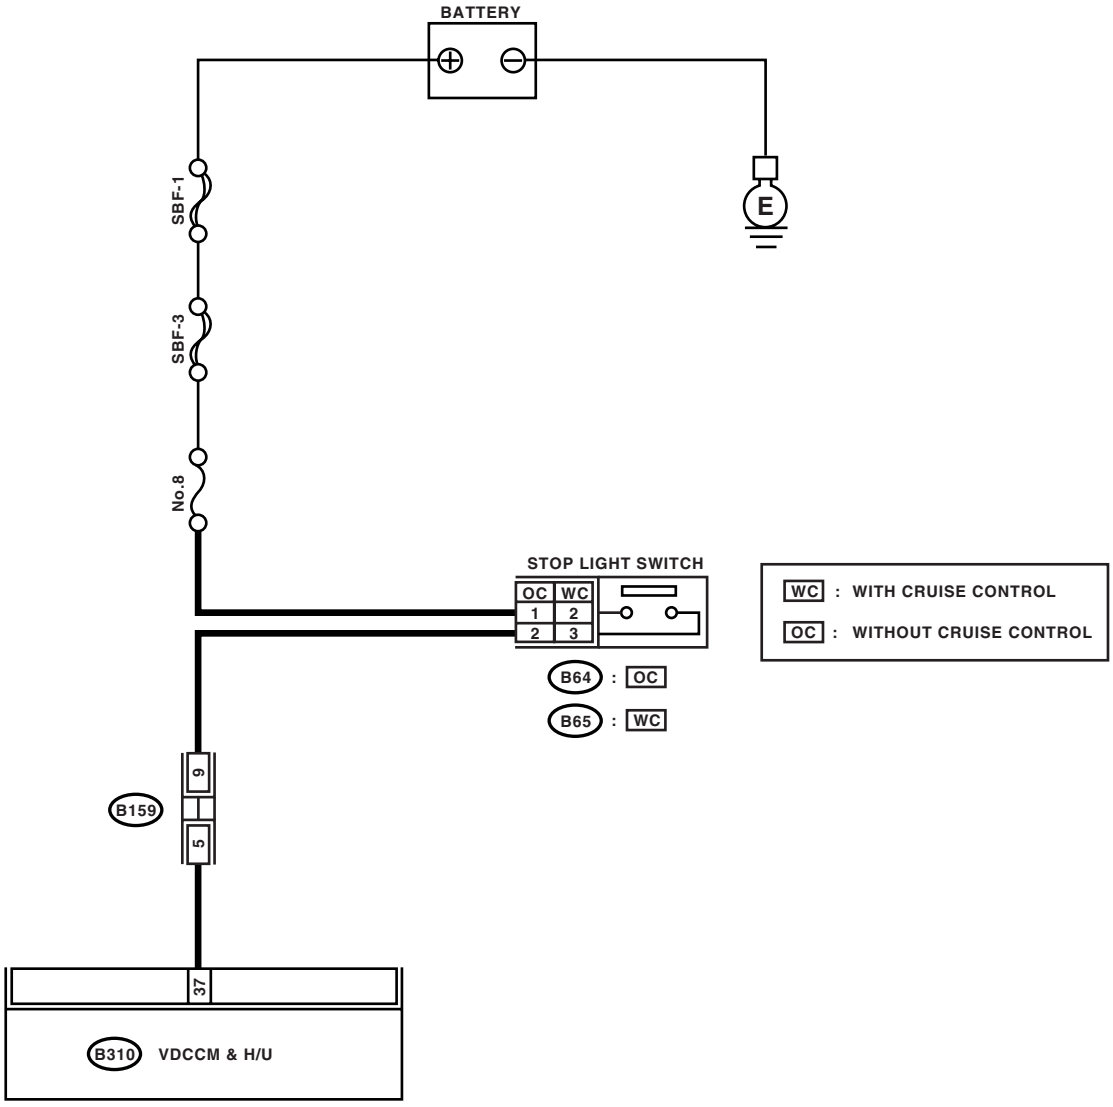
DTC DETECTING CONDITION:

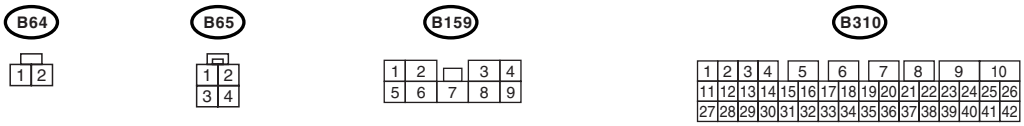
Defective stop light switch

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

WIRING DIAGRAM:





VDC00221

	Step	Check	Yes	No
1	**CHECK STOP LIGHT SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the stop light switch connector. 3) Measure the resistance of stop light switch terminals.	Is the resistance more than 1 MΩ when switch is OFF (when pedal is not depressed)?	Go to step **2.**	Replace the stop light switch.
2	**INTERVIEWING CUSTOMERS.** Make sure that the operation was performed in which accelerator pedal and brake pedal were depressed simultaneously (with depressing brake pedal with left foot).	Were the acceleration pedal and brake pedal depressed simultaneously during driving?	System is in good order. (DTC may be recorded while brake is applied during driving.)	Go to step **3.**
3	**CHECK VDCCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>	Go to step **4.**
4	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

AQ:DTC C0057 EGI COMMUNICATION

DTC DETECTING CONDITION:

No CAN signal from ECM.

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-24, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system.	Go to step **2.**
2	**CHECK POOR CONTACT IN CONNECTORS.**	Is the poor contact in ECM connector?	Repair the connector.	Go to step **3.**
3	**CHECK ECM.**	Is ECM normal?	Go to step **4.**	Replace the ECM.
4	**CHECK VDCCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>	It results from a temporary noise interference.
5	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC.	Temporary poor contact occurs.

AR:DTC C0071 EXCESSIVE STEERING ANGLE SENSOR OUTPUT OFFSET

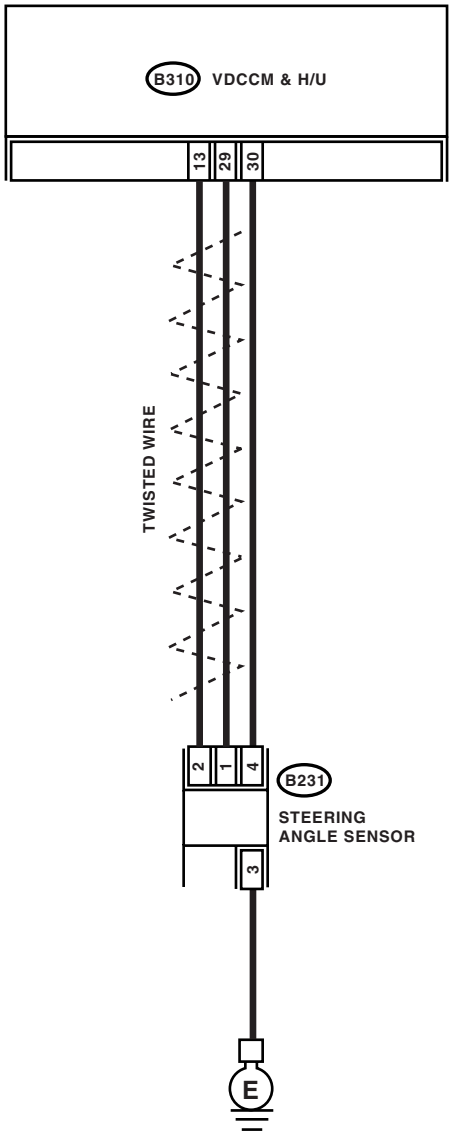
DTC DETECTING CONDITION:

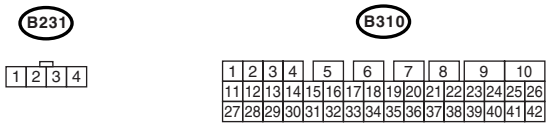
Defective steering angle sensor

TROUBLE SYMPTOM:

VDC does not operate.

WIRING DIAGRAM:



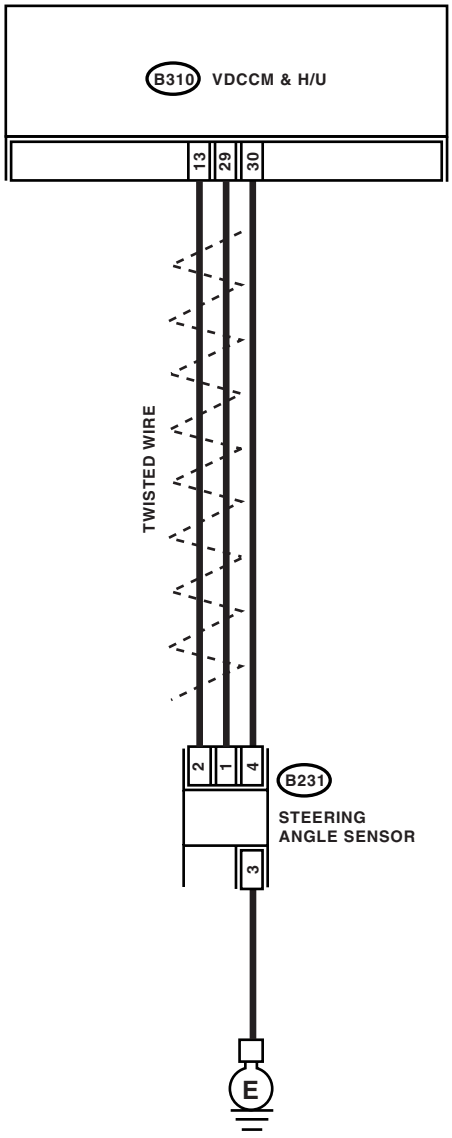


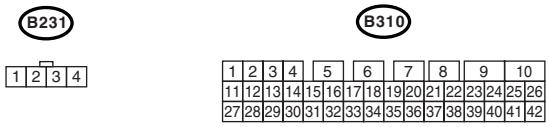
VDC00247

	Step	Check	Yes	No
1	**CHECK STEERING WHEEL.** 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Check the steering wheel for deviation from center.	Is the deviation from the center of steering wheel less than 5°?	Go to step **2.**	Perform the centering adjustment of steering wheel.
2	**CHECK VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) Connect all the connectors. 3) Erase the memory. 4) Perform the inspection mode. 5) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>	Go to step **3.**
3	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

AS:DTC C0071 EXCESSIVE VARIATION AMOUNT OF STEERING ANGLE SENSOR OUTPUT

DTC DETECTING CONDITION:
Defective steering angle sensor
TROUBLE SYMPTOM:
VDC does not operate.
WIRING DIAGRAM:





VDC00247

	Step	Check	Yes	No
1	**CHECK VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) Connect all the connectors. 3) Erase the memory. 4) Perform the inspection mode. 5) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>	Go to step **2.**
2	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

AT:DTC C0071 STEERING ANGLE SENSOR OUTPUT

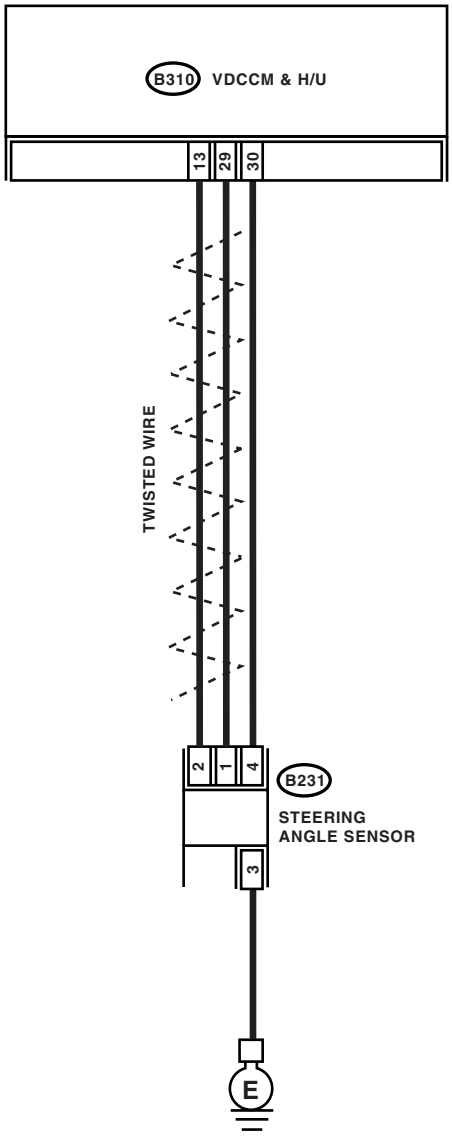
DTC DETECTING CONDITION:

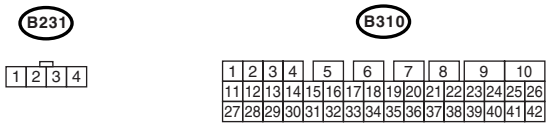
Defective steering angle sensor

TROUBLE SYMPTOM:

VDC does not operate.

WIRING DIAGRAM:





VDC00247

	Step	Check	Yes	No
1	**CHECK STEERING WHEEL.** 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Check the steering wheel for deviation from center.	Is the deviation from the center of steering wheel less than 5°?	Go to step **2.**	Perform the centering adjustment of steering wheel.
2	**CHECK DRIVING PLACE.** Check if the vehicle ran the road with banks or sandy surface (which does not mean a dirt road).	Did the vehicle run the road with banks or sandy surface (which does not mean a dirt road)?	VDCCM&H/U may record DTC when the vehicle ran the road with banks or sandy surface (which does not mean a dirt road).	Go to step **3.**
3	**CHECK OUTPUT OF STEERING ANGLE SENSOR WITH SUBARU SELECT MONITOR.** 1) Select {Current Data Display & Save} in Subaru Select Monitor. 2) Read the steering angle sensor output displayed on display.	Does the steering angle sensor output value on the display vary in accordance with steering operation when turning the steering wheel to the right or left?	Go to step **4.**	Replace the steering angle sensor.
4	**CHECK VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) Connect all the connectors. 3) Erase the memory. 4) Perform the inspection mode. 5) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>	Go to step **5.**
5	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC.	Temporary poor contact occurs.

AU:DTC C0071 STEERING ANGLE SENSOR COMMUNICATION

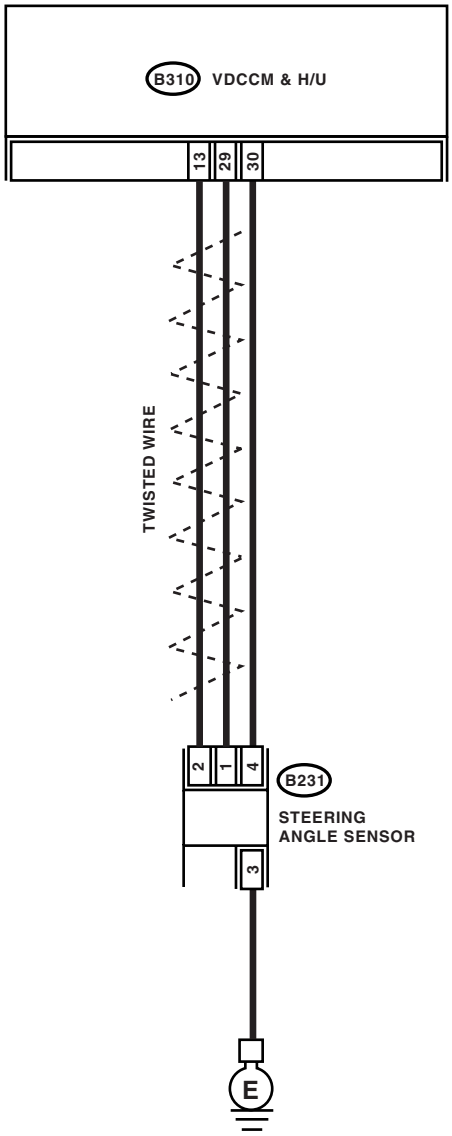
DTC DETECTING CONDITION:

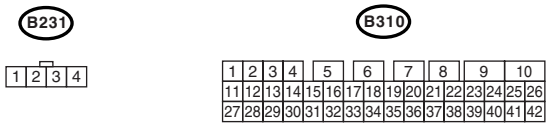
Signal does not come from the steering angle sensor.

TROUBLE SYMPTOM:

VDC does not operate.

WIRING DIAGRAM:





VDC00247

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY FOR STEERING ANGLE SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from steering angle sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between steering angle sensor and chassis ground. ***Connector & terminal*** ***(B231) No. 4 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **4.**	Go to step **2.**
2	**CHECK OUTPUT VOLTAGE OF VDCCM&H/U.** Measure the voltage between VDCCM&H/U and chassis ground. ***Connector & terminal*** ***(B310) No. 30 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Repair the harness between steering angle sensor and VDCCM&H/U.	Go to step **3.**
3	**CHECK POOR CONTACT IN CONNECTORS.**	Is there poor contact in connector?	Correct or replace the connector.	Go to step **9.**
4	**CHECK GROUND CIRCUIT FOR STEERING ANGLE SENSOR.** Measure the resistance between steering angle sensor and chassis ground. ***Connector & terminal*** ***(B231) No. 3 — Chassis ground:***	Is the resistance 0.5 Ω?	Go to step **5.**	Repair ground circuit in the steering angle sensor.
5	**CHECK STEERING ANGLE SENSOR HARNESS.** 1) Disconnect the connector from VDCCM&H/U. 2) Measure the resistance between VDCCM&H/U and steering angle sensor. ***Connector & terminal*** ***(B231) No. 1 — (B310) No. 29:*** ***(B231) No. 2 — (B310) No. 13:***	Is the resistance 0.5 Ω?	Go to step **6.**	Repair the harness between steering angle sensor and VDCCM&H/U.
6	**CHECK GROUND SHORT CIRCUIT OF STEERING ANGLE SENSOR HARNESS.** Measure the resistance between steering angle sensor and chassis ground. ***Connector & terminal*** ***(B231) No. 1 — Chassis ground:*** ***(B231 No. 2 — Chassis ground:***	Is the resistance more than 1 MΩ?	Go to step **7.**	Repair the harness between steering angle sensor and VDCCM&H/U.
7	**CHECK STEERING ANGLE SENSOR.** 1) Turn the ignition switch to OFF. 2) Connect all the connectors. 3) Erase the memory. 4) Perform the inspection mode. 5) Read the DTC.	Is the same DTC displayed?	Go to step **8.**	Go to step **10.**
8	**CHECK VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) Replace the steering angle sensor. 3) Erase the memory. 4) Perform the inspection mode. 5) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>	Go to step **11.**

	Step	Check	Yes	No
9	**CHECK STEERING ANGLE SENSOR.** 1) Turn the ignition switch to OFF. 2) Connect all the connectors. 3) Erase the memory. 4) Perform the inspection mode. 5) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>	Go to step **10.**
10	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC.	Temporary poor contact occurs.
11	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC.	Original steering angle sensor malfunction

AV:DTC C0071 STEERING ANGLE SENSOR POWER SUPPLY MALFUNCTION

DTC DETECTING CONDITION:

Defective steering angle sensor

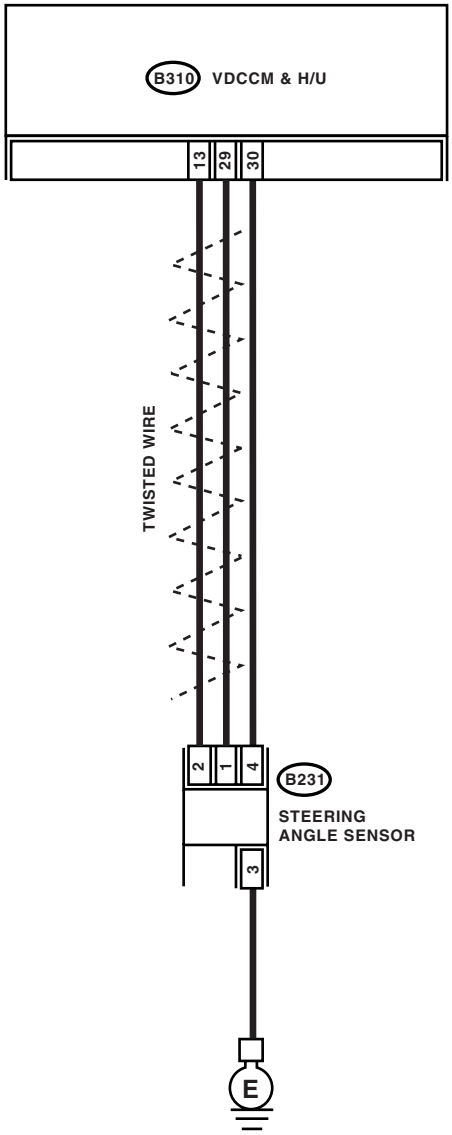
TROUBLE SYMPTOM:

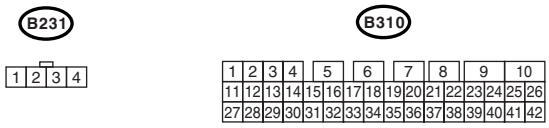
- ABS does not operate.
- VDC does not operate.

NOTE:

- Warning light does not illuminate though problem is detected.
- The ABS and VDC operate normally if voltage returns.

WIRING DIAGRAM:



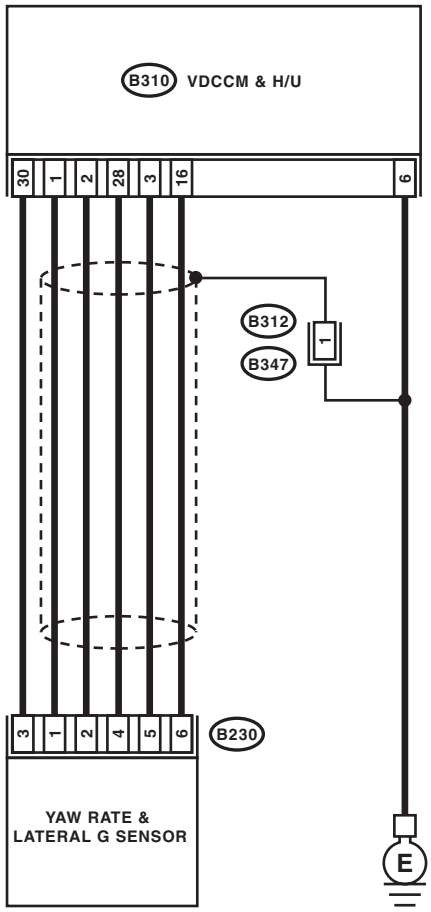


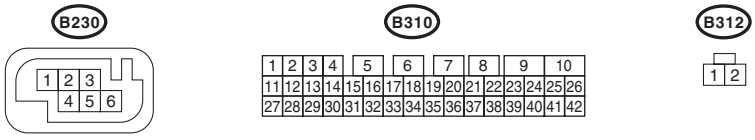
VDC00247

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY FOR STEERING ANGLE SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from steering angle sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between steering angle sensor and chassis ground. ***Connector & terminal*** ***(B231) No. 4 (+) — Chassis ground (−):***	Is the voltage 10 — 15 V?	Go to step **4.**	Go to step **2.**
2	**CHECK OUTPUT VOLTAGE OF VDCCM&H/U.** Measure the voltage between VDCCM&H/U and chassis ground. ***Connector & terminal*** ***(B310) No. 30 (+) — Chassis ground (−):***	Is the voltage 10 — 15 V?	Repair the harness between steering angle sensor and VDCCM&H/U.	Go to step **3.**
3	**CHECK POOR CONTACT IN CONNECTORS.**	Is there poor contact in connector?	Correct or replace the connector.	Go to step **7.**
4	**CHECK GROUND CIRCUIT FOR STEERING ANGLE SENSOR.** Measure the resistance between steering angle sensor and chassis ground. ***Connector & terminal*** ***(B231) No. 3 — Chassis ground:***	Is the resistance 0.5 Ω?	Go to step **5.**	Repair ground circuit in the steering angle sensor.
5	**CHECK STEERING ANGLE SENSOR.** 1) Turn the ignition switch to OFF. 2) Connect all the connectors. 3) Erase the memory. 4) Perform the inspection mode. 5) Read the DTC.	Is the same DTC displayed?	Go to step **6.**	Go to step **8.**
6	**CHECK VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) Replace the steering angle sensor. 3) Erase the memory. 4) Perform the inspection mode. 5) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>	Go to step **9.**
7	**CHECK STEERING ANGLE SENSOR.** 1) Turn the ignition switch to OFF. 2) Connect all the connectors. 3) Erase the memory. 4) Perform the inspection mode. 5) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>	Go to step **8.**
8	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC.	Temporary poor contact occurs.
9	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC.	Original steering angle sensor malfunction

AW:DTC C0072 YAW RATE SENSOR OUTPUT

DTC DETECTING CONDITION:
Defective yaw rate sensor
TROUBLE SYMPTOM:
VDC does not operate.
WIRING DIAGRAM:





VDC00222

	Step	Check	Yes	No
1	**CHECK DRIVING PLACE.** Check if the vehicle ran the road with banks or sandy surface (which does not mean a dirt road).	Did the vehicle run the road with banks or sandy surface (which does not mean a dirt road)?	VDCCM&H/U may record DTC when the vehicle ran the road with banks or sandy surface (which does not mean a dirt road).	Go to step **2.**
2	**CHECK YAW RATE & LATERAL G SENSOR INSTALLATION.**	Is the yaw rate & lateral G sensor installation bolt tightened to 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)?	Go to step **3.**	Tighten the yaw rate & lateral G sensor installation bolt.
3	**CHECK OUTPUT OF YAW RATE & LATERAL G SENSOR WITH SUBARU SELECT MONITOR.** 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Select {Current Data Display & Save} in Subaru Select Monitor. 4) Read the yaw rate output displayed on display.	Is the reading indicated on monitor display −4 — 4 deg/s?	Go to step **4.**	Replace the yaw rate & lateral G sensor.
4	**CHECK OUTPUT OF STEERING ANGLE SENSOR WITH SUBARU SELECT MONITOR.** 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Select {Current Data Display & Save} in Subaru Select Monitor. 4) Read the steering angle sensor output displayed on display.	Is the reading indicated on monitor display −5 — 5°?	Go to step **5.**	Perform the centering adjustment of steering wheel.
5	**CHECK YAW RATE & LATERAL G SENSOR.** 1) Turn the ignition switch to OFF. 2) Connect all the connectors. 3) Erase the memory. 4) Perform the inspection mode. 5) Read the DTC.	Is the same DTC displayed?	Go to step **6.**	Go to step **7.**
6	**CHECK VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) Replace the yaw rate & lateral G sensor. 3) Erase the memory. 4) Perform the inspection mode. 5) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>	Go to step **8.**
7	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC.	Temporary poor contact occurs.
8	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC.	Malfunction is found in original yaw rate & lateral G sensor.

AX:DTC C0072 YAW RATE SENSOR POWER/OUTPUT

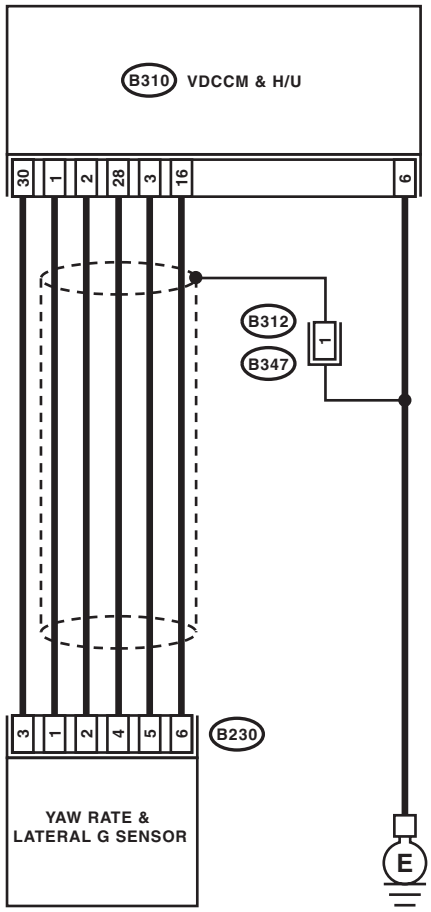
DTC DETECTING CONDITION:

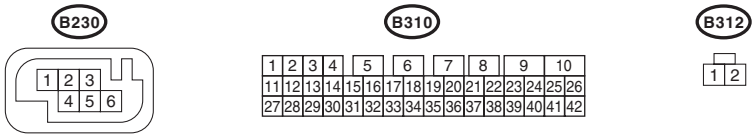
Defective yaw rate sensor

TROUBLE SYMPTOM:

VDC does not operate.

WIRING DIAGRAM:





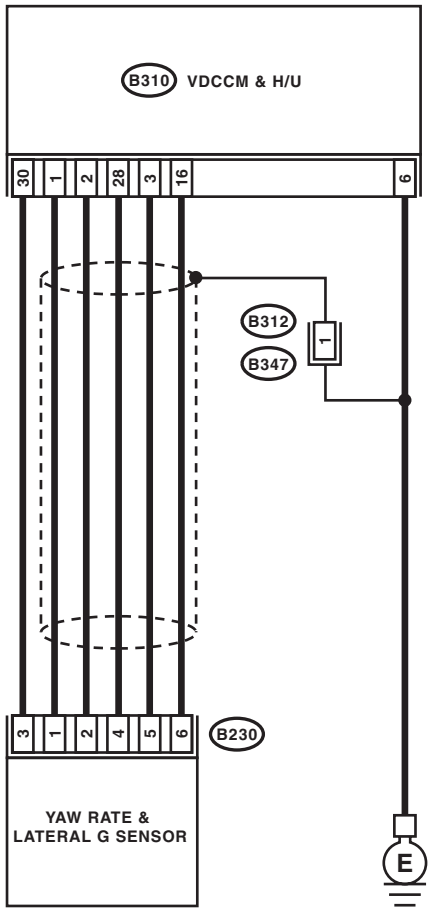
VDC00222

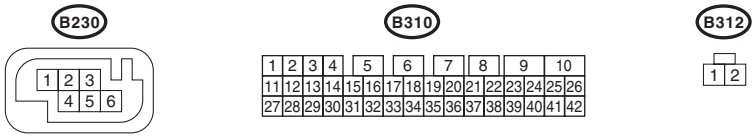
	Step	Check	Yes	No
1	**CHECK YAW RATE & LATERAL G SENSOR POWER SUPPLY.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the yaw rate & lateral G sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between yaw rate & lateral G sensor and chassis ground. ***Connector & terminal*** ***(B230) No. 3 (+) — Chassis ground (−):***	Is the voltage 10 — 15 V?	Go to step **4.**	Go to step **2.**
2	**CHECK OUTPUT VOLTAGE OF VDCCM&H/U.** Measure the voltage between VDCCM&H/U and chassis ground. ***Connector & terminal*** ***(B310) No. 30 (+) — Chassis ground (−):***	Is the voltage 10 — 15 V?	Repair the harness between yaw rate & lateral G sensor and VDCCM&H/U.	Go to step **3.**
3	**CHECK POOR CONTACT IN CONNECTORS.**	Is there poor contact in connector?	Correct or replace the connector.	Go to step **10.**
4	**CHECK GROUND CIRCUIT OF YAW RATE & LATERAL G SENSOR.** Measure the resistance between yaw rate & lateral G sensor and chassis ground. ***Connector & terminal*** ***(B230) No. 6 — Chassis ground:***	Is the resistance less than 0.5 Ω?	Go to step **7.**	Go to step **5.**
5	**CHECK GROUND CIRCUIT FOR VDCCM&H/U.** Measure the resistance between VDCCM&H/U and chassis ground. ***Connector & terminal*** ***(B310) No. 16 — Chassis ground:***	Is the resistance less than 0.5 Ω?	Repair the harness between yaw rate & lateral G sensor and VDCCM&H/U.	Go to step **6.**
6	**CHECK POOR CONTACT IN CONNECTORS.**	Is there poor contact in connector?	Correct or replace the connector.	Go to step **10.**
7	**CHECK YAW RATE & LATERAL G SENSOR HARNESS.** 1) Disconnect the connector from VDCCM&H/U. 2) Measure the resistance between VDCCM&H/U and yaw rate & lateral G sensor. ***Connector & terminal*** ***(B310) No. 28 — (B230) No. 4:***	Is the resistance less than 0.5 Ω?	Go to step **8.**	Repair the harness between yaw rate & lateral G sensor and VDCCM&H/U.
8	**CHECK GROUND SHORT OF HARNESS.** Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 28 — Chassis ground:***	Is the resistance more than 1 MΩ?	Go to step **9.**	Repair the harness between yaw rate & lateral G sensor and VDCCM&H/U.
9	**CHECK YAW RATE & LATERAL G SENSOR.** 1) Connect all the connectors. 2) Turn the ignition switch to ON. 3) Check the signal pattern of oscilloscope between VDCCM&H/U connector terminals. <Ref. to VDC(diag)-15, WAVEFORM, MEASUREMENT, Control Module I/O Signal.> ***Connector & terminal*** ***(B310) No. 2 — No. 16:*** ***(B310) No. 28 — No. 16:***	Is the oscilloscope pattern the same waveform as shown in the figure?	Go to step **10.**	Replace the yaw rate & lateral G sensor.

	Step	Check	Yes	No
10	**CHECK YAW RATE & LATERAL G SENSOR.** 1) Turn the ignition switch to OFF. 2) Connect all the connectors. 3) Erase the memory. 4) Perform the inspection mode. 5) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>	Go to step **11.**
11	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC.	Temporary poor contact occurs.

AY:DTC C0072 YAW RATE SENSOR REFERENCE

DTC DETECTING CONDITION:
Defective yaw rate sensor
TROUBLE SYMPTOM:
VDC does not operate.
WIRING DIAGRAM:





VDC00222

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY FOR YAW RATE & LATERAL G SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from yaw rate & lateral G sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between yaw rate & lateral G sensor and chassis ground. ***Connector & terminal*** ***(B230) No. 3 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **3.**	Go to step **2.**
2	**CHECK OUTPUT VOLTAGE OF VDCCM&H/U.** Measure the voltage between VDCCM&H/U and chassis ground. ***Connector & terminal*** ***(B310) No. 30 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Repair the harness between yaw rate & lateral G sensor and VDCCM&H/U.	Go to step **5.**
3	**CHECK GROUND CIRCUIT OF YAW RATE & LATERAL G SENSOR.** Measure the resistance between yaw rate & lateral G sensor and chassis ground. ***Connector & terminal*** ***(B230) No. 6 — Chassis ground:***	Is the resistance less than 0.5 Ω?	Go to step **6.**	Go to step **4.**
4	**CHECK GROUND CIRCUIT FOR VDCCM&H/U.** Measure the resistance between VDCCM&H/U and chassis ground. ***Connector & terminal*** ***(B310) No. 16 — Chassis ground:***	Is the resistance less than 0.5 Ω?	Repair the harness between yaw rate & lateral G sensor and VDCCM&H/U.	Go to step **5.**
5	**CHECK POOR CONTACT IN CONNECTORS.**	Is there poor contact in connector?	Correct or replace the connector.	Go to step **9.**
6	**CHECK HARNESS OF YAW RATE & LATERAL G SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from VDCCM&H/U. 3) Measure the resistance between VDCCM&H/U and yaw rate & lateral G sensor. ***Connector & terminal*** ***(B310) No. 1 — (B230) No. 1:***	Is the resistance less than 0.5 Ω?	Go to step **7.**	Repair the harness between yaw rate & lateral G sensor and VDCCM&H/U.

NOTE:
For the diagnostic procedure, refer to DTC C0073. <Ref. to VDC(diag)-118, DTC C0073 EXCESSIVE LATERAL G SENSOR OUTPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BB:DTC C0073 LATERAL G SENSOR OUTPUT

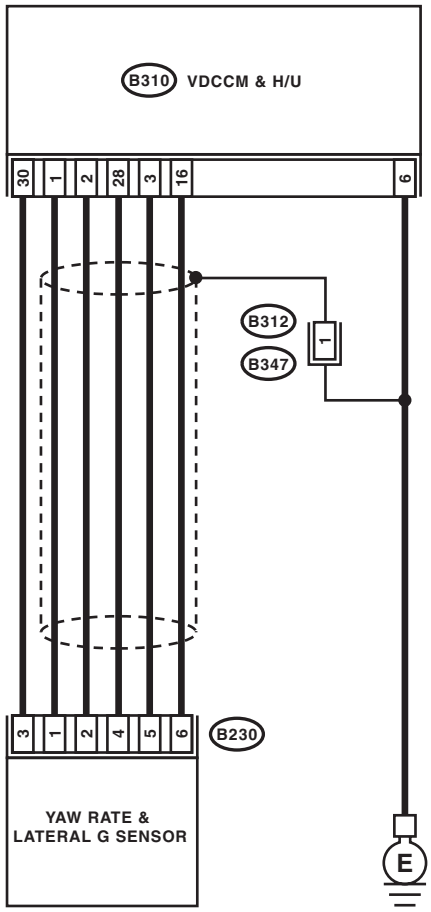
NOTE:
For the diagnostic procedure, refer to DTC C0073. <Ref. to VDC(diag)-118, DTC C0073 EXCESSIVE LATERAL G SENSOR OUTPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

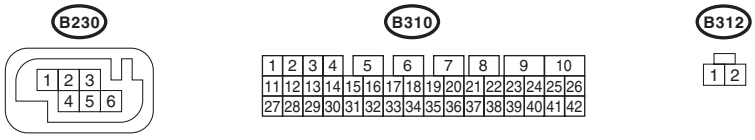
BC:DTC C0073 EXCESSIVE VARIATION AMOUNT OF LATERAL G SENSOR OUTPUT

NOTE:
For the diagnostic procedure, refer to DTC C0073. <Ref. to VDC(diag)-118, DTC C0073 EXCESSIVE LATERAL G SENSOR OUTPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BD:DTC C0073 EXCESSIVE LATERAL G SENSOR OUTPUT

DTC DETECTING CONDITION:
Defective lateral G sensor
TROUBLE SYMPTOM:
VDC does not operate.
WIRING DIAGRAM:



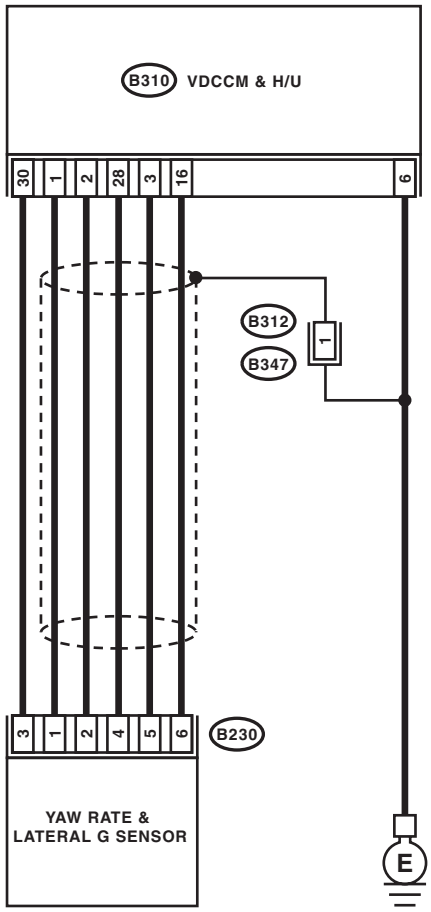


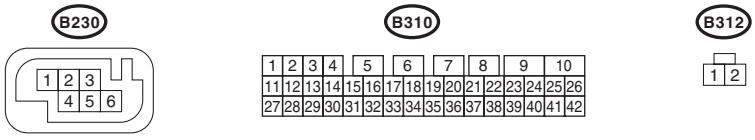
VDC00222

	Step	Check	Yes	No
1	**CHECK YAW RATE & LATERAL G SENSOR INSTALLATION.**	Is the yaw rate & lateral G sensor installation bolt tightened to 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)?	Go to step **2.**	Tighten the yaw rate & lateral G sensor installation bolt.
2	**CHECK LATERAL G SENSOR OUTPUT.** 1) Park the vehicle on a level surface. 2) Select {Current Data Display & Save} in Subaru Select Monitor. 3) Read the lateral G sensor output displayed on display.	Is the indicated reading on the monitor display −1.5 — 1.5 m/s^2?	Go to step **3.**	Replace the yaw rate & lateral G sensor.
3	**CHECK LATERAL G SENSOR OUTPUT.** 1) Turn the ignition switch to OFF. 2) Remove the yaw rate & lateral G sensor from vehicle. 3) Turn the ignition switch to ON, and select {Current Data Display & Save} in Subaru Select Monitor. 4) Read the lateral G sensor output displayed on display.	When the yaw rate & lateral G sensor is inclined 90° to the right, is the indicated value 6.8 — 12.8 m/s^2?	Go to step **4.**	Replace the yaw rate & lateral G sensor.
4	**CHECK LATERAL G SENSOR.** Read the lateral G sensor output displayed on screen.	When the yaw rate & lateral G sensor is inclined 90° to the left, is the indicated value −6.8 — −12.8 m/s^2?	Go to step **5.**	Replace the yaw rate & lateral G sensor.
5	**CHECK POOR CONTACT IN CONNECTORS.** Turn the ignition switch to OFF.	Is there poor contact in connector between VDCCM&H/U and yaw rate & lateral G sensor?	Repair the connector.	Go to step **6.**
6	**CHECK VDCCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>	Go to step **7.**
7	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC.	Temporary poor contact occurs.

BE:DTC C0073 LATERAL G SENSOR POWER/OUTPUT

DTC DETECTING CONDITION:
Defective lateral G sensor
DTC DETECTING CONDITION:
VDC does not operate.
WIRING DIAGRAM:





VDC00222

	Step	Check	Yes	No
1	**CHECK LATERAL G SENSOR OUTPUT.** 1) Park the vehicle on a level surface. 2) Select {Current Data Display & Save} in Subaru Select Monitor. 3) Read the lateral G sensor output displayed on display.	Is the indicated reading on the monitor display −1.5 — 1.5 m/s^2?	Go to step **2.**	Go to step **3.**
2	**CHECK POOR CONTACT IN CONNECTORS.** Turn the ignition switch to OFF.	Is there poor contact in connector between VDCCM&H/U and yaw rate & lateral G sensor?	Repair the connector.	Go to step **10.**
3	**CHECK YAW RATE & LATERAL G SENSOR POWER SUPPLY.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from yaw rate & lateral G sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between yaw rate & lateral G sensor and chassis ground. ***Connector & terminal*** ***(B230) No. 3 (+) — Chassis ground (−):***	Is the voltage 10 — 15 V?	Go to step **6.**	Go to step **4.**
4	**CHECK OUTPUT VOLTAGE OF VDCCM&H/U.** Measure the voltage between VDCCM&H/U and chassis ground. ***Connector & terminal*** ***(B310) No. 30 (+) — Chassis ground (−):***	Is the voltage 10 — 15 V?	Repair the harness between yaw rate & lateral G sensor and VDCCM&H/U.	Go to step **5.**
5	**CHECK POOR CONTACT IN CONNECTORS**	Is there poor contact in connector?	Correct or replace the connector.	Go to step **10.**
6	**CHECK OPEN CIRCUIT IN LATERAL G SENSOR OUTPUT HARNESS.** 1) Disconnect the connector from yaw rate & lateral G sensor. 2) Disconnect the connector from VDCCM&H/U. 3) Measure the resistance between VDCCM&H/U and yaw rate & lateral G sensor. ***Connector & terminal*** ***(B310) No. 3 — (B230) No. 5:***	Is the resistance less than 0.5 Ω?	Go to step **7.**	Repair the harness connector between yaw rate & lateral G sensor and VDCCM&H/U.
7	**CHECK GROUND SHORT CIRCUIT FOR YAW RATE & LATERAL G SENSOR HARNESS.** Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 3 — Chassis ground:***	Is the resistance more than 1 MΩ?	Go to step **8.**	Repair the harness connector between yaw rate & lateral G sensor and VDCCM&H/U.
8	**CHECK LATERAL G SENSOR.** 1) Turn the ignition switch to OFF. 2) Remove the yaw rate & lateral G sensor from vehicle. 3) Connect the connector to the yaw rate & lateral G sensor. 4) Connect the connector to VDCCM&H/U. 5) Turn the ignition switch to ON. 6) Measure the voltage between yaw rate & lateral G sensor connector terminals. ***Connector & terminal*** ***(B230) No. 5 (+) — No. 6 (−):***	Is the voltage 2.35 — 2.65 V when yaw rate & lateral G sensor is on level?	Go to step **9.**	Replace the yaw rate & lateral G sensor.

	Step	Check	Yes	No
9	**CHECK POOR CONTACT IN CONNECTORS.**	Is there poor contact in connector between VDCCM&H/U and yaw rate & lateral G sensor?	Repair the connector.	Go to step **10.**
10	**CHECK VDCCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>	Go to step **11.**
11	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC.	Temporary poor contact occurs.

BF:DTC C0074 PRESSURE SENSOR TEST MALFUNCTION

DTC DETECTING CONDITION:

Defective pressure sensor

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK PRESSURE SENSOR POWER SUPPLY.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from pressure sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between pressure sensor connector and chassis ground. ***Connector & terminal*** ***(B348) No. 3 (+) — Chassis ground (−):***	Is the voltage 4.75 — 5.25 V?	Go to step **4.**	Go to step **2.**
2	**CHECK OUTPUT VOLTAGE OF VDCCM&H/U.** Measure the voltage between VDCCM&H/U and chassis ground. ***Connector & terminal*** ***(B310) No. 27 (+) — Chassis ground (−):***	Is the voltage 4.75 — 5.25 V?	Repair the harness between pressure sensor and VDCCM&H/U.	Go to step **3.**
3	**CHECK POOR CONTACT IN CONNECTORS.**	Is there poor contact in connector?	Correct or replace the connector.	Go to step **9.**
4	**CHECK GROUND CIRCUIT OF PRESSURE SENSOR.** Measure the resistance between pressure sensor and chassis ground. ***Connector & terminal*** ***(B348) No. 1 — Chassis ground:***	Is the resistance less than 0.5 Ω?	Go to step **7.**	Go to step **5.**
5	**CHECK GROUND CIRCUIT OF VDCCM&H/U.** Measure the resistance between VDCCM&H/U and chassis ground. ***Connector & terminal*** ***(B310) No. 12 — Chassis ground:***	Is the resistance less than 0.5 Ω?	Repair the harness between pressure sensor and VDCCM&H/U.	Go to step **6.**
6	**CHECK POOR CONTACT IN CONNECTORS.**	Is there poor contact in connector?	Correct or replace the connector.	Go to step **9.**
7	**CHECK PRESSURE SENSOR HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from VDCCM&H/U. 3) Measure the resistance between VDCCM&H/U and pressure sensor. ***Connector & terminal*** ***(B310) No. 11 — (B348) No. 2:***	Is the resistance less than 0.5 Ω?	Go to step **8.**	Repair the harness between yaw rate & lateral G sensor and VDCCM&H/U.
8	**CHECK GROUND SHORT OF HARNESS.** Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 11 — Chassis ground:***	Is the resistance more than 1 MΩ?	Go to step **9.**	Repair the harness between yaw rate & lateral G sensor and VDCCM&H/U.
9	**CHECK VDCCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. 4) Read the DTC.	Is DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>	Go to step **10.**
10	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC.	Temporary poor contact occurs.

BG:DTC C0074 EXCESSIVE PRESSURE SENSOR OUTPUT OFFSET

DTC DETECTING CONDITION:

Defective pressure sensor

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK STOP LIGHT SWITCH CIRCUIT.** Check stop light switch open circuit.	Is the stop light switch circuit OK?	Go to step **2.**	Repair the stop light switch circuit.
2	**CHECK VDCCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>	Go to step **3.**
3	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

BH:DTC C0074 PRESSURE SENSOR POWER/OUTPUT

DTC DETECTING CONDITION:

Defective pressure sensor

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

NOTE:

For the diagnostic procedure, refer to DTC C0074 “PRESSURE SENSOR TEST MALFUNCTION”. <Ref. to VDC(diag)-123, DTC C0074 PRESSURE SENSOR TEST MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BI: DTC C0074 PRESSURE SENSOR OUTPUT

DTC DETECTING CONDITION:

Defective pressure sensor

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK STOP LIGHT SWITCH CIRCUIT.** Check stop light switch open circuit.	Is the stop light switch circuit OK?	Go to step **2.**	If there is malfunction in the stop light switch circuit, DTC may be recorded in the memory.
2	**CHECK PRESSURE SENSOR POWER SUPPLY.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from pressure sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between pressure sensor connector and chassis ground. ***Connector & terminal*** ***(B348) No. 3 (+) — Chassis ground (–):***	Is the voltage 4.75 — 5.25 V?	Go to step **5.**	Go to step **3.**
3	**CHECK OUTPUT VOLTAGE OF VDCCM&H/U.** Measure the voltage between VDCCM&H/U and chassis ground. ***Connector & terminal*** ***(B310) No. 27 (+) — Chassis ground (–):***	Is the voltage 4.75 — 5.25 V?	Repair the harness between pressure sensor and VDCCM&H/U.	Go to step **4.**
4	**CHECK POOR CONTACT IN CONNECTORS.**	Is there poor contact in connector?	Correct or replace the connector.	Go to step **10.**
5	**CHECK GROUND CIRCUIT OF PRESSURE SENSOR.** Measure the resistance between pressure sensor and chassis ground. ***Connector & terminal*** ***(B348) No. 1 — Chassis ground:***	Is the resistance less than 0.5 Ω?	Go to step **8.**	Go to step **6.**
6	**CHECK GROUND CIRCUIT OF VDCCM&H/U.** Measure the resistance between VDCCM&H/U and chassis ground. ***Connector & terminal*** ***(B310) No. 12 — Chassis ground:***	Is the resistance less than 0.5 Ω?	Repair the harness between pressure sensor and VDCCM&H/U.	Go to step **7.**
7	**CHECK POOR CONTACT IN CONNECTORS.**	Is there poor contact in connector?	Correct or replace the connector.	Go to step **10.**
8	**CHECK PRESSURE SENSOR HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from VDCCM&H/U. 3) Measure the resistance between VDCCM&H/U and pressure sensor. ***Connector & terminal*** ***(B310) No. 11 — (B348) No. 2:***	Is the resistance less than 0.5 Ω?	Go to step **9.**	Repair the harness between yaw rate & lateral G sensor and VDCCM&H/U.
9	**CHECK GROUND SHORT OF HARNESS.** Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 11 — Chassis ground:***	Is the resistance more than 1 MΩ?	Go to step **10.**	Repair the harness between yaw rate & lateral G sensor and VDCCM&H/U.
10	**CHECK VDCCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. 4) Read the DTC.	Is DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>	Go to step **11.**

Step		Check	Yes	No
11	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC.	Temporary poor contact occurs.

BJ:DTC C0074 PRESSURE SENSOR POWER MALFUNCTION

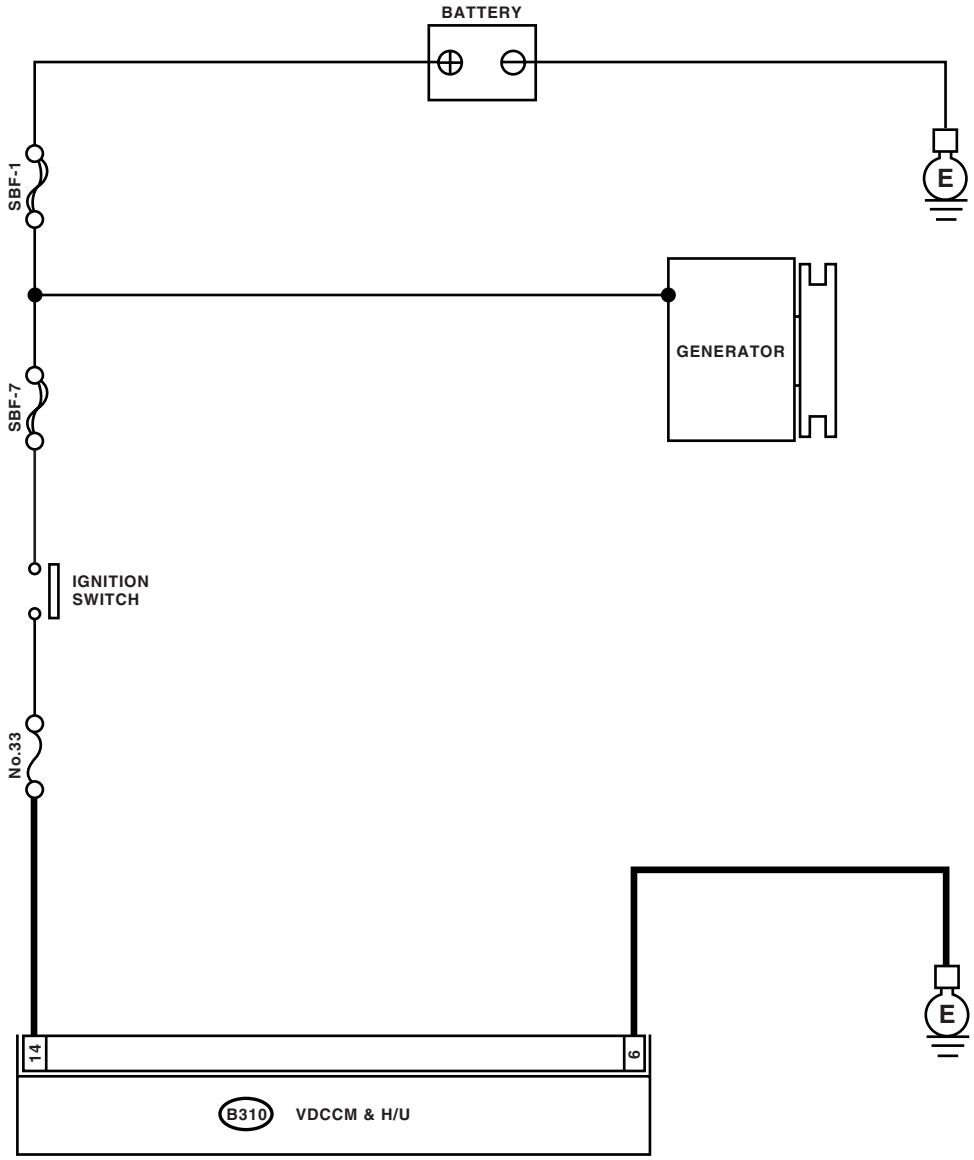
DTC DETECTING CONDITION:

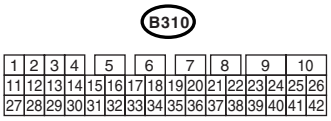
Defective pressure sensor

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

WIRING DIAGRAM:





VDC00216

	Step	Check	Yes	No
1	**CHECK POOR CONTACT IN CONNECTORS.** Check if there is poor contact in VDCCM&H/U power supply circuit.	Is there poor contact?	Repair the connector.	Go to step **2.**
2	**CHECK VDCCM&H/U POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the VDCCM&H/U connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between VDCCM&H/U connector terminals. ***Connector & terminal*** ***(B310) No. 14 (+) — (B310) No. 6 (–):***	Is the voltage 10 — 15 V?	Go to step **3.**	Check the power supply circuit in VDCCM&H/U.
3	**CHECK VDCCM&H/U.** 1) Connect all the connectors. 2) Erase the memory. 3) Perform the inspection mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>	Go to step **4.**
4	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC.	It results from a temporary noise interference.

BK:DTC C0081 SYSTEM MALFUNCTION

DTC DETECTING CONDITION:

VDC long time sequential control

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

	Step	Check	Yes	No
1	**CHECK POOR CONTACT IN CONNECTOR.**	Is there poor contact in the VDCCM&H/U and yaw rate & lateral G sensor connector?	Repair the connector.	Go to step **2.**
2	**CHECK VDCCM&H/U.** 1) Replace the yaw rate & lateral G sensor. 2) Connect all the connectors. 3) Erase the memory. 4) Perform the inspection mode. 5) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U.	Malfunction is found in original yaw rate & lateral G sensor.

13.General Diagnostic Table

A: INSPECTION

Symptom		Main probable cause	Other probable cause
Poor brake performance	Long braking/ stopping distance	• VDCCM&H/U • Brake pad • Aeration to brake line • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections	• Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & lateral G sensor or improper installation • Master cylinder • Brake caliper • Disc rotor • Brake pipe • Brake booster
	Wheel lock	• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Incorrect wiring or piping connections	• Defective steering angle sensor or improper neutral position • Defective yaw rate & lateral G sensor or improper installation • Brake caliper • Brake pipe
	Brake drag	• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Master cylinder • Brake caliper • Parking brake • Axle and wheels • Brake pedal play	• Defective steering angle sensor or improper neutral position • Defective yaw rate & lateral G sensor or improper installation • Brake pad • Brake pipe
	Long brake pedal stroke	• Aeration to brake line • Brake pedal play	• VDCCM&H/U • Master cylinder • Brake caliper • Brake pad • Brake pipe • Brake booster
	Vehicle vertical pitching	• VDCCM&H/U • Road surface (uneven) • Suspension play or fatigue (reduced damping) • Incorrect wiring or piping connections	• Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & lateral G sensor or improper installation
Poor brake performance	Unstable or uneven braking	• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Brake caliper • Brake pad • Road surface (uneven) • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections	• Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & lateral G sensor or improper installation • Master cylinder • Disc rotor • Brake pipe • Axle and wheels • Road with crowns or banks • Suspension play or fatigue (poor damping)

Symptom		Main probable cause	Other probable cause
Vibration or noise • When braking suddenly • When accelerating suddenly • While driving on a slippery road	Excessive brake pedal vibration	• Road surface (uneven) • Incorrect wiring or piping connections	• VDCCM&H/U • Brake booster • Suspension play or fatigue (poor damping)
	Strange noise from VDCH/U	• VDCCM&H/U (mount bushing) • Defective ABS wheel speed sensor or sensor gap • Brake pipe	• VDCCM&H/U • Defective steering angle sensor or improper neutral position • Defective yaw rate & lateral G sensor or improper installation
	Noise from the front side of vehicle	• VDCCM&H/U (mount bushing) • Defective ABS wheel speed sensor or sensor gap • Master cylinder • Brake caliper • Brake pad • Disc rotor • Brake pipe • Brake booster • Suspension play or fatigue (poor damping)	• Axle and wheels • Tire specifications, tire wear and air pressures
	Noise inside passenger seat		• VDCCM&H/U • Defective steering angle sensor or improper neutral position • Defective yaw rate & lateral G sensor or improper installation
	Noise from the rear side of vehicle	• Defective ABS wheel speed sensor or sensor gap • Brake caliper • Brake pad • Disc rotor • Parking brake • Brake pipe • Suspension play or fatigue (poor damping)	• Axle and wheels • Tire specifications, tire wear and air pressures
Engine does not accelerate or goes into a stall when accelerating suddenly or driving on a slippery surface.		• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Master cylinder • Brake caliper • Parking brake • Incorrect wiring or piping	• Defective steering angle sensor or improper neutral position • Defective yaw rate & lateral G sensor or improper installation • Brake pad • Brake pipe

General Diagnostic Table

Symptom		Main probable cause	Other probable cause
Poor change-direction-operation stability of TCS	Deviation to right or left direction	• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & lateral G sensor or improper installation • Brake caliper • Brake pad • Wheel alignment • Road surface (uneven) • Road with crowns or banks • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections	• Disc rotor • Brake pipe • Axle and wheels • Suspension play or fatigue (poor damping)
	Vehicle spin	• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & lateral G sensor or improper installation • Brake pad • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections	• Brake caliper • Brake pipe
Steering wheel drag while driving		• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & lateral G sensor or improper installation • Incorrect wiring or piping connections • Power steering system	• Brake caliper • Brake pad • Disc rotor • Wheel alignment • Road surface (uneven) • Road with crowns or banks • Suspension play or fatigue (poor damping) • Tire specifications, tire wear and air pressures
VDC operates while driving normally.		• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & lateral G sensor or improper installation • Wheel alignment • Road surface (uneven) • Road with crowns or banks • Suspension play or fatigue (poor damping) • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections • Power steering system	

Symptom	Main probable cause	Other probable cause
VDC OFF indicator light does not come on when the VDC OFF switch is depressed. NOTE: When pressing VDC OFF switch for more than 10 seconds, VDC OFF indicator light goes off and cannot operate any more. When turning the ignition switch from OFF to ON, the previous status is restored.	• Harness • Indicator light bulb • VDC OFF switch

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

1. General Description

A: SPECIFICATION

Model			2.0 i, 2.5 i	OUTBACK 2.5 i, OUTBACK 3.0 R	2.0 GT, 3.0 R
Front disc brake	Size		15-inch type	16-inch type	17-inch type
	Type		Disc (Floating type, ventilated)		
	Effective disc diameter	mm (in)	228 (8.98)	244 (4.61)	261 (10.28)
	Disc thickness × Outer diameter	mm (in)	24 × 277 (0.94 × 10.91)	24 × 294 (0.94 × 11.57)	30 × 316 (1.18 × 12.44)
	Effective cylinder diameter		42.8 (1.685) × 2		
	Pad dimensions (length × width × thickness)	mm (in)	117.8 × 50.5 × 11.0 (4.638 × 1.988 × 0.433)		130.0 × 53.5 × 11.0 (5.118 × 2.106 × 0.433)
	Clearance adjustment		Automatic adjustment		
Rear disc brake	Size		15-inch type		
	Type		Disc (Floating type, solid)		Disc (Floating type, ventilated)
	Effective disc diameter	mm (in)	238 (9.37)		254 (10.0)
	Disc thickness × Outer diameter	mm (in)	10 × 274 (0.39 × 10.79)		18 × 290 (0.71 × 11.42)
	Effective cylinder diameter	mm (in)	38.1 (1.500)		
	Pad dimensions (length × width × thickness)	mm (in)	92.0 × 33.0 × 9.0 (3.622 × 1.299 × 0.354)		82.4 × 33.7 × 9.0 (3.244 × 1.327 × 0.354)
	Clearance adjustment		Automatic adjustment		
Master cylinder	Type		Tandem		
	Effective diameter	mm (in)	23.8 (15/16)		
	Reservoir type		Sealed type		
	Brake fluid reservoir capacity	cm^3 (cu in)	205 (12.51)		
Brake booster	Type		Vacuum suspended		
	Effective diameter	mm (in)	208 + 229 (8.19 + 9.02)		
Brake line			Dual circuit system		
Brake fluid **CAUTION:** **• Avoid mixing brake fluid of different brands to prevent fluid performance from degrading.** **• When brake fluid is supplemented, be careful not to allow any dust into the reservoir.** **• Use fresh SUBARU genuine brake fluid when replacing or refilling the fluid.**			FMVSS No. 116, DOT3		

NOTE:
Refer to “PB” section for parking brake specifications. <Ref. to PB-2, SPECIFICATION, General Description.>

Item			Standard value	Limit
Front brake	Pad thickness mm (in)	Except 17-inch type	11 (0.43)	1.5 (0.059)
		17-inch type	11 (0.43)	1.5 (0.059)
	Disc thickness mm (in)	Except 17-inch type	24 (0.94)	22 (0.87)
		17-inch type	30 (1.18)	28 (1.10)
	Disc runout mm (in)		—	0.05 (0.0020)
Rear brake (Disc type)	Pad thickness mm (in)	Solid disc	9.0 (0.354)	1.5 (0.059)
		Ventilated disc	9.0 (0.354)	1.5 (0.059)
	Disc thickness mm (in)	Solid disc	10 (0.39)	8.5 (0.335)
		Ventilated disc	18 (0.71)	16 (0.63)
	Disc runout mm (in)		—	0.05 (0.0020)
Parking brake	Inside diameter mm (in)		170 (6.69)	171 (6.73)
	Lining thickness mm (in)		3.2 (0.126)	1.5 (0.059)
	Lever stroke		5 — 6 notches/200 N (20 kgf, 45 lb)	

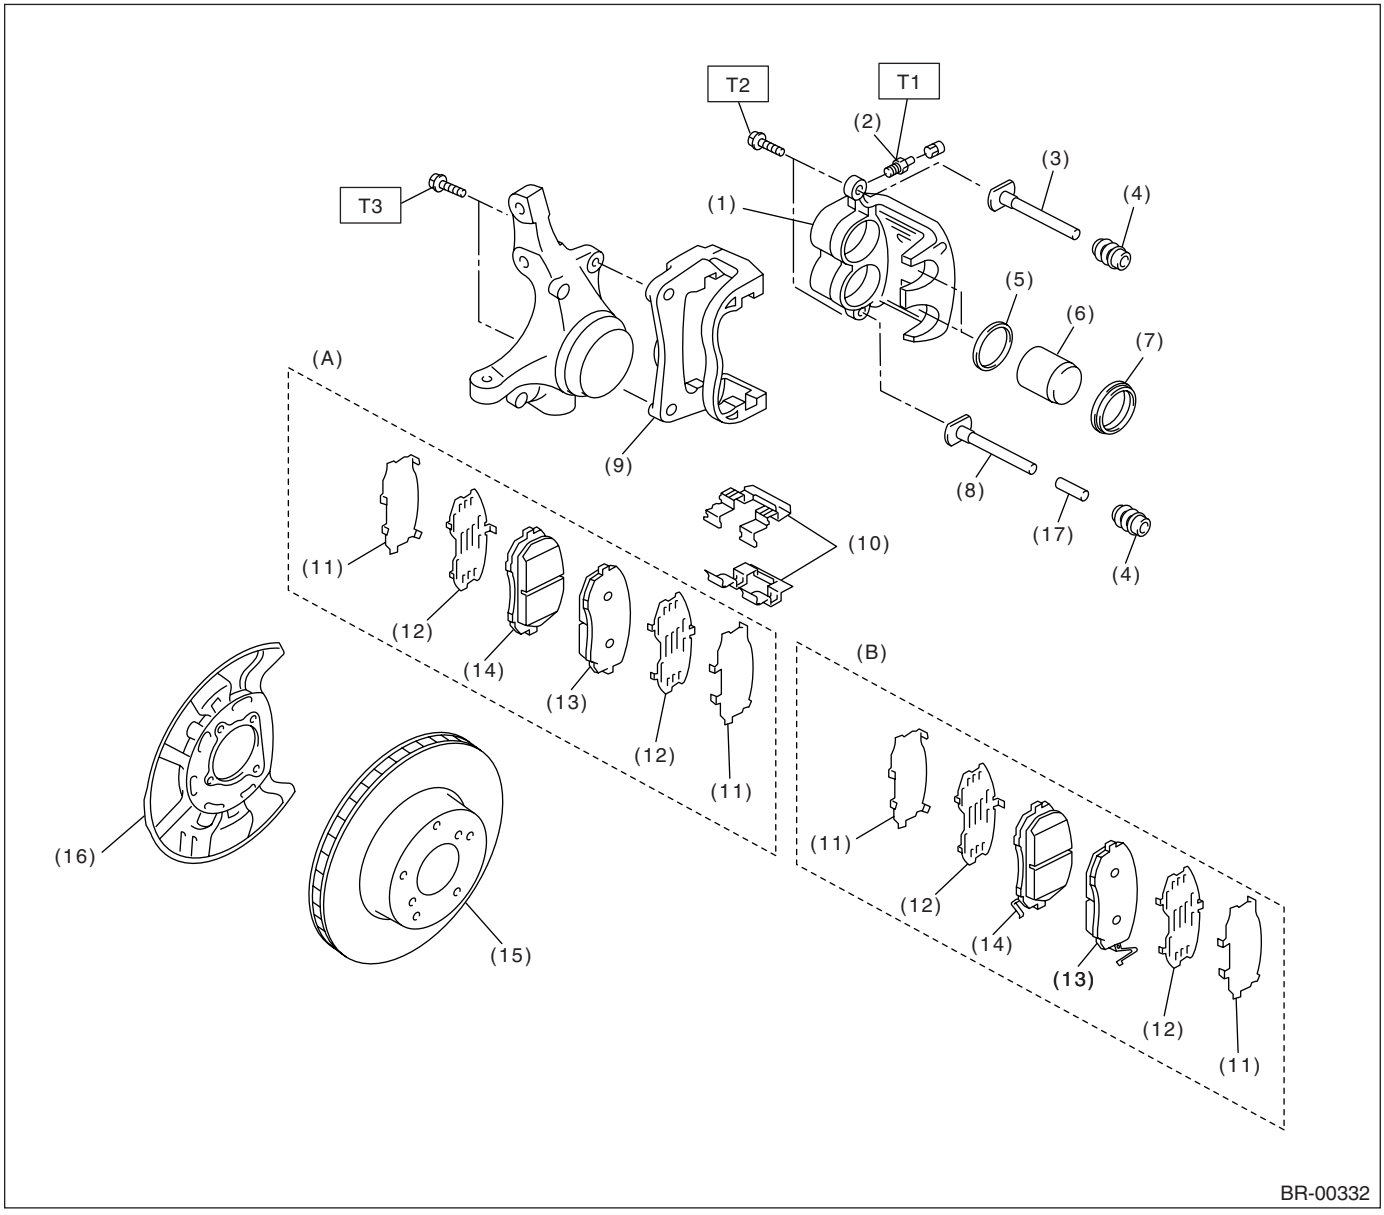
		Brake pedal force N (kgf, lb)	Fluid pressure kPa (kg/cm^2, psi)		
			15-inch type	16-inch type	17-inch type
Brake Booster	Brake fluid pressure without engine running	147 (15, 33)	545 (6, 79)		
		294 (30, 66)	1,564 (16, 227)		
	Brake fluid pressure with engine running and vacuum at 66.7 kPa (500 mmHg, 19.69 inHg)	147 (15, 33)	6,003 (61, 871)	5,381 (55, 780)	4,963 (51, 720)
		294 (30, 66)	11,273 (115, 1,635)	10,982 (112, 1,593)	10,055 (103, 1,458)

Brake pedal	Free play mm (in)	0.5 — 2 (0.02 — 0.08) [When pulling the brake pedal upward with a force of less than 10 N (1 kgf, 2 lb).]

B: COMPONENT

1. FRONT DISK BRAKE

• Except for EC, EK, OUTBACK model

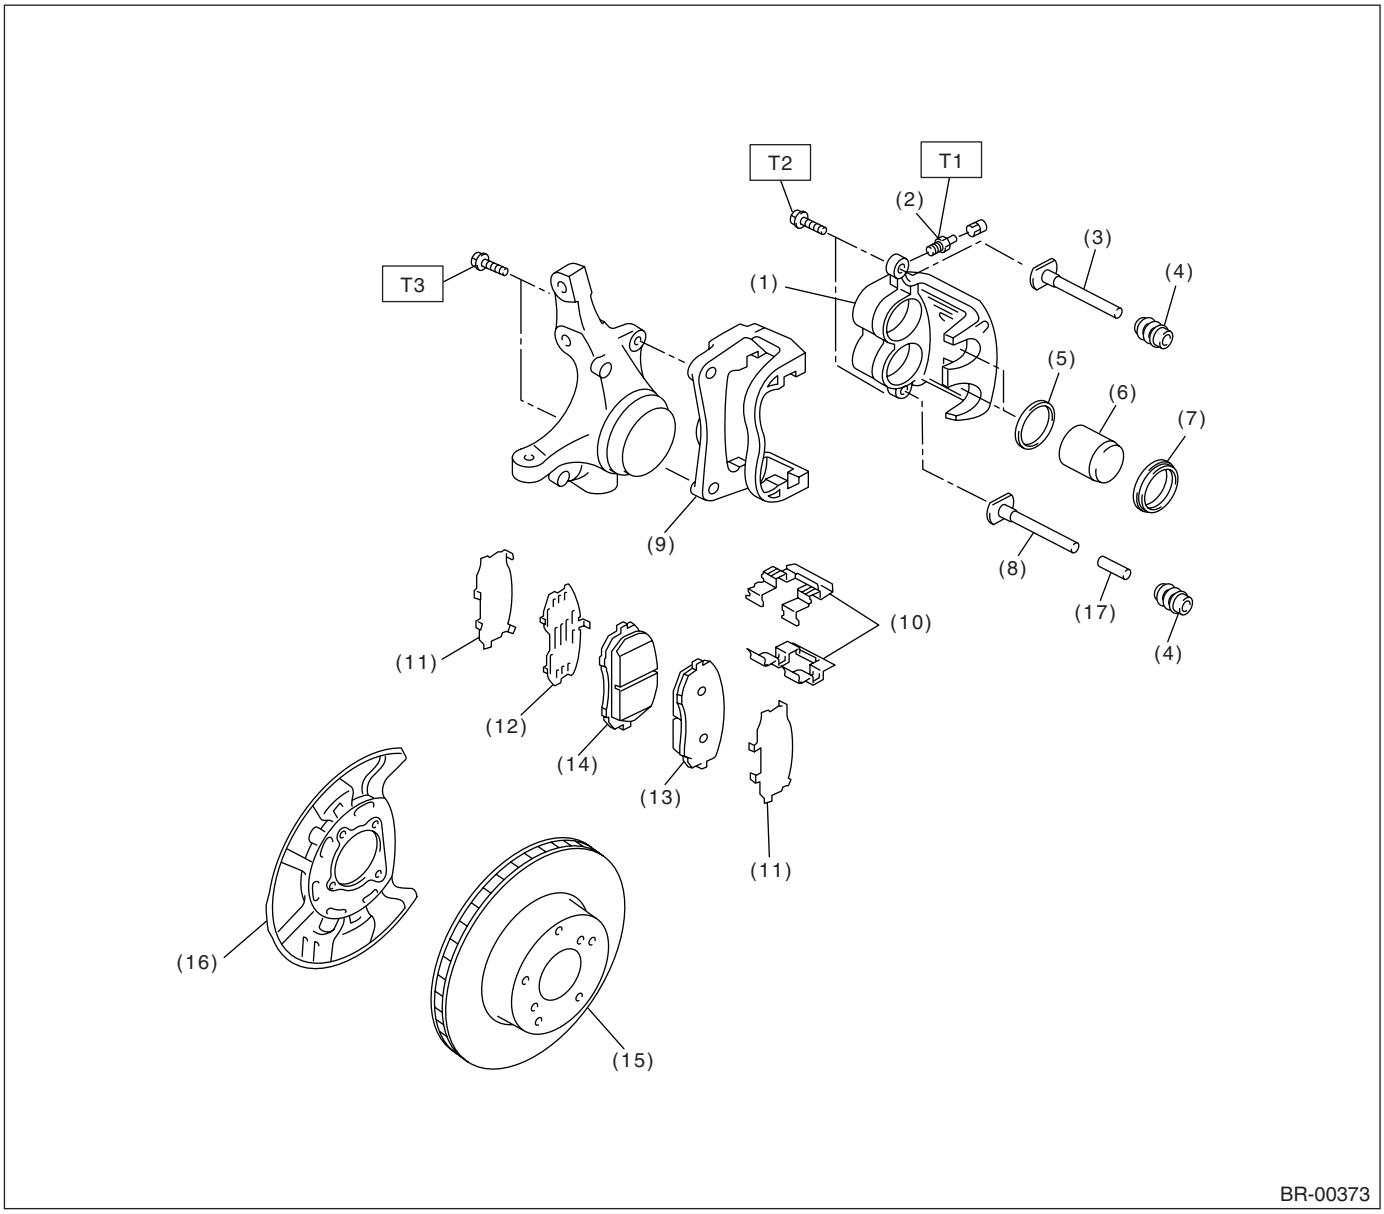


(A) 15, 16-inch type
(B) 17-inch type

(1) Caliper body
(2) Air bleeder screw
(3) Guide pin (Green)
(4) Pin boot
(5) Piston seal
(6) Piston
(7) Piston boot
(8) Lock pin (Yellow)
(9) Support
(10) Pad clip
(11) Outer shim
(12) Inner shim
(13) Pad (Outside)
(14) Pad (Inside)
(15) Disc rotor
(16) Disc cover
(17) Bushing

Tightening torque: N·m (kgf-m, ft-lb)
T1: 8 (0.8, 5.8)
T2: 27 (2.8, 19.9)
T3: 80 (8.2, 59)

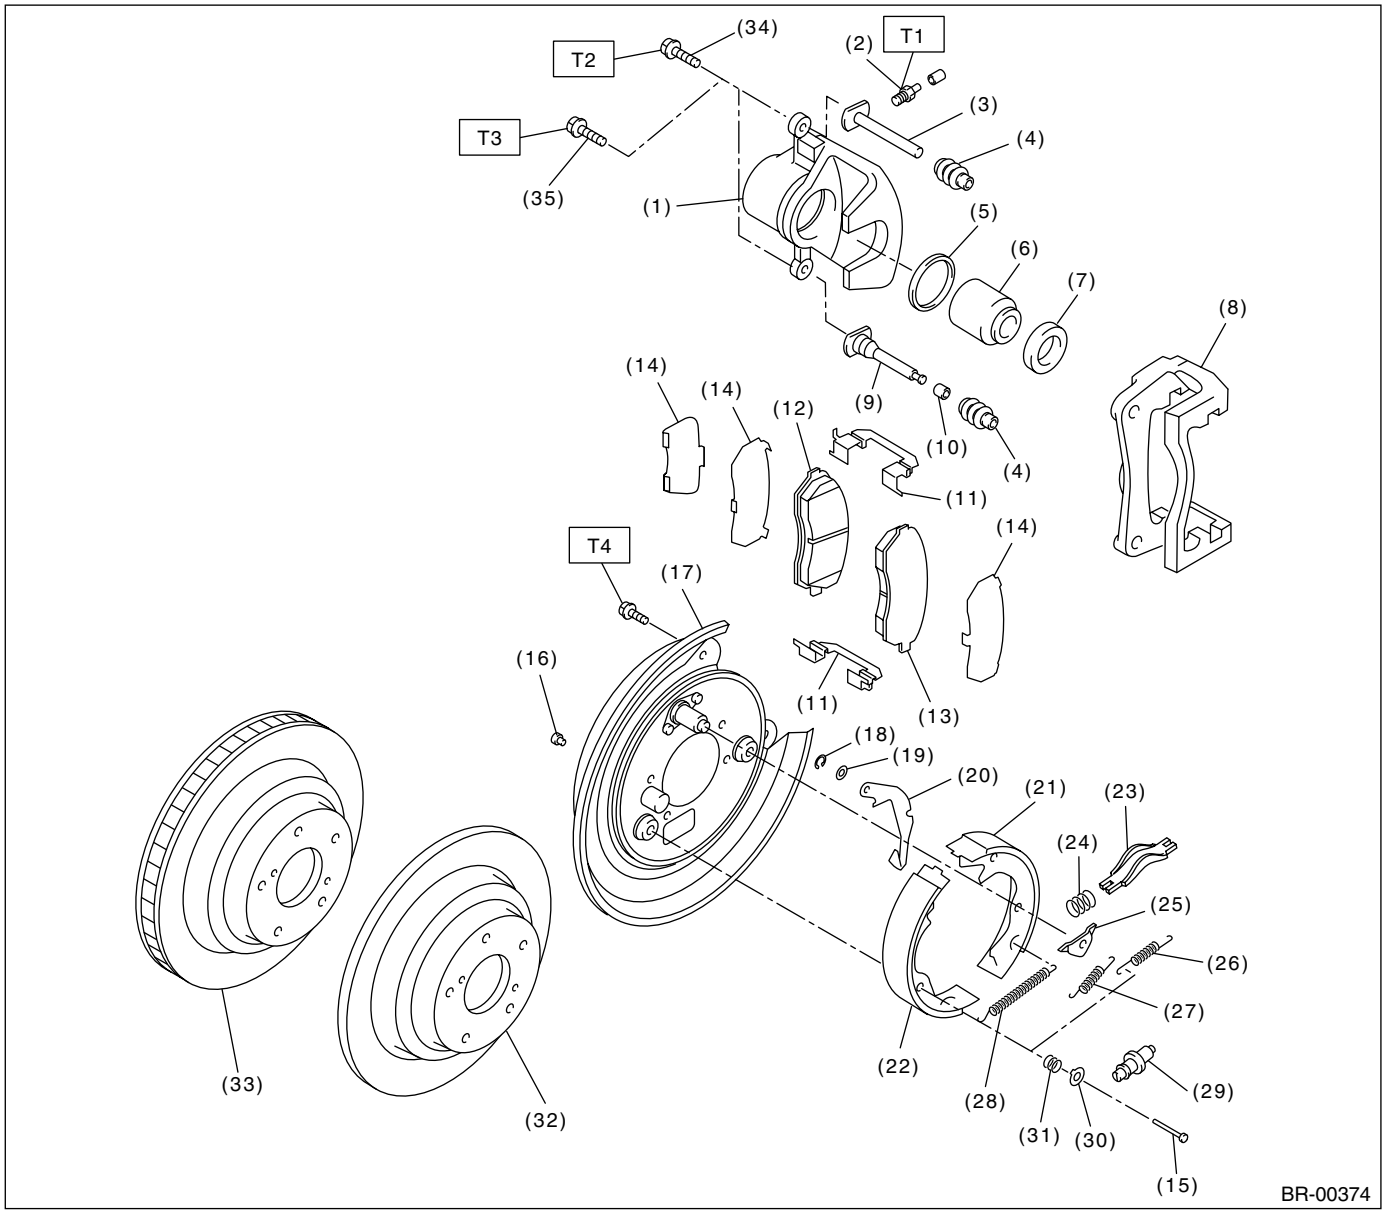
• EC, EK, OUTBACK model



(1) Caliper body
(2) Air bleeder screw
(3) Guide pin (Green)
(4) Pin boot
(5) Piston seal
(6) Piston
(7) Piston boot
(8) Lock pin (Yellow)
(9) Support
(10) Pad clip
(11) Outer shim
(12) Inner shim
(13) Pad (Outside)
(14) Pad (Inside)
(15) Disc rotor
(16) Disc cover
(17) Bushing

Tightening torque: N·m (kgf-m, ft-lb)
T1: 8 (0.8, 5.8)
T2: 27 (2.8, 19.9)
T3: 80 (8.2, 59)

2. REAR DISC BRAKE

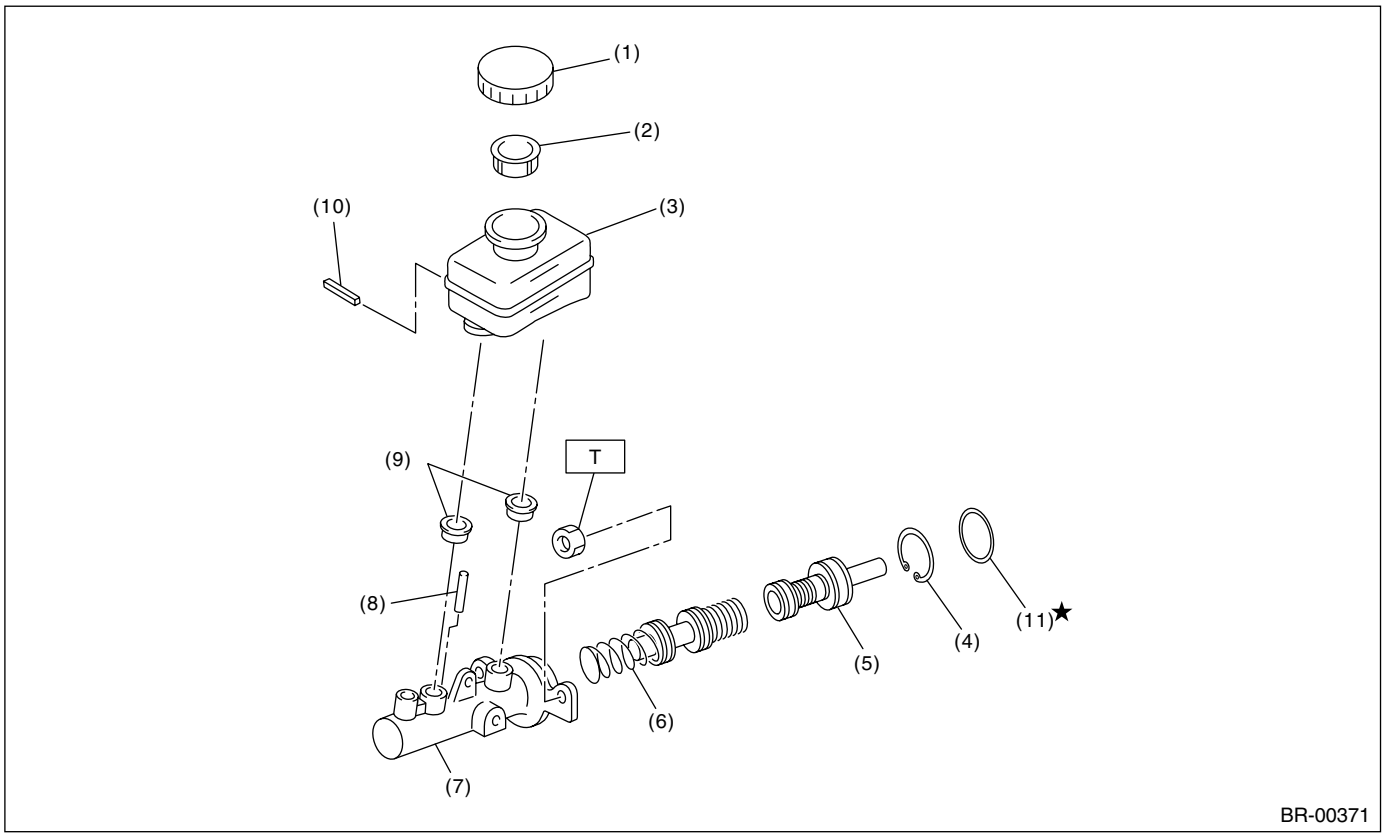


(1) Caliper body
(2) Air bleeder screw
(3) Guide pin (Green)
(4) Pin boot
(5) Piston seal
(6) Piston
(7) Piston boot
(8) Support
(9) Lock pin (Yellow)
(10) Bushing
(11) Pad clip
(12) Inner pad
(13) Outer pad
(14) Shim
(15) Shoe hold-down pin
(16) Cover
(17) Back plate
(18) Retainer
(19) Spring washer
(20) Parking brake lever
(21) Parking brake shoe (Secondary)
(22) Parking brake shoe (Primary)
(23) Strut
(24) Strut shoe spring
(25) Shoe guide plate
(26) Secondary shoe return spring
(27) Primary shoe return spring
(28) Adjusting spring
(29) Adjuster
(30) Shoe hold-down cup
(31) Shoe hold-down spring
(32) Disc rotor (Solid type)
(33) Disc rotor (Ventilated type)
(34) Bolt (For solid disc brake)
(35) Bolt (For ventilated disc brake)

Tightening torque: N·m (kgf-m, ft-lb)
T1: 8 (0.8, 5.8)
T2: 27 (2.8, 19.9)
T3: 37 (3.8, 27.5)
T4: 53 (5.4, 39.1)

3. MASTER CYLINDER

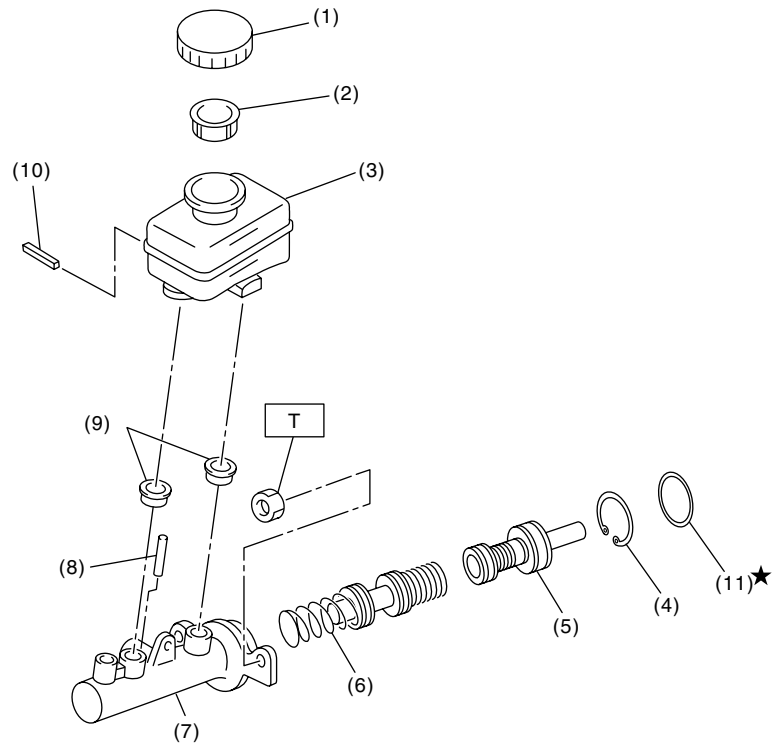
• LHD model



(1) Cap
(2) Filter
(3) Reservoir tank
(4) C-ring
(5) Primary piston
(6) Secondary piston
(7) Cylinder body
(8) Cylinder pin
(9) Seal
(10) Pin
(11) O-ring

Tightening torque: N·m (kgf-m, ft-lb)
T: 13 (1.3, 9.6)

• RHD model

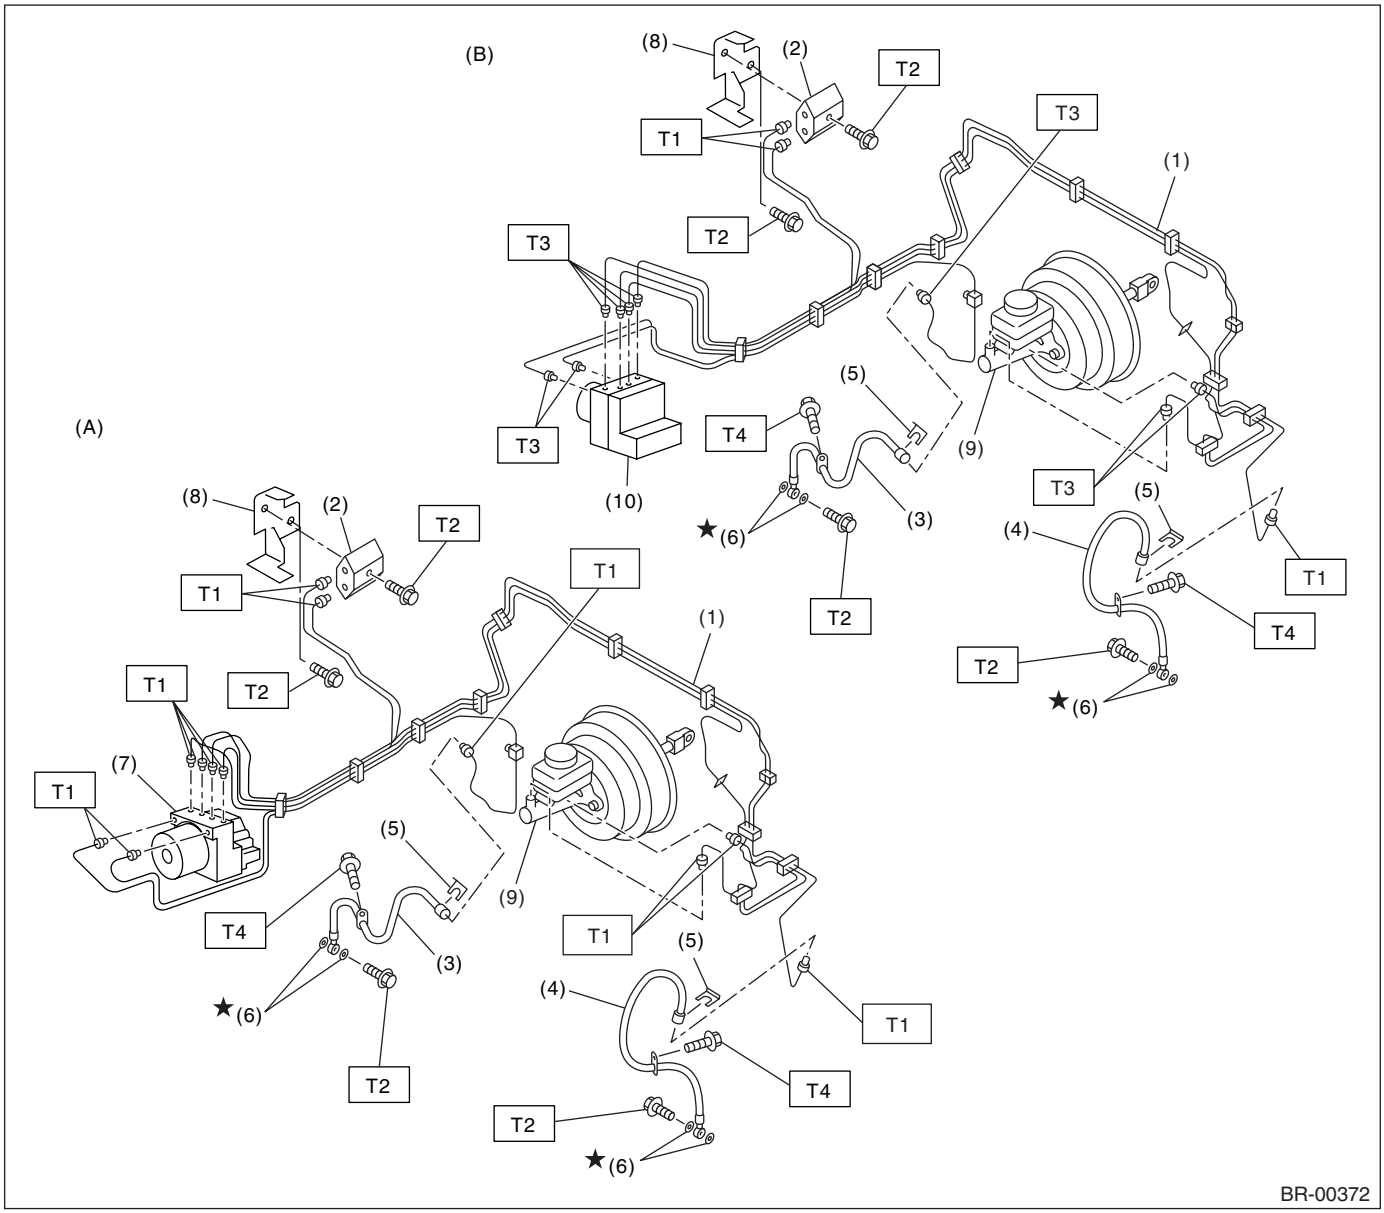


(1) Cap
(2) Filter
(3) Reservoir tank
(4) C-ring
(5) Primary piston
(6) Secondary piston
(7) Cylinder body
(8) Cylinder pin
(9) Seal
(10) Pin
(11) O-ring

Tightening torque: N·m (kgf-m, ft-lb)
T: 13 (1.3, 9.6)

4. FRONT BRAKE PIPES AND HOSE

• LHD model

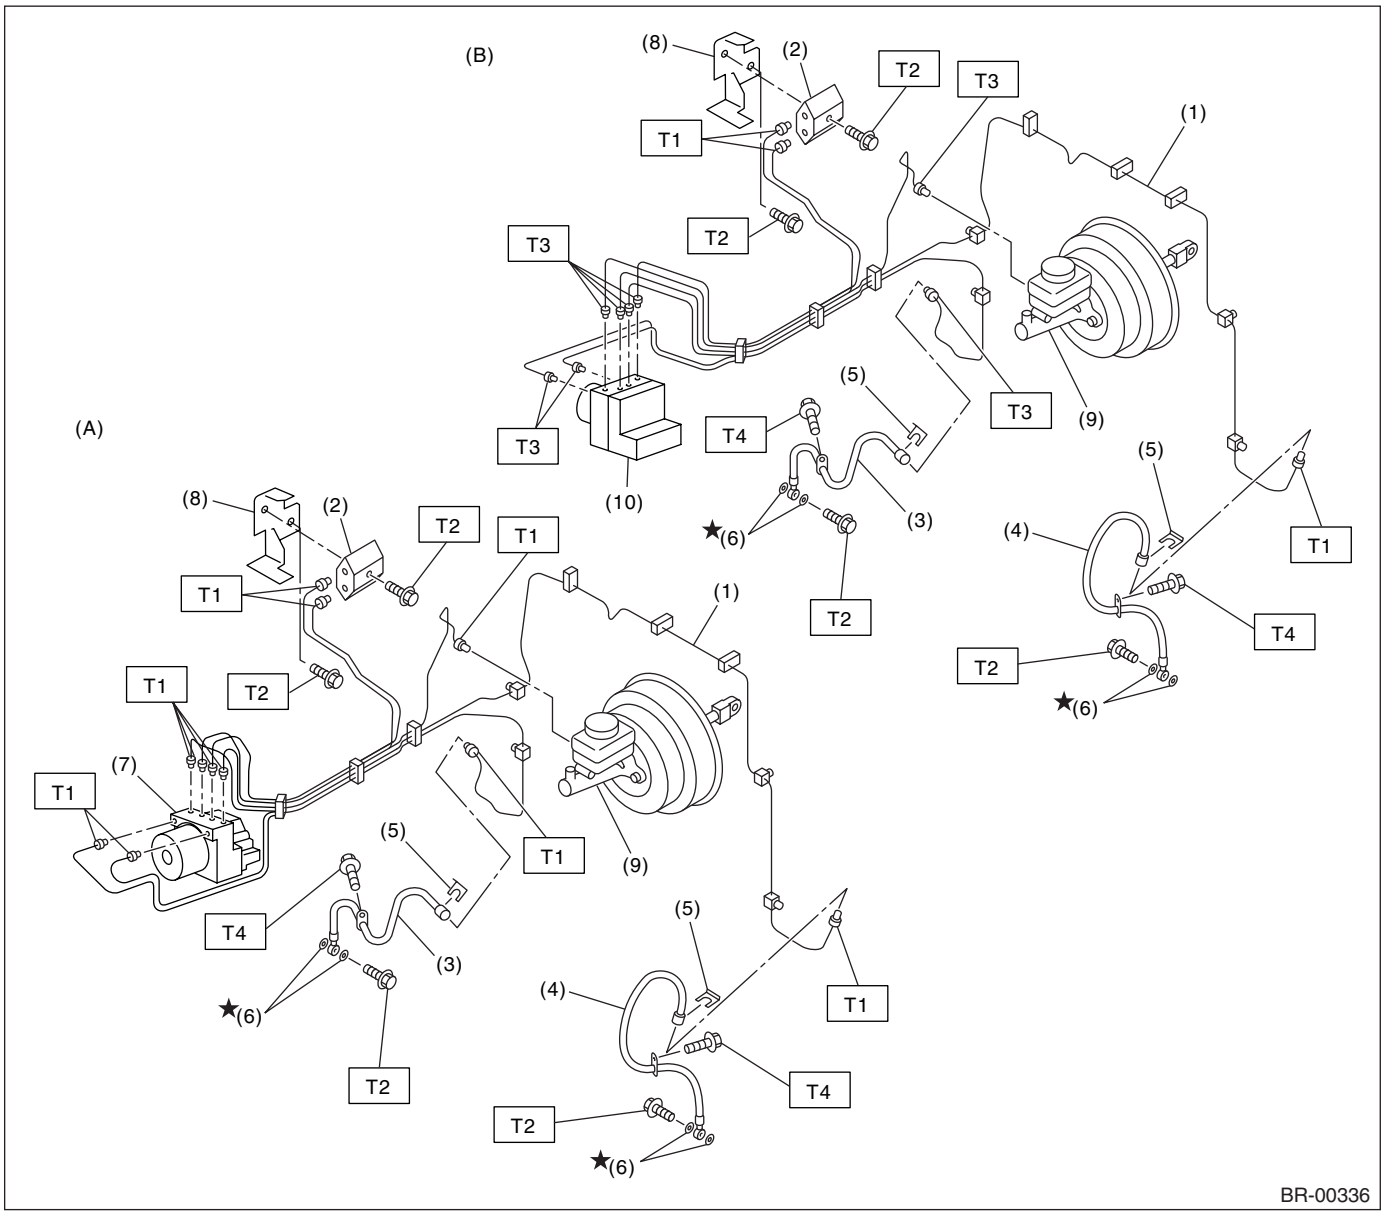


(A)	Model with ABS	(5)	Clamp
(B)	Model with Vehicle dynamics control (VDC)	(6)	Gasket
		(7)	ABS control module and hydraulic control unit (ABSCM&H/U)
(1)	Front brake pipe ASSY	(8)	Bracket
(2)	Two-way connector	(9)	Master cylinder
(3)	Front brake hose RH	(10)	VDC control module & hydraulic control unit (VDCCM&H/U)
(4)	Front brake hose LH		

Tightening torque: N·m (kgf-m, ft-lb)

T1: 15 (1.5, 10.8)
T2: 18 (1.8, 13.0)
T3: 19 (1.9, 14.0)
T4: 33 (3.4, 24.3)

• RHD model

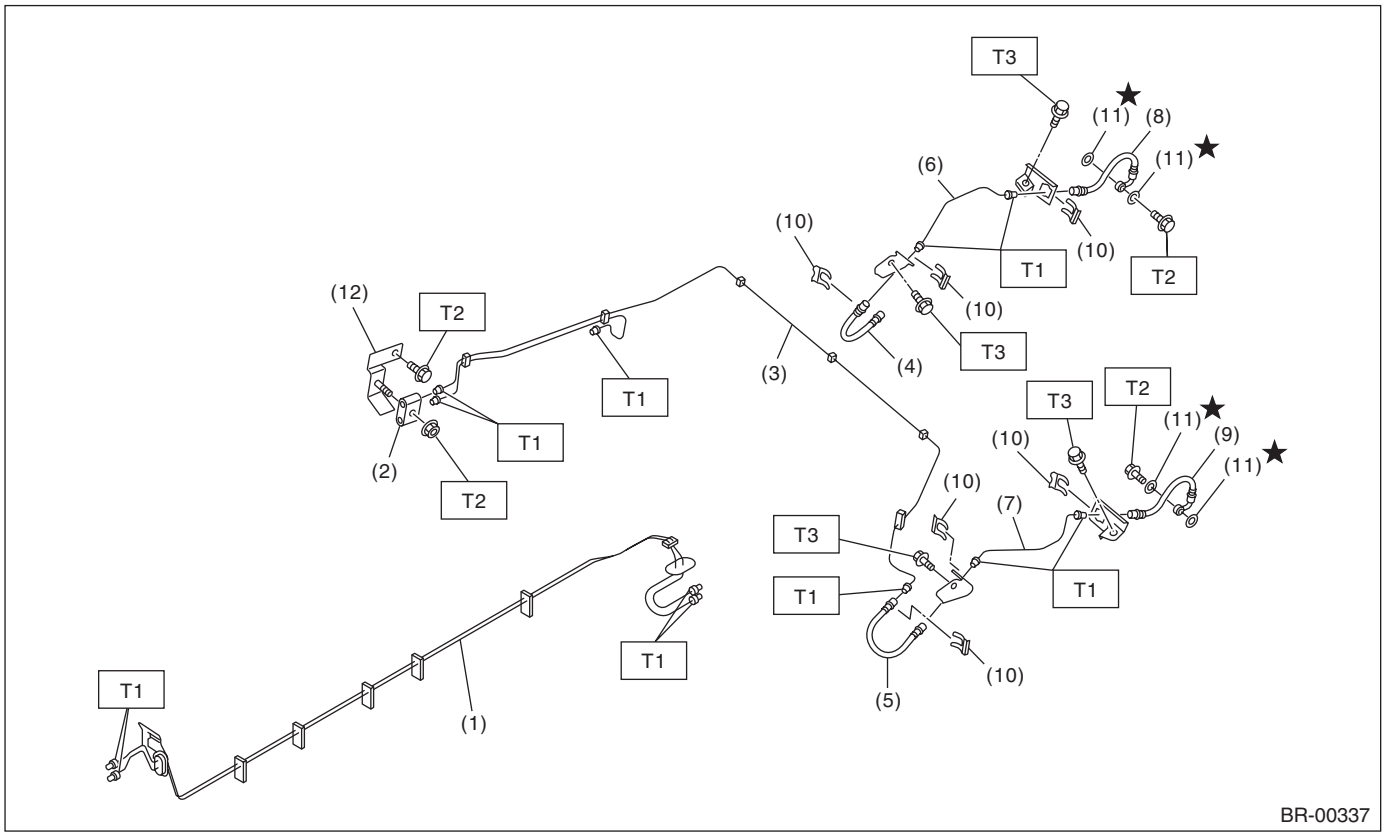


(A) Model with ABS
(B) Model with VDC

(1) Front brake pipe ASSY
(2) Two-way connector
(3) Front brake hose RH
(4) Front brake hose LH
(5) Clamp
(6) Gasket
(7) ABS control module and hydraulic control unit (ABSCM&H/U)
(8) Bracket
(9) Master cylinder
(10) VDC control module & hydraulic control unit (VDCCM&H/U)

Tightening torque: N·m (kgf-m, ft-lb)
T1: 15 (1.5, 10.8)
T2: 18 (1.8, 13.0)
T3: 19 (1.9, 14.0)
T4: 33 (3.4, 24.3)

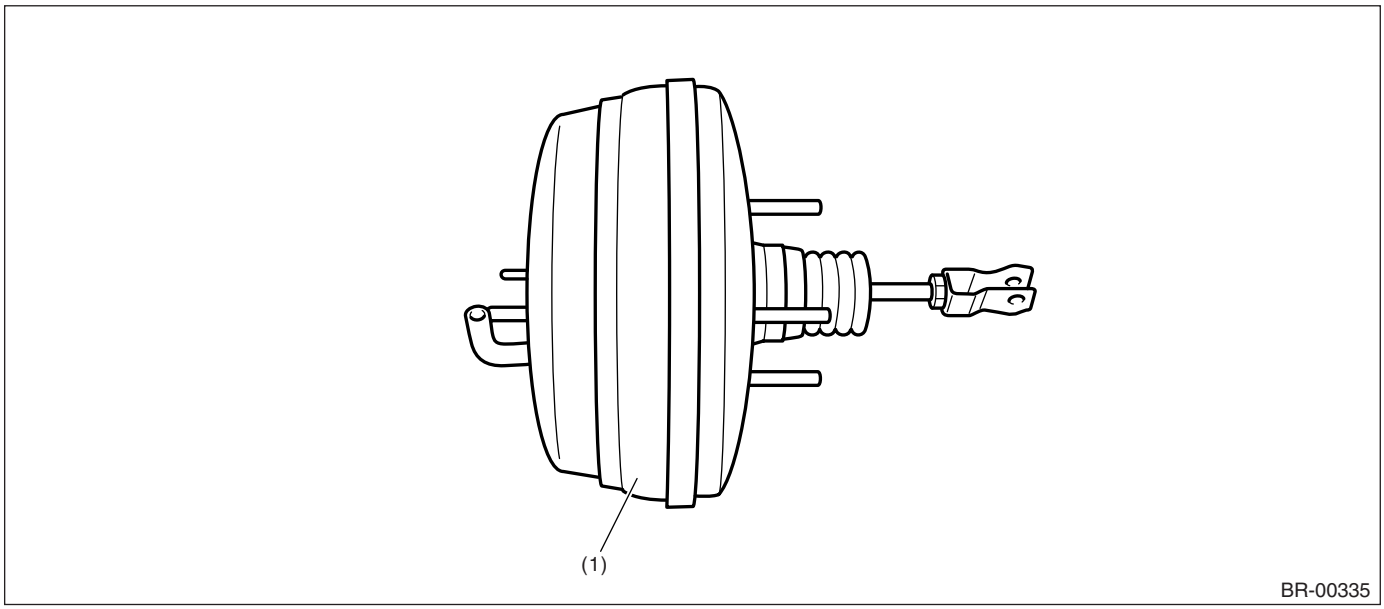
5. CENTER AND REAR BRAKE PIPES AND HOSE



(1)	Center brake pipe ASSY	(7)	Rear brake pipe LH
(2)	Two-way connector	(8)	Rear brake hose rear RH
(3)	Rear brake pipe ASSY	(9)	Rear brake hose rear LH
(4)	Rear brake hose RH	(10)	Clamp
(5)	Rear brake hose LH	(11)	Gasket
(6)	Rear brake pipe RH	(12)	Bracket

Tightening torque: N·m (kgf-m, ft-lb)
T1: 15 (1.5, 10.8)
T2: 18 (1.8, 13.0)
T3: 33 (3.4, 24.3)

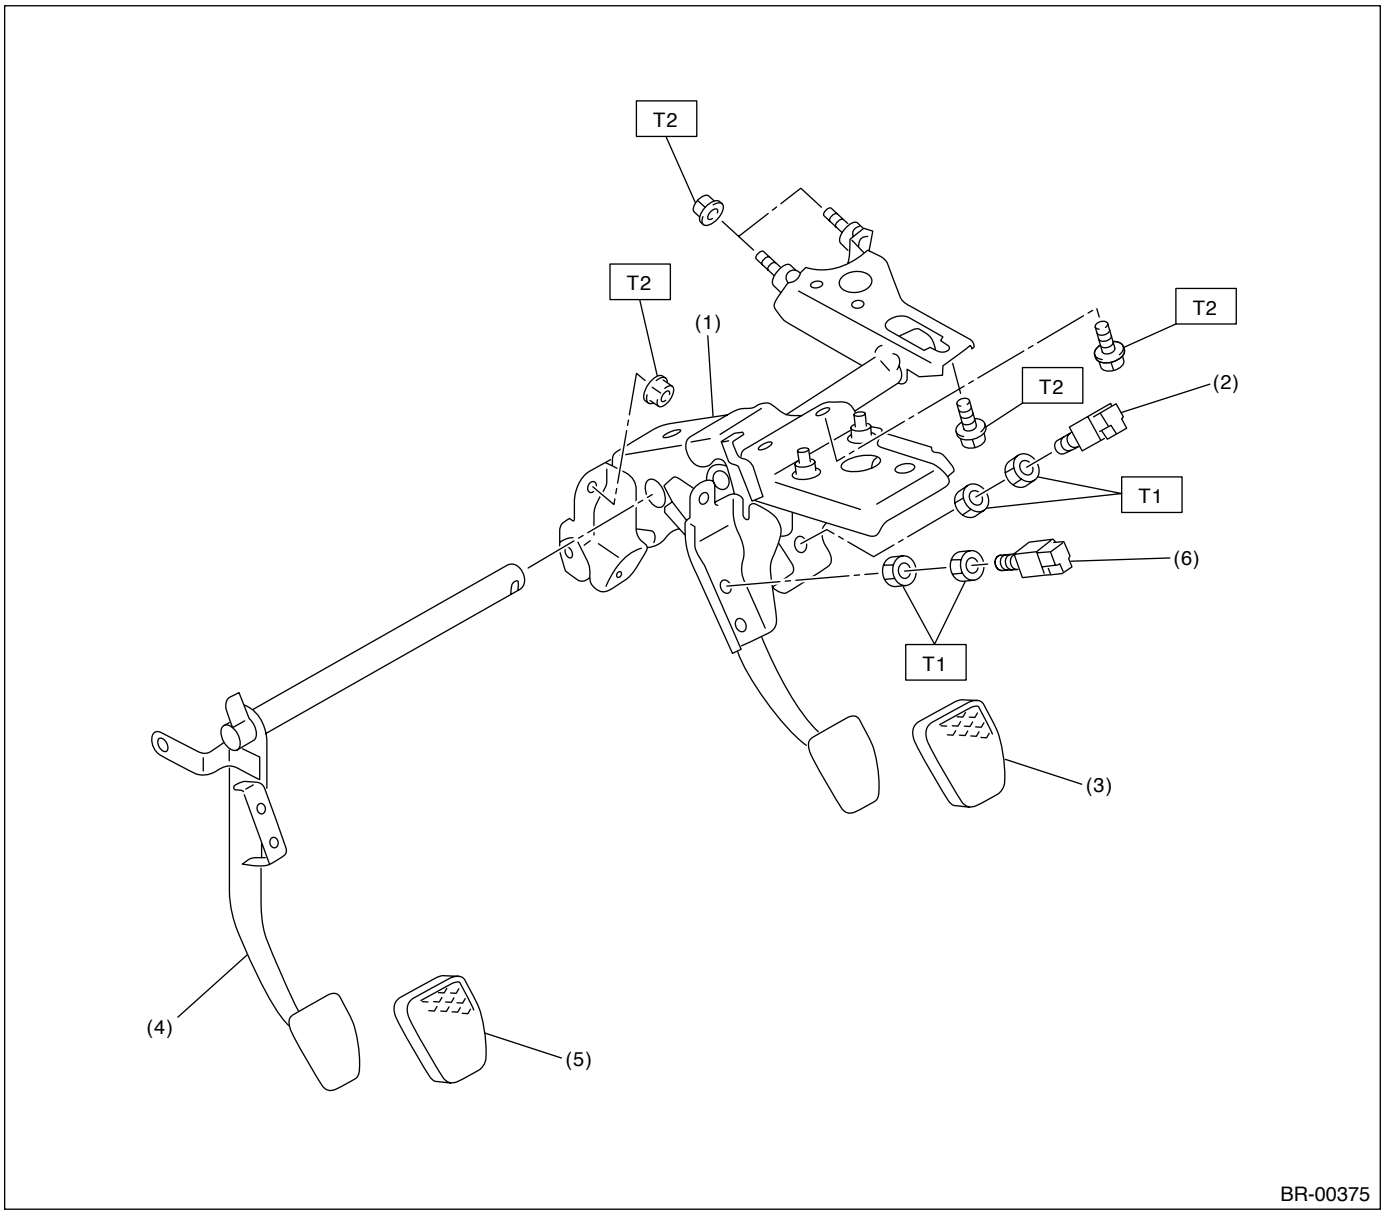
6. BRAKE BOOSTER



(1) Brake booster

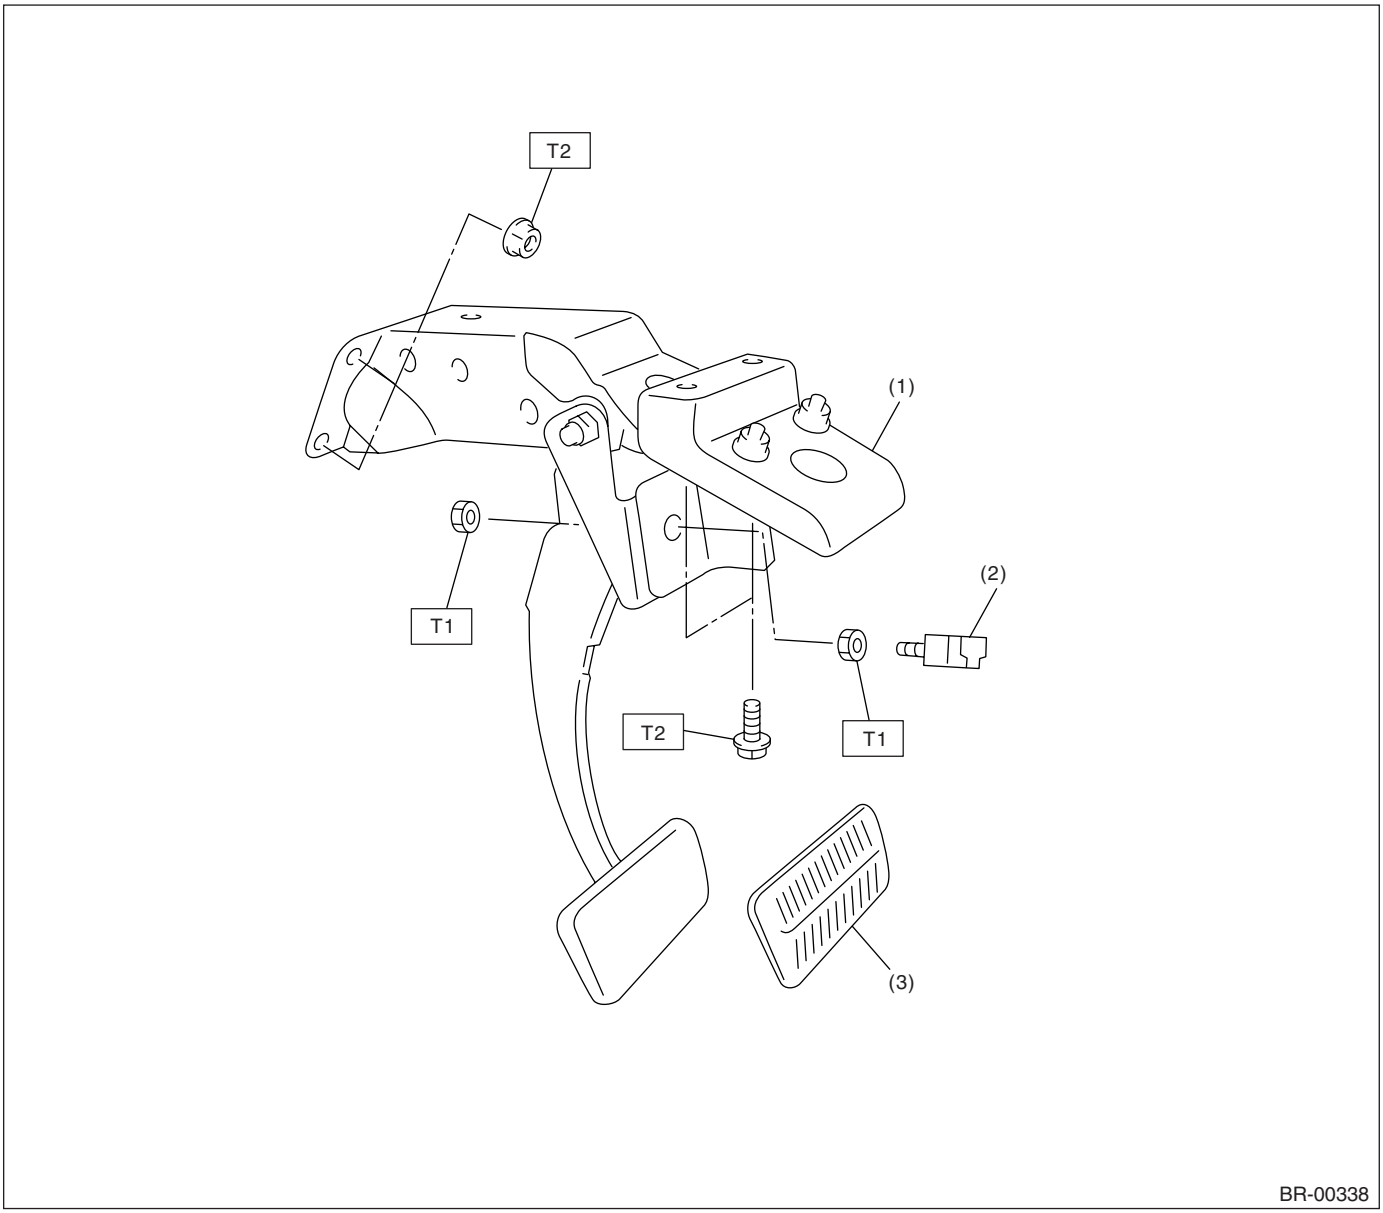
7. BRAKE PEDAL

• LHD MT model



(1)	Brake pedal ASSY	(4)	Clutch pedal	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Stop light switch	(5)	Clutch pedal pad	***T1: 8 (0.8, 5.8)***
(3)	Brake pedal pad	(6)	Clutch switch	***T2: 18 (1.8, 13.0)***

• LHD AT model, RHD model



(1) Brake pedal ASSY
(2) Stop light switch
(3) Brake pedal pad

Tightening torque: N·m (kgf-m, ft-lb)
T1: 8 (0.8, 5.8)
T2: 18 (1.8, 13.0)

C: CAUTION

• Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
• Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
• Use SUBARU genuine grease etc. or equivalent. Do not mix grease, etc. with that of another grade or from other manufacturers.
• Before securing a part on a vice, place cushioning material such as wood blocks, aluminum plate, or shop cloth between the part and the vice.
• Be sure to tighten fasteners including bolts and nuts to the specified torque.
• Place shop jacks or rigid racks at the specified points.

D: PREPARATION TOOL

1. GENERAL TOOL

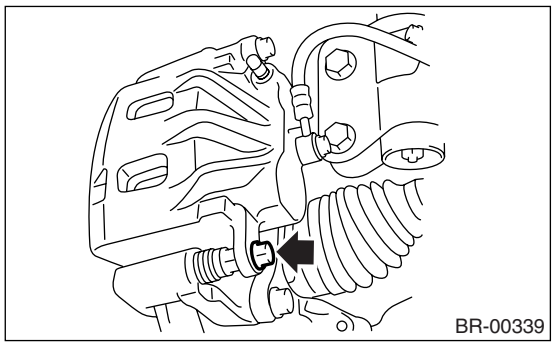
TOOL NAME	REMARKS
Snap ring pliers	Used for removing and installing snap ring.

2. Front Brake Pad

A: REMOVAL

1. 15-INCH TYPE

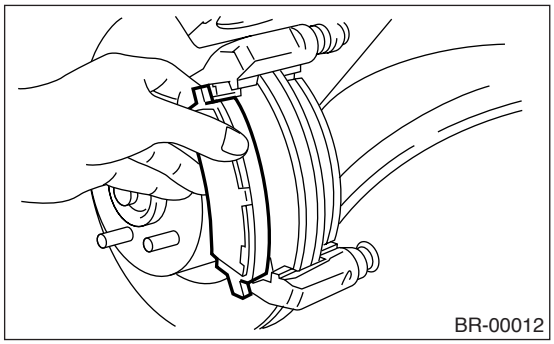
1) Lift-up the vehicle and remove the front wheels.
2) Remove the caliper bolt.



3) Raise the caliper body and support it.

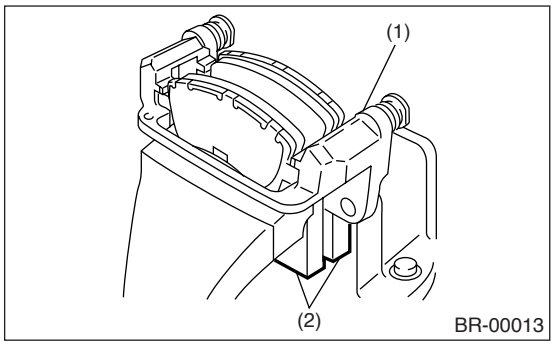
NOTE:
Do not disconnect the brake hose from caliper body.

4) Remove the pad.



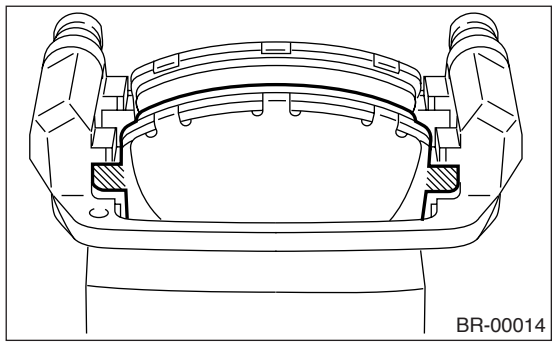
NOTE:
If the brake pad is difficult to remove, proceed as follows:

(1) Remove the caliper body from support.
(2) Remove the support.
(3) Place the support in a vise between wooden blocks.



(1) Support
(2) Wooden block

(4) Attach a rod of less than 12 mm (0.47 in) diameter to the shaded area of the brake pad, and strike the rod with a hammer to drive brake pad out of place.



2. 16-INCH TYPE

Refer to 15-inch type. <Ref. to BR-16, 15-INCH TYPE, REMOVAL, Front Brake Pad.>

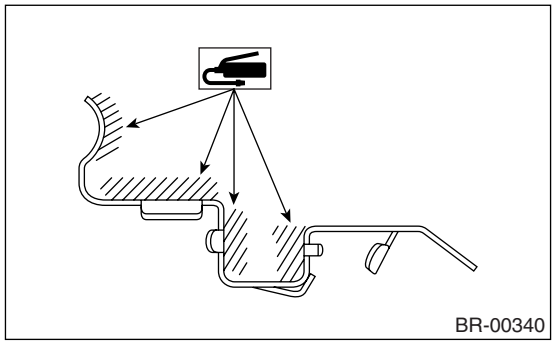
3. 17-INCH TYPE

Refer to 15-inch type. <Ref. to BR-16, 15-INCH TYPE, REMOVAL, Front Brake Pad.>

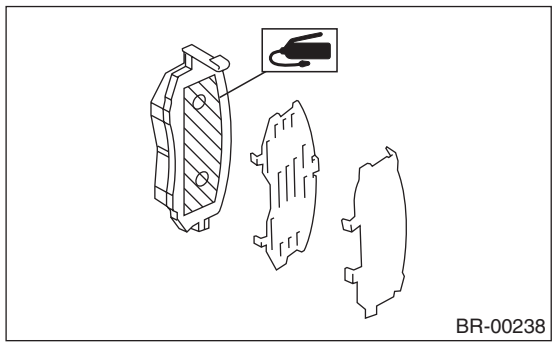
B: INSTALLATION

1. 15-INCH TYPE

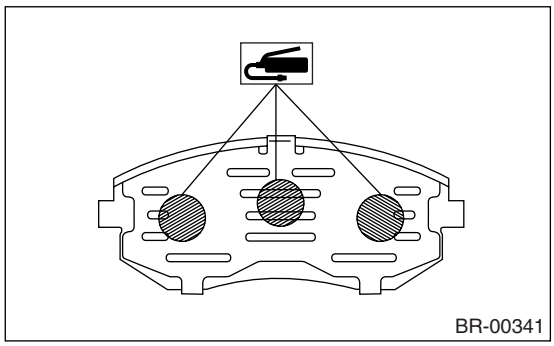
1) Apply a thin coat of Molykote M7439 to the pad clip.



2) Apply a thin coat of Molykote AS880N (Part No. K0779YA010) to the frictional portion between pad and pad inner shim.



3) Apply a thin coat of Molykote AS880N (Part No. K0779YA010) to the three frictional portions between inner shim and outer shim of outer pads.



4) Install the pad on support.
5) Install the caliper body on support.

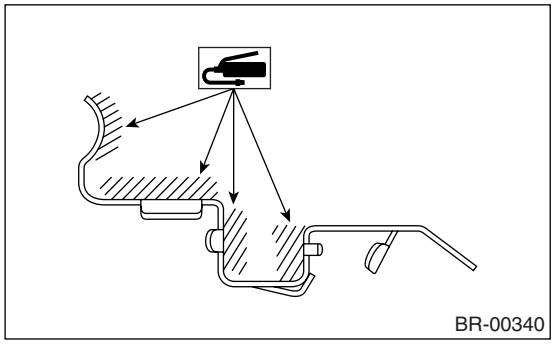
Tightening torque:
27 N·m (2.8 kgf-m, 19.9 ft-lb)

2. 16-INCH TYPE

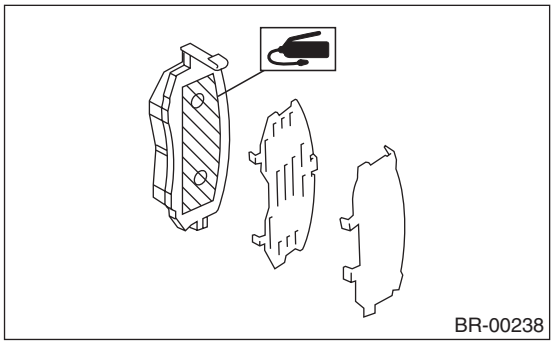
Refer to 15-inch type. <Ref. to BR-16, 15-INCH TYPE, INSTALLATION, Front Brake Pad.>

3. 17-INCH TYPE

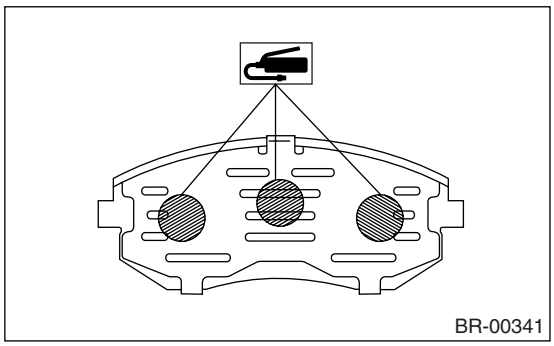
1) Apply a thin coat of Molykote M7439 to the pad clip.



2) Apply a thin coat of Molykote AS880N (Part No. K0779YA010) to the frictional portion between pad and pad inner shim.

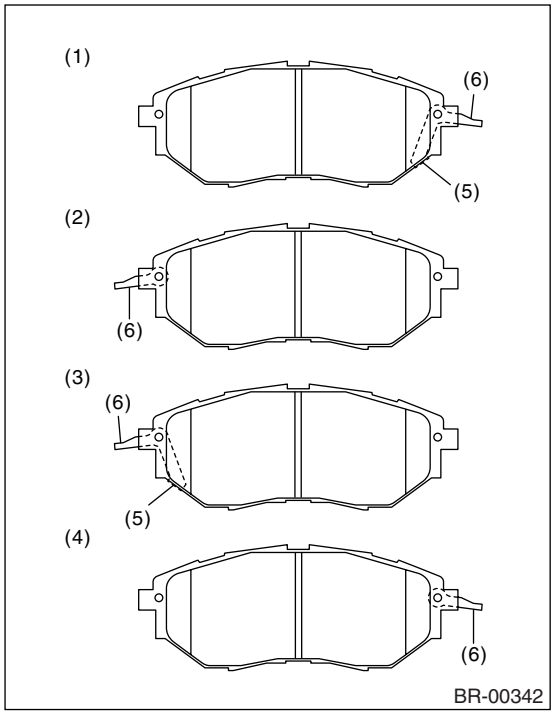


3) Apply a thin coat of Molykote AS880N (Part No. K0779YA010) to the three frictional portions between inner shim and outer shim of outer pads.



4) Install the pad on support.

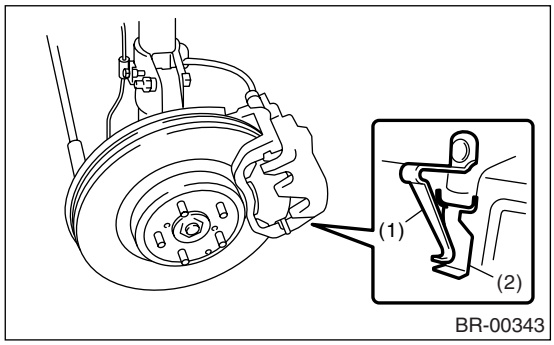
NOTE:
Install the pad indicator in proper direction.



(1) LH – IN
(2) LH – OUT
(3) RH – IN
(4) RH – OUT
(5) Pad indicator
(6) Pad return spring

CAUTION:
• Correctly install the pad return spring to supporting surface of pad clip as shown in the figure.

• When the pad return spring is deformed or damaged, replace the brake pad with new one.



(1) Pad return spring
(2) Supporting surface of pad clip

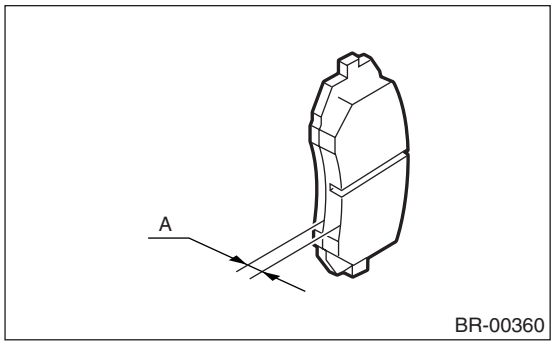
5) Install the caliper body on support.

Tightening torque:
27 N·m (2.8 kgf-m, 19.9 ft-lb)

C: INSPECTION

1. 15-INCH AND 16-INCH TYPE

Check the pad thickness A.



Pad thickness mm (in)	Standard value	11 (0.43)
	Wear limit	1.5 (0.059)

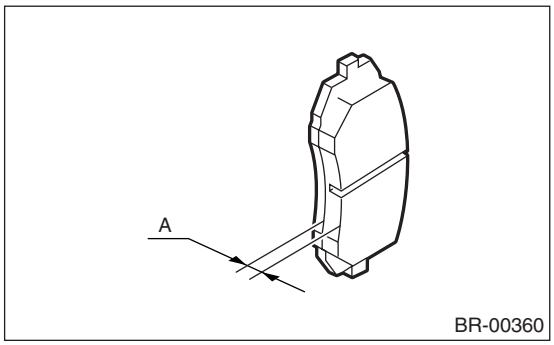
NOTE:
• Always replace the pads for both right and left wheels at the same time.
• Also replace the pad clips if they are twisted or worn.
• Replace the pad if there is oil or grease on it.

2. 16-INCH TYPE

Refer to 15-inch type. <Ref. to BR-18, 15-INCH AND 16-INCH TYPE, INSPECTION, Front Brake Pad.>

3. 17-INCH TYPE

Check the pad thickness A.



Pad thickness mm (in)	Standard value	11 (0.43)
	Wear limit	1.5 (0.059)

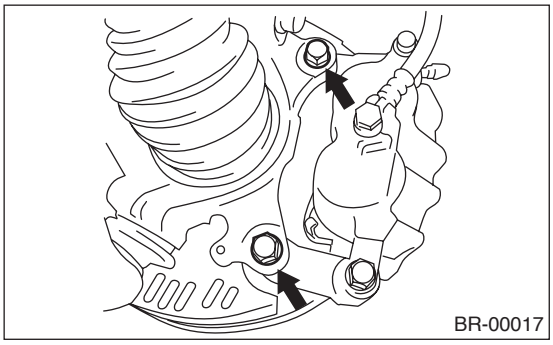
NOTE:
• Always replace the pads for both right and left wheels at the same time.
• Replace the pad if there is oil or grease on it.

3. Front Disc Rotor

A: REMOVAL

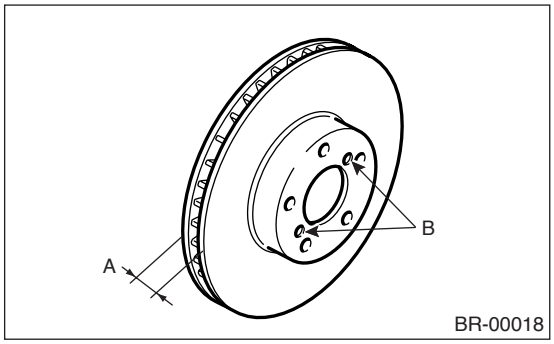
1. 15-INCH TYPE

1) Lift-up the vehicle, and remove the front wheels.
2) Remove the caliper body and the support from housing, and suspend it from strut using a wire.



3) Remove the disc rotor.

NOTE:
If the disc rotor seizes up within hub, drive the disc rotor out by pushing with an 8 mm bolt in holes B on the rotor.



4) Clean mud and foreign particles from the caliper body assembly and the support.

2. 16-INCH TYPE

Refer to 15-inch type. <Ref. to BR-19, 15-INCH TYPE, REMOVAL, Front Disc Rotor.>

3. 17-INCH TYPE

Refer to 15-inch type. <Ref. to BR-19, 15-INCH TYPE, REMOVAL, Front Disc Rotor.>

B: INSTALLATION

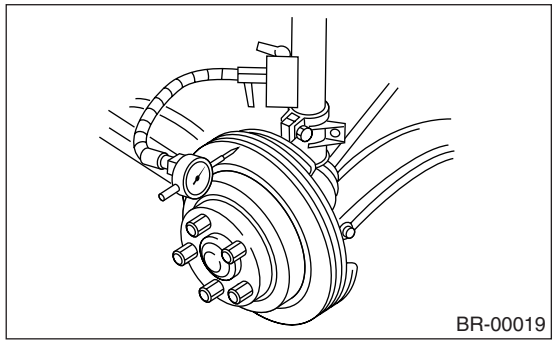
1) Install the disc rotor.
2) Install the caliper body and the support to housing.

Tightening torque:
80 N·m (8.2 kgf-m, 59 ft-lb)

3) Install the front wheels.

C: INSPECTION

1) Check front wheel bearing play and axial hub runout before disc rotor runout limit inspection. <Ref. to DS-15, INSPECTION, Front Axle.>
2) Secure the disc rotor by tightening five wheel nuts.
3) Set a dial gauge 10 mm (0.39 in) inward of rotor outer perimeter. Turn the disc rotor to check runout. If the disc rotor runout exceeds specified value, replace with a new disc rotor.



Disc rotor runout limit:
0.05 mm (0.0020 in)

4) Set a micrometer 10 mm (0.39 in) inward of the rotor outer perimeter, and then measure the disc rotor thickness. If the thickness of disc rotor is outside the service limit, replace with a new disc rotor.

		Standard value	Limit	Disc rotor outer diameter
Disc rotor thickness A mm (in)	15″	24 (0.94)	22 (0.87)	277 (10.91)
	16″	24 (0.94)	22 (0.87)	294 (11.57)
	17″	30 (1.18)	28 (1.10)	316 (12.44)

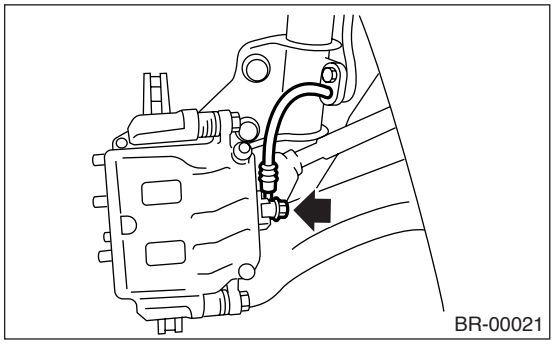
4. Front Disc Brake Assembly

A: REMOVAL

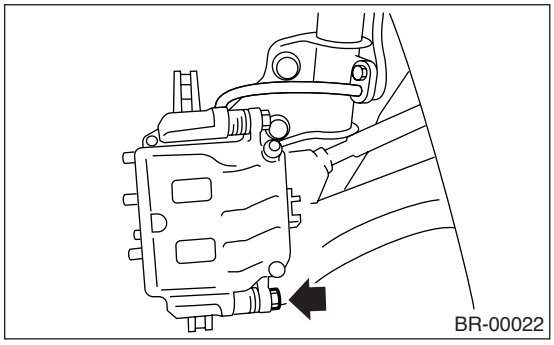
1. 15-INCH TYPE

CAUTION:
Do not allow brake fluid to come in contact with vehicle body; wash away with water and wipe off completely if spilled.

1) Lift-up the vehicle, and remove the front wheels.
2) Remove the union bolt, and disconnect the brake hose from caliper body assembly.

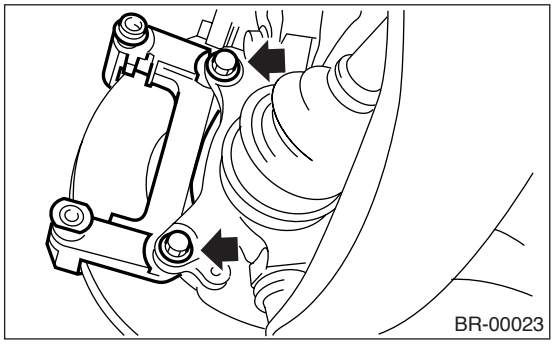


3) Remove the bolt securing lock pin to caliper body.



4) Raise the caliper body, and then move it toward vehicle center to separate it from support.
5) Remove the support from housing.

NOTE:
Remove the support only when replacing itself or rotor. It need not be removed when servicing the caliper body assembly.



6) Clean mud and foreign particles from the caliper body assembly and the support.

2. 16-INCH TYPE

Refer to 15-inch type. <Ref. to BR-20, 15-INCH TYPE, REMOVAL, Front Disc Brake Assembly.>

3. 17-INCH TYPE

Refer to 15-inch type. <Ref. to BR-20, 15-INCH TYPE, REMOVAL, Front Disc Brake Assembly.>

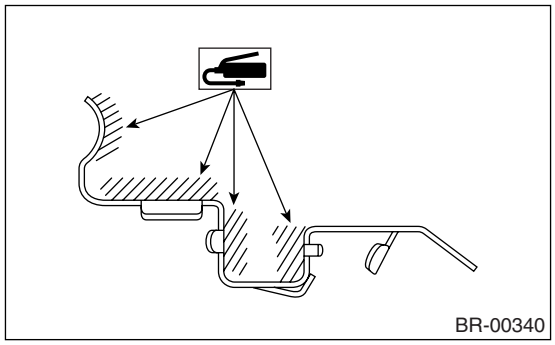
B: INSTALLATION

1. 15-INCH TYPE

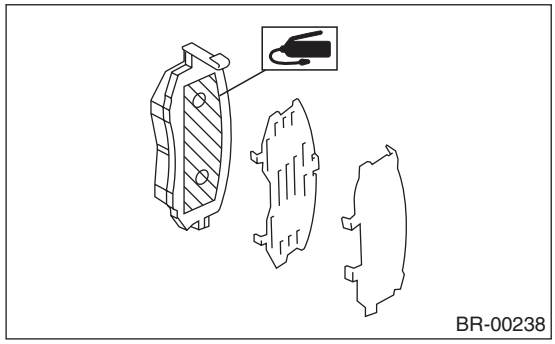
1) Install the support on housing.

Tightening torque:
80 N·m (8.2 kgf-m, 59 ft-lb)

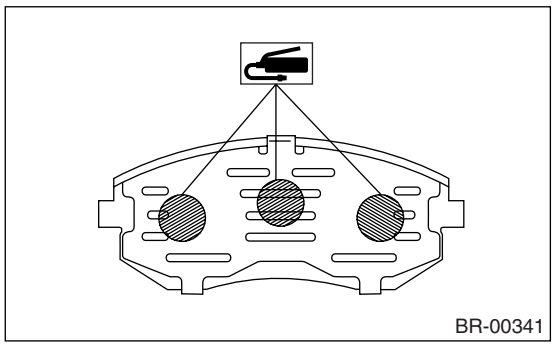
2) Apply a thin coat of Molykote M7439 to the pad clip.



3) Apply a thin coat of Molykote AS880N (Part No. K0777YA010) to the frictional portion between pad and inner shim.



4) Apply a thin coat of Molykote AS880N (Part No. K0777YA010) to the three frictional portions between inner shim and outer shim of outer pads.



5) Install the pad on support.
6) Install the caliper body on support.

Tightening torque:
27 N·m (2.8 kgf-m, 19.9 ft-lb)

7) Using new brake hose gaskets, connect the brake hose.

Tightening torque:
18 N·m (1.8 kgf-m, 13.0 ft-lb)

8) Bleed air from brake system.

2. 16-INCH TYPE

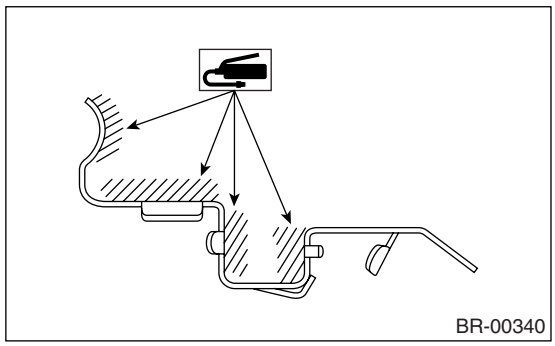
Refer to 15-inch type. <Ref. to BR-20, 15-INCH TYPE, INSTALLATION, Front Disc Brake Assembly.>

3. 17-INCH TYPE

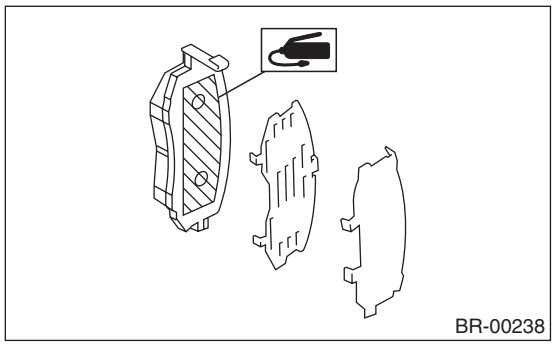
1) Install the support on housing.

Tightening torque:
80 N·m (8.2 kgf-m, 59 ft-lb)

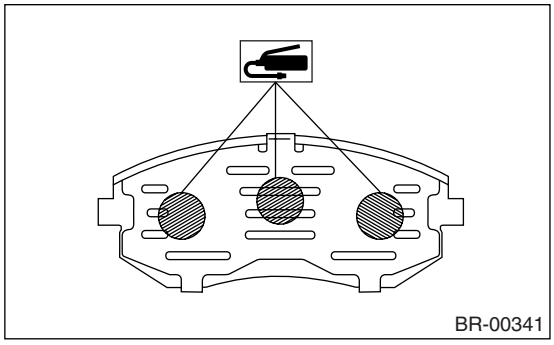
2) Apply a thin coat of Molykote M7439 to the pad clip.



3) Apply a thin coat of Molykote AS880N (Part No. K0777YA010) to the frictional portion between pad and inner shim.

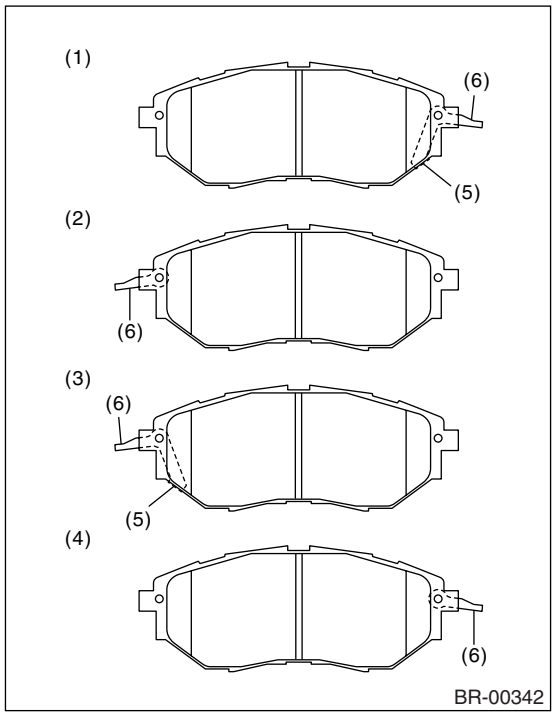


4) Apply a thin coat of Molykote AS880N (Part No. K0779YA010) to the three frictional portions between inner shim and outer shim of outer pads.



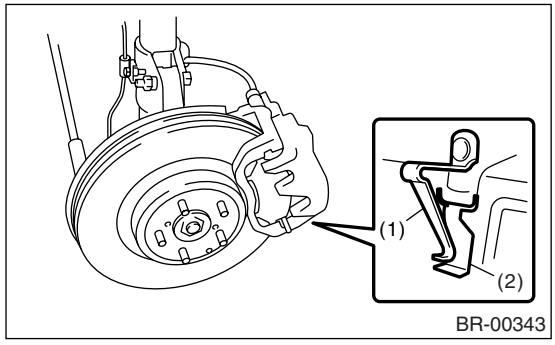
5) Install the pad on support.

NOTE:
Install the pad indicator in proper direction.



(1) LH – IN
(2) LH – OUT
(3) RH – IN
(4) RH – OUT
(5) Pad indicator
(6) Pad return spring

CAUTION:
• Correctly install the pad return spring to supporting surface of pad clip as shown in the figure.
• When the pad return spring is deformed or damaged, replace the brake pad with new one.



(1) Pad return spring
(2) Supporting surface of pad clip

6) Install the caliper body on support.

7) Using new brake hose gaskets, connect the brake hose.

Tightening torque:
18 N·m (1.8 kgf-m, 13.0 ft-lb)

8) Bleed air from brake system.

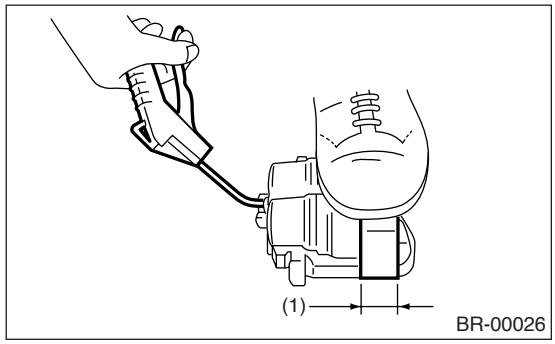
C: DISASSEMBLY

1. 15-INCH TYPE

1) Clean mud and foreign particles from the caliper body assembly and the support.

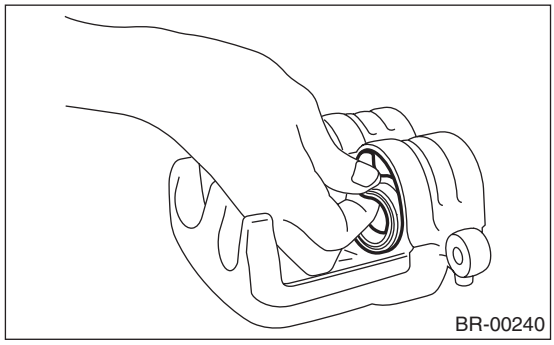
CAUTION:
Be careful not to allow foreign particles to enter inlet (at brake hose connector).

2) Place a wooden block in caliper body as shown in the figure to prevent piston from jumping out and avoid being damaged.
3) Gradually supply compressed air via installation hole of brake hose to force the piston out.



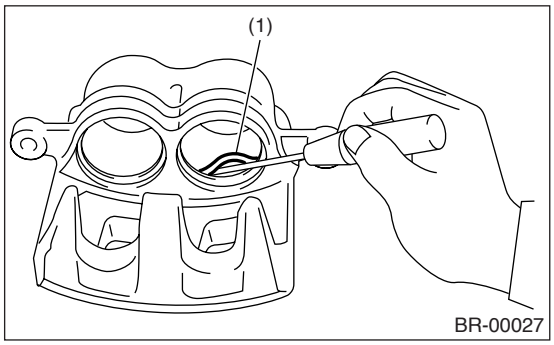
(1) Place a 30 mm (1.18 in) wide wood block here.

4) Remove the piston boot.



5) Remove the piston seal from caliper body cylinder.

CAUTION:
Do not damage the cylinder and piston seal groove.



(1) Piston seal

6) Remove the guide pin and boot from caliper body.

2. 16-INCH TYPE

Refer to 15-inch type. <Ref. to BR-22, 15-INCH TYPE, DISASSEMBLY, Front Disc Brake Assembly.>

3. 17-INCH TYPE

Refer to 15-inch type. <Ref. to BR-22, 15-INCH TYPE, DISASSEMBLY, Front Disc Brake Assembly.>

D: ASSEMBLY

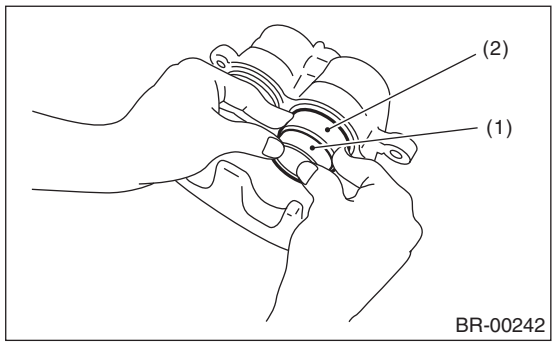
1. 15-INCH TYPE

1) Clean the caliper body interior using brake fluid.
2) Apply a coat of brake fluid to the piston seal and fit piston seal in groove on caliper body.
3) Apply a coat of brake fluid to the entire inner surface of cylinder and outer surface of piston.
4) Apply a coat of specified grease to the boot and fit in to the groove on ends of cylinder.

Grease:
NIGLUBE RX-2 (Part No. K0779GA102)

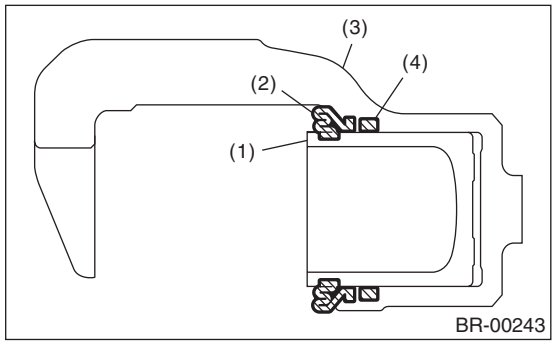
5) Insert the piston into cylinder.

CAUTION:
Do not force the piston into cylinder.



(1) Piston
(2) Piston boot

6) Position the boot in the grooves on cylinder and piston.

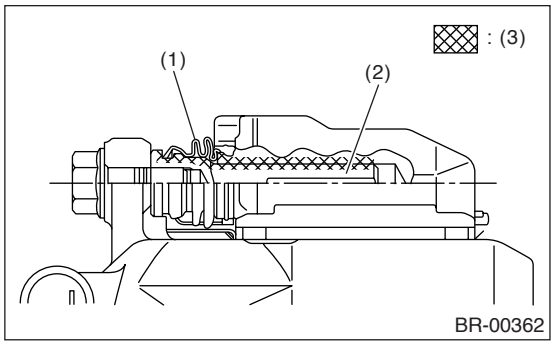


(1) Piston
(2) Piston boot
(3) Caliper body
(4) Piston seal

7) Apply a coat of specified grease to the lock pin and guide pin outer surface, cylinder inner surface, and boot grooves.

Grease:
NIGLUBE RX-2 (Part No. K0779GA102)

8) Install the lock pin and guide pin boot on support.



(1) Pin boot
(2) Lock pin or guide pin
(3) Apply grease.

2. 16-INCH TYPE

Refer to 15-inch type. <Ref. to BR-23, 15-INCH TYPE, ASSEMBLY, Front Disc Brake Assembly.>

3. 17-INCH TYPE

Refer to 15-inch type. <Ref. to BR-23, 15-INCH TYPE, ASSEMBLY, Front Disc Brake Assembly.>

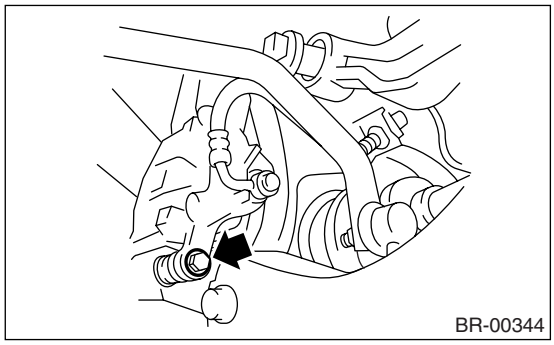
E: INSPECTION

1) Repair or replace the faulty parts.
2) Check the caliper body and piston for uneven wear, damage or rust.
3) Check the rubber parts for damage and deterioration.

5. Rear Brake Pad

A: REMOVAL

1) Lift-up the vehicle, and then remove the rear wheels.
2) Remove the caliper bolt.

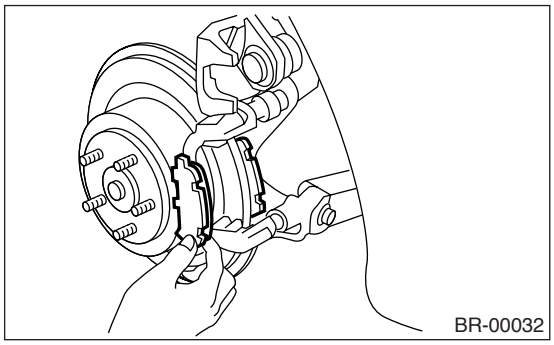


3) Raise the caliper body and support it.

NOTE:
Do not disconnect the brake hose from caliper body.

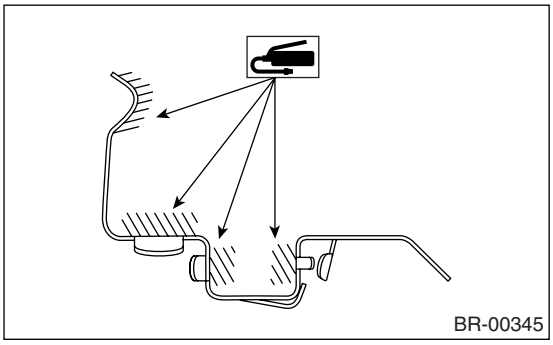
4) Remove the pad.

NOTE:
If the brake pad is difficult to remove, use the same procedure as for front disc brake pad.
<Ref. to BR-16, REMOVAL, Front Brake Pad.>



B: INSTALLATION

1) Apply a thin coat of Molykote M7439 to the pad clip.

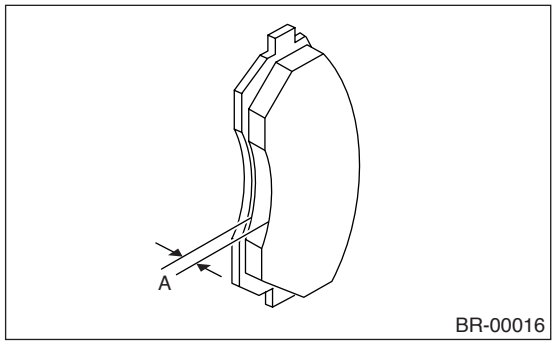


2) Apply a thin coat of Molykote AS880N (Part No. K0777YA010) to the frictional portion between pad and shim.
3) Install the pad on support.
4) Install the caliper body on support.

Tightening torque:
Solid disc brake model
27 N·m (2.8 kgf-m, 19.9 ft-lb)
Ventilated disc brake model
37 N·m (3.7 kgf-m, 27.2 ft-lb)

C: INSPECTION

Check the pad thickness A.



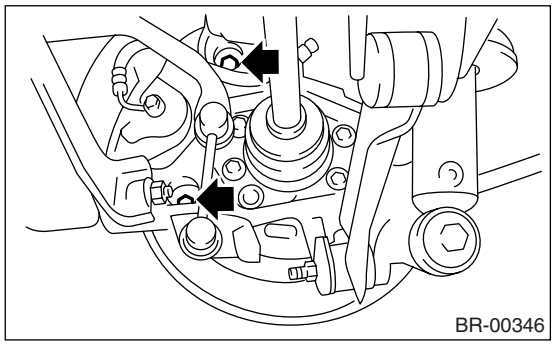
Type of disc rotor		Solid	Ventilated
Pad thickness mm (in)	Standard value	9.0 (0.35)	9.0 (0.35)
	Wear limit	1.5 (0.059)	1.5 (0.059)

NOTE:
• Always replace the pads for both right and left wheels at the same time.
• Also replace pad clips if they are twisted or worn.
• A wear indicator is provided on the inner disc brake pad. If the pad wears down to such an extent that the end of wear indicator contacts disc rotor, a squeaking sound is produced as the wheel rotates. If this sound is heard, replace the pad.
• Replace the pad if there is oil or grease on it.

6. Rear Disc Rotor

A: REMOVAL

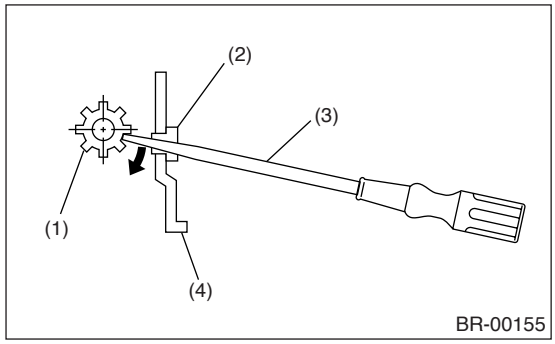
1) Lift-up the vehicle, and then remove the rear wheels.
2) Release the parking brake.
3) Remove the two mounting bolts, and remove the disc brake assembly.



4) Suspend the disc brake assembly so that the hose is not stretched.
5) Remove the disc rotor.

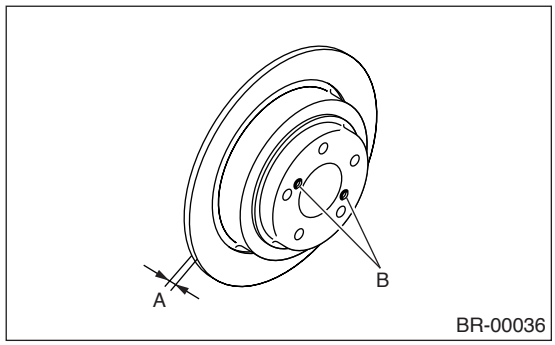
NOTE:
If the disc rotor is difficult to remove, try following two methods in order.

(1) Turn the adjusting screw using a flat tip screwdriver until the brake shoe gets away enough from the disc rotor.



(1) Adjusting screw
(2) Cover
(3) Flat tip screwdriver
(4) Back plate

(2) If the disc rotor seizes up within hub, drive the disc rotor out by pushing with an 8 mm bolt in holes B on the rotor.

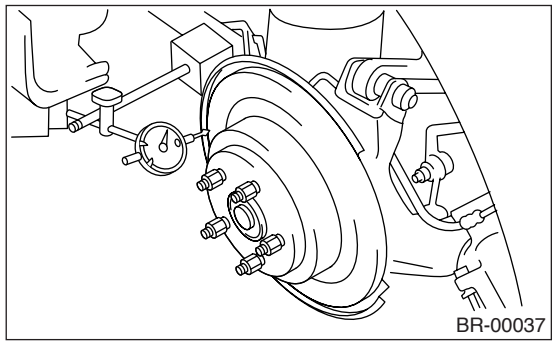


B: INSTALLATION

1) Install in the reverse order of removal.
2) Adjust the parking brake. <Ref. to PB-9, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

C: INSPECTION

1) Check rear wheel bearing play and axial hub runout before disc rotor runout limit inspection. <Ref. to DS-21, INSPECTION, Rear Hub Unit Bearing.>
2) Secure the disc rotor by tightening five wheel nuts.
3) Set a dial gauge 10 mm (0.39 in) inward of rotor outer perimeter. Turn the disc rotor to check runout. If the disc rotor runout exceeds specified value, replace with a new disc rotor.



Disc rotor runout limit:
0.05 mm (0.0020 in)

4) Set a micrometer 10 mm (0.39 in) inward of the rotor outer perimeter, and then measure the disc rotor thickness. If the thickness of disc rotor is outside the service limit, replace with a new disc rotor.

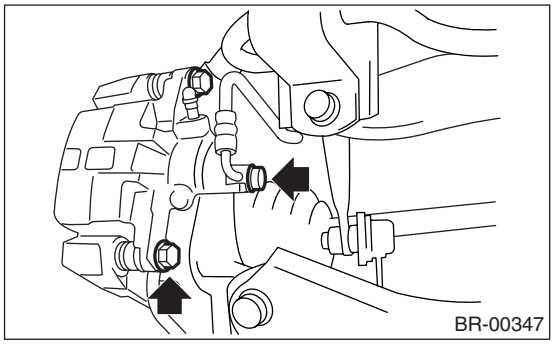
		Standard value	Limit	Disc outer dia.
Disc rotor thickness A mm (in)	Solid disc	10 (0.39)	8.5 (0.335)	274 (10.79)
	Ventilated disc	18 (0.71)	16 (0.63)	290 (11.42)

7. Rear Disc Brake Assembly

A: REMOVAL

CAUTION:
Do not allow brake fluid to come in contact with vehicle body; wash away with water and wipe off completely if spilled.

1) Lift-up the vehicle, and then remove the rear wheels.
2) Disconnect the brake hose from caliper body assembly.
3) Remove the caliper lower bolts.



4) Raise the caliper body, and then move it toward vehicle center to separate it from the support.
5) Remove the support from housing.

NOTE:
Remove the support only when replacing itself or rotor. It need not be removed when servicing the caliper body assembly.

6) Clean mud and foreign particles from the caliper body assembly and the support.

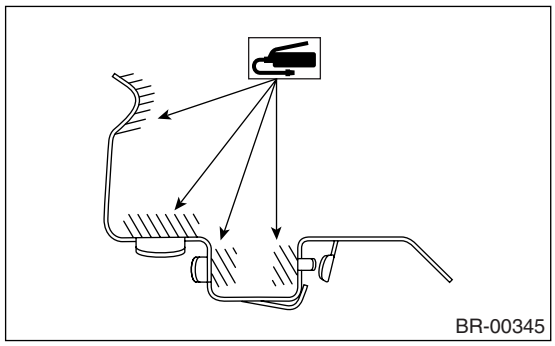
CAUTION:
Be careful not to allow foreign particles to enter inlet (at brake hose connector).

B: INSTALLATION

1) Install the support on housing.

Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)

2) Apply a thin coat of Molykote M7439 to the pad clip.



3) Apply a thin coat of Molykote AS880N (Part No. K0777YA010) to the frictional portion between pad and shim.
4) Install the pad on support.
5) Install the caliper body on support.

Tightening torque:
Solid disc brake model
27 N·m (2.8 kgf-m, 19.9 ft-lb)
Ventilated disc brake model
37 N·m (3.7 kgf-m, 27.2 ft-lb)

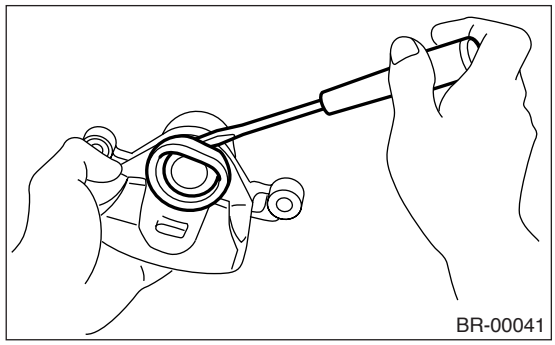
6) Replace the brake hose gaskets with new ones, and then connect the brake hose.

Tightening torque:
18 N·m (1.8 kgf-m, 13.0 ft-lb)

7) Bleed air from brake system.

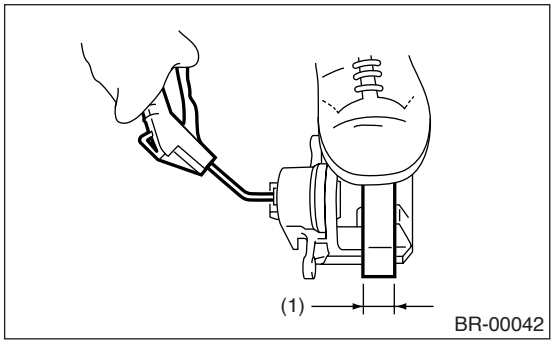
C: DISASSEMBLY

1) Remove the piston boot.



2) Place a wooden block in caliper body as shown in the figure to prevent the piston from jumping out and avoid being damaged.

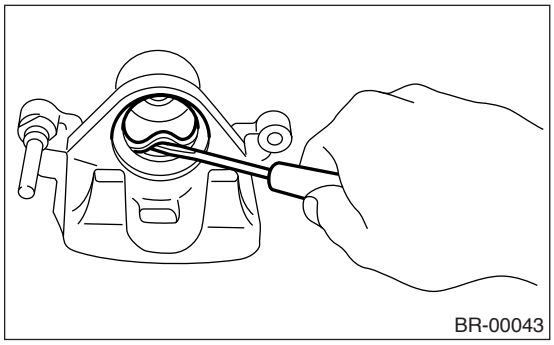
3) Gradually supply compressed air via installation hole of brake hose to force the piston out.



(1) Place a 30 mm (1.18 in) wide wooden block here.

4) Remove the piston seal from caliper body cylinder.

CAUTION:
Do not damage the cylinder and piston seal groove.



5) Remove the lock pin sleeve and boot from caliper body.
6) Remove the guide pin boot.

D: ASSEMBLY

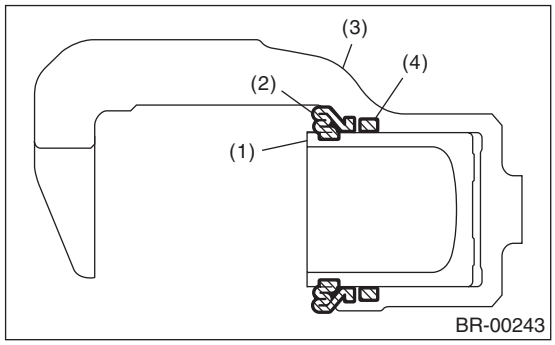
1) Clean the caliper body interior using brake fluid.
2) Apply a coat of brake fluid to the piston seal and fit piston seal in groove on caliper body.
3) Apply a coat of brake fluid to the entire inner surface of cylinder and outer surface of piston.
4) Apply a coat of specified grease to the boot and fit in to the groove on ends of cylinder.

Grease:
NIGLUBE RX-2 (Part No. K0779GA102)

5) Insert the piston into cylinder.

CAUTION:
Do not force the piston into cylinder.

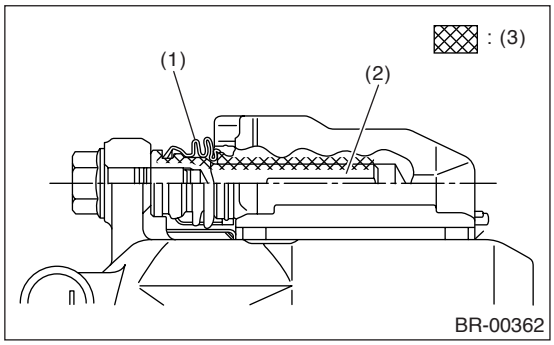
6) Position the boot in grooves on cylinder and piston.



(1) Piston
(2) Piston boot
(3) Caliper body
(4) Piston seal

7) Apply a coat of specified grease to the guide pin, outer surface, sleeve outer surface, cylinder inner surface, and boot grooves.

Grease:
NIGLUBE RX-2 (Part No. K0779GA102)



(1) Pin boot
(2) Lock pin or guide pin
(3) Apply grease.

8) Install the guide pin boot on support.
9) Install the lock pin boot on support, and then insert the lock pin sleeve into specified point.

E: INSPECTION

1) Repair or replace the faulty parts.
2) Check the caliper body and piston for uneven wear, damage or rust.
3) Check the rubber parts for damage or deterioration.

8. Master Cylinder

A: REMOVAL

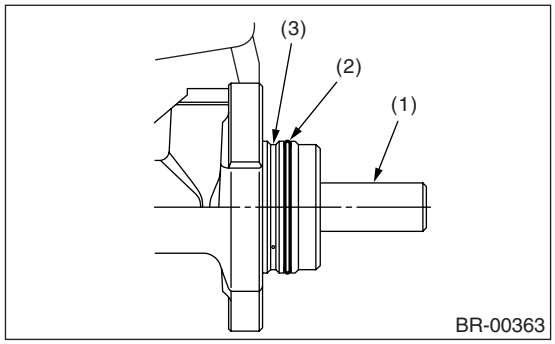
CAUTION:
Do not allow brake fluid to come in contact with vehicle body; wash away with water and wipe off completely if spilled.

1) Thoroughly drain the brake fluid from reservoir tank.
2) Disconnect the fluid level gauge harness connector.
3) Remove the brake pipes from master cylinder.
4) Remove the master cylinder mounting nuts, and take out the master cylinder from brake booster.

B: INSTALLATION

1) Replace the O-ring for the master cylinder with a new one.

CAUTION:
Do not install the O-ring in wrong place.



(1) Primary piston
(2) O-ring
(3) Do not install the O-ring on this groove.

2) Install in the reverse order of removal.

Tightening torque:
Master cylinder mounting nut
13 N·m (1.3 kgf-m, 9.6 ft-lb)
Piping flare nut
Model with ABS
15 N·m (1.5 kgf-m, 10.8 ft-lb)
Model with VDC
19 N·m (1.9 kgf-m, 14.0 ft-lb)

CAUTION:
Be sure to use recommended brake fluid.

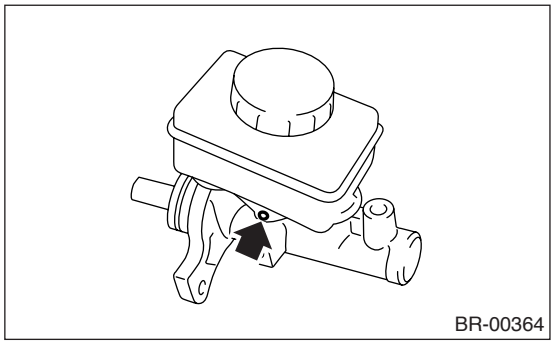
3) Bleed air from brake system. <Ref. to BR-38, PROCEDURE, Air Bleeding.>

C: REPLACEMENT

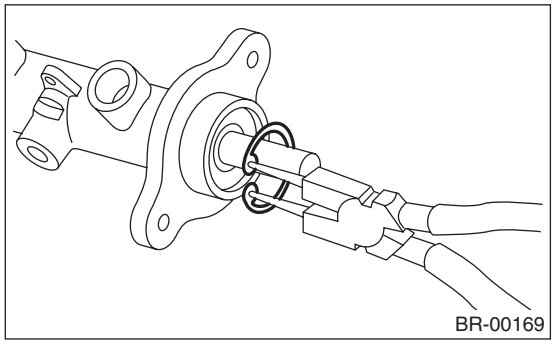
1) Remove mud and dirt from the surface of brake master cylinder.
2) Secure the master cylinder on a vise.

NOTE:
To avoid damaging master cylinder, use aluminum plate while holding with vise.

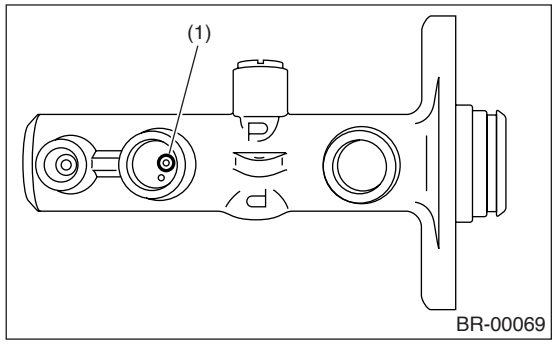
3) Remove the pin which secures the reservoir tank to master cylinder, and then remove the reservoir tank and seal.



4) With pushing-in the primary piston, remove the C-ring using pliers.



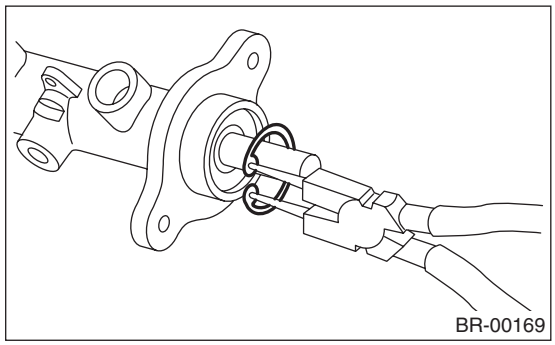
5) With pushing-in the primary piston, remove the straight pin from the port on installation part of reservoir tank using magnet pick-up tool.



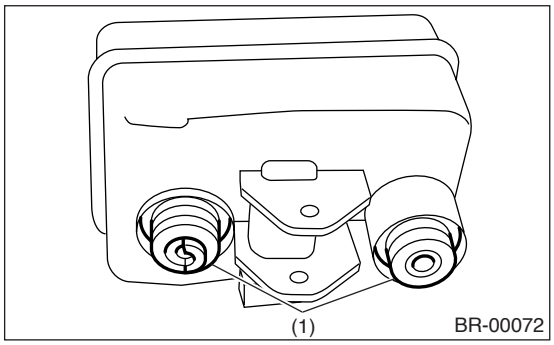
(1) Straight pin

6) Extract the primary piston assembly and secondary piston assembly straight out, while taking care not to scratch the inner surface of cylinder.
7) Clean the inside of master cylinder with brake fluid. Check the inside of cylinder for damage, deform and wear. Replace the master cylinder as assembly if faulty.
8) Apply recommended brake fluid to the inner wall of master cylinder, and outer surface of piston assembly.

9) Ensure that the inner wall of master cylinder, and piston assembly are free of dirt when assembling. Install the primary piston assembly and secondary piston assembly, while taking care not to damage the master cylinder inner wall.
10) With pushing-in the primary piston, install the cylinder pin.
11) With pushing-in the primary piston, install the C-ring to groove using pliers.

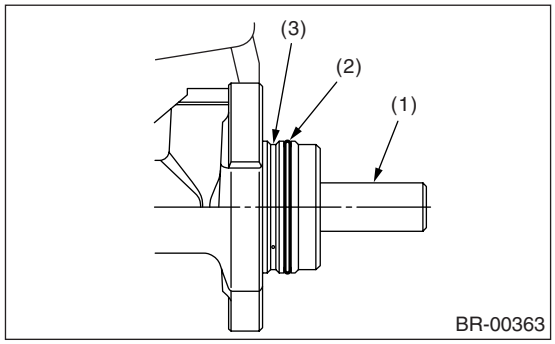


CAUTION:
Ensure the secure installation.
12) Install the seal to reservoir tank.



(1) Seal

13) Install the reservoir tank to master cylinder, and secure with pin.
14) Replace the O-ring for the master cylinder with a new one.



(1) Primary piston
(2) O-ring
(3) Do not install the O-ring on this groove.

D: INSPECTION

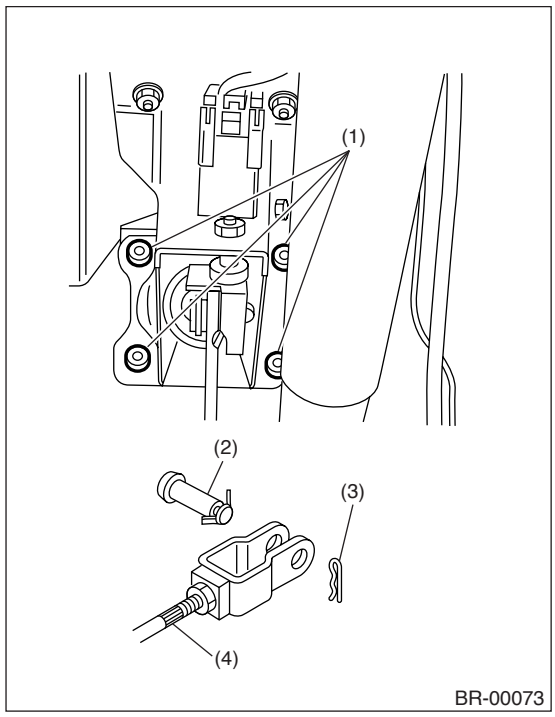
Inspect for oil leakage from the master cylinder.

NOTE:
After replacing piston kit; when the oil leakage is found without damaging or scratching the inside of cylinder, wear of master cylinder inner wall may be the cause. In this case, replace the master cylinder as assembly.

9. Brake Booster

A: REMOVAL

1) Remove or disconnect the following parts at engine compartment.
   (1) Disconnect the connector for brake fluid level gauge.
   (2) Remove the brake pipes from master cylinder.
   (3) Remove the master cylinder installing nuts.
   (4) Disconnect the vacuum hose from brake booster.
2) Remove the following parts from pedal bracket.
   (1) Snap pin and clevis pin
   (2) Four brake booster installing nuts

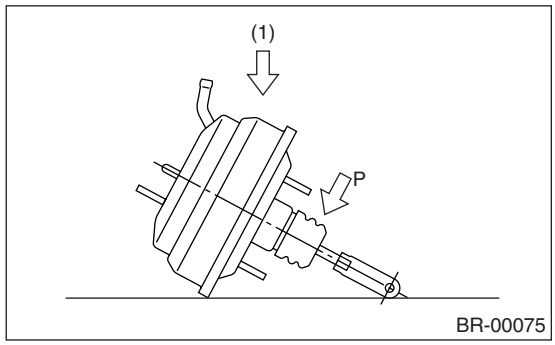


(1) Nut
(2) Clevis pin
(3) Snap pin
(4) Operating rod

3) Remove the brake booster while shunning brake pipes.

NOTE:
• Do not apply strong impact to booster shell and vacuum pipe.
• Be careful not to drop the brake booster. The brake booster should be replaced if it has been dropped.
• Use special care when handling the operating rod. If excessive force is applied to operating rod, sufficient to cause a change in the angle in excess of ±3°, it may result in damage to the power piston cylinder.
• Use care when placing the brake booster on the floor.
• Do not change the push rod length.

CAUTION:
• Do not disassemble the brake booster.
• If external force is applied from above when brake booster is placed in this position, the resin portion as indicated by "P", may be damaged.



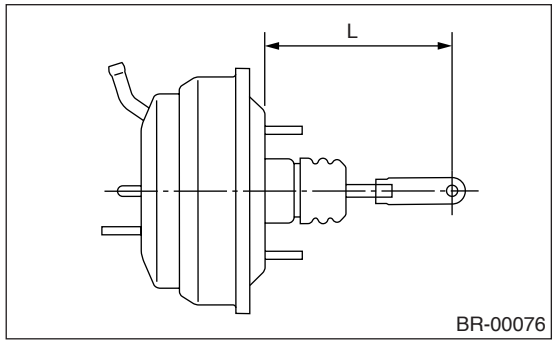
(1) Force

B: INSTALLATION

1) Check and adjust the operating rod of brake booster.

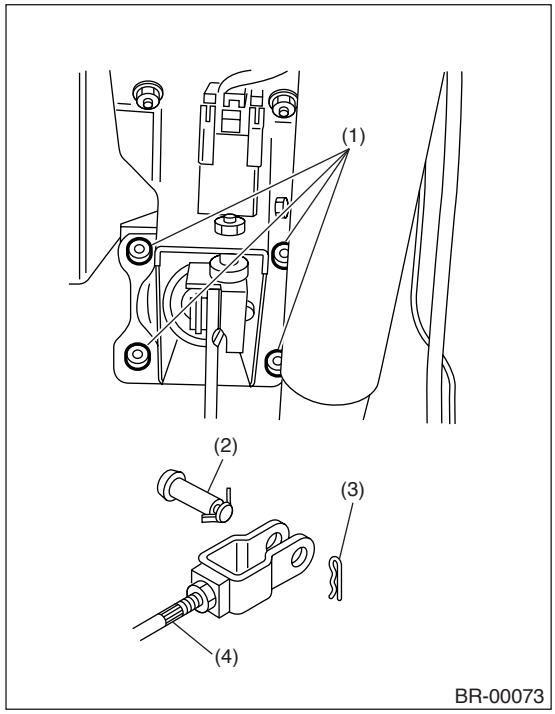
Standard L:
LHD: 136.3 mm (5.38 in)
RHD: 155.2 mm (6.11 in)

If it is not within the specified value, adjust it by adjusting the brake booster operating rod.



2) Mount the brake booster in position.

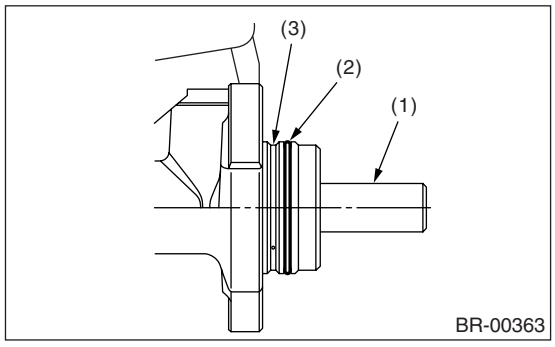
3) Connect the operating rod to brake pedal with clevis pin and snap pin.



(1) Nut
(2) Clevis pin
(3) Snap pin
(4) Operating rod

NOTE:
Apply a thin coat of grease [SUNLIGHT 2 (Part No. 003602010) or equivalent] to clevis pin.

4) Connect the vacuum hose to brake booster.
5) After replacing the O-ring with a new one, install the master cylinder to brake booster.

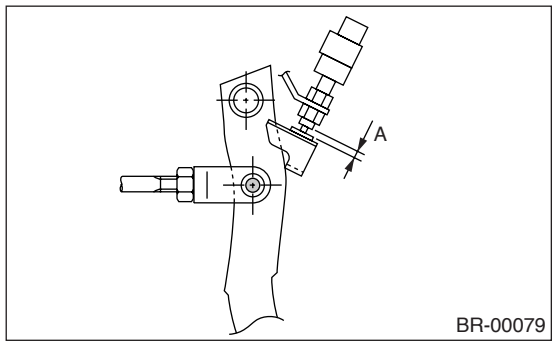


(1) Primary piston
(2) O-ring
(3) Do not install the O-ring on this groove.

6) Connect the brake pipes to master cylinder.
7) Connect the connector for brake fluid level gauge.
8) Measure the clearance between the threaded end of stop light switch and stopper.
If it is not within specified value, adjust it by adjusting the position of stop light switch. <Ref. to BR-45, ADJUSTMENT, Stop Light Switch.>

CAUTION:
Be careful not to rotate the stop light switch.

Stop light switch clearance A:
0.3 mm (0.012 in)



9) Apply grease to operating rod connecting pin to prevent it from wearing.
10) Bleed air from brake system.

Tightening torque (Air bleeder screw):
8 N·m (0.8 kgf-m, 5.8 ft-lb)

11) Conduct road tests to ensure brakes do not drag.

C: INSPECTION

1. OPERATION CHECK (WITHOUT GAUGES)

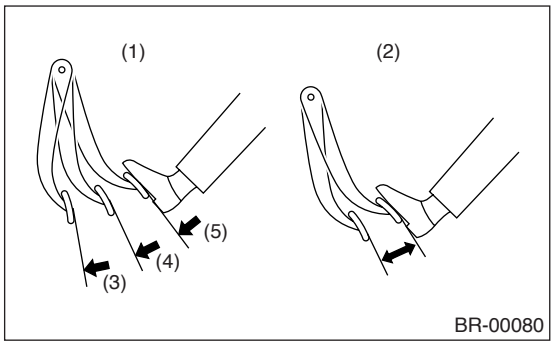
CAUTION:
When checking operation, be sure to securely apply the parking brake.

• CHECKING WITHOUT GAUGES

This method cannot determine the exact portion which has failed. But it can provide a rough understanding of the nature of failure if checking is conducted in accordance with the following procedures.

• AIR TIGHTNESS CHECK

Start the engine, and idle it for 1 to 2 minutes, then turn it OFF. Depress the brake pedal several times applying the same pedal force as that used in ordinary braking operations. The pedal stroke should be greatest on the 1st depression, and it should become smaller with each successive depression. If no change occurs in the pedal height while in a depressed state, the brake booster is faulty.

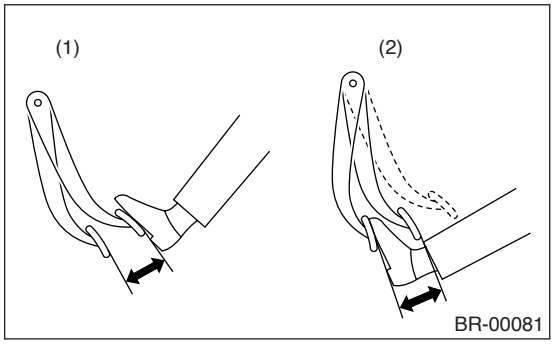


(1) Normal Operation
(2) Not OK
(3) 1st
(4) 2nd
(5) 3rd

NOTE:
• In the event of defective operation, also inspect the condition of the check valve and vacuum hose.
• Replace them if faulty and conduct the test again.
• If no improvement is observed, check precisely with gauges.

• OPERATION CHECK

1) With the engine OFF, depress the brake pedal several times applying the same pedal force and make sure that the pedal height does not vary with each depression of the pedal.



(1) When engine is stopped
(2) When engine is started

2) With the brake pedal depressed, start the engine.

3) As engine starts, the brake pedal should move slowly toward the floor. If no change occurs in the pedal height, the brake booster is faulty.

NOTE:
If faulty, check precisely with gauges.

• LOADED AIR TIGHTNESS CHECK

Depress the brake pedal while engine is running, and turn OFF the engine while the pedal is still depressed. Keep the pedal depressed for 30 seconds; if no change occurs in the pedal height, the brake booster is functioning normally; if the pedal height increases, it is faulty.

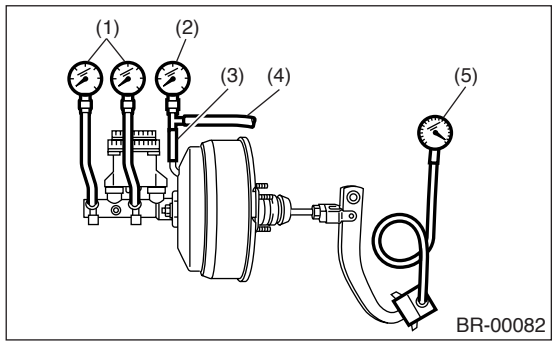
NOTE:
If faulty, check precisely with gauges.

2. OPERATION CHECK (WITH GAUGES)

CAUTION:
When checking operation, be sure to securely apply the parking brake.

• CHECKING WITH GAUGES

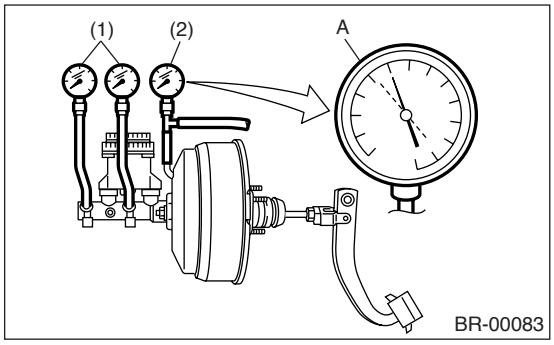
Connect gauges as shown in the figure. After bleeding air from pressure gauges, proceed to each check.



(1) Pressure gauge
(2) Vacuum gauge
(3) Adapter hose
(4) Vacuum hose
(5) Pedal force gauge

• AIR TIGHTNESS CHECK

1) Start the engine and keep it running until a vacuum of 66.7 kPa (500 mmHg, 19.69 inHg) = point A is indicated on vacuum gauge. Do not depress the brake pedal at this moment.

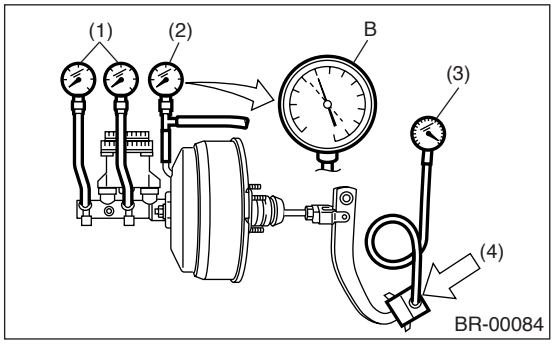


(1) Pressure gauge
(2) Vacuum gauge

2) Stop the engine and watch the gauge. If the vacuum drop range is less than 3.3 kPa (25 mmHg, 0.98 inHg) within 15 seconds after stopping the engine, brake booster is functioning properly.
If defective, the cause may be one of those listed below.
- Check valve malfunction
- Leak from vacuum hose
- Leak from shell jointed portion or stud bolt welded portion
- Damaged diaphragm
- Leak from valve body seal and bearing portion
- Leak from plate and seal assembly portion
- Leak from poppet valve assembly portion

• LOADED AIR TIGHTNESS CHECK

1) Start the engine and depress the brake pedal with pedal force of 196 N (20 kgf, 44 lb). Keep the engine running until a vacuum of 66.7 kPa (500 mmHg, 19.69 inHg) = point B is indicated on vacuum gauge while the pedal is still depressed.



(1) Pressure gauge
(2) Vacuum gauge
(3) Pedal force gauge
(4) Depressed

2) Stop the engine and watch vacuum gauge.
If the vacuum drop range is less than 3.3 kPa (25 mmHg, 0.98 inHg) within 15 seconds after stopping the engine, brake booster is functioning properly.
If defective, refer to “AIR TIGHTNESS CHECK”.
<Ref. to BR-33, INSPECTION, Brake Booster.>
3) If any fault is found on brake booster, replace the brake booster with a new one.

• LACK OF BOOSTING ACTION CHECK

Turn OFF the engine, and set the vacuum gauge reading at “0”. Then, check the fluid pressure when brake pedal is depressed. The pressure must be greater than the standard value listed.

Brake pedal force N (kgf, lb)	147 (15, 33) / 294 (30, 66)
Fluid pressure kPa (kg/cm^2, psi)	545 (6, 79) / 1,564 (16, 227)

• BOOSTING ACTION CHECK

Set the vacuum gauge reading at 66.7 kPa (500 mmHg, 19.69 inHg) by running engine. Then, check the fluid pressure when brake pedal is depressed. The pressure must be greater than the standard value listed.

Brake pedal force N (kgf, lb)		147 (15, 33)	294 (30, 66)
Fluid pressure kPa (kg/cm^2, psi)	15″ 16″ OUTBACK	6,003 (61, 871)	11,273 (115, 1,635)
	16″ (Except for OUTBACK)	5,381 (55, 780)	10,982 (112, 1,593)
	17″	4,963 (51, 720)	10,055 (103, 1,458)

10.Brake Fluid

A: INSPECTION

1) Check that the brake fluid level remains between “MIN” and “MAX”. If out of the specified range, refill or drain fluid. If the fluid level becomes close to “MIN”, refill fluid.
2) Check the fluid for discoloration. If the fluid color has excessively changed, drain the fluid and refill with new fluid.

B: REPLACEMENT

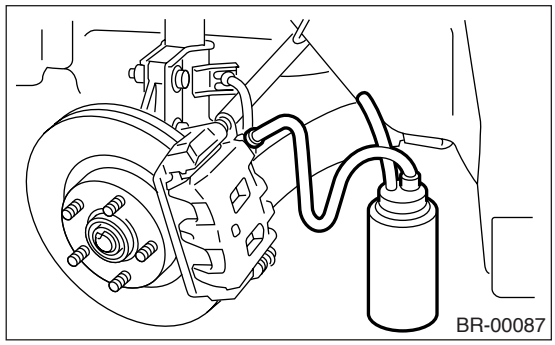
CAUTION:
• To always maintain the brake fluid characteristics, replace the brake fluid according to maintenance schedule or earlier than that when used in severe condition.
• Fresh Subaru genuine fluid must be used.
• Cover the bleeder with cloth, when loosening it, to prevent brake fluid from being splashed over surrounding parts.
• Do not allow brake fluid to come in contact with vehicle body; wash away with water and wipe off completely if spilled.
• Avoid mixing different brands of brake fluid to prevent degrading the quality of fluid.
• Be careful not to allow dirt or dust to get into the reservoir tank.

NOTE:
• During the bleeding operation, keep the brake reservoir tank filled with brake fluid to eliminate entry of air.
• The brake pedal operating must be very slow.
• For convenience and safety, two people should do the work.
• The amount of brake fluid required is approximately 500 mℓ (16.9 US fl oz, 17.6 Imp fl oz) for total brake system.

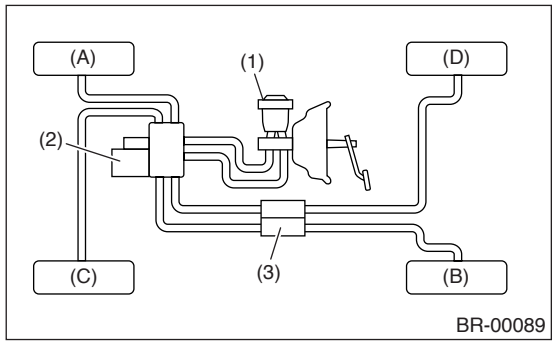
1) Either lift-up the vehicle to place a rigid rack under it, or lift-up the vehicle.
2) Remove both the front and rear wheels.
3) Draw out the brake fluid from master cylinder.
4) Refill the reservoir tank with recommended brake fluid.

Recommended brake fluid:
Refer to the specification. <Ref. to BR-2, SPECIFICATION, General Description.>

5) Install one end of a vinyl tube onto air bleeder and insert the other end of the tube into a container to collect brake fluid.



CAUTION:
Brake fluid replacement sequence; (A) Front RH → (B) Rear LH → (C) Front LH → (D) Rear RH



(1) Master cylinder
(2) Hydraulic unit
(3) Proportioning valve

6) Instruct your co-worker to depress the brake pedal slowly two or three times and then hold it depressed.
7) Loosen the bleeder screws to drain brake fluid. And then quickly tighten the screw.
8) Release the brake pedal slowly. Repeat steps 6) through 8) until there are no more air bubbles in the drained brake fluid.

NOTE:
Add brake fluid as necessary while performing air bleed operation, in order to prevent the tank from running short of brake fluid.

9) After completing the bleeding operation, hold the brake pedal depressed and tighten the screw and install bleeder cap.

Tightening torque (Bleeder screw):
8 N·m (0.8 kgf-m, 5.8 ft-lb)

10) Bleed air from each wheel cylinder using the same procedures as described in steps 6) through 8) above.

11) Depress the brake pedal with a force of approximately 294 N (30 kgf, 66 lb) and hold it there for approximately 20 seconds to check for no entry of air and if pedal height remain same.
Visually inspect the bleeder screws and brake pipe joints to make sure that there is no fluid leakage.
12) Install the wheels, and drive vehicle for a short distance between 2 to 3 km (1 to 2 miles) to make sure that brakes are operating properly.

11.Air Bleeding

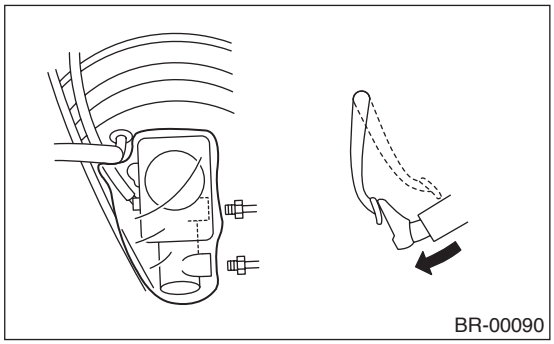
A: PROCEDURE

CAUTION:
• Fresh Subaru genuine fluid must be used.
• Cover the bleeder with cloth, when loosening it, to prevent brake fluid from being splashed over surrounding parts.
• Do not allow brake fluid to come in contact with vehicle body; wash away with water and wipe off completely if spilled.
• Avoid mixing different brands of brake fluid to prevent degrading the quality of fluid.
• Be careful not to allow dirt or dust to get into the reservoir tank.

1. MASTER CYLINDER

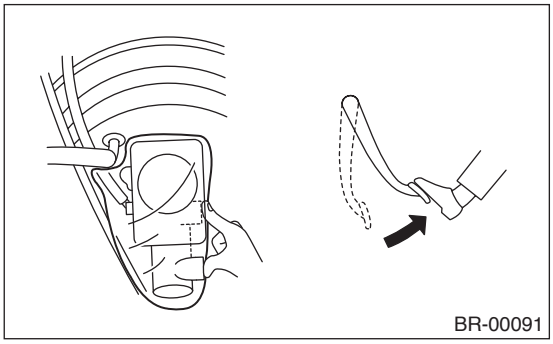
NOTE:
• If the master cylinder is disassembled or reservoir tank is empty, bleed the master cylinder.
• During the bleeding operation, keep the brake reservoir tank filled with brake fluid to eliminate entry of air.
• The brake pedal operating must be very slow.
• For convenience and safety, two people should do the work.

1) Loosen the wheel nuts, jack-up the vehicle, support it with rigid racks, and remove the wheels.
2) Disconnect the brake line at primary and secondary sides.
3) Put a plastic bag cover on master cylinder.
4) Carefully depress and hold the brake pedal.



BR-00090

5) Close the outlet plug with your finger, and then release the brake pedal.



BR-00091

6) Repeat the step4) and 5) until brake fluid is completely drained from outlet plug.
7) Remove the plastic bag.
8) Install the brake pipes to master cylinder.

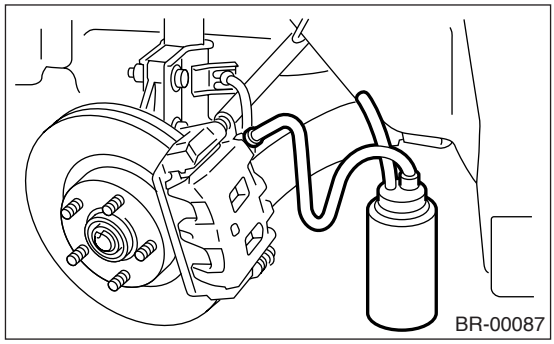
Tightening torque:
15 N·m (1.5 kgf-m, 10.8 ft-lb)

9) Bleed air from the brake line. <Ref. to BR-38, BRAKE LINE, PROCEDURE, Air Bleeding.>

2. BRAKE LINE

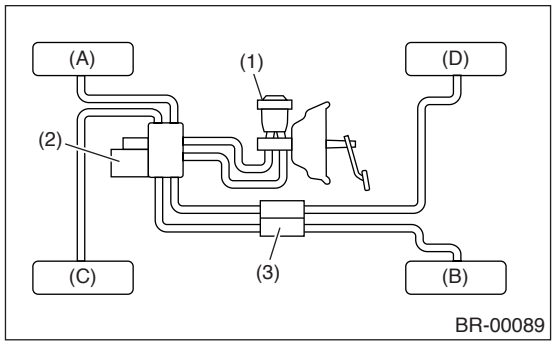
NOTE:
• During the bleeding operation, keep the reservoir tank filled with brake fluid to eliminate entry of air.
• The brake pedal operating must be very slow.
• For convenience and safety, two people should do the work.

1) Make sure that there is no leak from joints and connections of the brake system.
2) Fit one end of vinyl tube into the air bleeder and put the other end into a brake fluid container.



BR-00087

CAUTION:
Brake fluid replacement sequence; (A) Front RH → (B) Rear LH → (C) Front LH → (D) Rear RH



BR-00089

(1) Master cylinder
(2) Hydraulic unit
(3) Proportioning valve

3) Slowly depress the brake pedal and keep it depressed. Then, open the air bleeder to discharge air together with the fluid.
Release the air bleeder for 1 to 2 seconds.
Next, with the bleeder closed, slowly release the brake pedal.
Repeat these steps until there are no more air bubbles in the vinyl tube.
Allow 3 to 4 seconds between two brake pedal operations.

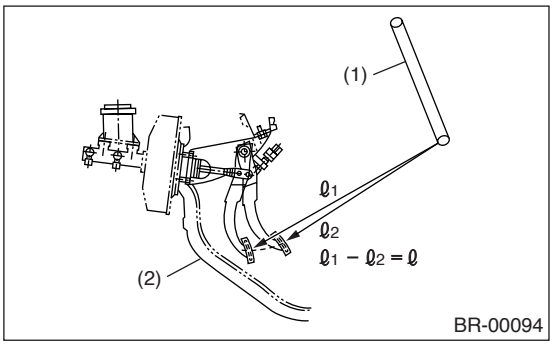
CAUTION:
Cover the bleeder with cloth, when loosening it, to prevent brake fluid from being splashed over surrounding parts.

NOTE:
The brake pedal operating must be very slow.

4) Tighten the air bleeder securely when no air bubbles are visible.

Air bleeder tightening torque:
8 N·m (0.8 kgf-m, 5.8 ft-lb)

5) Perform these steps for the brakes connecting to secondary chamber of master cylinder first, and then for the ones connecting to primary chamber. With all procedures completed, fully depress the brake pedal and keep it in that position for approximately 20 seconds to make sure that there is no leak evident in the entire system.
6) Check the pedal stroke.
While the engine is idling after warming up, depress the brake pedal with a 500 N (51 kgf, 112 lb) load and measure the distance between brake pedal and steering wheel. With the brake pedal released, measure the distance between pedal and steering wheel again. The difference between the two measurements must not be more than specified value.



(1) Steering wheel
(2) Toe board

Specified pedal stroke:
95 mm (3.74 in) or less
When depressing brake pedal with a 500 N (51 kgf, 112 lb) load.

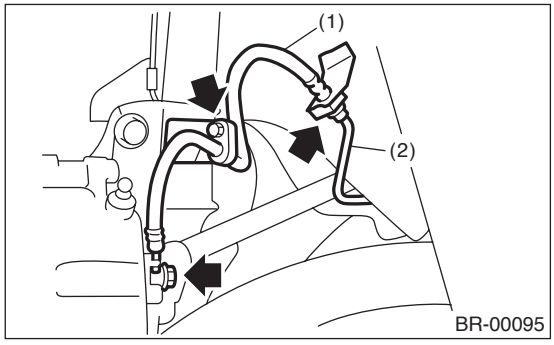
7) If the distance is more than specified, there is a possibility that air is in the brake line. Bleed the brake line until pedal stroke meets the specification.
8) Operate the hydraulic control unit in the sequence control mode. <Ref. to ABS-10, ABS Sequence Control.>
9) Recheck the pedal stroke.
10) If the distance is more than specified, there is a possibility that air is in the inside of the hydraulic unit. Repeat above steps 2) to 9) until pedal stroke meets the specification.
11) Add brake fluid to the required level (“MAX” level) of reservoir tank.
12) As a final step, test run the vehicle at low speed and ensure that brakes provide normal braking action.

12.Brake Hose

A: REMOVAL

1. FRONT BRAKE HOSE

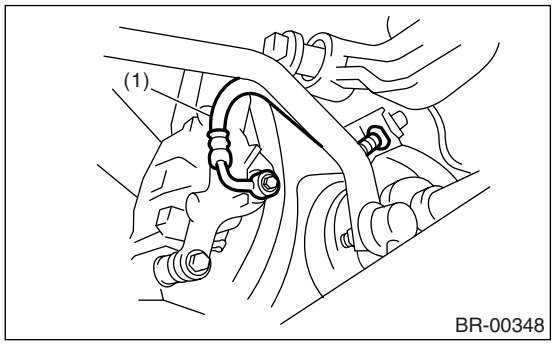
1) Separate the brake pipe from brake hose using a flare nut wrench.
2) Remove the clamp, bolt at strut mount, and union bolt.



(1) Brake hose
(2) Brake pipe

2. REAR BRAKE HOSE

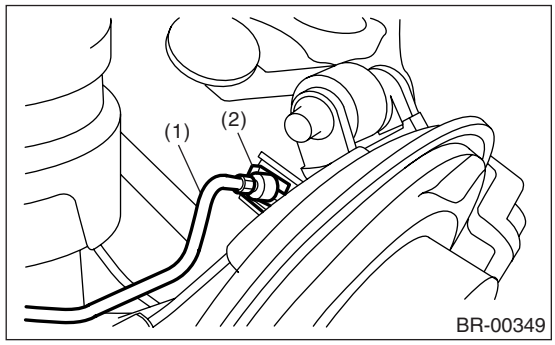
1) Remove the union bolt from rear brake caliper.



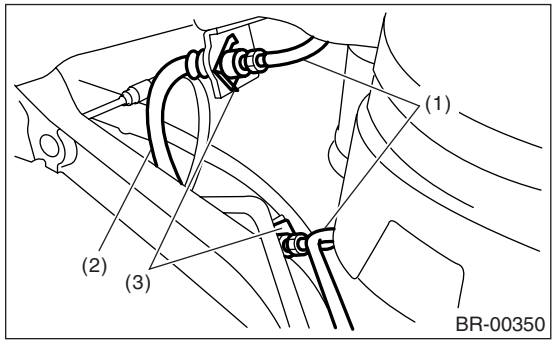
(1) Brake hose

2) Separate the brake pipe from brake hose using a flare nut wrench.

3) Remove the clamp and remove the brake hose.



(1) Brake pipe
(2) Brake hose clamp



(1) Brake pipe
(2) Brake hose
(3) Brake hose clamp

B: INSTALLATION

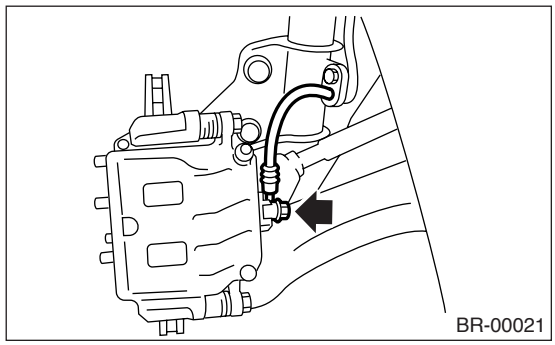
1. FRONT BRAKE HOSE

1) Secure the brake hose to strut mount.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)

2) Install the brake hose to caliper using a new gasket.

Tightening torque (Union bolt):
18 N·m (1.8 kgf-m, 13.0 ft-lb)



3) Position the disc in straight-forward direction and route the brake hose through the hole in bracket on wheel apron side.

CAUTION:
Be sure the brake hose is not twisted.

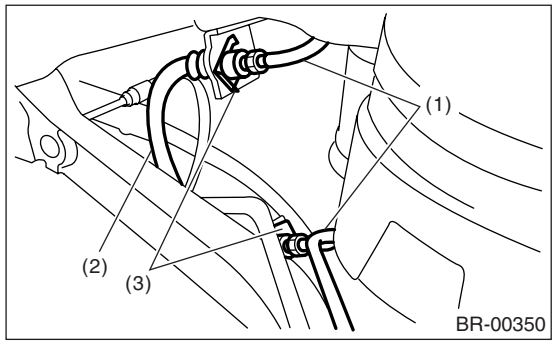
4) Temporarily tighten the flare nut to connect the brake pipe and hose.
5) Fix the brake hose with clamp at wheel apron bracket.
6) Tighten the flare nut to specified torque.

Tightening torque (Brake pipe flare nut):
15 N·m (1.5 kgf-m, 10.8 ft-lb)

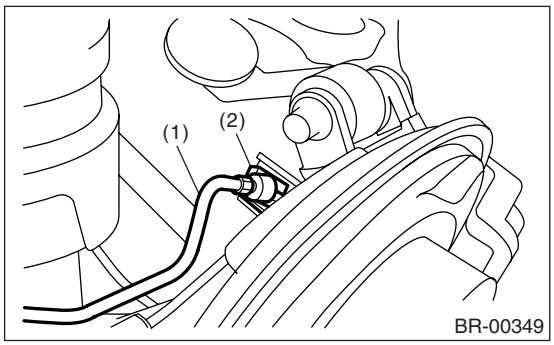
7) Bleed air from brake system.

2. REAR BRAKE HOSE

1) Pass the brake hose through the hole of bracket, and lightly tighten the flare nut to connect brake pipe.
2) Insert the clamp upward to fix brake hose.



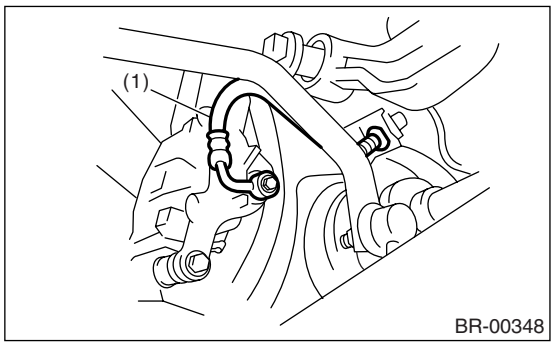
(1) Brake pipe
(2) Brake hose
(3) Brake hose clamp



(1) Brake pipe
(2) Brake hose clamp

3) Install the brake hose to rear brake caliper using a new gasket.

Tightening torque (Union bolt):
18 N·m (1.8 kgf-m, 13.0 ft-lb)



(1) Brake hose

4) Tighten the flare nut to specified torque.

Tightening torque (Brake pipe flare nut):
15 N·m (1.5 kgf-m, 10.8 ft-lb)

5) Bleed air from the brake system.

C: INSPECTION

Ensure there are no cracks, breakage or damage on hoses. Check joints for fluid leakage. If any cracks, breakage, damage or fluid leakage is found, repair or replace the hose.

13.Brake Pipe

A: REMOVAL

NOTE:
Airbag system wiring harness is routed near the center brake pipe.

CAUTION:
• All airbag system wiring harness and connectors are colored yellow. Do not use the electrical test equipment on these circuits.
• Be careful not to damage the airbag system wiring harness when servicing the center brake pipe.
• When removing the brake pipe, make sure that it is not bent.

B: INSTALLATION

NOTE:
Airbag system wiring harness is routed near the center brake pipe.

CAUTION:
• All airbag system wiring harness and connectors are colored yellow. Do not use the electrical test equipment on these circuits.
• Be careful not to damage the airbag system wiring harness when servicing the center brake pipe.
• When installing the brake pipe, make sure that it is not bent.
• After installing the brake pipe and hose, bleed air.
• After installing the brake hose, make sure that it does not touch the tire or suspension assembly, etc.

Brake pipe tightening torque:
15 N·m (1.5 kgf-m, 10.8 ft-lb)

C: INSPECTION

Ensure there are no cracks, breakage or damage on pipes. Check joints for fluid leakage. If any cracks, breakage, damage or fluid leakage is found, repair or replace the pipes.

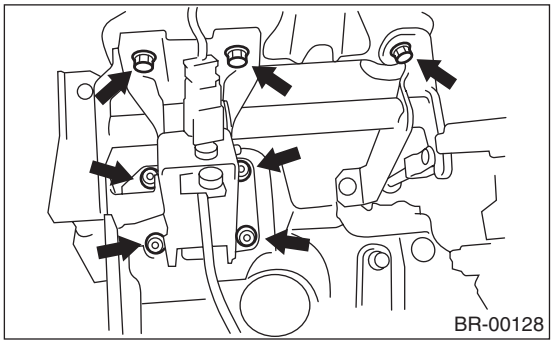
NOTE:
Use a mirror when inspecting the low-visible part or backside.

14.Brake Pedal

A: REMOVAL

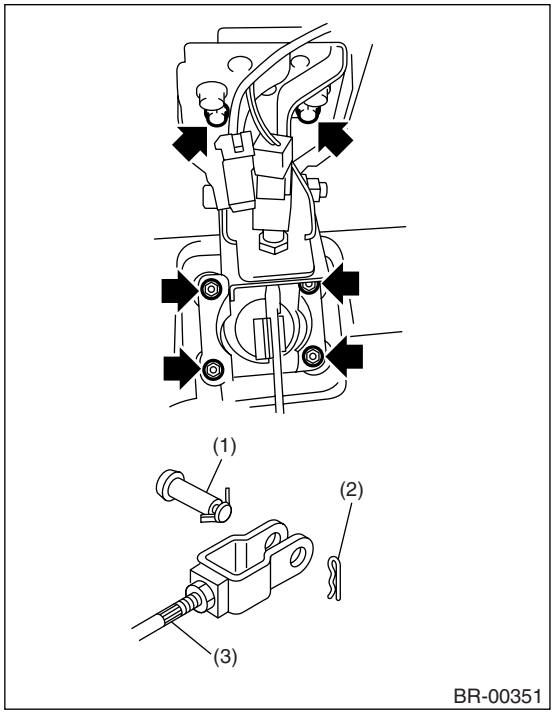
1. LHD MT MODEL

1) Remove the steering shaft.
2) Disconnect the connectors (stop light switch) from pedal bracket.
3) Remove the clevis pin which secures lever to push rod.
4) Remove the nuts which secure clutch master cylinder.
5) Remove the bolts and nuts which secure pedal bracket.



2. LHD AT MODEL

1) Remove the steering shaft.
2) Disconnect the connectors (stop light switch) from pedal bracket.
3) Remove the clevis pin which secures lever to push rod.
4) Remove the bolts and nuts which secure pedal bracket.



(1) Clevis pin
(2) Snap pin
(3) Operating rod

3. RHD MODEL

Refer to LHD AT model. <Ref. to BR-43, LHD AT MODEL, REMOVAL, Brake Pedal.>

B: INSTALLATION

1) Install in the reverse order of removal.

CAUTION:
Always use new clevis pins.

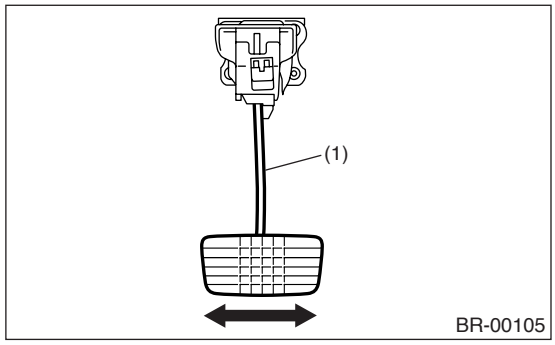
2) Inspect the brake pedal after installation. <Ref. to BR-43, INSPECTION, Brake Pedal.>

C: INSPECTION

1) Move the brake pedal pads in the lateral direction with a force of approx. 10 N (1 kgf, 2 lb) to ensure pedal deflection is in specified range.

CAUTION:
If excessive deflection is noted, replace the bushing with a new one.

Deflection of brake pedal:
Limit
5.0 mm (0.197 in) or less

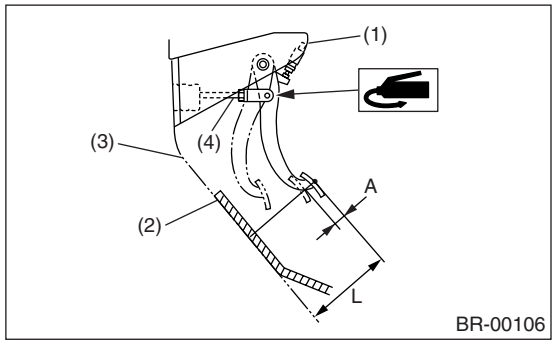


(1) Brake pedal

2) Check the position of pedal pad.

Pedal height L:
LHD: 150 — 160 mm (5.91 — 6.30 in)
RHD: 162 — 172 mm (6.38 — 6.77 in)

Brake pedal free play A:
0.5 — 2 mm (0.02 — 0.08 in) [When the brake pedal is pulled upward with force of less than 10 N (1 kgf, 2 lb).]



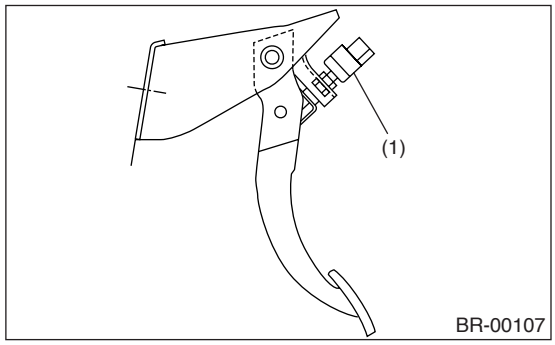
(1) Stop light switch
(2) Mat
(3) Toe board
(4) Brake booster operating rod

3) If it is not within the specified value, adjust it by adjusting the brake booster operating rod length.

15.Stop Light Switch

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Disconnect the stop light switch connector.
3) Loosen the nuts, and unscrew the stop light switch to remove.

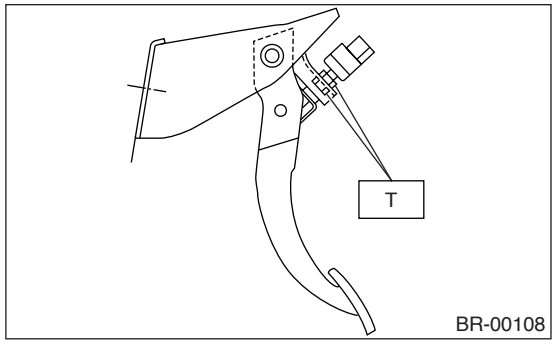


(1) Stop light switch

B: INSTALLATION

1) Screw the stop light switch onto a bracket and secure it temporarily with a nut.
2) Adjust the stop light switch position, and then tighten the nut.
<Ref. to BR-45, ADJUSTMENT, Stop Light Switch.>

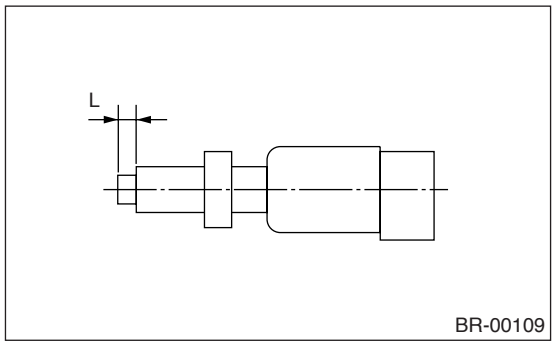
Tightening torque:
8 N·m (0.8 kgf-m, 5.8 ft-lb)



C: INSPECTION

1) If the stop light switch does not operate properly (or if it does not fix at the specified position), replace with a new one.

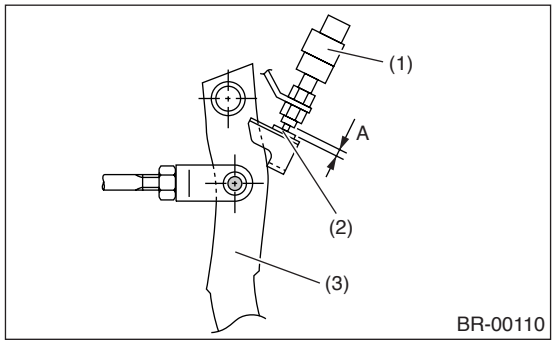
Specified position L:
2 mm (0.079 in)



2) Measure the clearance between the threaded end of stop light switch and stopper.

CAUTION:
Be careful not to rotate the stop light switch.

Stop light switch clearance A:
0.3 mm (0.012 in)



(1) Stop light switch
(2) Stopper
(3) Brake pedal

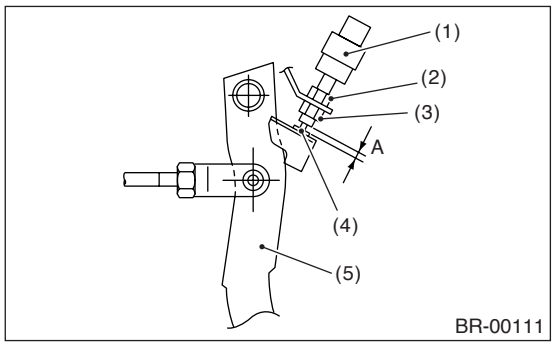
3) If it is not within the specified value, adjust it by adjusting the position of stop light switch.

CAUTION:
Be careful not to rotate the stop light switch.

D: ADJUSTMENT

Loosen the lock nut, and adjust the stop light switch position until the clearance between the threaded end of the stop light switch and stopper (A) becomes 0.3 mm (0.012 in). Then, tighten the lock nut.

Tightening torque:
8 N·m (0.8 kgf-m, 5.8 ft-lb)



(1) Stop light switch
(2) Lock nut A
(3) Lock nut B
(4) Stopper
(5) Brake pedal

NOTE:
Tighten the lock nut B until the clearance between the threaded end of stop light switch and stopper becomes 0 mm (0 inch). Hold the stop light switch to prevent turning, and then loosen the lock nut B approx. 60°. The clearance (A) becomes 0.3 mm (0.012 in).

16.Diagnosis

A: INSPECTION

	Trouble and possible cause	Corrective action
1. Insufficient braking	(1) Fluid leakage from the hydraulic mechanism	Correct or replace. (cup, piston seal, piston boot, master cylinder piston kit, pipe or hose)
	(2) Entry of air into the hydraulic mechanism	Bleed air.
	(3) Wear, deteriorated surface material, adhering water or fluid on the lining	Replace, grind or clean.
	(4) Improper operation of master cylinder, disc caliper, brake booster or check valve	Correct or replace.
2. Unstable or uneven braking	(1) Fluid on the lining or rotor	Eliminate cause of fluid leakage, and clean or replace.
	(2) Rotor eccentricity	Correct or replace the rotor.
	(3) Improper lining contact, deteriorated surface material, improper inferior material, or wear	Correct by grinding, or replace.
	(4) Deformed back plate	Rectify or replace.
	(5) Improper tire inflation	Adjust to correct pressure.
	(6) Disordered wheel alignment	Adjust alignment.
	(7) Loosened back plate or the support installing bolts	Retighten to specified torque.
	(8) Faulty wheel bearing	Replace.
	(9) Trouble in hydraulic system	Replace the cylinder, brake pipe or hose.
	(10) Uneven effect of the parking brake	Check, adjust, or replace the rear brake and cable system.
3. Excessive pedal stroke	(1) Entry of air into the hydraulic mechanism	Bleed air.
	(2) Excessive play in the master cylinder push rod	Adjust.
	(3) Fluid leakage from the hydraulic mechanism	Correct or replace. (cup, piston seal, piston boot, master cylinder piston kit, pipe or hose)
	(4) Improper lining contact or worn lining	Correct or replace.
4. Brake dragging or improper brake return	(1) Insufficient pedal play	Adjust play.
	(2) Improper master cylinder return	Clean or replace the cylinder.
	(3) Clogged hydraulic system	Replace.
	(4) Improper return or adjustment of parking brake	Correct or adjust.
	(5) Weakened spring tension or breakage of shoe return spring	Replace the spring.
	(6) Improper disc caliper operation	Correct or replace.
	(7) Faulty wheel bearing	Replace.
5. Brake noise (1) (creak sound)	(1) Hardened or deteriorated brake pad	Replace the pad.
	(2) Worn brake pad	Replace the pad.
	(3) Loosened back plate or the support installing bolts	Retighten to specified torque.
	(4) Loose wheel bearing	Retighten to specified torque.
	(5) Dirty rotor	Clean the rotor, or clean and replace brake assembly.
6. Brake noise (2) (hissing sound)	(1) Worn brake pad	Replace the pad.
	(2) Improper installed pad	Correct or replace the pad.
	(3) Loose or bent rotor	Retighten or replace.
7. Brake noise (3) (click sound)	Excessively worn pad or the support	Replace the pad or the support.

PARKING BRAKE

PB

Page

1. General Description 2
2. Parking Brake Lever....5
3. Parking Brake Cable 6
4. Parking Brake Assembly (Rear Disc Brake) 7
5. General Diagnostic Table....10

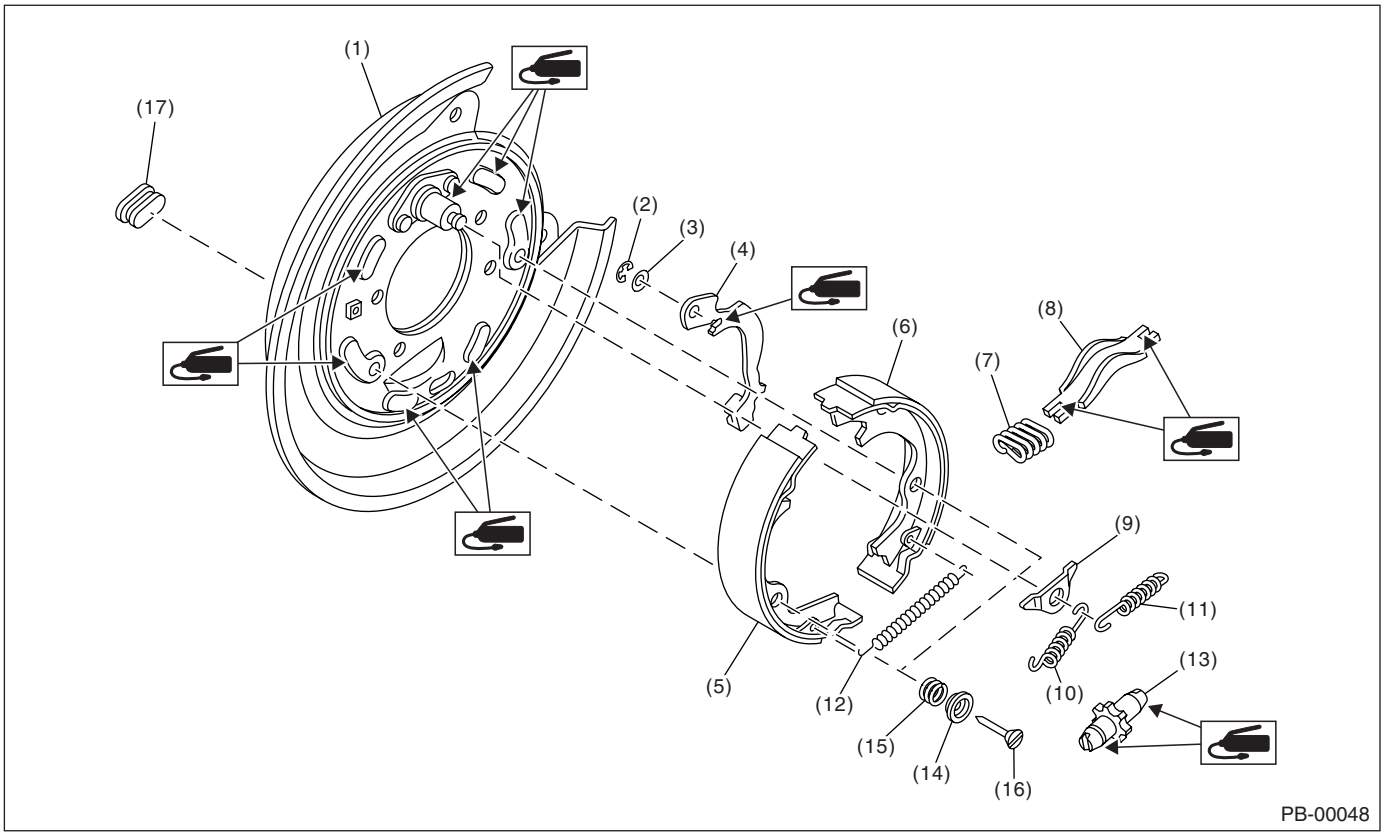
1. General Description

A: SPECIFICATION

Type	Mechanical on rear brakes, drum in disc
Effective drum diameter mm (in)	170 (6.69)
Lining dimensions (length × width × thickness) mm (in)	163.1 × 30.0 × 3.2 (6.421 × 1.181 × 0.126)
Clearance adjustment	Manual adjustment
Lever stroke notches/N (kgf, lb)	5 to 6/200 (20.4, 45)

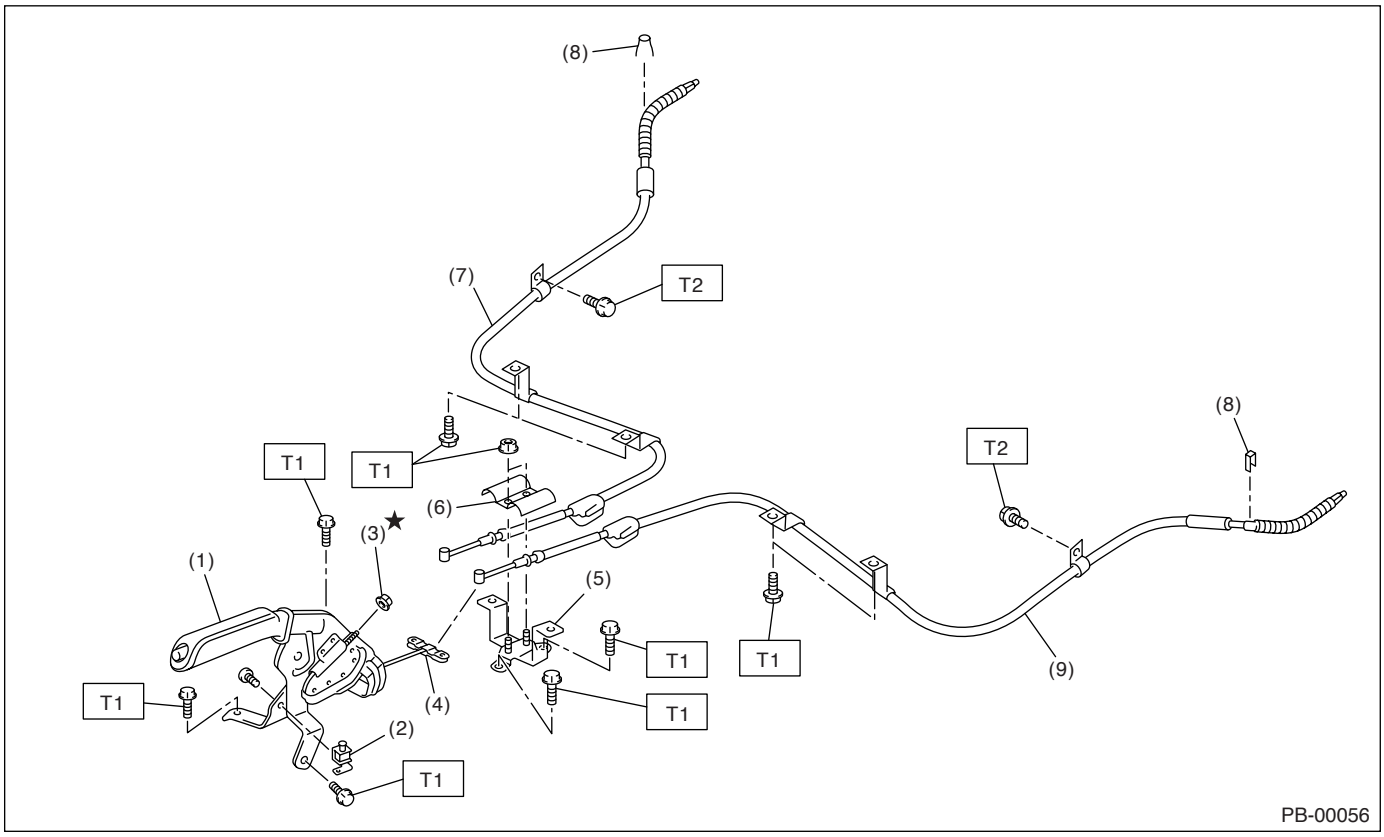
B: COMPONENT

1. PARKING BRAKE (REAR DISC BRAKE)



(1) Back plate
(2) Retainer
(3) Spring washer
(4) Lever
(5) Parking brake shoe (Primary)
(6) Parking brake shoe (Secondary)
(7) Strut spring
(8) Strut
(9) Shoe guide plate
(10) Primary return spring
(11) Secondary return spring
(12) Adjusting spring
(13) Adjuster
(14) Shoe hold-down cup
(15) Shoe hold-down spring
(16) Shoe hold-down pin
(17) Adjusting hole cover

2. PARKING BRAKE CABLE



(1) Parking brake lever
(2) Parking brake switch
(3) Adjusting nut (Self-locking nut)
(4) Equalizer
(5) Bracket
(6) Clamp
(7) Parking brake cable RH
(8) Clamp
(9) Parking brake cable LH

Tightening torque: N·m (kgf-m, ft-lb)
T1: 18 (1.8, 13.0)
T2: 33 (3.4, 24.3)

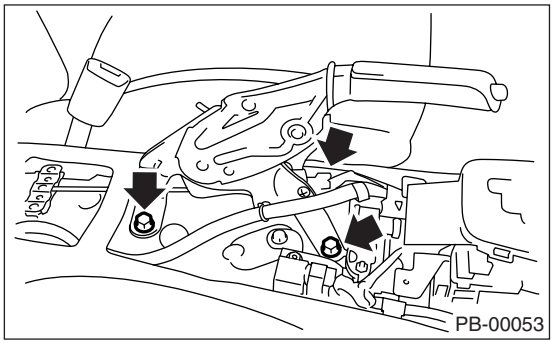
C: CAUTION

• Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
• Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
• Be careful not to burn your hands, because each part on the vehicle is hot after running.
• Use SUBARU genuine grease etc. or the equivalent. Do not mix grease etc. with that of another grade or from other manufacturers.
• Be sure to tighten fasteners including bolts and nuts to the specified torque.
• Place shop jacks or rigid racks at the specified points.
• Before securing a part on a vice, place cushioning material such as wood blocks, aluminum plate, or shop cloth between the part and the vice.
• Keep grease etc. away from parking brake shoes.

2. Parking Brake Lever

A: REMOVAL

1) Set the wheel stoppers to tires.
2) Remove the console box.
3) Disconnect the parking brake switch connector.
4) Remove the parking cable adjusting nut (self-locking nut).
5) Remove the parking brake lever.



B: INSTALLATION

1) Install in the reverse order of removal.

Tightening torque:
Parking brake lever
18 N·m (1.8 kgf-m, 13.0 ft-lb)

2) Install a new adjusting nut (self-locking nut).
3) Adjust the lever stroke. <Ref. to PB-5, ADJUSTMENT, Parking Brake Lever.>

C: INSPECTION

1) Operate the parking brake lever 3 to 4 times and return the lever fully.
2) While pulling the parking brake lever upward, count the notches.

Lever stroke:
5 to 6 notches when pulled with a force of 200 N (20.4 kgf, 45 lb)

If it is not within the specified value, adjust the parking brake. <Ref. to PB-9, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

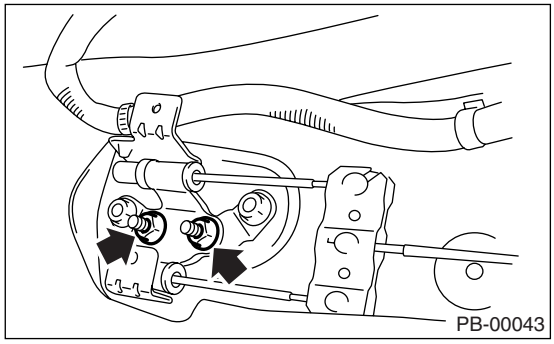
D: ADJUSTMENT

Adjust the parking lever stroke. <Ref. to PB-9, LEVER STROKE, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

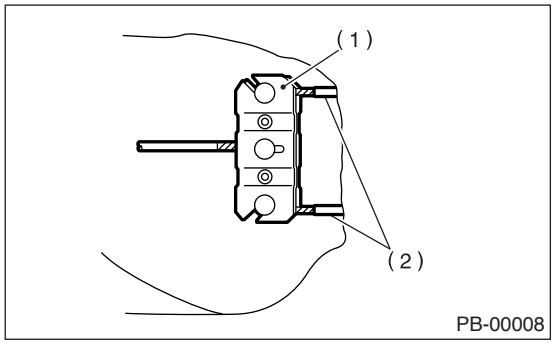
3. Parking Brake Cable

A: REMOVAL

1) Remove the rear seat cushion.
2) Remove the console box.
3) Remove the parking cable adjusting nut (self-locking nut).
4) Remove the parking brake lever. <Ref. to PB-5, REMOVAL, Parking Brake Lever.>
5) Roll up the floor mat and remove the clamps.

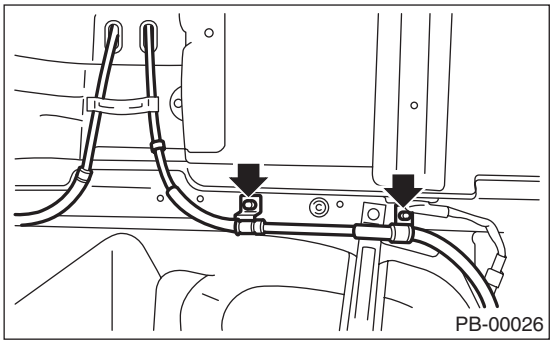


6) Remove the inner cable end from equalizer.



(1) Equalizer
(2) Inner cable end

7) Lift-up the vehicle, and then remove the rear wheels.
8) Remove the parking brake cable from rear brake. <Ref. to PB-7, REMOVAL, Parking Brake Assembly (Rear Disc Brake).>
9) Remove the clamp from rear brake.
10) Remove the cable clamp from rear arm bracket.
11) Remove the cable clamp from rear floor.



12) Remove the cable assembly.

B: INSTALLATION

1) Install in the reverse order of removal.

NOTE:
Be sure to pass the cable through the cable guide inside tunnel.

2) Adjust the lever stroke. <Ref. to PB-5, ADJUSTMENT, Parking Brake Lever.>

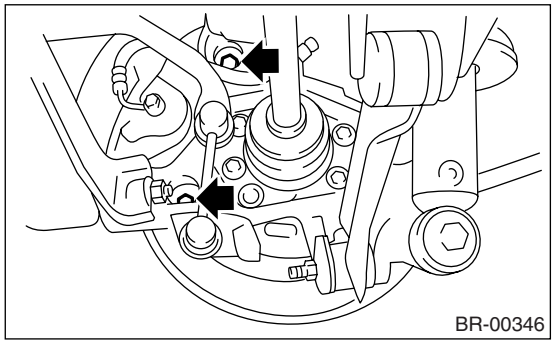
C: INSPECTION

Check and replace the removed cable if damaged, rusty or faulty.
1) Check the cable for smooth operation.
2) Check the inner cable for damage and rust.
3) Check the outer cable for damage, bends and cracks.
4) Check the boot for damage, cracks and corrosion.

4. Parking Brake Assembly (Rear Disc Brake)

A: REMOVAL

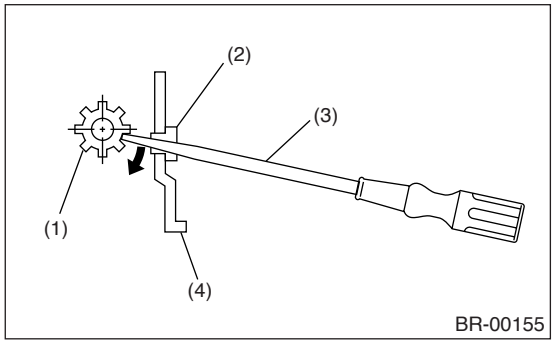
1) Release the parking brake.
2) Remove the two mounting bolts and remove the brake caliper assembly.



3) Suspend the brake caliper assembly so that the hose is not stretched.
4) Remove the disc rotor.

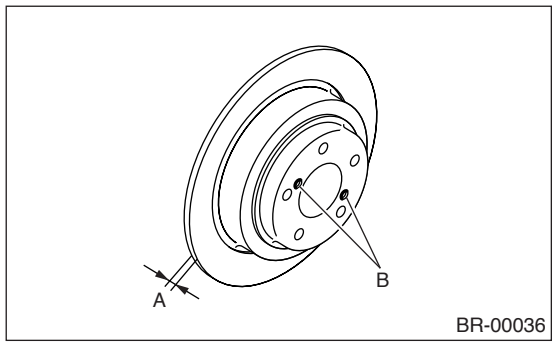
NOTE:
If the disc rotor is difficult to remove, try the following two methods in order.

(1) Turn the adjusting screw using a flat tip screwdriver until the brake shoe gets away enough from the disc rotor.

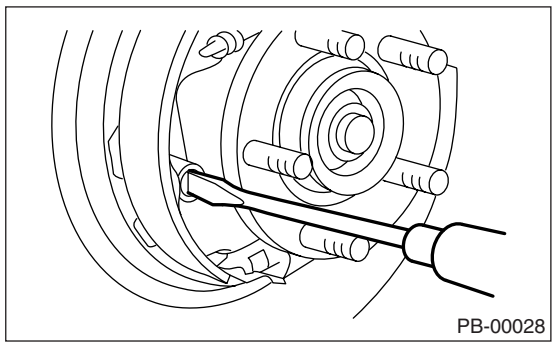


(1) Adjuster
(2) Adjusting hole cover (rubber)
(3) Flat tip screwdriver
(4) Back plate

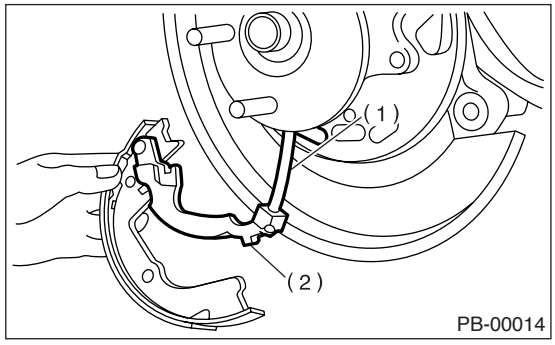
(2) If the disc rotor seizes up within hub, drive out the disc rotor by pushing two 8 mm bolts in holes B on rotor.



5) Remove the shoe return spring from parking brake assembly.
6) Remove the front shoe hold down spring and pin.



7) Remove the strut and strut spring.
8) Remove the adjuster assembly from parking brake assembly.
9) Remove the brake shoe.
10) Remove the rear shoe hold down spring and pin with pliers.
11) Remove the parking brake cable from lever.



(1) Parking brake cable
(2) Lever

12) Using a flat tip screwdriver, raise the retainer. Remove the parking lever and washer from brake shoe.

B: INSTALLATION

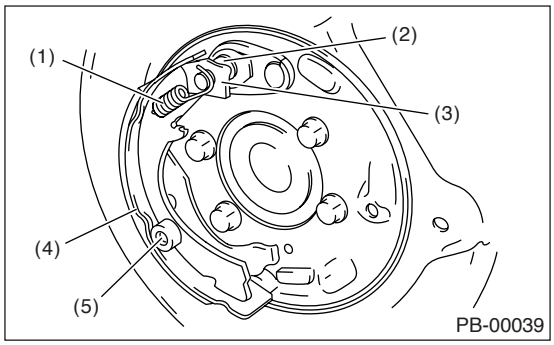
CAUTION:
Be sure the lining surface is free from oil and grease contamination.

1) Apply brake grease to the following places.

Brake grease:
Brake Grease (Part No. 003602002)

- Six contact surfaces of shoe rim and back plate packing
- Contact surface of shoe wave and anchor pin
- Contact surface of lever and strut
- Contact surface of shoe wave and adjuster assembly
- Contact surface of shoe wave and strut
- Contact surface of lever and shoe wave

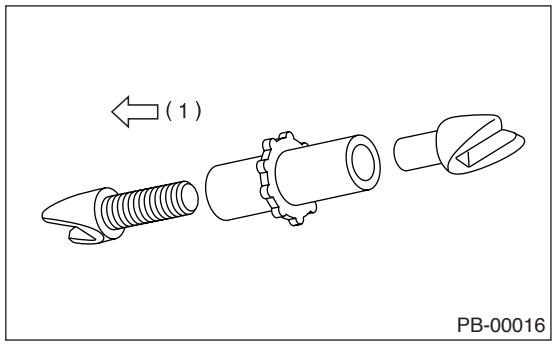
2) Insert the primary side brake shoe into anchor pin groove.
3) Secure the brake shoe with the shoe hold-down pin and cup.
4) Install the plate to anchor pin, and then assemble the primary return spring to anchor pin.



(1) Primary return spring
(2) Anchor pin
(3) Plate
(4) Primary shoe
(5) Shoe hold-down pin and shoe hold-down cup

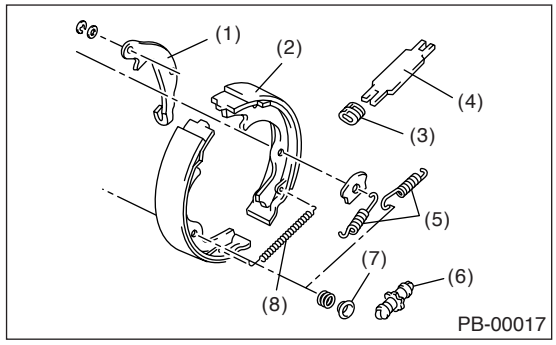
5) Install the parking brake cable to parking brake lever.
6) Assemble the strut and adjuster, and then secure the secondary side brake shoe with shoe hold-down pin and cup.

NOTE:
- Install the strut spring of both right and left wheel facing vehicle front.
- Install the adjuster assembly with screw on left side.



(1) LH

7) Install the secondary return spring and adjusting spring.



(1) Lever
(2) Secondary brake shoe
(3) Strut spring
(4) Strut
(5) Return spring
(6) Adjuster
(7) Shoe hold-down cup
(8) Adjusting spring

8) Adjust the parking brake. <Ref. to PB-9, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>
9) Drive the vehicle for parking brake lining “break-in”.
(1) Drive the vehicle at about 35 km/h (22 MPH).
(2) With the parking brake release button pushed in, pull the parking brake lever gently.
(3) Drive the vehicle for about 200 m (0.12 mile) in this condition.
(4) Wait 5 to 10 minutes for the parking brake to cool down.
Repeat once more from step (1).
(5) After breaking-in, re-adjust the parking brakes.

C: INSPECTION

1) Measure the brake disc rotor inside diameter. If the disc is scored or worn, replace the brake disc rotor.

Disc rotor inside diameter:
Standard:
170 mm (6.69 in)
Service limit:
171 mm (6.73 in)

2) Measure the lining thickness. If it exceeds the limit, replace shoe assembly.

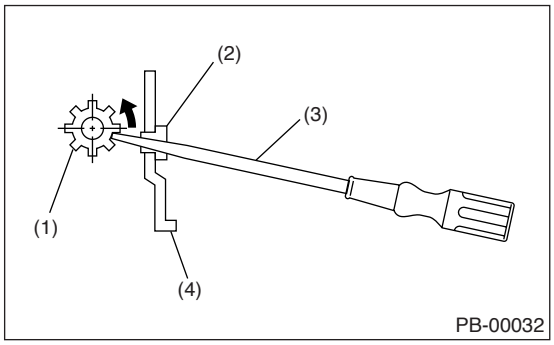
Lining thickness:
Standard:
3.2 mm (0.126 in)
Service limit:
1.5 mm (0.059 in)

NOTE:
Replace the right and left brake shoe as a set.

D: ADJUSTMENT

1. SHOE CLEARANCE

1) Return the parking brake lever fully.
2) Remove the adjusting hole cover from back plate.
3) Turn the adjusting screw using a flat tip screwdriver until the brake shoe is in close contact with disc rotor.



(1) Adjusting screw
(2) Adjusting hole cover (rubber)
(3) Flat tip screwdriver
(4) Back plate

4) Turn back (downward) the adjusting screw 3 to 4 notches.

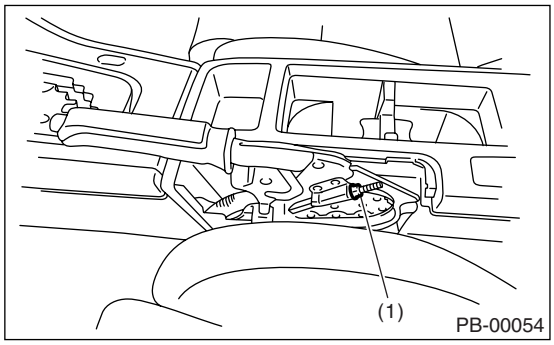
CAUTION:
Check there is no brake drag.

5) Install the adjusting hole cover to back plate.
6) Adjust the parking lever stroke. <Ref. to PB-9, LEVER STROKE, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

2. LEVER STROKE

1) Adjust the shoe clearance before lever stroke adjustment. <Ref. to PB-9, SHOE CLEARANCE, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>
2) Remove the parking lever cover.
3) Operate the parking brake lever 3 to 4 times.
4) Turn the adjusting nut until lever stroke is at the specification.

Lever stroke:
5 to 6 notches when pulled with a force of 200 N (20.4 kgf, 45 lb)



(1) Adjusting nut (Self-locking nut)

5) Check there is no brake drag.
6) Install the parking lever cover.

5. General Diagnostic Table

A: INSPECTION

Symptom	Possible cause	Remedy
Brake drag	Parking brake lever is maladjusted.	Adjustment.
	Parking brake cable does not move.	Repair or replace.
	Parking brake shoe clearance is maladjusted.	Adjustment.
	Return spring is faulty.	Replace.
Noise from brake	Return spring is faulty.	Replace.
	Shoe hold-down spring is faulty.	Replace.

C: CAUTION

• Wear work clothing, including a cap, protective goggles and protective shoes during operation.
• Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
• Be careful not to burn yourself, because each part on the vehicle is hot after running.
• Use SUBARU genuine power steering fluid, grease etc. or the equivalent. Do not mix fluid, grease etc. with that of another grade or from other manufacturers.
• Be sure to tighten fasteners including bolts and nuts to the specified torque.
• Place shop jacks or rigid racks at the specified points.
• Before securing a part on a vise, place cushioning material such as wooden blocks, aluminum plate or cloth between the part and the vise.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-925711000	925711000	PRESSURE GAUGE	Used for measuring oil pump pressure.
 ST-926200000	926200000	STAND	• Used when inspecting characteristic of gear-box assembly and disassembling it. • Used with BOSS D (34199AG000).
 ST34099AC010	34099AC010	ADAPTER HOSE A	Used with PRESSURE GAUGE (925711000).
 ST34099AC020	34099AC020	ADAPTER HOSE B	Used with PRESSURE GAUGE (925711000).

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-926230000	926230000	SPANNER	For the lock nut when adjusting backlash of gearbox.
 ST34099PA100	34099PA100	SPANNER	Used when measuring the rotating resistance of gearbox assembly.
 ST-926420000	926420000	PLUG	When fluid leaks from pinion side of gearbox assembly, remove pipe B from valve housing, attach this tool and check fluid leaking points.
 ST-926250000	926250000	GUIDE	• Used for installing holder assembly into rack housing. • Except for turbo and 3.0 R model.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST34099FA060	34099FA060	PUNCH HOLDER	Used for caulking.
 ST34099FA080	34099FA080	PUNCH	• Used for removing caulking. • For RHD model.
 ST34199AE090	34199AE090	PLUG WRENCH	• Used for removing plug. • For RHD model.
 ST34199AE100	34199AE100	OIL SEAL PLUG REMOVER	• Used for removing oil seal plug. • For RHD model.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST34199AE110	34199AE110	OIL SEAL PLUG INSTALLER	• Used for installing oil seal plug. • For RHD model.
 ST34199AE120	34199AE120	GEARBOX OIL SEAL REMOVER	• Used for removing gearbox oil seal. • For RHD model.
 ST34199AE130	34199AE130	GEARBOX OIL SEAL INSTALLER	• Used for installing gearbox oil seal. • For RHD model.
 ST34199FE040	34199FE040	INSTALLER A, B, C	• Used for installing oil seal to rack assembly. • For turbo and 3.0 R model.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-927490000	927490000	INSTALLER A, B, C	• Used for installing oil seal to rack assembly. • Except for turbo and 3.0 R model.
 ST34199FE010	34199FE010	REMOVER	• Used for removing backup ring and oil seal. • For turbo and 3.0 R model.
 ST-927580000	927580000	REMOVER	• Used for removing backup ring and oil seal. • Except for turbo and 3.0 R model.
 ST34199FE050	34199FE050	GUIDE	• Used for installing rack and seal into housing assembly. • For turbo and 3.0 R model.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST34199AE000	34199AE000	GUIDE	• Used for installing rack and seal into housing assembly. • Except for turbo and 3.0 R model.
 ST34199FE000	34199FE000	INSTALLER & REMOVER	• Used for removing and installing rack oil seal (outer & inner). • For turbo and 3.0 R model.
 ST34199FA030	34199FA030	INSTALLER & REMOVER	• Used for removing and installing rack oil seal (outer & inner). • Except for turbo and 3.0 R model.
 ST34199FE060	34199FE060	INSTALLER	• Used for installing rack oil seal (outer). • For turbo and 3.0 R model. • For RHD model.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST34199AE010	34199AE010	INSTALLER	• Used for installing rack oil seal (outer). • Except for turbo and 3.0 R model. • For RHD model.
 ST34199FE020	34199FE020	BASE	• Used for support housing assembly. • For turbo and 3.0 R model. • For RHD model.
 ST34099FA070	34099FA070	BASE	• Used for support housing assembly. • Except for turbo and 3.0 R model. • For RHD model.
 ST34199AG000	34199AG000	BOSS D	• Used for inspecting characteristic of gearbox assembly and disassembling it. • Used with STAND (926200000).

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST34199AG040	34199AG040	GUIDE	• Used for installing sealing of rack. • For 3.0 R model. • For LHD model.
 ST34199AG030	34199AG030	GUIDE	• Used for installing seal ring of rack. • Except for 3.0 R model. • For LHD model.
 ST34199AG070	34199AG070	FORMER	• Used for forming seal ring of pinion. • For LHD model.
 ST34199AG020	34199AG020	GUIDE	• Used for installing seal ring of pinion. • For LHD model.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST34199AG060	34199AG060	GUIDE G (26)	• Used for forming seal ring of rack. • For 3.0 R model. • For LHD model. • Used with FORMER PISTON (34199AG080).
 ST34199AG050	34199AG050	GUIDE G (24)	• Used for forming seal ring of rack. • Except for 3.0 R model. • For LHD model. • Used with FORMER PISTON (34199AG080).
 ST34199AE050	34199AE050	OIL SEAL REMOVER	• Used for removing oil seal. • Except for 3.0 R model. • For LHD model.
 ST34099PA010	34099PA010	OIL SEAL REMOVER	• Used for removing oil seal. • For 3.0 R model. • For LHD model.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST34199AG090	34199AG090	INSTALLER & REMOVER	• Used for installing oil seal of valve housing. • Used with SEAL INSTALLER (34099FA130). • Used for installing ball bearing of valve housing. • Used for removing oil seal and ball bearing from valve housing. • For LHD model.
 ST34199AG080	34199AG080	FORMER PISTON	• Used for forming seal of rack. • For LHD model. • Used with GUIDE G (26) (34199AG060) or GUIDE G (24) (34199AG050).
 ST34199AG010	34199AG010	INSTALLER	• Used for press-fit oil seal of gearbox cylinder. • For LHD model.

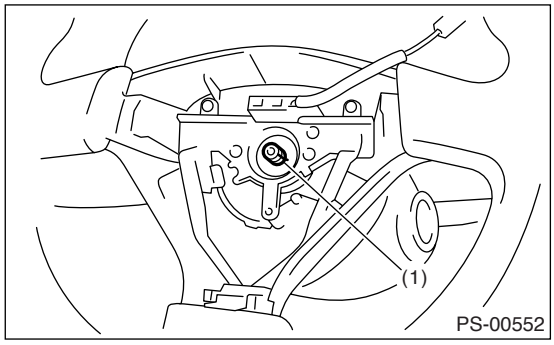
2. Steering Wheel

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Set the tire to the straight-ahead position.
3) Remove the airbag module. <Ref. to AB-14, REMOVAL, Driver's Airbag Module.>

WARNING:
Always refer to "Airbag System" before performing airbag module service. <Ref. to AB-4, CAUTION, General Description.>

4) Place alignment marks on the steering wheel and steering shaft.



(1) Alignment mark

5) Remove the steering wheel nut, and then draw out the steering wheel from shaft using steering puller.

B: INSTALLATION

WARNING:
Always refer to "Airbag System" before performing airbag module service. <Ref. to AB-4, CAUTION, General Description.>

1) Align the center of roll connector. <Ref. to AB-23, ADJUSTMENT, Roll Connector.>
2) Install in the reverse order of removal.

NOTE:
Align the alignment marks on the steering wheel and steering shaft.

Tightening torque:
45 N·m (4.6 kgf-m, 33.2 ft-lb)

Column cover-to-steering wheel clearance:
2 — 4 mm (0.08 — 0.16 in)

CAUTION:
Insert roll connector guide pin into guide hole on lower end of surface of steering wheel to prevent damage.

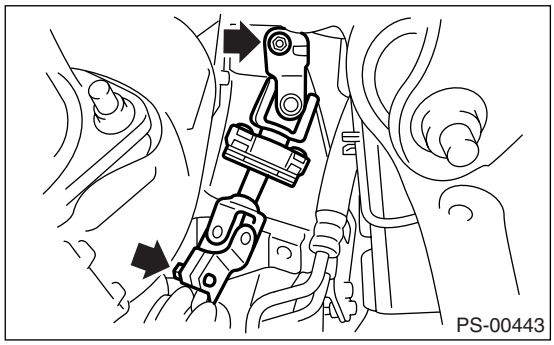
C: INSPECTION

1) Check the steering wheel for deformation. If the deformation is excessive, replace the steering wheel.
2) Check the splines on the steering wheel for damage. If the damage is excessive, replace the steering wheel.

3. Universal Joint

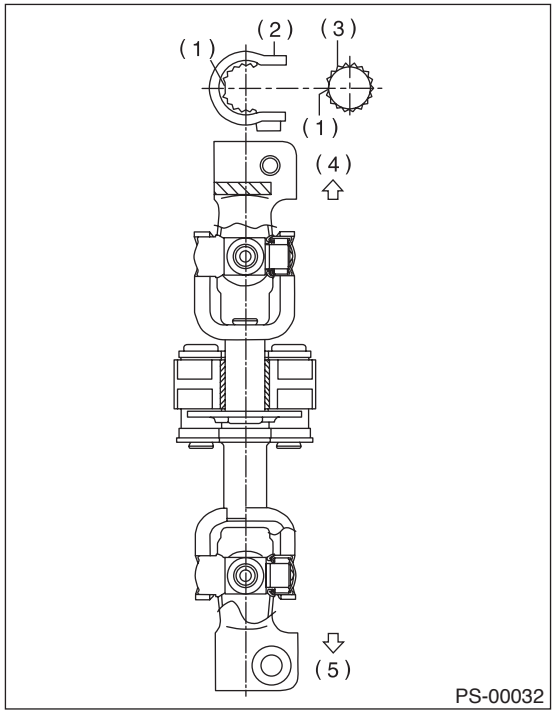
A: REMOVAL

1) Remove the steering wheel. <Ref. to PS-20, REMOVAL, Steering Wheel.>
2) Place alignment marks on universal joint.
3) Remove the universal joint bolts and then remove the universal joint.



B: INSTALLATION

1) Align the cutout at serrated section of the column shaft and yoke, then install the universal joint into column shaft.



(1) Cutout
(2) Yoke
(3) Column shaft
(4) Column shaft side
(5) Gearbox side

2) Install the universal joint to the serrations of gearbox assembly by matching alignment marks.
3) Tighten the bolt.

Tightening torque:
24 N·m (2.4 kgf-m, 17.4 ft-lb)

CAUTION:
Excessively large tightening torque of universal joint bolts may lead to heavy steering wheel operation.

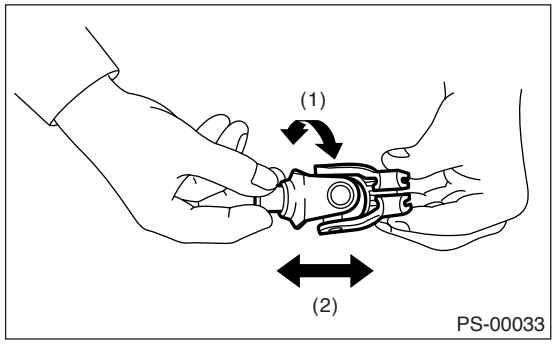
Clearance between coupling of universal joint to turbo cover:
15 mm (0.59 in) or more

4) Align the center of roll connector. <Ref. to AB-23, ADJUSTMENT, Roll Connector.>
5) Install the steering wheel. <Ref. to PS-20, INSTALLATION, Steering Wheel.>

C: INSPECTION

Check for wear, damage or any other faults. If necessary, replace it.

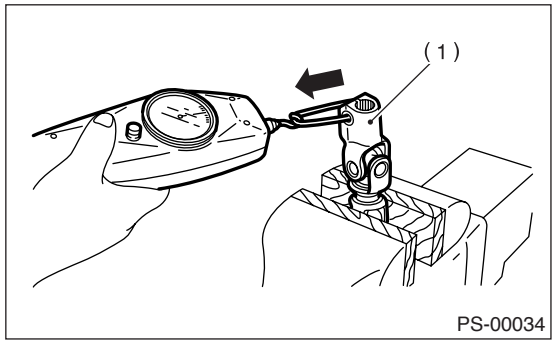
Service limit:
Universal joint play: 0 mm (0 in)
Maximum swing torque: 0.3 N (0.03 kgf, 0.07 lb)



(1) Swinging torque
(2) Play

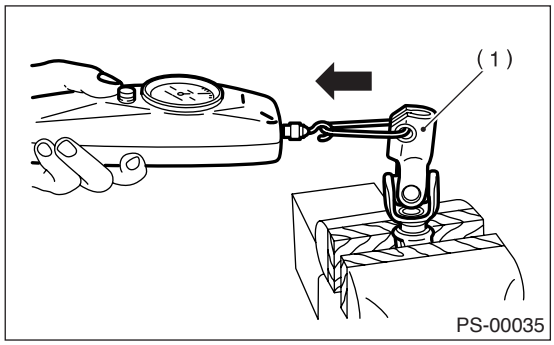
Measure the folding torque of universal joint.

Service limit:
Maximum load: 3.8 N (0.39 kgf, 0.86 lb) or less



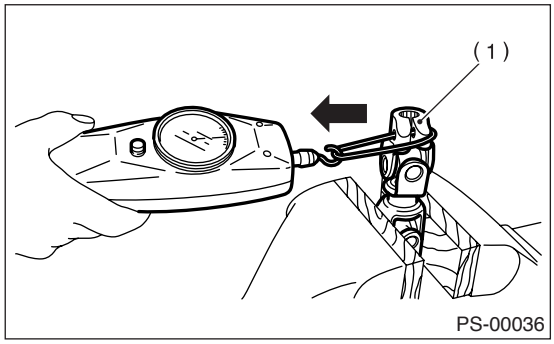
(1) Yoke (Gearbox side)

Service limit:
Maximum load: 3.8 N (0.39 kgf, 0.86 lb) or less



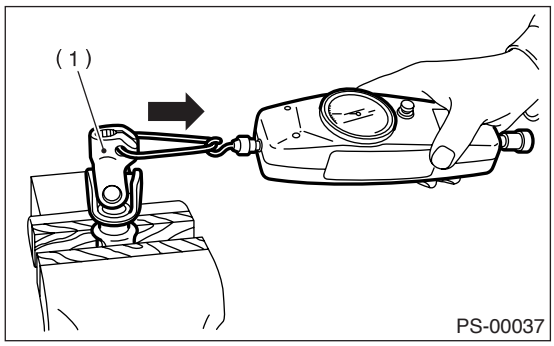
(1) Yoke (Gearbox side)

Service limit:
Maximum load: 7.3 N (0.74 kgf, 1.64 lb) or less



(1) Yoke (Steering column side)

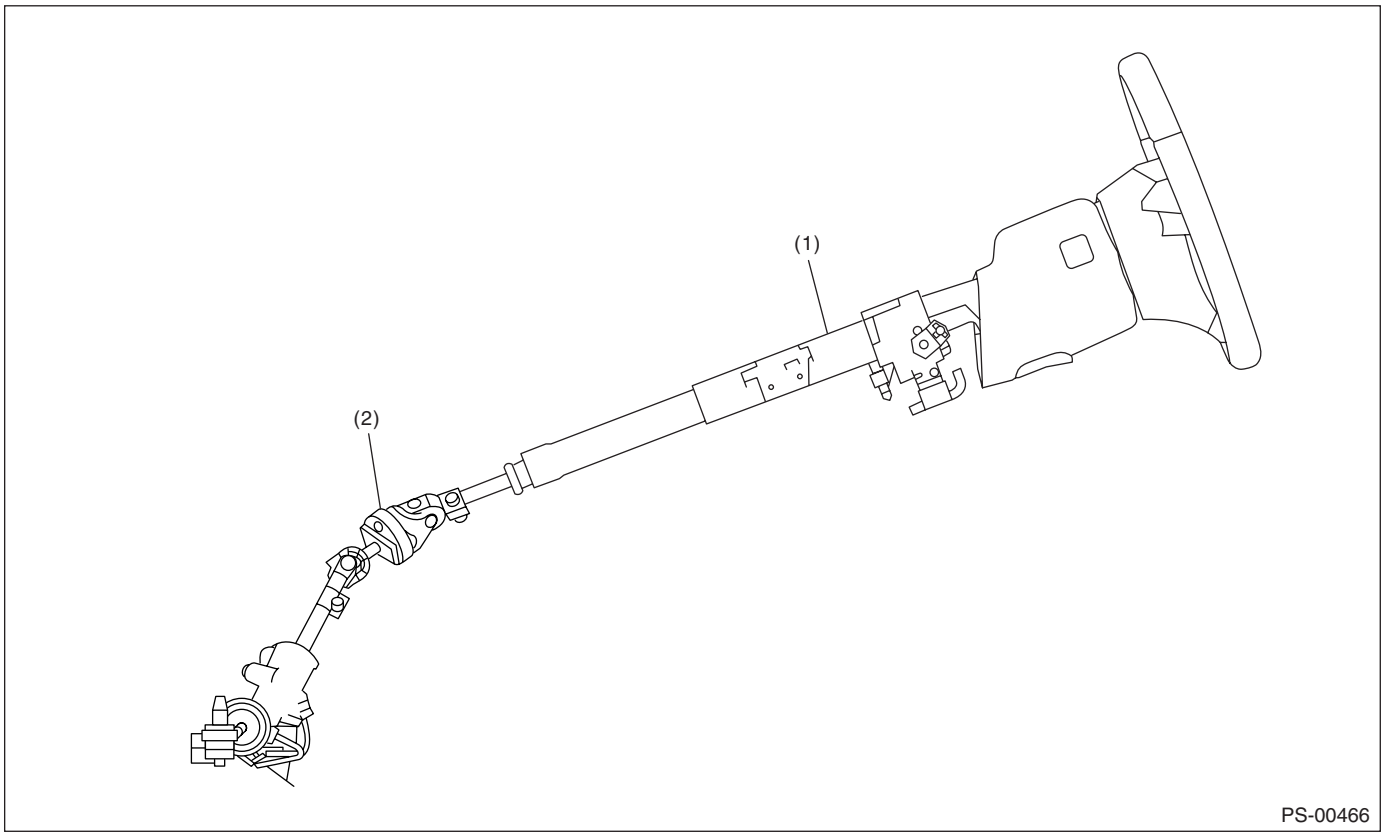
Service limit:
Maximum load: 7.3 N (0.74 kgf, 1.64 lb) or less



(1) Yoke (Steering column side)

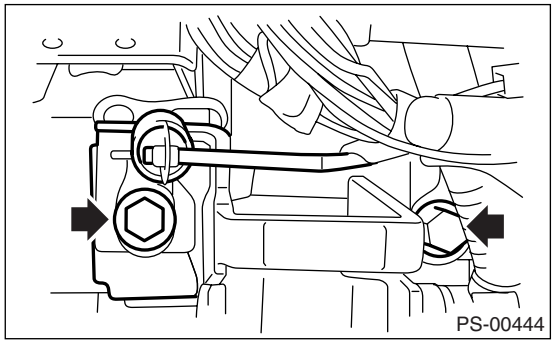
4. Tilt Steering Column

A: REMOVAL



(1) Tilt steering column (2) Universal joint

1) Remove the steering wheel. <Ref. to PS-20, REMOVAL, Steering Wheel.>
2) Remove the universal joint. <Ref. to PS-21, REMOVAL, Universal Joint.>
3) Remove the instrument panel lower cover under.
4) Remove the instrument panel lower cover upper.
5) Remove all connectors from the steering column.
6) Remove the two bolts under instrument panel securing steering column.

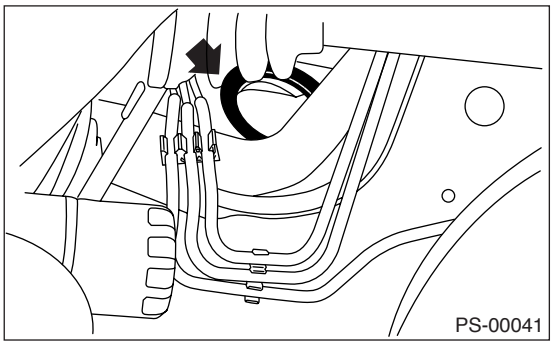


7) Pull out the steering shaft assembly from the hole on toe board.

CAUTION:
• Be sure to remove the universal joint before removing steering shaft assembly installing bolts when removing steering shaft assembly or when lowering it for servicing of other parts.
• Do not loosen the tilt lever when the steering column is not secured to the vehicle.

B: INSTALLATION

1) Install the grommet to toe board.



2) Insert the end of steering shaft into toe board grommet.
3) With the tilt lever secured, tighten the steering shaft mounting bolts under instrument panel.

Tightening torque:
25 N·m (2.5 kgf-m, 18.1 ft-lb)

4) Connect all the connectors under instrument panel.
5) Connect the airbag system connector at the harness spool.

NOTE:
Make sure to apply double lock.

6) Install the instrument panel lower cover with tilt lever held in the lowered position.
7) Install the universal joint. <Ref. to PS-21, INSTALLATION, Universal Joint.>
8) Align the center of roll connector. <Ref. to AB-23, ADJUSTMENT, Roll Connector.>
9) Install the steering wheel. <Ref. to PS-20, INSTALLATION, Steering Wheel.>

CAUTION:
Insert roll connector guide pin into guide hole on lower end of steering wheel surface to prevent damage.

C: DISASSEMBLY

Remove the two screws securing upper steering column covers, and the two screws securing combination switch, and then remove the related parts.

D: ASSEMBLY

Insert the combination switch to the upper column shaft, and install the upper column cover. Then route the ignition key harness and combination switch harness between column cover mounting bosses.

Tightening torque:
1.2 N·m (0.12 kgf-m, 0.9 ft-lb)

CAUTION:
Do not overtorque the screw.

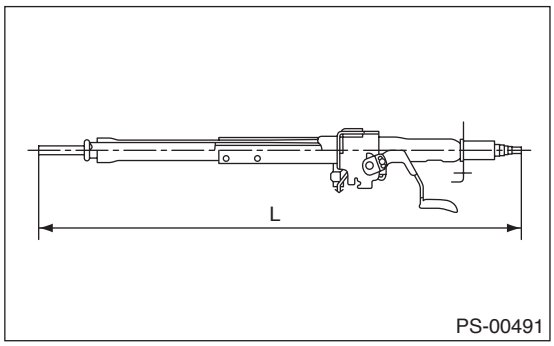
E: INSPECTION

1. BASIC INSPECTION

Measure the overall length of steering column. If not as specified, replace it.

Overall length L:

Standard value
Except for OUTBACK model
833.6±1.5mm (32.82±0.059 in)
OUTBACK model
825.4±1.5mm (32.50±0.059 in)



2. AIRBAG MODEL INSPECTION

WARNING:
For airbag inspection procedures, refer to "Airbag System". <Ref. to AB-4, CAUTION, General Description.>

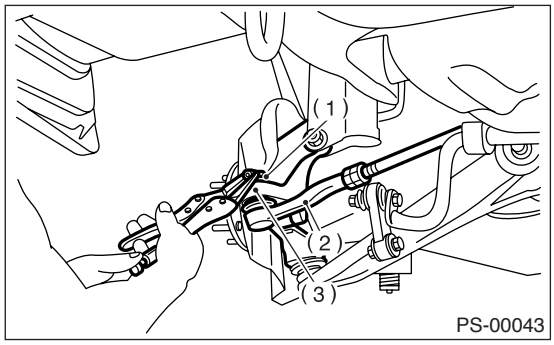
5. Steering Gearbox [LHD Model]

A: REMOVAL

1) Set the vehicle on a lift.
2) Disconnect the ground cable from battery.
3) Loosen the front wheel nuts.
4) Lift-up the vehicle and remove the front wheels.
5) Remove the under cover. <Ref. to EI-26, REMOVAL, Front Under Cover.>
6) Remove the front exhaust pipe assembly. (Non-turbo model) <Ref. to EX(H4SO 2.0)-7, REMOVAL, Front Exhaust Pipe.>

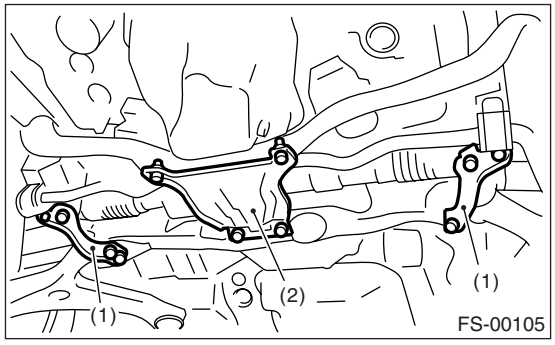
WARNING:
Be careful, not to burn your hand because the exhaust pipe is hot.

7) Using a puller, remove the tie-rod end from the knuckle arm after pulling off cotter pin and removing castle nut.



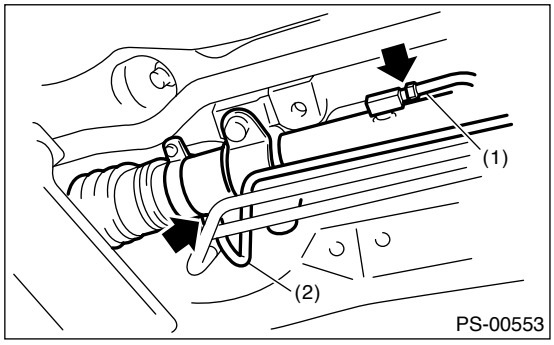
(1) Castle nut
(2) Tie-rod end
(3) Knuckle arm

8) Remove the front crossmember support plate, jack-up plate and front stabilizer. <Ref. to FS-16, REMOVAL, Front Stabilizer.>



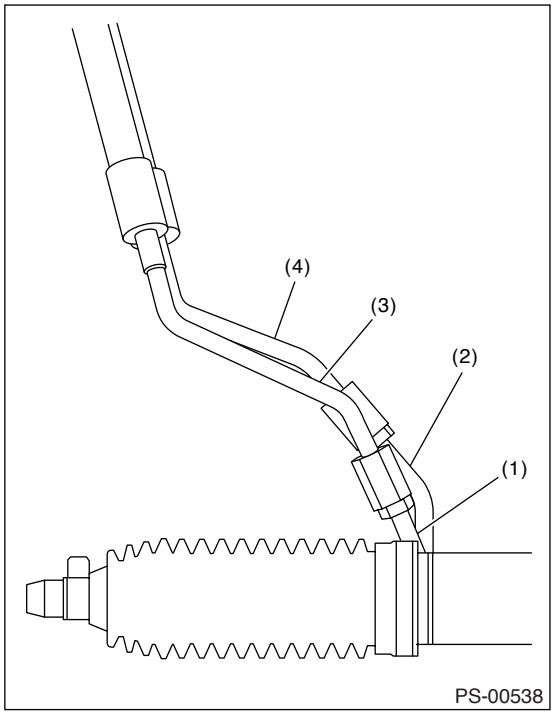
(1) Crossmember support plate
(2) Jack-up plate

9) Remove the one pipe joint at the center of gearbox, and connect the vinyl hose to the pipe and the joint. Discharge the fluid by turning steering wheel fully clockwise and counterclockwise. Discharge the fluid similarly from other pipes.



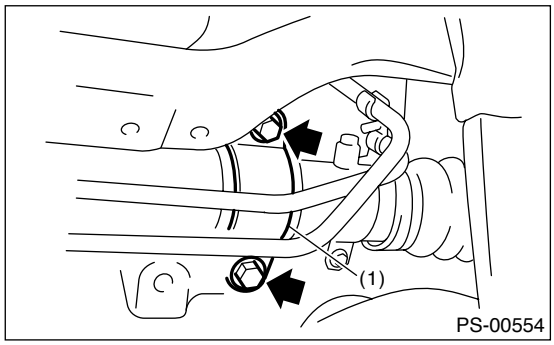
(1) Pipe A
(2) Pipe B

10) Remove the universal joint. <Ref. to PS-21, REMOVAL, Universal Joint.>
11) Disconnect the pipe C from pressure hose first, and pipe D from return hose second.



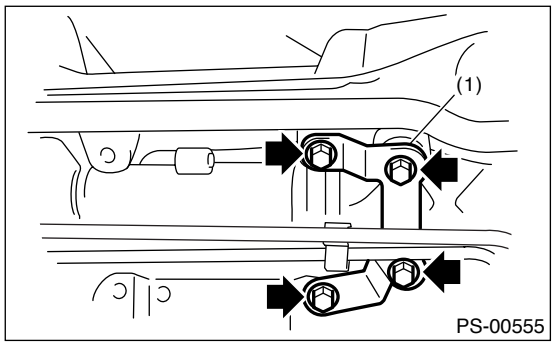
(1) Pipe C
(2) Pipe D
(3) Pressure hose
(4) Return hose

12) Remove the clamp bolts securing gearbox to crossmember, and remove the clamp.



(1) Clamp

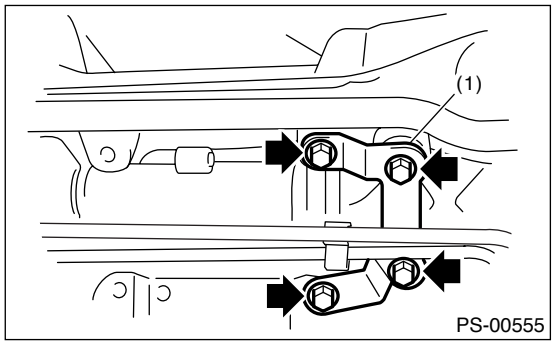
13) Remove the bolts which secure gearbox bracket, and remove the bracket and gearbox.



(1) Bracket

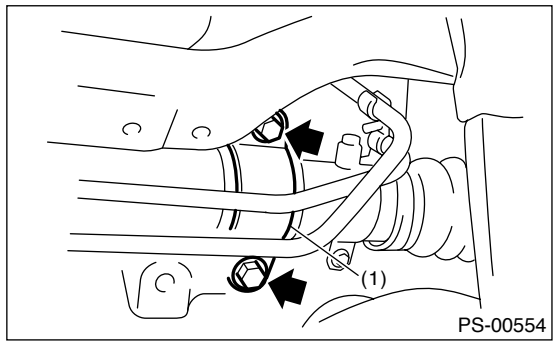
B: INSTALLATION

1) Insert the gearbox into crossmember, being careful not to damage gearbox boot.
2) Install the gearbox and bracket. Tighten the bolt temporarily.



(1) Bracket

3) Tighten the gearbox to the crossmember bracket via clamp with bolt temporarily.



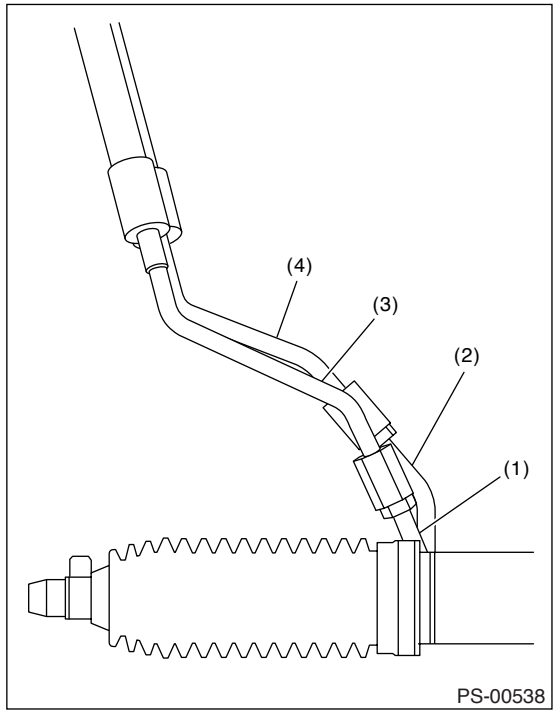
(1) Clamp

4) Tighten the bolts which temporary tightening the clamp and bracket of gearbox to specified torque.

Tightening torque:
60 N·m (6.1 kgf-m, 44.1 ft-lb)

5) Connect the pipe D to return hose first, and the pipe C to pressure hose second.

Tightening torque:
15 N·m (1.5 kgf-m, 10.8 ft-lb)



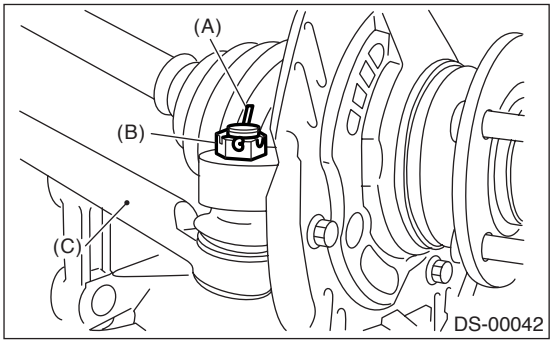
(1) Pipe C
(2) Pipe D
(3) Pressure hose
(4) Return hose

6) Install the universal joint. <Ref. to PS-21, INSTALLATION, Universal Joint.>
7) Connect the tie-rod end and knuckle arm, and tighten with castle nut.

Castle nut tightening torque:
27 N·m (2.75 kgf-m, 19.9 ft-lb)

CAUTION:
When connecting, do not hit cap at the bottom of tie-rod end with hammer.

8) After tightening the castle nut to specified tightening torque, tighten it further within 60° until cotter pin hole is aligned with slot in the nut. Fit the cotter pin into nut, and then bend the pin to lock.



(A) Cotter pin
(B) Castle nut
(C) Tie-rod end

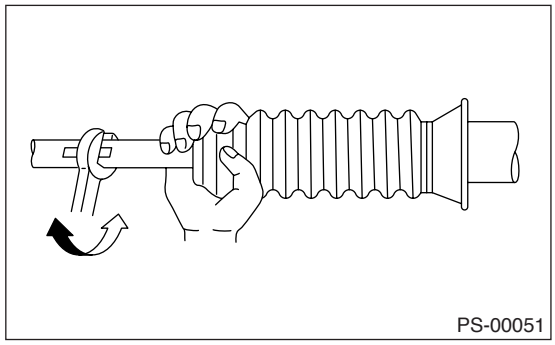
9) Install the front stabilizer. <Ref. to FS-16, INSTALLATION, Front Stabilizer.>
10) Install the front crossmember support plate and jack-up plate.
11) Install the front exhaust pipe assembly. (Non-turbo model) <Ref. to EX(H4SO 2.0)-8, INSTALLATION, Front Exhaust Pipe.>
12) Install the under cover. <Ref. to EI-26, INSTALLATION, Front Under Cover.>
13) Install the front wheels.
14) Tighten the wheel nuts to specified torque.

Tightening torque:
90 N·m (9.1 kgf-m, 65.8 ft-lb)

15) Lower the vehicle.
16) Remove the steering wheel. <Ref. to PS-20, REMOVAL, Steering Wheel.>
17) Align the center of roll connector. <Ref. to AB-23, ADJUSTMENT, Roll Connector.>
18) Install the steering wheel. <Ref. to PS-20, INSTALLATION, Steering Wheel.>
19) Connect the battery ground cable to battery.
20) Pour fluid into the oil tank, and bleed air. <Ref. to PS-84, Power Steering Fluid.>
21) Check for fluid leaks.
22) Check the fluid level in oil tank.
23) After adjusting toe-in and steering angle, tighten the lock nut on tie-rod end.

Tightening torque:
85 N·m (8.7 kgf-m, 62.7 ft-lb)

NOTE:
When adjusting toe-in, hold the boot as shown to prevent it from being rotated or twisted. If twisted, straighten it.



C: DISASSEMBLY

1. RACK HOUSING ASSEMBLY

1) Disconnect the four pipes from gearbox.

NOTE:
Remove the pipes C and D, which are fixed to clamp plate, as a single unit.

2) Secure the gearbox removed from vehicle in vice using ST.
ST1 926200000 STAND

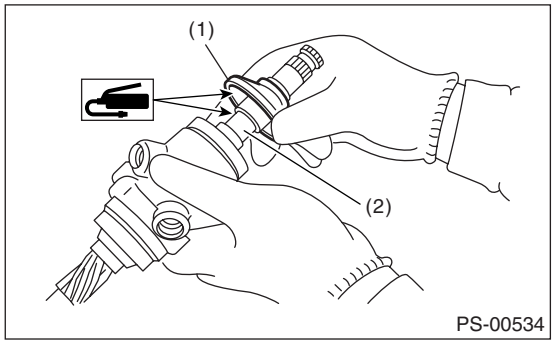
(2) Diameter: 2 — 2.5 mm (0.08 — 0.10 in)
(3) End of cylinder
(4) Holder

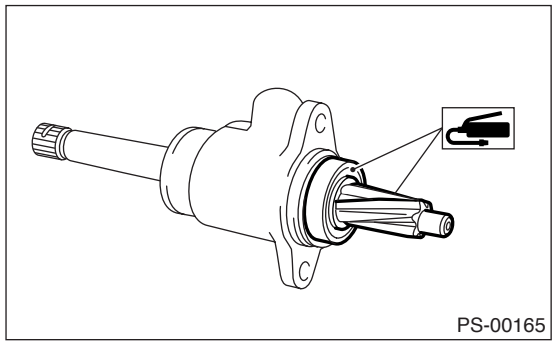
15) Apply vinyl tape to spline portion, and apply genuine grease to dust cover, and then install the dust cover to valve assembly.

CAUTION:
Be sure to install the dust cover to groove on shaft properly.

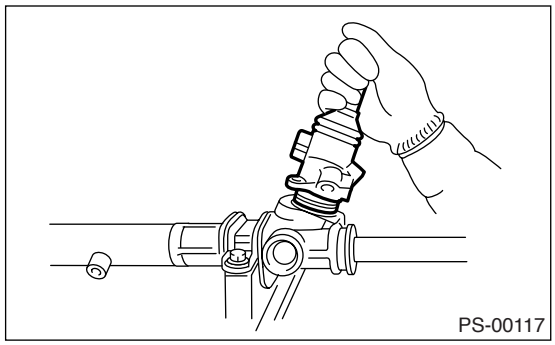


(1) Dust cover
(2) Groove

16) Apply genuine grease to the pinion gear and bearing of valve assembly.



17) Install a new gasket on valve assembly. Insert the valve assembly into place while facing the rack teeth toward pinion.



18) Tighten the bolts alternately to secure valve assembly.

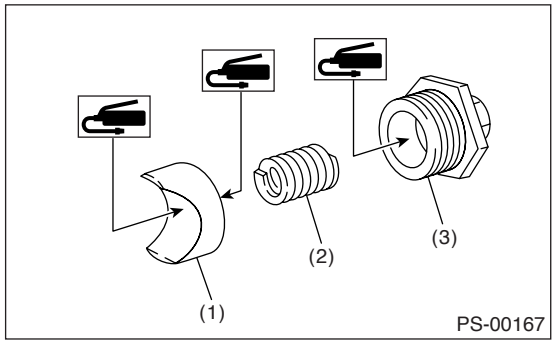
Tightening torque:
25 N·m (2.5 kgf-m, 18.1 ft-lb)

CAUTION:
Be sure to alternately tighten the bolts.

19) Temporarily install the rack, and then operate it from lock to lock two or three times to make it fit in. Remove the grease blocking air vent hole.

CAUTION:
If operating the rack from lock to lock without installing tie-rod, it may damage the oil seal. Always install the tie-rods LH and RH.

20) Apply a coat of grease to the sliding surface of sleeve and seating surface of spring, and then insert sleeve into steering body.
Charge the adjusting screw with grease, and then insert the spring into adjusting screw and install on steering body.



(1) Sleeve
(2) Spring
(3) Adjusting screw

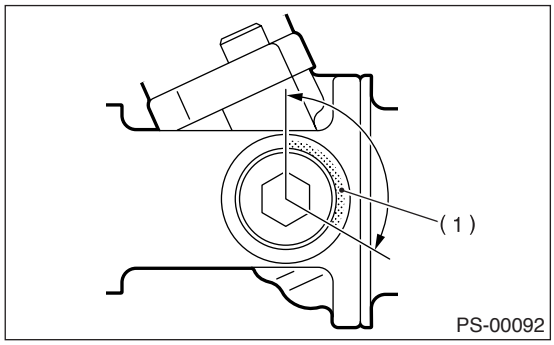
21) Tighten the adjusting screw to specified torque.

Tightening torque:
7.4 N·m (0.75 kgf-m, 5.4 ft-lb)

22) After tightening the adjusting screw with the specified tightening torque, loosen it by 25°.
23) Remove the tie-rod.

24) Verify that play is within specified value. **<Ref. to PS-43,** SERVICE LIMIT, INSPECTION**, Steering Gearbox [LHD Model].>**
25) Loosen the adjusting screw, and then apply liquid gasket to at least 1/3 of the entire perimeter of adjusting screw thread.

Liquid gasket:
THREE BOND 1141



(1) Apply liquid gasket to at least 1/3 of entire perimeter.

26) Tighten the adjusting screw to specified torque.

Tightening torque:
7.4 N·m (0.75 kgf-m, 5.4 ft-lb)

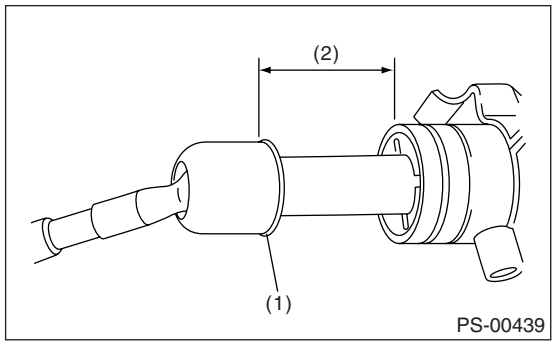
27) After tightening the adjusting screw with the specified tightening torque, loosen it by 25°.
28) Install the lock nut. While holding the adjusting screw with a wrench, tighten lock nut using ST.
ST 926230000 SPANNER

Tightening torque (Lock nut):
39 N·m (4.0 kgf-m, 28.9 ft-lb)

NOTE:
Hold the adjusting screw with a wrench to prevent it from turning while tightening lock nut.

29) Extend the rack approx. 40 mm (1.57 in) beyond side of steering body.
30) Install the tie-rod and a new lock washer into rack.

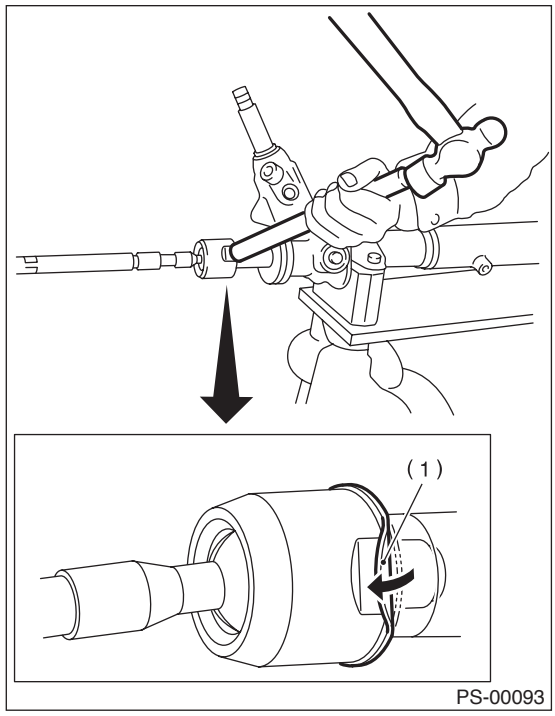
Tightening torque:
78 N·m (8.0 kgf-m, 57.9 ft-lb)



(1) Lock washer
(2) Approx. 40 mm (1.57 in)

31) Bend the lock washer.

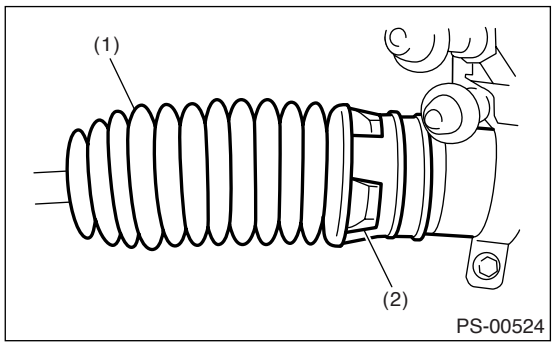
CAUTION:
Be careful not to scratch the rack when bending lock washer.



(1) Lock washer

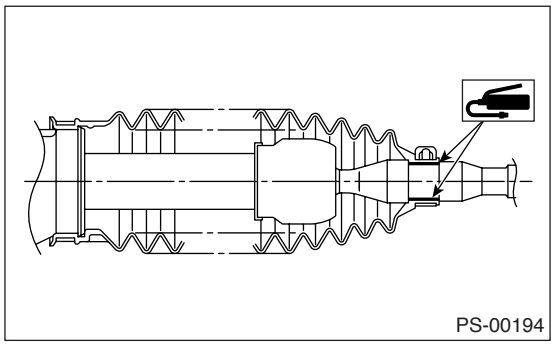
32) Apply a coat of grease to the tie-rod groove, and then install the boot to housing.

CAUTION:
Right side boot has groove for identification. Be sure to install the boots after identifying left and right boots.

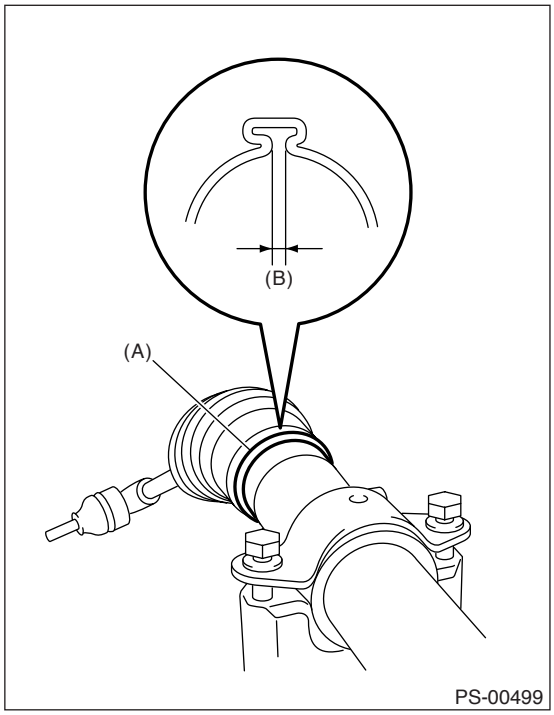


(1) Right side boot
(2) Groove for identification

NOTE:
Make sure that the boot is installed without unusual inflation or deflation.

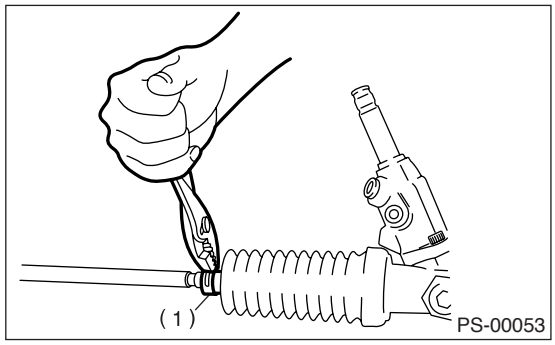


33) Install a new boot band. Using band clamp pliers, caulk the boot band until caulking part clearance is 2 mm (0.079 in) or less.



(A) Boot band
(B) 2 mm (0.079 in) or less

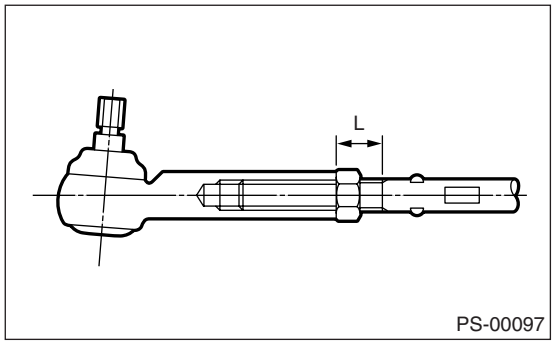
34) Fix the boot end with clip (small).



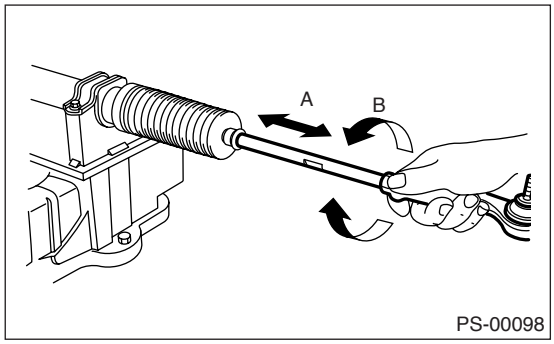
(1) Clip

35) After installing, check the boot end is positioned into groove on tie-rod.
36) If the tie-rod end has been removed, screw in the lock nut and tie-rod end to screwed portion of tie-rod, and then tighten the lock nut temporarily in a position as shown in the figure.

Installed tie-rod length L:
31 mm (1.22 in)



37) Inspect the gearbox as follows:
"A" Holding the tie-rod end, repeat lock to lock two or three times as quickly as possible.
"B" Holding the tie-rod end, turn it slowly at a radius one or two times as large as possible.
After all, make sure that the boot is installed in specified position without deflation.

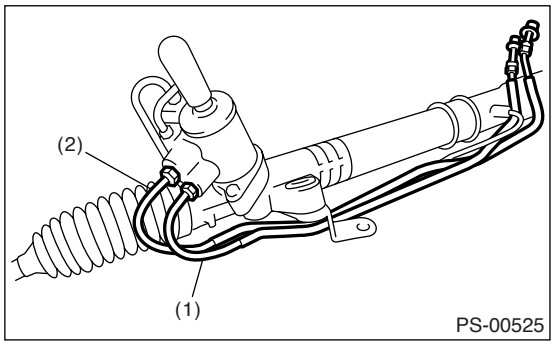


38) Remove the gearbox from ST.
ST1 926200000 STAND
ST2 34199AG000 BOSS D
39) Install the four pipes on gearbox.
(1) Connect the pipe A and B to four pipe joints of gearbox.

Tightening torque:
13 N·m (1.3 kgf-m, 9.4 ft-lb)

(2) Connect the pipe C and D to gearbox.

Tightening torque:
Pipe C: 15 N·m (1.5 kgf-m, 10.8 ft-lb)
Pipe D: 25 N·m (2.5 kgf-m, 18.1 ft-lb)

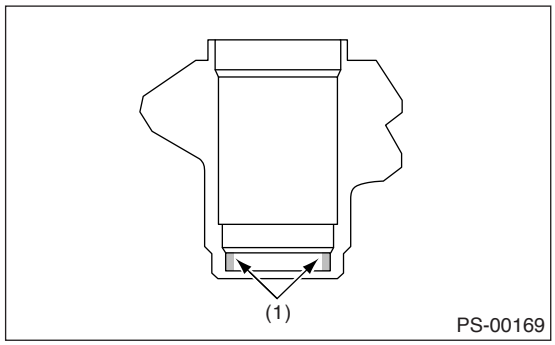


(1) Pipe C
(2) Pipe D

2. CONTROL VALVE ASSEMBLY

Specified steering grease:
VALIAM GREASE M2 (Part No. 003608001)

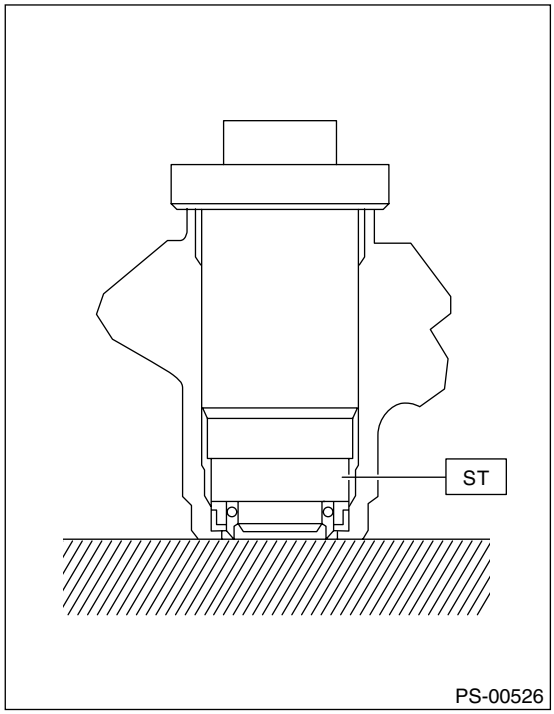
1) Clean all parts and tools before reassembling.
2) Apply a coat of specified power steering fluid to the inner wall of valve housing.



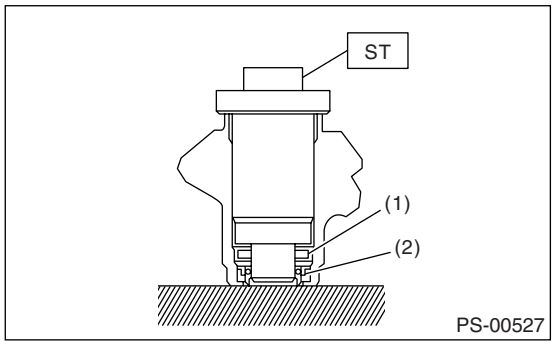
(1) Apply fluid.

3) To avoid scratching the oil seal, apply a coat of grease to the contact surface of installer and oil seal.
4) Verify the oil seal direction.
Attach the oil seal to installer and position in valve housing before pressing into place.

5) Press the oil seal into place using a press.
ST 34199AG090 INSTALLER & REMOVER



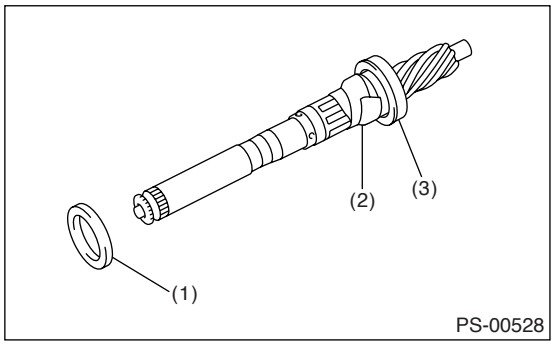
6) Attach the bearing to ST, and then position in value housing. Using the ST and press, install the special bearing in valve housing.
ST 34199AG090 INSTALLER & REMOVER



(1) Special bearing
(2) Oil seal

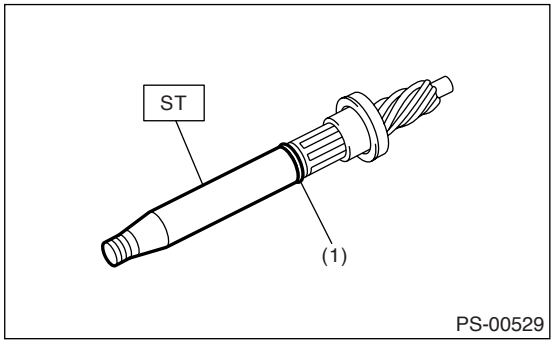
7) Apply vinyl tape to the groove portion of pinion.

8) Install the backup ring and oil seal to pinion, and then remove the vinyl tape.



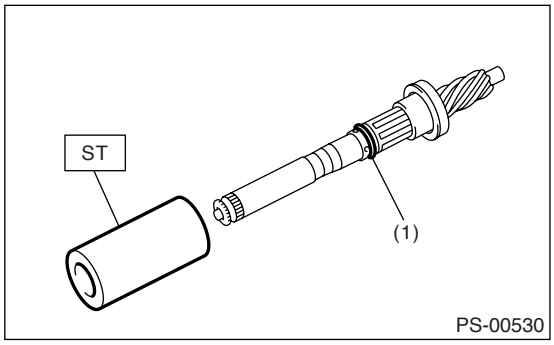
(1) Oil seal
(2) Vinyl tape
(3) Backup ring

9) Set the ST to pinion, and install the seal ring.
ST 34199AG020 GUIDE



(1) Seal ring

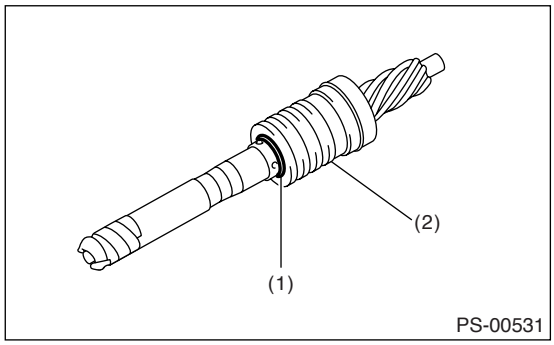
10) Remove the ST GUIDE, and form the seal ring properly using ST FORMER.
ST 34199AG070 FORMER



(1) Seal ring

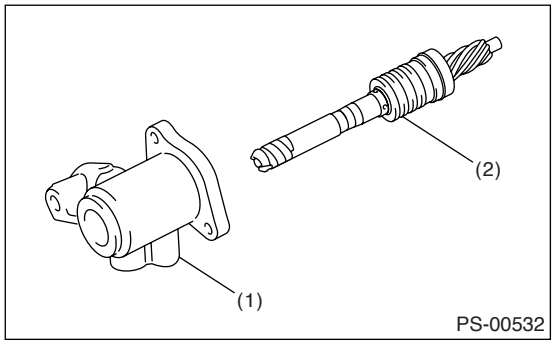
11) Put vinyl tape around the pinion shaft splines to protect oil seal from damage.

12) Install the valve to pinion, and install the snap ring.



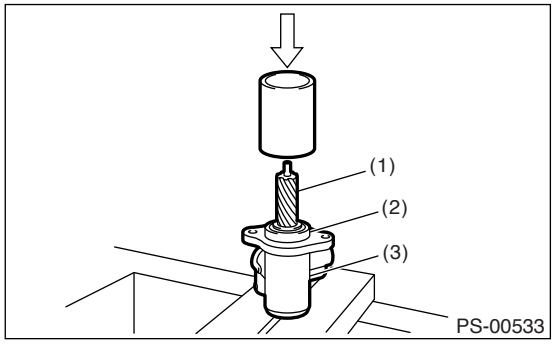
(1) Snap ring
(2) Valve

13) Fit the pinion & valve assembly into valve housing.



(1) Valve housing
(2) Pinion & valve ASSY

14) Using a press, press-fit the pinion & valve assembly into housing by pressing the bearing outer race.

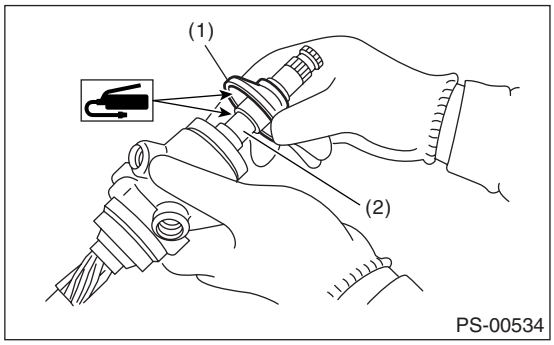


(1) Pinion & valve ASSY
(2) Bearing
(3) Housing

15) Apply the specified grease to dust cover.

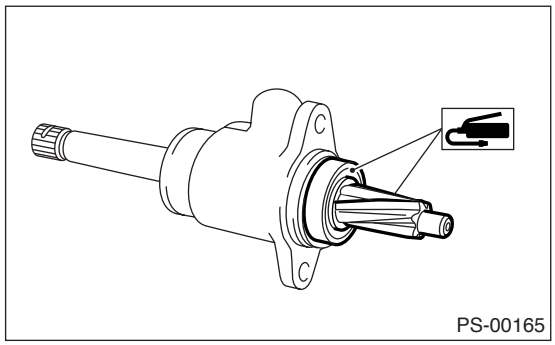
16) Install the dust cover on valve assembly.

CAUTION:
Be sure to install the dust cover to groove on shaft properly.

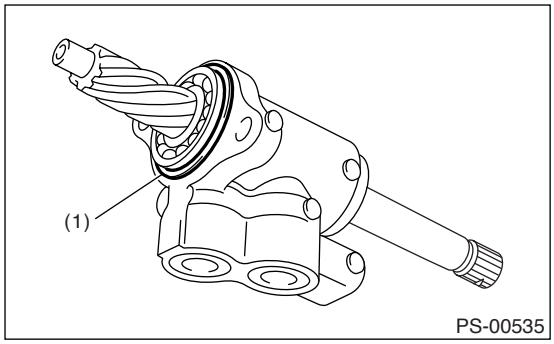


(1) Dust cover
(2) Groove

17) Apply genuine grease to the pinion gear and bearing of valve assembly.

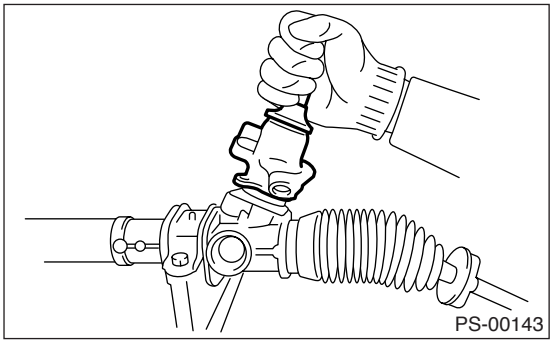


18) Install a new O-ring on valve assembly.



(1) O-ring

19) Insert the valve assembly into place while facing rack teeth toward pinion.

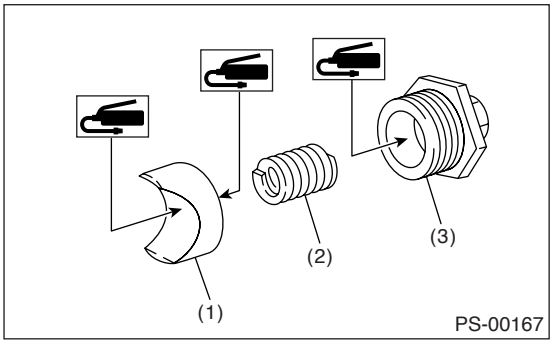


20) Tighten the bolts alternately to secure valve assembly.

Tightening torque:
25 N·m (2.5 kgf-m, 18.1 ft-lb)

CAUTION:
Be sure to alternately tighten the bolts.

21) Apply a coat of grease to the sliding surface of sleeve and seating surface of spring, and then insert the sleeve into steering body.
Charge the adjusting screw with grease, and then insert the spring into adjusting screw and install on steering body.



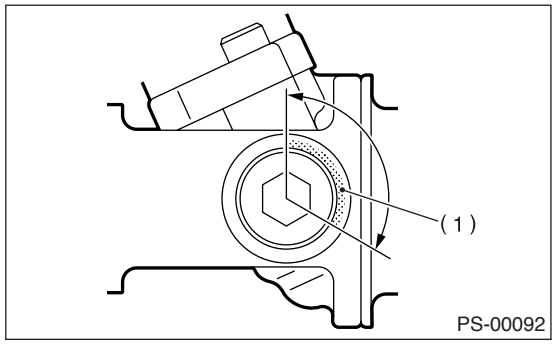
(1) Sleeve
(2) Spring
(3) Adjusting screw

22) Tighten the adjusting screw with specified torque.

Tightening torque:
7.4 N·m (0.75 kgf-m, 5.4 ft-lb)

23) After tightening to the specified tightening torque, loosen it by 25°.
24) Verify that play is within specified value. **<Ref. to PS-43,** SERVICE LIMIT, INSPECTION**, Steering Gearbox [LHD Model].>**
25) Loosen the adjusting screw, and then apply liquid gasket to at least 1/3 of the entire perimeter of adjusting screw thread.

Liquid gasket:
THREE BOND 1141



(1) Apply liquid gasket to at least 1/3 of entire perimeter.

26) Tighten the adjusting screw to specified torque.

Tightening torque:
7.4 N·m (0.75 kgf-m, 5.4 ft-lb)

27) After tightening to the specified tightening torque, loosen it by 25°.
28) Install the lock nut. While holding the adjusting screw with a wrench, tighten the lock nut using ST.
ST 926230000 SPANNER

Tightening torque (Lock nut):
39 N·m (4.0 kgf-m, 28.9 ft-lb)

NOTE:
Hold the adjusting screw with a wrench to prevent it from turning while tightening lock nut.

29) Remove the gearbox from ST.

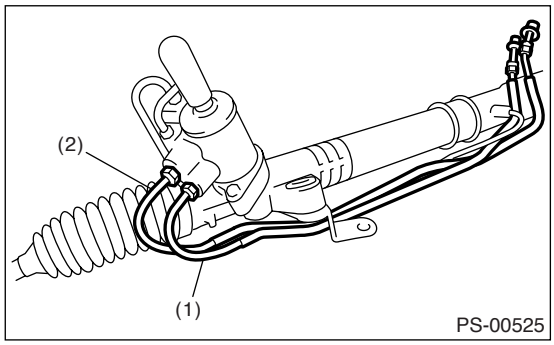
ST2 34199AG000 BOSS D
30) Install the four pipes on gearbox.
(1) Connect the pipe A and B to the gearbox.

Tightening torque:
13 N·m (1.3 kgf-m, 9.4 ft-lb)

(2) Connect the pipe C and D to gearbox.

Tightening torque:
Pipe C: 15 N·m (1.5 kgf-m, 10.8 ft-lb)
Pipe D: 25 N·m (2.5 kgf-m, 18.1 ft-lb)



(1) Pipe C
(2) Pipe D

E: INSPECTION

1. BASIC INSPECTION

1) Clean all disassembled parts, and check for wear, damage or any other faults, then repair or replace as necessary.
2) When disassembling, check the inside of gearbox for water. If any water is found, carefully check the boot for damage, input shaft dust seal, adjusting screw and boot clips for poor sealing. If faulty, replace with new parts.

No.	Parts	Inspection	Corrective action
1	Input shaft	(1) Bend of input shaft (2) Damage on serration	If the bend or damage is excessive, replace the entire gearbox.
2	Dust seal	(1) Crack or damage (2) Wear	If the outer wall slips, the lip is worn out or damage is found, replace it with a new one.
3	Rack & pinion	Poor mating of rack with pinion	(1) Adjust the backlash properly. By measuring the turning torque of gearbox and sliding resistance of rack, check if rack & pinion engage uniformly and smoothly with each other. (Refer to “Service limit”.) (2) Keeping the rack pulled out all the way so that all teeth emerge, check teeth for damage. Even if abnormality is found in either (1) or (2), replace the entire gearbox.
4	Gearbox unit	(1) Bend of rack shaft (2) Bend of cylinder portion (3) Crack or damage on cast iron portion	Replace the gearbox with a new one.
		(4) Wear or damage on rack bush	If the free play of rack shaft in radial direction is out of the specified range, replace the gearbox with a new one. (Refer to “Service limit”.)
		(5) Wear on input shaft bearing	If the free plays of input shaft in radial and axial directions are out of the specified ranges, replace the gearbox with a new one. (Refer to “Service limit”.)
5	Boot	Crack, damage or deterioration	Replace.
6	Tie-rod	(1) Looseness of ball joint (2) Bend of tie-rod	Replace.
7	Tie-rod end	Damage or deterioration on dust seal	Replace.
8	Adjusting screw spring	Deterioration	Replace.
9	Boot clip	Deterioration	Replace.
10	Sleeve	Damage	Replace.
11	Pipes	(1) Damage to flared surface (2) Damage to flare nut (3) Damage to pipe	Replace.

2. SERVICE LIMIT

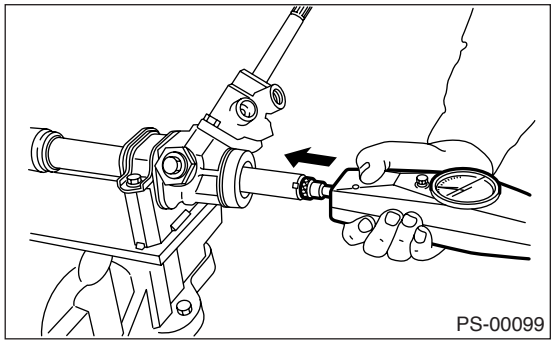
Make a measurement as follows. If it exceeds the specified service limit, adjust or replace.

NOTE:
When making a measurement, vise the gearbox using ST. Never vise the gearbox by inserting aluminum plates, etc. between vise and gearbox.

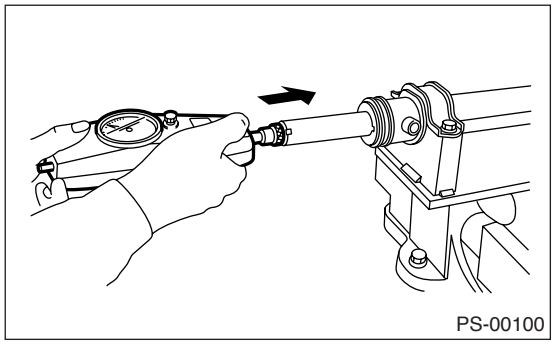
ST1 926200000 STAND
ST2 34199AG000 BOSS D

Sliding resistance of rack shaft:

Service limit
400 N (41 kgf, 90 lb) or less



PS-00099



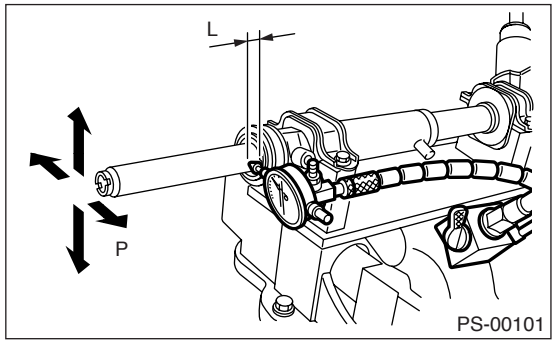
PS-00100

3. RACK SHAFT PLAY IN RADIAL DIRECTION

Right-turn steering:

Service limit
0.19 mm (0.0075 in) or less

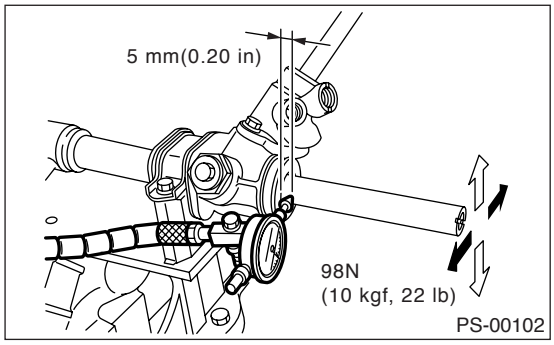
On condition
L: 5 mm (0.20 in)
P: 122.6 N (12.5 kgf, 27.6 lb)



PS-00101

Left-turn steering:

Service limit
Direction ⇦ ⇨
0.3 mm (0.012 in) or less
Direction ⬅ ➡
0.15 mm (0.0059 in) or less



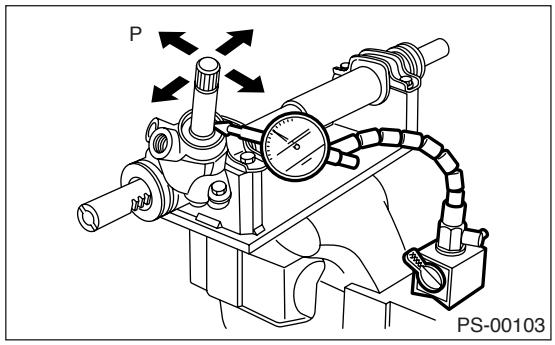
PS-00102

4. INPUT SHAFT PLAY

In radial direction:

Service limit
0.18 mm (0.0071 in) or less

On condition
P: 98 N (10 kgf, 22 lb)



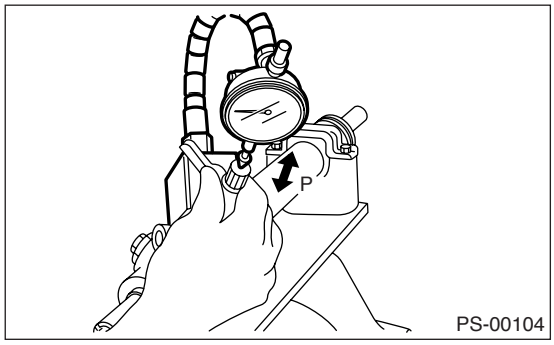
PS-00103

In axial direction:

Service limit
0.5 mm (0.020 in) or less

On condition

P: 20 — 49 N (2 — 5 kgf, 4 — 11 lb)



5. TURNING RESISTANCE OF GEARBOX

Using the ST, measure the gearbox turning resistance.

ST 34099PA100 SPANNER

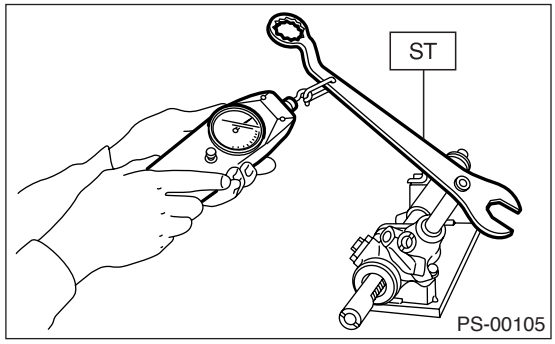
Service limit:

Maximum allowable resistance:

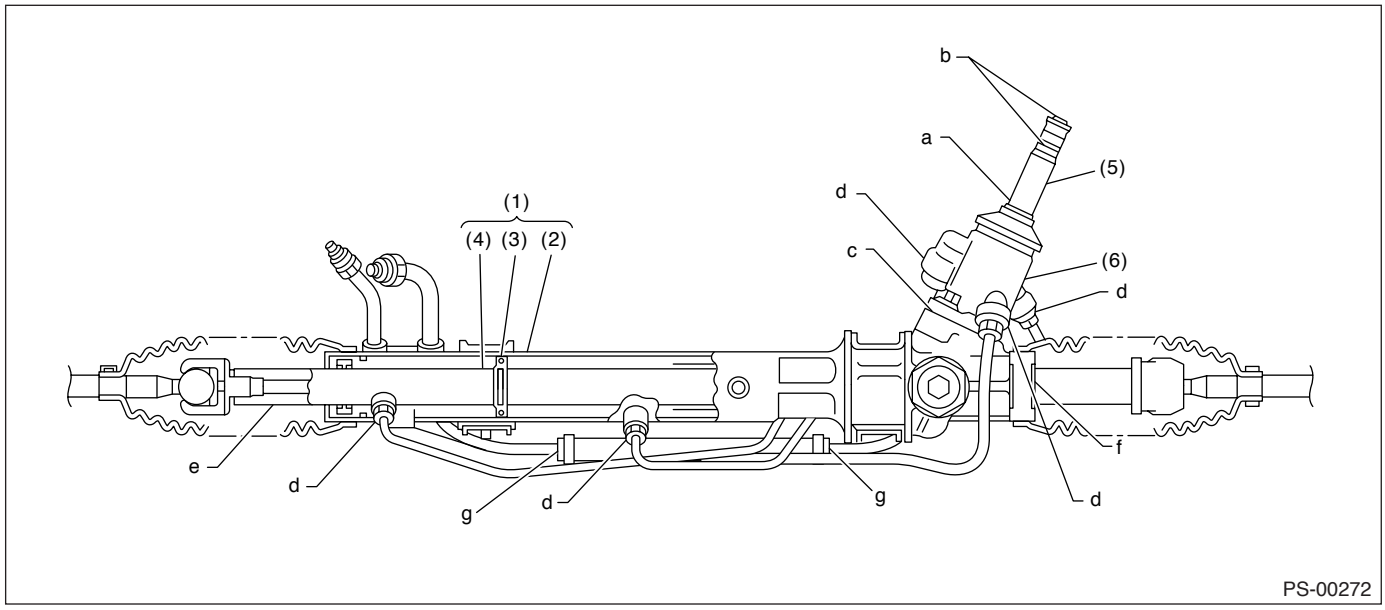
10.5 N (1.1 kgf, 2.4 lb) or less

Difference between right and left turning resistance:

20% or less



6. OIL LEAKING



(1) Power cylinder
(2) Cylinder
(3) Rack piston
(4) Rack axle
(5) Input shaft
(6) Valve housing

1) Lift up the vehicle.
2) Even if the location of leak can be easily found by observing the leaking condition, it is necessary to thoroughly remove the fluid from the suspected portion and turn the steering wheel from lock to lock about thirty to forty times with engine running, then make comparison of the suspected portion between immediately after and several hours after this operation.
3) Cause and measure for oil leakage from “a”
The oil seal is damaged. Replace the valve assembly with a new one.
4) Cause and measure for oil leakage from “b”
The torsion bar O-ring is damaged. Replace the valve assembly with a new one.
5) Cause and measure for oil leakage from “c”
The oil seal is damaged. Replace the valve assembly or oil seal with a new one.
6) Cause and measure for oil leakage from “d”
The pipe is damaged. Replace the faulty pipe or O-ring.
7) Cause and measure for oil leakage from “g”
The hose is damaged. Replace the hose with a new one.
8) If leak is other than a, b, c, d, or g, and if oil is leaking from the gearbox, move the right and left boots toward tie-rod end side, respectively, with the gearbox mounted to the vehicle, and remove fluid from the surrounding portions. Then, turn the steering wheel from lock to lock thirty to forty times with the engine running, and make comparison of the leaked portion immediately after and several hours after this operation.

(1) Leakage from “e”
The cylinder seal is damaged. Replace the rack bush with a new one.

(2) Leakage from “f”
There are two possible causes. Take the following step first. Remove the pipe assembly B from the valve housing, and close the circuit with ST.

ST 926420000 PLUG

Turn the steering wheel from lock to lock thirty to forty times with the engine running, then make comparison of the leaked portion between immediately after and several hours after this operation.

- If leakage from “f” is noted again:

The oil seal of pinion & valve assembly is damaged. Replace the pinion & valve assembly with a new one. Or replace the oil seal and parts that are damaged during disassembly with new ones.

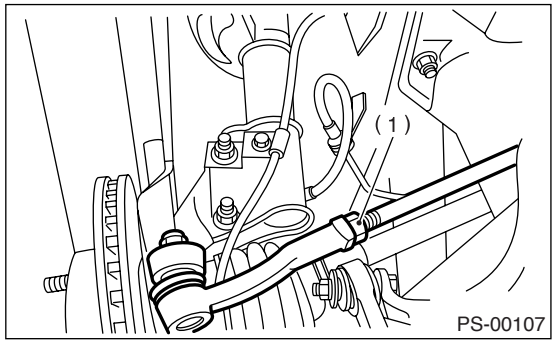
- If oil stops leaking from “f”:

The oil seal of rack housing is damaged. Replace the oil seal and the parts that are damaged during disassembly with new ones.

F: ADJUSTMENT

1) Adjust the front toe. <Ref. to FS-12, FRONT WHEEL TOE-IN, INSPECTION, Wheel Alignment.>

Standard of front toe:
IN 3 — OUT 3 mm (IN 0.12 — OUT 0.12 in)



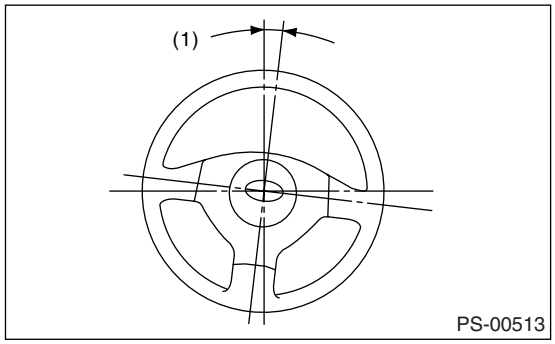
(1) Lock nut

2) Adjust the steering angle of wheels.

Standard of steering angle:

Model	2.0 i, 2.5 i	3.0 R	OUTBACK
Inner wheel	37.3°±1.5°	37.2°±1.5°	37.8°±1.5°
Outer wheel	33.0°±1.5°	32.9°±1.5°	33.5°±1.5°

3) If the steering wheel spokes are not horizontal when wheels are set in the straight ahead position, and error is more than 5° on the periphery of steering wheel, correctly re-install the steering wheel.



(1) Within 5°

4) If the steering wheel spokes are not horizontal with vehicle set in the straight ahead position after this adjustment, correct it by turning the right and left tie-rods in opposite direction by same angle.

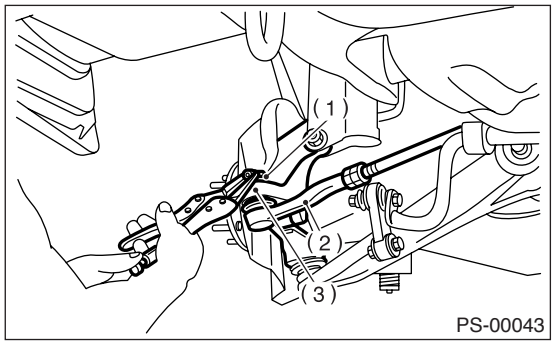
6. Steering Gearbox [RHD Model]

A: REMOVAL

1) Set the vehicle on a lift.
2) Disconnect the ground cable from battery.
3) Loosen the front wheel nuts.
4) Lift-up the vehicle and remove the front wheels.
5) Remove the under cover. <Ref. to EI-26, REMOVAL, Front Under Cover.>
6) Remove the front exhaust pipe assembly. (Non-turbo model) <Ref. to EX(H4SO 2.0)-7, REMOVAL, Front Exhaust Pipe.>

WARNING:
Be careful, not to burn your hand because the exhaust pipe is hot.

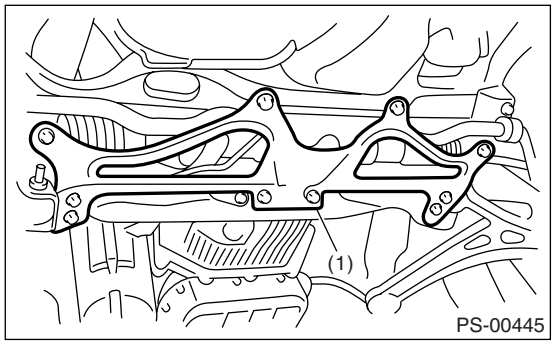
7) Using a puller, remove the tie-rod end from the knuckle arm after pulling off cotter pin and removing castle nut.



(1) Castle nut
(2) Tie-rod end
(3) Knuckle arm

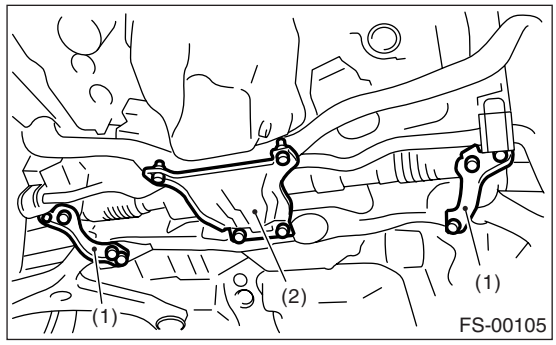
8) Remove the front crossmember support plate, jack-up plate and front stabilizer. <Ref. to FS-16, REMOVAL, Front Stabilizer.>

• Large type



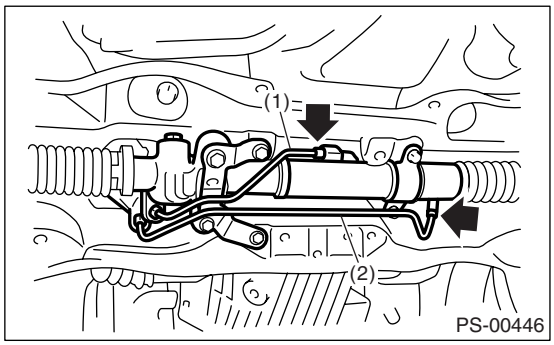
(1) Front crossmember support plate

• Small type



(1) Front crossmember support plate
(2) Jack-up plate

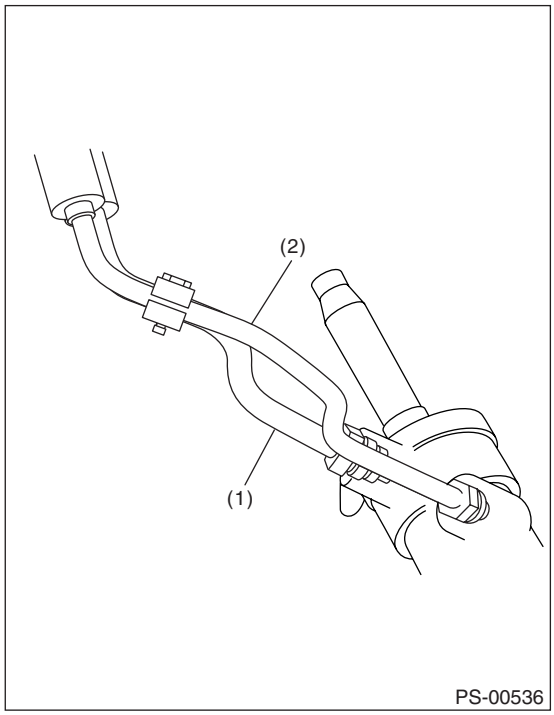
9) Remove the one pipe joint at the center of gearbox, and connect the vinyl hose to the pipe and the joint. Discharge the fluid by turning steering wheel fully clockwise and counterclockwise. Discharge the fluid similarly from other pipes.



(1) Pipe A
(2) Pipe B

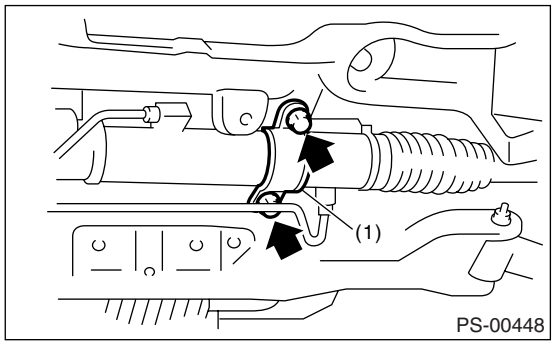
10) Remove the universal joint. <Ref. to PS-21, REMOVAL, Universal Joint.>

11) Disconnect the return hose and pressure hose from gearbox.



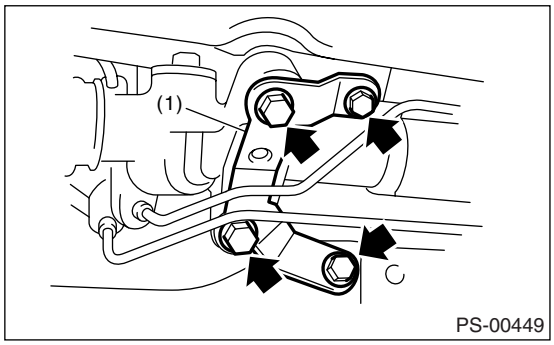
(1) Return hose
(2) Pressure hose

12) Remove the clamp bolts securing gearbox to crossmember, and remove the clamp.



(1) Clamp

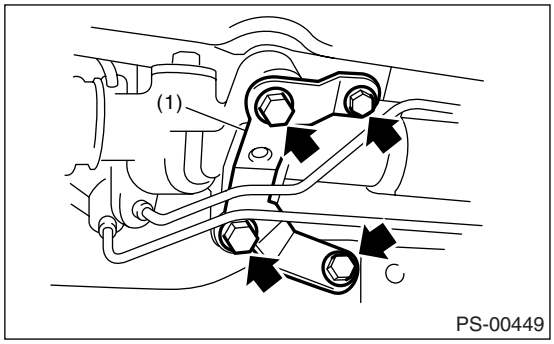
13) Remove the bolts which secure the gearbox bracket, and remove the bracket and gearbox.



(1) Bracket

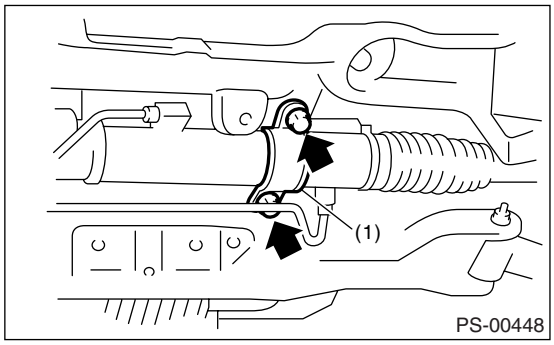
B: INSTALLATION

1) Insert the gearbox into the crossmember, being careful not to damage gearbox boot.
2) Install the gearbox and bracket. Tighten the bolt temporarily.



(1) Bracket

3) Tighten the gearbox to the crossmember bracket via clamp with bolt temporarily.



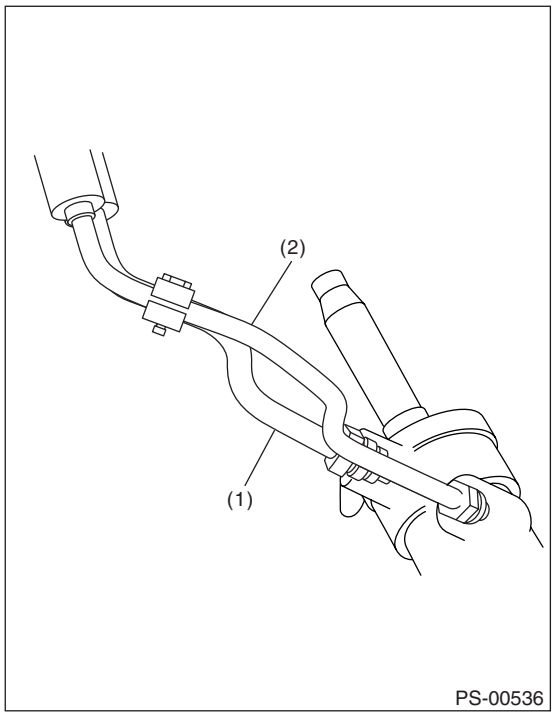
(1) Clamp

4) Tighten the bolts which temporary tightening the clamp and bracket of gearbox to specified torque.

Tightening torque:
60 N·m (6.1 kgf-m, 44.1 ft-lb)

5) Connect the return hose and pressure hose to gearbox.

Tightening torque:
15 N·m (1.5 kgf-m, 10.8 ft-lb)



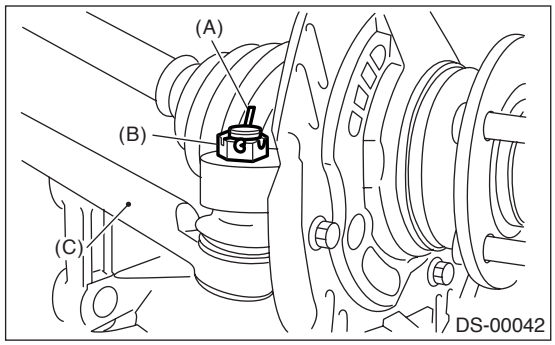
(1) Return hose
(2) Pressure hose

6) Install the universal joint. <Ref. to PS-21, INSTALLATION, Universal Joint.>
7) Connect the tie-rod end and knuckle arm, and tighten with castle nut.

Castle nut tightening torque:
27 N·m (2.75 kgf-m, 19.9 ft-lb)

CAUTION:
When connecting, do not hit cap at the bottom of tie-rod end with hammer.

8) After tightening the castle nut to specified tightening torque, tighten it further within 60° until cotter pin hole is aligned with slot in the nut. Fit the cotter pin into nut, and then bend the pin to lock.



(A) Cotter pin
(B) Castle nut
(C) Tie-rod end

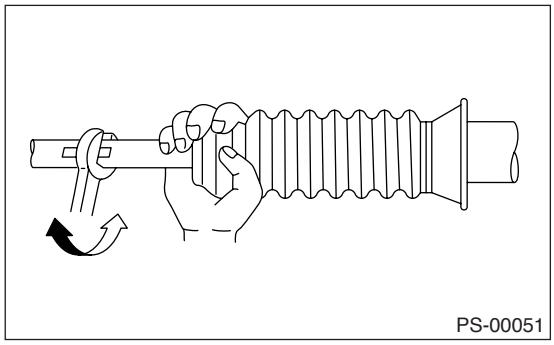
9) Install the front stabilizer. <Ref. to FS-16, INSTALLATION, Front Stabilizer.>
10) Install the front crossmember support plate and jack-up plate.
11) Install the front exhaust pipe assembly. (Non-turbo model) <Ref. to EX(H4SO 2.0)-8, INSTALLATION, Front Exhaust Pipe.>
12) Install the under cover. <Ref. to EI-26, INSTALLATION, Front Under Cover.>
13) Install the front wheels.
14) Tighten the wheel nuts to specified torque.

Tightening torque:
90 N·m (9.1 kgf-m, 65.8 ft-lb)

15) Lower the vehicle.
16) Remove the steering wheel. <Ref. to PS-20, REMOVAL, Steering Wheel.>
17) Align the center of roll connector. <Ref. to AB-23, ADJUSTMENT, Roll Connector.>
18) Install the steering wheel. <Ref. to PS-20, INSTALLATION, Steering Wheel.>
19) Connect the battery ground cable to battery.
20) Pour fluid into the oil tank, and bleed air. <Ref. to PS-84, Power Steering Fluid.>
21) Check for fluid leaks.
22) Check the fluid level in oil tank.
23) After adjusting toe-in and steering angle, tighten the lock nut on tie-rod end.

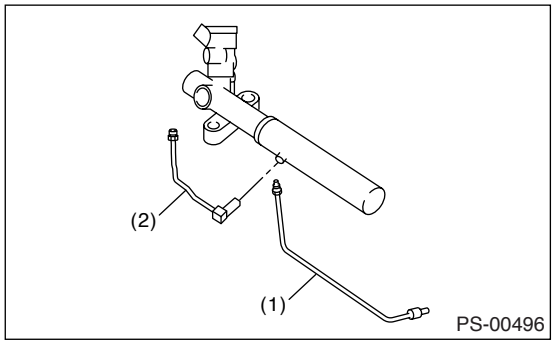
Tightening torque:
85 N·m (8.7 kgf-m, 62.7 ft-lb)

NOTE:
When adjusting toe-in, hold the boot as shown to prevent it from being rotated or twisted. If twisted, straighten it.



C: DISASSEMBLY

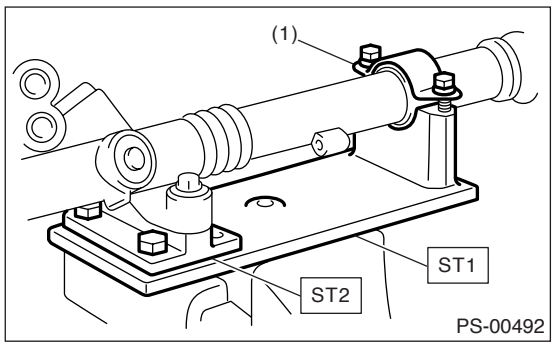
1) Disconnect the pipes A and B from steering body and control valve housing.



(1) Pipe A
(2) Pipe B

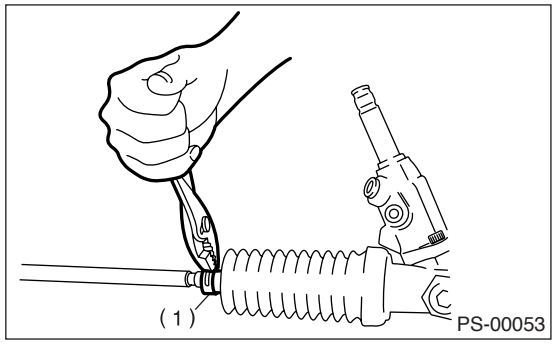
2) Secure the gearbox removed from vehicle in a vice using ST.
ST1 926200000 STAND
ST2 34199AG000 BOSS D

CAUTION:
Secure the gearbox assembly in a vice using the ST as shown. Do not secure the gearbox without this ST.



(1) Clamp

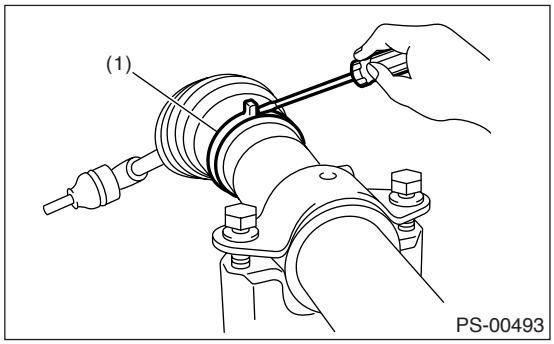
3) Remove the tie-rod end and lock nut from gearbox.
4) Remove the clip from outside boot using pliers, and then move the boot to tie-rod end side.



(1) Clip

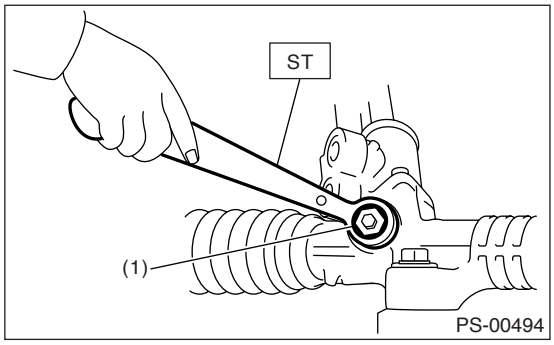
5) Using a flat tip screwdriver, remove the band from boot.

NOTE:
Replace the boot if there is damage, cracks or deterioration.



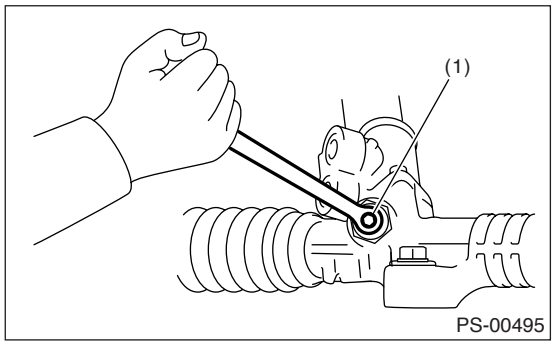
(1) Band

6) Using the ST, loosen the lock nut.
ST 926230000 SPANNER



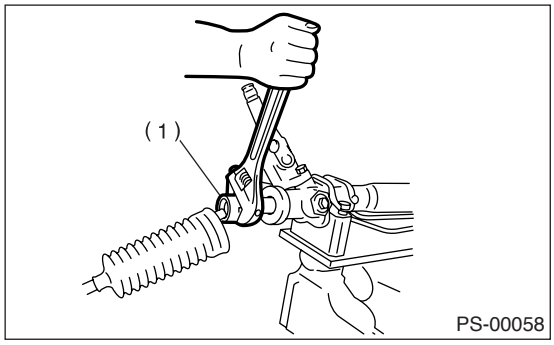
(1) Lock nuts

7) Tighten the adjusting screw until it no longer tightens.



(1) Adjusting screw

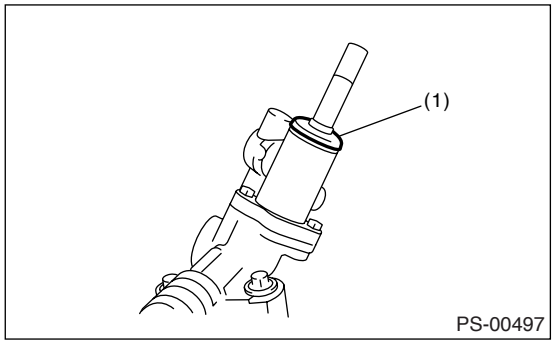
8) Using a 32 mm spanner or adjustable wrench with cinching boot, remove the tie-rod.



(1) Tie-rod

9) Loosen the adjusting screw and remove the spring and sleeve.
10) Clean the dirt adherent to the input shaft. Remove the dust cover paying attention not to scratch the housing or input shaft and not to allow foreign matter to enter the gear box interior.

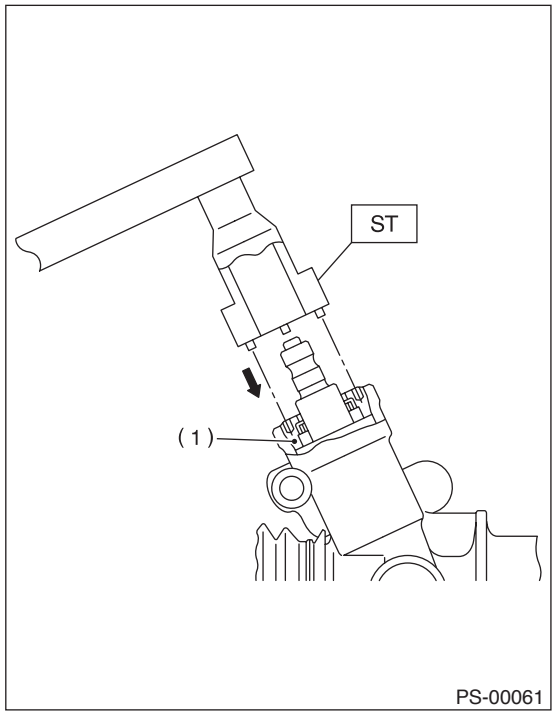
CAUTION:
Wrap the tape to the spline part of input shaft to avoid damaging dust cover.



(1) Dust cover

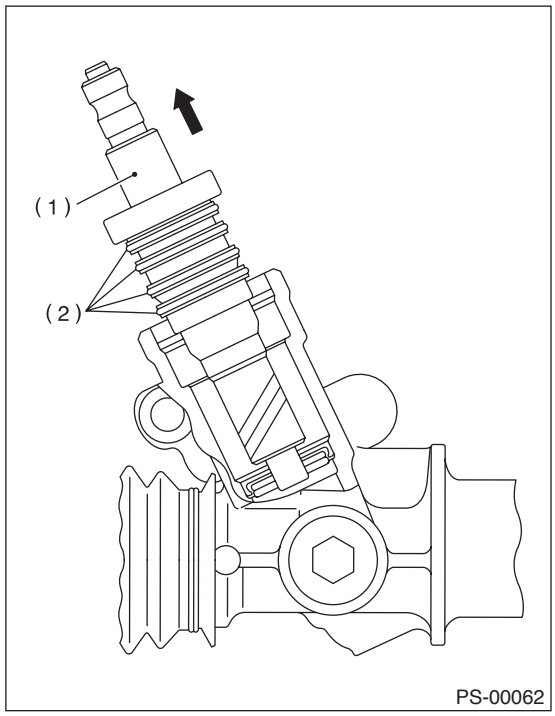
11) Align the ST pin with the plug hole to install. Rotate the ST counterclockwise to remove the plug.

ST 34199AE090 PLUG WRENCH



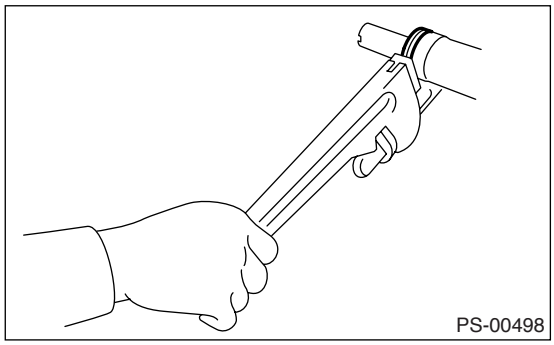
(1) Plug

12) Remove the valve assembly paying attention not to scratch seal ring or valve housing inner surface.



(1) Valve ASSY
(2) Seal ring

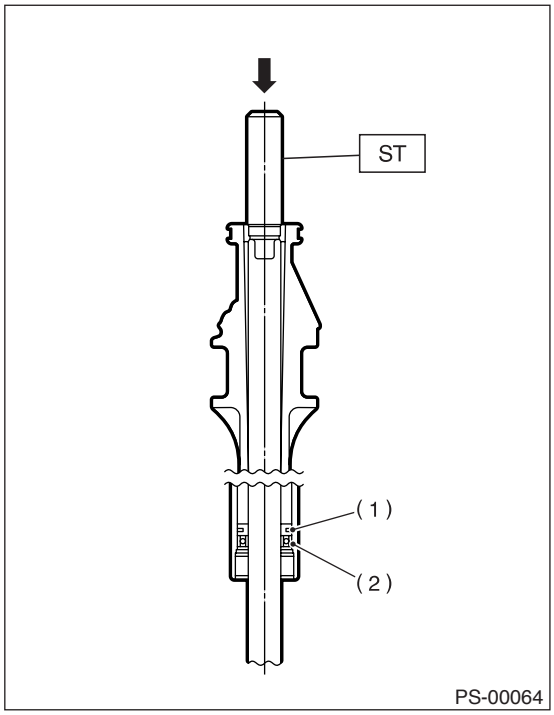
13) Remove the holder using a 36 mm spanner or adjustable wrench.



14) Install the ST on valve side of rack and press outer side oil seal out taking care not to contact rack with steering body inner surface.

ST	34199FE010	INSTALLER & REMOVER (Turbo and 3.0 R model)
ST	34199FA030	INSTALLER & REMOVER (Except for turbo and 3.0 R model)

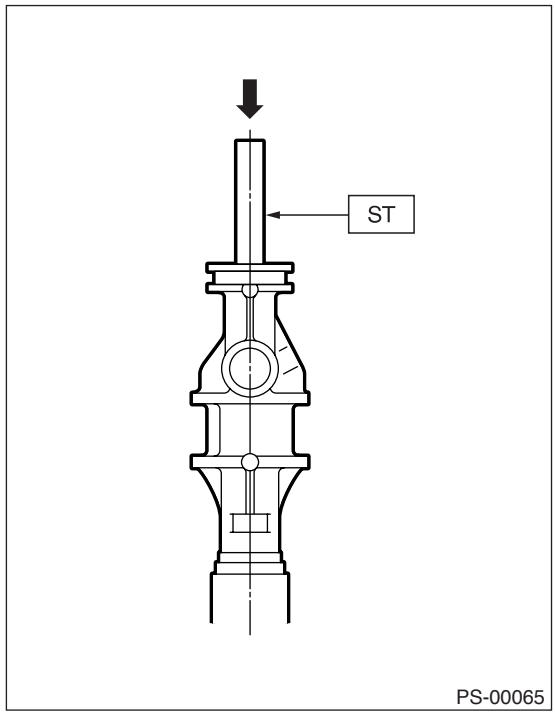
NOTE:
Block the pipe connection of steering body to prevent fluid from flowing out.



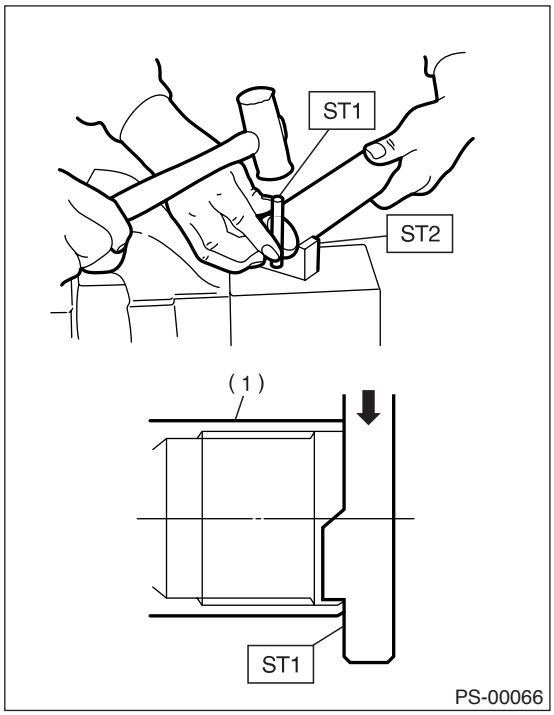
(1) Rack piston
(2) Outer side oil seal

15) Insert the ST from the valve side and press the back-up ring and oil seal out.

ST	34199FE010	REMOVER (Turbo and 3.0 R model)
ST	927580000	REMOVER (Except for turbo and 3.0 R model)

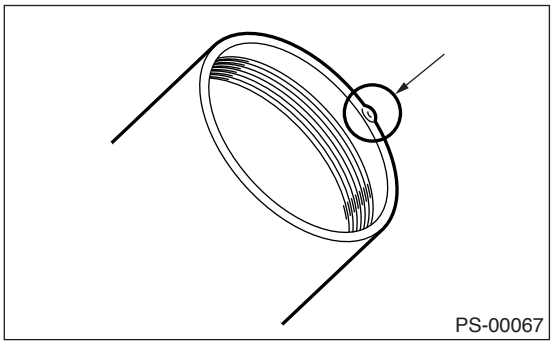


16) Using ST1 and ST2, repair the caulking portion of cylinder.
ST1 34099FA080 PUNCH
ST2 34199FE020 BASE (Turbo and 3.0 R model)
ST2 34099FA070 BASE (Except for turbo and 3.0 R model)



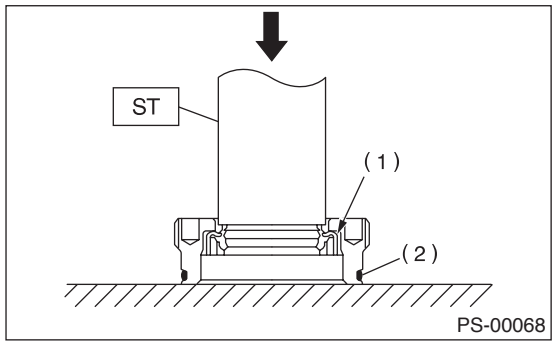
(1) Cylinder

17) If the cylinder edge is deformed in a convex shape, repair using an oil stone.



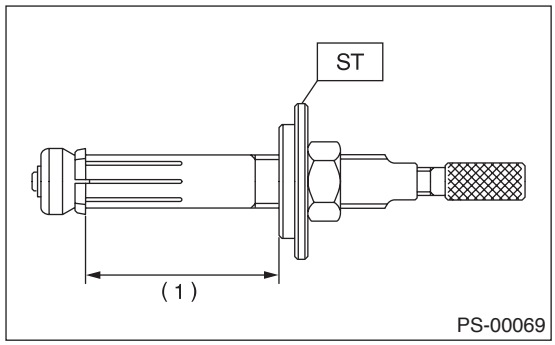
18) Remove the oil seal using ST and press from plug.
ST 34199AE100 OIL SEAL PLUG REMOVER

NOTE:
Do not apply force on the plug edge surface.



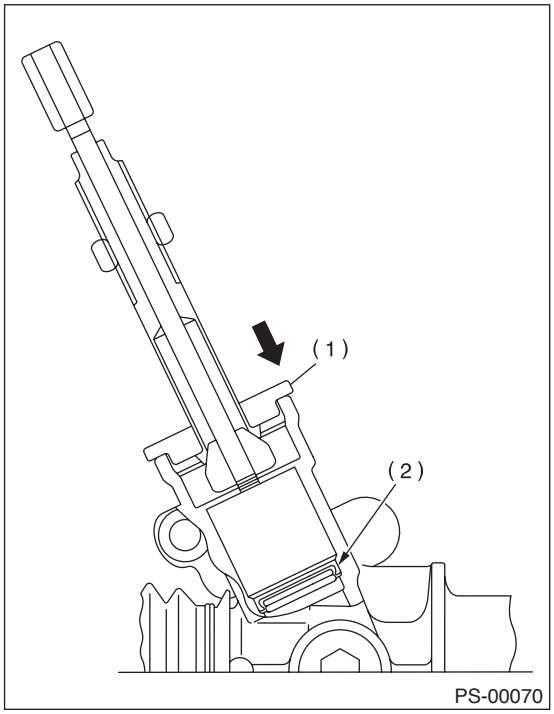
(1) Oil seal
(2) O-ring

19) Set the ST in the dimension as shown in the figure.
ST 34199AE120 GEARBOX OIL SEAL REMOVER



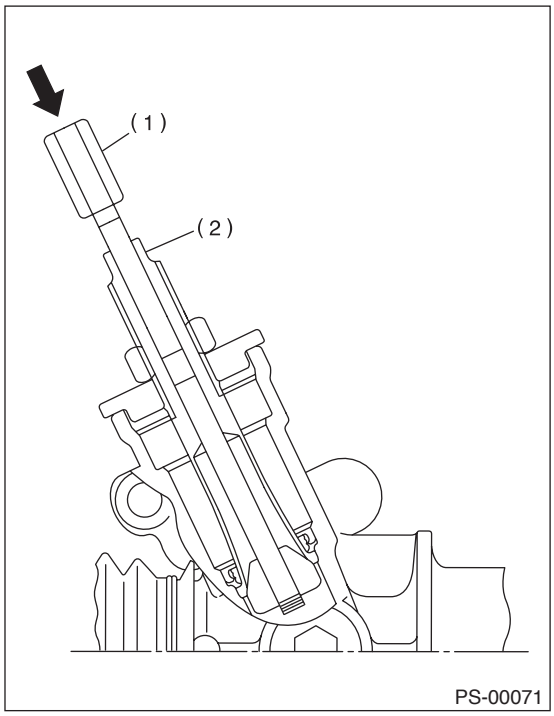
(1) 70 mm (2.76 in)

20) Set the stopper to gearbox, and then insert the tip of ST to gearbox.



(1) Stopper
(2) Oil seal

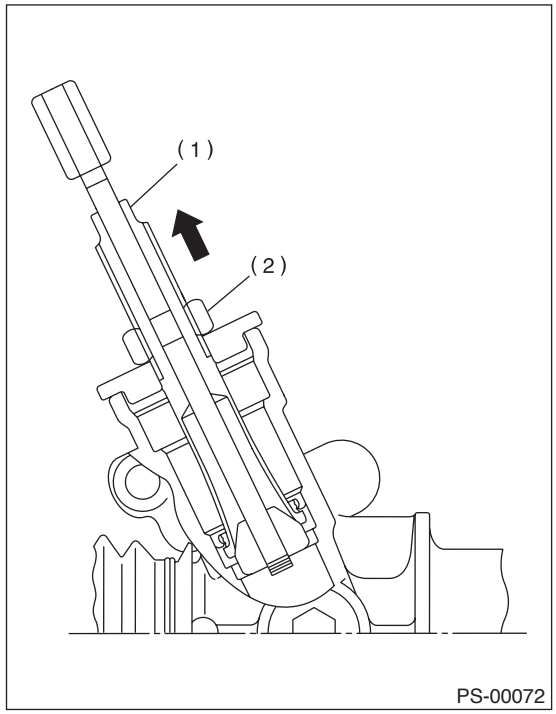
21) By fixing the 2-surface width, press-in by rotating the rod and attach to oil seal.



(1) Rod
(2) 2-surface width

22) While fixing the 2-surface width, pull out the oil seal by rotating nut.

CAUTION:
Take care not to scratch the gearbox inner surface.



(1) 2-surface width
(2) Nut

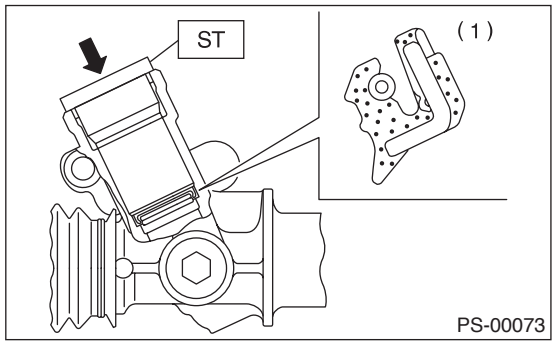
D: ASSEMBLY

1) Apply a coat of grease to the inside and outside of new oil seal.

Steering grease:
VALIANT GREASE M2 (Part No. 003608001)

2) Verify the oil seal direction and installation position. Using the ST and press, press-fit the oil seal to gearbox.

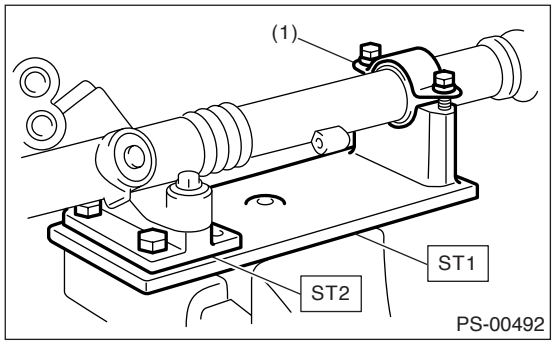
ST 34199AE130 GEARBOX OIL SEAL INSTALLER



(1) Oil seal

3) Attach the steering body to ST as shown in the figure. Apply a coat of grease to needle bearing.
ST1 926200000 STAND
ST2 34199AG000 BOSS D

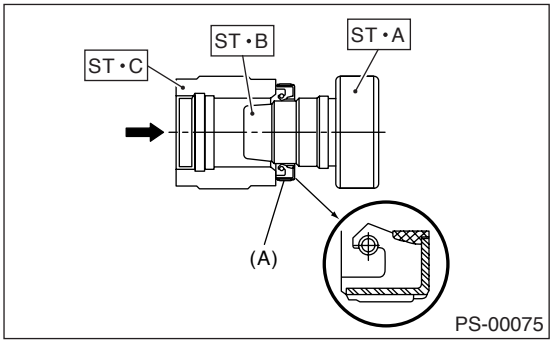
CAUTION:
Ensure the needle bearing is free from defects. If it is faulty, replace the steering body with a new one.



(1) Clamp

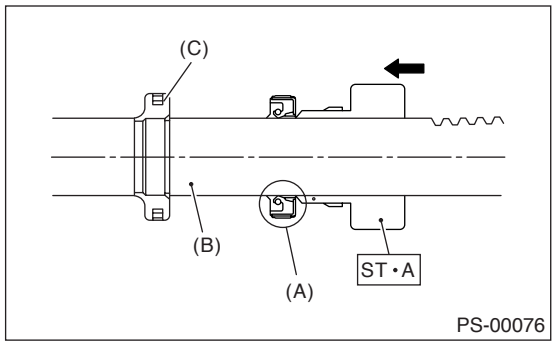
4) Using ST-B and ST-C, install the oil seal to ST-A.
ST 34199FE040 INSTALLER A, B, C (Turbo and 3.0 R model)
ST 927490000 INSTALLER A, B, C (Except for turbo and 3.0 R model)

NOTE:
Face the oil seal in the direction as shown in the figure.



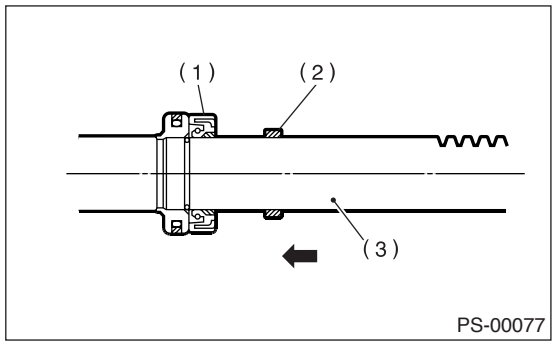
(A) Oil seal

5) Insert the ST-A with oil seal assembled from the gear side of rack. Remove the oil seal from ST-A near piston, and then remove the ST-A from rack.



(A) Oil seal
(B) Rack
(C) Piston

6) Install the back-up washer from gear side of rack.

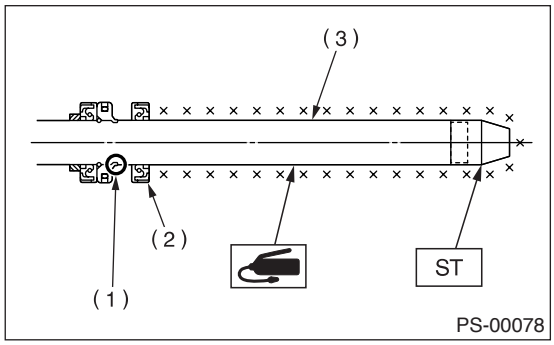


(1) Oil seal
(2) Back-up washer
(3) Rack

7) Install the ST on rack, and equally apply a thin coat of grease to the rack and ST, then install the oil seal.
ST 926250000 GUIDE

CAUTION:
Be careful not to scratch the oil seal lips with the inner ring section of piston.

NOTE:
Do not use this ST for turbo model.

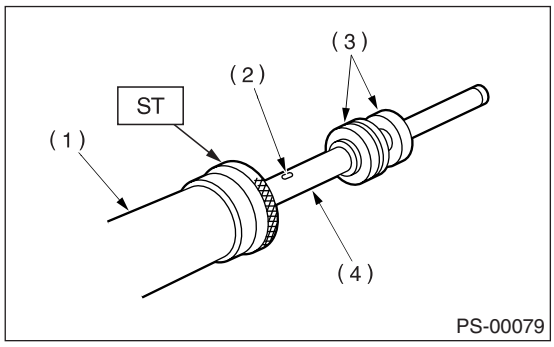


(1) Rack piston inner ring
(2) Outer side oil seal
(3) Rack

8) Apply a coat of grease to the grooves in rack, sliding surface of sleeve and sealing surface of piston. Install ST on the end of steering body cylinder. Then insert the rack into steering body from cylinder side.

ST 34199FE050 GUIDE (Turbo and 3.0 R model)
ST 34199AE000 GUIDE (Except for turbo and 3.0 R model)

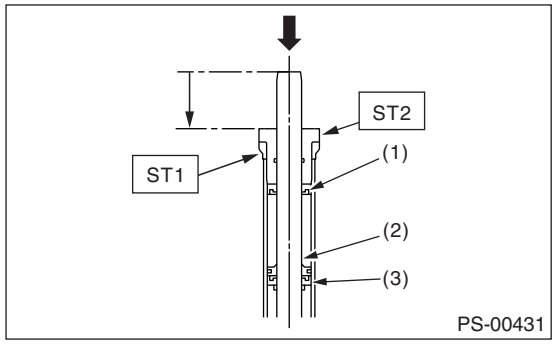
CAUTION:
Do not allow grease to block the air vent hole on rack.



(1) Cylinder side of steering body
(2) Air vent hole
(3) Oil seal
(4) Rack

9) Make the ST2 pass through rack, and then press-in the rack and ST2 using press.
Press-in the rack until ST1 comes in contact with ST2 and the edge surface of rack is aligned with that of ST2.

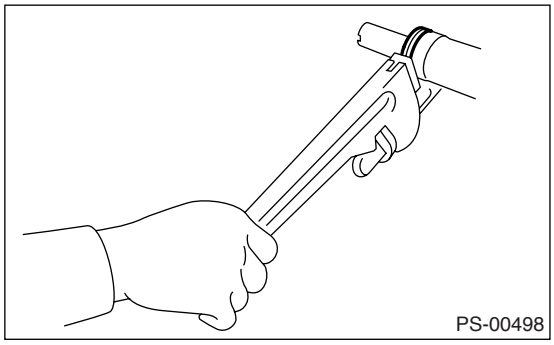
ST1 34199FE050 GUIDE (Turbo and 3.0 R model)
34199AE000 GUIDE (Except for turbo and 3.0 R model)
ST2 34199FE060 INSTALLER (Turbo and 3.0 R model)
34199AE010 INSTALLER (Except for turbo and 3.0 R model)



(1) Outer side oil seal
(2) Rack piston
(3) Inner side oil seal

10) Install a new holder to the cylinder side of steering body.

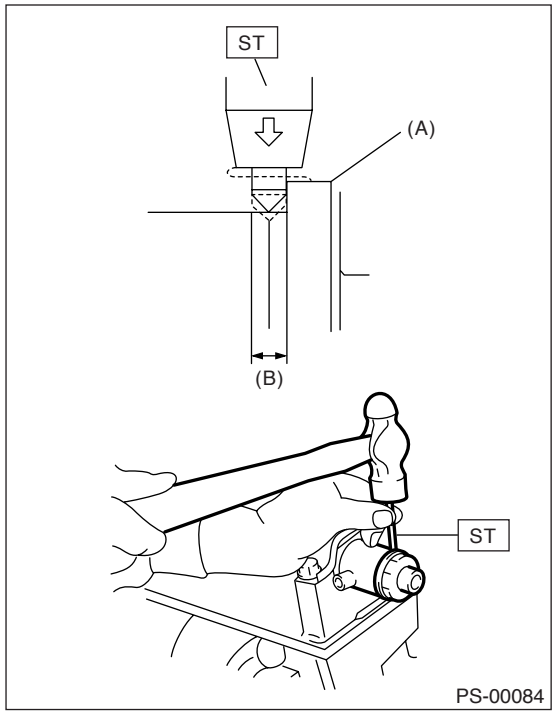
Tightening torque:
Turbo and 3.0 R model
90 N·m (9.18 kgf-m, 66.4 ft-lb)
Except for turbo and 3.0 R model
64 N·m (6.5 kgf-m, 47.0 ft-lb)



11) Using the ST, caulk the steering body at one point less than 3mm (0.12 in) from holder.

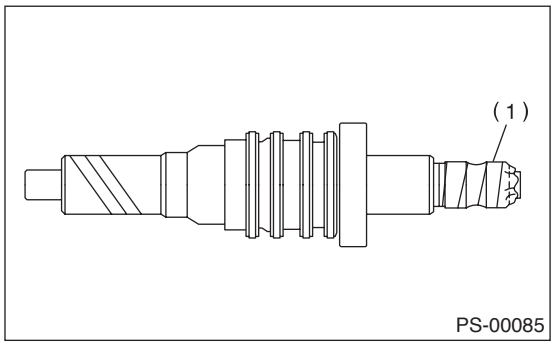
CAUTION:
Be careful not to deform the holder.

ST 34099FA060 PUNCH HOLDER



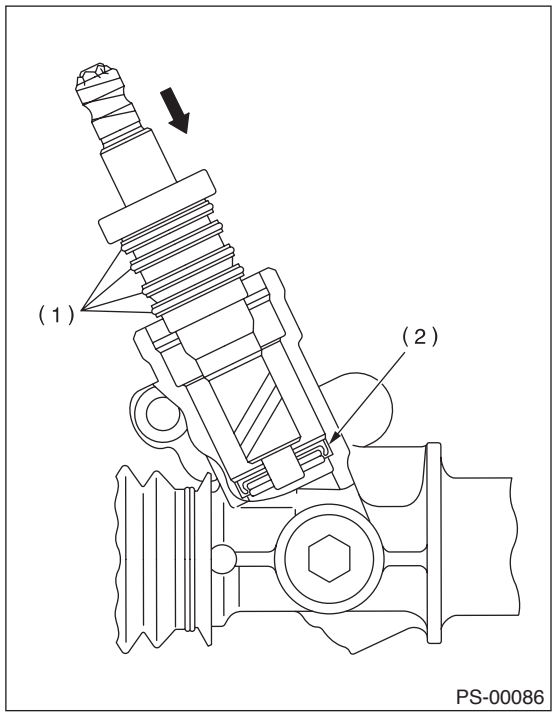
(A) Holder
(B) 3 mm (0.12 in)

12) Roll the vinyl tape on serration part of valve assembly, and then apply grease on the tape surface.



(1) Vinyl tape

13) Apply a coat of grease on the gear teeth of valve assembly, and then attach the valve assembly taking care not to scratch oil seal and seal ring.

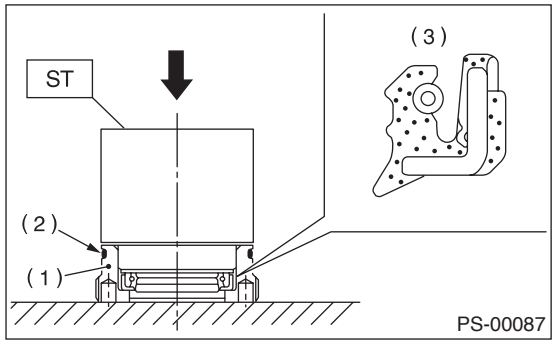


(1) Seal ring
(2) Oil seal

14) Apply grease on the oil seal circumference, and then press it into the plug using ST and press. Replace the O-rings of plug circumference with new ones.

ST 34199AE110 OIL SEAL PLUG INSTALLER

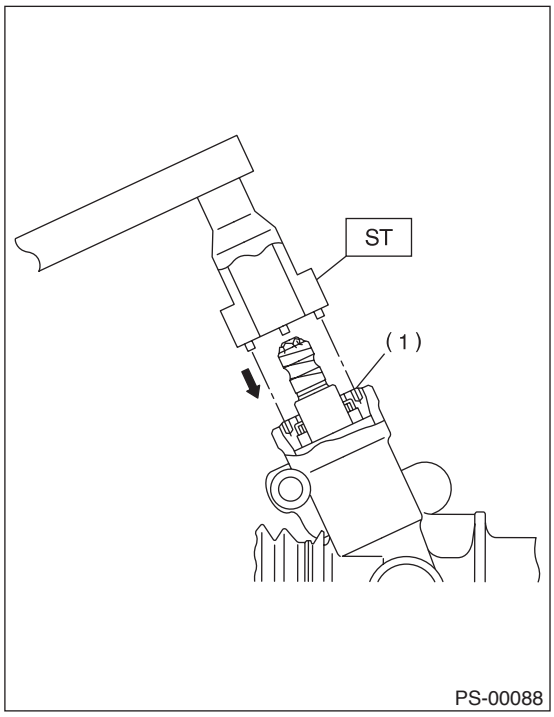
CAUTION:
Install the oil seal paying attention to its direction.



(1) Plug
(2) O-ring
(3) Oil seal

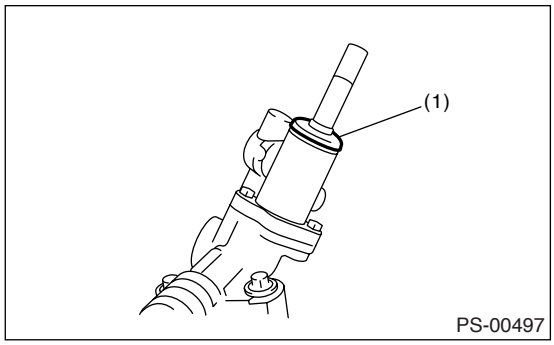
15) Using the ST, install plug.
ST 34199AE090 PLUG WRENCH

Tightening torque:
64 N·m (6.5 kgf-m, 47.0 ft-lb)



(1) Plug

16) Install the dust cover. Remove the vinyl tape.

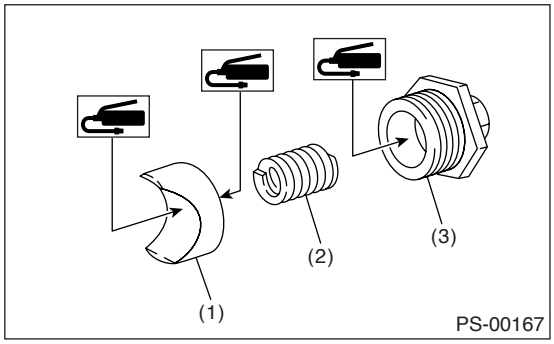


(1) Dust cover

17) Temporarily install the tie-rod to the rack, and then operate it from lock to lock two or three times to make it fit in. Remove the grease blocking air vent hole.

CAUTION:
If operating the rack from lock to lock without installing tie-rod, it may damage the oil seal. Always install the tie-rods LH and RH.

18) Apply a coat of grease to the sliding surface of sleeve and seating surface of spring, and then insert the sleeve into spring body.
Charge the adjusting screw with grease, and then insert the spring into adjusting screw and install on steering body.



(1) Sleeve
(2) Spring
(3) Adjusting screw

19) Tighten the adjusting screw to specified torque.

Tightening torque:
9.8 N·m (1.0 kgf-m, 7.2 ft-lb)

20) After tightening the adjusting screw with the specified tightening torque, loosen it.

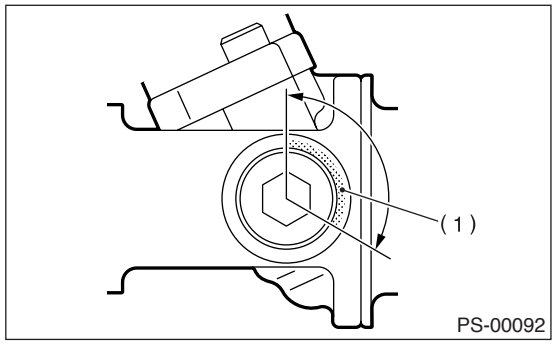
Tightening torque:
4.9 N·m (0.50 kgf-m, 3.6 ft-lb)

21) After tightening the adjusting screw with the specified tightening torque, loosen 37° it.

Tightening torque:
4.9 N·m (0.50 kgf-m, 3.6 ft-lb)

22) Remove the tie-rod.
23) Verify that play is within specified value. <Ref. to PS-61, LIMIT, INSPECTION, Steering Gearbox [RHD Model].>
24) Loosen the adjusting screw, and then apply liquid gasket to at least 1/3 of the entire perimeter of adjusting screw thread.

Liquid gasket:
THREE BOND 1141 (Part No. 004403006)



(1) Apply liquid gasket to at least 1/3 of entire perimeter.

25) Install the lock nut. While holding adjusting screw with a wrench, tighten the lock nut using ST.
ST 926230000 SPANNER

Tightening torque (Lock nut):
39 N·m (4.0 kgf-m, 28.9 ft-lb)

NOTE:
Hold the adjusting screw with a wrench to prevent it from turning while tightening lock nut.

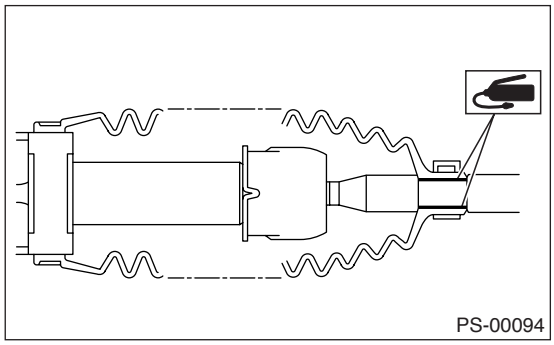
26) Install the tie-rod into rack.

Tightening torque:
90 N·m (9.0 kgf-m, 65.1 ft-lb)

NOTE:
Check the mating face of rack and tie-rod for foreign material, dirt and etc.

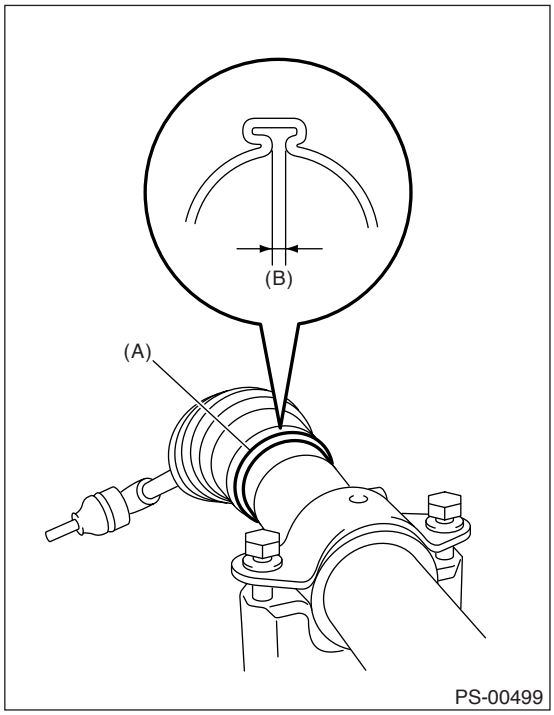
27) Apply a coat of grease to the tie-rod groove, and then install the boot to housing.

NOTE:
Make sure that the boot is installed without unusual inflation or deflation.



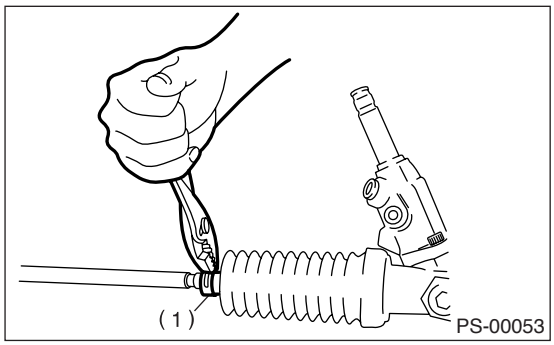
28) Caulk the boot so the space inside boot band caulking portion becomes 2 mm (0.08 in) or less.

NOTE:
Use a new boot band.



(A) Boot band
(B) 2 mm (0.08 in) or less

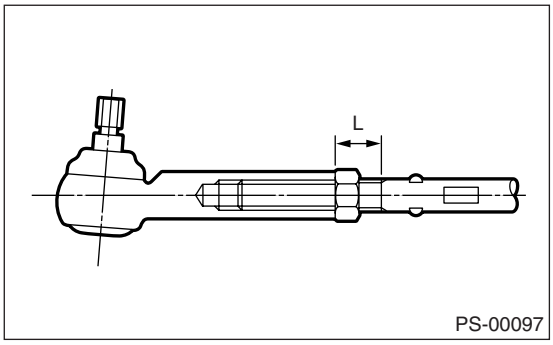
29) Fix the boot end with clip (small).



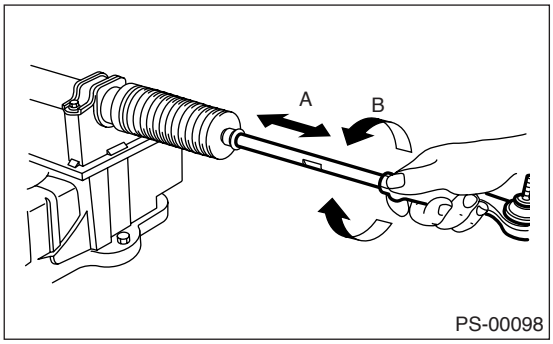
(1) Clip

30) After installing, check that the boot end is positioned into groove on tie-rod.
31) If the tie-rod end has been removed, screw in lock nut and tie-rod end to the screwed portion of tie-rod, and tighten the lock nut temporarily in a position as shown in figure.

Installed tie-rod length L:
31 mm (1.22 in)

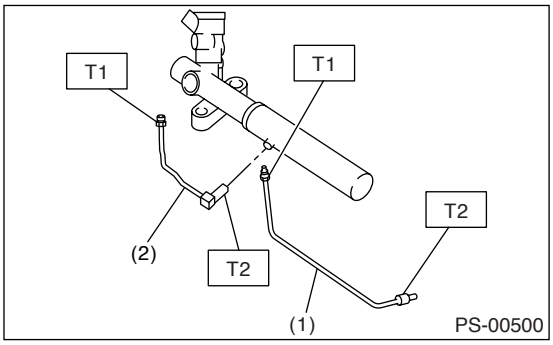


32) Inspect the gearbox as follows:
"A" Holding tie-rod end, repeat lock to lock two or three times as quickly as possible.
"B" Holding tie-rod end, turn it slowly at a radius one or two times as large as possible.
After all, make sure that the boot is installed in the specified position without deflation.



33) Take off the gearbox from ST.
ST1 926200000 STAND
ST2 34199AG000 BOSS D
34) Install the pipe A and B to steering body and control valve housing.

Tightening torque:
T1: 20 N·m (2.0 kgf-m, 14.5 ft-lb)
T2: 24 N·m (2.4 kgf-m, 17.4 ft-lb)



(1) Pipe A
(2) Pipe B

E: INSPECTION

1. BASIC INSPECTION

1) Clean all disassembled parts, and check for wear, damage or any other faults, then repair or replace as necessary.
2) When disassembling, check inside of gearbox for water. If any water is found, carefully check boot for damage, input shaft dust seal, adjusting screw and boot clips for poor sealing. If faulty, replace with new parts.

No.	Parts	INSPECTION	Corrective action
1	Input shaft	(1) Bend of input shaft (2) Damage on serration	If the bend or damage is excessive, replace the entire gearbox.
2	Dust seal	(1) Crack or damage (2) Wear	If the outer wall slips, the lip is worn out or damage is found, replace it with a new one.
3	Rack & Pinion	Poor mating of rack with pinion	(1) Adjust the backlash properly. By measuring turning torque of gearbox and sliding resistance of rack, check if rack & pinion engage uniformly and smoothly with each other. (Refer to “Service limit”.) (2) Keeping rack pulled out all the way so that all teeth emerge, check teeth for damage. Even if abnormality is found in either (1) or (2), replace the entire gearbox.
4	Gearbox unit	(1) Bend of rack shaft (2) Bend of cylinder portion (3) Crack or damage on cast iron portion	Replace the gearbox with a new one.
		(4) Wear or damage on rack bush	If the free play of rack shaft in radial direction is out of the specified range, replace the gearbox with new one. (Refer to “Service limit”.)
		(5) Wear on input shaft bearing	If the free play of rack shaft in radial and axial direction is out of the specified range, replace the gearbox with a new one. (Refer to “Service limit”.)
5	Boot	Crack, damage or deterioration	Replace.
6	Tie-rod	(1) Looseness of ball joint (2) Bend of tie-rod	Replace.
7	Tie-rod end	Damage or deterioration on dust seal	Replace.
8	Adjusting screw spring	Deterioration	Replace.
9	Boot clip	Deterioration	Replace.
10	Sleeve	Damage	Replace.
11	Pipes	(1) Damage to flared surface (2) Damage to flare nut (3) Damage to pipe	Replace.

2. LIMIT

Make a measurement as follows. If it exceeds the specified service limit, adjust or replace.

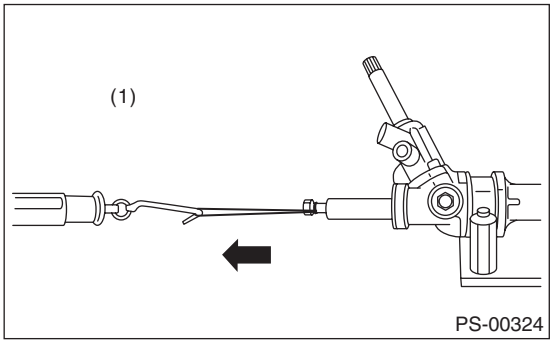
NOTE:
When making a measurement, vise the gearbox using ST. Never vise the gearbox by inserting aluminum plates, etc. between vise and gearbox.

ST1 926200000 STAND
ST2 34199AG000 BOSS D

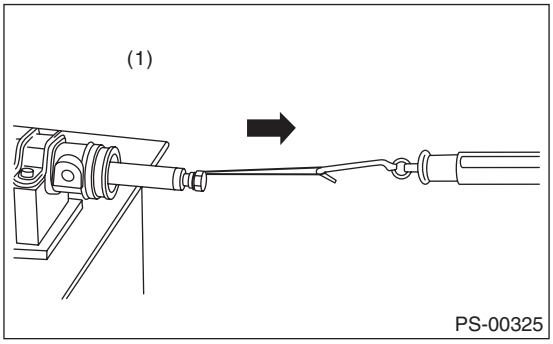
Sliding resistance of rack shaft:

Limit
314 N (32 kgf, 71 lb) or less

Difference between right and left sliding resistance:
20% or less



(1) Right-turn steering



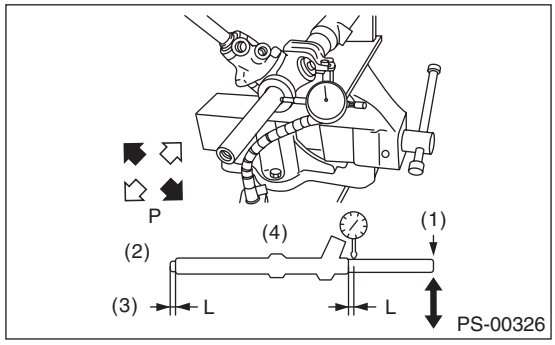
(1) Left-turn steering

3. RACK SHAFT PLAY IN RADIAL DIRECTION

Right-turn steering:

Limit
Direction ⇦ ⇨
0.4 mm (0.016 in) or less
Direction ⇦ ⇨
0.6 mm (0.024 in) or less

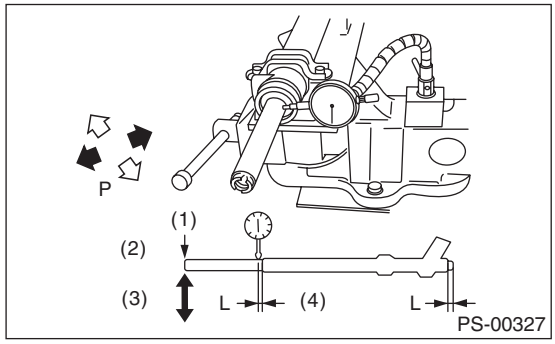
On condition
L: 5 mm (0.20 in)
P: 98 N (10 kgf, 22 lb)



(1) Under the step
(2) Right-turn steering
(3) Measure point
(4) Right

Left-turn steering:

Limit
Direction ⇦ ⇨
0.4 mm (0.016 in) or less



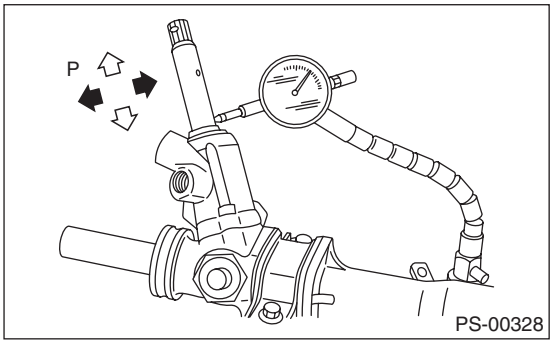
(1) Under the step
(2) Left-turn steering
(3) Measure point
(4) Left

4. INPUT SHAFT PLAY

In radial direction:

Limit
0.18 mm (0.0071 in) or less

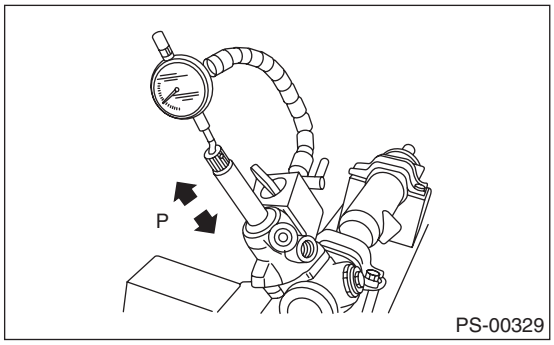
On condition
P: 98 N (10 kgf, 22 lb)



In axial direction:

Service limit
0.27 mm (0.0106 in) or less

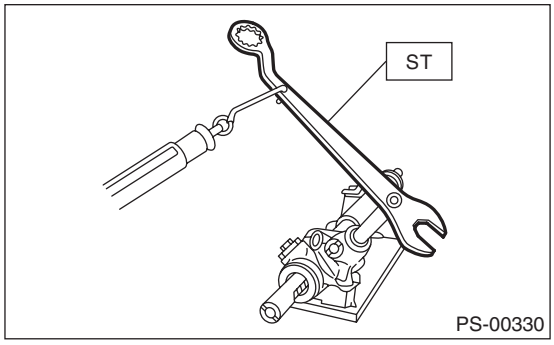
On condition
P: 20 — 49 N (2 — 5 kgf, 4 — 11 lb)



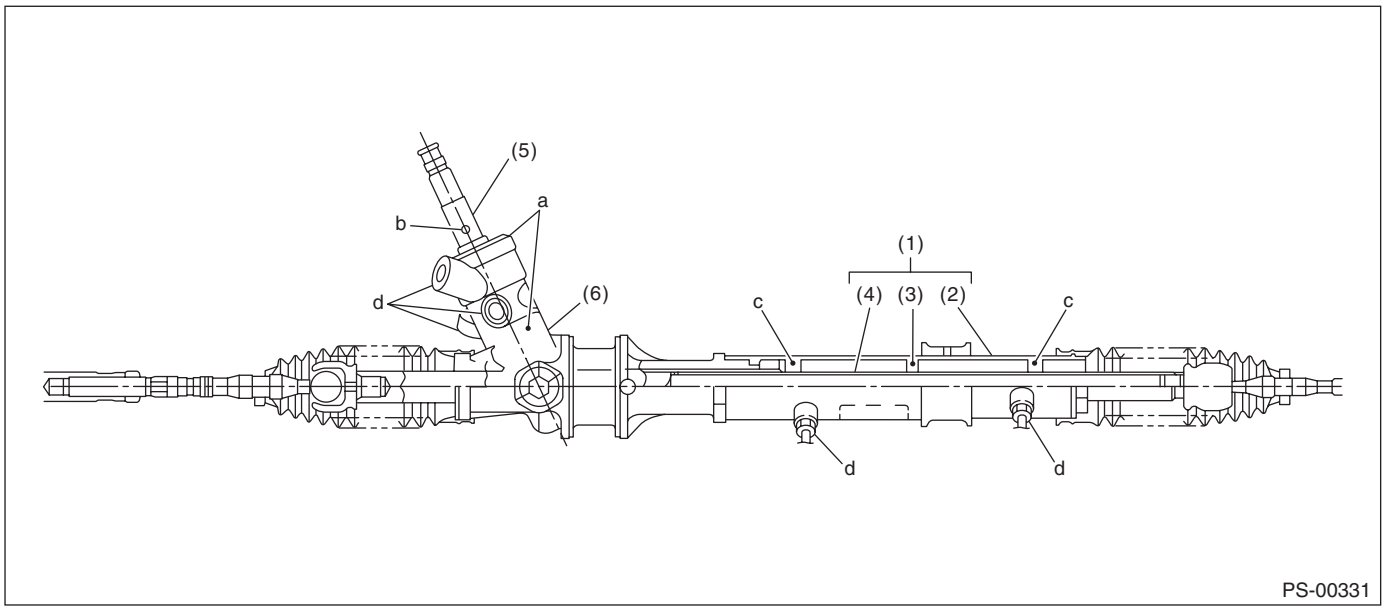
5. TURNING RESISTANCE OF GEARBOX

Using the ST, measure the gearbox turning resistance.
ST 34099PA100 SPANNER

Service limit:
Maximum allowable resistance:
13 N (1.3 kgf, 9.6 lb) or less
Difference between right and left turning resistance:
20% or less



6. OIL LEAKING



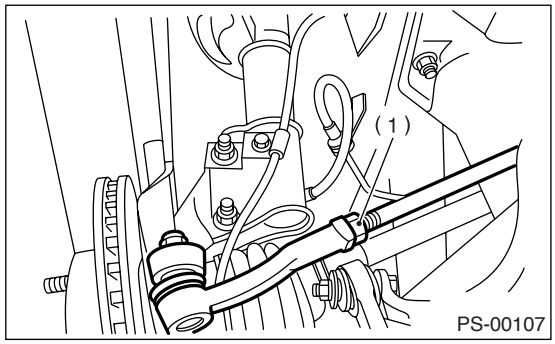
(1) Power cylinder
(2) Cylinder
(3) Rack piston
(4) Rack axle
(5) Input shaft
(6) Valve housing

1) Lift-up the vehicle.
2) Even if the location of leak can be easily found by observing leaking condition, it is necessary to thoroughly remove the oil from suspected portion and turn steering wheel from lock to lock about 30 to 40 times with engine running, then reinspect the suspected portion immediately after and several hours after this operation.
3) Cause and measure for oil leakage from “a”
The oil seal is damaged. Replace the valve assembly with a new one.
4) Cause and measure for oil leakage from “b”
The torsion bar O-ring is damaged. Replace the valve assembly with a new one.
5) Cause and measure for oil leakage from “c”
The oil seal is damaged. Replace the oil seal with a new one.
6) Cause and measure for oil leakage from “d”
The pipe is damaged. Replace the faulty pipe or O-ring.

F: ADJUSTMENT

1) Adjust the front toe.
<Ref. to FS-12, FRONT WHEEL TOE-IN, INSPECTION, Wheel Alignment.>

Standard of front toe:
IN 3 — OUT 3 mm (IN 0.12 — OUT 0.12 in)



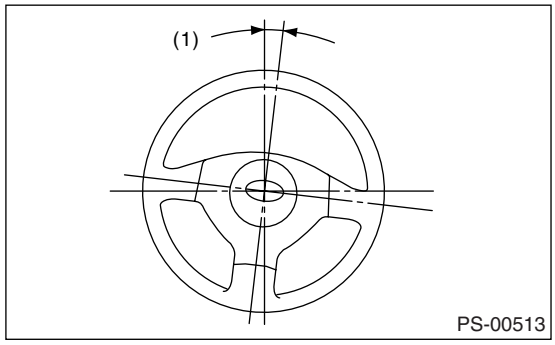
(1) Lock nut

2) Adjust the steering angle of wheels.

Standard of steering angle:

Model	2.0 i, 2.5 i	2.0 GT, 3.0 R	OUTBACK
Inner wheel	37.3°±1.5°	37.2°±1.5°	37.8°±1.5°
Outer wheel	33.0°±1.5°	32.9°±1.5°	33.5°±1.5°

3) If the steering wheel spokes are not horizontal when wheels are set in the straight ahead position, or error is more than 5° on the periphery of steering wheel, correctly re-install the steering wheel.



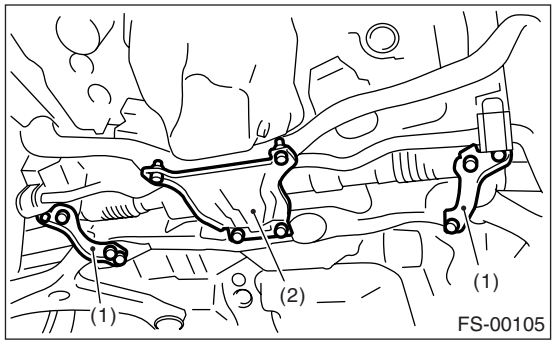
(1) Within 5°

4) If the steering wheel spokes are not horizontal with vehicle set in the straight ahead position after this adjustment, correct it by turning the right and left tie-rods in the opposite direction each other by the same angle.

7. Pipe Assembly [LHD Model]

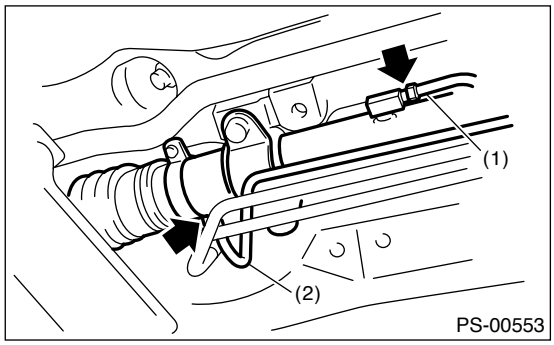
A: REMOVAL

1) Disconnect the ground cable from battery.
2) Lift-up the vehicle, and then remove the front crossmember support plate and jack-up plate.



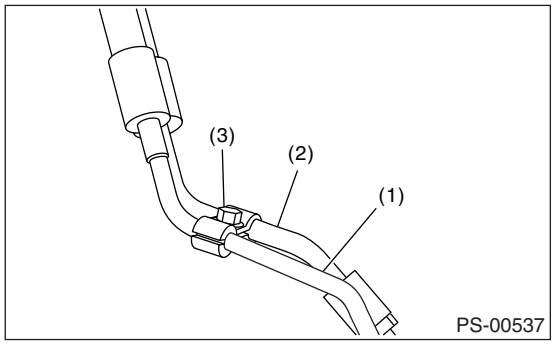
(1) Front crossmember support plate
(2) Jack-up plate

3) Remove one pipe joint at the center of gearbox, and connect the vinyl hose to the pipe and the joint. Discharge the fluid by turning steering wheel fully clockwise and counterclockwise. Discharge the fluid similarly from other pipes.



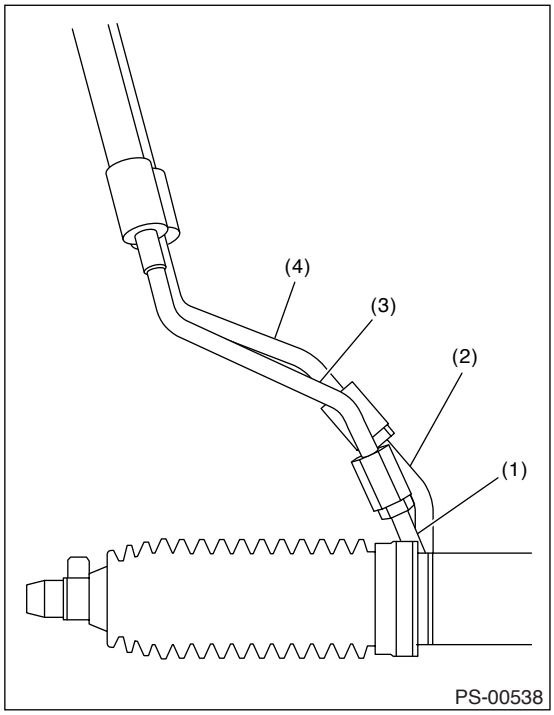
(1) Pipe A
(2) Pipe B

4) Remove the clamp E from return hose and pressure hose.



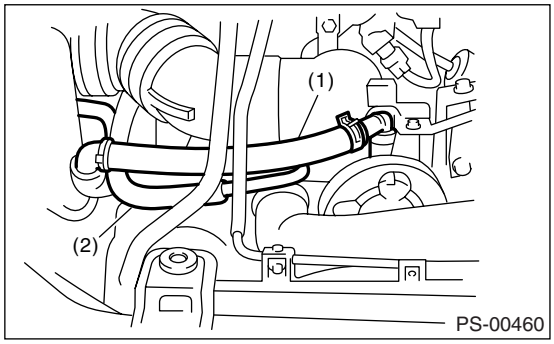
(1) Return hose
(2) Pressure hose
(3) Clamp E

5) Disconnect the return hose and pipe D, pressure hose and pipe C.



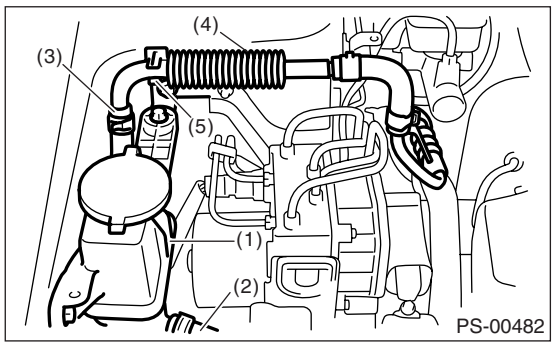
(1) Pipe C
(2) Pipe D
(3) Pressure hose
(4) Return hose

6) Remove the air intake duct. <Ref. to IN(H4DOTC)-9, REMOVAL, Air Intake Duct.> <Ref. to IN(H4SO 2.0)-9, REMOVAL, Air Intake Duct.>
7) Disconnect the suction hose and pressure hose from oil pump.



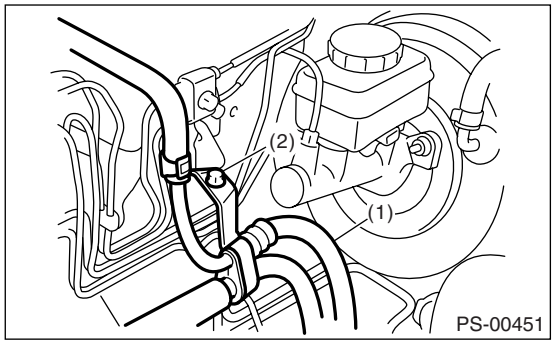
(1) Suction hose
(2) Pressure hose

8) Disconnect the suction hose and return hose from reservoir tank. Remove the oil cooler from oil cooler bracket.



(1) Reservoir tank
(2) Suction hose
(3) Return hose
(4) Oil cooler
(5) Oil cooler bracket

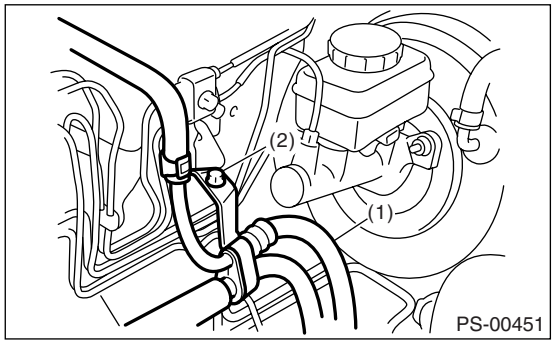
9) Remove the hose bracket and take out the hose assembly from vehicle.



(1) Hose ASSY
(2) Hose bracket

B: INSTALLATION

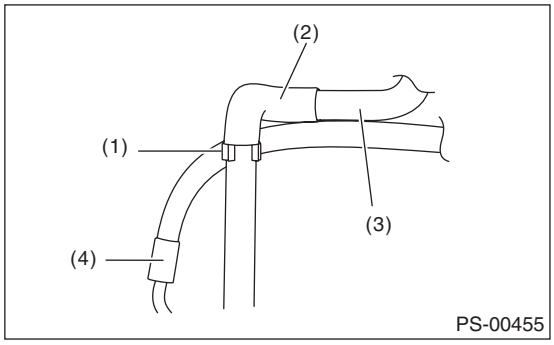
1) Temporarily tighten the bolt of hose bracket.



(1) Hose ASSY
(2) Hose bracket

2) Install the resin clip to the pressure hose and suction hose.

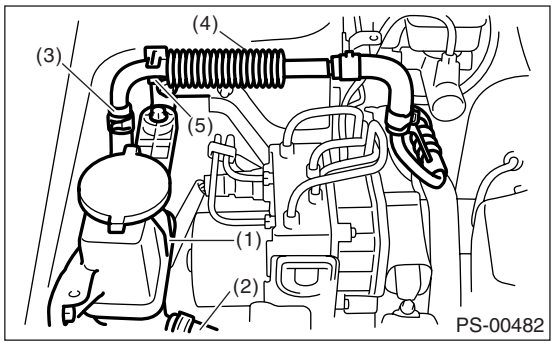
CAUTION:
Align the installation position of the resin clip with the protector edge of suction hose.



(1) Resin clip
(2) Protector
(3) Suction hose
(4) Pressure hose

3) Connect the suction hose and return hose to reservoir tank. Install the oil cooler to oil cooler bracket.

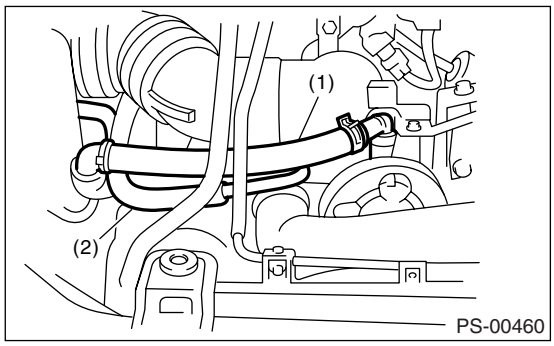
CAUTION:
Firmly insert the resin clip of return hose to the bracket.



(1) Reservoir tank
(2) Suction hose
(3) Return hose
(4) Oil cooler
(5) Oil cooler bracket

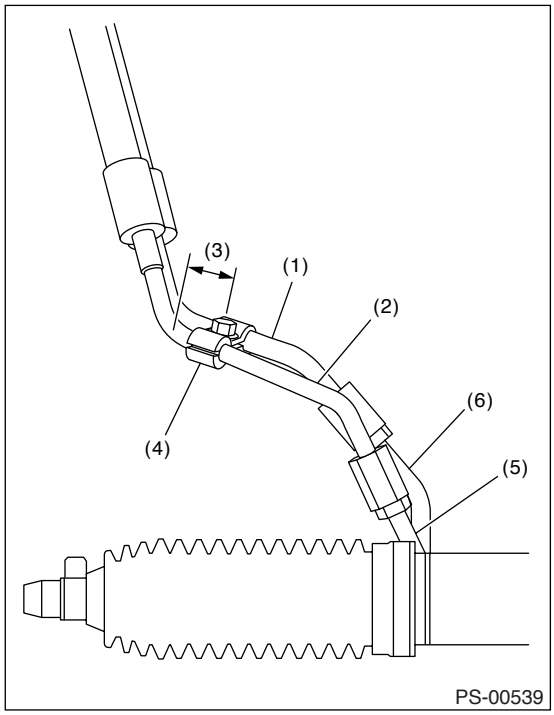
4) Connect the suction hose and pressure hose to the oil pump. Tighten the eye bolt of pressure hose.

Tightening torque:
39 N·m (4.0 kgf-m, 28.9 ft-lb)



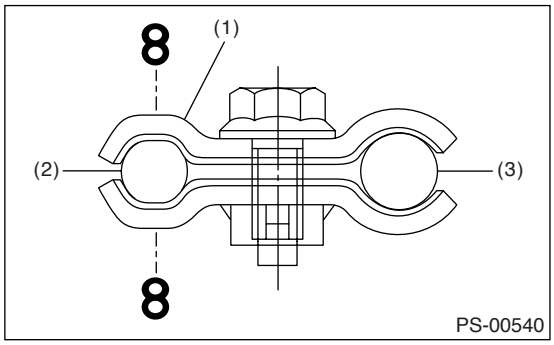
(1) Suction hose
(2) Pressure hose

5) Temporarily connect the pressure hose and pipe C, the return hose and D. Place the clamp E in the position shown in the figure, and tighten the bolt temporarily.



(1) Return hose
(2) Pressure hose
(3) Approx. 18 mm (0.71 in)
(4) Clamp E
(5) Pipe C
(6) Pipe D

NOTE:
Ensure that the letter “8” on each clamp are diagonally opposite each other as shown in the figure.



(1) Clamp E
(2) Pressure hose
(3) Return hose

6) Tighten the clamp E.

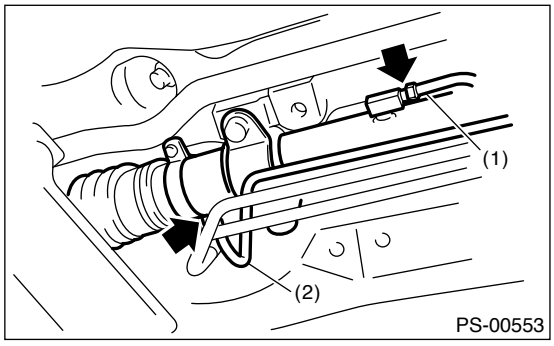
Tightening torque:
7.4 N·m (0.75 kgf-m, 5.4 ft-lb)

7) Tighten the pressure hose and pipe C, the return hose and pipe D.

Tightening torque:
15 N·m (1.5 kgf-m, 10.8 ft-lb)

8) Connect the pipe A and B to the four pipe joints of gearbox.

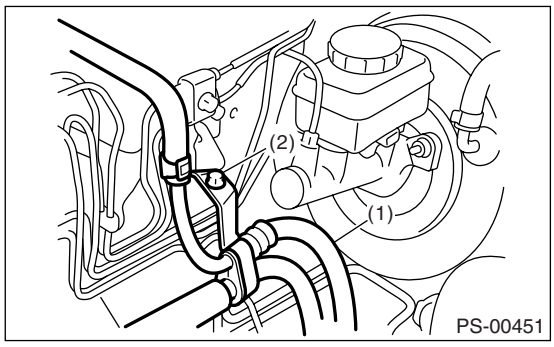
Tightening torque:
13 N·m (1.3 kgf-m, 9.4 ft-lb)



(1) Pipe A
(2) Pipe B

9) Install the front crossmember support plate and jack-up plate.
10) Lower the vehicle.
11) Tighten the bolts which hold the hose bracket.

Tightening torque:
13 N·m (1.3 kgf-m, 9.4 ft-lb)



(1) Hose ASSY
(2) Hose bracket

12) Install the air intake duct.
<Ref. to IN(H4DOTC)-9, INSTALLATION, Air Intake Duct.> <Ref. to IN(H4SO 2.0)-9, INSTALLATION, Air Intake Duct.>
13) Connect the battery ground cable to battery.
14) Feed the specified fluid.

CAUTION:
Never start the engine before feeding the fluid; otherwise vane pump might be seized up.

15) Finally, check clearance between pipes or hoses as shown in the figure indicated in “General Diagnostic Table”. <Ref. to PS-89, INSPECTION OF CLEARANCE, INSPECTION, General Diagnostic Table.>

C: INSPECTION

Check all disassembled parts for wear, damage or other abnormalities. Repair or replace defective parts as necessary.

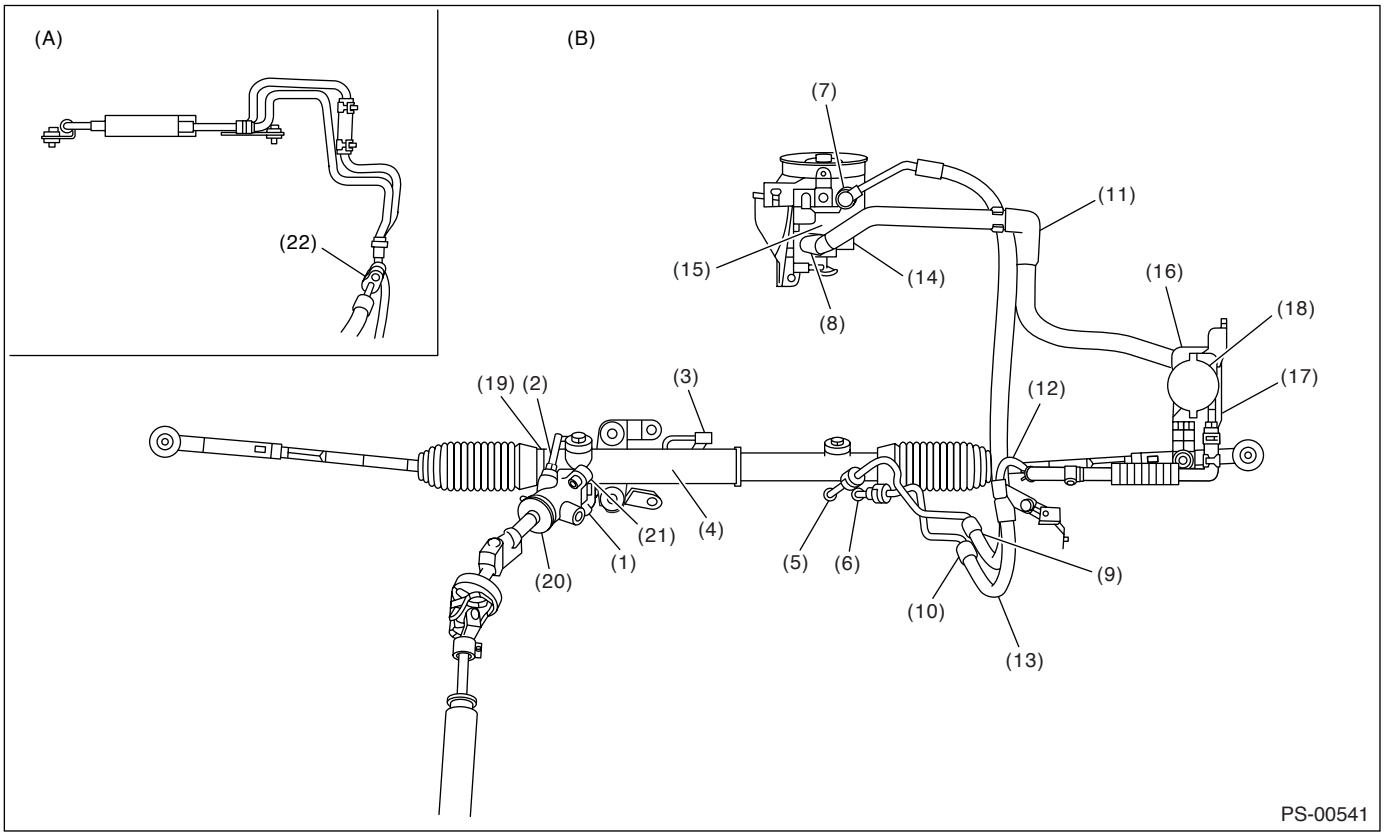
Parts	Maintenance Parts	Corrective action
Pipe	• O-ring fitting surface for damage • Nut for damage • Pipe for damage	Replace with a new one.
Clamp	• Clamps for weak clamping force	Replace with a new one.
Hose	• Flare surface for damage • Flare nut for damage • Outer surface for cracks • Outer surface for wear • Clip for damage • End coupling or adapter for deformation	Replace with a new one.

CAUTION:
Although surface layer materials of rubber hoses have excellent weathering resistance, heat resistance and resistance for low temperature brittleness, they are likely to be damaged chemically by brake fluid, battery electrolyte, engine oil and automatic transmission fluid and their service lives are to be very shortened. Wipe out immediately when the hoses are adhered with the fluids.
Since resistances for heat or low temperature brittleness are gradually declining according to time accumulation of hot or cold conditions for the hoses and their service lives are shortening accordingly, it is necessary to perform careful inspection frequently when the vehicle is used in hot weather areas, cold weather areas and a driving condition in which many steering operations are required in short time.
Particularly continuous work of relief valve over 5 seconds causes to reduce service lives of the hoses, the oil pump, the fluid, etc. due to over heat.

Trouble	Possible cause	Corrective action
Pressure hose burst	Excessive holding time of relief status	Instruct customers.
	Malfunction of relief valve	Replace oil pump.
	Poor cold characteristic of fluid	Replace fluid.
Forced out return hose	Poor connection	Repair.
	Poor holding of clip	Retighten.
	Poor cold characteristic of fluid	Replace fluid.
Fluid bleeding out of hose slightly	Wrong layout, tensioned	Replace hose.
	Excessive play of engine due to deterioration of engine mounting rubber	Replace the parts if defective.
	Improper stop position of pitching stopper	Replace the parts if defective.
Crack on hose	Excessive holding time of relief status	Replace. Instruct customers.
	Excessive tightening torque of return hose clip	Replace.
	Power steering fluid, engine oil, electrolyte adhere on the hose surface	Replace. Pay attention on service work.
	Too many times use in extremely cold weather	Replace. Instruct customers.

Pipe Assembly [LHD Model]

NOTE:
It is likely that although one judges fluid leakage, there is actually no leakage. This is because the fluid spilt during the last maintenance was not completely wiped off. Be sure to wipe off spilt fluid thoroughly after maintenance.



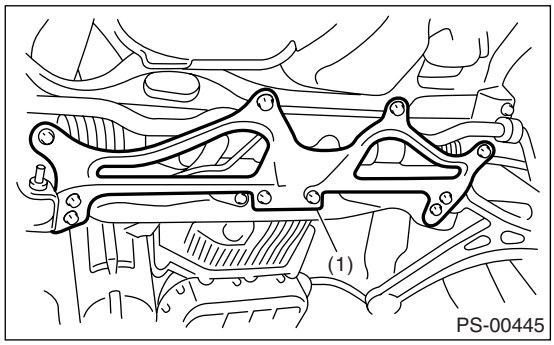
(A) 3.0 L model (B) Except for 3.0 L model

Fluid leaking area	Possible cause	Corrective action
Leakage from connecting portions of pipes and hoses, numbered with (1) through (8) in figure	Insufficient tightening of flare nut, adhesion of dirt, damage to flare or flare nut or eye bolt	Loosen and retighten. Replace if ineffective.
	Poor insertion of hose or clamping	Retighten or replace the clamp.
	Damaged O-ring or gasket	Replace O-ring or gasket pipe or hose with new one, if ineffective, replace the gearbox also.
Leakage from hose (9) through (13) in figure	Crack or damage in hose	Replace with a new one.
	Crack or damage in hose hardware	Replace with a new one.
Leakage from surrounding of cast iron portion of oil pump (14) and (15) in figure	Damaged O-ring	Replace the oil pump.
	Damaged gasket	Replace the oil pump.
Leakage from oil tank (16) and (17) in figure	Crack in oil tank	Replace the oil tank.
Leakage from filler neck (18)	Damaged cap packing	Replace the cap.
	Crack in root of filler neck	Replace the oil tank.
	High fluid level	Adjust the fluid level.
Leakage from surrounding of power cylinder of gearbox (19) in figure	Damaged oil seal	Replace the oil seal.
Leakage from control valve of gearbox (20) and (21) in figure	Damaged packing or oil seal	Replace the problem parts.
	Damage in control valve	Replace the control valve.
(22) Leakage from connecting portion of cooler pipe and hose.	Insufficient tightening of connecting portion.	Loosen and retighten.

8. Pipe Assembly [RHD Model]

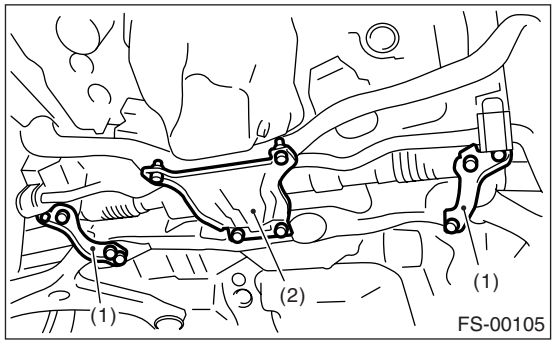
A: REMOVAL

1) Disconnect the ground cable from battery.
2) Lift-up the vehicle, and then remove the front crossmember support plate and jack-up plate.
• Large type



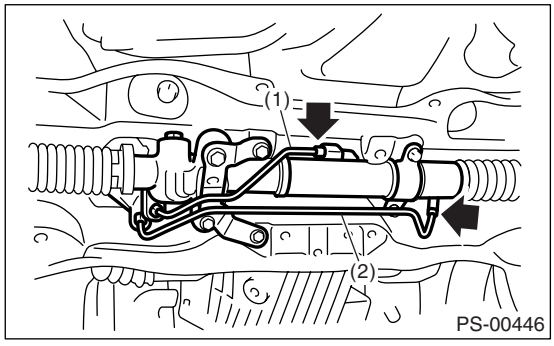
(1) Front crossmember support plate

• Small type



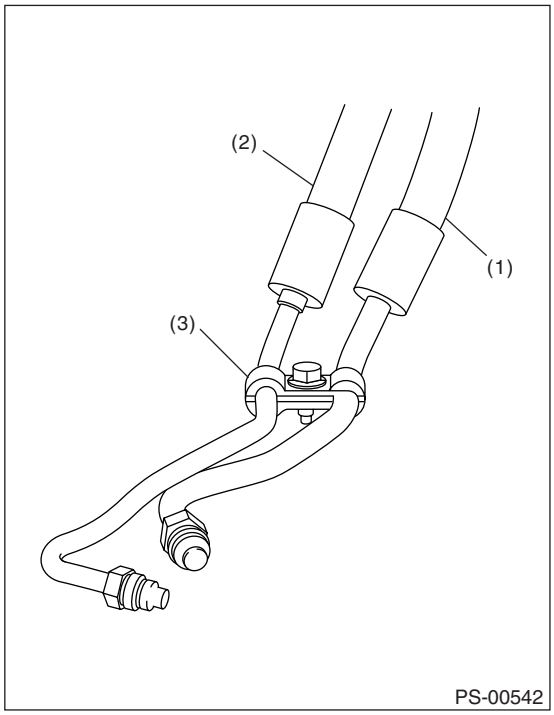
(1) Front crossmember support plate
(2) Jack-up plate

3) Remove one pipe joint at the center of gearbox, and connect the vinyl hose to the pipe and the joint. Discharge the fluid by turning steering wheel fully clockwise and counterclockwise. Discharge the fluid similarly from other pipes.



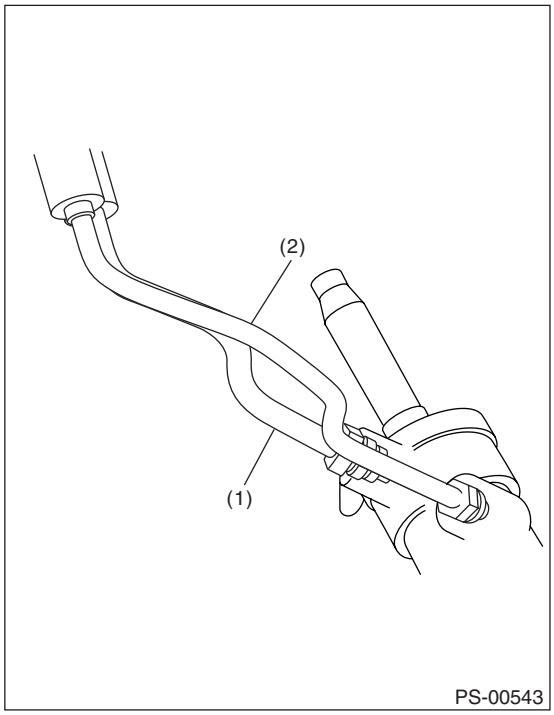
(1) Pipe A
(2) Pipe B

4) Remove the clamp E from the return hose and pressure hose.



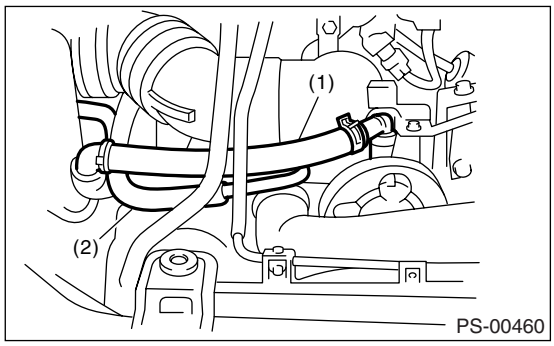
(1) Return hose
(2) Pressure hose
(3) Clamp E

5) Disconnect the return hose and pressure hose from gearbox.

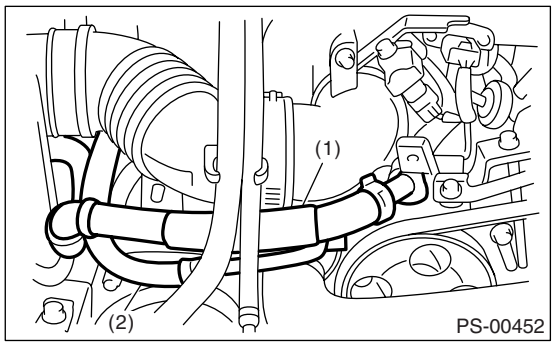


(1) Return hose
(2) Pressure hose

6) Remove the air intake duct. <Ref. to IN(H4DOTC)-9, REMOVAL, Air Intake Duct.> <Ref. to IN(H4SO 2.0)-9, REMOVAL, Air Intake Duct.>
7) Disconnect the suction hose and pressure hose from the oil pump.
• Non-turbo model

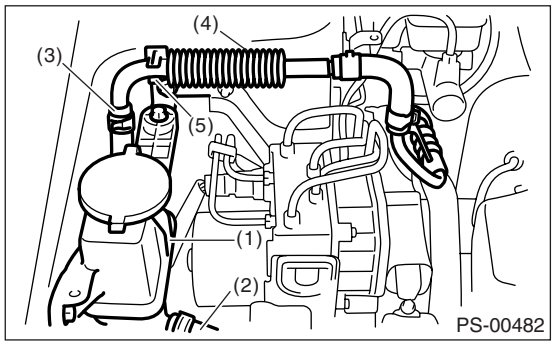


• Turbo model



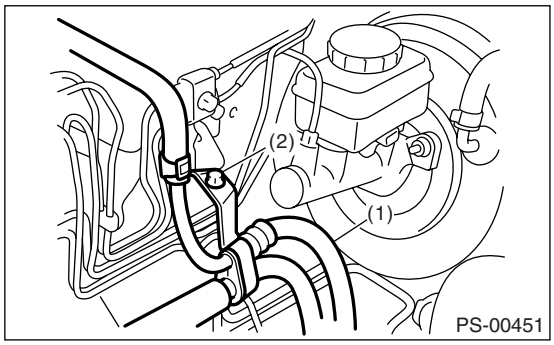
(1) Suction hose
(2) Pressure hose

8) Disconnect the suction hose and return hose from reservoir tank. Remove the oil cooler from oil cooler bracket.



(1) Reservoir tank
(2) Suction hose
(3) Return hose
(4) Oil cooler
(5) Oil cooler bracket

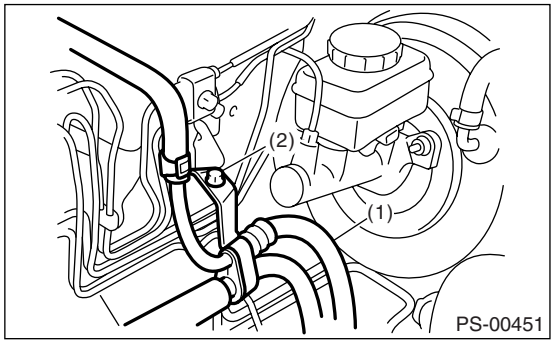
9) Remove the hose bracket and take out the hose assembly from vehicle.



(1) Hose ASSY
(2) Hose bracket

B: INSTALLATION

1) Temporarily tighten the bolt of hose bracket.

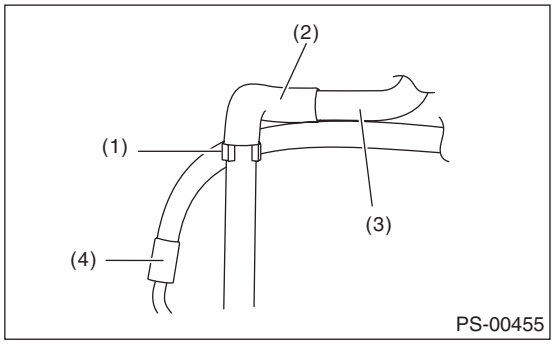


(1) Hose ASSY
(2) Hose bracket

2) Install the resin clip to the pressure hose and suction hose.

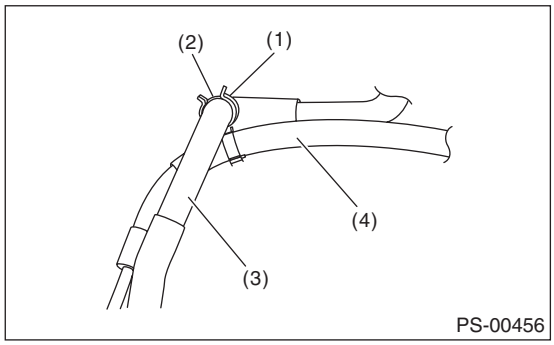
CAUTION:
Align the installation position of the resin clip with the protector edge of suction hose.

• Non-turbo model



(1) Resin clip
(2) Protector
(3) Suction hose
(4) Pressure hose

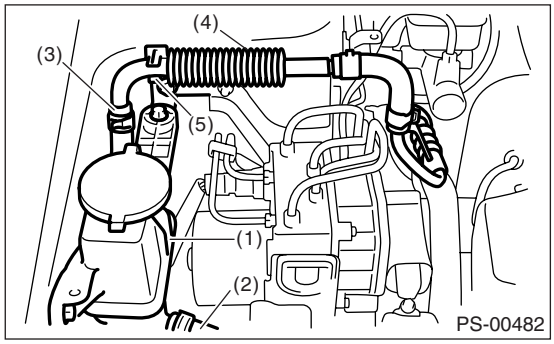
• Turbo model



(1) Resin clip
(2) Protector
(3) Suction hose
(4) Pressure hose

3) Connect the suction hose and return hose to reservoir tank. Install the oil cooler to oil cooler bracket.

CAUTION:
Firmly insert the resin clip of return hose to the bracket.

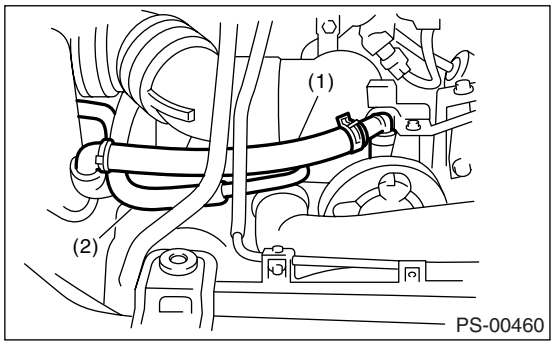


(1) Reservoir tank
(2) Suction hose
(3) Return hose
(4) Oil cooler
(5) Oil cooler bracket

4) Connect the suction hose and pressure hose to the oil pump. Tighten the eye bolt of pressure hose.

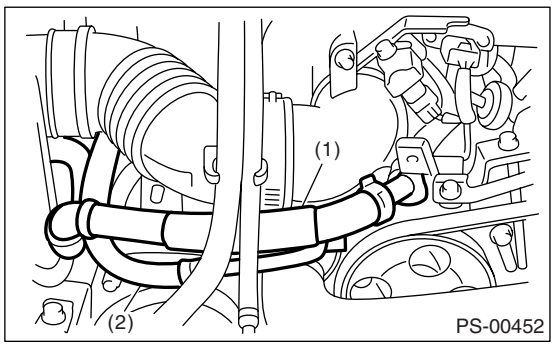
Tightening torque:
39 N·m (4.0 kgf-m, 28.9 ft-lb)

• Non-turbo model



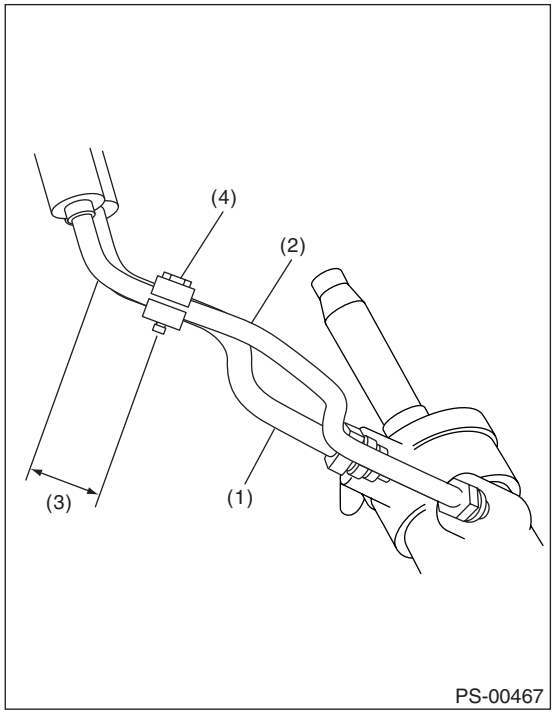
(1) Suction hose
(2) Pressure hose

• Turbo model



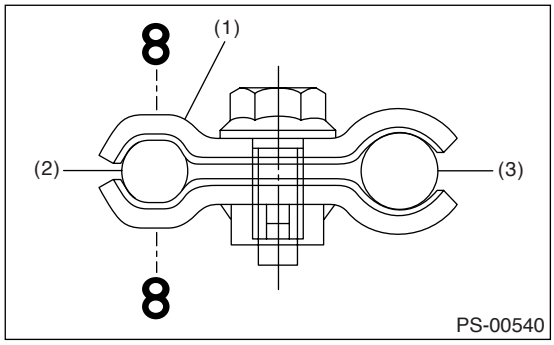
(1) Suction hose
(2) Pressure hose

5) Temporarily connect the return hose and pressure hose to gearbox. Place the clamp E in the position shown in the figure, and tighten the bolt temporarily.



(1) Return hose
(2) Pressure hose
(3) Approx. 27 mm (1.06 in)
(4) Clamp E

NOTE:
Ensure that the letter “8” on each clamp are diagonally opposite each other as shown in the figure.



(1) Clamp E
(2) Pipe C
(3) Return hose

6) Tighten the clamp E.

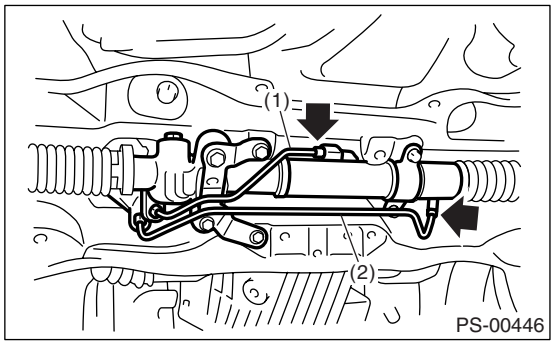
Tightening torque:
7.4 N·m (0.75 kgf-m, 5.4 ft-lb)

7) Tighten the joint nut.

Tightening torque:
15 N·m (1.5 kgf-m, 10.8 ft-lb)

8) Connect the pipe A and B to the four pipe joints of gearbox.

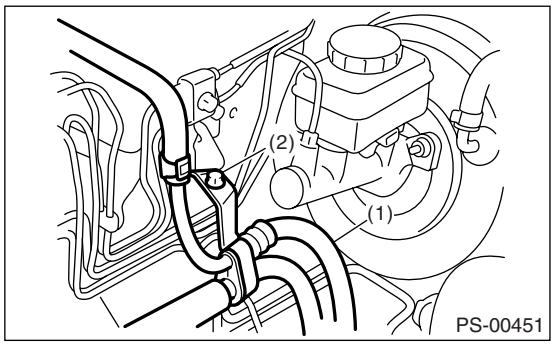
Tightening torque:
13 N·m (1.3 kgf-m, 9.4 ft-lb)



(1) Pipe A
(2) Pipe B

9) Install the front crossmember support plate and jack-up plate.
10) Lower the vehicle.
11) Tighten the bolts which hold the hose bracket.

Tightening torque:
13 N·m (1.3 kgf-m, 9.4 ft-lb)



(1) Hose ASSY
(2) Hose bracket

12) Install the air intake duct.
<Ref. to IN(H4DOTC)-9, INSTALLATION, Air Intake Duct.> <Ref. to IN(H4SO 2.0)-9, INSTALLATION, Air Intake Duct.>
13) Connect the battery ground cable to battery.
14) Feed the specified fluid.

CAUTION:
Never start the engine before feeding the fluid; otherwise vane pump might be seized up.

15) Finally, check clearance between pipes or hoses as shown in the figure indicated in “General Diagnostic Table”. <Ref. to PS-89, INSPECTION OF CLEARANCE, INSPECTION, General Diagnostic Table.>

C: INSPECTION

Check all disassembled parts for wear, damage or other abnormalities. Repair or replace defective parts as necessary.

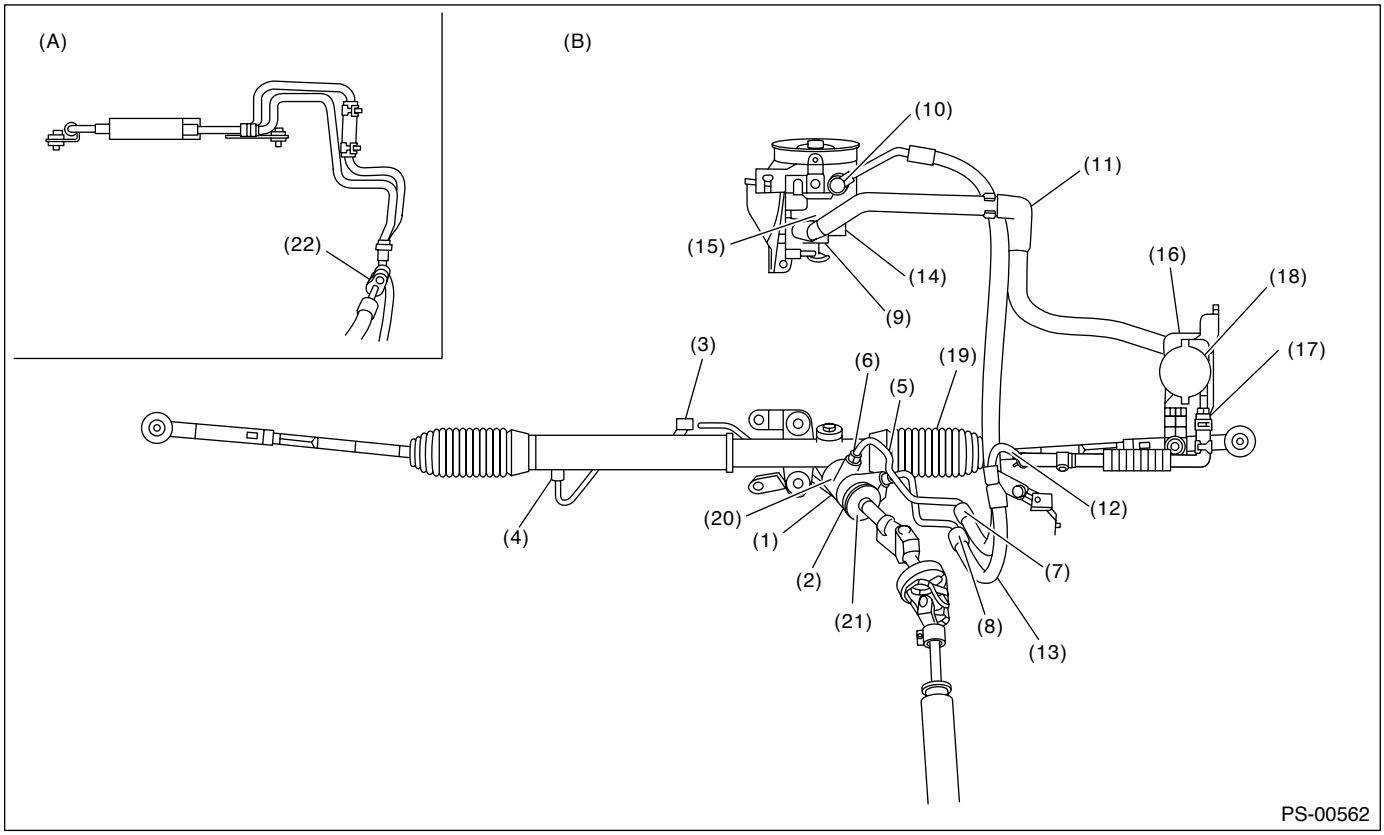
Parts	Maintenance Parts	Corrective action
Pipe	• O-ring fitting surface for damage • Nut for damage • Pipe for damage	Replace with a new one.
Clamp	• Clamps for weak clamping force	Replace with a new one.
Hose	• Flare surface for damage • Flare nut for damage • Outer surface for cracks • Outer surface for wear • Clip for damage • End coupling or adapter for deformation	Replace with a new one.

CAUTION:
Although surface layer materials of rubber hoses have excellent weathering resistance, heat resistance and resistance for low temperature brittleness, they are likely to be damaged chemically by brake fluid, battery electrolyte, engine oil and automatic transmission fluid and their service lives are to be very shortened. Wipe out immediately when the hoses are adhered with the fluids.
Since resistances for heat or low temperature brittleness are gradually declining according to time accumulation of hot or cold conditions for the hoses and their service lives are shortening accordingly, it is necessary to perform careful inspection frequently when the vehicle is used in hot weather areas, cold weather areas and a driving condition in which many steering operations are required in short time.
Particularly continuous work of relief valve over 5 seconds causes to reduce service lives of the hoses, the oil pump, the fluid, etc. due to over heat.

Trouble	Possible cause	Corrective action
Pressure hose burst	Excessive holding time of relief status	Instruct customers.
	Malfunction of relief valve	Replace oil pump.
	Poor cold characteristic of fluid	Replace fluid.
Forced out return hose	Poor connection	Repair.
	Poor holding of clip	Retighten.
	Poor cold characteristic of fluid	Replace fluid.
Fluid bleeding out of hose slightly	Wrong layout, tensioned	Replace hose.
	Excessive play of engine due to deterioration of engine mounting rubber	Replace the parts if defective.
	Improper stop position of pitching stopper	Replace the parts if defective.
Crack on hose	Excessive holding time of relief status	Replace. Instruct customers.
	Excessive tightening torque of return hose clip	Replace.
	Power steering fluid, engine oil, electrolyte adhere on the hose surface	Replace. Pay attention on service work.
	Too many times use in extremely cold weather	Replace. Instruct customers.

Pipe Assembly [RHD Model]

NOTE:
It is likely that although one judges fluid leakage, there is actually no leakage. This is because the fluid spilt during the last maintenance was not completely wiped off. Be sure to wipe off spilt fluid thoroughly after maintenance.



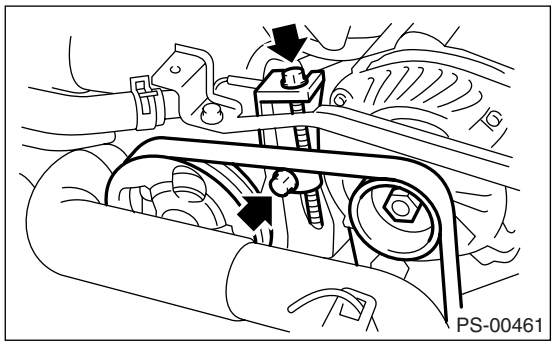
(A) 3.0 L model (B) Except for 3.0 L model

Fluid leaking area	Possible cause	Corrective action
Leakage from connecting portions of pipes and hoses, numbered with (1) through (10) in figure	Insufficient tightening of flare nut, adhesion of dirt, damage to flare or flare nut or eye bolt	Loosen and retighten. Replace if ineffective.
	Poor insertion of hose or clamping	Retighten or replace the clamp.
	Damaged O-ring or gasket	Replace O-ring or gasket pipe or hose with new one, if ineffective, replace the gearbox also.
Leakage from hose (11), (12) and (13) in figure	Crack or damage in hose	Replace with a new one.
	Crack or damage in hose hardware	Replace with a new one.
Leakage from surrounding of cast iron portion of oil pump (14) and (15) in figure	Damaged O-ring	Replace the oil pump.
	Damaged gasket	Replace the oil pump.
Leakage from oil tank (16) and (17) in figure	Crack in oil tank	Replace the oil tank.
Leakage from filler neck (18)	Damaged cap packing	Replace the cap.
	Crack in root of filler neck	Replace the oil tank.
	High fluid level	Adjust the fluid level.
Leakage from surrounding of power cylinder of gearbox (19) in figure	Damaged oil seal	Replace the oil seal.
Leakage from control valve of gearbox (20) and (21) in figure	Damaged packing or oil seal	Replace the problem parts.
	Damage in control valve	Replace the control valve.
(22) Leakage from connecting portion of cooler pipe and hose.	Insufficient tightening of connecting portion.	Loosen and retighten.

9. Oil Pump

A: REMOVAL

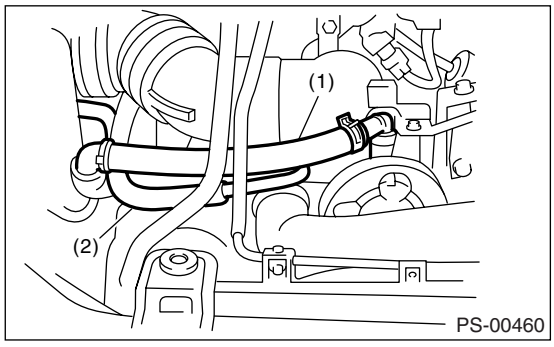
1) Disconnect the ground cable from battery.
2) Remove the air intake duct. <Ref. to IN(H4DOTC)-9, REMOVAL, Air Intake Duct.> <Ref. to IN(H4SO 2.0)-9, REMOVAL, Air Intake Duct.>
3) Remove the pulley belt cover.
4) Loosen the belt tension securing bolt and generator securing bolt, and then remove the power steering pump V-belt.



5) Disconnect the connector from power steering pump switch.
6) Disconnect the pressure hose and suction hose from oil pump.

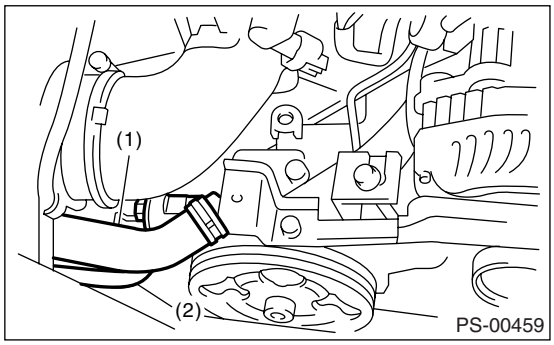
CAUTION:
• Do not allow fluid to come into contact with pulley belt.
• To prevent foreign matter from entering the hose and pipe, cover the open ends with a clean cloth.

• Non-turbo model



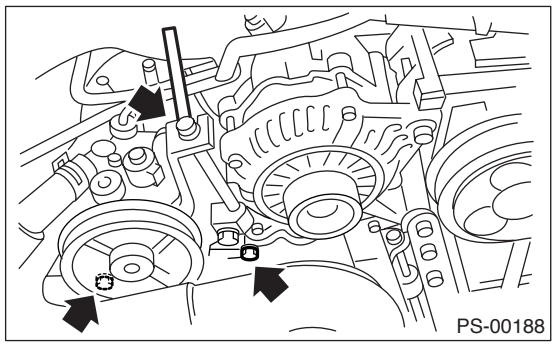
(1) Suction hose
(2) Pressure hose

• Turbo model



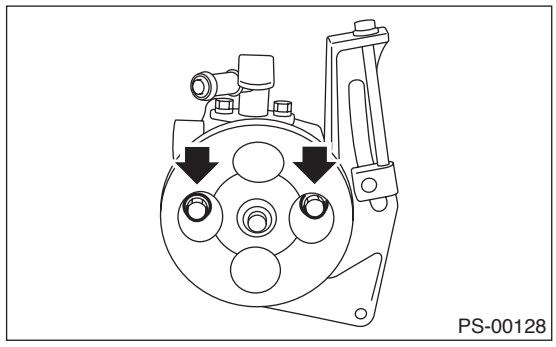
(1) Suction hose
(2) Pressure hose

7) Remove the bolts which hold the power steering pump bracket.



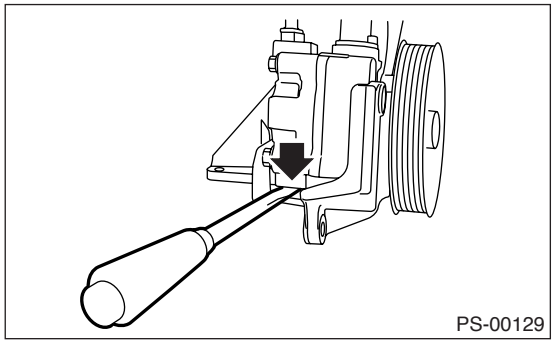
8) Place the oil pump bracket in a vise, and remove the two bolts from the front side of oil pump.

CAUTION:
When securing the oil pump bracket in a vice, hold the oil pump bracket with the least possible force between two wood pieces.



9) Remove the bolt from the rear side of oil pump.

10) Disassemble the oil pump and bracket by inserting a flat tip screwdriver as shown in the figure.

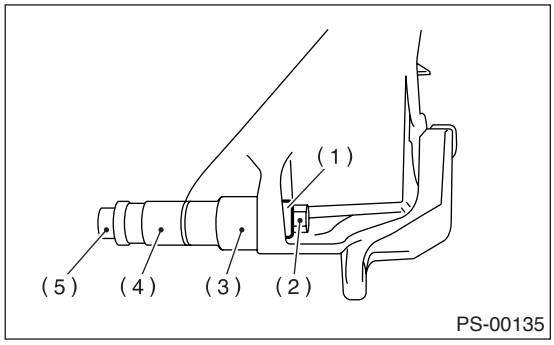


B: INSTALLATION

1) Install the oil pump to bracket.

(1) Place the oil pump bracket in a vise. Tighten the bushing using a 12.7 mm (1/2″) type 14- and 21-mm box wrench until it contact with oil pump mounting surface.

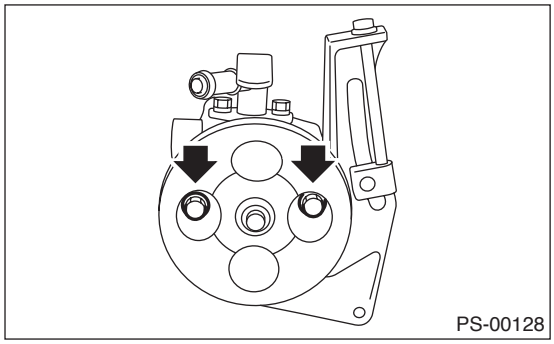
CAUTION:
When securing the oil pump bracket on a vice, hold the oil pump bracket with the least possible force between two wood pieces.



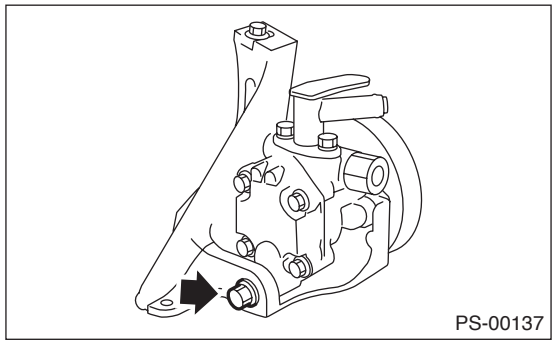
(1) Bushing
(2) Nut
(3) 21 mm
(4) 14 mm
(5) Bolt

(2) Tighten the bolt which holds the oil pump to bracket.

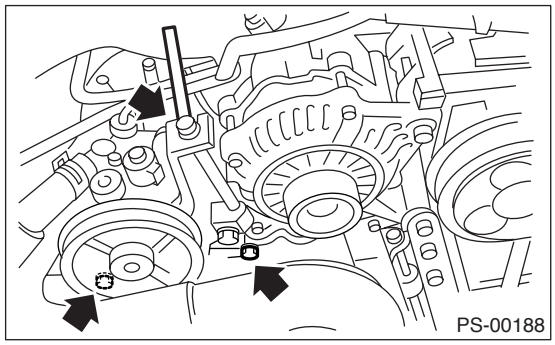
Tightening torque:
15.7 N·m (1.6 kgf-m, 11.6 ft-lb)



Tightening torque:
37.3 N·m (3.8 kgf-m, 27.5 ft-lb)



2) Tighten the bolts which hold the power steering pump bracket.

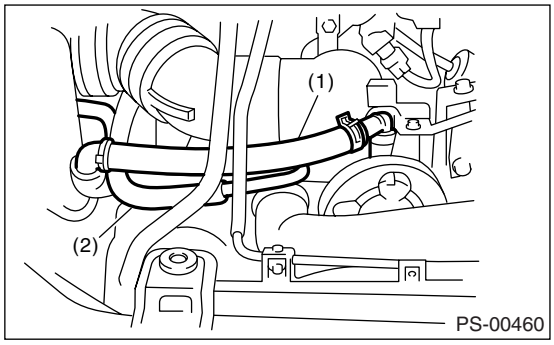


3) Interconnect the pressure hose and suction hose.

Tightening torque:
Eye bolt
39 N·m (4.0 kgf-m, 28.9 ft-lb)

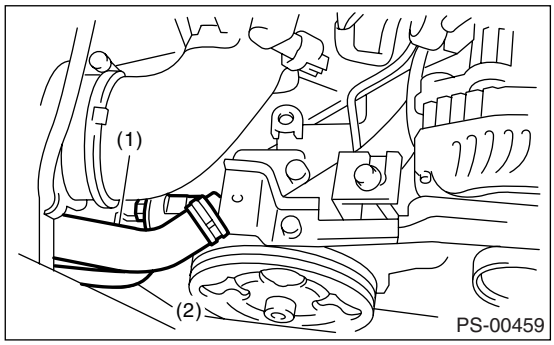
CAUTION:
If a hose is twisted at this step, take care the hose may come into contact with some other parts.

• Non-turbo model



(1) Suction hose
(2) Pressure hose

• Turbo model



(1) Suction hose
(2) Pressure hose

4) Connect the connector to power steering pump switch.
5) Install the V-belts to oil pump.
6) Check the tension of V-belt.
<Ref. to ME(H4SO 2.0)-39, INSPECTION, V-belt.>
7) Tighten the belt tension bolt.

Tightening torque:
25 N·m (2.5 kgf-m, 18.1 ft-lb)

8) Install the pulley belt cover.
9) Install the air intake duct.
<Ref. to IN(H4DOTC)-9, INSTALLATION, Air Intake Duct.> <Ref. to IN(H4SO 2.0)-9, INSTALLATION, Air Intake Duct.>
10) Connect the battery ground cable to battery.
11) Feed the specified power steering fluid. <Ref. to PS-84, Power Steering Fluid.>

CAUTION:
Never start the engine before feeding the fluid; otherwise vane pump might be seized up.

C: INSPECTION

1. BASIC INSPECTION

Perform the following inspection procedures and replace defective parts.

No.	Parts	INSPECTION	Corrective action
1	Oil pump (Exterior)	(1) Crack, damage or oil leakage	Replace the oil pump with a new one.
		(2) Play of pulley shaft	Measure the radial play and axial play. If any of these exceeds the service limit, replace the oil pump with a new one.
2	Pulley	(1) Damage	Replace with a new one.
		(2) Bend	Measure the V ditch deflection. If it exceeds the service limit, replace the pulley with a new one.
3	Oil pump (Interior)	(1) Defect or burning of vane pump	Check the resistance to the rotation of pulley. If it exceeds the service limit, replace the oil pump with a new one.
		(2) Bend in the shaft or damage to bearing	Oil pump emits a noise that is markedly different in tone and loudness from a sound of a new oil pump when turning its pulley which is put around with a string, replace the oil pump with a new one.
4	O-ring	Crack or deterioration	Replace with a new one.
5	Bracket	Crack	Replace with a new one.

2. SERVICE LIMIT

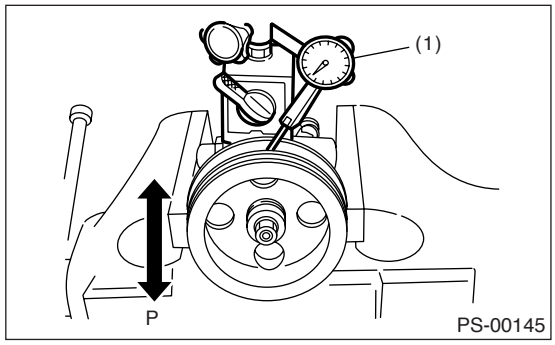
Make a measurement as follows. If it exceeds the service limit, replace with a new one.

CAUTION:
• When securing the oil pump on a vice, hold the oil pump with the least possible force between two wood pieces.
• Do not set outside of flow control valve or pulley on a vice; otherwise outside or pulley might be deformed. Select properly sized wood pieces.

1) Play of the pulley shaft

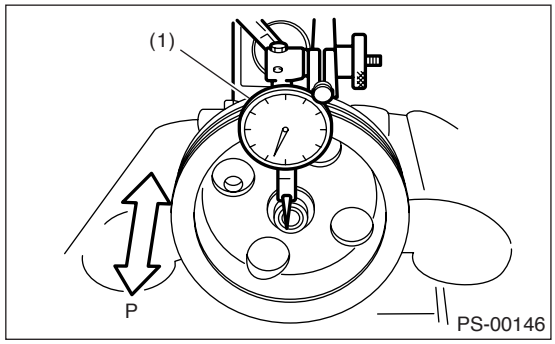
Condition:
P: When applying the force of 9.8 N (1.0 kgf, 2.2 lb)

Service limit:
Radial play (Direction ⟷)
0.4 mm (0.016 in) or less



(1) Dial gauge

Axial play (Direction ⟺)
0.9 mm (0.035 in) or less

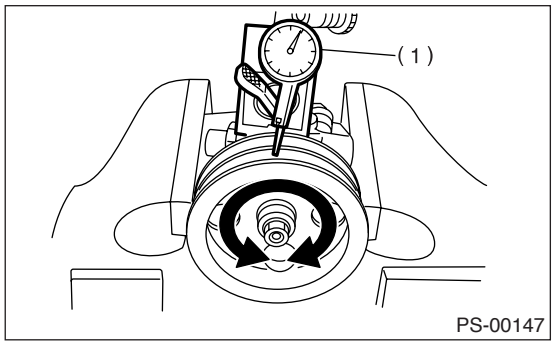


(1) Dial gauge

2) Ditch deflection of pulley

Service limit:
1.0 mm (0.039 in) or less

NOTE:
Read the value for one surface of V ditch, and then the value for another off the dial.

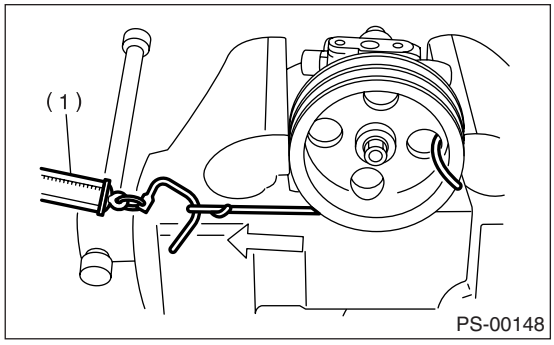


(1) Dial gauge

3) Resistance to rotation of pulley

Service limit:
Maximum load: 9.22 N (0.94 kgf, 2.07 lb) or less

NOTE:
• A rather higher value may be indicated when pulley starts turning.
• Measure the load during rotation to make a judgment.



(1) Spring balance

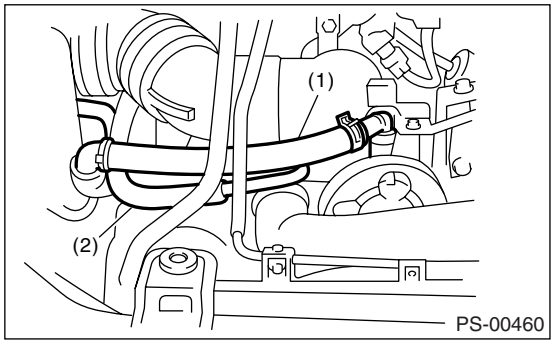
3. HYDRAULIC PRESSURE

NOTE:
• Be sure to complete all items aforementioned in "INSPECTION", prior to measuring hydraulic pressure. Otherwise, pressure cannot be measured correctly. <Ref. to PS-85, INSPECTION, General Diagnostic Table.>
• Do not leave the valve of pressure gauge closed or hold the steering wheel at stop end for 5 seconds or more in any case, as the oil pump may be damaged due to long keep of these conditions.
• Put cloth at a place where fluid drops before pressure gauge is installed. Wipe off spilt fluid thoroughly after the measurement.

1) Regular pressure measurement
(1) Connect ST1, ST2 and ST3.

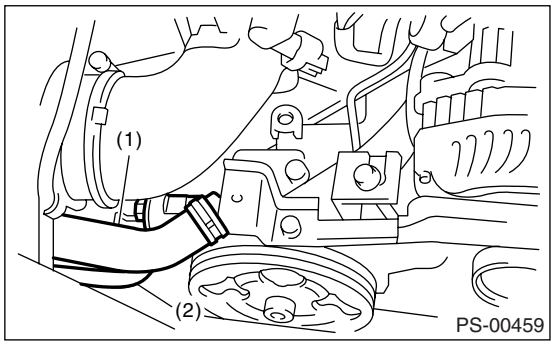
ST1 925711000 PRESSURE GAUGE
ST2 34099AC020 ADAPTER HOSE B
ST3 34099AC010 ADAPTER HOSE A

(2) Remove the air intake duct.
(3) Disconnect the pipe C from pump.
(4) Using the gasket (Part No. 34621AC021) and bolt (Part No. 34620AC010), install the ST2 to pump instead of pressure hose.
• Non-turbo model



(1) Suction hose
(2) Pressure hose

• Turbo model

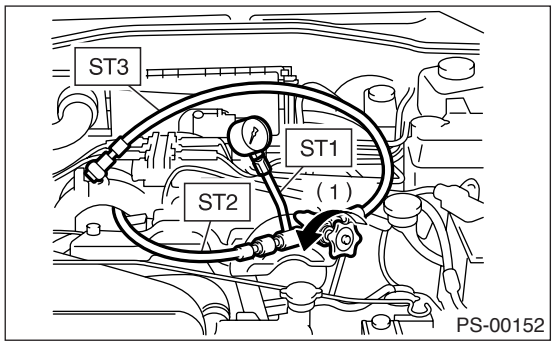


(1) Suction hose
(2) Pressure hose

(5) Install the ST3 to the end of pressure hose which is removed from pump.
(6) Replenish the power steering fluid up to specified level.
(7) Open the valve, and start the engine.

(8) Measure the regular pressure.

ST1 925711000 PRESSURE GAUGE
ST2 34099AC020 ADAPTER HOSE B
ST3 34099AC010 ADAPTER HOSE A



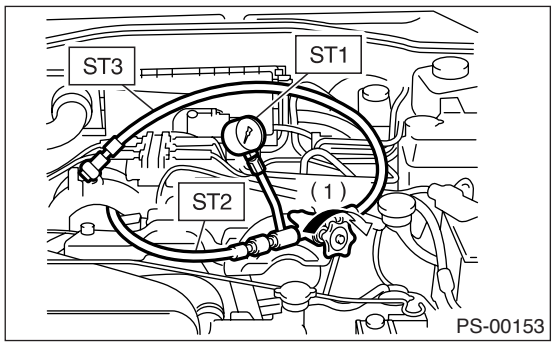
(1) Valve

Service limit:
981 kPa (10 kg/cm^2, 142 psi) or less

(9) If it is not within the specified value, replace the troubled part caused by following symptoms. (Pipe or hose clogged, leaks from fluid line, and mixture of foreign matters in fluid line)

2) Measure the relief pressure.
(1) Using the STs, measure the relief pressure.
(2) Close the valve.
(3) Measure the relief pressure.

ST1 925711000 PRESSURE GAUGE
ST2 34099AC020 ADAPTER HOSE B
ST3 34099AC010 ADAPTER HOSE A



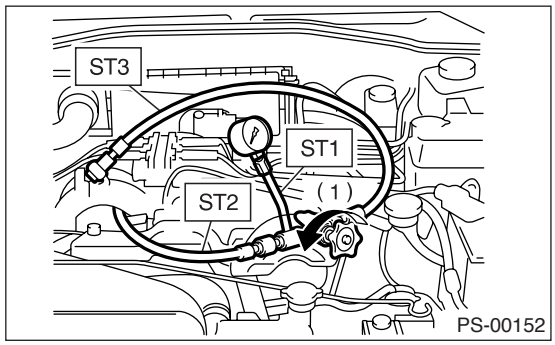
(1) Valve

Service limit:
Non-turbo model (Except for 3.0 R model):
6,767 — 7,453 kPa
(69 — 76 kg/cm^2, 981 — 1,081 psi)
Turbo model:
7,350 — 8,036 kPa
(75 — 82 kg/cm^2, 1,067 — 1,165 psi)
3.0 R model:
8,300 — 9,000 kPa
(85 — 92 kg/cm^2, 1,204 — 1,305 psi)

(4) If it is not within the specified value, replace the oil pump.

3) Measure working pressure.
(1) Using the STs, measure the working pressure.
(2) Open the valve.
(3) Measure the working pressure of control valve by turning steering wheel from stop to stop.

ST1 925711000 PRESSURE GAUGE
ST2 34099AC020 ADAPTER HOSE B
ST3 34099AC010 ADAPTER HOSE A



(1) Valve

Service limit:
7,650 — 8,330 kPa (78 — 85 kg/cm^2, 1,110 — 1,208 psi)

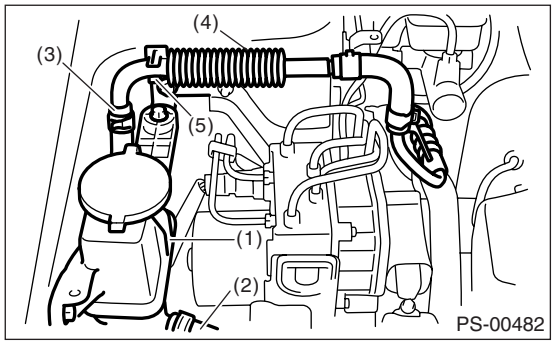
(4) If it is not within the specified value, measure the steering effort. <Ref. to PS-88, MEASUREMENT OF STEERING EFFORT, INSPECTION, General Diagnostic Table.> If it is not within specified value, replace the control valve itself or control valve and pinion as a single unit with new ones.

10.Reservoir Tank

A: REMOVAL

1) Drain fluid from the reservoir tank.
2) Disconnect the hose from reservoir tank.

CAUTION:
To prevent foreign matter from entering the hose and pipe, cover the open ends of them with a clean cloth.



(1) Reservoir tank
(2) Suction hose
(3) Return hose
(4) Oil cooler
(5) Oil cooler bracket

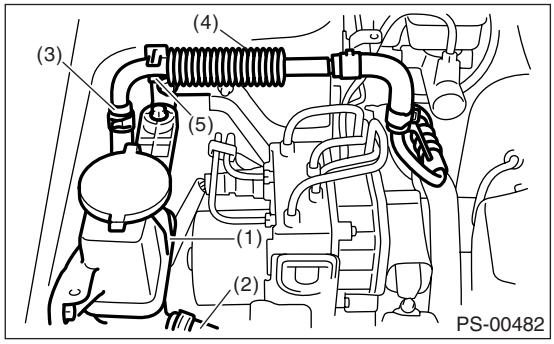
3) Remove the reservoir tank from body.

B: INSTALLATION

1) Install the reservoir tank to body.

Tightening torque:
13 N·m (1.3 kgf-m, 9.4 ft-lb)

2) Connect the hose to reservoir tank.



(1) Reservoir tank
(2) Suction hose
(3) Return hose
(4) Oil cooler
(5) Oil cooler bracket

3) Feed the power steering fluid to specified level.
<Ref. to PS-84, Power Steering Fluid.>

C: INSPECTION

Check the reservoir tank for cracks, breakage and damage. If a failure is found, replace the reservoir tank.

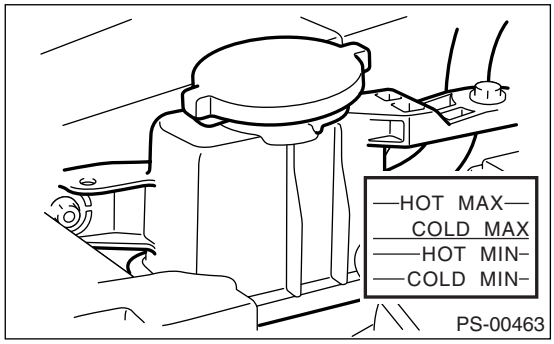
11.Power Steering Fluid

A: SPECIFICATION

Recommended power steering fluid	Manufacturer
ATF DEXRON III or equivalent	B.P.
	CALTEX
	CASTROL
	MOBIL
	SHELL
	TAXACO

B: INSPECTION

1) Check the power steering fluid for deterioration and contamination. If the fluid is highly deteriorated or contaminated, drain it and refill with new fluid.
2) Check the joints and units for oil leakage. If any oil leaks are found, repair or replace the applicable part.
3) Inspect the fluid level on flat and level surface with engine "OFF" by indicator of reservoir tank.
If the level is at "MIN." point or below, add fluid to keep the level in the specified range of the indicator. If at "MAX." point or above, drain fluid by using a syringe or the like.
(1) Check at power steering fluid temperature 20°C (68°F); read the fluid level on the "COLD" side.
(2) Check at power steering fluid temperature 80°C (176°F); read the fluid level on the "HOT" side.



C: REPLACEMENT

1) Lift-up the vehicle.
2) Remove the crossmember support.
3) Remove the pipe joint in the center of gearbox, and connect the vinyl hose to the pipe and joint. Wipe fluid off while turning the steering wheel.
4) Add the specified fluid to reservoir tank at MAX level.
5) Continue to turn the steering wheel slowly from lock to lock until the bubbles stop appearing on oil surface while keeping the fluid at the level in the Step 4).
6) If turning the steering wheel in low fluid level condition, air will be sucked in pipe. In this case, leave it about half an hour and then do the step 5) again.
7) Start the engine and let it idle.
8) Continue to turn the steering wheel slowly from lock to lock again until the bubbles stop appearing on oil surface while keeping the fluid at the level in Step 4).
Normally bubbles stop appearing after three times turning of steering wheel from lock to lock.
9) In case bubbles do not stop appearing in the tank, leave it about half an hour and then do the step 4) all over again.
10) Lower the vehicle, and then idle the engine.
11) Continue to turn the steering wheel from lock to lock until the bubbles stop appearing and change of the fluid level is within 3 mm (0.12 in).
12) In case the following happens, leave it about half an hour and then do step 8) to 11) again.
(1) The fluid level changes over 3 mm (0.12 in).
(2) Bubbles remain on the upper surface of the fluid.
(3) Grinding noise is generated from oil pump.
13) Check the fluid leakage after turning steering wheel from lock to lock with engine running.

12.General Diagnostic Table

A: INSPECTION

Trouble	Possible cause	Corrective action
• Heavy steering effort in all ranges • Heavy steering effort at stand still • Steering wheel surges when turning.	1. Pulley belt • Unequal length of pulley belts • Adhesion of oil and grease • Loose or damage of pulley belt • Poor uniformity of pulley belt cross section • Pulley belt touches to pulley bottom • Poor revolution of pulleys except oil pump pulley • Poor revolution of oil pump pulley	Adjust or replace.
	2. Tire and wheel • Improper tires out of specification*1 • Improper wheel out of specification*1 • Tires not properly inflated	Replace or reinflate.
	3. Fluid • Low fluid level • Aeration • Dust mix • Deterioration of fluid • Poor warming-up of fluid *2	Refill, bleed air, replace or instruct customer.
	4. Idle speed • Lower idle speed • Excessive drop of idle speed at start or at turning steering wheel *3	Adjust or instruct customer.
	5. Measure hydraulic pressure. <Ref. to PS-80, INSPECTION, Oil Pump.>	Replace the problem parts.
	6. Measure steering effort. <Ref. to PS-88, MEASUREMENT OF STEERING EFFORT, INSPECTION, General Diagnostic Table.>	Adjust or replace.
• Vehicle leads to one side or the other • Poor return of steering wheel to center • Steering wheel surges when turning.	1. Fluid line • Folded hose • Flattened pipe	Correct or replace.
	2. Tire and wheel • Flat tire • Mix use of different tires • Mix use of different wheels • Abnormal wear of tire • Unbalance of remained grooves • Unbalance of tire pressure	Adjust, fix or replace.
	3. Front alignment • Improper or unbalance caster • Improper or unbalance toe-in • Loose connection of suspension	Adjust or retighten.
	4. Others • Damaged joint assembly • Unbalanced height • Unbalanced weight	Replace, adjust or instruct customer.
	5. Measure steering effort. <Ref. to PS-88, MEASUREMENT OF STEERING EFFORT, INSPECTION, General Diagnostic Table.>	Adjust or replace.

*1 If the tires or wheels are wider than specifications, the load to power steering system is increased. Accordingly, in a condition, for example before fluid warms-up, relief valve may work before maximum turning angle. In this case, steering effort may be heavy. When the measured hydraulic pressure is normal, there is no abnormal thing.
*2 In cold weather, steering effort may be heavy due to increased flow resistance of cold fluid. After warming-up engine, turn the steering wheel from stop to stop several times to warm-up fluid. Then if steering effort reduces normally, there is no abnormal thing.

*3 In cold weather or with insufficient warm-up of engine, steering effort may be heavy due to excessive drop of idling when turning steering wheel. In this case, it is recommended to start the vehicle with increasing engine speed than usual. Then if steering effort reduces normally, there is no abnormal thing.

1. NOISE AND VIBRATION

CAUTION:
Do not keep the relief valve operated over five seconds at any time or inner parts of the oil pump may be damaged due to rapid increase of fluid temperature.

NOTE:
• Grinding noise may be heard immediately after the engine start in extremely cold condition. In this case, if the noise goes off during warm-up there is no abnormal function in the system. This is due to the fluid characteristic in extremely cold condition.
• Oil pump makes whine or growl noise slightly due to its mechanism. Even if the noise can be heard when steering wheel is turned at stand still, there is no abnormal function in the system provided that the noise eliminates when the vehicle is running.
• When turning the steering wheel with service brake and/or parking brake applied, the noise is generated by creaking between disc and pads. However this does not indicate abnormal function in system.
• There may be a little vibration around the steering devices when turning steering wheel at standstill, even though the component parts are properly adjusted and have no defects.
Hydraulic systems are likely to generate this kind of vibration as well as working noise and fluid noise because of combined conditions, i.e., road surface and tire surface, engine speed and turning speed of steering wheel, fluid temperature and braking condition.
These phenomena do not indicate there are some abnormal functions in the system.
Confirm the vibration by turning the steering wheel repeatedly at various speeds from slow to rapid step by step with parking brake applied on concrete road and in “D” range for AT model.

Trouble	Possible cause	Corrective action
Hiss noise (continuous) While engine is running.	Relief valve emits operating sound when steering wheel is completely turned in either direction. (Do not keep this condition over five seconds.)	Normal Operation
	Relief valve emits operating sound when steering wheel is not turned. This means that the relief valve is defective.	Replace the oil pump.
Rattling noise (intermittent) While engine is running.	Interference with adjacent parts	Check the clearance. Correct if necessary. <Ref. to PS-69, INSPECTION, Pipe Assembly [LHD Model].>
	Loosened installation of oil pump, oil tank, pump bracket, gearbox or crossmember	Retighten.
	Loosened installation of oil pump pulley or other pulley(s)	Retighten.
	Loosened linkage or play of steering or suspension Loosened tightening of joint or steering column	Retighten or replace.
	Sound generates from the inside of gearbox or oil pump.	Replace the faulty parts of the gearbox or oil pump.
Knocking When turning steering wheel in both directions with small angle repeatedly at engine ON or OFF.	Excessive backlash Loosened lock nut for adjusting backlash	Adjust and retighten.
	Loosened tightening or play of tie-rod, tie-rod end	Retighten or replace.
Grinding noise (continuous) While engine is running.	Vane pump aeration	Inspect and retighten the fluid line connection. Refill the fluid and vent air.
	Vane pump seizing	Replace the oil pump.
	Pulley bearing seizing of oil pump	Replace the oil pump.
	Folded hose, flattened pipe	Replace.

Trouble	Possible cause	Corrective action
Squeal, squeak (intermittent or continuous) While engine is running.	Maladjustment of pulley belt Damaged or charged pulley belt Unequal length of pulley belts	Adjust or replace. (Replace two belts as a set.)
	Runout or defacement of V-groove surface of oil pump pulley	Clean or replace.
Sizzling noise (continuous) While engine is running.	Fluid aeration	Fix the wrong part causing aeration. Replace the fluid and vent air.
	Damaged pipe of gearbox	Replace the pipe.
	Abnormal inside of hose or pipe Flattened hose or pipe	Rectify or replace.
	Abnormal inside of oil tank	Replace.
	Removed oil tank cap	Install cap.
Whistle (continuous) While engine is running.	Abnormal pipe of gearbox or abnormal inside of hose	Replace the faulty parts of the gearbox or hose.
Whine or growl (intermittent or continuous) While engine is running with/ without steering turned.	Loosened installation of oil pump, oil pump bracket	Retighten.
	Abnormal inside of oil pump, hose	Replace the oil pump or hose, if the noise can be heard when running as well as stand still.
	Torque converter growl, air conditioner compression growl	Remove the power steering pulley belt and confirm.
Grinding noise (continuous) While engine is running with the steering turned.	Abnormal inside of gearbox	Replace the faulty parts of gearbox.
	Abnormal bearing for steering shaft	Apply grease or replace.
	Generates when turning steering wheel with brake (service or parking) applied.	If the noise goes off when brake is released, it is normal.
Vibration While engine is running with/ without steering turned.	Too low engine speed	Adjust and instruct customers.
	Vane pump aeration	Fix the wrong part. Vent air.
	Damaged valve in oil pump, gearbox	Replace the oil pump, faulty parts of gearbox.
	Looseness of play of steering, suspension parts	Retighten.

2. MEASUREMENT OF STEERING EFFORT

	Step	Check	Yes	No
1	**CHECK STEERING EFFORT.** 1) Stop the vehicle on a concrete road. 2) Start the engine. 3) Run the engine at idle. 4) Install a spring scale on the steering wheel. 5) Pull the spring scale at a right angle to the steering wheel, and measure both right and left steering wheel efforts. NOTE: When turning the steering more quickly than necessary from a direction to the other direction at an engine speed over 2,000 rpm, steering effort may be heavy. This is caused by flow characteristic of oil pump and is not defective.	Is the steering effort less than 29.4 N (3.0 kgf, 6.6 lb)?	Go to step **2.**	Adjust the backlash.
2	**CHECK STEERING EFFORT.** 1) Stop the engine. 2) Pull the spring scale at a right angle to the steering wheel, and measure both right and left steering wheel efforts.	Is the steering effort less than 294.2 N (30 kgf, 66.2 lb)?	Go to step **3.**	Perform adjustment.
3	**CHECK STEERING WHEEL EFFORT.** 1) Remove the universal joint. 2) Measure steering wheel effort.	Is steering effort less than 2.26 N (0.23 kgf, 0.51 lb)?	Go to step **4.**	Check, adjust and replace if necessary.
4	**CHECK STEERING WHEEL EFFORT.** Measure steering wheel effort.	Is the difference of steering effort between clockwise and counterclockwise less than 20%?	Go to step **5.**	Check, adjust and replace if necessary.
5	**CHECK UNIVERSAL JOINT.** Measure the folding torque of the joint (yoke of steering column side). <Ref. to PS-21, INSPECTION, Universal Joint.>	Is the folding torque less than 7.3 N (0.74 kgf, 1.64 lb)?	Go to step **6.**	Replace with a new one.
6	**CHECK UNIVERSAL JOINT.** Measure the folding torque of the joint (yoke of gearbox side). <Ref. to PS-21, INSPECTION, Universal Joint.>	Is the folding torque less than 3.8 N (0.39 kgf, 0.86 lb)?	Go to step **7.**	Replace with a new one.
7	**CHECK FRONT WHEEL.** Check the front wheel.	If the front wheels have unsteady revolution or rattling and brake for dragging?	Inspect, readjust and replace if necessary.	Go to step **8.**
8	**CHECK TIE-ROD ENDS.** Remove the tie-rod ends.	If the tie-rod ends of suspension have unsteady revolution or rattling?	Inspect and replace if necessary.	Go to step **9.**
9	**CHECK BALL JOINT.** Remove the ball joint.	If the ball joints of suspension have unsteady revolution or rattling?	Inspect and replace if necessary.	Go to step **10.**
10	**CHECK GEARBOX.** Measure the rotating of gearbox. <Ref. to PS-44, TURNING RESISTANCE OF GEARBOX, INSPECTION, Steering Gearbox [LHD Model].>	Is the rotating resistance of steering gearbox less than 10.5 N (1.1 kgf, 2.4 lb)? Is the difference between clockwise and counterclockwise less than 20%?	Go to step **11.**	Readjust the backlash, and if ineffective, replace the faulty parts.
11	**CHECK GEARBOX.** Measure the sliding of gearbox. **<Ref. to PS-43,** SERVICE LIMIT, INSPECTION**, Steering Gearbox [LHD Model].>**	Is the sliding resistance of steering gearbox less than 314 N (32 kgf, 71 lb)? Is the difference between right and left sliding resistances less than 20%?	Steering effort is normal.	Readjust the backlash, and if ineffective, replace the faulty parts.

3. INSPECTION OF CLEARANCE

This table lists various clearances that must be correctly adjusted to ensure the normal vehicle driving without interfering noise, or any other faults.

LOCATION	Minimum allowance mm (in)
(1) Crossmember-to-Hose ASSY	3 (0.12)
(2) Front exhaust pipe-to-Hose ASSY (Turbo model)	15 (0.59)
(3) Front frame side-to-Hose ASSY	10 (0.39)
(4) Turbo cover-to-Hose ASSY (Turbo model)	10 (0.39)
(5) Master cylinder-to-Return hose (Turbo model)	10 (0.39)
(6) Master cylinder-to-Hose clip (Model with vehicle dynamics control (VDC))	10 (0.39)
(7) VDC H/U-to-Hose ASSY (Model with vehicle dynamics control (VDC))	5 (0.20)
(8) Air cleaner-to-Hose ASSY (Turbo model)	5 (0.20)
(9) Air boot-to-Hose ASSY	10 (0.39)
(10) Protector-to-Hose ASSY (Turbo model, DOHC non-turbo model)	10 (0.39)
(11) Blow-by-to-Hose ASSY (Turbo model)	8 (0.31)
(12) Over flow hose-to-Hose ASSY (Turbo model)	8 (0.31)
(13) Brake pipe-to-Return hose (Model with ABS)	10 (0.39)
(14) Front suspension bracket-to-Return hose	5 (0.20)
(15) Front wheel apron-to-Return hose	5 (0.20)
(16) VDC H/U bracket-to-Suction hose (Model with vehicle dynamics control (VDC))	5 (0.20)
(17) Air cleaner case-to-Suction hose	5 (0.20)
(18) Air intake duct-to-Suction hose (Turbo model)	10 (0.39)
(19) Air duct-to-Suction hose (Turbo model)	10 (0.39)
(20) Front wheel apron-to-Reservoir tank	5 (0.20)
(21) VDC H/U-to-Reservoir tank (Model with vehicle dynamics control (VDC))	5 (0.20)
(22) Valve housing-to-DOJ (MT model)	12 (0.47)
(23) Valve housing-to-Crossmember (Hole)	1 (0.04)
(24) Bracket-to-Crossmember	1 (0.04)
(25) Cylinder-to-Crossmember	5 (0.20)
(26) Elbow-to-Crossmember	1 (0.04)
(27) Cylinder-to-Exhaust pipe	18 (0.71)
(28) Universal joint coupling-to-Turbo cover (Turbo model)	15 (0.59)
(29) Universal joint column side yoke-to-Master cylinder (Closest approach point when universal joint turns by 360°) (OUTBACK model)	5 (0.20)
(30) Cruise control-to-Hose ASSY (Model with cruise control)	10 (0.39)
(31) Universal joint coupling-to-ATF level gauge (LHD model)	10 (0.39)
(32) Boot-to-Exhaust pipe (LHD model)	18 (0.71)
(33) Return hose-to-Pressure hose	No contact between hoses

BODY SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

1. General Description

A: SPECIFICATION

1. HEATER SYSTEM

Item		Specification	On condition
Heating capacity		5.2 kW (4,471 kcal/h, 17,743 BTU/h) or more	• Mode selector switch: HEAT • Temperature control switch: FULL HOT • Temperature difference between hot water and inlet air: 65°C (149°F) • Hot water flow rate: 360 ℓ (95.1 US gal, 79.2 Imp gal)/h
Air flow rate		370 m^3 (13,066 cu ft)/h	Heat mode (FRESH), FULL HOT at 12.5 V
Max air flow rate		460 m^3 (16,245 cu ft)/h	• Temperature control switch: FULL COLD • Blower fan speed: Auto A/C: 6th position Manual A/C: 4th position • Mode selector lever: RECIRC
Heater core size (height × length × width)		264 × 110 × 27 mm (10.4 × 4.33 × 1.06 in)	—
Blower motor	Type	Magnet motor 220 W or less	12 V
	Fan type and size (diameter × width)	Sirocco fan type 150 × 75 mm (5.91 × 2.95 in)	—

2. A/C SYSTEM

• Auto A/C model

Item		Specification
Type of air conditioner		Reheat air-mix type
Cooling capacity		5.3 kW (4,557 kcal/h, 18,084 BTU/h)
Refrigerant		HFC-134a (CH_2FCF_3) [0.4±0.03 kg (0.88±0.07 lb)]
Compressor	Type	Scroll, constant volume (SCSA 08C)
	Discharge	74.5 cc (4.55 cu in)/rev
	Max. permissible speed	9,000 rpm
Magnet clutch	Type	Dry, single-disc type
	Power consumption	35 W
	Type of belt	H4 model: V-belt 4 PK H6 model: V-belt 6 PK
	Pulley dia. (effective dia.)	93 mm (3.7 in)
	Pulley ratio	1.43
Condenser	Type	Corrugated fin (Sub cool type)
	Core face area	0.186 m^2 (2.002 sq ft)
	Core thickness	16 mm (0.63 in)
	Radiation area	5.49 m^2 (59.09 sq ft)
Receiver drier	Effective inner capacity	190 cm^3 (11.6 cu in)
Expansion valve	Type	Internal equalizing
Evaporator	Type	Single tank
	Dimensions (W × H × T)	298.6 × 151 × 38 mm (11.76 × 5.94 × 1.50 in)
Blower fan	Fan type	Sirocco fan
	Outer diameter × width	150 × 75 mm (5.91 × 2.95 in)
	Power consumption	220 W

Condenser fan (Sub fan)		Motor type	Magnet
		Power consumption	H4 model: 90 W H6 model: 160 W
		Fan outer diameter	H4 model: 300 mm (11.8 in) H6 model: 320 mm (12.6 in)
Radiator fan (Main fan)		Motor type	Magnet
		Power consumption	H4 model: 90 W H6 model: 160 W
		Fan outer diameter	H4 model: 300 mm (11.8 in) H6 model: 320 mm (12.6 in)
Idling speed (A/C ON)		MPFI model	800±100 rpm
Triple switch (Pressure switch)	Low-pressure switch operating pressure	ON → OFF	196±20 kPa (2.00±0.20 kg/cm^2, 28.4±2.9 psi)
		OFF → ON	225^{+25}_{-29} kPa ($2.29^{+0.25}_{-0.30}$ kg/cm^2, $32.6^{+3.6}_{-4.2}$ psi)
	High-pressure switch operating pressure	ON → OFF	$3{,}140^{+50}_{-200}$ kPa ($32.02^{+0.51}_{-2.04}$ kg/cm^2, $455.4^{+7.25}_{-29.0}$ psi)
		OFF → ON	2,550±200 kPa (26.00±2.04 kg/cm^2, 369.8±29.0 psi)
	Middle-pressure switch operating pressure	ON → OFF	1,370±120 kPa (13.97±1.22 kg/cm^2, 198.65±17.35 psi)
		OFF → ON	1,770±100 kPa (18.05±1.02 kg/cm^2, 256.81±14.50 psi)
Thermo-control amplifier working temperature (Evaporator outlet air)		 AC-00601 (1) ON (2) OFF (3) 1±0.5°C (33.8±0.9°F) (4) $4^{+1.5}_{0}$°C ($39.2^{+2.7}_{0}$°F)	

• Manual A/C model

Item		Specification
Type of air conditioner		Reheat air-mix type
Cooling capacity		5.3 kW (4,557 kcal/h, 18,084 BTU/h)
Refrigerant		HFC-134a (CH_2FCF_3) [0.4±0.03 kg (0.88±0.07 lb)]

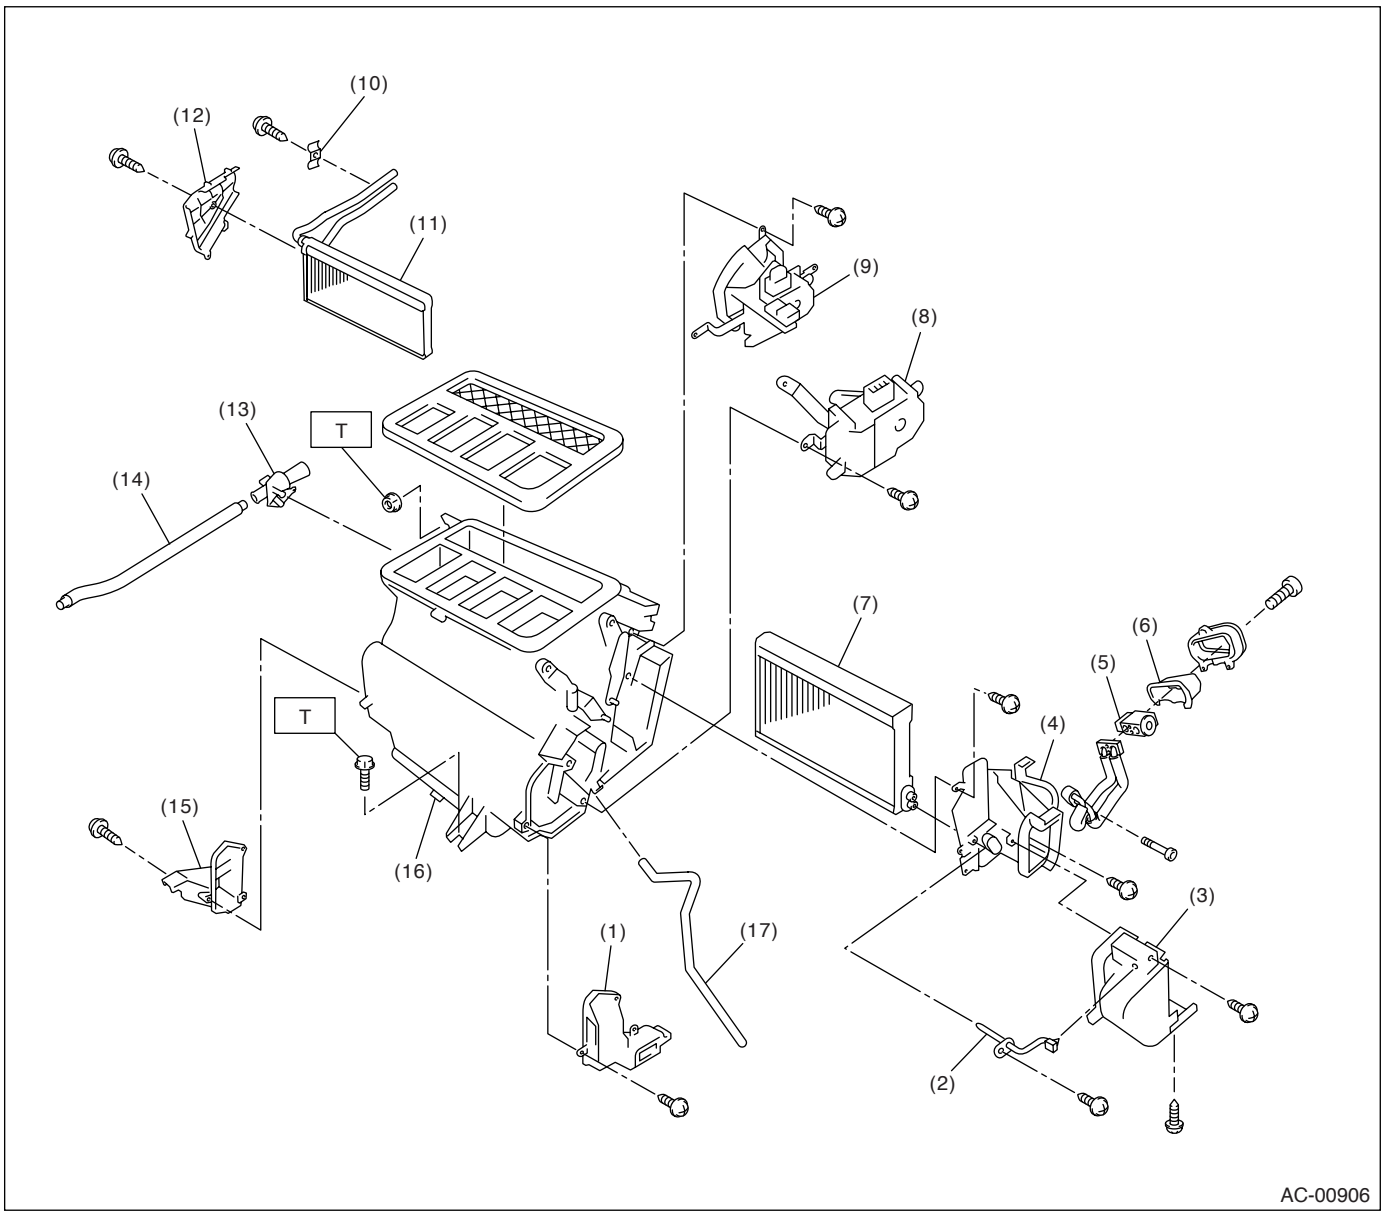
B: COMPONENT

1. HEATER COOLING UNIT

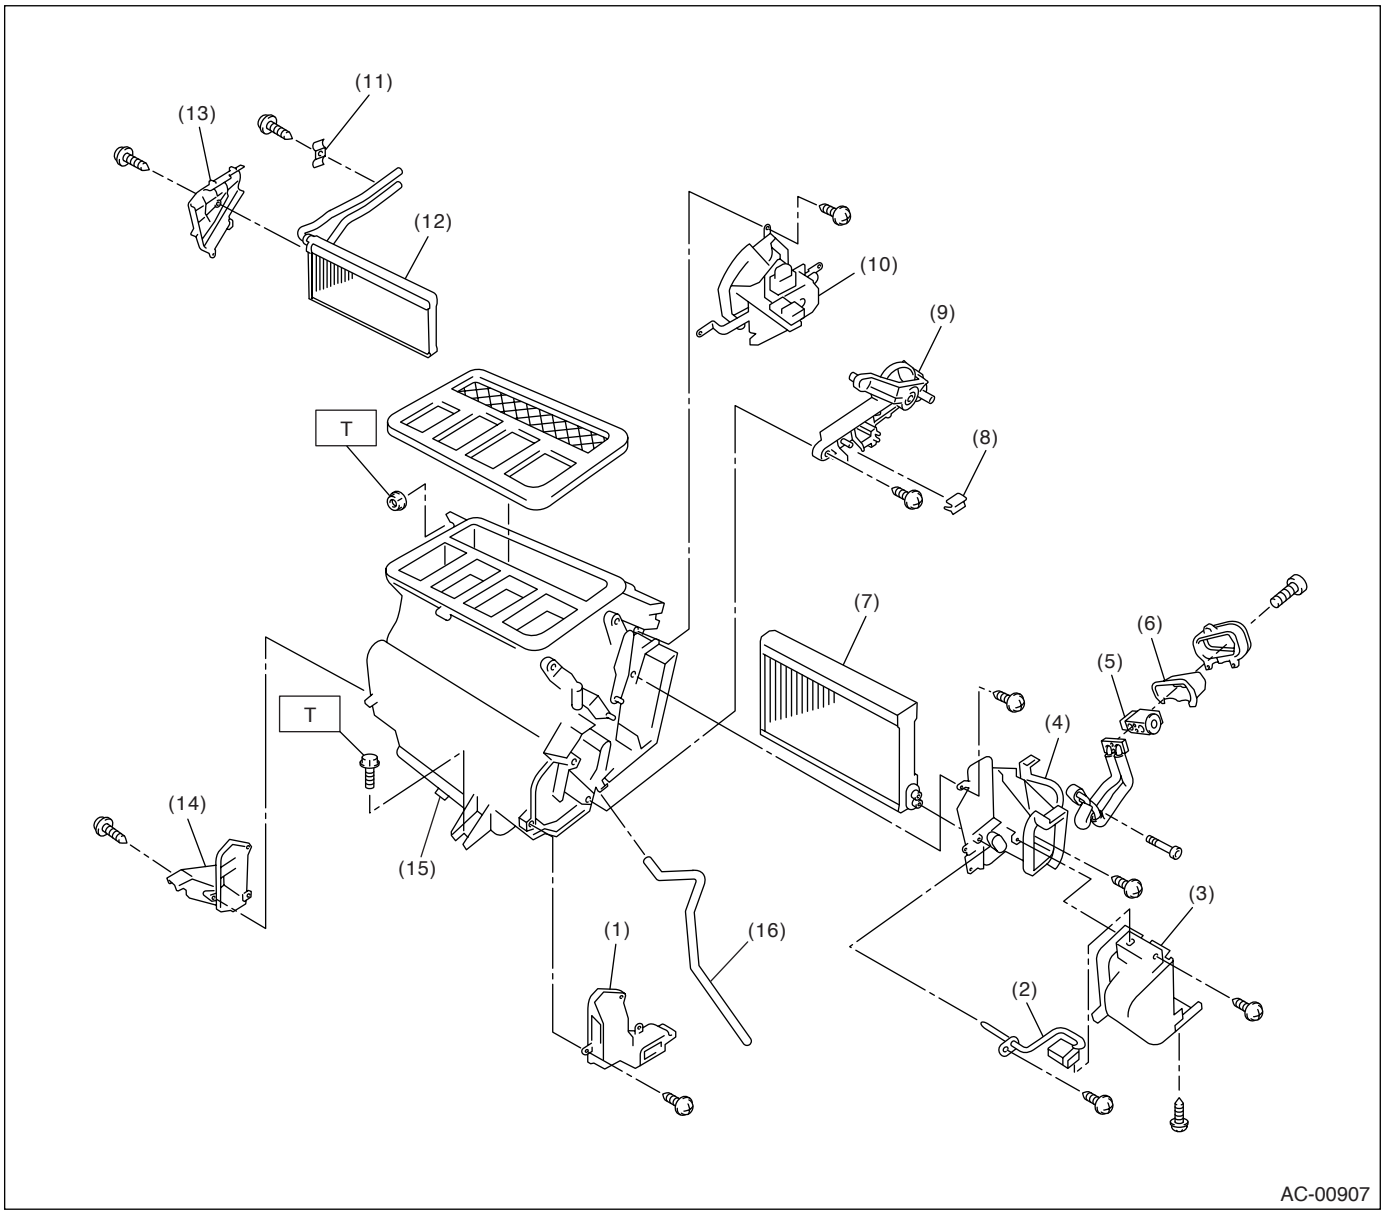
• Auto A/C model



(1) Foot duct (RH)
(2) Evaporator center
(3) Pipe cover
(4) Evaporator cover
(5) Expansion valve
(6) Packing
(7) Evaporator
(8) Mix actuator
(9) Mode actuator
(10) Heater pipe clamp
(11) Heater core
(12) Heater core cover
(13) Aspirator
(14) Aspirator hose
(15) Foot duct (LH)
(16) Unit ASSY
(17) Drain hose

Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.76, 5.5)

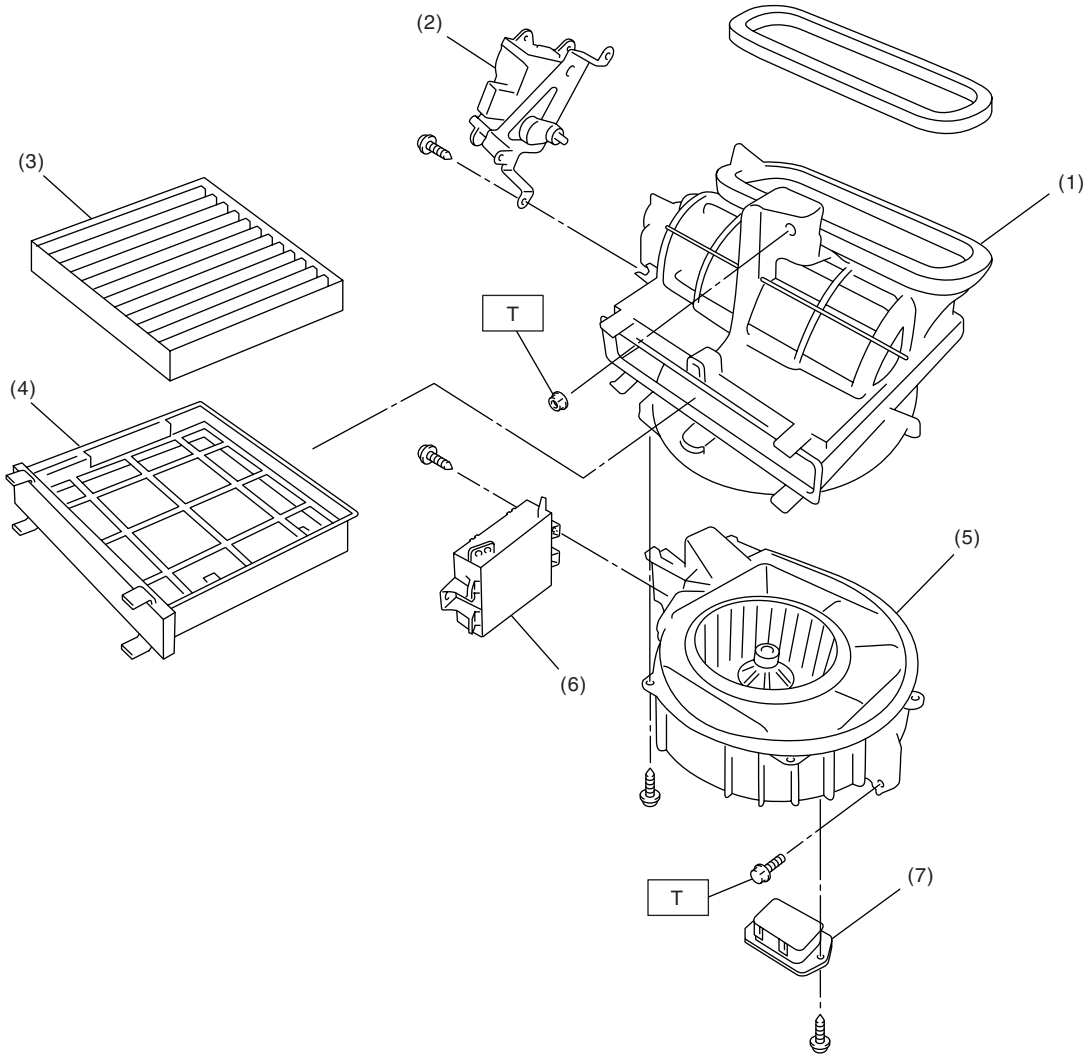
• Manual A/C model



(1) Foot duct (RH)
(2) Thermo amplifier
(3) Pipe cover
(4) Evaporator cover
(5) Expansion valve
(6) Packing
(7) Evaporator
(8) Clip
(9) Air mix door linkage
(10) Mode actuator
(11) Heater pipe clamp
(12) Heater core
(13) Heater core cover
(14) Foot duct (LH)
(15) Unit ASSY
(16) Drain hose

Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.76, 5.5)

2. BLOWER MOTOR UNIT

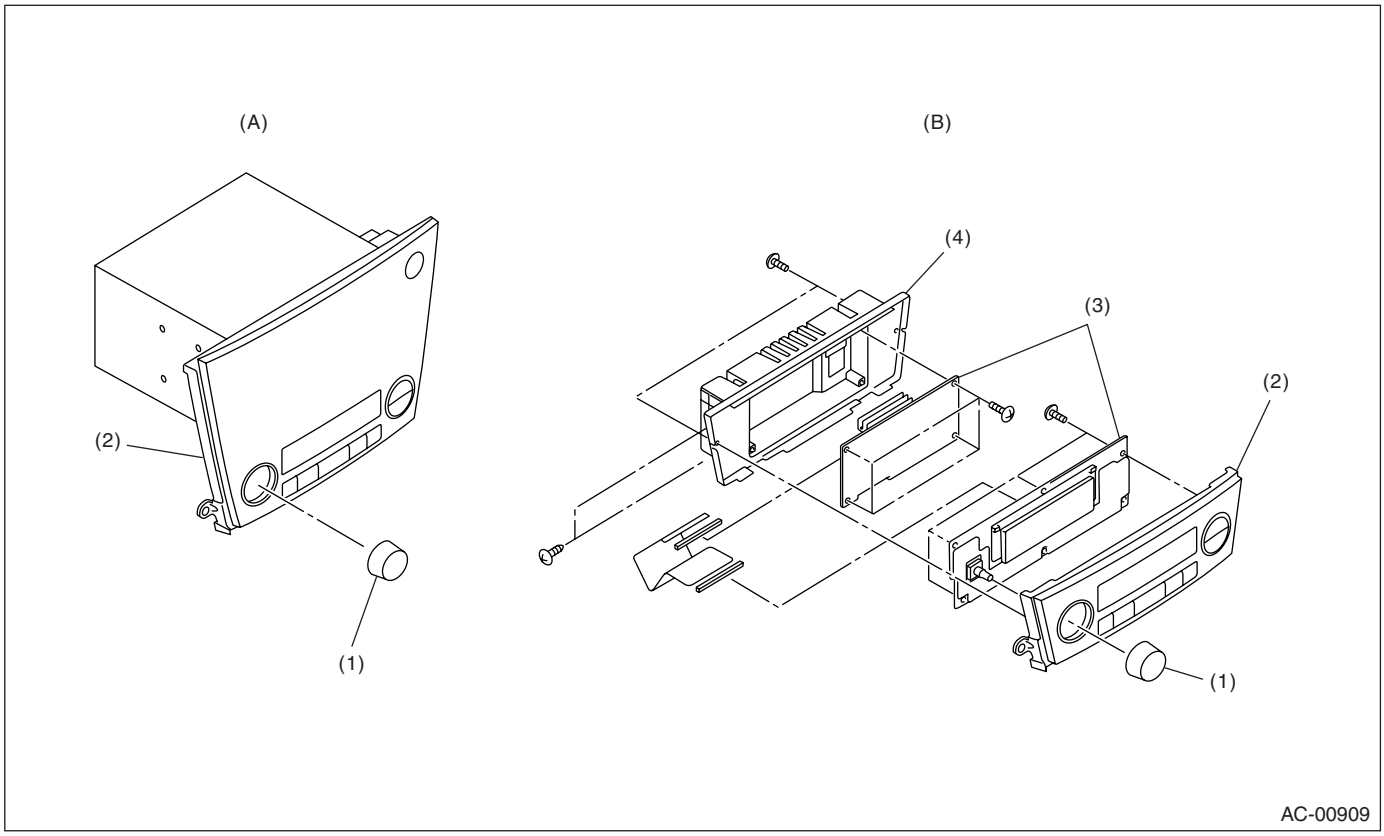


(1) Upper case
(2) Intake door actuator
(3) Filter (Auto A/C model)
(4) Filter cover
(5) Blower motor ASSY
(6) Control unit (Auto A/C model)
(7) Power transistor (Auto A/C model)
Blower resistor (Manual A/C model)

Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.76, 5.5)

3. CONTROL PANEL

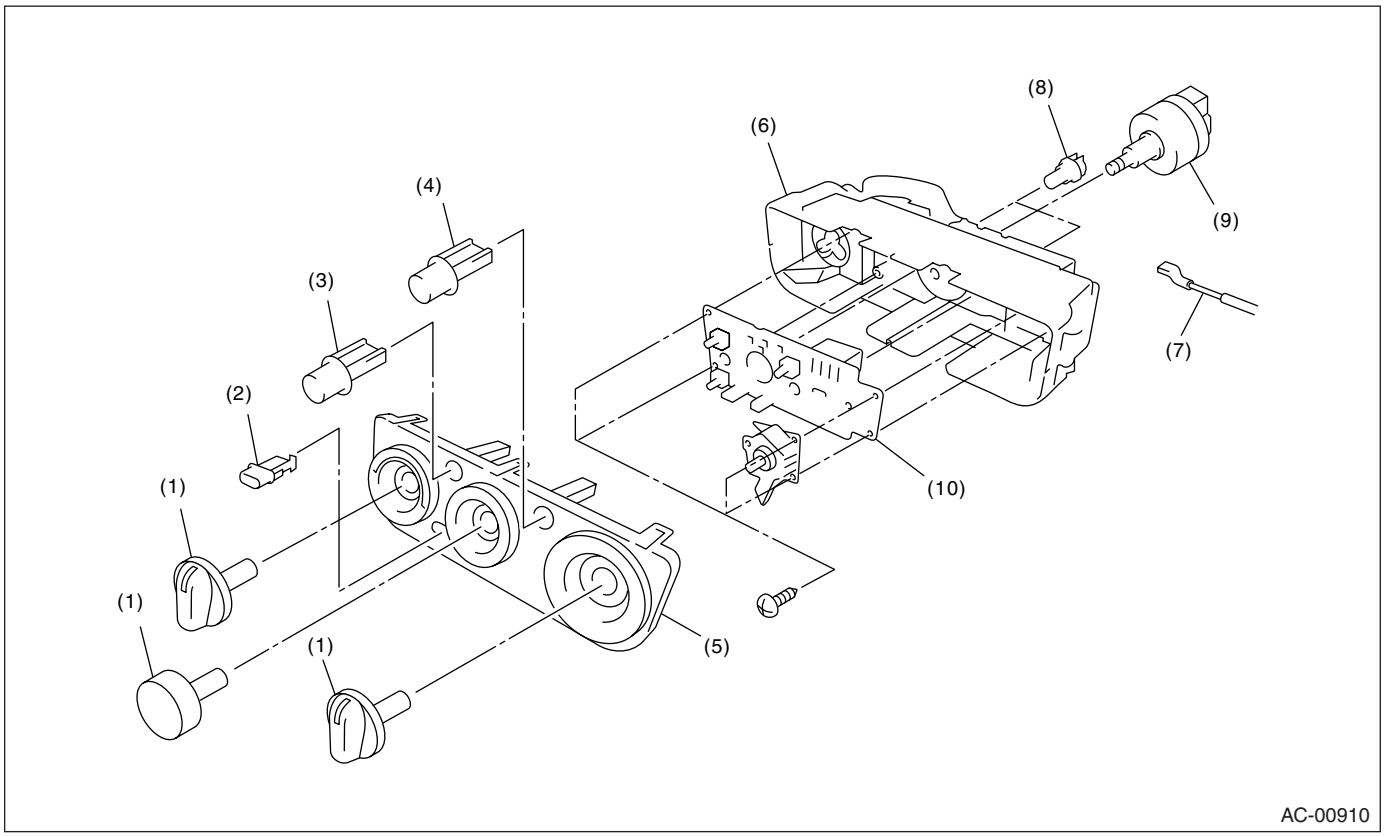
• Auto A/C model



(A) For integrated audio
(B) For Mclntosh audio

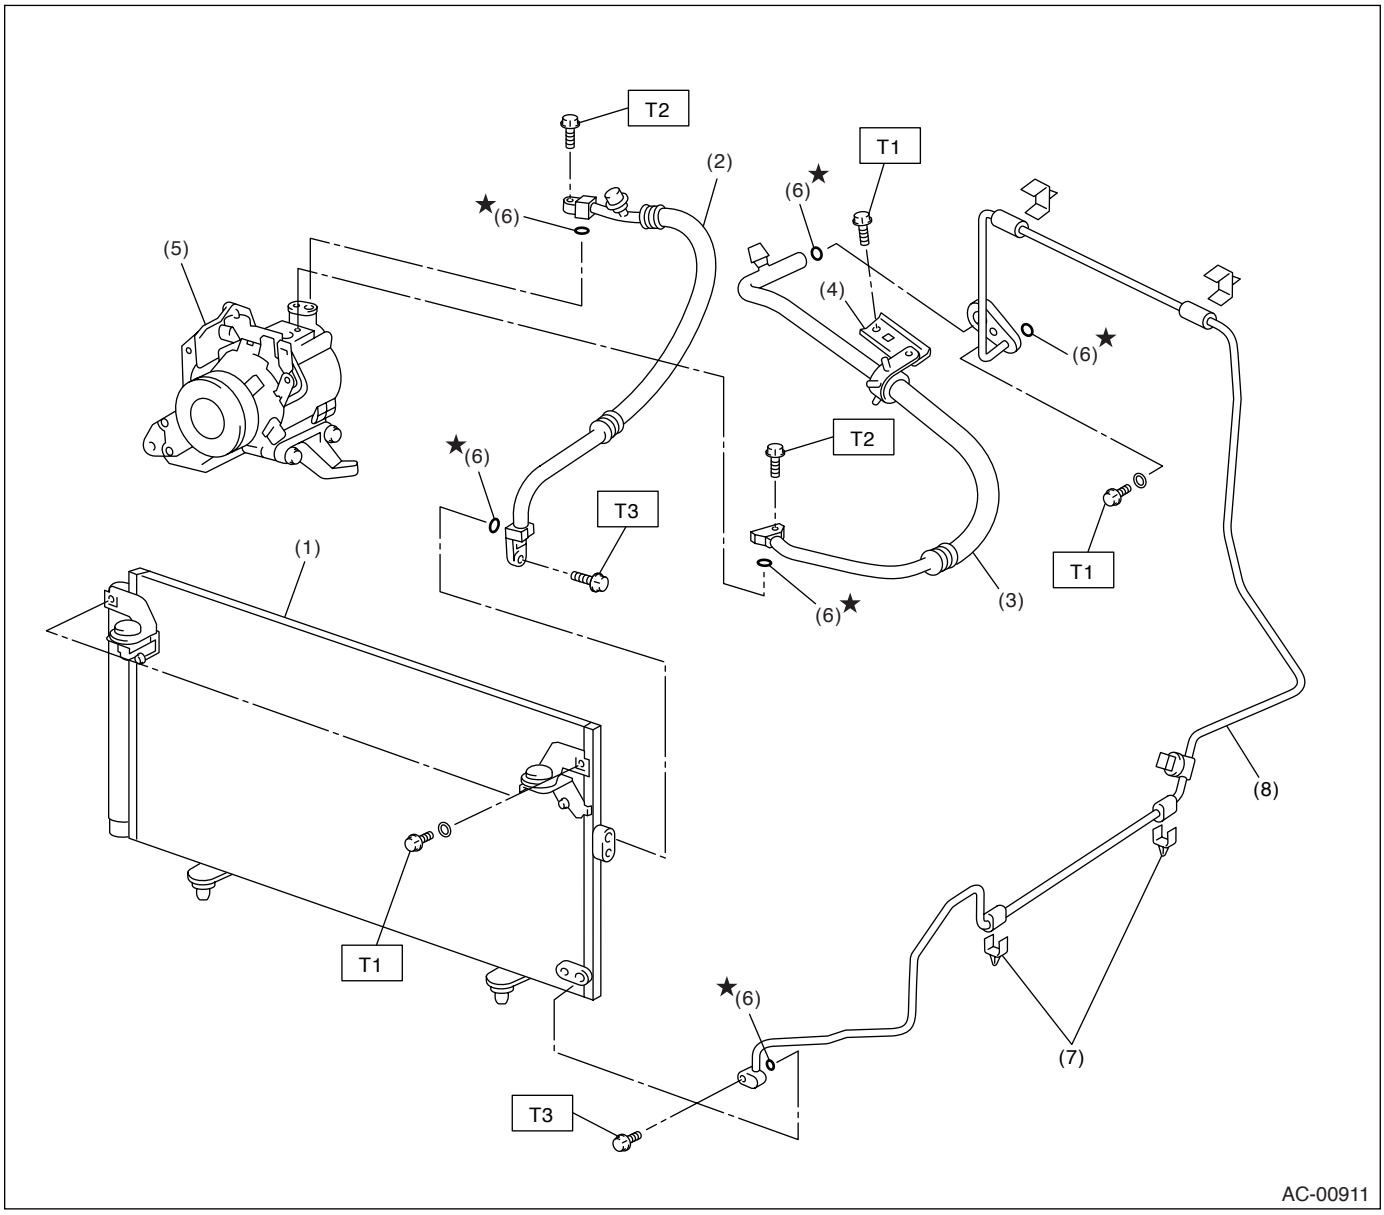
(1) Temperature control dial
(2) Control panel assembly
(3) Board
(4) Heater control base

• Manual A/C model



(1) Dial
(2) A/C switch
(3) FRESH/RECIRC switch
(4) Rear window defogger switch
(5) Heater control panel
(6) Heater control base
(7) Temperature control cable
(8) Valve
(9) Fan switch ASSY
(10) Switch base

4. AIR CONDITIONING UNIT

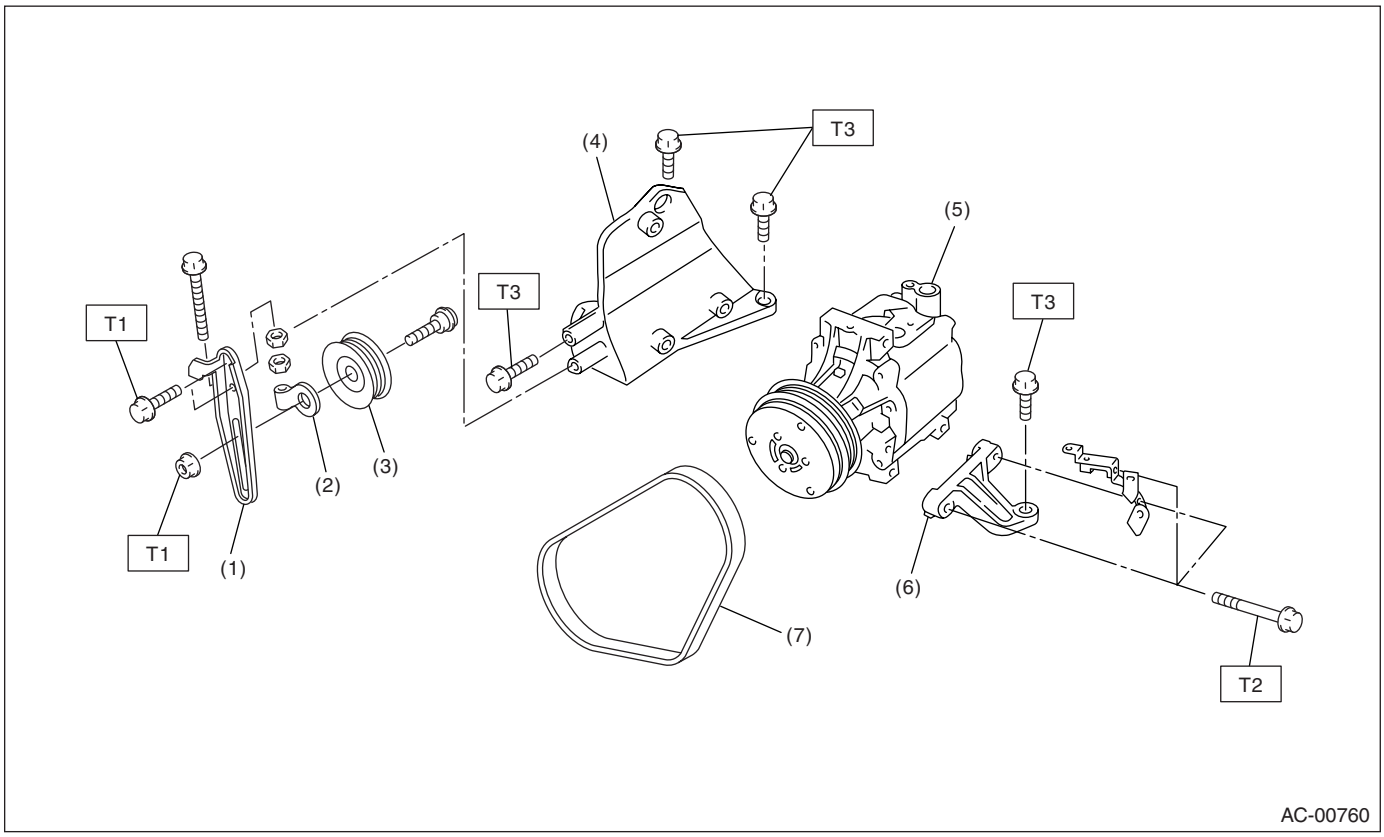


(1)	Condenser	(5)	Compressor
(2)	Hose (High-pressure)	(6)	O-ring
(3)	Hose (Low-pressure)	(7)	Clamp
(4)	Bracket	(8)	Tube

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.76, 5.5)
T2: 10 (1.0, 7.4)
T3: 5 (0.5, 3.7)

5. COMPRESSOR

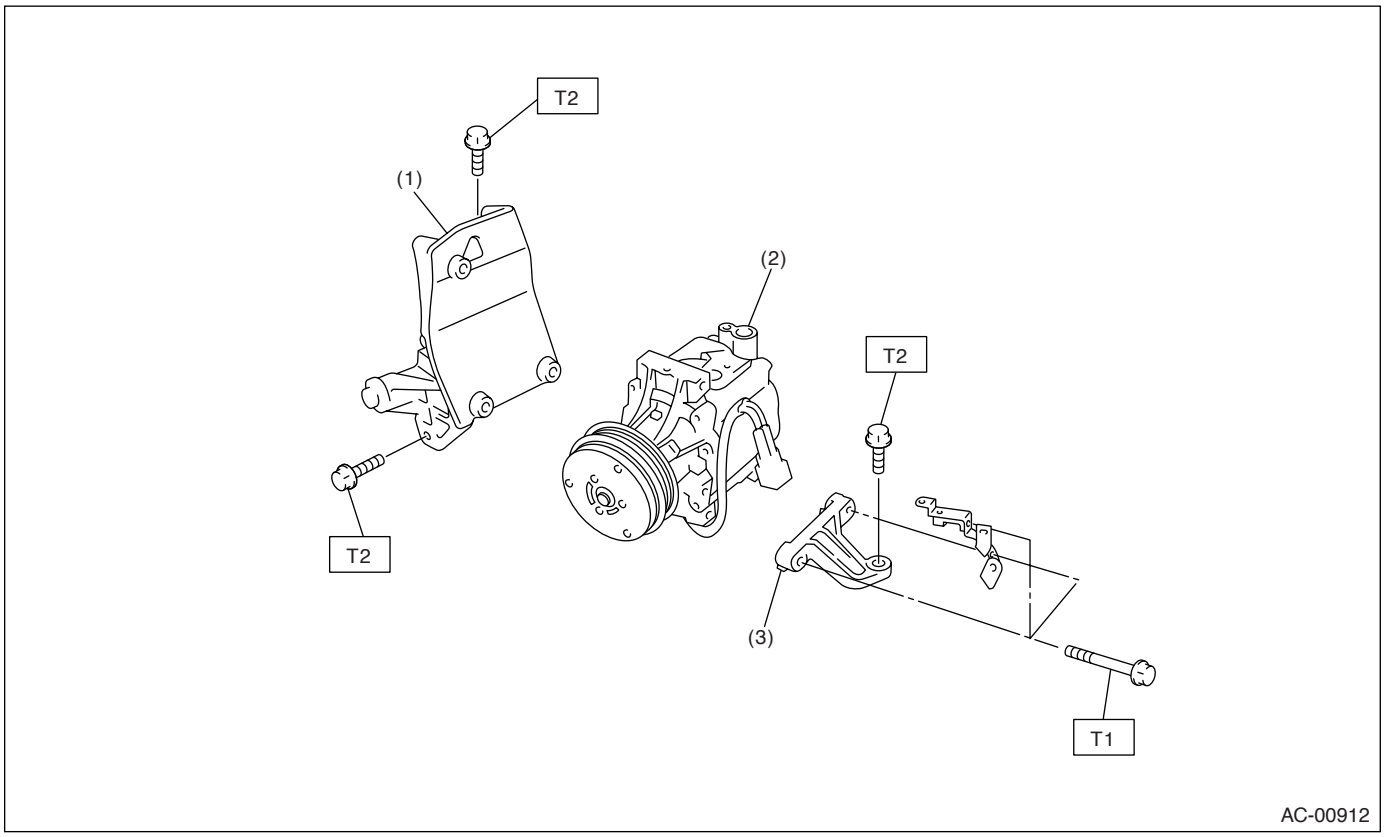
• H4 model



(1)	Idler pulley bracket	(5)	Compressor
(2)	Idler pulley adjuster	(6)	Compressor lower bracket
(3)	Idler pulley	(7)	V-Belt
(4)	Compressor upper bracket		

Tightening torque: N·m (kgf-m, ft-lb)
T1: 23.0 (2.35, 17.0)
T2: 28.9 (2.95, 21.3)
T3: 36 (3.7, 26.6)

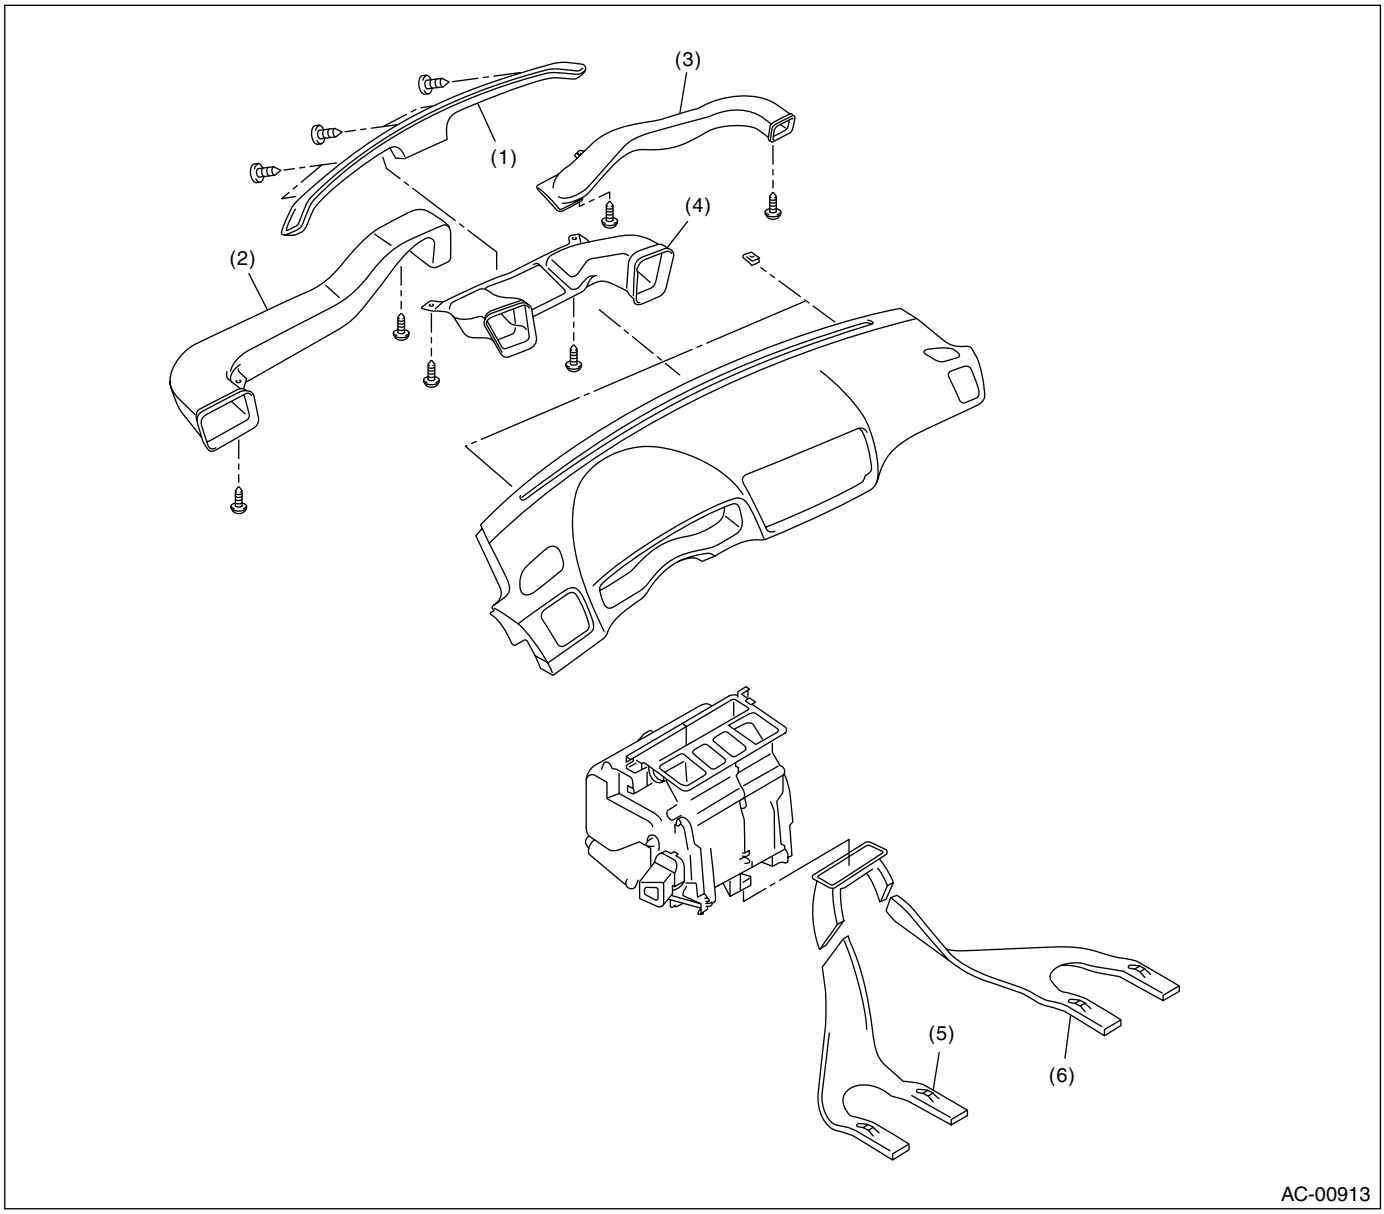
• H6 model



(1) Compressor upper bracket
(2) Compressor
(3) Compressor lower bracket

Tightening torque: N·m (kgf-m, ft-lb)
T1: 28.9 (2.95, 21.3)
T2: 36 (3.7, 26.6)

6. HEATER DUCT

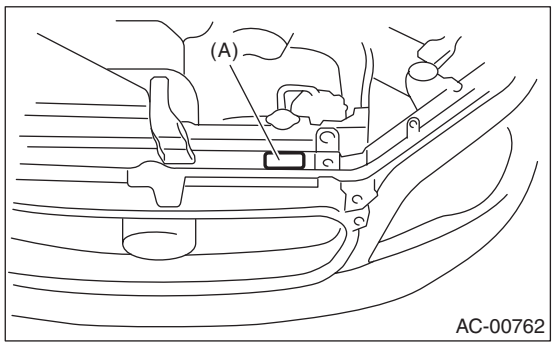


(1) Front defroster nozzle
(2) Side ventilation duct (LH)
(3) Side ventilation duct (RH)
(4) Center ventilation duct
(5) Rear heater duct (LH)
(6) Rear heater duct (RH)

C: CAUTION

1. HFC-134a A/C SYSTEM

• The cooling system components for the HFC-134a system such as the refrigerant and compressor oil are different from the conventional CFC-12 system components and they are incompatible with each other.
• Vehicles with the HFC-134a system can be identified by the label (A) attached to the vehicle.
Before maintenance, check which A/C system is installed to the vehicle.



2. COMPRESSOR OIL

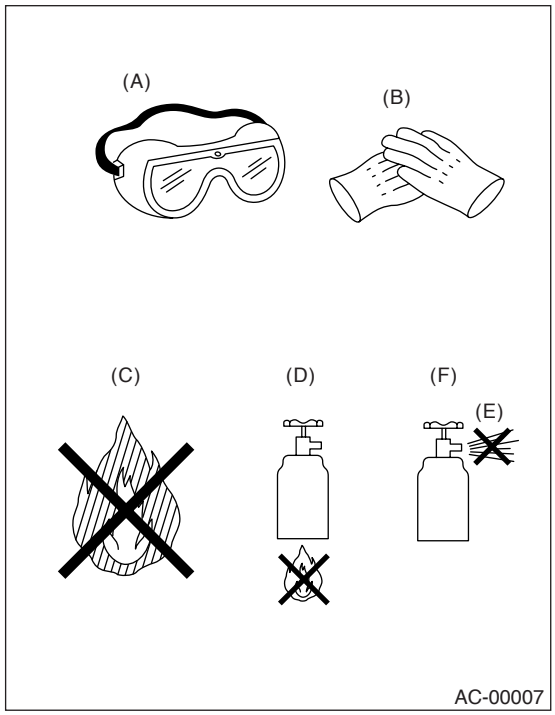
• HFC-134a compressor oil has no compatibility with that of CFC-12 system.
• Use only Denso Oil 8 which is a manufacturer-authorized compressor oil for HFC-134a system.
• Do not mix multiple compressor oils.
If CFC-12 compressor oil is used in the HFC-134a A/C system, the compressor may become stuck due to poor lubrication, or the refrigerant may leak due to swelling of rubber parts.
On the other hand, if HFC-134a compressor oil is used in a CFC-12 A/C system, the durability of the A/C system will be lowered.
• HFC-134a compressor oil is very hygroscopic. When replacing or installing/removing A/C parts, immediately isolate the oil from atmosphere using a plug or tape. In order to avoid moisture, store the oil in a container with its cap tightly closed.

3. REFRIGERANT

• The CFC-12 refrigerant cannot be used in the HFC-134a A/C system. The HFC-134a refrigerant, also, cannot be used in the CFC-12 A/C system.
• If an incorrect or no refrigerant is used, it will result in poor lubrication and the compressor itself may be damaged.

4. HANDLING OF REFRIGERANT

• The refrigerant boils at approx. –30°C (–22°F). When handling it, be sure to wear protective goggles and protective gloves. Direct contact of the refrigerant with skin may cause frostbite.
If the refrigerant gets into your eye, avoid rubbing your eyes with your hands. Wash your eye with plenty of water, and receive medical treatment from an eye doctor.
• Do not heat a service can. If a service can is directly heated, or put into boiling water, the inside pressure will become extremely high. This may cause the can to explode. If a service can must be warmed up, use hot water in 40°C (104°F) max.
• Do not drop or impact a service can. (Observe the precautions and operation procedure described on the refrigerant can.)
• When the engine is running, do not open the high-pressure valve of manifold gauge. The high-pressure gas will back-flow resulting in an explosion of the can.
• Provide good ventilation and do not work in a closed area.
• In order to prevent global warming, avoid releasing HFC-134a into the atmosphere. Using a refrigerant recovery system, discharge and reuse it.

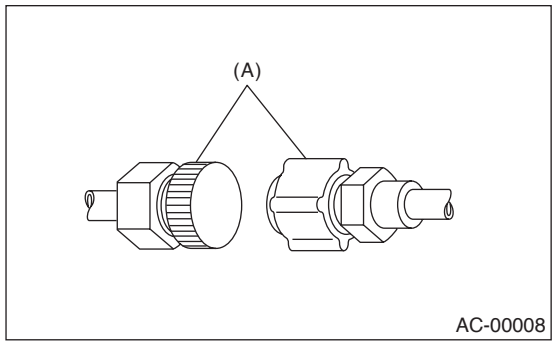


(A) Goggles
(B) Gloves
(C) Avoid open flame
(D) No direct heat on container
(E) Do not discharge
(F) Loosen

5. O-RING CONNECTIONS

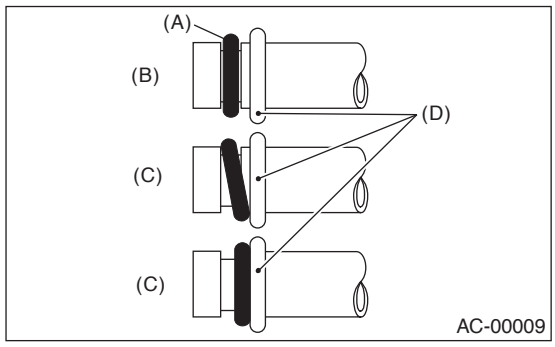
• Always use a new O-ring.
• In order to keep the O-rings free of lint which will cause a refrigerant gas leak, perform operations without gloves and cloth.

• Apply compressor oil to O-rings to avoid sticking, before installation.
• Use a torque wrench to tighten the O-ring fittings. Over-tightening will result in damage of O-ring and tube end distortion.
• If the operation is interrupted before completing a pipe connection; recap the tubes, components and fittings with a plug or tape to prevent foreign matter from entering.



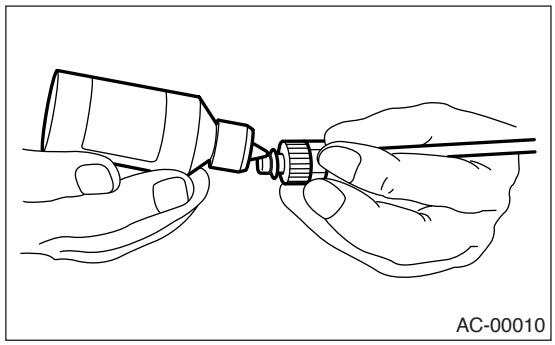
(A) Seal

• Visually check the surfaces and mating surfaces of O-rings, threads and connecting points. If a failure is found, replace the applicable parts.
• Install the O-rings at right angle to tube beads.



(A) O-ring
(B) OK
(C) NG
(D) Bead

• Use compressor oil specified in the service manual to lubricate the O-rings.
Apply oil to the top and sides of O-rings before installation.
Apply compressor oil to the bead of tube.



• After tightening, use a clean cloth to remove excess compressor oil from the connections and any oil which may have run on the vehicle body or other parts.
• If any leakage is suspected after tightening, do not further tighten the connections, but disconnect the connections, remove the O-rings, and check the O-rings, threads, and connections.

D: PREPARATION TOOL

CAUTION:
When working on vehicles with HFC-134a system, only use HFC-134a specified tools and parts. Do not mix with those of CFC-12. If HFC-134a and CFC-12 refrigerant or compressor oil is mixed, it will result in poor lubrication and the compressor itself may be destroyed.
In order to prevent the mixture of HFC-134a and CFC-12 parts and liquid, the tool and screw type and the type of service valves used are different. The gas leak detectors for the HFC-134a and CFC-12 systems must also not be interchanged.

	HFC-134a	CFC-12
Tool & screw type	Millimeter size	Inch size
Valve type	Quick joint type	Screw-in type

ILLUSTRATION	Tools and Equipment
 AC-00213	Wrench Various **WRENCHES** will be required to service any A/C system. 7 to 40 N·m (0.7 to 4.1 kgf-m, 5 to 30 ft-lb) torque wrench and various crow-foot wrenches will be needed. Open end or flare nut wrenches will be needed to hold the tube and hose fittings.
 AC-00012	Applicator bottle A small **APPLICATOR BOTTLE** is recommended to apply compressor oil to the various parts. It can be available at a hardware or drug store.
 AC-00013	Manifold gauge set A **MANIFOLD GAUGE SET** (with hoses) can be available at either a refrigerant supplier or an automotive equipment supplier.

ILLUSTRATION	Tools and Equipment
 AC-00014	Refrigerant recovery system A **REFRIGERANT RECOVERY SYSTEM** is used for the recovery and reuse of A/C system refrigerant after contaminants and moisture have been removed from the refrigerant.
 AC-00015	Syringe A graduated plastic **SYRINGE** will be needed to add oil back into the system. A syringe can be available at a pharmacy or drug store.
 AC-00016	Vacuum pump A **VACUUM PUMP** is necessary (for a good working condition), and may be available at either a refrigerant supplier or an automotive equipment supplier.
 AC-00017	Can tap A **CAN TAP** for the 397 g (14 oz.) can is available at an automotive equipment supplier.

ILLUSTRATION	Tools and Equipment
 AC-00018	Temperature gauge A Pocket **THERMOMETER** is available at either a industrial hardware store or a refrigerant suppliers.
 AC-00019	Electronic leak detector An **ELECTRONIC LEAK DETECTOR** can be available at either a specialty tool supplier or an A/C equipment supplier.
 AC-00020	Weight scale A **WEIGHT SCALE** such as an electronic charging scale or a bathroom scale with digital display will be needed, if a 13.6 kg (30 lb) refrigerant container is used.

2. Refrigerant Pressure with Manifold Gauge Set

A: PROCEDURE

1) Place the vehicle in the shade and windless condition.
2) Connect the manifold gauge set.
3) Open the front windows and close all doors.
4) Open the front hood.
5) Increase the engine to 1,500 rpm.
6) Turn on the A/C switch.
7) Turn the temperature control switch to MAX COOL.
8) Put in RECIRC position.
9) Turn the blower control switch to HI.
10) Read the gauge.

Standard:
Low pressure: 127 — 196 kPa (1.3 — 2.0 kg/cm^2, 18 — 28 psi)
High pressure: 1,471 — 1,667 kPa (15 — 17 kg/cm^2, 213 — 242 psi)
Ambient temperature: 30 — 35°C (86 — 95°F)

B: INSPECTION

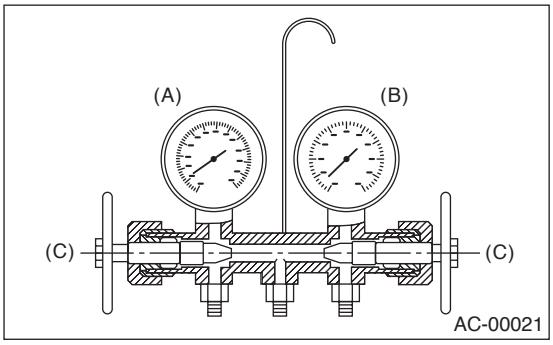
Symptom	Probable cause	Repair order
High-pressure side is unusually high.	• Defective condenser fan motor • Clogged condenser fin • Too much refrigerant • Air inside the system • Defective receiver dryer	• Replace the fan motor. • Clean the condenser fin. • Discharge refrigerant. • Replace the receiver dryer. • After evacuating again, charge an appropriate amount of refrigerant.
High-pressure side is unusually low.	• Defective compressor • Not enough refrigerant • Clogged expansion valve • Expansion valve frozen temporarily by moisture.	• Replace the compressor. • Check for leaks. • Replace the expansion valve. • Fully evacuate the expansion valve.
Low-pressure side is unusually high.	• Defective compressor • Defective expansion valve • Too much refrigerant	• Replace the compressor. • Replace the expansion valve. • Discharge refrigerant.
Low-pressure side is unusually low.	• Not enough refrigerant • Clogged expansion valve • Expansion valve frozen temporarily by moisture. • Saturated receiver dryer	• Check for leaks. • Replace the expansion valve. • Replace the receiver dryer.

3. Refrigerant Recovery Procedure

A: PROCEDURE

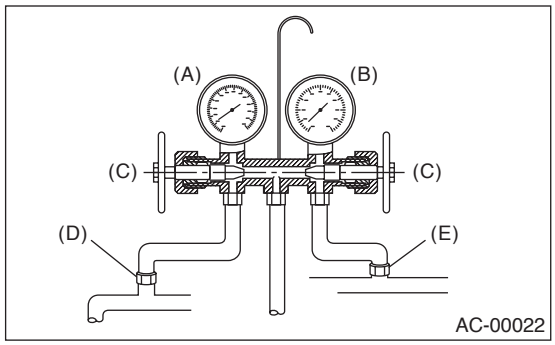
CAUTION:
• During operation, be sure to wear protective goggles and protective gloves.
• Connect the refrigerant recovery system with the manifold gauge set to discharge the refrigerant from the A/C system and reuse it.
• When reusing the discharged refrigerant, keep service cans on hand. Because the discharge rate with the recovery system is approx. 90%, service cans are necessary to charge the refrigerant.
• Follow the detailed operation procedure described in the operation manual attached to the refrigerant recovery system.

1) Perform the compressor oil return operation. <Ref. to AC-25, PROCEDURE, Compressor Oil.>
2) Stop the engine.
3) Make sure the valves on low-/high-pressure sides of manifold gauge set are fully closed.



(A) Low-pressure gauge (Compound pressure gauge)
(B) High-pressure gauge
(C) Close

4) Install the low-/high-pressure hoses to the service ports on the low-/high-pressure sides of the vehicle respectively.



(A) Low-pressure gauge (Compound pressure gauge)
(B) High-pressure gauge
(C) Close
(D) Low-pressure side service port
(E) High-pressure side service port

5) Connect the center hose to the refrigerant recovery system.
6) Follow the operation manual to activate the refrigerant recovery system.

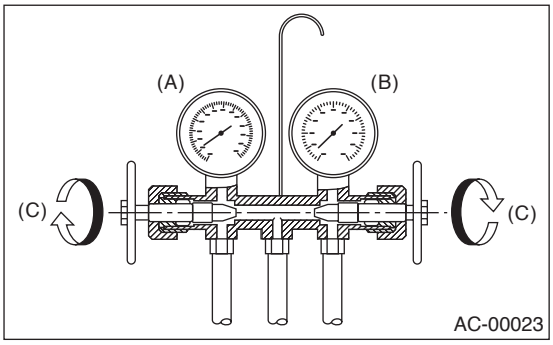
4. Refrigerant Charging Procedure

A: PROCEDURE

CAUTION:
• During operation, be sure to wear protective goggles and protective gloves.
• Before charging the refrigerant, evacuate the system to remove small amounts of moisture remaining in the system.
The moisture in the system can be completely evacuated only under the minimum vacuum level. The minimum vacuum level affects the temperature in the system.
• The list below shows the vacuum values necessary to boil water in various temperature. In addition, the vacuum levels indicated on the gauge are approx. 3.3 kPa (25 mmHg, 0.98 inHg) lower than those measured at 304.8 m (1,000 ft) above sea level.

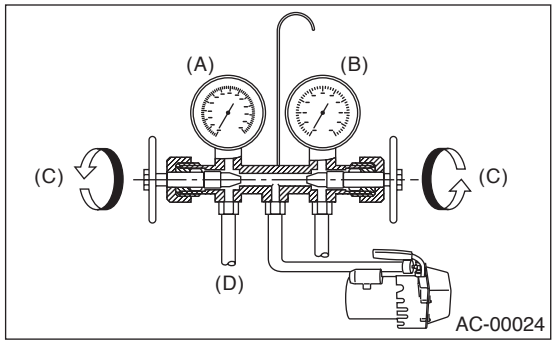
Vacuum level required to boil water (at sea level)	
Temperature	Vacuum
1.7°C (35°F)	100.9 kPa (757 mmHg, 29.8 inHg)
7.2°C (45°F)	100.5 kPa (754 mmHg, 29.7 inHg)
12.8°C (55°F)	99.8 kPa (749 mmHg, 29.5 inHg)
18.3°C (65°F)	99.2 kPa (744 mmHg, 29.3 inHg)
23.9°C (75°F)	98.5 kPa (739 mmHg, 29.1 inHg)
29.4°C (85°F)	97.2 kPa (729 mmHg, 28.7 inHg)
35°C (95°F)	95.8 kPa (719 mmHg, 28.3 inHg)

1) Close the valves on low-/high-pressure sides of the manifold gauge.



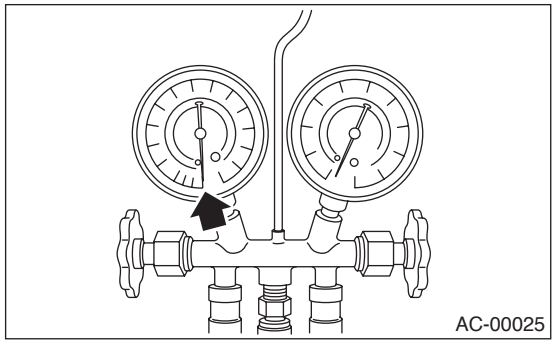
(A) Low-pressure gauge (Compound pressure gauge)
(B) High-pressure gauge
(C) Close

2) Install the low-/high-pressure hoses to the corresponding service ports on the vehicle respectively.
3) Connect the center hose of the manifold gauge set with the vacuum pump.
4) Carefully open the valves on the low-/high-pressure sides to activate the vacuum pump.

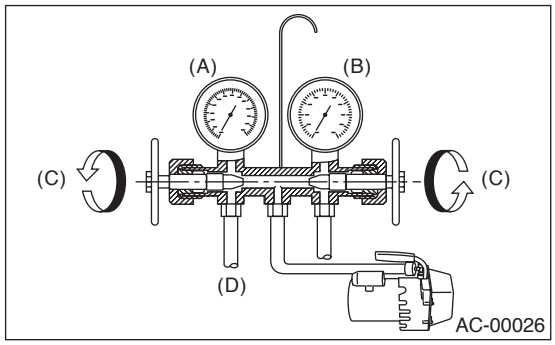


(A) Low-pressure gauge (Compound pressure gauge)
(B) High-pressure gauge
(C) Slowly open
(D) Vacuum pump turn on

5) After the low-pressure gauge reaches 100.0 kPa (750 mmHg, 29.5 inHg) or higher, evacuate the system for approx. 15 minutes. (Continue evacuation).

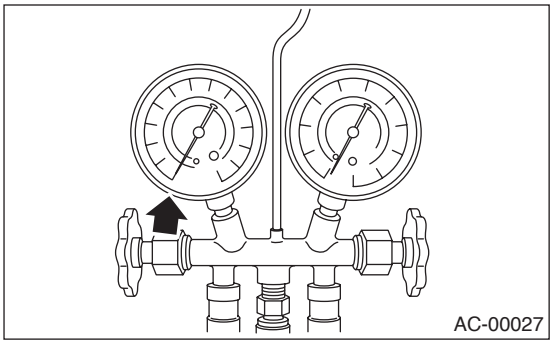


6) After 15 minutes of evacuation, if the reading shows 100.0 kPa (750 mmHg, 29.5 inHg) or higher, close the valves on the both sides to stop the vacuum pump.

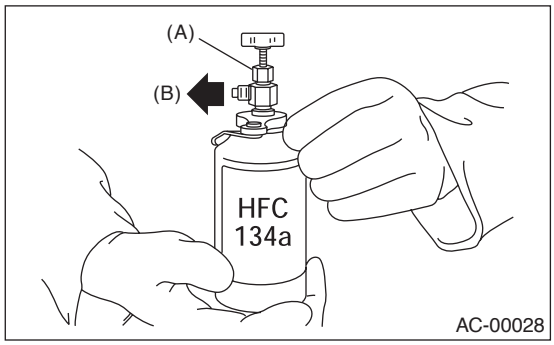


(A) Low-pressure gauge (Compound pressure gauge)
(B) High-pressure gauge
(C) Close
(D) Vacuum pump turn off

7) Note the low-pressure gauge reading.

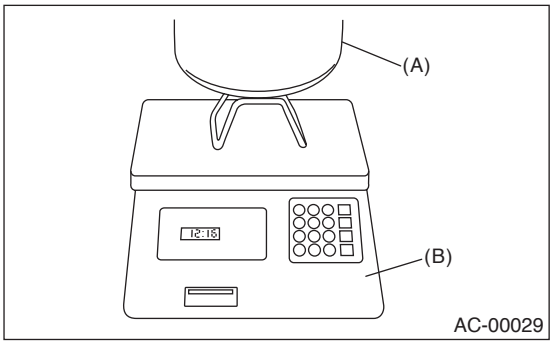


8) Leave it at least 5 minutes, and then check the low-pressure gauge reading for any changes.
When a gauge indicator shows near to zero point, it is a sign of leakage. Check pipe connector points, repair them, make sure there is no leakage by air bleeding.
9) Following the can tap operation manual instructions, install it to the refrigerant can.



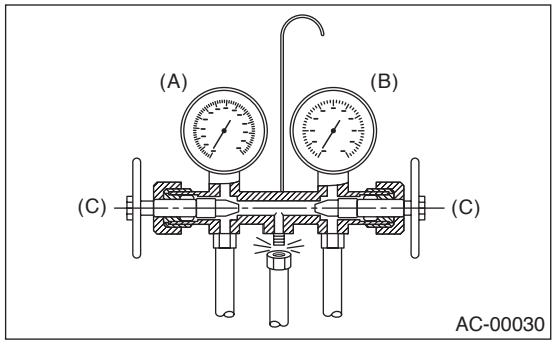
(A) Tap valve
(B) Center manifold hose

10) Disconnect the center manifold hose from the vacuum pump, and connect the hose to the tap valve.
11) When a 13.6 kg (30 lb) refrigerant container is used, measure the refrigerant amount in use using a weight scale.



(A) Refrigerant container (HFC-134a)
(B) Weight scale

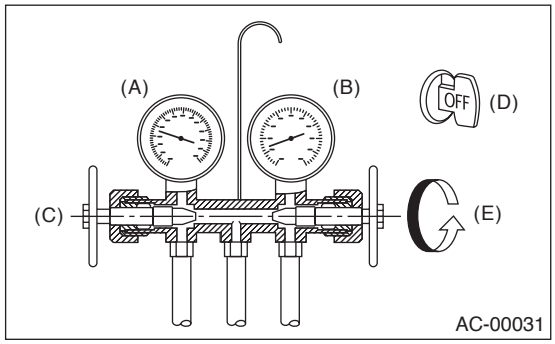
12) Confirm that all the 3 hoses are tightly connected to the manifold gauge set.



(A) Low-pressure gauge (Compound pressure gauge)
(B) High-pressure gauge
(C) Close

13) Open the valve on the HFC-134a source.
14) Loosen the center hose connection on the manifold gauge set (if applicable, press a purge valve on the manifold gauge set) only for a couple of seconds to allow the air in the center hose to escape by the refrigerant.
15) Carefully open the high-pressure valve with the engine stopping.

CAUTION:
Do not open the low-pressure valve.



(A) Low-pressure gauge (Compound pressure gauge)
(B) High-pressure gauge
(C) Close
(D) Ignition switch OFF
(E) Slowly open

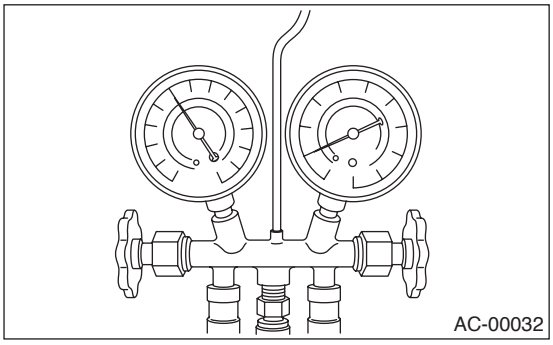
CAUTION:
Never run the engine during charging from the high-pressure side.

16) Close the high-pressure valve when the low-pressure gauge reaches 98 kPa (1 kg/cm^2, 14 psi).
Using a leak tester, check the system for leaks.
If any leakage is found after the refrigerant recovery is completed, repair the applicable area.

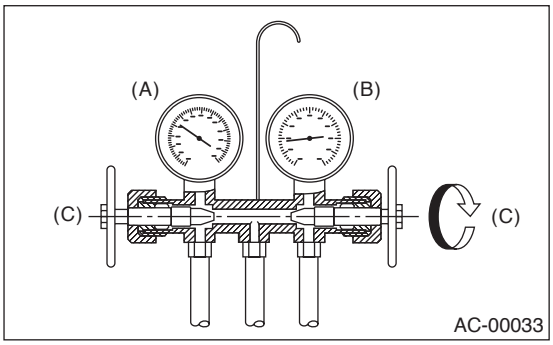
17) After confirming that there are no leaks with the leak test, charge the required amount of refrigerant.

CAUTION:
Never run the engine during charging from the high-pressure side.

18) Close the high-pressure valve when;
• the readings of low- / high-pressure gauges become almost equal, after the charging speed is reduced,
• the HFC-134a source becomes empty, or the system is filled with the gas.



19) If the HFC-134a source is empty, close the high-pressure valve, close the valve on the can tap, and replace the HFC-134a source with a new one to restart the operation.

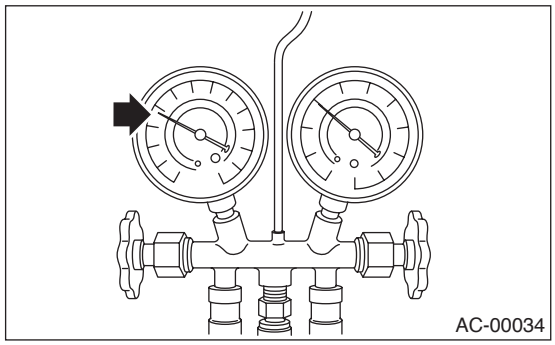


(A) Low-pressure gauge (Compound pressure gauge)
(B) High-pressure gauge
(C) Close

20) Confirm that both the low-/high-pressure valves can be closed. Start the engine with the A/C switch OFF.
21) Quickly repeat ON-OFF cycles a few times to prevent initial compressor damage.
22) Set up the vehicle to the following status:
• A/C switch ON
• Engine running at 1,500 rpm
• Blower speed setting to “HI”
• Temperature setting to “MAX COOL”
• Air inlet setting to “RECIRC”
• Window open

23) While reading the low-pressure gauge, carefully open the low-pressure valve with the refrigerant source connected and the service hose purged.

CAUTION:
Never open the high-pressure valve with the engine running. The high-pressure gas will backflow resulting in an explosion of the can.



24) Adjust the refrigerant flow to maintain the pressure on the low-pressure side at 276 kPa (2.81 kg/cm^2, 40 psi) max.
25) After the system is fully charged, close the low-pressure valve.
26) Close the valve on the refrigerant source.

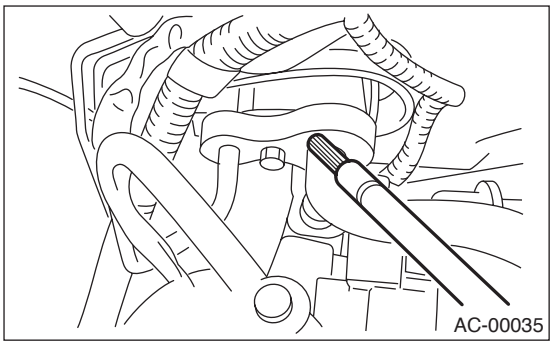
Refrigerant amount		
Refrigerant	Minimum	Maximum
HFC-134a	370 g (0.82 lb)	430 g (0.95 lb)

27) Disconnect the hose from the service port, and install the service port cap.

5. Refrigerant Leak Check

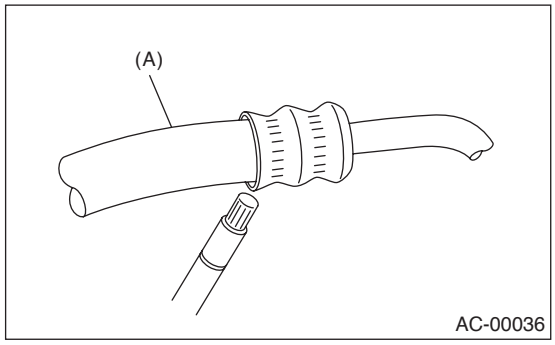
A: INSPECTION

1) Operate the A/C system for approx. 10 minutes, and confirm that the high-side pressure shows at least 690 kPa (7.03 kg/cm^2, 100 psi). Then stop the engine to start the leak test.
2) Starting from the connection between high-pressure pipe and evaporator, check the system for leaks along the high-pressure side through the compressor. The following items must be checked thoroughly.
3) Check the joint and seam between pressure switch (dual switch) and high-pressure pipe.
4) Check the connections between condenser and pipes, and welded joints on the condenser.
The leak tester may detect the oil on the condenser fins as a leak.
5) Check the joint between compressor and hoses.
6) Check the machined area of compressor and other joints on the compressor.
7) Check the compressor shaft seal at the area near the center of compressor clutch pulley.
Some shaft seals show a slight amount of leakage about 3 g (0.1 oz.) per year. This is not a problem.
8) Starting from the connection between low-pressure pipe and evaporator, check the system for leakage along the low-pressure side through the compressor. The following items must be checked thoroughly.
- Connection between 2 parts
- Connection between pipe and plate



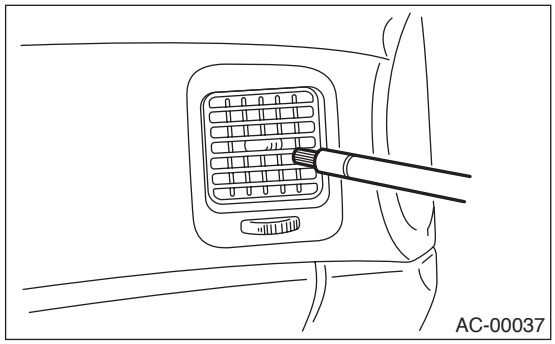
9) Visually check the rubber area of the flexible hose for cracks.
Check the entire length of the flexible hose, especially the connection with the metal hose end.

CAUTION:
Carefully check the external surface of hoses and tubes at approx. 25 mm (0.98 in) per second.

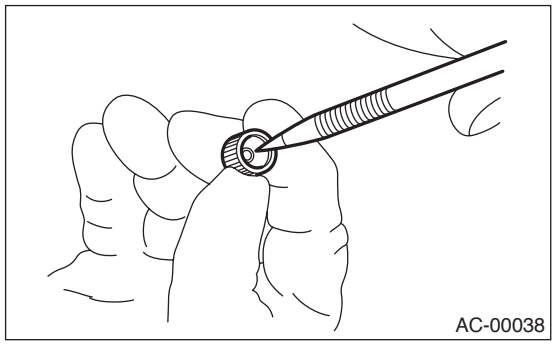


(A) Flexible hose

10) Disconnect the drain hose from heater case, and check the hose end for at least 10 seconds.
After the test is finished, reconnect the drain hose.
11) Turn the ignition key to ON position, and run the blower at high speed for approx. 1 minute. Stop the blower to check the ventilation grille on the instrument panel. While moving the tester closer to the grille, run the blower for 1 or 2 seconds, then stop it. Check the grille at that point for at least 10 seconds.



12) Check the valve in the service port.
13) Visually check the rubber seal in the service port cap.



6. Compressor Oil

A: PROCEDURE

NOTE:
Before making repairs, perform the oil return operation to return the compressor oil in circulation with the refrigerant to the compressor.

1) Increase the engine to 1,500 rpm.
2) Turn ON the A/C switch.
3) Turn the temperature control switch to MAX COOL.
4) Put in RECIRC position.
5) Turn the blower control switch to HI.
6) Leave in this condition for 10 minutes.

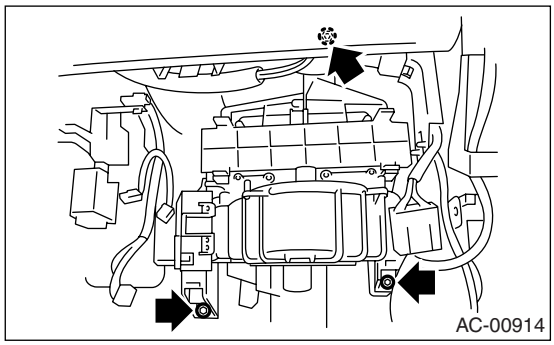
B: REPLACEMENT

NOTE:
• If a component has been replaced, add an appropriate amount of compressor oil (same as the amount of remaining oil in removed component).
• When replacing the compressor, the new compressor will already have the specified amount of oil in it. Install the new compressor after removing the same amount of oil that is remaining in the compressor removed.

7. Blower Motor Unit Assembly

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the glove box. <Ref. to EI-51, REMOVAL, Glove Box.>
3) Disconnect the connectors of A/C control module, intake door actuator, blower motor, power transistor and blower resistor.
4) Loosen the bolt and nut to remove blower motor unit assembly.



B: INSTALLATION

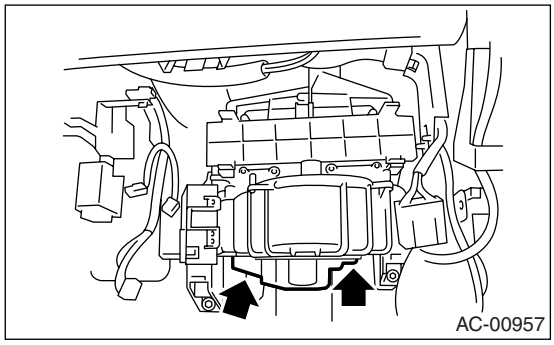
Install in the reverse order of removal.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to AC-5, HEATER COOLING UNIT, COMPONENT, General Description.> <Ref. to AC-7, BLOWER MOTOR UNIT, COMPONENT, General Description.>

8. Blower Motor

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the glove box lower cover. <Ref. to EI-51, REMOVAL, Glove Box.>
3) Disconnect the connector of blower motor.
4) Loosen the screw to remove blower motor.

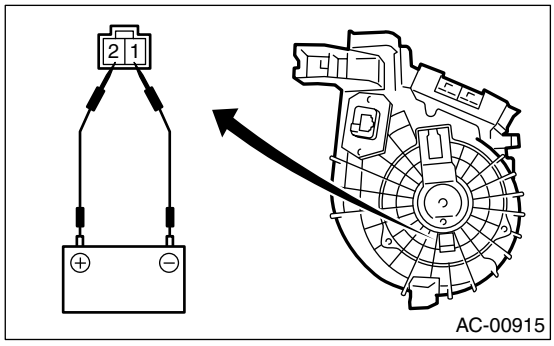


B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

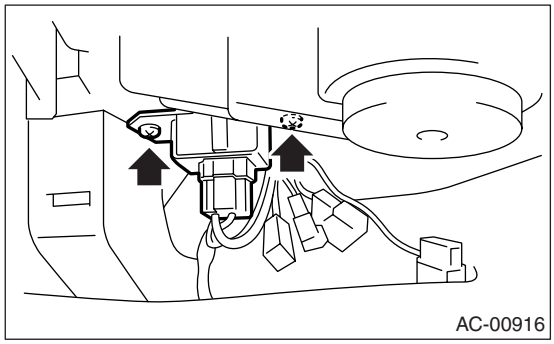
Connect the battery positive (+) terminal to terminal No. 2 of blower motor, and negative (−) terminal to terminal No. 1. Check the blower motor for smooth rotation.



9. Power Transistor (Auto A/C Model)

A: REMOVAL

1) Remove the glove box lower cover on passenger side. <Ref. to EI-51, REMOVAL, Glove Box.>
2) Disconnect the power transistor connector.
3) Remove two screws, and then remove the power transistor.



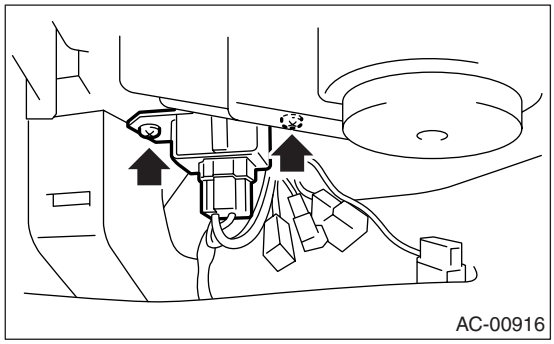
B: INSTALLATION

Install in the reverse order of removal.

10. Blower Resistor (Manual A/C Model)

A: REMOVAL

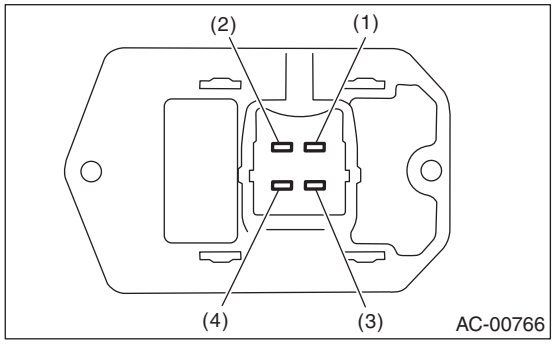
1) Remove the glove box lower cover on passenger side. <Ref. to EI-51, REMOVAL, Glove Box.>
2) Disconnect the blower resistor connector.
3) Remove two screws, and then remove the blower resistor.



B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION



Measure the blower resistor resistance.

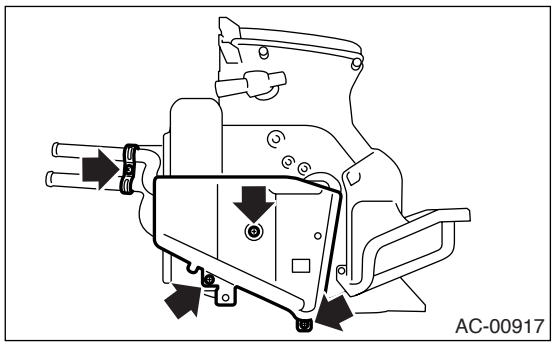
Terminal No.	Standard
4 and 2	Approx. 0.44 Ω
4 and 3	Approx. 1.12 Ω
4 and 1	Approx. 2.92 Ω

If NG, replace the blower resistor.

11.Heater Core

A: REMOVAL

1) Remove the heater and cooling unit. <Ref. to AC-36, REMOVAL, Heater and Cooling Unit.>
2) Remove the screws and remove the heater core cover and pipe clamp.



3) Remove the heater core.

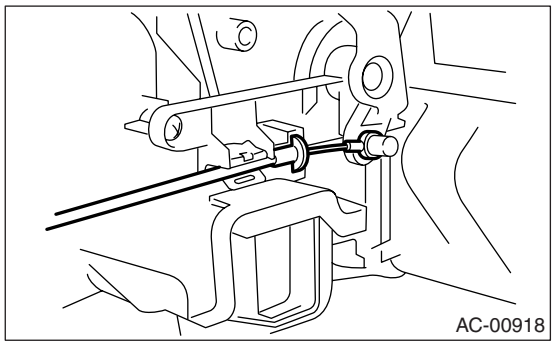
B: INSTALLATION

Install in the reverse order of removal.

12.Control Unit (Manual A/C Model)

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the glove box. <Ref. to EI-51, REMOVAL, Glove Box.>
3) Remove the control wires.



4) Remove the integrated panel. <Ref. to ET-5, REMOVAL, Audio.>
5) Loosen the screw to remove the control unit from bracket.

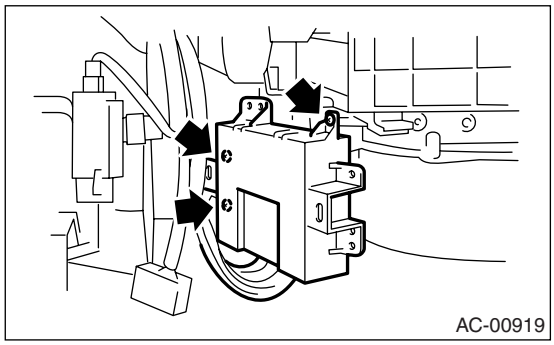
B: INSTALLATION

Install in the reverse order of removal.

13.Control Unit (Auto A/C Model)

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the glove box. <Ref. to EI-51, REMOVAL, Glove Box.>
3) Remove the screw, disconnect the connector and remove the control unit.



B: INSTALLATION

Install in the reverse order of removal.

14.Compressor

A: INSPECTION

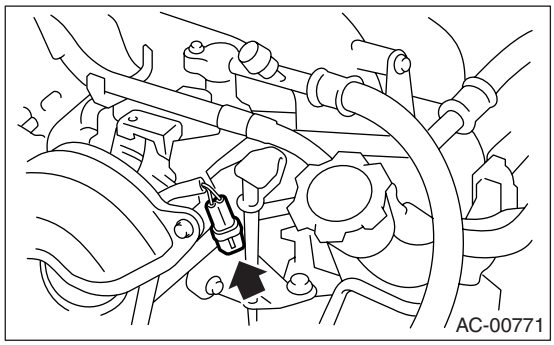
1. MAGNETIC CLUTCH CLEARANCE

Check the clearance of entire circumference around the drive plate and pulley.

Standard:
0.45±0.15 mm (0.0177±0.0059 in)

2. MAGNETIC CLUTCH OPERATION

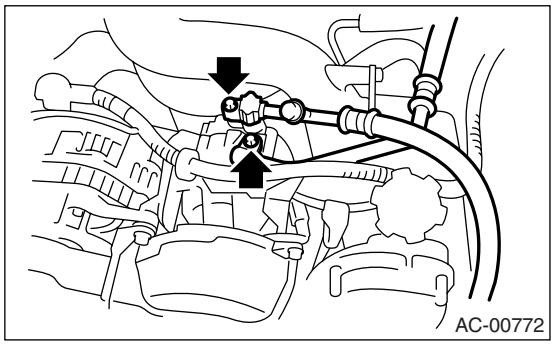
1) Disconnect the compressor connector.
2) Connect the battery positive (+) terminal to terminal No. 1 of compressor connector, and negative (−) terminal to terminal No. 2.



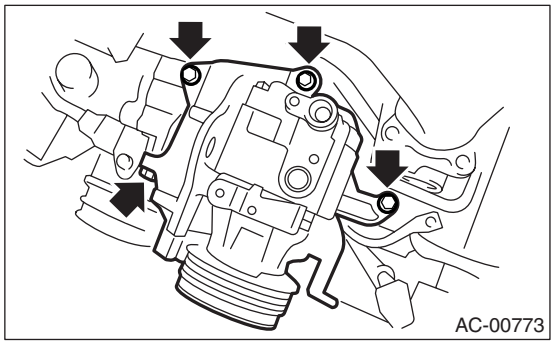
3) Check the magnet clutch engagement.
If NG, replace the compressor.

B: REMOVAL

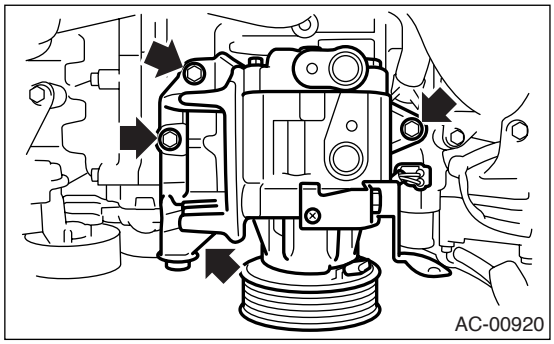
1) Perform the compressor oil return operation. <Ref. to AC-25, PROCEDURE, Compressor Oil.>
2) Turn the A/C switch to OFF and stop the engine.
3) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-20, PROCEDURE, Refrigerant Recovery Procedure.>
4) Disconnect the ground cable from battery.
5) Remove the V-belts. <Ref. to ME(H4SO 2.0)-38, REMOVAL, V-belt.> <Ref. to ME(H4DOTC)-39, REMOVAL, V-belt.> <Ref. to ME(H6DO)-33, REMOVAL, V-belt.>
6) Remove the generator. <Ref. to SC(H4SO 2.0)-14, REMOVAL, Generator.> <Ref. to SC(H6DO)-14, REMOVAL, Generator.>
7) Remove the bolt and remove the low-pressure hose and high-pressure hose.



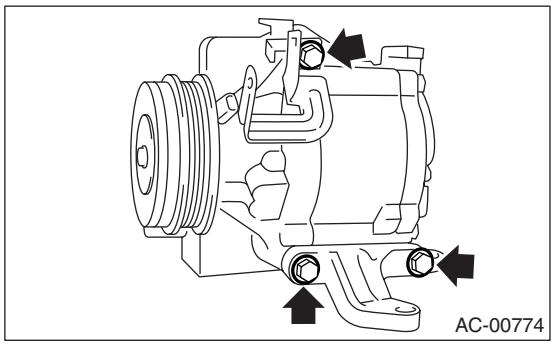
8) Disconnect the compressor harness from body harness.
9) Remove the bolts and remove compressor bracket.
• H4 model



• H6 model



10) Remove the bolts, and then remove the bracket from compressor.



C: INSTALLATION

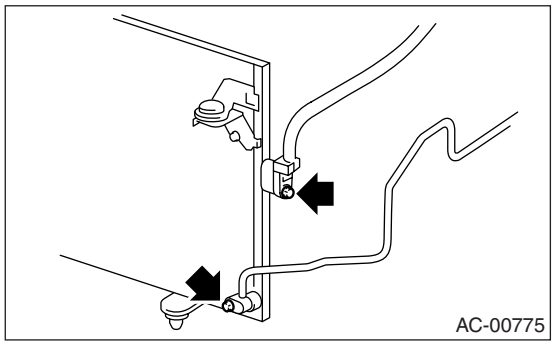
1) Install in the reverse order of removal.
2) Replace the O-rings on low-/high-pressure hoses with new ones, then apply compressor oil.
3) When replacing the compressor, adjust amount of compressor oil. <Ref. to AC-25, PROCEDURE, Compressor Oil.>
4) Charge refrigerant. <Ref. to AC-21, PROCEDURE, Refrigerant Charging Procedure.>

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to AC-10, AIR CONDITIONING UNIT, COMPONENT, General Description.> <Ref. to AC-11, COMPRESSOR, COMPONENT, General Description.>

15.Condenser

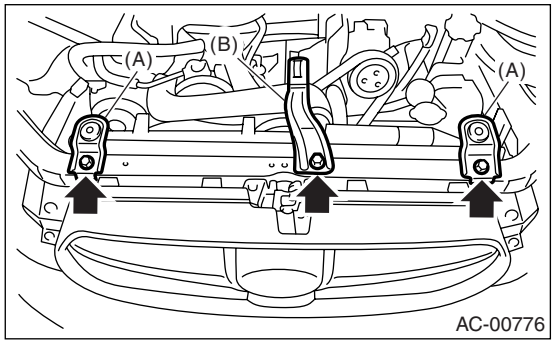
A: REMOVAL

1) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-20, PROCEDURE, Refrigerant Recovery Procedure.>
2) Disconnect the ground cable from battery.
3) Disconnect the pressure hose and pipe from condenser.



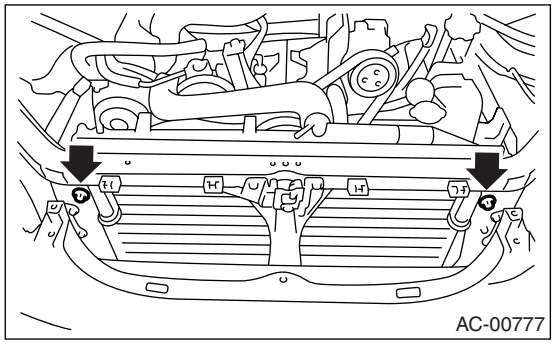
AC-00775

4) Remove the radiator bracket (A) and hood stay (B).



AC-00776

5) Remove the front grille. <Ref. to EI-24, REMOVAL, Front Grille.>
6) Remove two bolts. While lifting condenser, pull it out through the space between radiator and radiator panel.



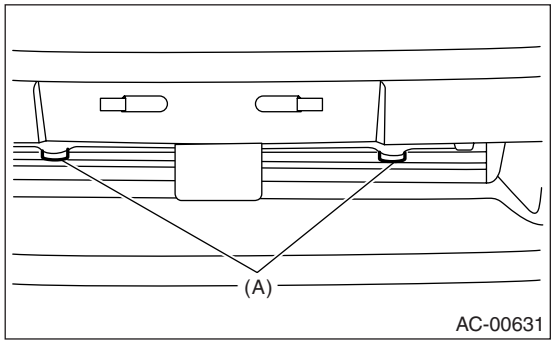
AC-00777

CAUTION:
• Be careful not to damage the condenser fins. If a damaged fin is found, repair it using a thin screwdriver.
• If the condenser is replaced, add an appropriate amount of compressor oil to the compressor. <Ref. to AC-25, REPLACEMENT, Compressor Oil.>

B: INSTALLATION

1) Install in the reverse order of removal.

CAUTION:
Replace the O-rings on hoses or pipes with new ones, and then apply compressor oil. Confirm that lower guide of condenser (A) has been fitted into holes on radiator panel.



AC-00631

2) Charge refrigerant. <Ref. to AC-21, PROCEDURE, Refrigerant Charging Procedure.>

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to AC-10, AIR CONDITIONING UNIT, COMPONENT, General Description.> <Ref. to CO(H4SO 2.0)-5, RADIATOR AND RADIATOR FAN, COMPONENT, General Description.>

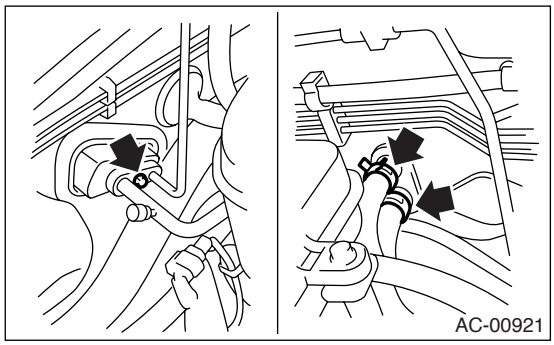
C: INSPECTION

1) Check no dust or insects are found on the condenser fins. Air-blow or flush fins with water as needed.
2) Inspect for oil leakage from condenser. If a failure is found, replace the condenser with a new one.

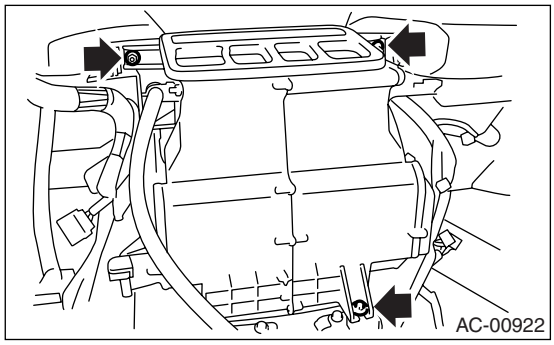
16.Heater and Cooling Unit

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-20, PROCEDURE, Refrigerant Recovery Procedure.>
3) Drain coolant from the radiator.
4) Remove the bolts securing expansion valve and pipe in engine compartment. Release the heater hose clamps in engine compartment to remove the hoses.



5) Remove the instrument panel. <Ref. to EI-56, REMOVAL, Instrument Panel Assembly.>
6) Remove the support beam.
7) Remove the blower motor unit assembly. <Ref. to AC-26, REMOVAL, Blower Motor Unit Assembly.>
8) Disconnect the actuator connector.
9) Remove the bolt and nuts to remove the heater and cooling unit.



B: INSTALLATION

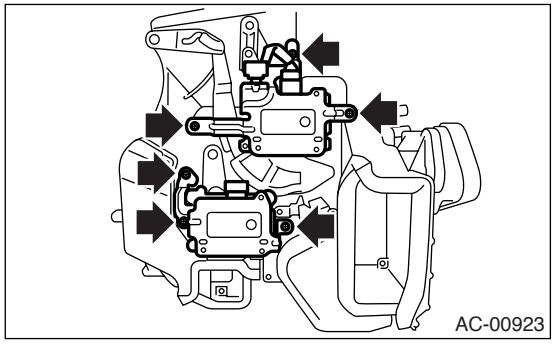
1) Install in the reverse order of removal.
2) Charge refrigerant. <Ref. to AC-21, PROCEDURE, Refrigerant Charging Procedure.>

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to AC-5, HEATER COOLING UNIT, COMPONENT, General Description.>

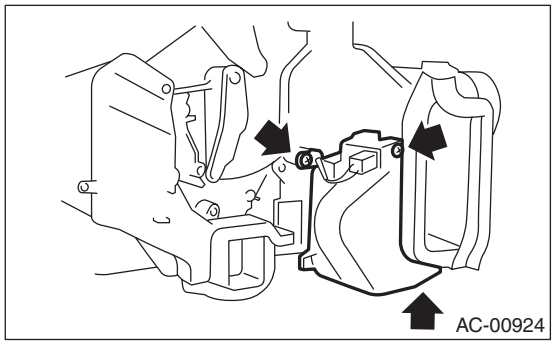
17.Evaporator

A: REMOVAL

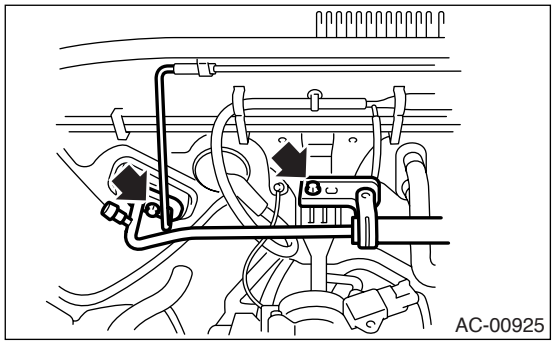
1) Remove the blower motor unit assembly. <Ref. to AC-26, REMOVAL, Blower Motor Unit Assembly.>
2) Disconnect the connector, remove the screw and then remove the air-mix door actuator and mode door actuator.



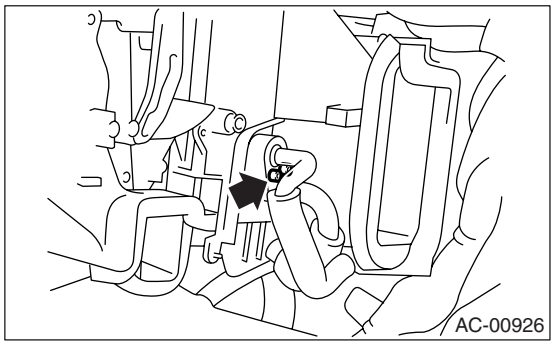
3) Disconnect the connector, remove the screw and remove the pipe cover and evaporator sensor.



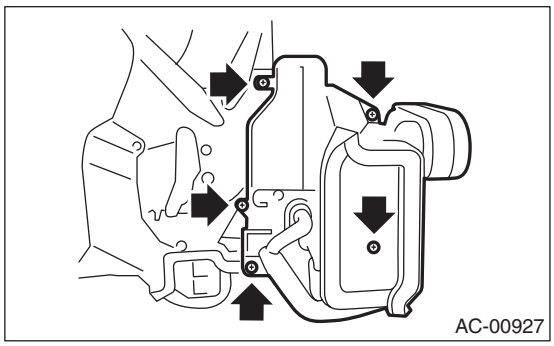
4) Remove the bolts securing expansion valve and pipe in engine compartment.



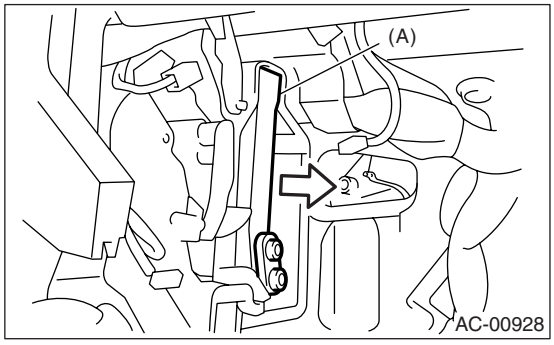
5) Remove the bolt which holds the pipe to evaporator.



6) Remove the screws and clip to remove the evaporator cover.



7) Pull out the evaporator (A) in the direction of arrow.



CAUTION:
If the evaporator is replaced, add an appropriate amount of compressor oil to evaporator. <Ref. to AC-25, REPLACEMENT, Compressor Oil.>

B: INSTALLATION

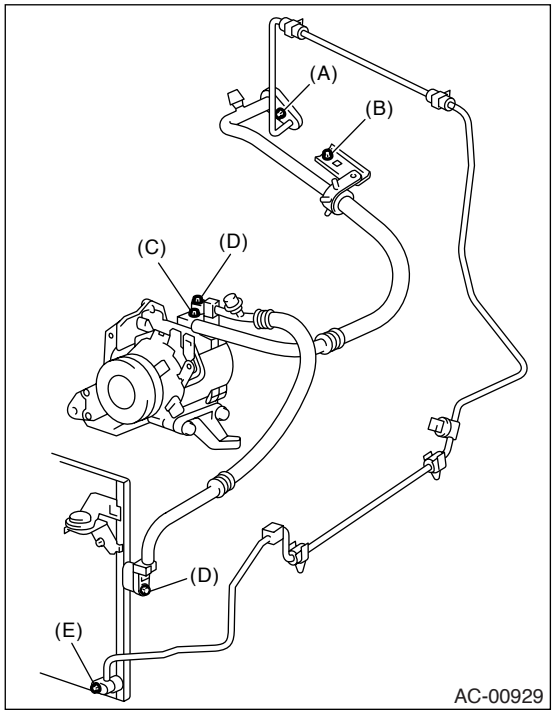
Install in the reverse order of removal.

18.Hose and Tube

A: REMOVAL

CAUTION:
• When disconnecting/connecting hoses, do not apply an excessive force to them. Confirm that no torsion and excessive tension is charged after installing.
• Seal the disconnected hose with a plug or vinyl tape to prevent foreign matter from entering.

1) Disconnect the ground cable from battery.
2) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-20, PROCEDURE, Refrigerant Recovery Procedure.>
3) Remove the evaporator unit mounting bolt (A) and low-pressure hose bracket bolt (B).
4) Remove the low-pressure hose attaching bolts (C).
5) Disconnect the low-pressure hose from evaporator unit.
6) Disconnect the low-pressure hose from compressor.
7) Remove the low-pressure hose from vehicle.
8) Remove the high-pressure hose attaching bolt (D).
9) Disconnect the high-pressure hose from compressor.
10) Disconnect the high-pressure hose from condenser.
11) Remove the high-pressure hose from vehicle.
12) Remove the high-pressure attaching bolt (E).
13) Remove the high-pressure tube from vehicle.



B: INSTALLATION

CAUTION:
• When disconnecting or connecting the hoses, do not apply excessive force to them. Confirm that no torsion and excessive tension is charged after installing.
• Seal the disconnected hose with a plug or vinyl tape to prevent foreign matter from entering.

1) Install in the reverse order of removal.
2) Charge refrigerant. <Ref. to AC-21, PROCEDURE, Refrigerant Charging Procedure.>

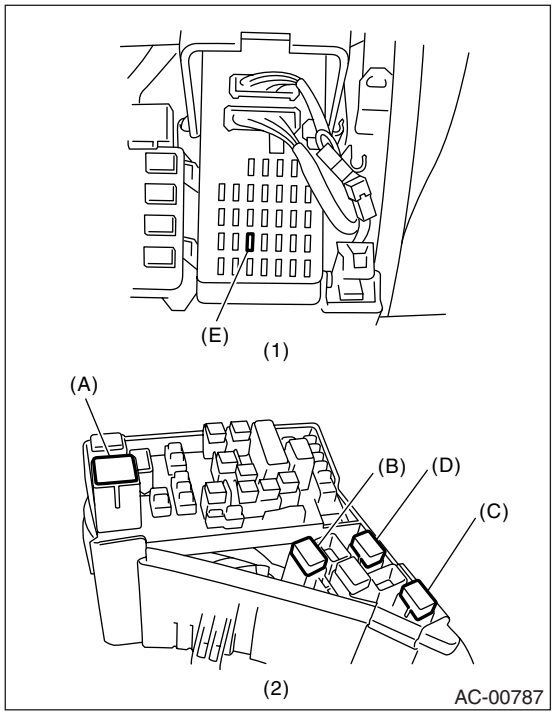
Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to AC-10, AIR CONDITIONING UNIT, COMPONENT, General Description.>

C: INSPECTION

Check the hoses for cracks, damage and expansion. If any fault is found, replace them with new ones.

19.Relay and Fuse

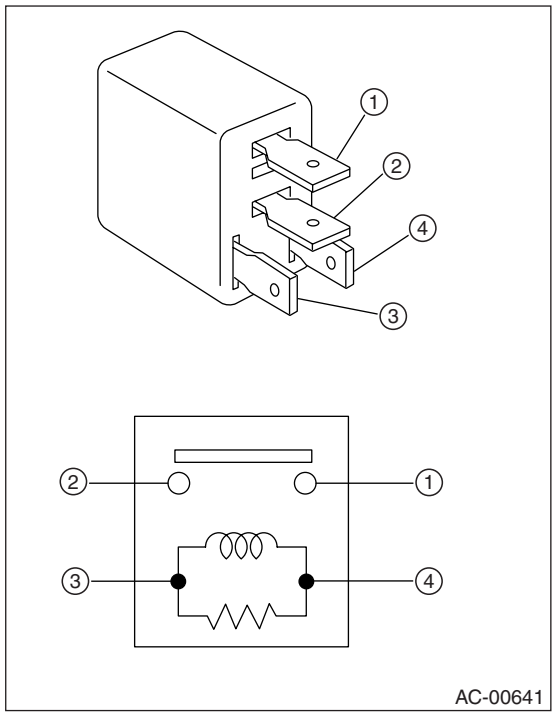
A: LOCATION



(1) Joint box
(2) Main fuse box

Main Fan Relay 1	(A)
Main Fan Relay 2	(B)
Sub Fan Relay	(C)
A/C Relay	(D)
A/C Fuse	(E)

B: INSPECTION



(3) — (4): Continuity exists
(1) — (2): Continuity does not exist

While applying battery voltage to the terminal between (3) and (4), check continuity between (1) and (2).
If no continuity exists, replace the relay with a new one.

20.Pressure Switch (Triple Pressure Switch)

A: INSPECTION

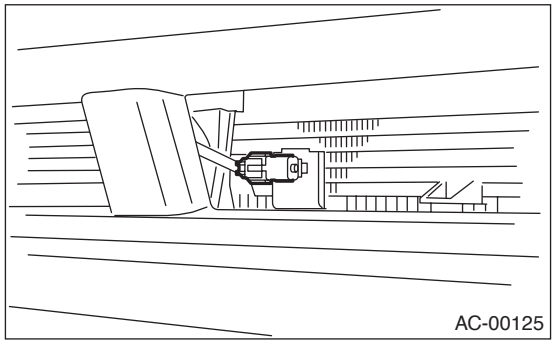
1) Connect the manifold gauge to the service valve on the high-pressure side.
2) Remove the pressure switch harness connector. Using a circuit tester, inspect the ON-OFF operation of pressure switch.

	Terminal No.	Operation	Standard kPa (kg/cm^2, psi)
High and low pressure switch	1 and 2	Turns OFF.	Increasing to $3{,}140^{+50}_{-200}$ ($32.02^{+0.51}_{-2.04}$, $455.4^{+7.25}_{-29.0}$)
			Decreasing to 196±20 (2.00±0.20, 28.4±2.9)
		Turns ON.	Increasing to 225^{+25}_{-29} ($2.29^{+0.25}_{-0.30}$, $32.6^{+3.6}_{-4.2}$)
			Decreasing to 2,550±200 (26.00±2.04, 369.8±29.0)
Middle pressure switch	3 and 4	Turns OFF.	Decreasing to 1,370±120 (14±1, 199±14)
		Turns ON.	Increasing to 1,770±100 (18±1, 256±14)

21. Ambient Sensor (Auto A/C Model)

A: REMOVAL

1) Open the front hood.
2) Disconnect the ground cable from battery.
3) Disconnect the ambient sensor connector.
4) Remove the ambient sensor from the radiator lower panel.



B: INSTALLATION

Install in the reverse order of removal.

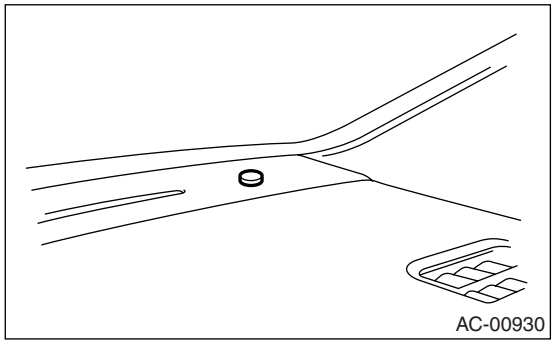
C: INSPECTION

<Ref. to AC(diag)-30, AMBIENT SENSOR, Diagnostic Procedure for Sensors.>

22.Sunload Sensor (Auto A/C Model)

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Disconnect the connector and remove the sunload sensor.



CAUTION:
Be careful not to damage the interior trims when removing the sensor.

B: INSTALLATION

Install in the reverse order of removal.

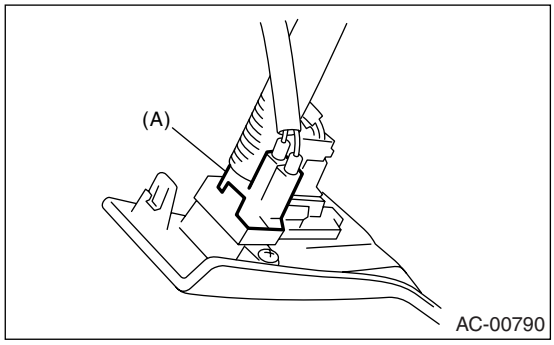
C: INSPECTION

<Ref. to AC(diag)-36, SUNLOAD SENSOR, Diagnostic Procedure for Sensors.>

23.In-Vehicle Sensor (Auto A/C Model)

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the instrument panel lower cover. <Ref. to EI-50, REMOVAL, Instrument Panel Lower Cover.>
3) Disconnect the connector and aspirator hose, remove the pawl and remove the in-vehicle sensor (A) from instrument lower cover.



CAUTION:
Be careful not to damage the sensors and interior trims when removing.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

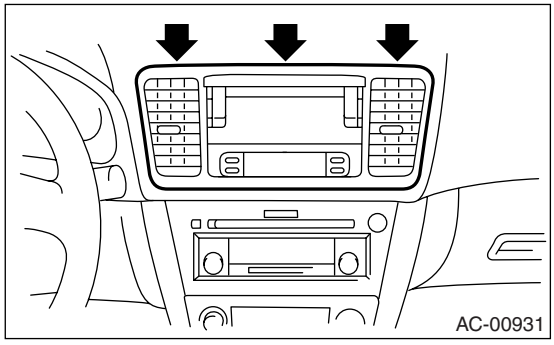
<Ref. to AC(diag)-32, IN-VEHICLE SENSOR, Diagnostic Procedure for Sensors.>

24. Air Vent Grille

A: REMOVAL

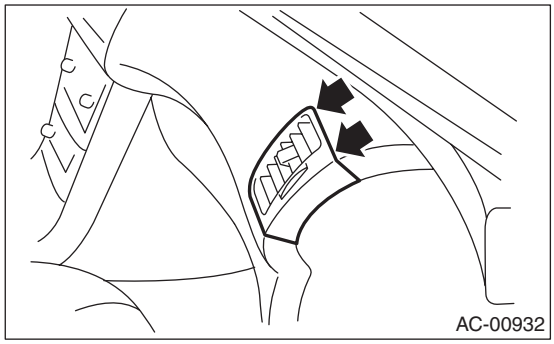
1. CENTER GRILLE

1) Disconnect the ground cable from battery.
2) Remove the three pawls and connector to remove center air vent grill.



2. SIDE GRILLE

Remove the two pawls to remove side air vent grill.



B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

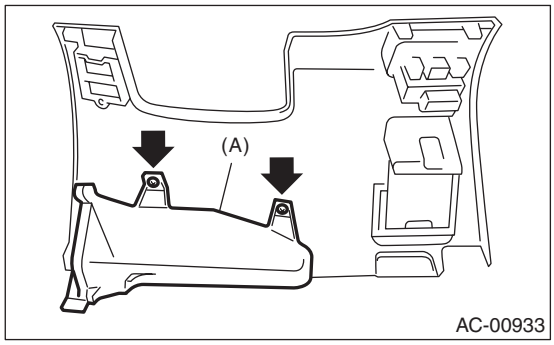
1) Check the direction and amount of air can be adjusted smoothly.
2) Check the adjustment can be kept in each position.

25.Heater Duct

A: REMOVAL

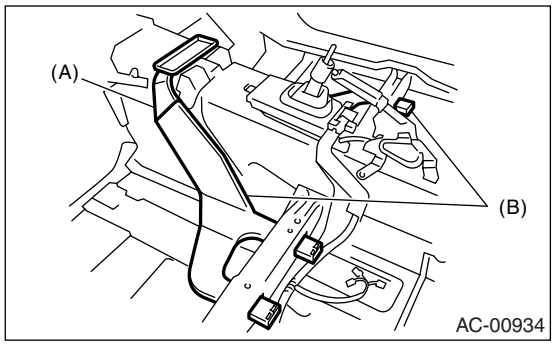
1. FRONT HEATER DUCT

1) Remove the instrument panel lower cover. <Ref. to EI-50, REMOVAL, Instrument Panel Lower Cover.>
2) Remove the screws and detach the front heater duct (A).



2. REAR HEATER DUCT

1) Remove the heater cooling unit. <Ref. to AC-36, REMOVAL, Heater and Cooling Unit.>
2) Remove the front seats. <Ref. to SE-7, REMOVAL, Front Seat.>
3) Remove the front side sill cover.
4) Pull off the floor mat to remove the rear center heater duct (A) and rear heater duct LH, RH (B).



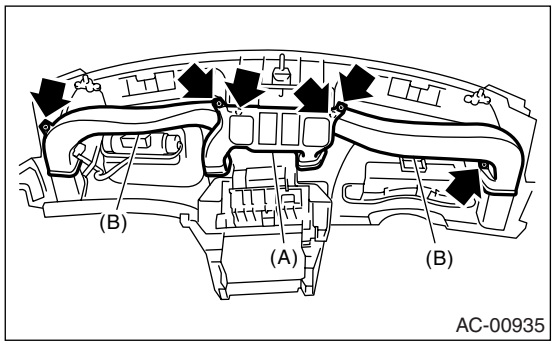
B: INSTALLATION

Install in the reverse order of removal.

26.Heater Vent Duct

A: REMOVAL

1) Remove the instrument panel. <Ref. to EI-50, REMOVAL, Instrument Panel Lower Cover.>
2) Remove the screws and detach the center vent duct (A).
3) Remove the screws and detach the center vent duct (B).
4) Remove the insulator, remove the screws and detach the defroster duct.



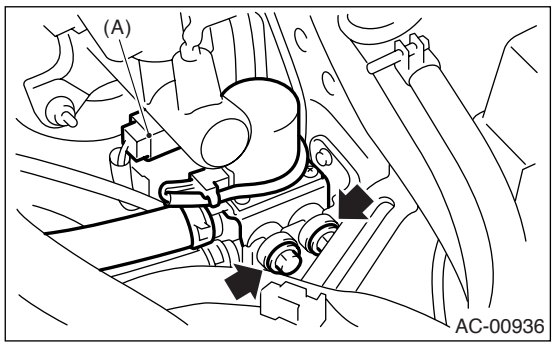
B: INSTALLATION

Install in the reverse order of removal.

27.Heater Cock Solenoid Valve

A: REMOVAL

1) Drain the engine coolant. <Ref. to CO(H4SO 2.0)-13, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
2) Disconnect the harness connector (A) of the heater cock solenoid valve.
3) Remove the two bolts to remove the heater cock solenoid from the bracket.



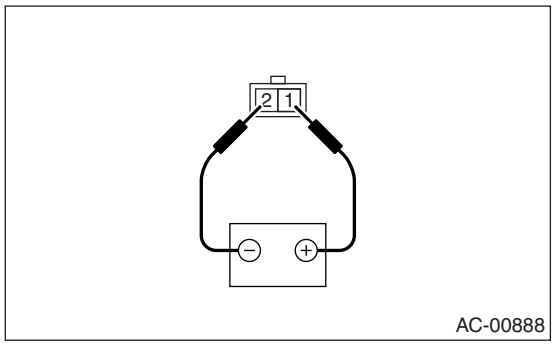
4) Pull out the heater cock solenoid. Loosen the hose clamp and disconnect the two heater hoses.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

1) Remove the heater cock solenoid valve. <Ref. to AC-47, REMOVAL, Heater Cock Solenoid Valve.>
2) Connect the positive terminal of battery to No. 1 terminal of heater cock solenoid valve, and the ground terminal to No. 2 terminal. Check that the heater cock solenoid valve opens and closes normally.



If any failure is found, replace the heater cock solenoid valve.

28.General Diagnostic Table

A: INSPECTION

Symptom		Repair order
Blower motor	Doesn't operate.	Fuse
		Blower motor relay
		Blower motor
		Blower motor resistor
		Blower switch
		Wire harness
	Noise	Blower motor
Compressor	Doesn't operate.	Refrigerant
		Fuse
		Air conditioning relay
		Magnet clutch
		Compressor
		Pressure switch
		A/C switch
		Blower switch
		Wire harness
	Noise	V-Belt
		Magnet clutch
		Compressor
Cold air not emitted.		Refrigerant
		V-Belt
		Magnet clutch
		Compressor
		Pressure switch
		A/C switch
		Blower switch
		Wire harness
		Heater duct
		Heater vent duct
Warm air not emitted.		Engine coolant
		Blower switch
		Heater core
		Heater cock solenoid valve
Temperature of air from vents does not change.		Engine coolant
		Air mix actuator (Auto A/C)
		Wire harness (Auto A/C)
		Temperature control cable (Manual A/C)
Unable to switch blow vents.		Mode actuator (Auto A/C)
		Air flow switch (Auto A/C)
		Wire harness (Auto A/C)
		Mode cable (Manual A/C)
Unable to switch suction vents.		Air inlet select switch (Auto A/C)
		FRESH/RECIRC actuator (Auto A/C)
		Wire harness (Auto A/C)
		Intake cable (Manual A/C)

BODY SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	**START INSPECTIONS.** 1) Perform the pre-inspection. <Ref. to AC(diag)-3, INSPECTION, General Description.> 2) Perform the self-diagnosis. <Ref. to AC(diag)-10, OPERATION, Diagnostic Chart for Self-Diagnosis.>	Does the self-diagnosis operate?	Go to step **2.**	<Ref. to AC(diag)-15, A/C OR SELF-DIAGNOSIS SYSTEMS DO NOT OPERATE, Diagnostics for A/C System Malfunction.>
2	**IDENTIFY MALFUNCTION PART.** Identify the malfunction part with self-diagnosis.	Can the malfunction part be identified?	Repair the malfunction part in accordance with each diagnostic chart.	Go to step **3.**
3	**CHECK COMPARTMENT TEMPERATURE.** 1) Turn ON the A/C switch. 2) Turn the temperature control dial at maximum cool position. 3) Check the compartment temperature change.	Does the compartment temperature change?	Go to step **4.**	<Ref. to AC(diag)-20, COMPARTMENT TEMPERATURE DOES NOT CHANGE, OR A/C SYSTEM DOES NOT RESPOND PROMPTLY., Diagnostics for A/C System Malfunction.>
4	**CHECK A/C SYSTEM RESPONSE.** Change the temperature setting, and check the response of A/C system.	Does the A/C system respond quickly?	A/C system is normal.	<Ref. to AC(diag)-20, COMPARTMENT TEMPERATURE DOES NOT CHANGE, OR A/C SYSTEM DOES NOT RESPOND PROMPTLY., Diagnostics for A/C System Malfunction.>

2. General Description

A: CAUTION

1) Never connect the battery in reverse polarity.
• Auto A/C control module may be destroyed instantly.
2) Do not disconnect the battery terminals while the engine is running.
• A large counter electromotive force will be generated in the generator, and this voltage may damage electronic parts such as auto A/C control module, etc.
3) Before disconnecting the connectors of each sensor and the auto A/C control module, be sure to turn off the ignition switch.
• Auto A/C control module may be damaged.
4) Every A/C-related part is a precision part. Do not drop them.
5) Airbag system wiring harness is routed near the A/C control panel and junction box.

CAUTION:
• For airbag system, yellow-colored wiring harness and connectors are all used. Do not use the electrical test equipment on these circuits.
• Be careful not to damage the airbag system wiring harness when servicing the A/C control panel and junction box.

B: INSPECTION

Before performing the diagnosis, check the following items which might affect A/C system problems.

1. BATTERY

1) Measure the battery voltage and specific gravity of electrolyte.

Standard voltage: 12 V

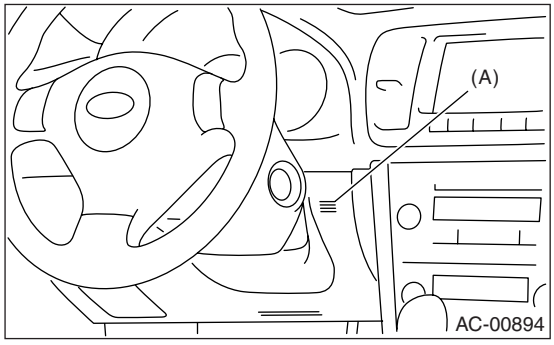
Specific gravity: More than 1.260

2) Check the condition of the fuses for A/C system power supply and other fuses.
3) Check the condition of harness and harness connector connections.

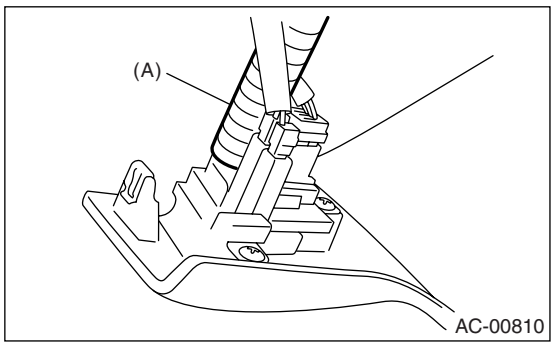
2. ASPIRATOR HOSE

1) Turn the ignition switch to ON, and press the A/C switch.
2) Turn the temperature control dial at maximum hot position.
3) Turn the air flow control dial to “DEF” position.
4) Turn the fan speed control dial to 4th position.
5) Approach a strip of paper in front of the in-vehicle sensor suction port (A) located in the instrument lower cover, and check that air is being sucked into the port by seeing the paper moving towards the port.

NOTE:
Be careful not to let the paper get sucked into the port.

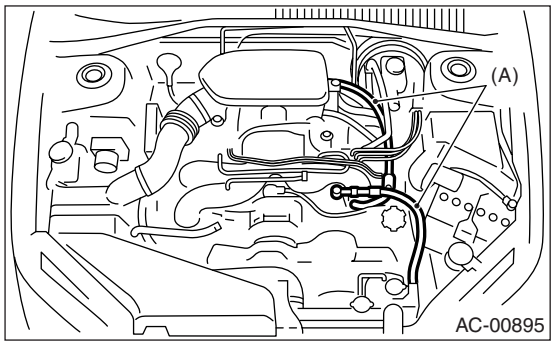


6) If the paper does not move at all, remove the instrument panel lower cover <Ref. to EI-50, REMOVAL, Instrument Panel Lower Cover.> and check for improper connection of the aspirator hose (A), in-vehicle sensor and heater unit, and repair them if necessary.



3. A/C LINE

Check the connection for A/C line (A) and lower side high-pressure pipe.



4. CONTROL LINKAGE

1) Check the state of mode door linkage.
2) Check the state of air mix door linkage.
3) Check the state of intake door linkage.

5. CONTROL SWITCHES

Start and warm-up the engine completely.
1) Inspection using switches

No.	Point to check	Switch operation	Judgment standard
1	OFF switch	Press the OFF switch.	Setting temperature display goes out. • Blower fan: OFF • Inlet opening: External air • Compressor: OFF
2	AUTO switch	1) Press the AUTO switch. 2) Turn the temperature control dial to the left fully, and set to 18°C (maximum cool position).	AUTO display illuminates. • Outlet air temperature: COOL • Blower fan: HI (AUTO) • Outlet opening: FACE • Inlet opening: AUTO • Compressor: AUTO
		3) Turn the temperature control dial to the right slowly, and change the setting from 18°C (maximum cool position) to 32°C.	• Outlet air temperature: COOL → HOT • Blower fan: AUTO • Outlet opening: FACE → B/L → FOOT • Inlet opening: AUTO • Compressor: AUTO
		4) Turn the temperature control dial to the right fully, and set to 32°C (maximum hot position).	• Outlet air temperature: HOT • Blower fan: HI (AUTO) • Outlet opening: FOOT • Inlet opening: Ambient (AUTO) • Compressor: AUTO
3	Defroster switch	Press the defroster switch.	Defroster switch indicator illuminates. • Outlet air temperature: AUTO • Blower fan: AUTO • Outlet opening: DEF • Inlet opening: External air • Compressor: ON
4	FRESH/RECIRC switch	Press the FRESH/RECIRC switch.	Inlet opening switches RECIRC → FRESH or FRESH → RECIRC each time pressing the switch.
5	MODE switch	Press the MODE switch.	Outlet opening switches FACE → B/L → FOOT → F/D each time pressing the switch
6	FAN switch	Press the FAN (+) switch.	Inlet opening switches LO → M1 → M2 → M3 → M4 → HI each time pressing the switch

2) Compressor operation inspection

No.	Point to check	Switch operation	Judgment standard
1	Compressor	1) Turn the A/C switch to ON. 2) Set the FAN switch between LO and HI.	Compressor: ON

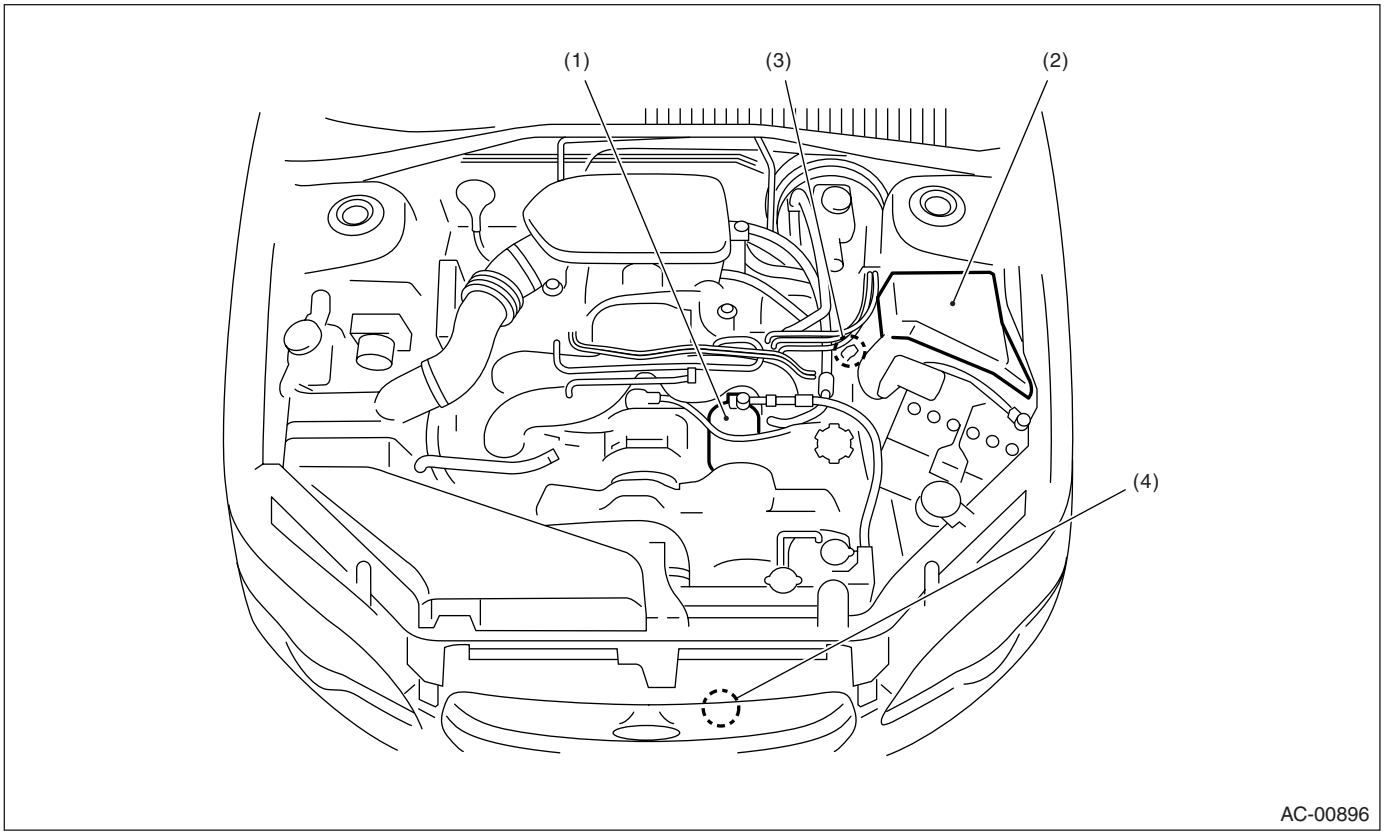
3) Inspection of illumination control

No.	Point to check	Switch operation	Judgment standard
1	Illumination	Turn the lighting switch to ON.	Illumination comes on.

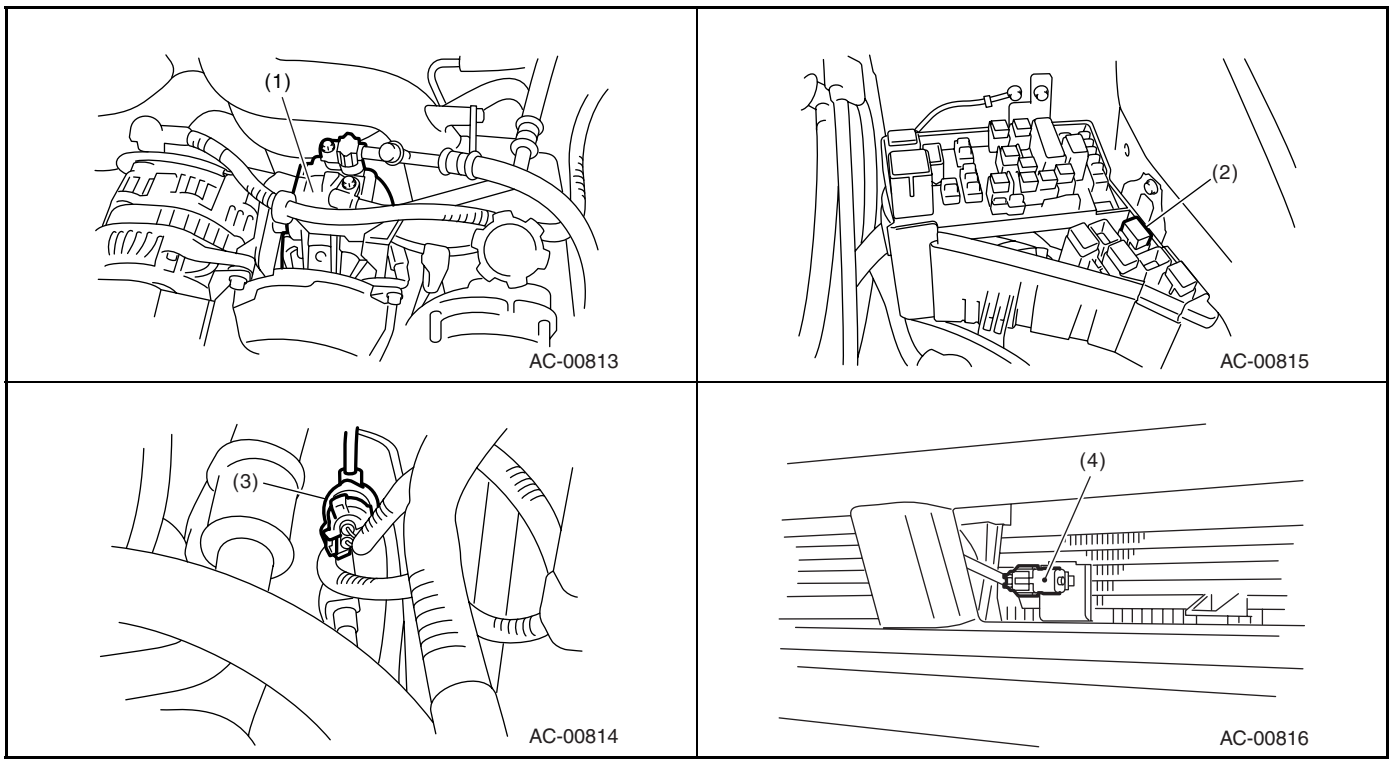
3. Electrical Component Location

A: LOCATION

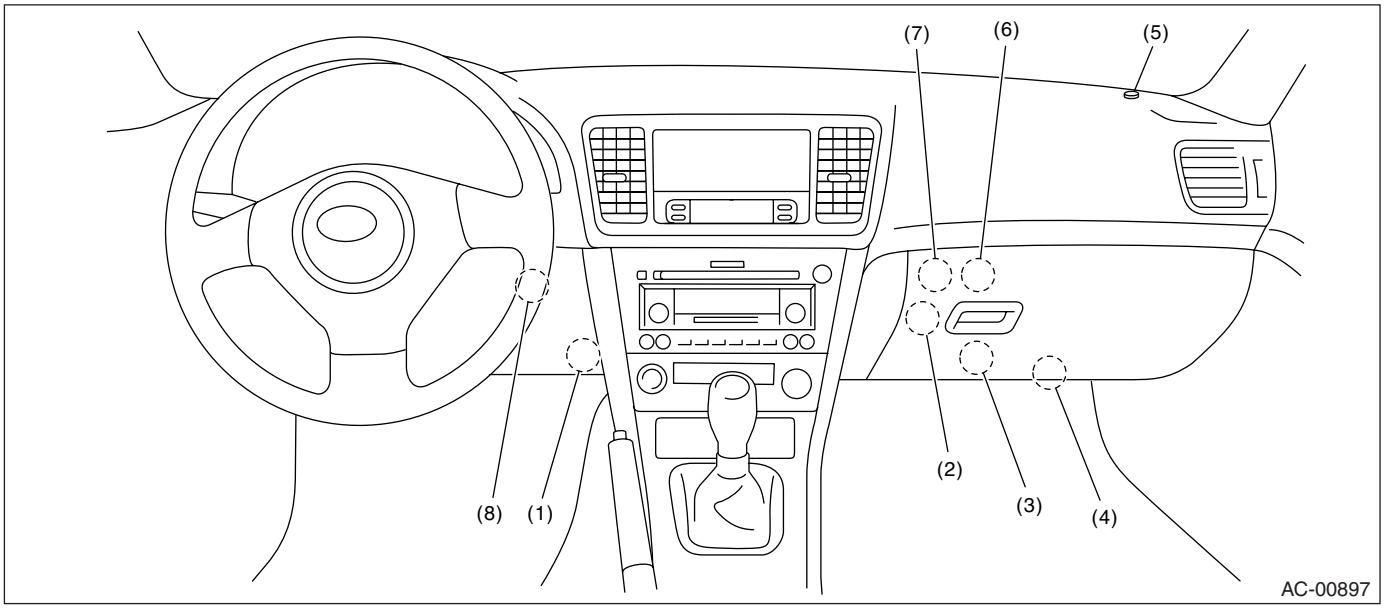
1. ENGINE COMPARTMENT



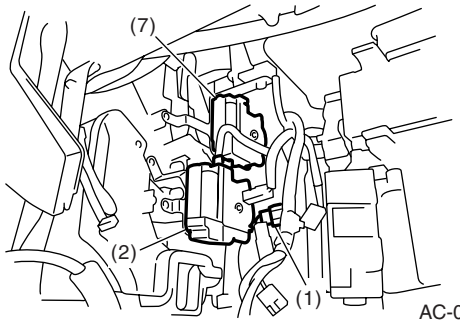
(1) A/C compressor
(2) A/C relay
(3) Pressure switch
(4) Ambient sensor



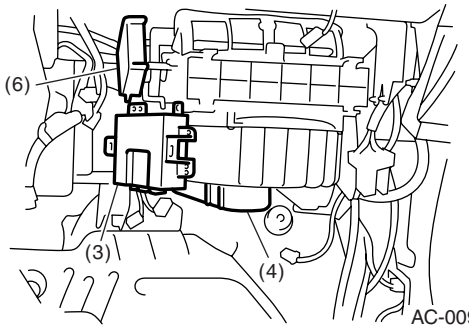
2. PASSENGER COMPARTMENT



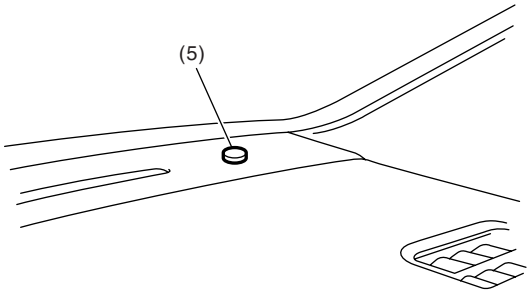
(1) Evaporator sensor
(2) Air mix door actuator
(3) Auto A/C control module
(4) Blower motor
(5) Sunload sensor
(6) Intake door actuator
(7) Mode door actuator
(8) In-vehicle sensor



AC-00898



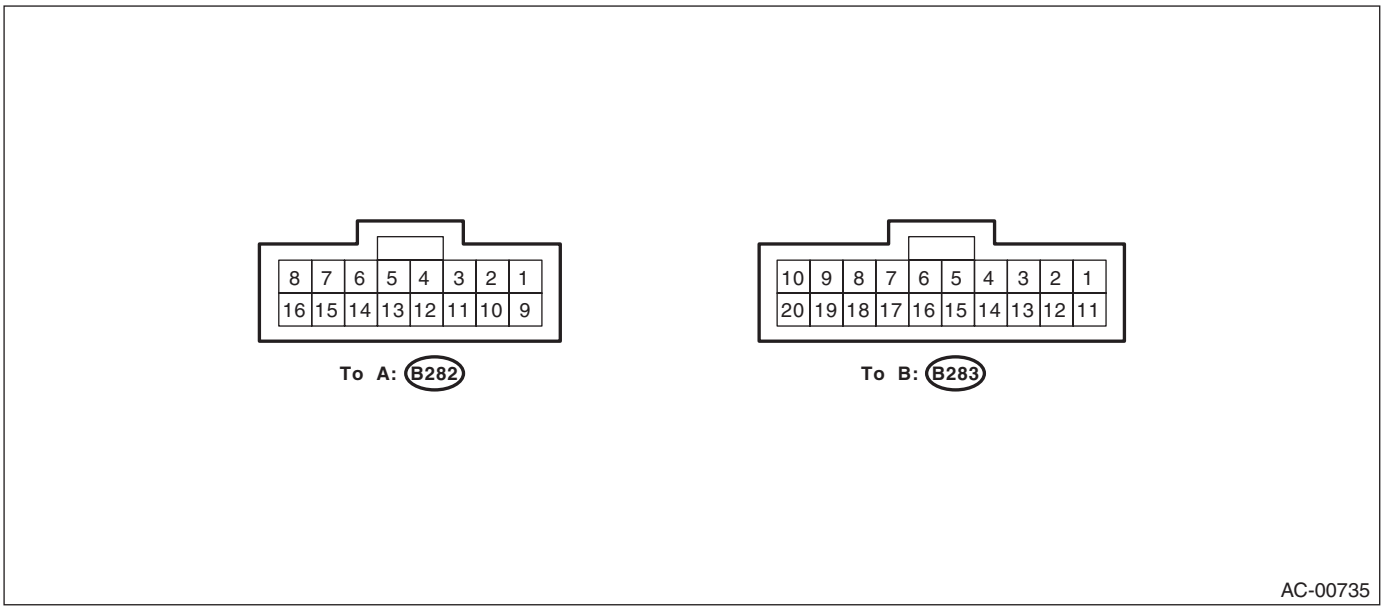
AC-00900



AC-00899

4. Auto A/C Control Module I/O Signal

A: ELECTRICAL SPECIFICATION



Terminal No.	Remarks	Measuring conditions	Standard value
A1	Battery power supply	Ignition switch: OFF	Battery voltage
A2	ACC power supply	Ignition switch: ACC	Battery voltage
A3	Mode door actuator position signal	Mode door: FACE position	4 V
		Mode door: DEF position	1 V
A4	Air mix door actuator position signal	Air mix door: Maximum cool position	4 V
		Air mix door: Maximum hot position	1 V
A5	In-vehicle sensor	Ignition switch: ON	Less than 5 V
A6	Sunload sensor	Ignition switch: ON, With sunload (No sunload: 0 V)	3 V
A8	Sensor power supply	Ignition switch: ON	5 V
A9	Ignition power supply	Ignition switch: ON	Battery voltage
A10	A/C cut signal	Ignition switch: ON	Battery voltage
		When operating pressure SW	0 V
A13	Evaporator center	Ignition switch: ON	Less than 5 V
A14, A16	Ground	Continuity to chassis ground	0 Ω
A15	Sensor ground	Continuity to chassis ground	0 Ω
B1, B11	Ambient sensor, engine coolant temperature sensor	—	*1
B2	Blower motor control	Ignition switch : ON, Blower switch : ON	0.45 V
B3	Blower motor control	Ignition switch : ON, Blower switch : ON	9.05 V
B4	RAM monitor	—	*1
B5	RAM monitor	—	*1
B6	A/C ON signal	A/C ON (A/C OFF: 0 V)	7 — 14 V
B7	Mode door actuator power supply	When switching mode door from DEF → FACE	Battery voltage
B17		When switching mode door from FACE → DEF	Battery voltage
B8	Air mix door actuator power supply	When switching air mix door from HOT → COOL	Battery voltage
B18		When switching air mix door from COOL → HOT	Battery voltage
B10	Intake door actuator	FRESH (RECIRC: Battery voltage)	0 V
B20		RECIRC (FRESH: Battery voltage)	0 V
B13	Blower fan ON signal	When blower fan is rotating (Not rotating: Battery voltage)	0 V
B14	RAM monitor	—	*1
B15, B16	Control panel	—	*1

*1: Unable to measure the voltage for digital signal.

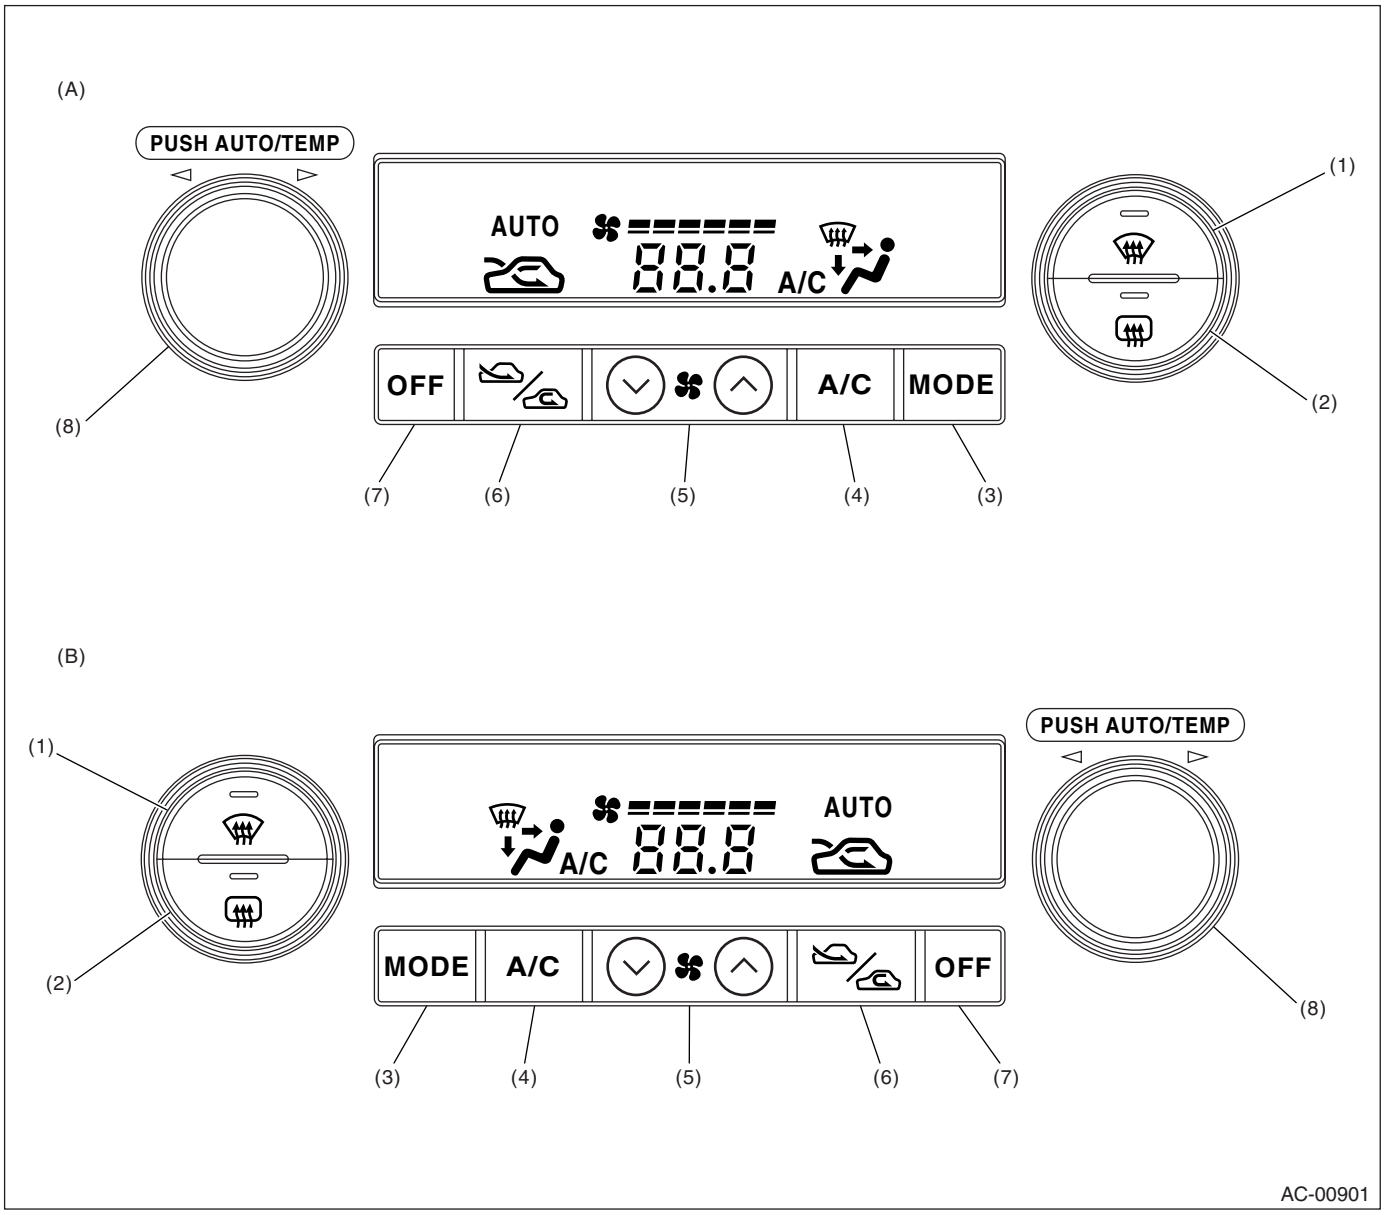
B: WIRING DIAGRAM

1. AIR CONDITIONER AUTO A/C MODEL

<Ref. to WI-59, WIRING DIAGRAM, Air Conditioning System.>

5. Diagnostic Chart for Self-Diagnosis

A: OPERATION



(A) LHD model
(B) RHD model

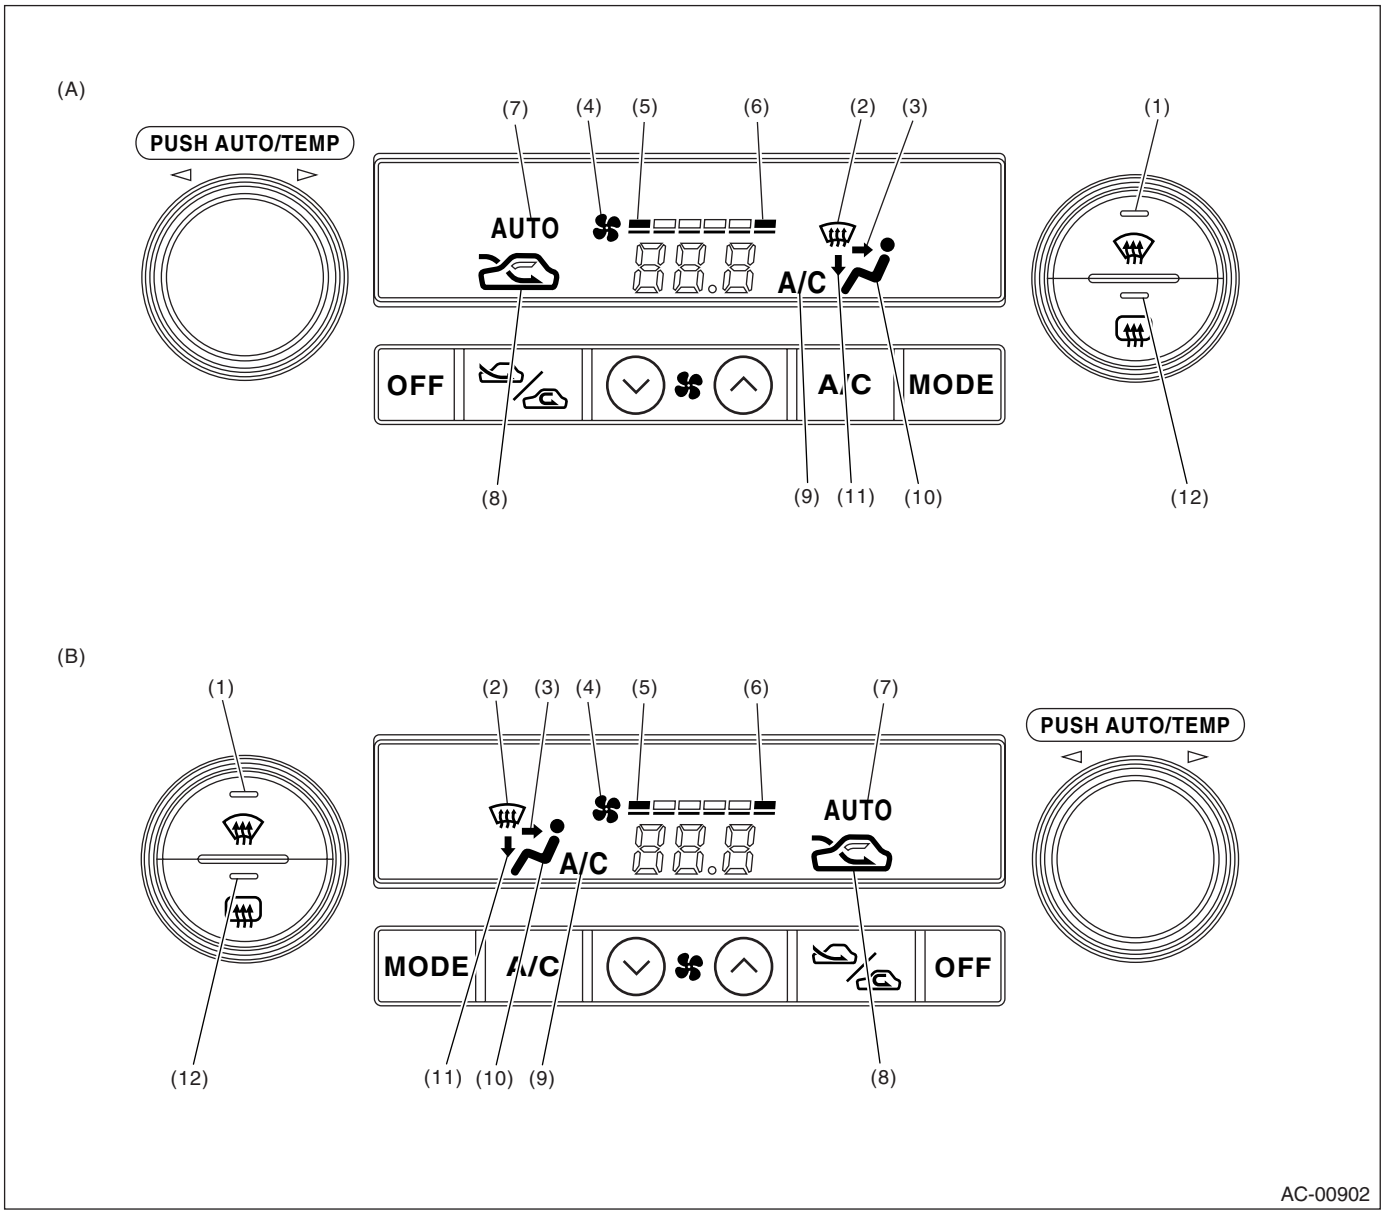
(1) Defroster switch
(2) Rear window defogger switch
(3) Air flow control switch
(4) A/C switch
(5) Fan switch
(6) FRESH/RECIRC switch
(7) OFF switch
(8) Temperature control dial (AUTO switch)

NOTE:
For A/C system self-diagnosis, there is one that checks the control panel, and the other that checks the whole control system (sensor, actuator, blower motor, etc.). Perform the self-diagnosis for control panel first, and then perform the self-diagnosis for control system.

1. A/C CONTROL PANEL SELF-DIAGNOSIS

	Step	Check	Yes	No
1	**SET SELF-DIAGNOSIS MODE BY OPERATING A/C CONTROL PANEL.** 1) Turn the ignition switch to OFF. 2) Turn the ignition switch to ON with the defroster switch and A/C switch pressed. 3) The screen display and indicator illuminate.	Does the self-diagnosis mode operate?	Go to step **2.**	<Ref. to AC(diag)-15, A/C OR SELF-DIAGNOSIS SYSTEMS DO NOT OPERATE, Diagnostics for A/C System Malfunction.>
2	**CHECK DISPLAY AND INDICATOR.** Check the display and all indicators illuminate.	Do the display and all indicators illuminate?	Go to step **3.**	Replace the A/C control panel.
3	**CHECK SWITCH AND TEMPERATURE CONTROL DIAL INPUT.** According to the switch check table, press each switch or turn the temperature control dial, and check the relative screen display and indicators illuminate. <Ref. to AC(diag)-12, SWITCH CHECK TABLE, OPERATION, Diagnostic Chart for Self-Diagnosis.>	Does the screen display related to each switch and dial input illuminate?	Go to step **4.**	Replace the A/C control panel.
4	**CHECK A/C CONTROL PANEL COMMUNICATION.** 1) Turn the ignition switch to OFF. 2) Disconnect the auto A/C control module harness connector. 3) Using a suitable lead wire, short the terminal No. 15 and No. 16 of auto A/C control module harness connector (B283). 4) Turn the ignition switch to ON with the rear defogger switch and A/C switch pressed. 5) When no malfunction occurs in the control panel communication, “CL” is displayed in the screen; and when malfunction occurs, “OP” is displayed.	Is “CL” displayed in the screen?	A/C control panel is normal. Turn the ignition switch to OFF, and connect the auto A/C control module harness connector.	Replace the A/C control panel.

2. SWITCH CHECK TABLE



(A) LHD model (B) RHD model

Switch	Display screen	Switch	Display screen
A/C switch	(9)	FAN switch (+)	(6)
AUTO switch	(7)	FAN switch (–)	(5)
Air flow control switch	(10)	Temperature control dial (Right turn)	(3)
FRESH/RECIRC	(8)	Temperature control dial (Left turn)	(11)
Defroster switch	(1) (2)	OFF switch	(4)
Rear defogger switch	(12)		

3. A/C CONTROL SYSTEM SELF-DIAGNOSIS

	Step	Check	Yes	No
1	**SET SELF-DIAGNOSIS MODE BY OPERATING A/C CONTROL PANEL.** 1) Turn the ignition switch to OFF. 2) Start the engine with the auto switch and FRESH/RECIRC switch pressed. NOTE: Self-diagnosis can also be performed with ignition switch ON, but start the engine because telling the magnet clutch operation is difficult. 3) All the indicator blinks four times.	Does the self-diagnosis mode operate?	Go to step **2.**	<Ref. to AC(diag)-15, A/C OR SELF-DIAGNOSIS SYSTEMS DO NOT OPERATE, Diagnostics for A/C System Malfunction.>
2	**CHECK EACH SENSOR AND POTENTIOMETER** 1) After the indicators are completed to blink, automatically change to the inspection mode of sensor and potentiometer. NOTE: Display items can be changed each time the A/C switch is pressed. (Step Operation) 2) When malfunction occurs in each sensor and potentiometer, codes are displayed on the screen. When no malfunction occurs in each sensor and potentiometer, code “20” is displayed on the screen. 3) Identify the defective sensor according to the sensor check table. <Ref. to AC(diag)-14, SENSOR CHECK TABLE, OPERATION, Diagnostic Chart for Self-Diagnosis.>	Are other codes except “20” displayed?	Repair the defective sensor. <Ref. to AC(diag)-30, Diagnostic Procedure for Sensors.>	Go to step **3.**
3	**CHECK EACH ACTUATOR, BLOWER FAN AND MAGNET CLUTCH.** 1) After completing each sensor and potentiometer inspection, change to the inspection mode of actuator, blower fan and magnet clutch by pressing the defroster switch. 2) Each mode will change and operate automatically every four seconds. NOTE: Operation mode items can be changed each time the A/C switch is pressed. (Step Operation) 3) Check the operation of actuator, blower fan and magnet clutch in each mode according to the operating mode table. <Ref. to AC(diag)-14, OPERATING MODE TABLE, OPERATION, Diagnostic Chart for Self-Diagnosis.>	Do the actuator, blower fan and magnet clutch operate along the operating mode table?	A/C control system is normal. Press the OFF switch and complete the self-diagnosis mode.	Repair the malfunction part in accordance with each diagnostic chart. <Ref. to AC(diag)-15, Diagnostics for A/C System Malfunction.> or <Ref. to AC(diag)-24, Diagnostic Procedure for Actuators.>

4. SENSOR CHECK TABLE

NOTE:
When the sunload sensor check is conducted indoors or in the shade, open circuit might be indicated. Always check the sunload sensor at the place where the sun shines directly on it.

Display screen (Malfunction at present) *1	SENSOR	Trouble contents
21/AUTO Blink	In-vehicle sensor	Broken
−21/AUTO Blink		Short
22/AUTO Blink	Ambient sensor	Sensor trouble or communication malfunction
23/AUTO Blink	Evaporator sensor	Broken
−23/AUTO Blink		Short
24/AUTO Blink	Engine coolant temperature sensor	Sensor trouble or communication malfunction
25 Blink	Sunload sensor	Open *2
−25/AUTO Blink		Short
26/AUTO Blink	Air mix door actuator potentiometer	COOL
27/AUTO Blink		HOT
28/AUTO Blink	Mode door actuator potentiometer	FACE
29/AUTO Blink		DEF
20 Blink	When all conditions are normal	

*1: “AUTO” display does not blink when past malfunction occurred. Past malfunction means that abnormal signal had input for a certain time continuously in the past.
*2: Present malfunction only is displayed for sunload sensor open circuit.

5. OPERATING MODE TABLE

Display screen	FRESH/RECIRC door	Mode door	Air mix door	Blower fan	A/C compressor (Magnet clutch)
31	FRESH	FACE	Maximum cool	LO	OFF
32	RECIRC	FACE	Maximum cool	LO	ON
33	RECIRC	FACE	Maximum cool	M1	ON
34	FRESH	B/L	50%	M1	ON
35	FRESH	FOOT	50%	M1	ON
36	FRESH	FOOT	Maximum hot	M3	ON
37	FRESH	F/D	Maximum hot	M3	ON
38	FRESH	DEF	Maximum hot	HI	ON

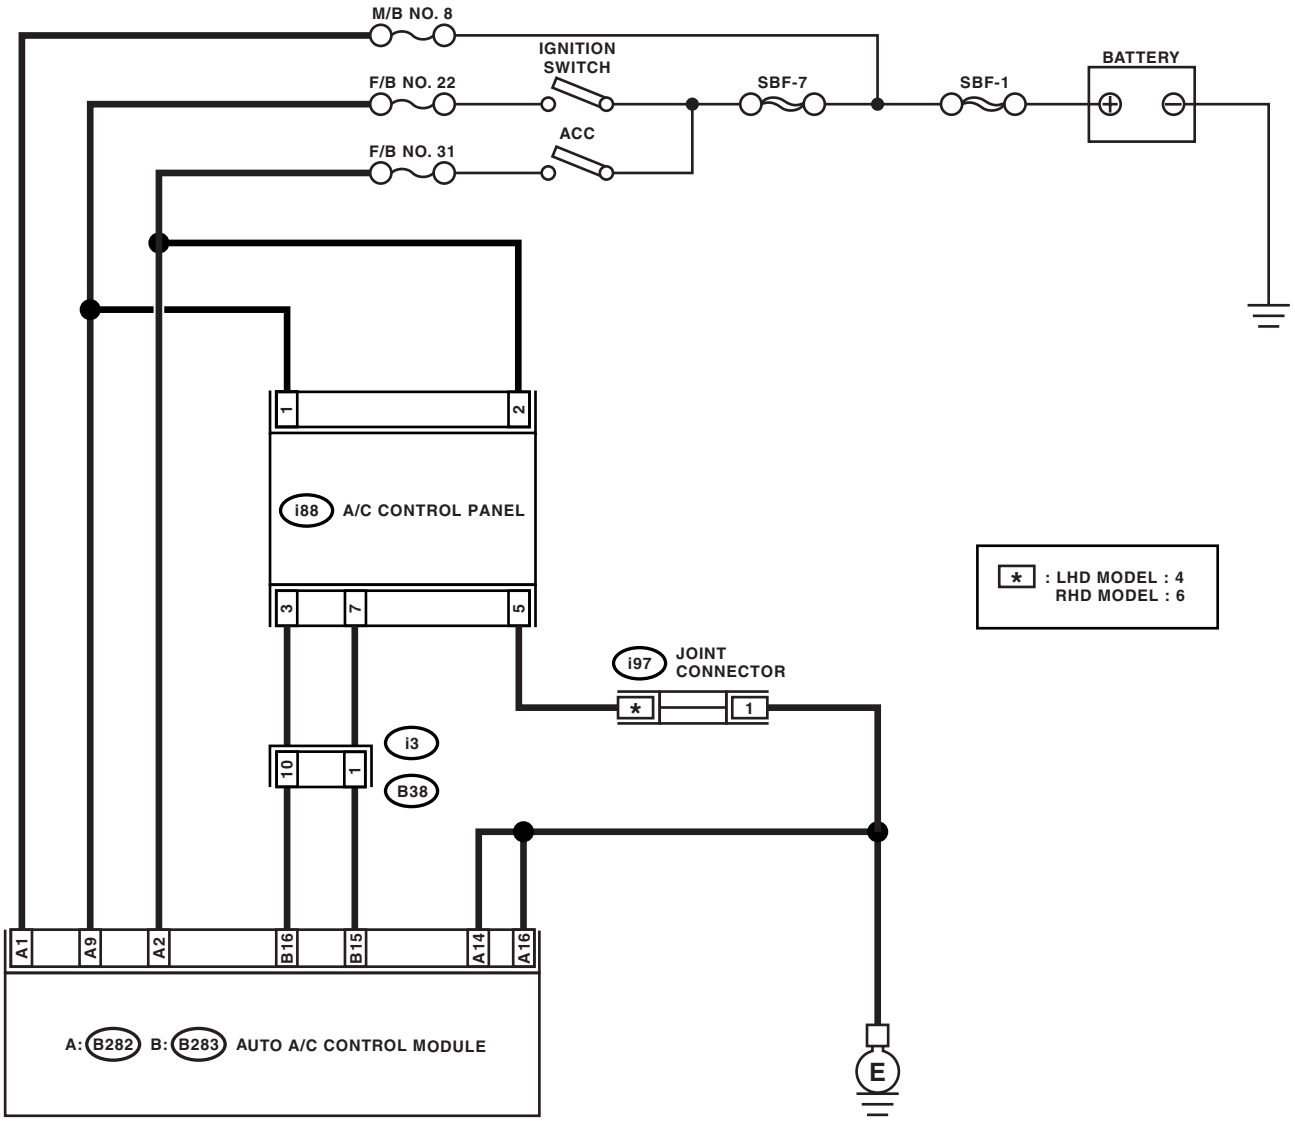
6. Diagnostics for A/C System Malfunction

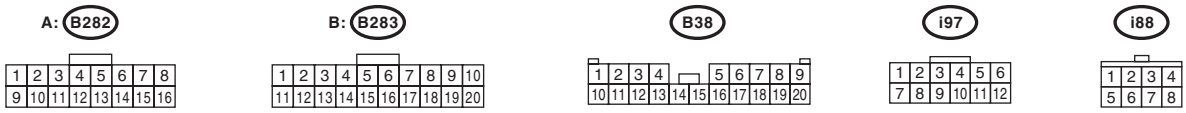
A: A/C OR SELF-DIAGNOSIS SYSTEMS DO NOT OPERATE

TROUBLE SYMPTOM:

- "Set" temperature is not indicated on the display, switch LEDs are faulty and switches do not operate.
- Self-diagnosis system does not operate.

WIRING DIAGRAM:





AC-00903

	Step	Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Remove the fuse No. 8 from main fuse box. 3) Check the condition of fuse.	Is the fuse blown-out?	Replace the fuse.	Go to step **2.**
2	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Remove the fuse No. 22 and 31 from fuse & relay box. 3) Check the condition of fuse.	Is the fuse blown-out?	Replace the fuse.	Go to step **3.**
3	**CHECK A/C CONTROL PANEL POWER CIRCUIT.** 1) Replace the A/C control panel. 2) Disconnect the A/C control panel harness connector. 3) Measure the voltage between A/C control panel harness connector terminal and chassis ground after turning the ignition switch to ACC position. ***Connector & terminal*** ***(i88) No. 2 (+) — Chassis ground (–):***	Is the voltage more than 10 V?	Go to step **4.**	Check the harness for open or short circuit between A/C control panel and fuse.
4	**CHECK A/C CONTROL PANEL POWER CIRCUIT.** Measure the voltage between A/C control panel harness connector terminal and chassis ground after turning the ignition switch to ON position. ***Connector & terminal*** ***(i88) No. 1 (+) — Chassis ground (–):***	Is the voltage more than 10 V?	Go to step **5.**	Check the harness for open or short circuit between A/C control panel and fuse.
5	**CHECK A/C CONTROL PANEL GROUND POWER CIRCUIT.** Measure the resistance in harness between A/C control panel and chassis ground after turning the ignition switch to OFF position. ***Connector & terminal*** ***(i88) No. 5 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **6.**	Repair the harness for ground line.
6	**CHECK AUTO A/C CONTROL MODULE POWER CIRCUIT.** Measure the voltage between auto A/C control module connector terminal and chassis ground after turning the ignition switch to OFF position. ***Connector & terminal*** ***(B282) No. 1 (+) — Chassis ground (–):***	Is the voltage more than 10 V?	Go to step **7.**	Check the harness for open or short circuit between auto A/C control module and fuse.
7	**CHECK AUTO A/C CONTROL MODULE POWER CIRCUIT.** Measure the voltage between auto A/C control module connector terminal and chassis ground after turning the ignition switch to ACC position. ***Connector & terminal*** ***(B282) No. 2 (+) — Chassis ground (–):***	Is the voltage more than 10 V?	Go to step **8.**	Check the harness for open or short circuit between auto A/C control module and fuse.
8	**CHECK AUTO A/C CONTROL MODULE POWER CIRCUIT.** Measure the voltage between auto A/C control module connector terminal and chassis ground after turning the ignition switch to ON position. ***Connector & terminal*** ***(B282) No. 9 (+) — Chassis ground (–):***	Is the voltage more than 10 V?	Go to step **9.**	Check the harness for open or short circuit between auto A/C control module and fuse.

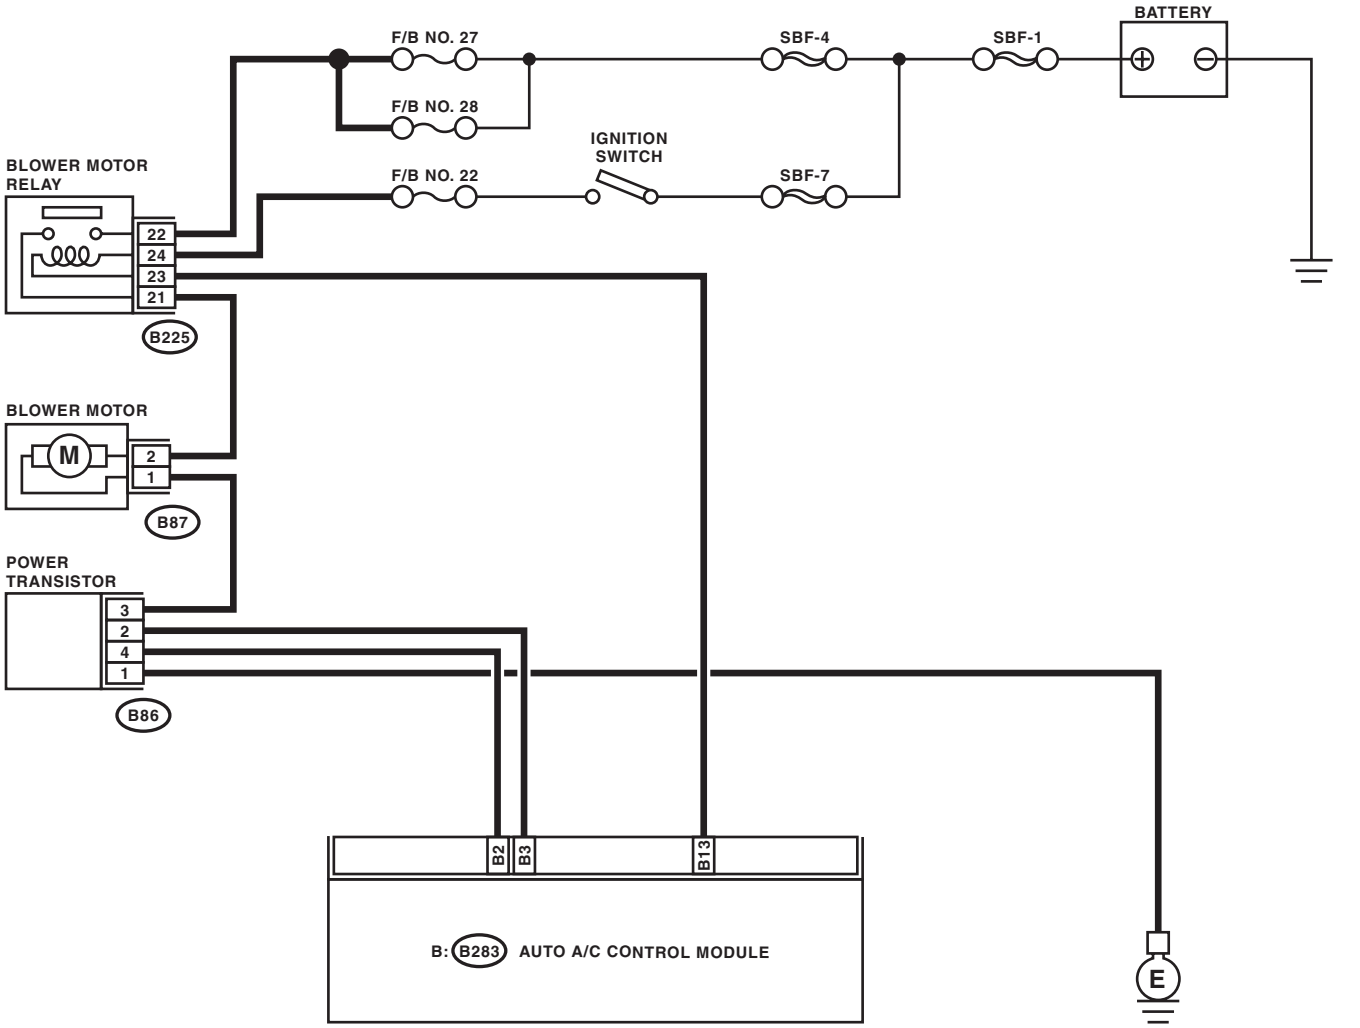
	Step	Check	Yes	No
9	**CHECK AUTO A/C CONTROL MODULE GROUND CIRCUIT.** Measure the resistance in harness between auto A/C control module and chassis ground. ***Connector & terminal*** ***(B282) No. 14, No. 16 — Chassis ground:***	Is the resistance less than 5 Ω?	Go to step **10.**	Repair the harness for ground line.
10	**CHECK COMMUNICATION CIRCUIT.** Measure the resistance in harness between A/C control panel and auto A/C control module. ***Connector & terminal*** ***(i88) No. 3 — (B283) No. 16:*** ***(i88) No. 7 — (B283) No. 15:***	Is the resistance less than1 Ω?	Go to step **11.**	Repair the harness.
11	**CHECK POOR CONTACT.** Check poor contact in auto A/C control module connector.	Is there poor contact in connector?	Repair the connector.	Replace the auto A/C control module.

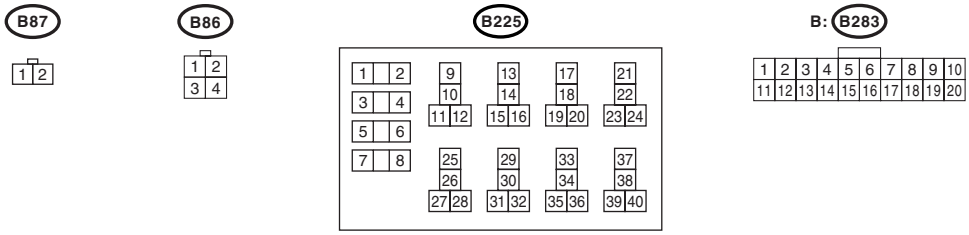
B: BLOWER FAN DOES NOT ROTATE.

TROUBLE SYMPTOM:

- Blower motor does not rotate.
- Blower motor does not rotate in “HI”.

WIRING DIAGRAM:



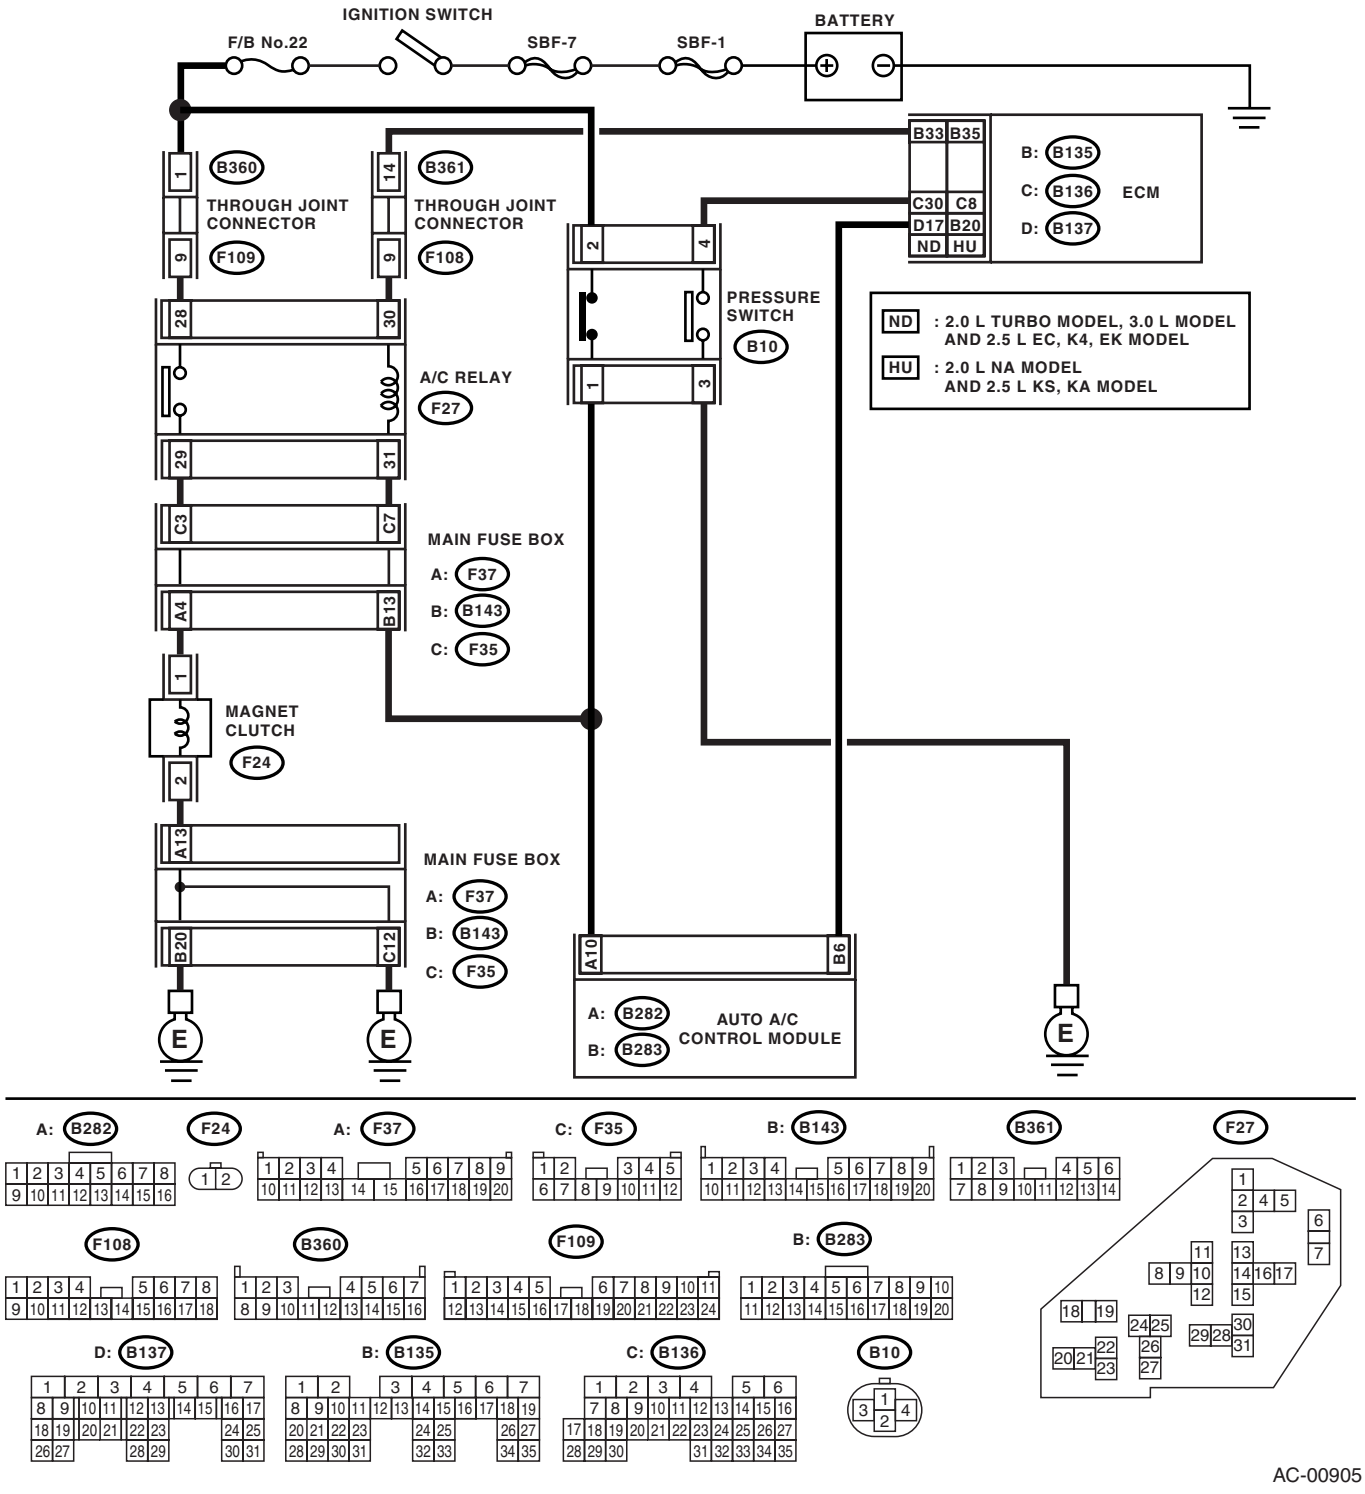


AC-00824

	Step	Check	Yes	No
1	**CHECK FUSE.** 1) Remove the fuse No. 22, 27 and 28 from fuse & relay box. 2) Check the condition of fuse.	Is any fuse blown-out?	Replace the fuse.	Go to step **2.**
2	**CHECK POWER SUPPLY FOR BLOWER MOTOR.** 1) Turn the ignition switch to ON. 2) Turn the blower switch to ON. 3) Measure the voltage between blower motor and chassis ground. ***Connector & terminal*** ***(B87) No. 2 (+) — Chassis ground (–):***	Is the voltage more than 10 V?	Go to step **3.**	Repair the open circuit of blower motor power supply line harness.
3	**CHECK BLOWER MOTOR RELAY.** 1) Turn the ignition switch to OFF. 2) Remove the blower motor relay. 3) Connect the battery positive (+) terminal to terminal No. 24 of blower motor relay, and negative (–) terminal to terminal No. 23. 4) Measure the resistance between terminals No. 21 and 22. ***Terminals*** ***No. 21 — No. 22:***	Is the resistance less than 1 Ω?	Go to step **4.**	Replace the blower motor relay.
4	**CHECK BLOWER MOTOR.** 1) Disconnect the connector from blower motor. 2) Connect the battery positive (+) terminal to terminal No. 2 of blower motor connector, and negative (–) terminal to terminal No. 1. 3) Make sure the blower motor runs.	Does the blower motor run?	Go to step **5.**	Replace the blower motor.
5	**CHECK POOR CONTACT.** Check poor contact in auto A/C control module connector.	Is there poor contact in connector?	Repair the connector.	Replace the auto A/C control module.

C: COMPARTMENT TEMPERATURE DOES NOT CHANGE, OR A/C SYSTEM DOES NOT RESPOND PROMPTLY.

WIRING DIAGRAM:



AC-00905

	Step	Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Remove the fuse No. 22 from fuse & relay box. 3) Check the condition of fuse.	Is the fuse blown-out?	Replace the fuse.	Go to step **2.**
2	**CHECK SIGNAL TO A/C RELAY AND A/C CONTROL MODULE.** 1) Disconnect the A/C relay and auto A/C control module harness connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between A/C relay connector terminal and chassis ground. 4) Measure the voltage between auto A/C control module harness connector terminal and chassis ground. ***Connector & terminal*** ***(F27) No. 31 (+) — Chassis ground (−):*** ***(B282) No. 10 (+) — Chassis ground (−):***	Is the voltage more than 10 V?	Go to step **5.**	Go to step **3.**
3	**CHECK POWER SUPPLY FOR PRESSURE SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the pressure switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between pressure switch harness connector terminal and chassis ground. ***Connector & terminal*** ***(B10) No. 2 (+) — Chassis ground (−):***	Is the voltage more than 10 V?	Go to step **4.**	Check the harness for open or short circuit between fuse and pressure switch.
4	**CHECK HARNESS BETWEEN PRESSURE SWITCH AND A/C RELAY, AUTO A/C CONTROL MODULE.** 1) Turn the ignition switch to OFF. 2) Measure the resistance in harness between pressure switch connector and A/C relay connector. 3) Measure the resistance in harness between pressure switch connector and auto A/C control module connector. ***Connector & terminal*** ***(B10) No. 1 — (F27) No. 31:*** ***(B10) No. 1 — (B282) No. 10:***	Is the resistance less than 1 Ω?	Check the pressure switch. <Ref. to AC-40, INSPECTION, Pressure Switch (Triple Pressure Switch).>	Repair the harness.
5	**CHECK POWER SUPPLY FOR A/C RELAY.** Measure the voltage between A/C relay connector terminal and chassis ground. ***Connector & terminal*** ***(F27) No. 28 (+) — Chassis ground (−):***	Is the voltage more than 10 V?	Go to step **6.**	Check the harness for open or short circuit between fuse and A/C relay.
6	**CHECK A/C RELAY.** Check the A/C relay. <Ref. to AC-39, INSPECTION, Relay and Fuse.>	Is malfunction found in A/C relay?	Go to step **7.**	Replace the A/C relay.

	Step	Check	Yes	No
7	**CHECK A/C ON SIGNAL.** 1) Turn the ignition switch to OFF. 2) Connect the A/C relay and all disconnected connectors. 3) Start the engine and turn the A/C switch to ON. 4) Turn the temperature control dial at maximum cool position. 5) Measure the voltage between auto A/C control module harness connector terminal and chassis ground. ***Connector & terminal*** ***(B283) No. 6 (+) — Chassis ground (–):***	Is the voltage more than 5.5 V?	Go to step **9.**	Go to step **8.**
8	**CHECK HARNESS BETWEEN AUTO A/C CONTROL MODULE AND ECM.** 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of auto A/C control module and ECM. 3) Measure the resistance in harness between auto A/C control module connector and ECM connector. ***Connector & terminal*** ***2.0 L turbo model, 3.0 L model and 2.5 L EC, K4, EK model*** ***(B283) No. 6 — (B137) No. 17:*** ***2.0 L non-turbo model and 2.5 L KS, KA model*** ***(B283) No. 6 — (B135) No. 20:***	Is the resistance less than 1 Ω?	Replace the auto A/C control module.	Repair the harness.
9	**CHECK MAGNET CLUTCH ON SIGNAL.** 1) Stop the engine and turn the A/C switch to OFF. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM connector terminal and chassis ground. ***Connector & terminal*** ***2.0 L turbo model, 3.0 L model and 2.5 L EC, K4, EK model*** ***(B135) No. 33 (+) — Chassis ground (–):*** ***2.0 L non-turbo model and 2.5 L KS, KA model*** ***(B135) No. 35 (+) — Chassis ground (–):***	Is the voltage more than 10 V?	Go to step **10.**	Check the harness for open or short circuit between A/C relay and ECM.
10	**CHECK MAGNET CLUTCH ON SIGNAL.** 1) Start the engine and turn the A/C switch to ON. 2) Turn the temperature control dial at maximum cool position. 3) Measure the voltage between ECM connector terminal and chassis ground. ***Connector & terminal*** ***2.0 L turbo model, 3.0 L model and 2.5 L EC, K4, EK model*** ***(B135) No. 33 (+) — Chassis ground (–):*** ***2.0 L non-turbo model and 2.5 L KS, KA model*** ***(B135) No. 35 (+) — Chassis ground (–):***	Is the voltage 0 V?	Go to step **11.**	Replace the ECM.

	Step	Check	Yes	No
11	**CHECK POWER SUPPLY FOR MAGNET CLUTCH.** 1) Stop the engine and turn the A/C switch to OFF. 2) Disconnect the harness connector of magnet clutch. 3) Start the engine and turn the A/C switch to ON. 4) Turn the temperature control dial at maximum cool position. 5) Measure the voltage between magnet clutch harness connector terminal and chassis ground. ***Connector & terminal*** ***(F24) No. 1 (+) — Chassis ground (−):***	Is the voltage more than 10 V?	Go to step **12.**	Check the harness for open or short circuit between A/C relay and magnet clutch.
12	**CHECK HARNESS BETWEEN AUTO A/C CONTROL MODULE AND ECM.** 1) Stop the engine and turn the A/C switch to OFF. 2) Measure the resistance between magnet clutch harness connector terminal and chassis ground. ***Connector & terminal*** ***(F24) No. 2 — Chassis ground:***	Is the resistance less than 1 Ω?	Check the compressor. <Ref. to AC-33, INSPECTION, Compressor.>	Repair the harness.

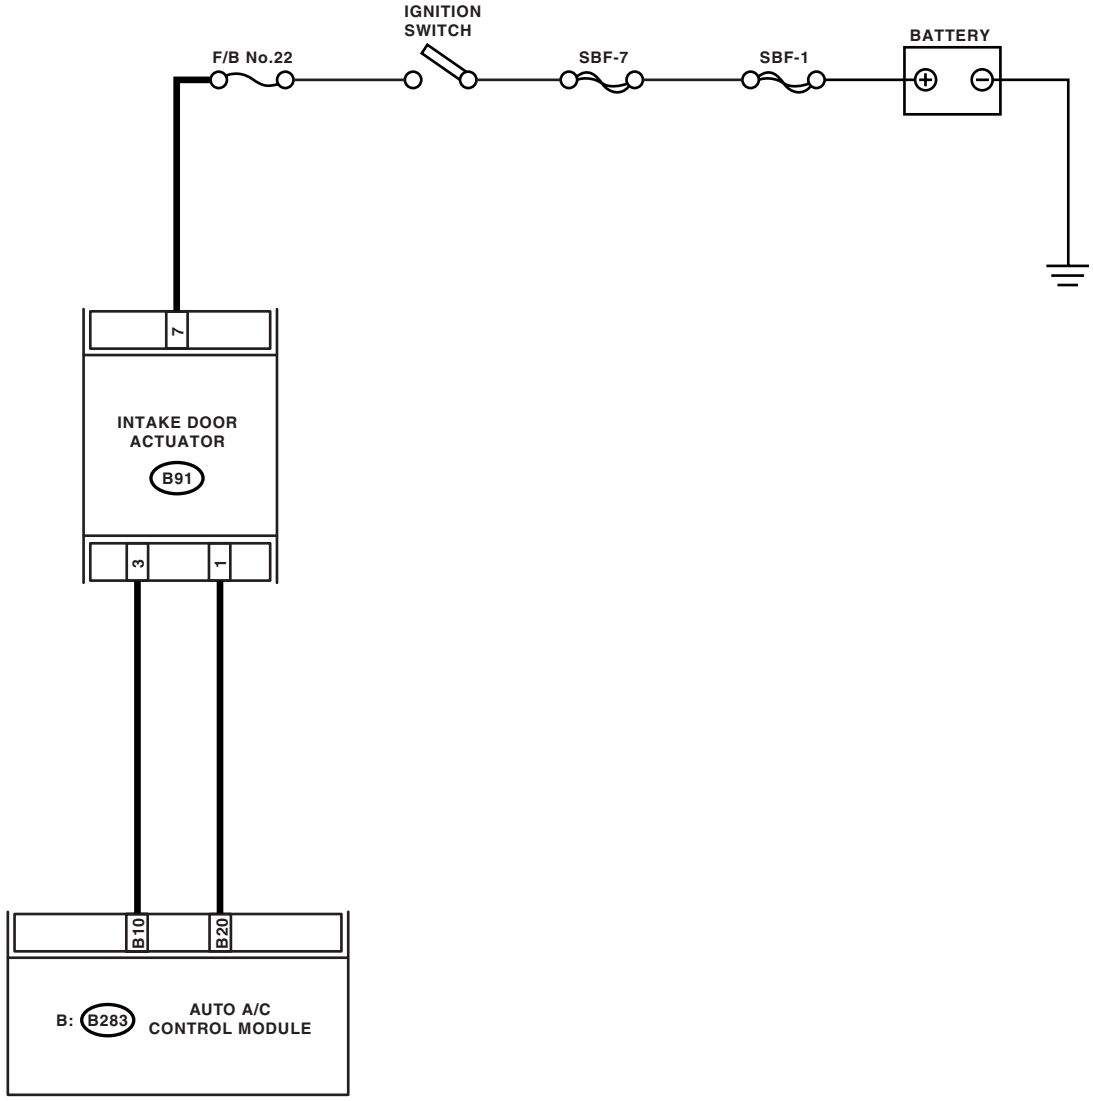
7. Diagnostic Procedure for Actuators

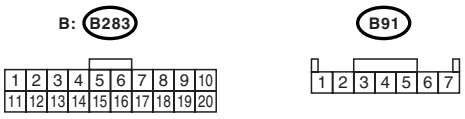
A: INTAKE DOOR ACTUATOR

TROUBLE SYMPTOM:

FRESH/RECIRC mode is not changed.

WIRING DIAGRAM:





AC-00826

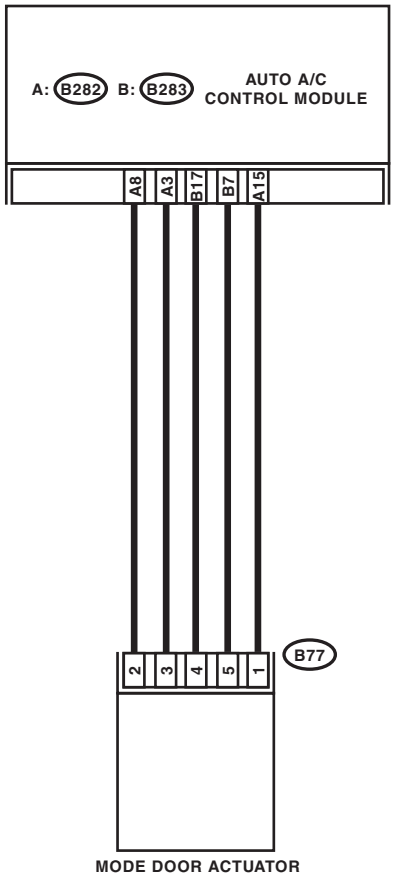
	Step	Check	Yes	No
1	**CHECK POWER SUPPLY FOR INTAKE DOOR ACTUATOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the intake door actuator connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between intake door actuator connector and chassis ground. ***Connector & terminal*** ***(B91) No. 7 (+) — Chassis ground (–):***	Is the voltage 7 V (at normal temperature)?	Go to step **2.**	Check the harness for open or short circuit between intake door actuator and fuse.
2	**CHECK HARNESS BETWEEN AUTO A/C CONTROL MODULE AND INTAKE DOOR ACTUATOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the auto A/C control module connector. 3) Measure the resistance between intake door actuator connector and auto A/C control module connector. ***Connector & terminal*** ***(B283) No. 10 — (B91) No. 3:*** ***(B283) No. 20 — (B91) No. 1:***	Is the resistance less than 1 Ω?	Go to step **3.**	Repair the harness between auto A/C control module and intake door actuator.
3	**CHECK OPERATION OF INTAKE DOOR ACTUATOR.** 1) Connect the intake door actuator connector. 2) Ground the auto A/C control module connector with a suitable wire. 3) Turn the ignition switch to ON, and check the operation of intake door actuator. ***Connector & terminal*** ***(B283) No. 10 — Chassis ground:***	Does the actuator move to the FRESH side?	Go to step **4.**	Replace the intake door actuator.
4	**CHECK OPERATION OF INTAKE DOOR ACTUATOR.** 1) Turn the ignition switch to OFF. 2) Ground the auto A/C control module connector with a suitable wire. 3) Turn the ignition switch to ON, and check the operation of intake door actuator. ***Connector & terminal:*** ***(B283) No. 20 — Chassis ground:***	Does the actuator move to the RECIRC side?	Replace the auto A/C control module.	Replace the intake door actuator.

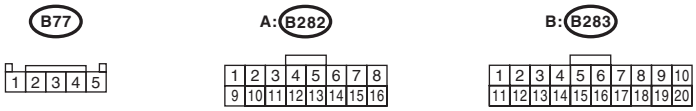
B: MODE DOOR ACTUATOR

TROUBLE SYMPTOM:

Air flow outlet is not changed.

WIRING DIAGRAM:





AC-00827

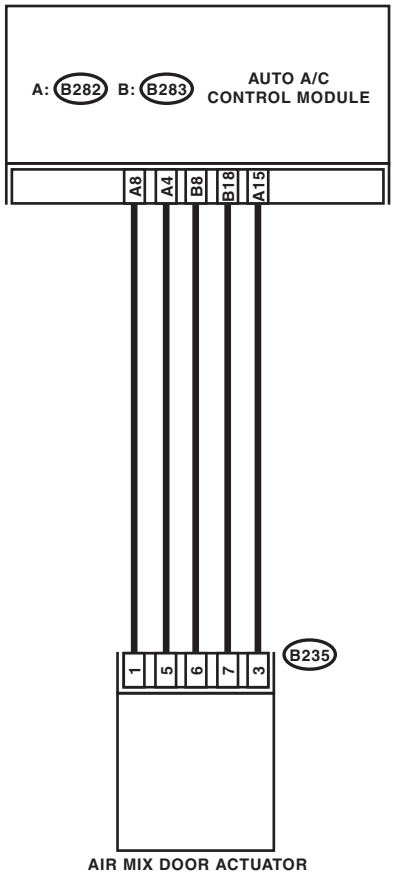
	Step	Check	Yes	No
1	**CHECK POWER SUPPLY FOR MODE DOOR ACTUATOR POSITION SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the mode door actuator connector. 3) Turn the ignition switch and AUTO switch to ON. 4) Measure the voltage between auto A/C control module connector terminals. ***Connector & terminal*** ***(B282) No. 8 (+) — (B282) No. 15 (–):***	Is the voltage approx. 5 V?	Go to step **2.**	Replace the auto A/C control module.
2	**CHECK POWER SUPPLY FOR MODE DOOR ACTUATOR.** Measure the voltage between auto A/C control module connector and chassis ground after turning the air flow control switch to FACE position. ***Connector & terminal*** ***(B283) No. 7 (+) — Chassis ground (–):***	Is the voltage 7 V (at normal temperature)?	Go to step **3.**	Replace the auto A/C control module.
3	**CHECK POWER SUPPLY FOR MODE DOOR ACTUATOR.** Measure the voltage between auto A/C control module connector and chassis ground after turning the air flow control switch to DEF position. ***Connector & terminal*** ***(B283) No. 17 (+) — Chassis ground (–):***	Is the voltage 7 V (at normal temperature)?	Go to step **4.**	Replace the auto A/C control module.
4	**CHECK HARNESS BETWEEN AUTO A/C CONTROL MODULE AND MODE DOOR ACTUATOR.** 1) Turn the A/C and ignition switch to OFF. 2) Disconnect the auto A/C control module connector. 3) Measure the resistance between auto A/C control module and mode door actuator connector. ***Connector & terminal*** ***(B77) No. 1 — (B282) No. 15:*** ***(B77) No. 2 — (B282) No. 8:*** ***(B77) No. 3 — (B282) No. 3:*** ***(B77) No. 4 — (B283) No. 17:*** ***(B77) No. 5 — (B283) No. 7:***	Is the resistance less than 1 Ω?	Go to step **5.**	Repair the harness between auto A/C control module and mode door actuator.
5	**CHECK MODE DOOR ACTUATOR POSITION SWITCH SIGNAL.** 1) Connect the connector of auto A/C control module and mode door actuator. 2) Turn the ignition switch and AUTO switch to ON. 3) Check the voltage between auto A/C control module connector terminals while changing the mode between DEF and FACE. ***Connector & terminal*** ***(B282) No. 3 (+) — (B282) No. 15 (–):***	Does the voltage change between 1 (DEF) — 4 (FACE) V?	Go to step **6.**	Replace the mode door actuator.
6	**CHECK POOR CONTACT.** Check poor contact in auto A/C control module and connector.	Is there poor contact in connector?	Repair connector.	Replace the auto A/C control module.

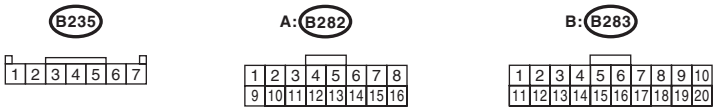
C: AIR MIX DOOR ACTUATOR

TROUBLE SYMPTOM:

Outlet air temperature does not change.

WIRING DIAGRAM:





AC-00828

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY FOR AIR MIX DOOR ACTUATOR POSITION SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the air mix door actuator connector. 3) Turn the ignition switch and AUTO switch to ON. 4) Measure the voltage between auto A/C control module connector terminals. ***Connector & terminal*** ***(B282) No. 8 (+) — (B282) No. 15 (–):***	Is the voltage approx. 5 V?	Go to step **2.**	Replace the auto A/C control module.
2	**CHECK POWER SUPPLY FOR AIR MIX DOOR ACTUATOR.** Measure the voltage between auto A/C control module connector and chassis ground after turning the temperature control dial to maximum COOL position. ***Connector & terminal*** ***(B283) No. 8 (+) — Chassis ground (–):***	Is the voltage 7 V (at normal temperature)?	Go to step **3.**	Replace the auto A/C control module.
3	**CHECK POWER SUPPLY FOR AIR MIX DOOR ACTUATOR.** Measure the voltage between auto A/C control module connector and chassis ground after turning the temperature control dial to maximum HOT position. ***Connector & terminal*** ***(B283) No. 18 (+) — Chassis ground (–):***	Is the voltage 7 V (at normal temperature)?	Go to step **4.**	Replace the auto A/C control module.
4	**CHECK HARNESS BETWEEN AUTO A/C CONTROL MODULE AND AIR MIX DOOR ACTUATOR.** 1) Turn the A/C and ignition switch to OFF. 2) Disconnect the auto A/C control module connector. 3) Measure the resistance between auto A/C control module and air mix door actuator connector. ***Connector & terminal*** ***(B235) No. 1 — (B282) No. 8:*** ***(B235) No. 3 — (B282) No. 15:*** ***(B235) No. 5 — (B282) No. 4:*** ***(B235) No. 6 — (B283) No. 8:*** ***(B235) No. 7 — (B283) No. 18:***	Is the resistance less than 1 Ω?	Go to step **5.**	Repair the harness between auto A/C control module and air mix door actuator.
5	**CHECK AIR MIX DOOR ACTUATOR POSITION SWITCH SIGNAL.** 1) Connect the connector of auto A/C control module and air mix door actuator. 2) Turn the ignition switch and AUTO switch to ON. 3) Check the voltage between auto A/C control module connector terminals while changing the setting temperature between maximum COOL and maximum HOT. ***Connector & terminal*** ***(B282) No. 4 (+) — (B282) No. 15 (–):***	Does the voltage change between 1 (Max. HOT) — 4 (Max. COOL) V?	Go to step **6.**	Replace the air mix door actuator.
6	**CHECK POOR CONTACT.** Check poor contact in auto A/C control module and connector.	Is there poor contact in connector?	Repair the connector.	Replace the auto A/C control module.

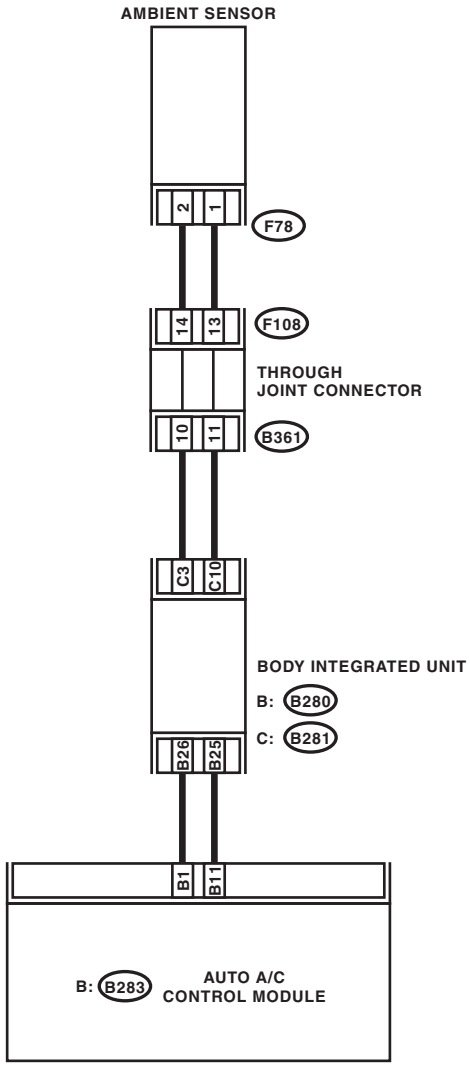
8. Diagnostic Procedure for Sensors

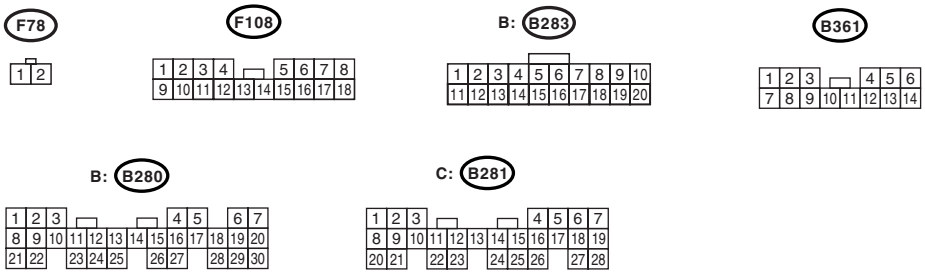
A: AMBIENT SENSOR

TROUBLE SYMPTOM:

Fan speed is not switched when the fan speed control dial is in AUTO position.

WIRING DIAGRAM:





AC-00829

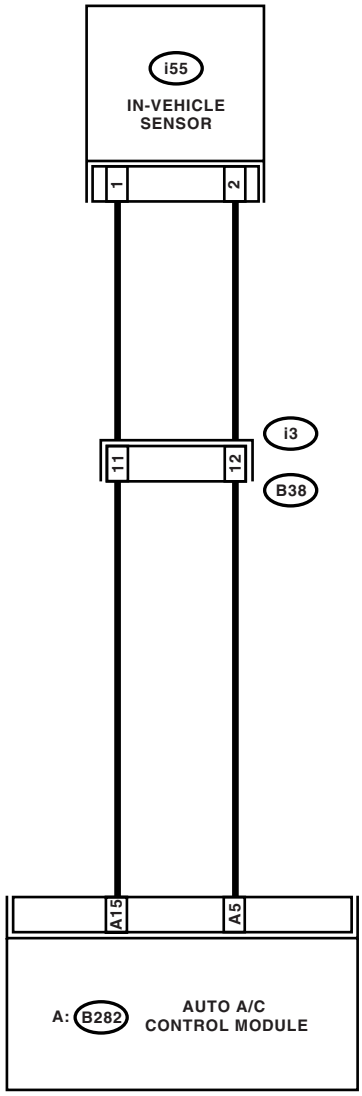
	Step	Check	Yes	No
1	**CHECK AMBIENT SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ambient sensor. 3) Measure the resistance between connector terminals of ambient sensor. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance approx. 2.2 kΩ at 25°C (77°F)?	Go to step **2.**	Replace the ambient sensor.
2	**CHECK INPUT SIGNAL FOR AMBIENT SENSOR.** 1) Turn the ignition to ON. 2) Measure the voltage between connector (F78) terminals. ***Connector & terminal*** ***(F78) No. 1 (+) — No. 2 (–):***	Is the voltage approx. 5 V?	Go to step **6.**	Go to step **3.**
3	**CHECK OUTPUT SIGNAL OF BODY INTEGRATED UNIT.** 1) Turn the ignition switch to OFF. 2) Draw out the body integrated unit. 3) Disconnect the connector from ambient sensor. 4) Turn the ignition switch to ON. 5) Measure the voltage between connector terminals of body integrated unit. ***Connector & terminal*** ***(B281) No. 3 (+) — No. 10 (–):***	Is the voltage approx. 5 V?	Go to step **4.**	Go to step **6.**
4	**CHECK HARNESS CONNECTOR BETWEEN BODY INTEGRATED UNIT AND AMBIENT SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from body integrated unit. 3) Measure the resistance in harness between body integrated unit and ambient sensor. ***Connector & terminal*** ***(F78) No. 1 — (B281) No. 10:***	Is the resistance less than 1 Ω?	Go to step **5.**	Repair the open circuit in harness between body integrated unit and ambient sensor.
5	**CHECK HARNESS CONNECTOR BETWEEN BODY INTEGRATED UNIT AND AMBIENT SENSOR.** Measure the resistance in harness between body integrated unit and ambient sensor. ***Connector & terminal*** ***(F78) No. 2 — (B281) No. 3:***	Is the resistance less than 1 Ω?	Go to step **6.**	Repair the open circuit in harness between body integrated unit and ambient sensor.
6	**CHECK COMMUNICATION ERROR DISPLAY.** 1) Connect the connectors of body integrated unit and ambient sensor to original position. 2) Check “Er xx” is indicated on the Odo/Trip meter in combination meter after turning the ignition switch to ON.	Is the error display “Er xx” indicated?	Check the communication circuit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **7.**
7	**CHECK POOR CONTACT.** Check poor contact in auto A/C control module connector.	Is there poor contact in connector?	Repair the connector.	Replace the A/C control module.

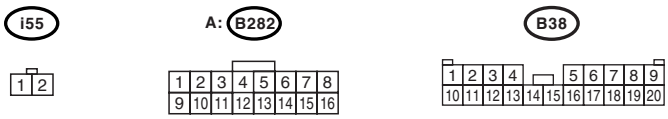
B: IN-VEHICLE SENSOR

TROUBLE SYMPTOM:

Blower fan speed, outlet port and inlet port do not change after turning the AUTO switch to ON.

WIRING DIAGRAM:



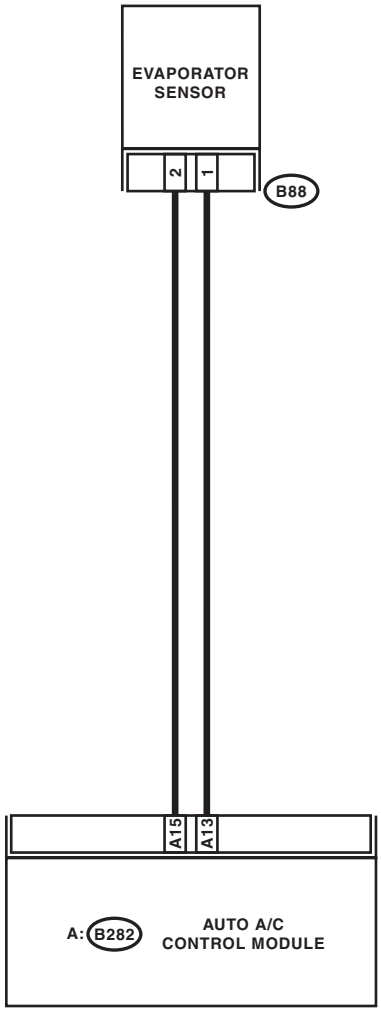


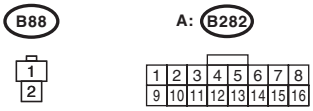
AC-00830

	Step	Check	Yes	No
1	**CHECK IN-VEHICLE SENSOR.** 1) Turn the ignition switch to OFF. 2) Remove the driver's side lower cover. 3) Disconnect the connector from in-vehicle sensor. 4) Measure the resistance between connector terminals of in-vehicle sensor. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance approx. 2.7 kΩ at 20°C (68°F)?	Go to step **2.**	Replace the in-vehicle sensor.
2	**CHECK INPUT SIGNAL FOR IN-VEHICLE SENSOR.** 1) Turn the ignition switch to ON. 2) Measure the voltage between in-vehicle sensor harness connector terminal and chassis ground. ***Connector & terminal*** ***(i55) No. 2 (+) — No. 1 (−):***	Is the voltage approx. 5 V?	Go to step **6.**	Go to step **3.**
3	**CHECK AUTO A/C CONTROL MODULE OUTPUT SIGNAL.** 1) Turn the ignition switch to OFF. 2) Remove the auto A/C control module. 3) Turn the ignition switch to ON. 4) Measure the voltage between connector terminals of auto A/C control module. ***Connector & terminal*** ***(B282) No. 5 (+) — (B282) No. 15 (−):***	Is the voltage approx. 5 V?	Go to step **4.**	Go to step **6.**
4	**CHECK HARNESS BETWEEN AUTO A/C CONTROL MODULE AND IN-VEHICLE SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from auto A/C control module. 3) Measure the resistance in harness between auto A/C control module and in-vehicle sensor. ***Connector & terminal*** ***(i55) No. 2 — (B282) No. 5:***	Is the resistance less than 1 Ω?	Go to step **5.**	Repair the harness between auto A/C control module and in-vehicle sensor.
5	**CHECK HARNESS BETWEEN AUTO A/C CONTROL MODULE AND IN-VEHICLE SENSOR.** Measure the resistance in harness between auto A/C control module and in-vehicle sensor. ***Connector & terminal*** ***(i55) No. 1 — (B282) No. 15:***	Is the resistance less than 1 Ω?	Go to step **6.**	Repair the harness between auto A/C control module and in-vehicle sensor.
6	**CHECK POOR CONTACT.** Check poor contact in auto A/C control module connector.	Is there poor contact in connector?	Repair the connector.	Replace the auto A/C control module.

C: EVAPORATOR SENSOR

WIRING DIAGRAM:





AC-00831

	Step	Check	Yes	No
1	**CHECK EVAPORATOR SENSOR** 1) Turn the ignition switch to OFF. 2) Remove the glove box. 3) Disconnect the connector from evaporator sensor. 4) Measure the resistance between connector terminals of evaporator sensor. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance approx. 3.3 kΩ at 20°C (68°F)?	Go to step **2.**	Replace the evaporator sensor.
2	**CHECK INPUT SIGNAL FOR EVAPORATOR SENSOR.** 1) Turn the ignition switch to ON. 2) Measure the voltage between connector (B88) terminal and chassis ground. ***Connector & terminal*** ***(B88) No. 1 (+) — No. 2 (–):***	Is the voltage approx. 5 V?	Go to step **6.**	Go to step **3.**
3	**CHECK AUTO A/C CONTROL MODULE OUTPUT SIGNAL.** 1) Turn the ignition switch to OFF. 2) Remove the auto A/C control module. 3) Turn the ignition switch to ON. 4) Measure the voltage between connector terminals of auto A/C control module. ***Connector & terminal*** ***(B282) No. 13 (+) —No. 15 (–):***	Is the voltage approx. 5 V?	Go to step **4.**	Go to step **6.**
4	**CHECK HARNESS CONNECTOR BETWEEN AUTO A/C CONTROL MODULE AND EVAPORATOR SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from auto A/C control module. 3) Measure the resistance in harness between auto A/C control module and evaporator sensor. ***Connector & terminal*** ***(B88) No. 2 — (B282) No. 15:***	Is the resistance less than 1 Ω?	Go to step **5.**	Repair the open circuit in harness between auto A/C control module and evaporator sensor.
5	**CHECK HARNESS CONNECTOR BETWEEN AUTO A/C CONTROL MODULE AND EVAPORATOR SENSOR.** Measure the resistance in harness between auto A/C control module and evaporator sensor. ***Connector & terminal*** ***(B88) No. 1 — (B282) No. 13:***	Is the resistance less than 1 Ω?	Go to step **6.**	Repair the open circuit in harness between auto A/C control module and evaporator sensor.
6	**CHECK POOR CONTACT.** Check poor contact in auto A/C control module connector.	Is there poor contact in connector?	Repair the connector.	Replace the auto A/C control module.

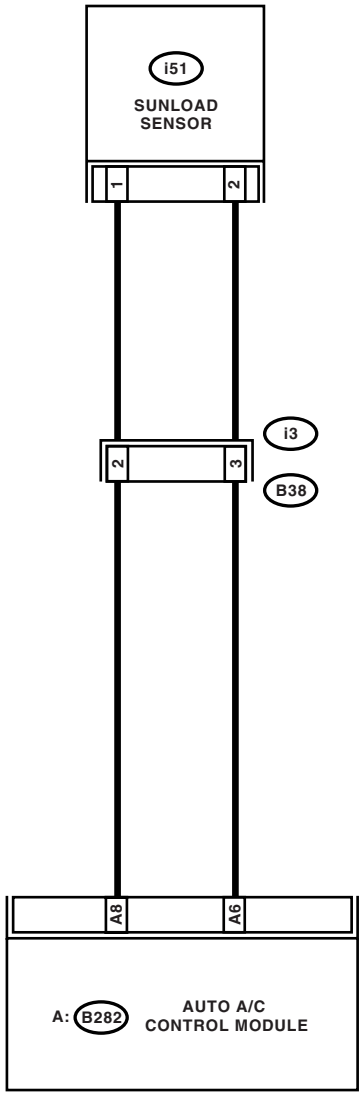
D: SUNLOAD SENSOR

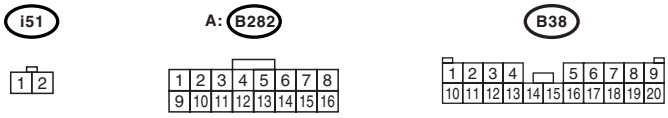
TROUBLE SYMPTOM:

- Sensor identifies that sunlight is at maximum. Then, A/C system is controlled to COOL side.
- Sensor identifies that sunlight is at minimum. Then, A/C system is controlled to HOT side.

NOTE:
When the sunload sensor check is conducted indoors or in the shade, open circuit might be indicated. Always check the sunload sensor at the place where the sun shines directly on it.

WIRING DIAGRAM:





AC-00832

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY VOLTAGE FOR SUNLOAD SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from sunload sensor. 3) Turn the ignition switch to ON. 4) Measure the power supply voltage for sunload sensor. ***Connector & terminal*** ***(i51) No. 1 (+) — No. 2 (–):***	Is the voltage approx. 5 V?	Go to step **4.**	Go to step **2.**
2	**CHECK HARNESS CONNECTOR BETWEEN AUTO A/C CONTROL MODULE AND SUNLOAD SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from auto A/C control module. 3) Measure the resistance in harness between auto A/C control module and sunload sensor. ***Connector & terminal*** ***(i51) No. 2 — (B282) No. 6:***	Is the resistance less than 1 Ω?	Go to step **3.**	Repair the harness between auto A/C control module and sunload sensor.
3	**CHECK HARNESS CONNECTOR BETWEEN AUTO A/C CONTROL MODULE AND SUNLOAD SENSOR.** Measure the resistance in harness between auto A/C control module and sunload sensor. ***Connector & terminal*** ***(i51) No. 1 — (B282) No. 8:***	Is the resistance less than 1 Ω?	Go to step **4.**	Repair the harness between auto A/C control module and sunload sensor.
4	**CHECK INPUT VOLTAGE FOR AUTO A/C CONTROL MODULE.** 1) Connect the connectors of sunload sensor and auto A/C control module. 2) Turn the ignition switch to ON. 3) Measure the voltage between connector terminals of auto A/C control module. ***Connector & terminal*** ***(B282) No. 8 (+) — (B282) No. 6 (–):***	Is the voltage approx. 2.5 V?	Go to step **5.**	Replace the sunload sensor.
5	**CHECK POOR CONTACT.** Check poor contact in auto A/C control module connector.	Is there poor contact in connector?	Repair the connector.	Replace the auto A/C control module.

9. Diagnostics with Phenomenon

A: INSPECTION

Symptom	Problem parts
A/C system fails to operate.	• Fuse (M/B No. 8, F/B No. 22, 31) • Connector (Poor contact) • Ground • Auto A/C control module • Blower fan motor • Blower fan relay • A/C Relay • Compressor (Magnet clutch) • Evaporator sensor
Fuse is blown out.	• Fuse (M/B No. 8, F/B No. 22, 31) • Connector (Poor contact)
Illumination cannot dim.	• Fuse (M/B No. 8, F/B No. 22, 31) • Connector (Poor contact) • Auto A/C control module
Blower fan does not rotate or fan speed cannot be controlled.	• Fuse (M/B No. 8, F/B No. 22, 31) • Connector (Poor contact) • Ground • Auto A/C control module • Blower fan motor • Blower fan relay
Unable to switch suction vents.	• Connector (Poor contact) • Auto A/C control module • Intake door actuator
Unable to switch blow vents.	• Connector (Poor contact) • Auto A/C control module • Mode door actuator
Compartment temperature does not increase. (No hot air is discharged.)	• Connector (Poor contact) • Auto A/C control module • Air mix door actuator • In-vehicle sensor, ambient sensor, evaporator sensor and sunload sensor • In-vehicle sensor aspirator hose
Compartment temperature does not decrease. (No cool air is discharged.)	• Connector (Poor contact) • Auto A/C control module • Air mix door actuator • A/C Relay • Compressor (Magnet clutch) • Radiator fan motor • Radiator fan relay • In-vehicle sensor, ambient sensor, evaporator sensor and sunload sensor • In-vehicle sensor aspirator hose
Compartment temperature is higher or lower than setting temperature.	• Auto A/C control module • Air mix door actuator • In-vehicle sensor, ambient sensor, evaporator sensor and sunload sensor • In-vehicle sensor aspirator hose
Compartment temperature does not quickly respond to setting temperature.	• Air mix door actuator • In-vehicle sensor, ambient sensor, evaporator sensor and sunload sensor • In-vehicle sensor aspirator hose
Radiator fan does not rotate during A/C operation.	• Radiator fan motor • Radiator fan relay

BODY SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

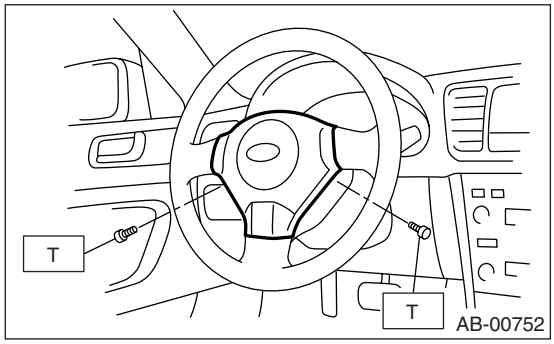
1. General Description

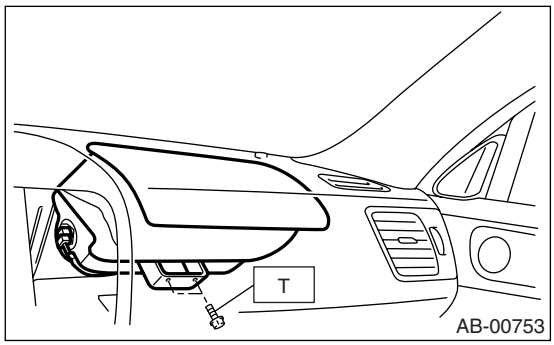
A: COMPONENT

1. DRIVER'S AIRBAG MODULE



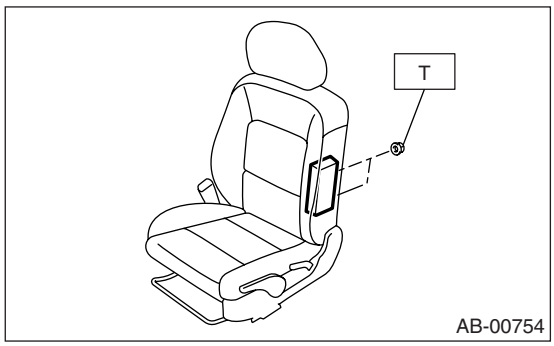
Tightening torque:
10 N·m (1.0 kgf-m, 7.2 ft-lb)

2. PASSENGER'S AIRBAG MODULE



Tightening torque:
7.4 N·m (0.75 kgf-m, 5.5 ft-lb)

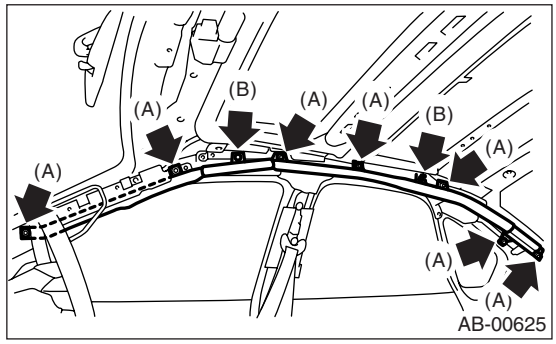
3. SIDE AIRBAG MODULE



Tightening torque:
6 N·m (0.61 kgf-m, 4.4 ft-lb)

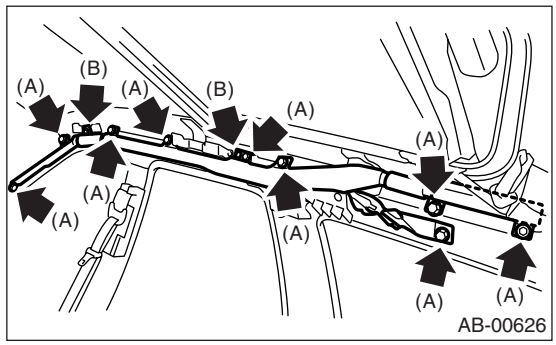
4. CURTAIN AIRBAG MODULE

• Sedan model



(A) Bolt
(B) Clip

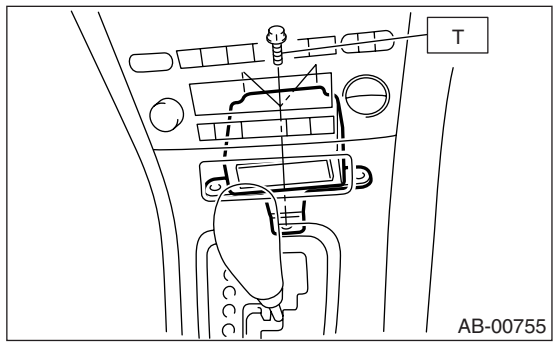
• Wagon model



(A) Bolt
(B) Clip

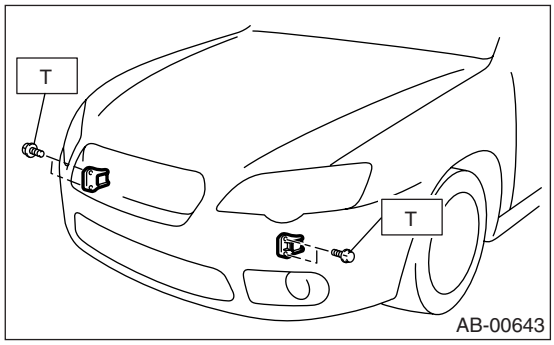
Tightening torque:
7.5 N·m (0.77 kgf-m, 5.5 ft-lb)

5. AIRBAG CONTROL MODULE



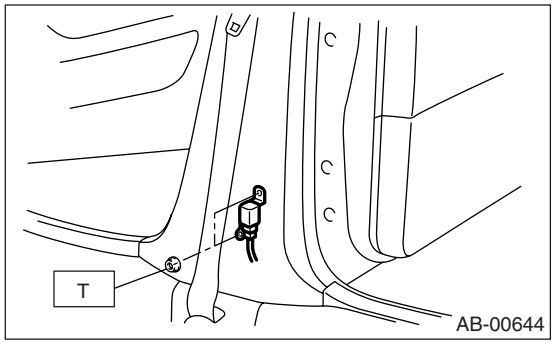
Tightening torque:
25 N·m (2.5 kgf-m, 18.1 ft-lb)

6. FRONT SUB SENSOR



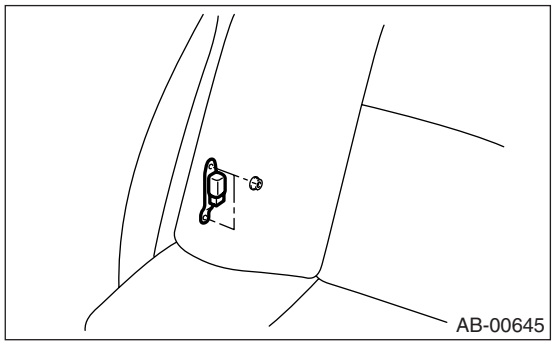
Tightening torque:
13 N·m (1.32 kgf-m, 9.6 ft-lb)

7. SIDE AIRBAG SENSOR



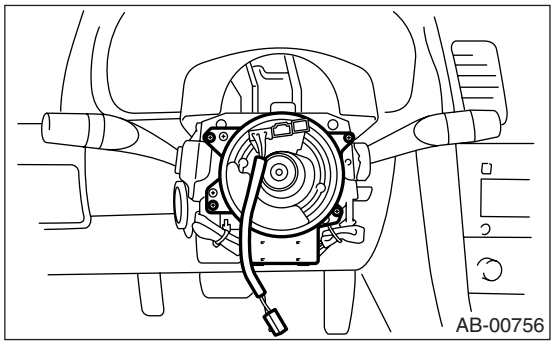
Tightening torque:
7.4 N·m (0.75 kgf-m, 5.5 ft-lb)

8. CURTAIN AIRBAG SENSOR

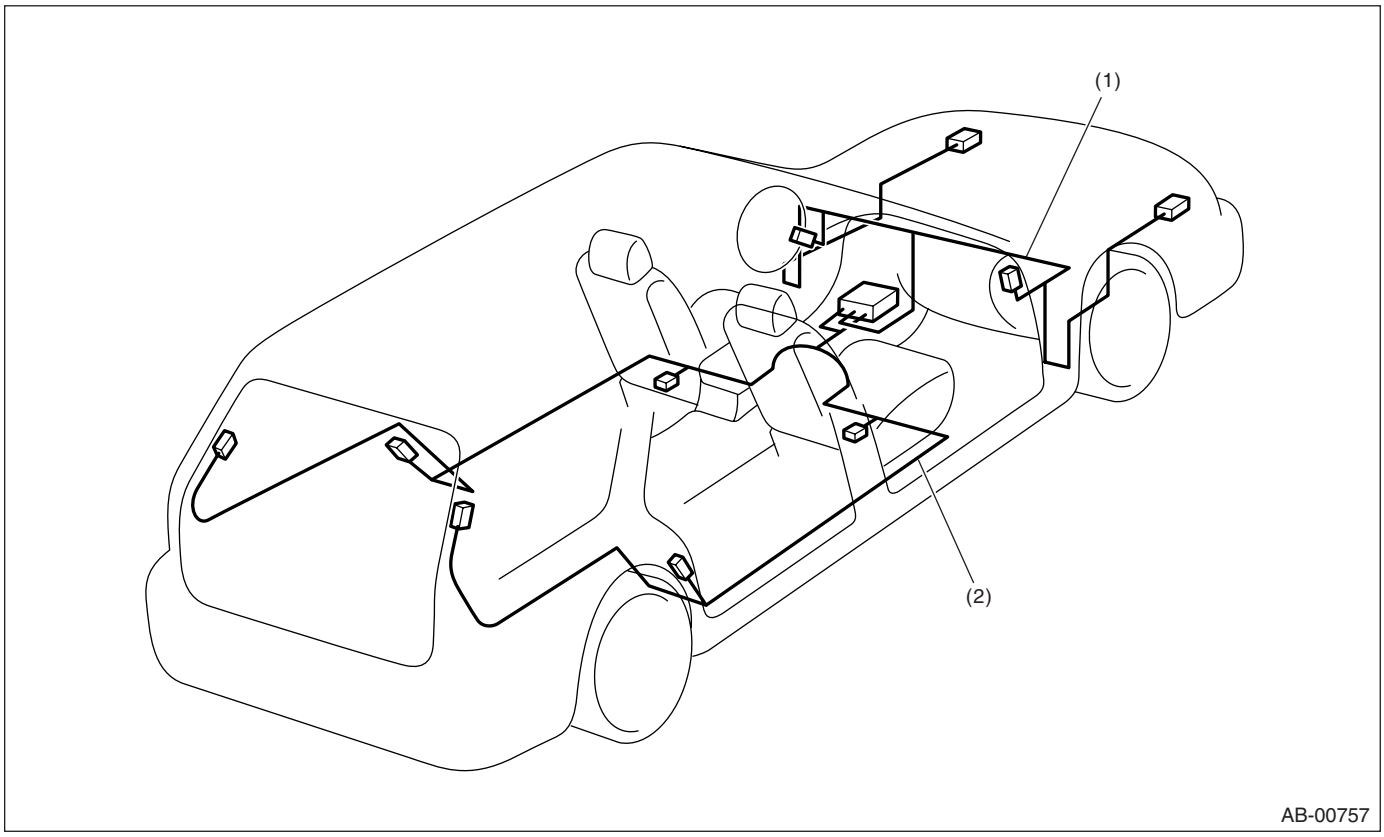


Tightening torque:
7.4 N·m (0.75 kgf-m, 5.5 ft-lb)

9. STEERING ROLL CONNECTOR



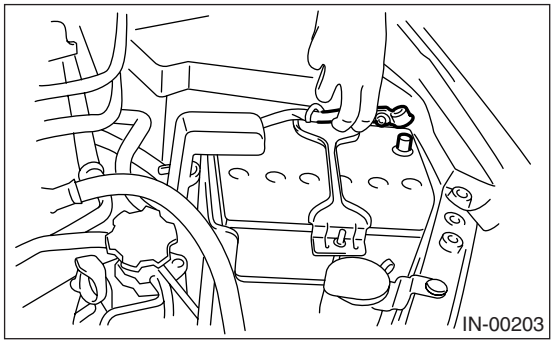
10.AIRBAG HARNESS



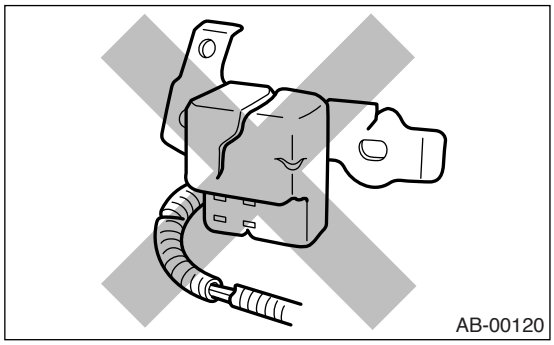
(1) Airbag main harness (2) Airbag rear harness

B: CAUTION

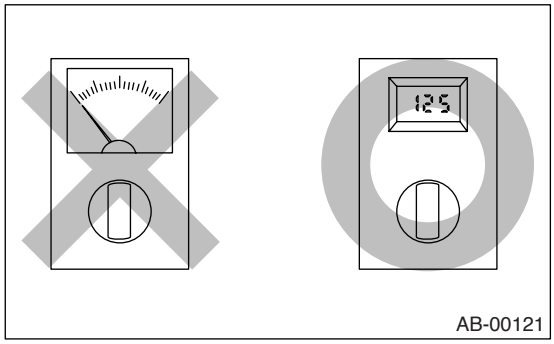
• When servicing a vehicle, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for more than 20 seconds before starting work.
• The airbag system is fitted with a backup power source. If the airbag system is serviced within 20 seconds after the ground cable is disconnected, it may inflate.



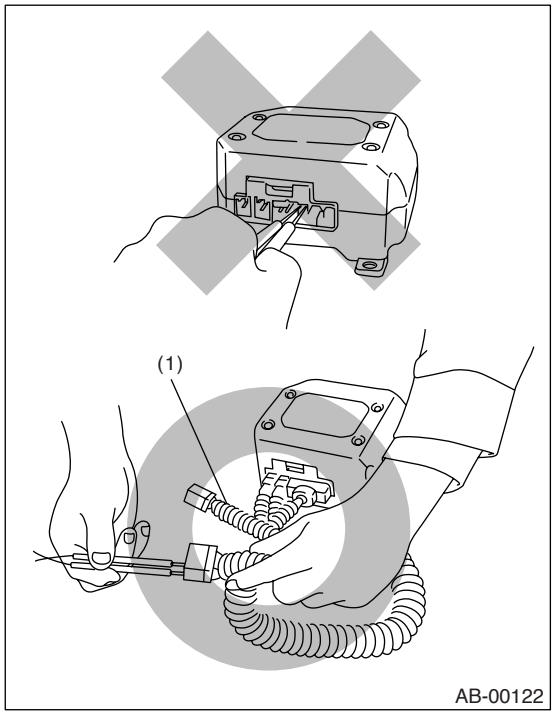
• If the airbag warning light illuminates, repair the vehicle immediately. Airbag or pretensioner may inflate incorrectly, or not inflate in collision.
• If sensors, airbag module, airbag control module, pretensioner and harness are deformed or damaged, replace them with new parts.



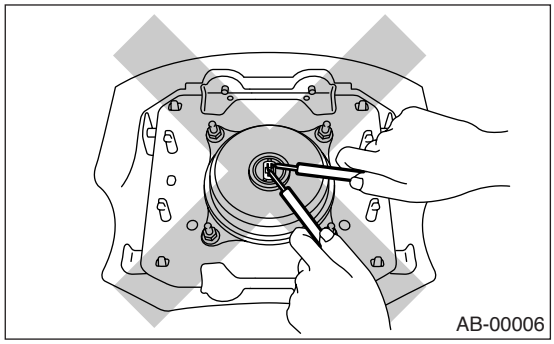
• When checking the airbag system, be sure to use a digital circuit tester. Use of an analog circuit tester may cause the airbag to activate erroneously.



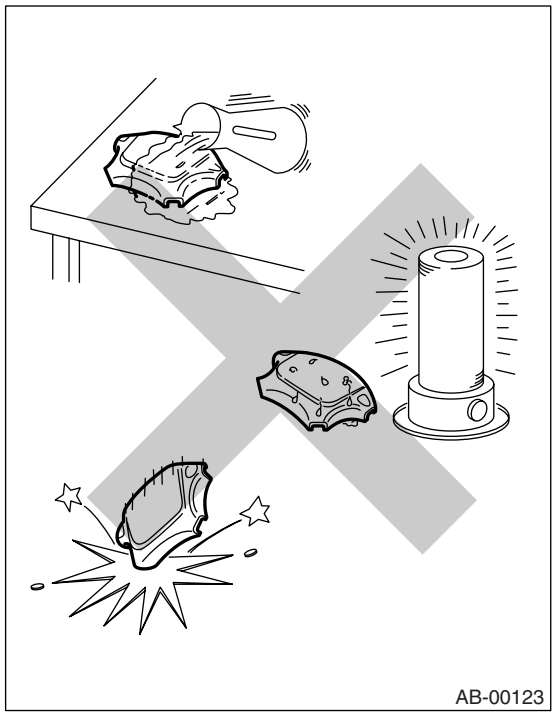
• When checking, use a test harness (1). Since damage to the connector terminal may cause the airbag to activate erroneously, do not directly apply the tester probe to any connector terminal of the airbag.



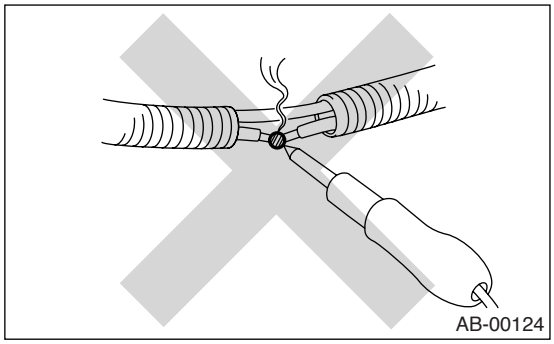
• Do not check continuity of the airbag modules for driver, passenger, side or curtain, or pretensioner.



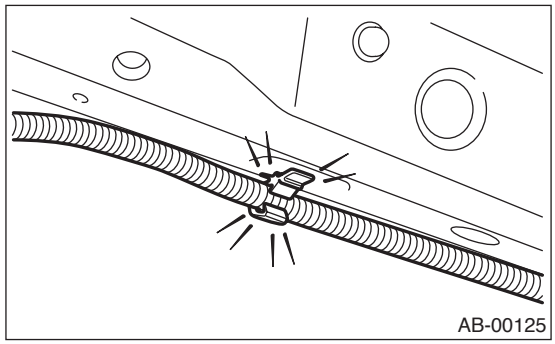
• Do not drop the airbag modules, subject them to high temperature over 93°C (199°F), or let water, oil or grease get on them; the internal parts may be damaged and reliability greatly lowered.



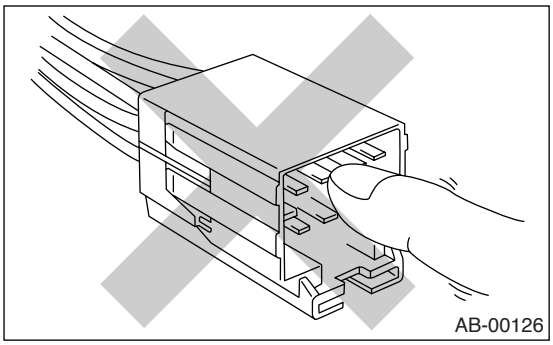
• If any damage, opening or rust is found on the airbag system wire harness, do not attempt to repair using soldering equipment. Be sure to replace the faulty harness with a new genuine part.



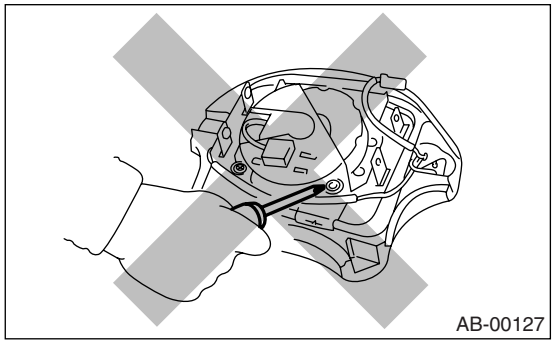
• Install the wire harness securely with the specified clips to avoid interference or tangled up with other parts.



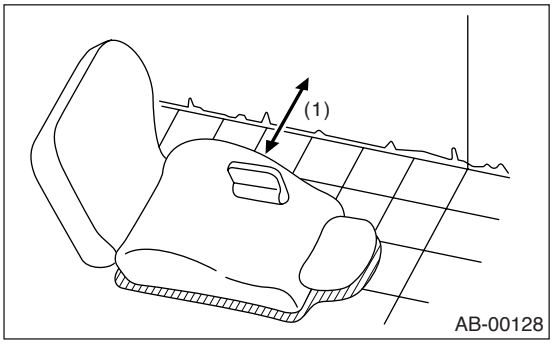
• Do not allow water or oil to come in contact with the connector terminals. Do not touch the connector terminals.



• Either of the airbag modules for driver, passenger, side or curtain, or pretensioner must not be disassembled.

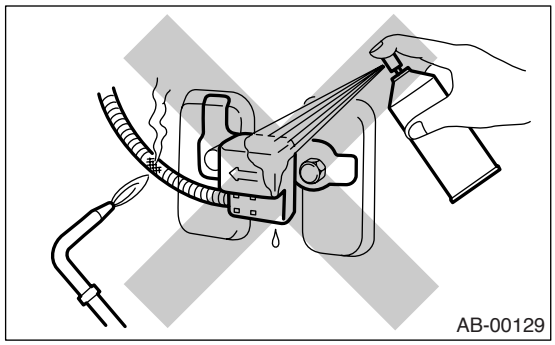


• The removed front seat with airbag module must be kept at least 200 mm (8 in) away from walls and other objects.

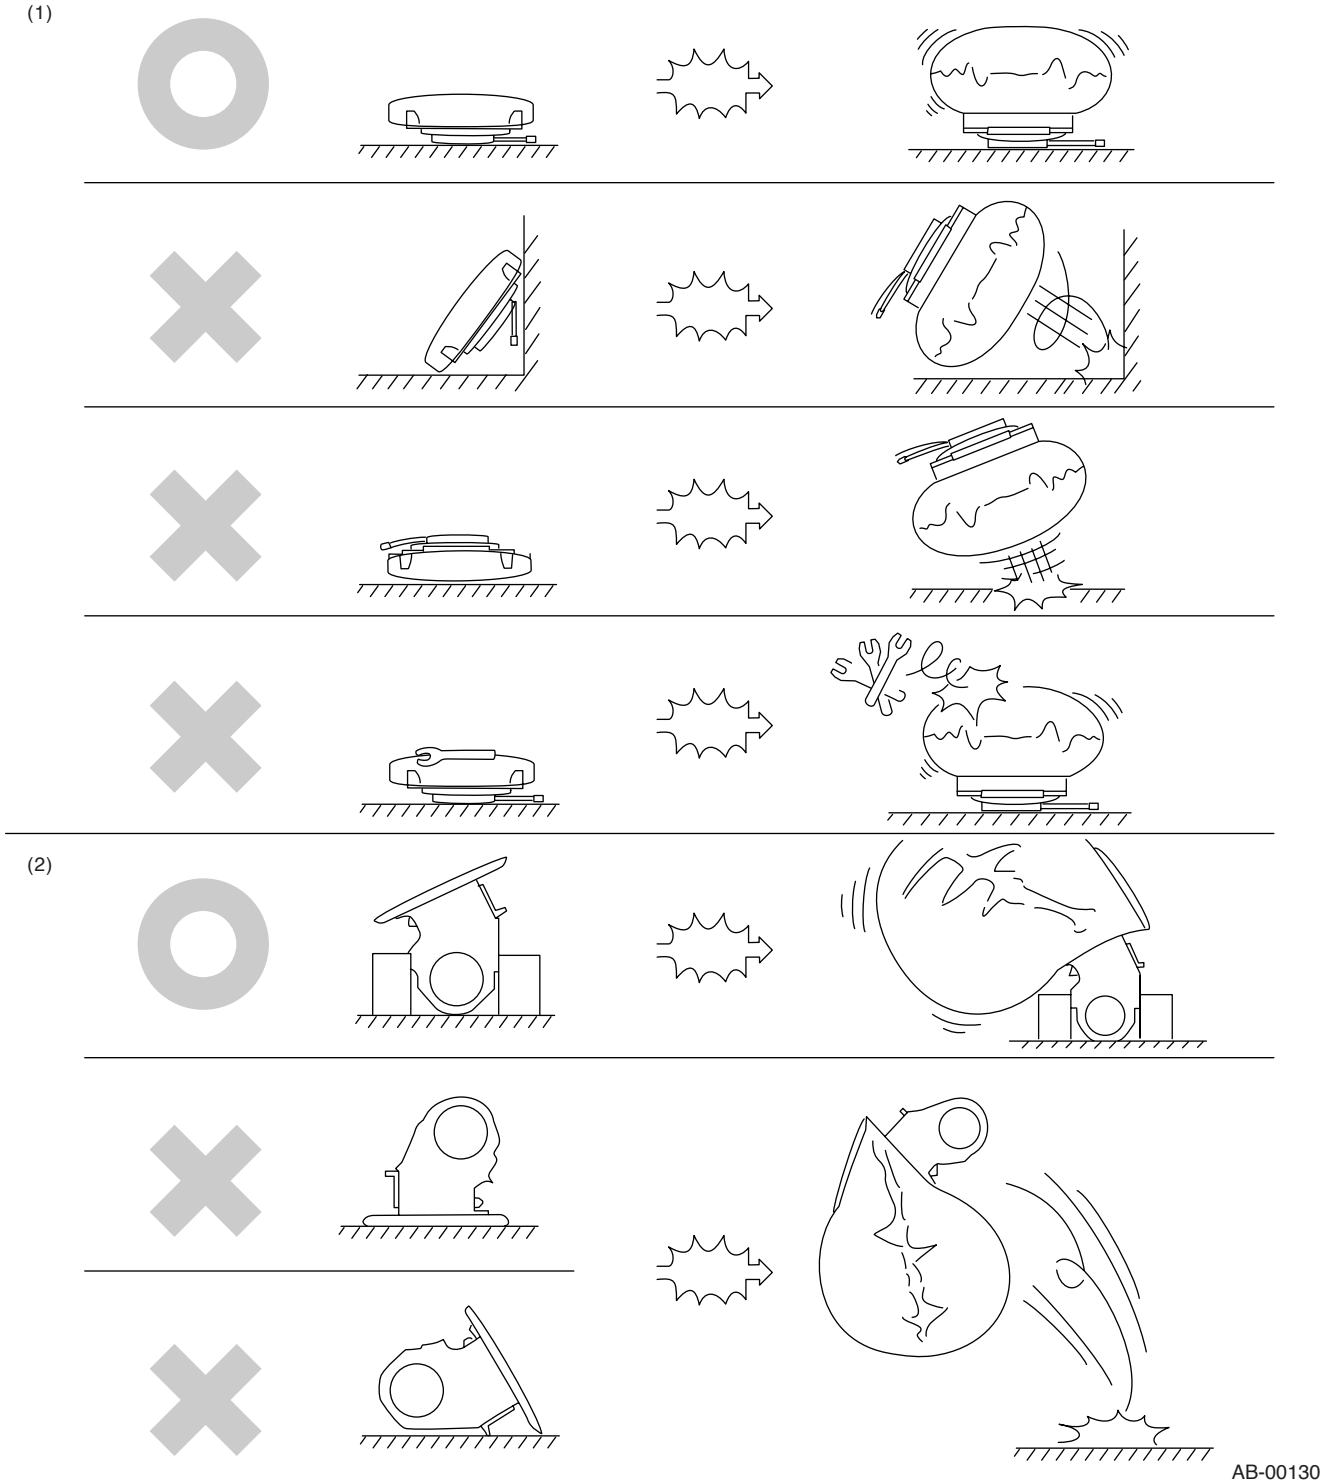


(1) 200 mm (8 in) or more

• Do not use the airbag or pretensioner parts from other vehicles. Always replace the defective parts with new parts.
• Never reuse a deployed airbag and pretensioner.
• When painting or performing sheet metal work on the front part of the vehicle, including the front wheel apron front fender, and front side frame, remove the front sub sensors and wire harness of airbag system.
• When painting or performing sheet metal work on the side of the vehicle, including the side sill, center pillar, and front and rear doors, remove the side airbag sensors and wire harness of airbag system.



• When storing a removed airbag module, do not place any objects on it or pile airbag modules on top of each other. If the airbag inflates for some reason when it is placed with its pad side facing downward or under any object, a serious accident may result.



(1) Driver's airbag module (2) Passenger's airbag module

C: PREPARATION TOOL

1. SPECIAL TOOL

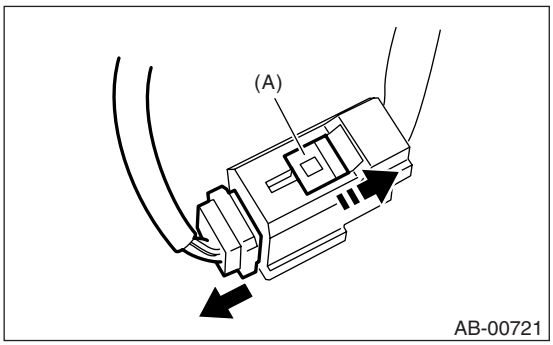
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299FC030	98299FC030	DEPLOYMENT ADAPTER A	• Used for deploying side airbag module. • Used for deploying curtain airbag module. • Used with DEPLOYMENT TOOL (98299PA030).
 ST98299SA030	98299SA030	DEPLOYMENT ADAPTER E	• Used for deploying driver's airbag module. • Used for deploying passenger's airbag module. • Used with DEPLOYMENT TOOL (98299PA030).
 ST98299AG030	98299AG030	DEPLOYMENT ADAPTER X	• Used for deploying driver's airbag module. • Used with DEPLOYMENT TOOL (98299PA030). • Can not reuse.
ST98299PA030	98299PA030	DEPLOYMENT TOOL	• Used for deploying airbag module. • Used with each deployment adapter.

2. Airbag Connector

A: PROCEDURE

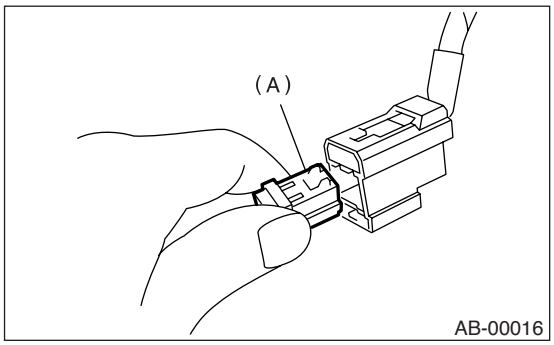
1. POWER SUPPLY

1) How to disconnect:
(1) Move the slide lock (A) in the direction of arrow.
(2) With the slide lock (A) moved, separate the connector.



CAUTION:
When pulling the slide lock or disconnecting the connector, be sure to hold onto the connector and not the wire.

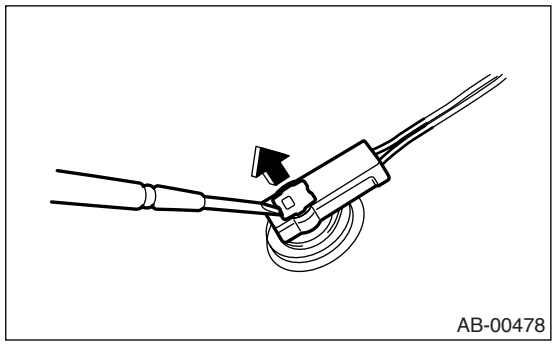
2) How to connect:
Holding the connector (A), and push it in carefully until a connecting sound is heard.



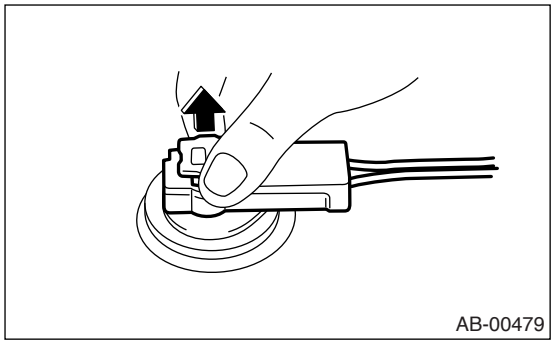
CAUTION:
Be sure to insert the connector in until it is locked. Then pull on it gently to make sure that it is locked.

2. DRIVER'S AIRBAG MODULE AND PRETENSIONER

1) How to disconnect:
(1) Using a flat tip screwdriver, pry the push lock upward to unlock.

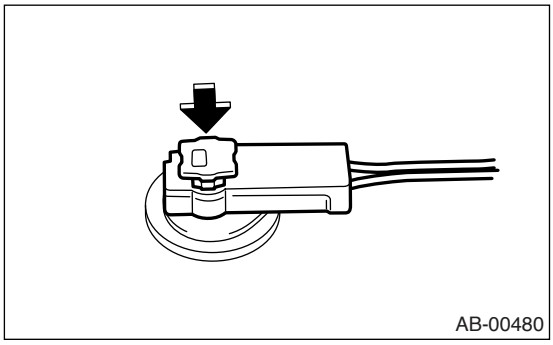


(2) Pull the connector to disconnect from the driver's airbag module assembly or retractor assembly.



2) How to connect:
Connect the connector in the reverse order of disconnecting. At this time, be sure to insert the push lock until a connecting sound is heard.

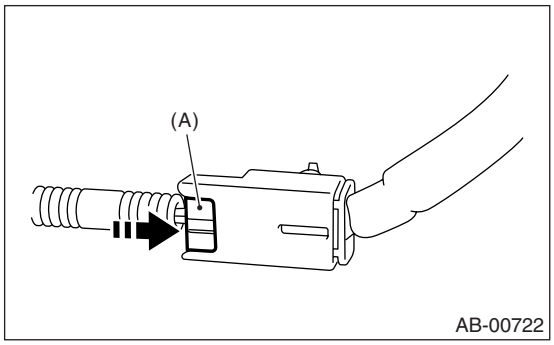
CAUTION:
• Be sure to insert the connector in until it is locked. Then pull on it gently to make sure that it is locked.
• Be sure to push the push lock in securely.



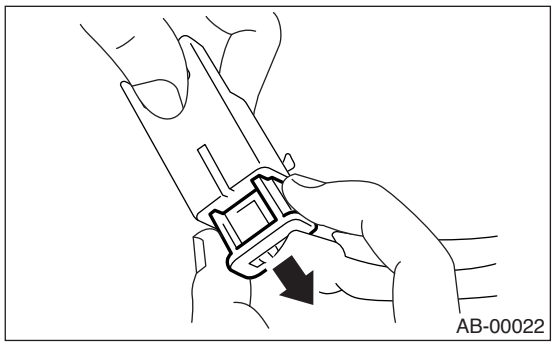
NOTE:
Connector can not be connected when the push lock is in lock position. To connect the connector, set the push lock to unlock position.

3. DRIVER'S AIRBAG (BETWEEN AIRBAG MAIN HARNESS AND ROLL CONNECTOR), PASSENGER'S AIRBAG

1) How to disconnect:
(1) Push the slide lock (A) into the direction of arrow.



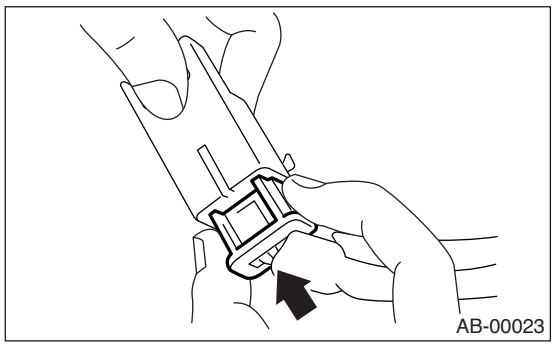
(2) With the slide lock pushed, disconnect the connector.



CAUTION:
When pulling the side lock or disconnecting the connector, be sure to hold onto the connector and not the wire.

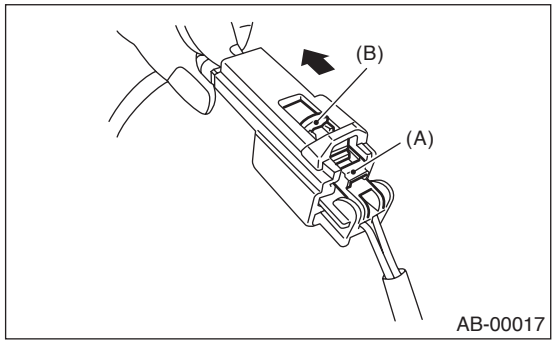
2) How to connect:
Holding the connector, and push it in carefully until a connecting sound is heard.

CAUTION:
Be sure to insert the connector in until it is locked. Then pull on it gently to make sure that it is locked.



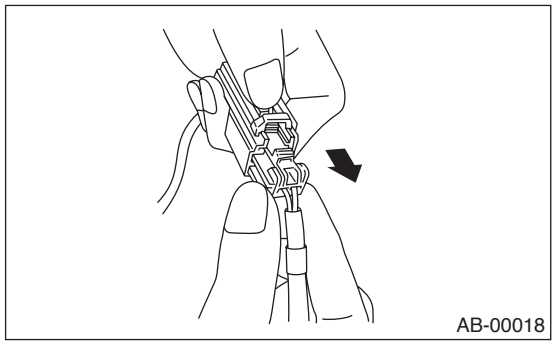
4. SIDE AIRBAG AND CURTAIN AIRBAG

1) How to disconnect:
(1) Push the lock arm (A).
(2) With the lock arm (A) pushed in, move the slide lock (B) in the direction of arrow.



(3) With the slide lock moved, release the lock arm (back to its original position), and disconnect the connector.

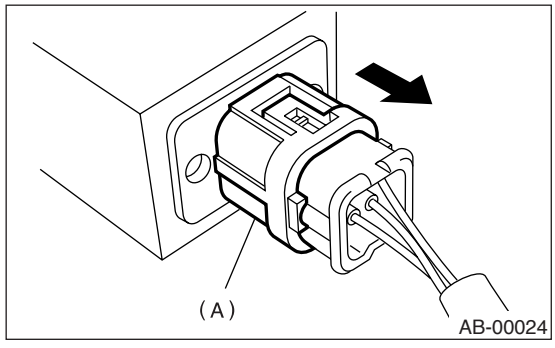
CAUTION:
When pulling the side lock or disconnecting the connector, be sure to hold onto the connector and not the wire.



5. FRONT SUB-SENSOR, SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR

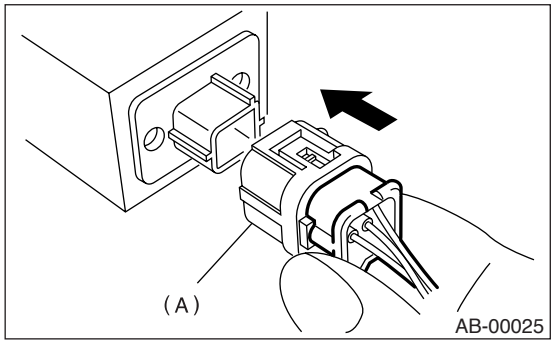
1) How to disconnect:
Holding the outer part (A), pull it in the direction of arrow.

CAUTION:
When pulling the side lock or disconnecting the connector, be sure to hold onto the connector and not the wire.



2) How to connect:
Holding the connector, and push it in carefully until a connecting sound is heard.

CAUTION:
• The outer side (A) moves back, and so do not put your hand on the outer part.
• Be sure to insert the connector in until it is locked. Then pull on it gently to make sure that it is locked.



3. Inspection Locations After a Collision

A: REPLACEMENT

Replace the following parts when the airbag is deployed.

1. FRONT COLLISION

1) Driver's airbag module
2) Passenger's airbag module
3) Driver's seat belt (Pretensioner)
4) Passenger's seat belt (Pretensioner)
5) Airbag control module
6) Front sub sensor
7) Roll connector
8) Instrument panel (for integrating with passenger's airbag module)

2. SIDE COLLISION

1) Airbag control module
2) Side airbag module (operating side seat backrest)
3) Side airbag sensor (operating side)
4) Curtain airbag module (operating side)
5) Curtain airbag sensor (operating side)

3. INSPECTION OF OTHER PARTS

Check for the following, and replace the damaged parts with new parts.
1) Check the steering shaft for mounting conditions and deflection of front and rear, upward and downward directions, and deflection of front and rear direction with tilt lever released. (After collision, absorbing part of steering shaft may work.)
2) Check the direct type connector of driver's airbag module, pretensioner, etc. for damage, and also check each harness for pinch and connector damage. Replace the harness as a unit if damage is found.
3) Check the installing condition and play of the seat cushion, backrest, seat rail and headrest.

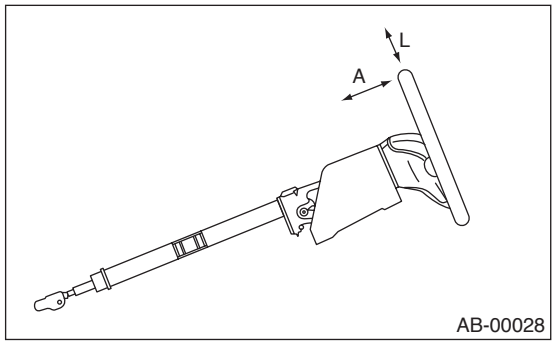
B: INSPECTION

If the vehicle is involved in a collision on any side, even if it is a slight collision, be sure to check the following systems.

1. DRIVER'S AIRBAG MODULE

1) Check for the following, and replace the damaged parts with new parts.
• Airbag module is cracked or deformed.
• Harness and/or connector is cracked, deformed or open. Harness wire is exposed.
• The module surface is fouled with grease, oil, water or cleaning solvent.
2) When installing a new driver's airbag module, check for the following, and replace the damaged parts with new parts.
• The steering wheel is in the way, making it difficult to install the airbag module.
• The clearance between the driver's airbag module and steering wheel is not constant.
• When steering wheel deformation in axial, upward and downward directions exceed limits.

Standard value:
Height deflection A
Less than 6 mm (0.24 in)
O.D. deflection L
Less than 7 mm (0.28 in)



2. PASSENGER'S AIRBAG MODULE

Check for the following, and replace the damaged parts with new parts.
• Airbag module and instrument panel are cracked or deformed.
• Harness and/or connector is cracked, deformed or open. Harness wire is exposed.
• Mounting bracket is cracked or deformed.

3. SIDE AIRBAG MODULE

Check for the following, and replace the damaged parts with new parts.
• Front seat, airbag module and mounting bracket are damaged or deformed.
• Harness and/or connector is cracked, deformed or open. Harness wire is exposed.

4. CURTAIN AIRBAG MODULE

Check for the following, and replace the damaged parts with new parts.
• Airbag cover is scratched or broken.
• Harness and/or connector is cracked, deformed or open. Harness wire is exposed.
• Mounting bracket and securing clip are cracked or deformed.

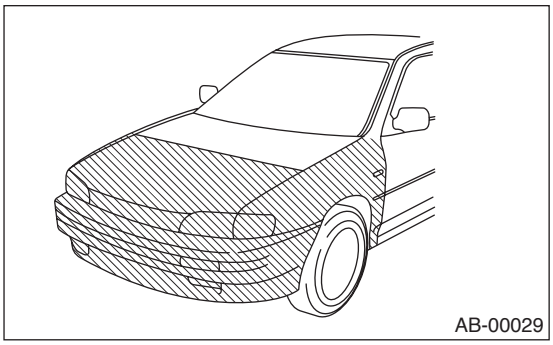
5. AIRBAG CONTROL MODULE

Check for the following, and replace the damaged parts with new parts.
• Control module is cracked or deformed.

- Mounting bracket is cracked or deformed.
- Connector is scratched, cracked or deformed.
- Airbag is deployed.
- Side airbag is deployed.
- Curtain airbag is deployed.

6. FRONT SUB SENSOR

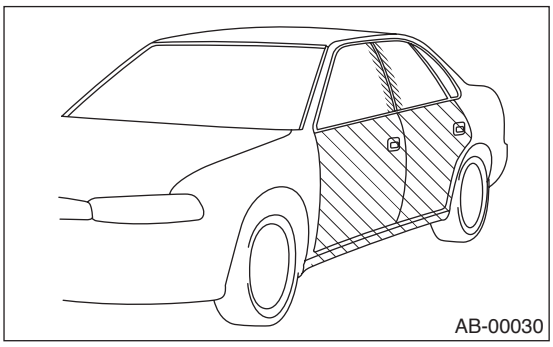
If the section of vehicle as shown in the figure is damaged, check for the following and replace the damaged parts with new parts.



- Front sub sensor is cracked or deformed.
- Mounting bracket is cracked or deformed.
- Connector is scratched, cracked or deformed.
- Airbag is deployed.

7. SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR

If the section of vehicle as shown in the figure is damaged, check for the following and replace the damaged parts with new parts.



- Side airbag sensor and curtain airbag sensor are cracked or deformed.
- Mounting bracket is cracked or deformed.
- Connector is scratched, cracked or deformed.
- Side airbag sensor or curtain airbag is deployed. (operating side)

8. ROLL CONNECTOR

Check for the following, and replace the damaged parts with new parts.

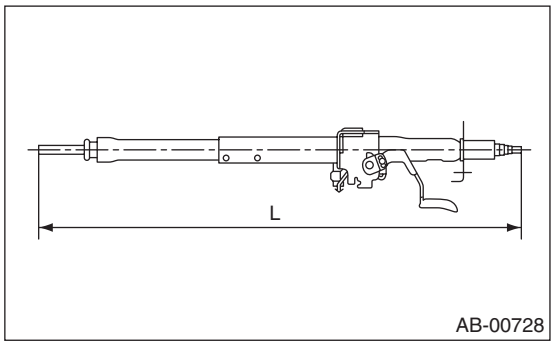
- Combination switch or steering roll connector is cracked or deformed.

9. STEERING SHAFT

Check for the following, and replace the damaged parts with new parts.

- Overall length of steering column should be within specifications.

Standard value:
Overall length L
Except for OUTBACK model
833.6 $^{+1.3}_{-0.3}$ mm (32.8 $^{+0.1}_{-0.01}$ in)
OUTBACK model
825.4 $^{+1.3}_{-0.3}$ mm (32.5 $^{+0.1}_{-0.01}$ in)

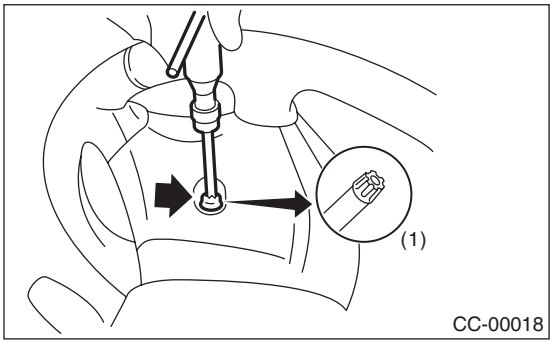


4. Driver's Airbag Module

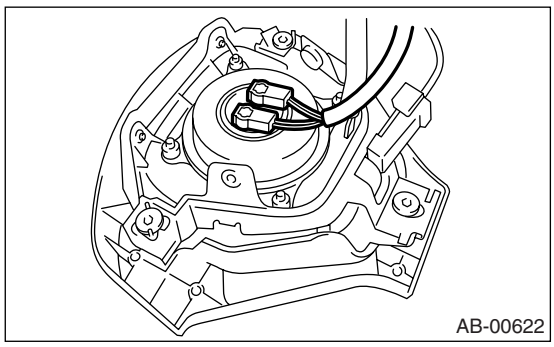
A: REMOVAL

CAUTION:
Refer to "CAUTION" of General Description before handling the airbag module. <Ref. to AB-4, CAUTION, General Description.>

1) Position the front wheels straight ahead. (After moving a vehicle more than 5 m (16 ft) with front wheels positioned straight ahead, make sure the vehicle moves straight ahead.)
2) Turn the ignition switch to OFF.
3) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
4) Using TORX® BIT T30 (1), remove the two TORX® bolts on the side of steering wheel.



5) Disconnect the horn harness.
6) Disconnect the airbag connector on the back of airbag module, and then remove the airbag module. <Ref. to AB-9, PROCEDURE, Airbag Connector.>



7) Refer to "CAUTION" for handling of a removed airbag module. <Ref. to AB-4, CAUTION, General Description.>

B: INSTALLATION

CAUTION:
• Refer to "CAUTION" of General Description before handling the airbag module. <Ref. to AB-4, CAUTION, General Description.>
• Do not allow harness and connectors to interfere or get tangled up with other parts.
• To prevent the misconnection, the connector is colored. Connect the harness side connector to the same color of module side connector.

Install in the reverse order of removal.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to AB-2, DRIVER'S AIRBAG MODULE, COMPONENT, General Description.>

C: INSPECTION

CAUTION:
Refer to "CAUTION" of General Description before handling the airbag module. <Ref. to AB-4, CAUTION, General Description.>

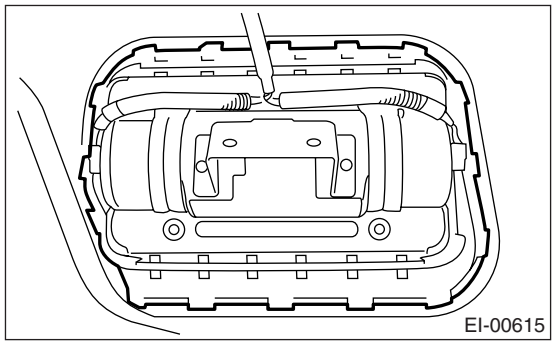
Check for the following, and replace damaged parts with new parts.
• Airbag module, harness, connector and mounting bracket are damaged. <Ref. to AB-12, DRIVER'S AIRBAG MODULE, INSPECTION, Inspection Locations After a Collision.>

5. Passenger's Airbag Module

A: REMOVAL

CAUTION:
Refer to "CAUTION" of "General Description" before handling the airbag module. <Ref. to AB-4, CAUTION, General Description.>

1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
3) Remove the instrument panel. <Ref. to EI-56, INSTRUMENT PANEL (EXCLUDING STEERING SUPPORT BEAM), REMOVAL, Instrument Panel Assembly.>
4) Remove the pawl and remove the passenger's airbag module.



5) Refer to "CAUTION" for handling of a removed airbag module. <Ref. to AB-4, CAUTION, General Description.>

B: INSTALLATION

CAUTION:
Refer to "CAUTION" of General Description before handling the airbag module. <Ref. to AB-4, CAUTION, General Description.>

Install in the reverse order of removal.

CAUTION:
Do not allow harness and connectors to interfere or get tangled up with other parts.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to AB-2, PASSENGER'S AIRBAG MODULE, COMPONENT, General Description.>

C: INSPECTION

CAUTION:
Refer to "CAUTION" of General Description before handling the airbag module. <Ref. to AB-4, CAUTION, General Description.>

Check for the following, and replace damaged parts with new parts.
• Airbag module, harness, connector, and mounting bracket are damaged. <Ref. to AB-12, PASSENGER'S AIRBAG MODULE, INSPECTION, Inspection Locations After a Collision.>

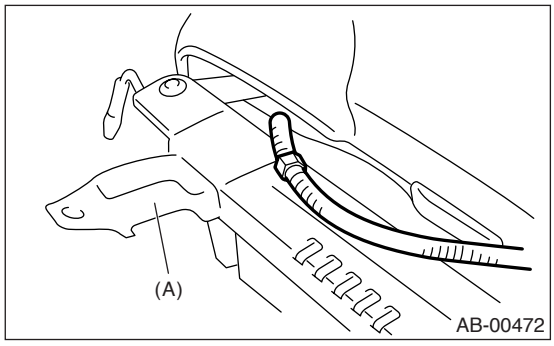
6. Side Airbag Module

A: REMOVAL

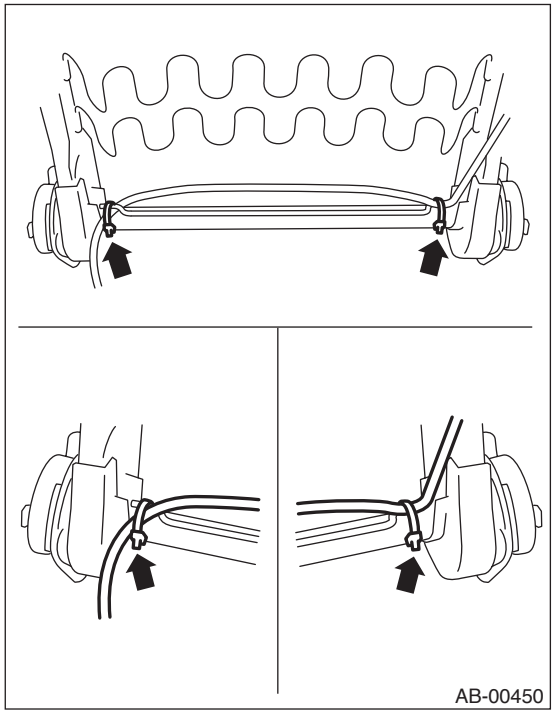
CAUTION:
Refer to "CAUTION" of General Description before handling the airbag module. <Ref. to AB-4, CAUTION, General Description.>

NOTE:
Remove the passenger's side by referring to driver's side.

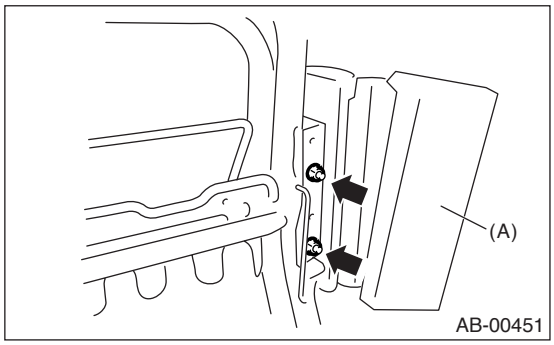
1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
3) Remove the front seats. <Ref. to SE-7, REMOVAL, Front Seat.>
4) Remove the clip from reverse side of seat cushion assembly and slide rail IN (A), and then remove the side airbag harness.



5) Remove the backrest cover. <Ref. to SE-7, DISASSEMBLY, Front Seat.>
6) Remove the side airbag harness from backrest frame assembly.



7) Remove the side airbag module (A) from backrest frame assembly.

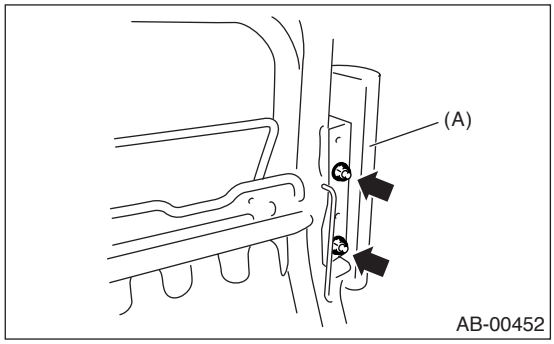


B: INSTALLATION

CAUTION:
Refer to "CAUTION" of General Description before handling the airbag module. <Ref. to AB-4, CAUTION, General Description.>

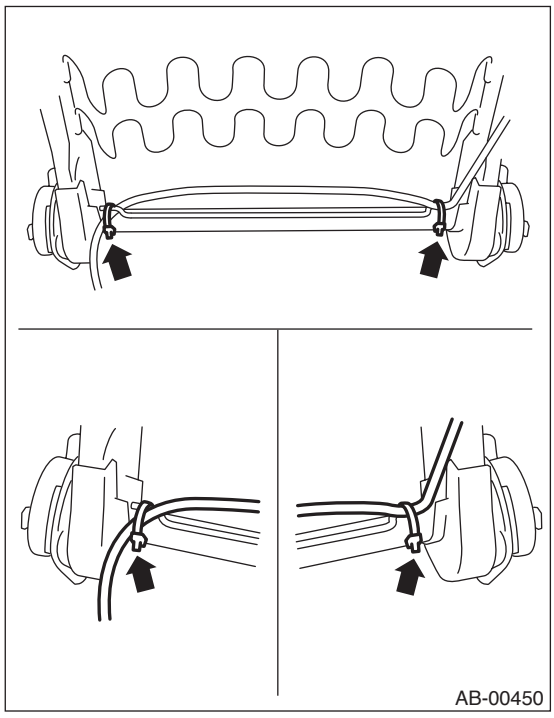
1) Ensure that there are no foreign articles on side airbag module.
2) Install the side airbag module (A) to backrest frame assembly.

Tightening torque:
6.0 N·m (0.61 kgf-m, 4.4 ft-lb)



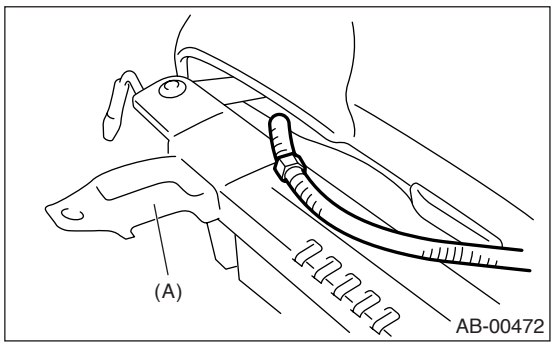
3) Install the side airbag harness to backrest frame assembly.

NOTE:
Secure the harness to its original position of seat.



4) Install the backrest cover. <Ref. to SE-12, ASSEMBLY, Front Seat.>

5) Install the side airbag harness to slide rail IN (A), and then secure the connector to the bracket on back side of seat cushion assembly.



6) Recline the seat or slide it backward and forward, and check there is no contact between the seat backrest assembly, cushion cover assembly and side airbag harness.

C: INSPECTION

CAUTION:
Refer to "CAUTION" of General Description before handling the airbag module. <Ref. to AB-4, CAUTION, General Description.>

Perform the inspection of following items, and replace the damaged parts with new ones. <Ref. to AB-12, SIDE AIRBAG MODULE, INSPECTION, Inspection Locations After a Collision.>

1) With side collision (when side airbag is deployed)
- Side airbag module assembly
- Backrest pad assembly
- Backrest frame assembly
- Backrest cover assembly

2) Other replacement parts, which found to be damaged by visual check
- Headrest assembly
- Bushing
- Slide rail OUT
- Slide rail IN
- Seat hinge cover
- Seat lifter lever
- Reclining lever
- Side airbag harness and connector on body side.

3) With side collision (when side airbag is not deployed)
Check the seat and airbag module visually, and then replace them with new ones if damaged or cracked.
Specially inspect the damage of airbag module body, mounting bracket, and harness connector.

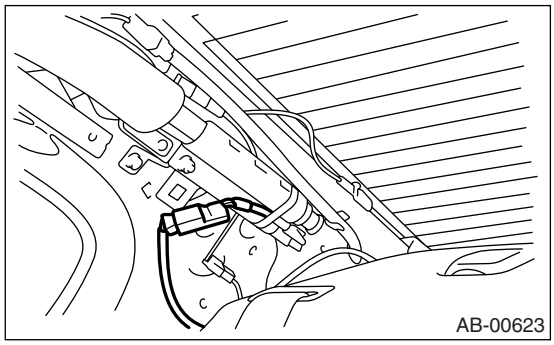
4) Without side collision (dirt and damage of cover)
Replace the corresponding part with a new one.

7. Curtain Airbag Module

A: REMOVAL

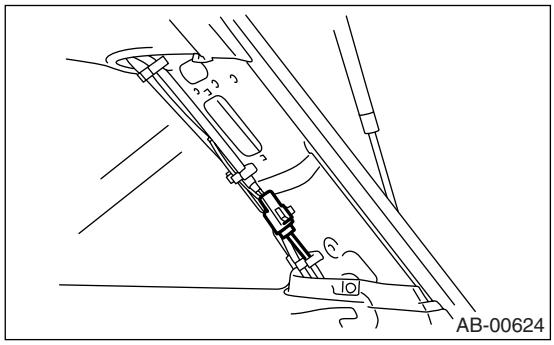
CAUTION:
Refer to "CAUTION" of General Description before handling the airbag module. <Ref. to AB-4, CAUTION, General Description.>

1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
3) Remove the rear quarter trim. (Sedan model) <Ref. to EI-63, SEDAN MODEL (MODEL WITH CURTAIN AIRBAG), REMOVAL, Rear Quarter Trim.>
4) Remove the quarter rear pillar trim. (Wagon model) <Ref. to EI-63, WAGON MODEL, REMOVAL, Rear Quarter Trim.>
5) Disconnect the curtain airbag module connector.
• Sedan model



AB-00623

• Wagon model

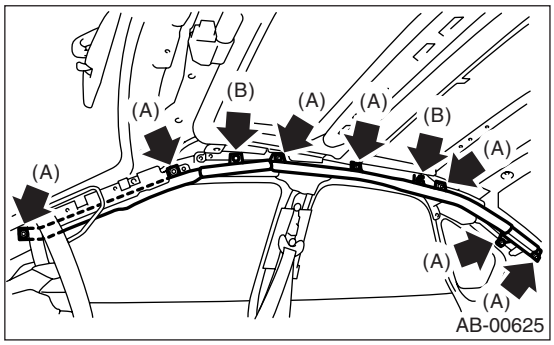


AB-00624

6) Remove the roof trim. <Ref. to EI-67, REMOVAL, Roof Trim.>
7) Remove the bolts (A) and clips (B), and then remove the curtain airbag module.

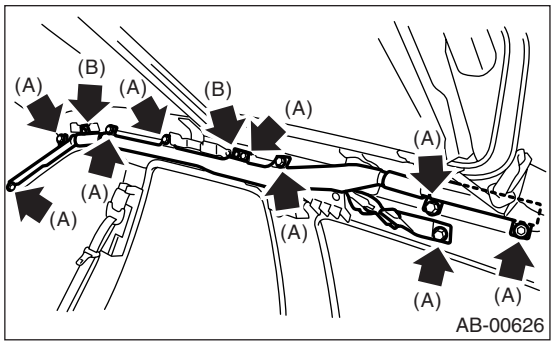
CAUTION:
• Be careful not to damage the curtain airbag module during removal.
• Never open the curtain airbag module before deploying it. Never reuse the opened curtain airbag module.

• Sedan model



AB-00625

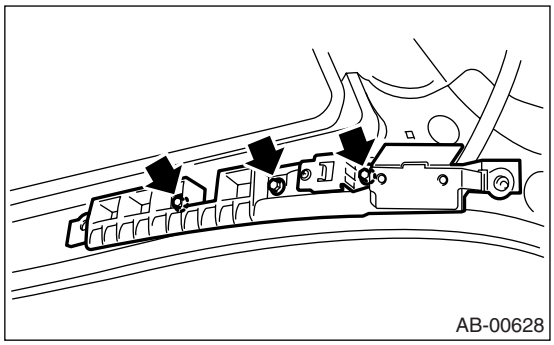
• Wagon model



AB-00626

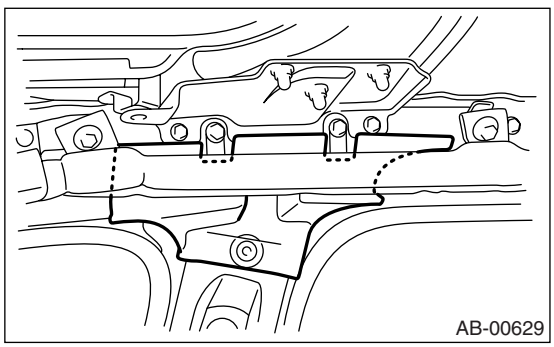
NOTE:
Remove the rear center seat belt retractor on the RH side before servicing.

8) Remove the airbag guide A from front pillar.



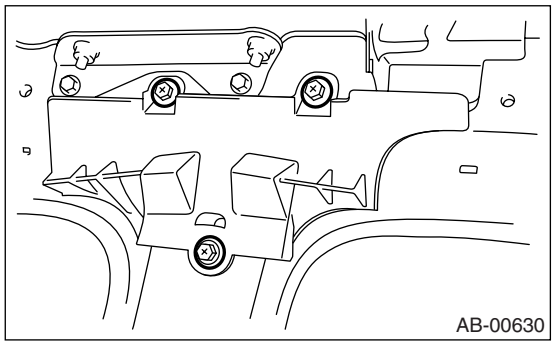
AB-00628

9) Remove the airbag guide B from center pillar.
• Sedan model

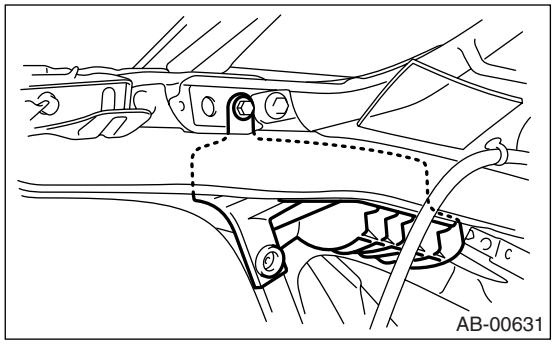


AB-00629

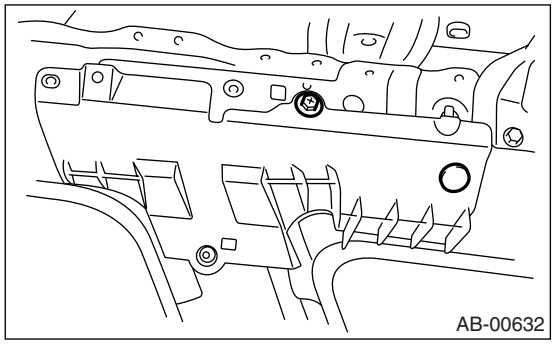
• Wagon model



10) Remove the airbag guide C from quarter pillar.
• Sedan model



• Wagon model



B: INSTALLATION

CAUTION:
• Refer to "CAUTION" of General Description before handling the airbag module. <Ref. to AB-4, CAUTION, General Description.>
• When installing the curtain airbag module, install a specified part at specified place.
• Be careful not to damage the curtain airbag module during removal.
• Never open the curtain airbag module before deploying it. Never reuse the deployed curtain airbag module.
• Ensure that there are no foreign articles on airbag module.

Install in the reverse order of removal.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to AB-2, CURTAIN AIRBAG MODULE, COMPONENT, General Description.>

C: INSPECTION

CAUTION:
Refer to "CAUTION" of General Description before handling the airbag module. <Ref. to AB-4, CAUTION, General Description.>

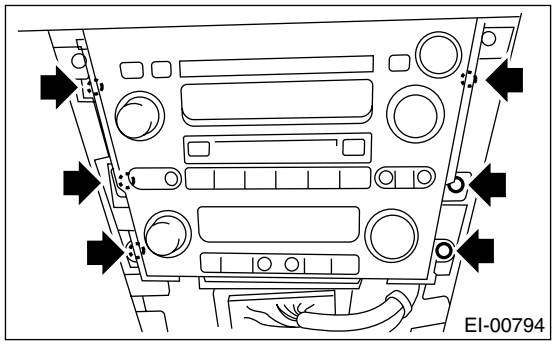
Perform the inspection of following items, and replace the damaged parts with new ones. <Ref. to AB-12, CURTAIN AIRBAG MODULE, INSPECTION, Inspection Locations After a Collision.>
1) With side collision (when curtain airbag is deployed)
• Curtain airbag module assembly
• Roof trim
• Front pillar upper trim
• Center pillar upper trim
• Rear quarter pillar trim
• Airbag guide A, B, C
2) Other replacement parts, which found to be damaged by visual check
• Assist grip
• Assist grip bracket
• Curtain airbag harness and connector on body side.
3) With side collision (when curtain airbag is not deployed)
Check the roof trim, pillar trim and airbag module visually, and then replace them with new ones if damaged or cracked.
Specially inspect the damage of airbag module body, mounting bracket, harness connector.
4) Without side collision (dirt and damage of cover)
Replace the corresponding part with a new one.

8. Airbag Control Module

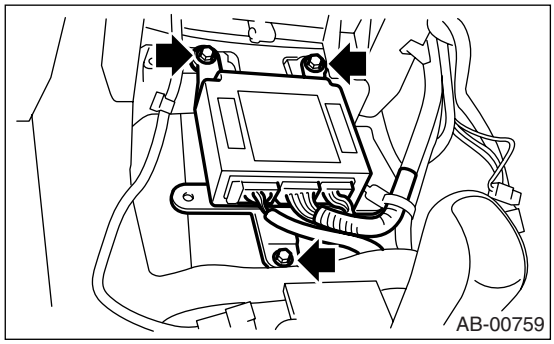
A: REMOVAL

CAUTION:
• Do not disassemble the airbag control module.
• If the airbag control module is deformed or if water damage is suspected, replace the airbag control module with a new one.
• Do not drop the airbag control module.
• After removal, keep the airbag control module on a dry, clean surface away from moisture, heat and dust.

1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
3) Remove the console front panel and console side garnish. <Ref. to EI-54, REMOVAL, Center Console.>
4) Remove the screws and pull out the audio unit assembly to disconnect the connector for removal.



5) Disconnect the connector from airbag control module.
6) Remove the bolts and remove airbag control module.



B: INSTALLATION

CAUTION:
Use new hexagon head bolts (for airbag control module only) during installation.

Install in the reverse order of removal.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to AB-2, AIRBAG CONTROL MODULE, COMPONENT, General Description.>

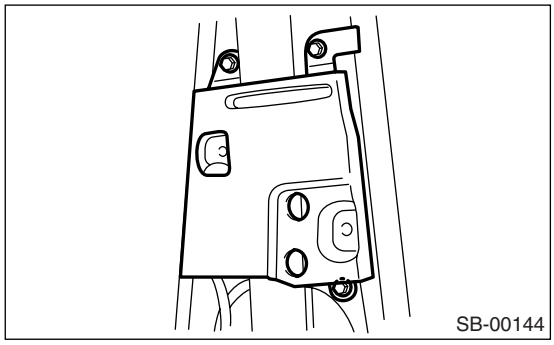
C: INSPECTION

Check for the following, and replace the damaged parts with new parts.
• Control module, connector, and mounting bracket are damaged.
• Airbag is deployed.
• Side airbag is deployed.
• Curtain airbag is deployed.

9. Side Airbag Sensor

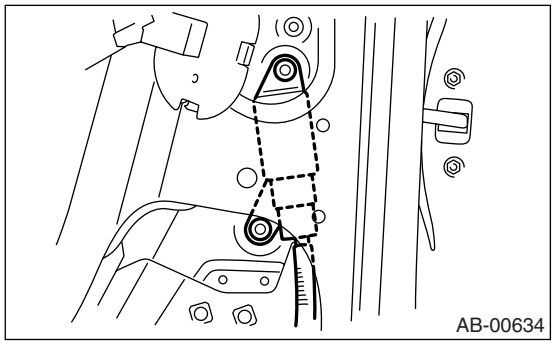
A: REMOVAL

1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
3) Remove the center pillar lower trim. <Ref. to EI-60, REMOVAL, Lower Inner Trim.>
4) Remove the center pillar inner protector lower.



SB-00144

5) Remove the front outer seat belt retractor. <Ref. to SB-12, OUTER SEAT BELT ASSEMBLY, REMOVAL, Front Seat Belt.>
6) Remove the nut and disconnect the airbag connector to remove side airbag sensor.



AB-00634

B: INSTALLATION

CAUTION:
Use new nuts (exclusive use for side airbag sensors) during installation.

Install in the reverse order of removal.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to AB-3, SIDE AIRBAG SENSOR, COMPONENT, General Description.>

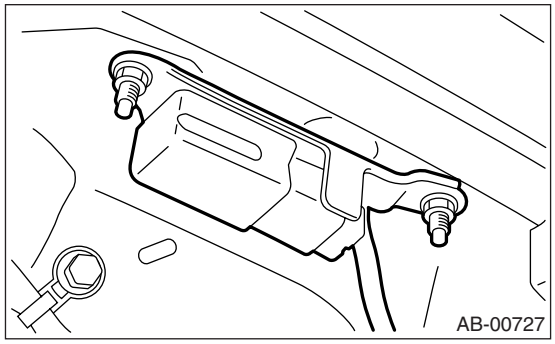
C: INSPECTION

Check for the following, and replace the damaged parts with new parts.
• Mounting bracket of airbag sensor or connector is damaged.
• Side airbag is deployed.

10.Curtain Airbag Sensor

A: REMOVAL

1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
3) Remove the rear seat. <Ref. to SE-14, REMOVAL, Rear Seat.>
4) Detach the nuts and disconnect the airbag connector to remove the curtain airbag sensor.



B: INSTALLATION

CAUTION:
Use new nuts (exclusive use for curtain airbag sensors) during installation.

Install in the reverse order of removal.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to AB-3, CURTAIN AIRBAG SENSOR, COMPONENT, General Description.>

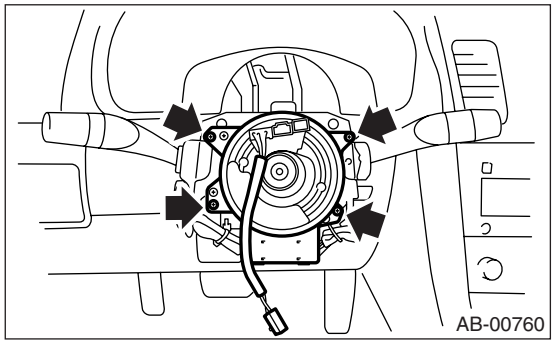
C: INSPECTION

Check for the following, and replace the damaged parts with new parts.
• Mounting bracket of curtain airbag sensor or connector is damaged.
• Curtain airbag is deployed.

11.Roll Connector

A: REMOVAL

1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
3) Remove the driver's airbag module. <Ref. to AB-14, REMOVAL, Driver's Airbag Module.>
4) Remove the steering wheel. <Ref. to PS-20, REMOVAL, Steering Wheel.>
5) Remove the steering column cover.
6) Remove the screws, and then remove the roll connector.



B: INSTALLATION

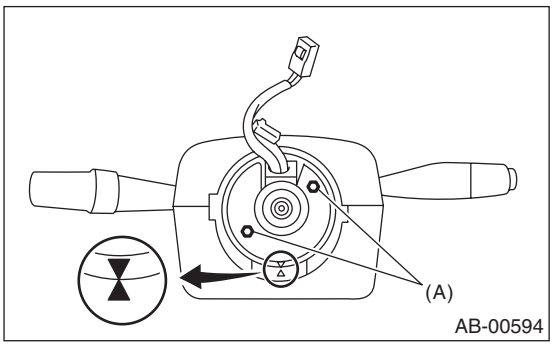
1) Install in the reverse order of removal.
2) Before installing steering wheel, be sure to adjust the direction of roll connector with steering. <Ref. to AB-23, ADJUSTMENT, Roll Connector.>

C: INSPECTION

Check for the following, and replace the damaged parts with new parts.
• Combination switch and roll connector are cracked or deformed.

D: ADJUSTMENT

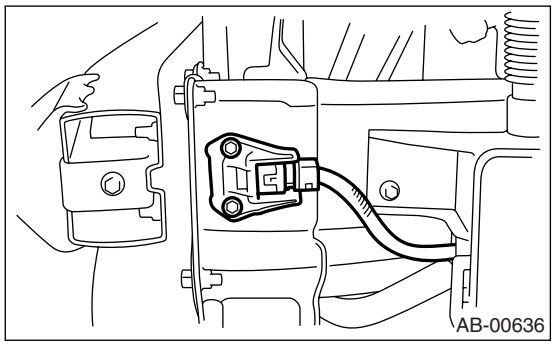
1) Check that front wheels are positioned in straight ahead direction.
2) Turn the roll connector pins (A) clockwise until it stops.
3) Turn the roll connector pins (A) approx. 3.25 turns until "▲" marks are aligned.



12.Front Sub Sensor

A: REMOVAL

1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
3) Remove the front bumper face. <Ref. to EI-30, FRONT BUMPER FACE, REMOVAL, Front Bumper.>
4) Remove the bolts, and then detach the front sub sensor.



5) Disconnect the connector from front sub sensor.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to AB-3, FRONT SUB SENSOR, COMPONENT, General Description.>

C: INSPECTION

Check for the following, and replace the damaged parts with new parts.
• Front sub sensor, mounting bracket and connector are damaged.
• Airbag is deployed.

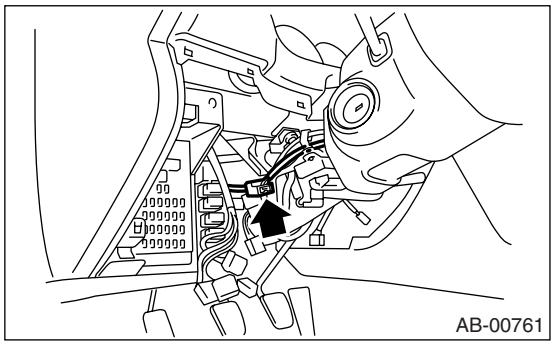
13. Disposal of Airbag Module (Deployment Processing On Vehicle)

A: PROCEDURE

CAUTION:
• Do not discard an undeployed airbag modules because it may cause a serious personal injury when accidentally deployed.
• As a rule, airbag modules should be deployed while still installed in the vehicle. Do not remove airbag modules unless necessary.
• Deployment of airbag modules should be done on a flat place free from any possible danger. Avoid deploying outdoors during rainy or windy weather.
• Deploying an airbag module causes a high explosive noise, be sure to warn people in the area, and do not allow anyone within a 5 m (16 ft) radius of the disposal site.
• Some smoke will be emitted from deployment of the airbag module. Therefore, it must be deployed in a well-ventilated place with no smoke detector nearby.
• Wear protective gloves, safety goggles and earplugs during this operation. Wash your hands afterwards.
• After deployment, the airbag module will be especially hot, leave it unattended for 40 minutes, and then discard it.
• Do not let water get on the deployed airbag module.
• Wrap the deployed airbag module in an airtight vinyl bag, and discard it.
• If circumstances do not permit the airbag module deployment, contact the SUBARU dealer.

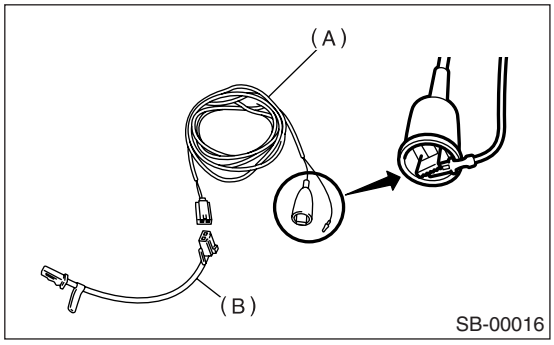
1. DRIVER'S AIRBAG MODULE

1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
3) Remove the instrument panel lower cover upper. <Ref. to EI-50, REMOVAL, Instrument Panel Lower Cover.>
4) Disconnect the airbag connector.



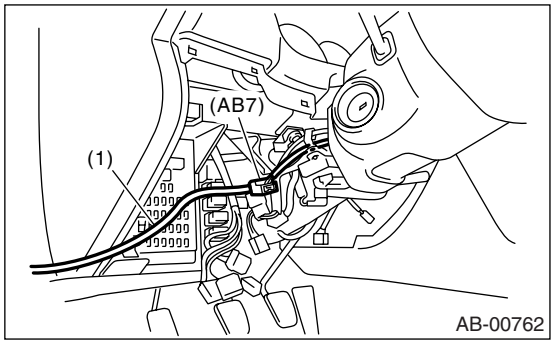
5) Short the terminal to the alligator clip furnished as deployment tool (A).
6) Connect the deployment tool and deployment adapter E (B).

CAUTION:
The deployment tool should be kept shorted terminals until just before deployment of airbag module.



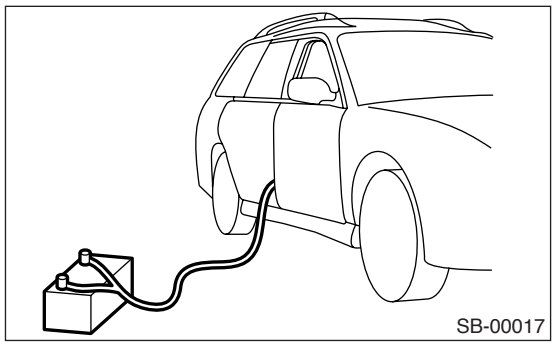
(A) Deployment tool:
(Tool number 98299PA030)
(B) Deployment adapter E:
(Tool number 98299SA030)

7) Connect the deployment adapter E (1) to airbag connector (AB7).



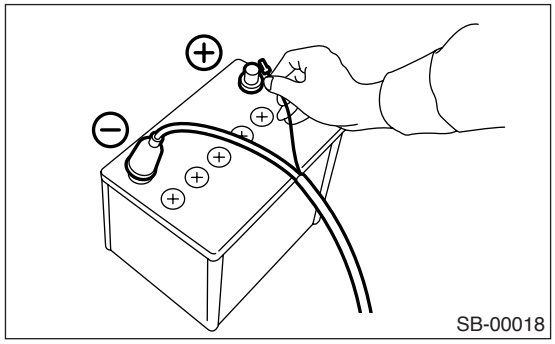
(1) Deployment adapter E:
(Tool number 98299SA030)

8) Extend the wiring of deployment tool to the limit, and make sure the vehicle is empty. Close all the windows, sunroof and rear gate completely.



SB-00017

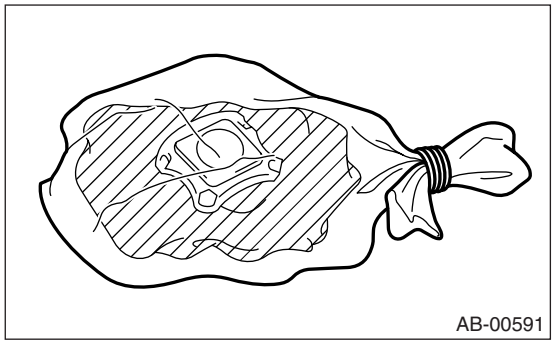
9) Move the battery at least 5 m (16 ft) from vehicle, and secure the nearby area. Connect the deployment tool alligator clip to the battery negative (–) terminal.
10) Connect the other cable of deployment tool to the battery positive (+) terminal, and deploy the airbag module.



SB-00018

CAUTION:
• After deployment, the airbag module will be especially hot, leave it unattended for 40 minutes, and then discard it.
• Do not let water get on the deployed airbag module.

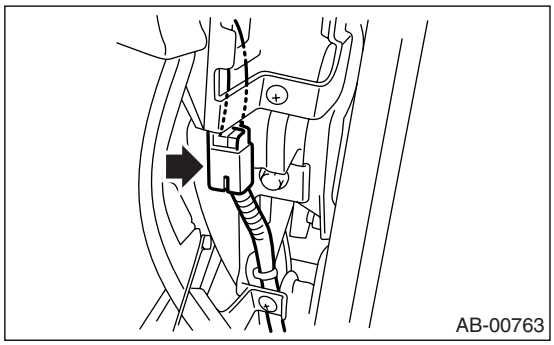
11) Remove the airbag module. <Ref. to AB-14, Driver's Airbag Module.>
12) Wrap the deployed airbag module in airtight vinyl bag, and discard it.



AB-00591

2. PASSENGER'S AIRBAG MODULE

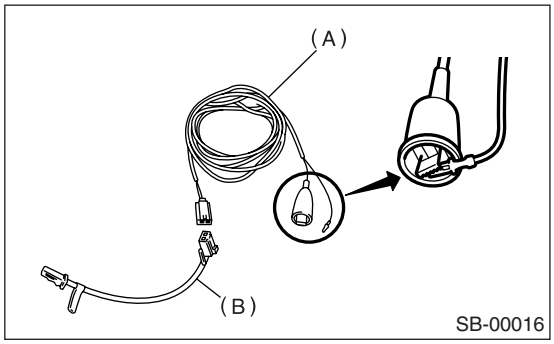
1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
3) Remove the instrument panel side cover of passenger's side and disconnect the airbag connector.



AB-00763

4) Short the terminal to the alligator clip furnished as deployment tool (A).
5) Connect the deployment tool (A) and deployment adapter E (B).

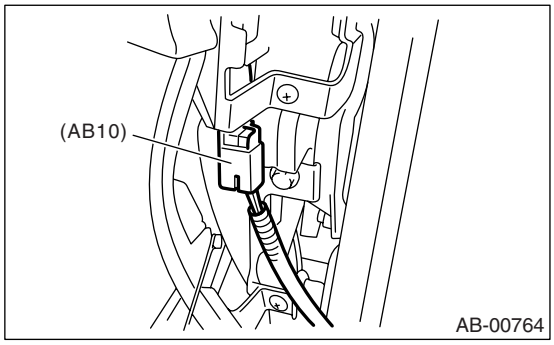
CAUTION:
The deployment tool should be kept shorted terminals until just before deployment of airbag module.



SB-00016

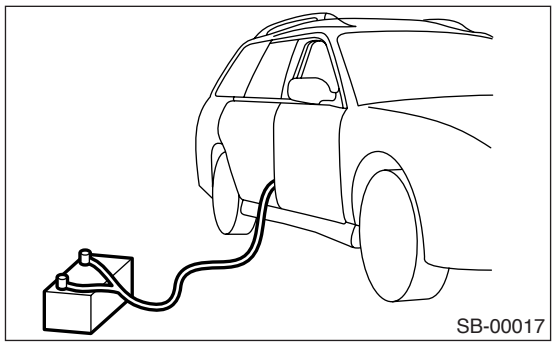
(A) Deployment tool:
(Tool number 98299PA030)
(B) Deployment adapter E:
(Tool number 98299SA030)

6) Connect the deployment adapter E to airbag connector (AB10).



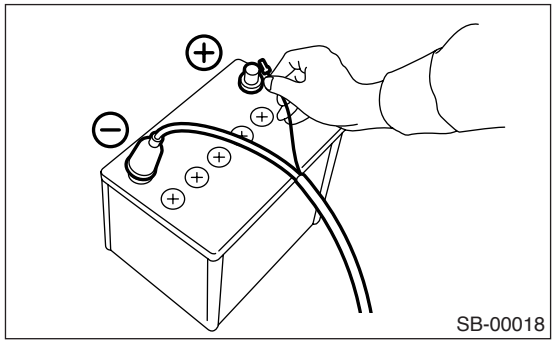
AB-00764

7) Extend the wiring of deployment tool to the limit, and make sure the vehicle is empty. Close all the windows, sunroof and rear gate completely.



SB-00017

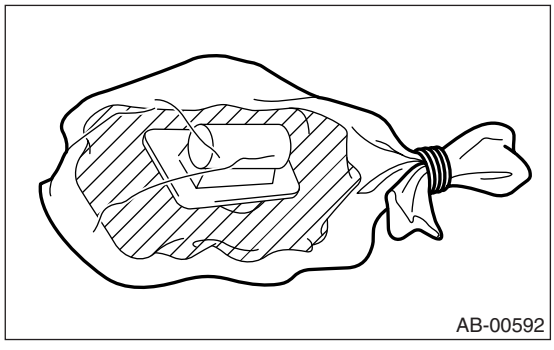
8) Move the battery at least 5 m (16 ft) from vehicle, and secure the nearby area. Connect the deployment tool alligator clip to the battery negative (–) terminal.
9) Connect the other cable of deployment tool to the battery positive (+) terminal, and deploy the airbag module.



SB-00018

CAUTION:
• After deployment, the airbag module will be especially hot, leave it unattended for 40 minutes, and then discard it.
• Do not let water get on the deployed airbag module.

10) Remove the instrument panel upper. <Ref. to EI-56, REMOVAL, Instrument Panel Assembly.>
11) Remove the passenger airbag module from instrument panel upper.
12) Wrap the airbag module, which were removed from instrument panel upper, in airtight vinyl bag, and discard it.



AB-00592

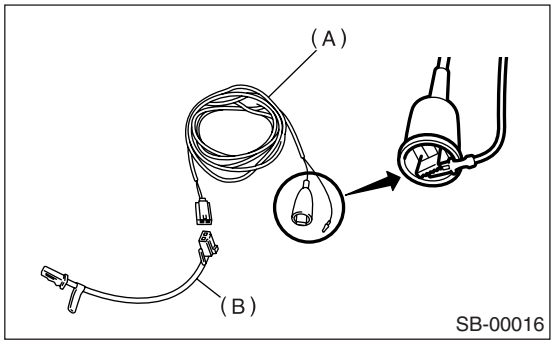
3. SIDE AIRBAG MODULE

1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
3) Disconnect the side airbag module connector (yellow) under the front seat cushion.

NOTE:
For power seat type, seat need to be removed. When deploying in vehicle, reinstall the seat after disconnecting the airbag connector. When deploying after removal from vehicle, refer to “Disposal of Airbag Module (Deploying After Removal from Vehicle)”. <Ref. to AB-33, SIDE AIRBAG MODULE, PROCEDURE, Disposal of Airbag Module (Deployment Processing After Removal from Vehicle).>

4) Set the backrest at most standing position, and then set the seat position at the center of slide rail.
5) Short the terminal to the alligator clip furnished as deployment tool (A).
6) Connect the deployment tool and deployment adapter A (B).

CAUTION:
The deployment tool should be kept shorted terminals until just before deployment of airbag module.



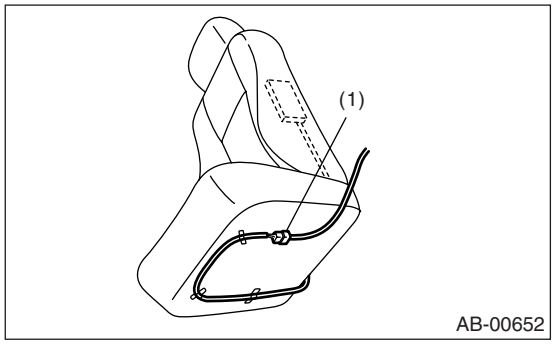
SB-00016

(A) Deployment tool:
(Tool number 98299PA030)
(B) Deployment adapter A:
(Tool number 98299FC030)

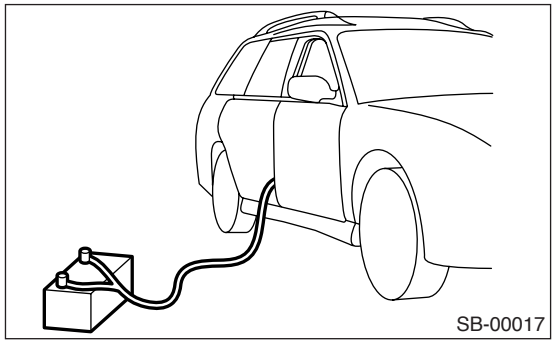
7) Connect the deployment adapter A (1) to the side airbag module connector (yellow).

CAUTION:
• Do not place any object on front seat.

• **Deploy the side airbag one by one to discard.**

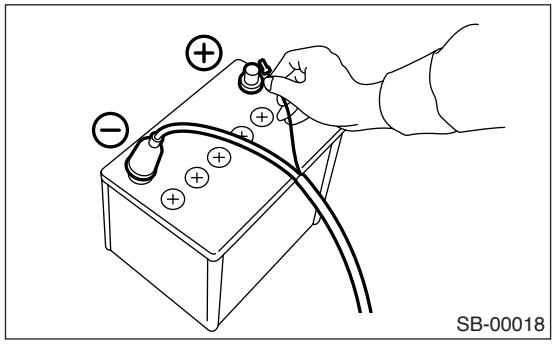


8) Extend the wiring of deployment tool to the limit, and make sure the vehicle is empty. Close all the windows, sunroof and rear gate completely.



9) Move the battery at least 5 m (16 ft) from vehicle, and secure the nearby area. Connect the deployment tool alligator clip to the battery negative (–) terminal.

10) Connect the other cable of deployment tool to the battery positive (+) terminal, and deploy the airbag module.



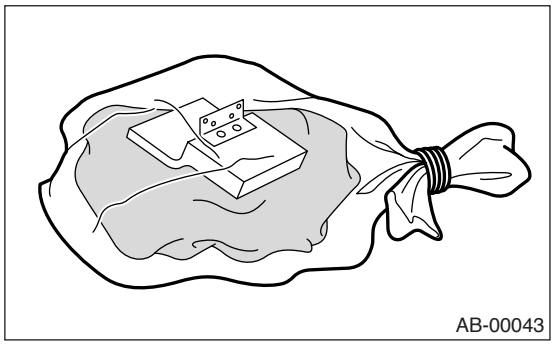
CAUTION:

• **After deployment, the airbag module will be especially hot, leave it unattended for 40 minutes, and then discard it.**

• **Do not let water get on the deployed airbag module.**

11) Remove the side airbag module. <Ref. to AB-16, REMOVAL, Side Airbag Module.>

12) Wrap the deployed airbag module in airtight vinyl bag, and discard it.



4. CURTAIN AIRBAG MODULE

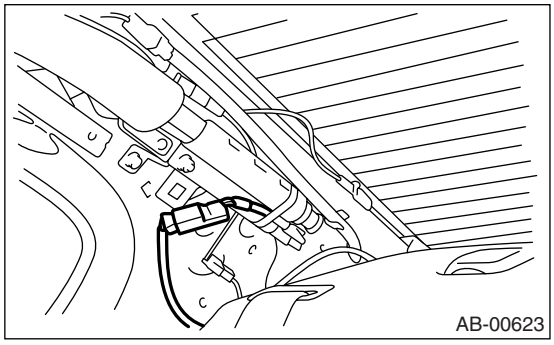
1) Turn the ignition switch to OFF.

2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.

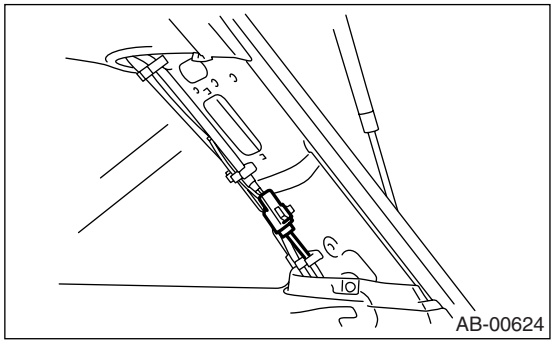
3) Remove the rear quarter trim. <Ref. to EI-63, REMOVAL, Rear Quarter Trim.>

4) Disconnect the curtain airbag harness.

• Sedan model



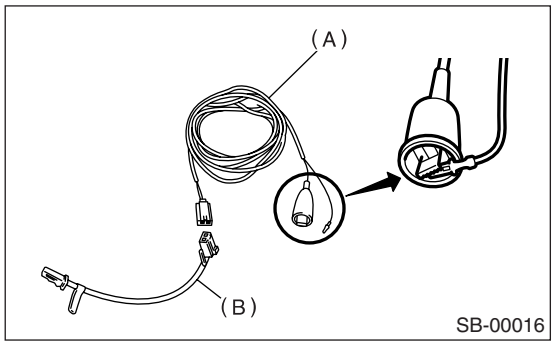
• Wagon model



5) Short the terminal to the alligator clip furnished as deployment tool (A).

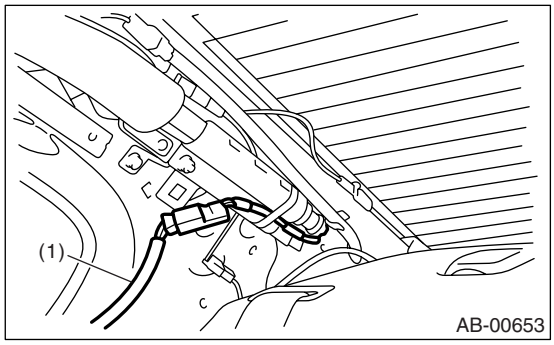
6) Connect the deployment tool and deployment adapter A (B).

CAUTION:
The deployment tool should be kept shorted terminals until just before deployment of airbag module.

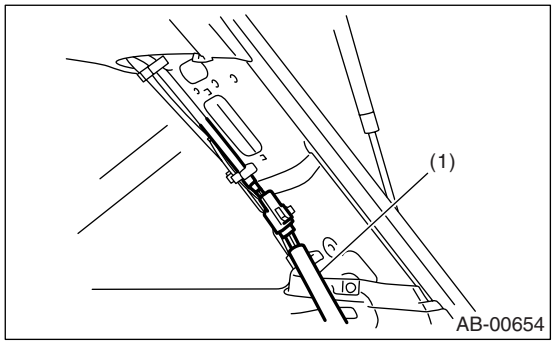


(A) Deployment tool:
(Tool number 98299PA030)
(B) Deployment adapter A:
(Tool number 98299FC030)

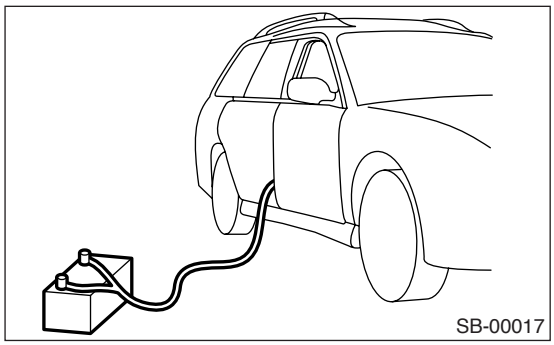
7) Connect the deployment adapter A (1) to the curtain airbag module connector (yellow).
• Sedan model



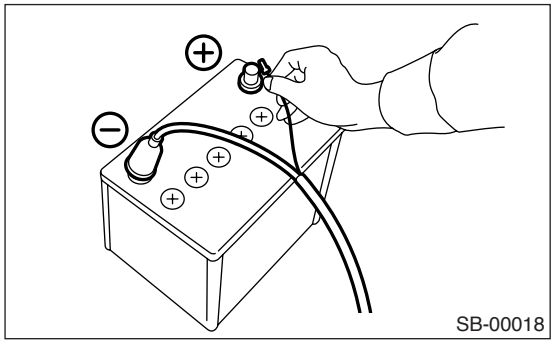
• Wagon model



8) Extend the wiring of deployment tool to the limit, and make sure the vehicle is empty. Close all the windows, sunroof and rear gate completely.

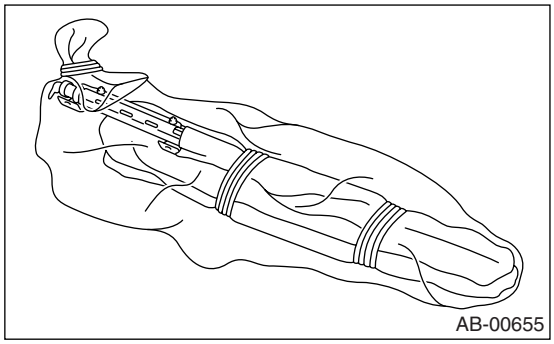


9) Move the battery at least 5 m (16 ft) from vehicle, and secure the nearby area. Connect the deployment tool alligator clip to the battery negative (–) terminal.
10) Connect the other cable of deployment tool to the battery positive (+) terminal, and deploy the airbag module.



CAUTION:
• After deployment, the airbag module will be especially hot, leave it unattended for 40 minutes, and then discard it.
• Do not let water get on the deployed airbag module.

11) Remove the curtain airbag module. <Ref. to AB-18, REMOVAL, Curtain Airbag Module.>
12) Wrap the deployed airbag module in airtight vinyl bag, and discard it.



NOTE:
Fold the airbag cloth three or four times as required and fasten it with string and seal it with vinyl bag.

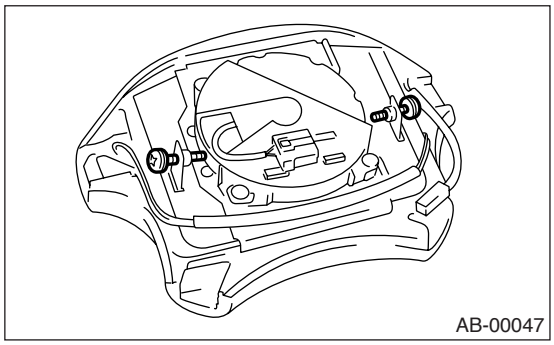
14. Disposal of Airbag Module (Deployment Processing After Removal from Vehicle)

A: PROCEDURE

CAUTION:
• Do not discard an undeployed airbag module because it may cause serious personal injury when accidentally deployed.
• As a rule, airbag modules should be deployed while still installed in the vehicle. Do not remove the airbag modules unless necessary.
• Deployment of airbag modules should be done on a flat place free from any possible danger. Avoid deploying outdoors during rainy or windy weather.
• Do not damage the airbag module or drop it.
• Deploying an airbag module causes a high explosive noise, be sure to warn people in the area, and do not allow anyone within a 5 m (16 ft) radius of the disposal site.
• Some smoke will be emitted from deployment of the airbag module. Therefore, it must be deployed in a well ventilated place with no smoke detector nearby.
• Wear protective gloves, safety goggles and earplugs during this operation. Wash your hands afterwards.
• After deployment, the airbag module will be especially hot, leave it unattended for 40 minutes, and then discard it.
• Do not let water get on the deployed airbag module.
• Wrap the deployed airbag module in an airtight vinyl bag, and discard it.
• If circumstances do not permit the airbag module deployment, contact the SUBARU dealer.

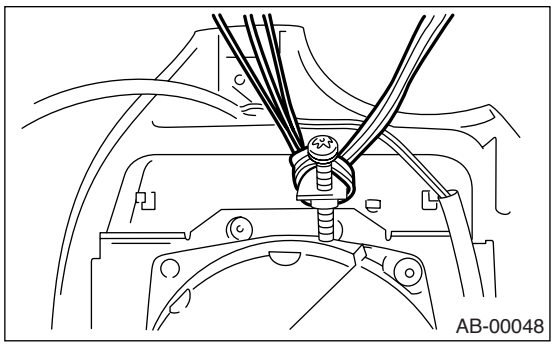
1. DRIVER'S AIRBAG MODULE

1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
3) Remove the driver's airbag module. <Ref. to AB-14, Driver's Airbag Module.>
4) Install the removed bolts to airbag module.



AB-00047

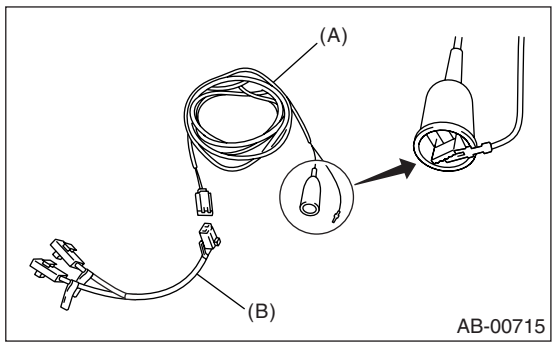
5) Bundle three automotive wire harnesses [each with a sectional area of 1.25 mm^2 (0.00194 sq in) or more], and bind them twofold around airbag module stay.



AB-00048

6) Short the terminal to the alligator clip furnished as deployment tool (A).
7) Connect the deployment tool and deployment adapter X (B).

CAUTION:
The deployment tool should be kept shorted terminals until just before deployment of airbag module.

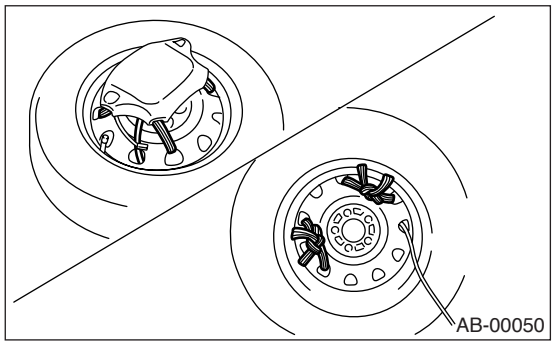


AB-00715

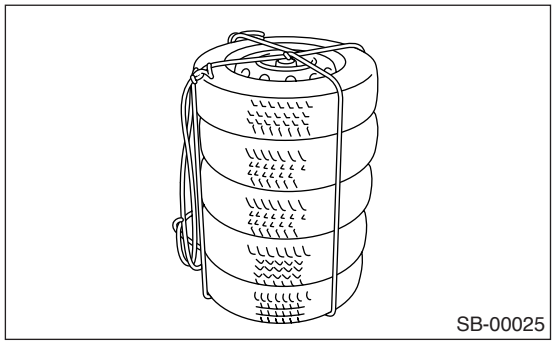
(A) Deployment tool:
(Tool number 98299PA030)
(B) Deployment adapter X:
(Tool number 98299AG030)

8) Connect the deployment adapter X connector to airbag module.

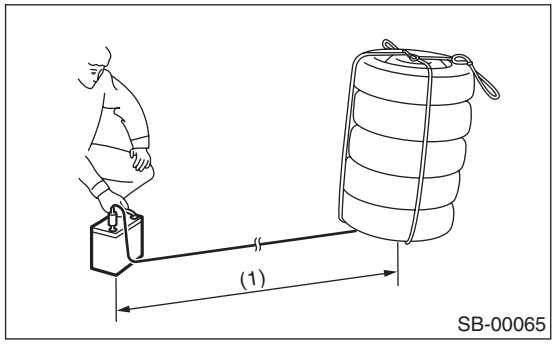
9) Install the airbag module with pad side facing upward on a wheel with tire.



10) Put three tires without wheels on the tire installed with the airbag module. Put on an additional tire with a wheel, and then fasten them tight with a rope.

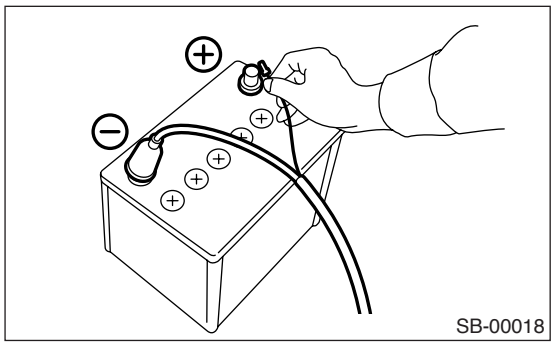


11) Move the battery at least 5 m (16 ft) from tires, and secure the nearby area. Connect the deployment tool alligator clip to the battery negative (–) terminal.



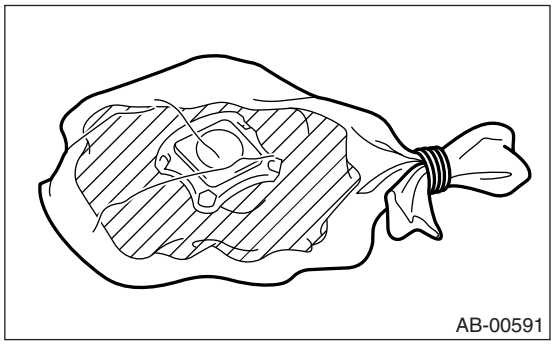
(1) 5 m (16 ft) or more

12) Connect the other cable of deployment tool to the battery positive (+) terminal, and deploy the airbag module.



CAUTION:
• After deployment, the airbag module will be especially hot, leave it unattended for 40 minutes, and then discard it.
• Do not let water get on the deployed airbag module.

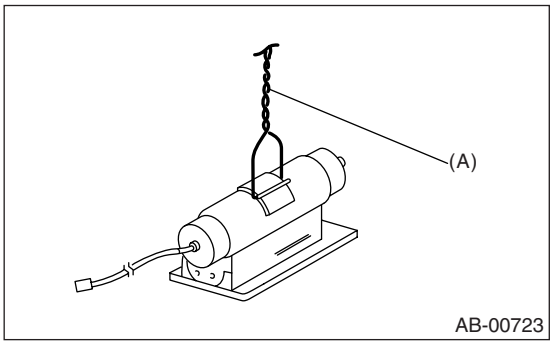
13) Wrap the deployed airbag module in airtight vinyl bag, and discard it.



2. PASSENGER'S AIRBAG MODULE

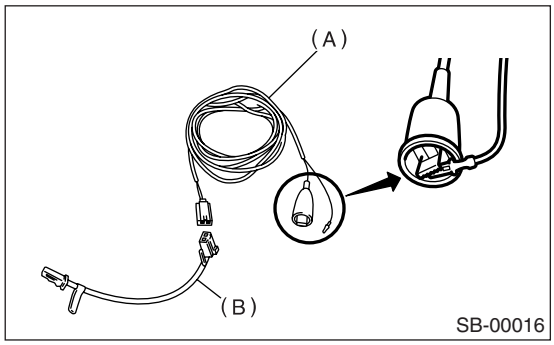
1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
3) Remove the instrument panel assembly. <Ref. to EI-56, REMOVAL, Instrument Panel Assembly.>
4) Remove the passenger airbag module. <Ref. to AB-15, Passenger's Airbag Module.>

5) Bundle three automotive wire harnesses [each with a sectional area of 1.25 mm^2 (0.00194 sq in) or more], route them through airbag module bracket (A). Then, twist them to add strength.



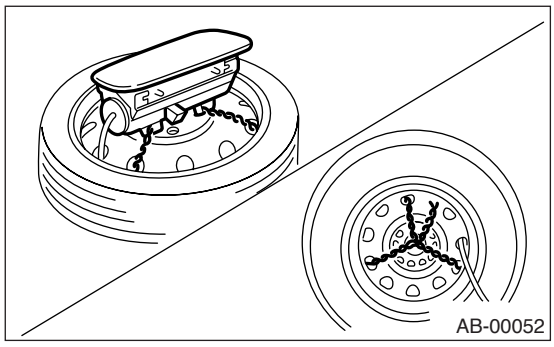
6) Short the terminal to the alligator clip furnished as deployment tool (A).
7) Connect the deployment tool and deployment adapter E (B).

CAUTION:
The deployment tool should be kept shorted terminals until just before deployment of airbag module.

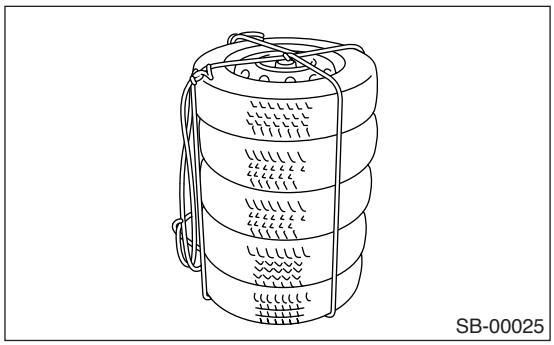


(A) Deployment tool:
(Tool number 98299PA030)
(B) Deployment adapter E:
(Tool number 98299SA030)

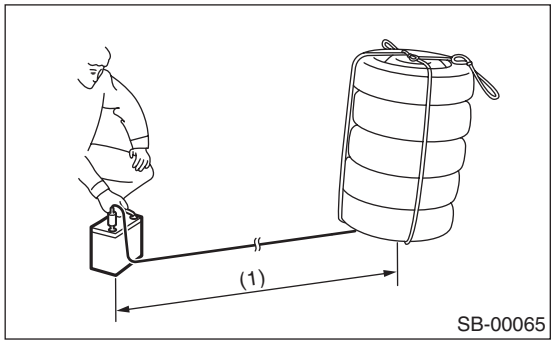
8) Connect the deployment adapter E connector to the airbag module.
9) Install the airbag module with opening side facing upward on a 14-inch or greater size wheel with tire.



10) Put three tires without wheels on the tire installed with the airbag module. Put on an additional tire with a wheel on top, and then fasten them tight with a rope.

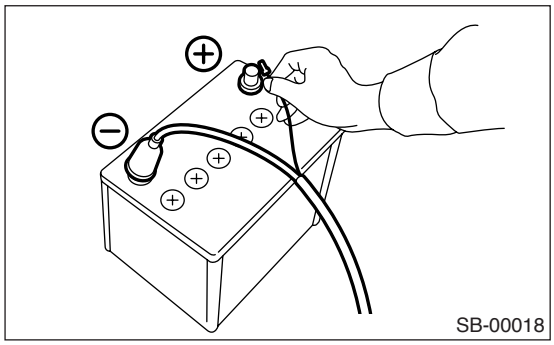


11) Move the battery at least 5 m (16 ft) from tires, and secure the nearby area. Connect the deployment tool alligator clip to the battery negative (–) terminal.



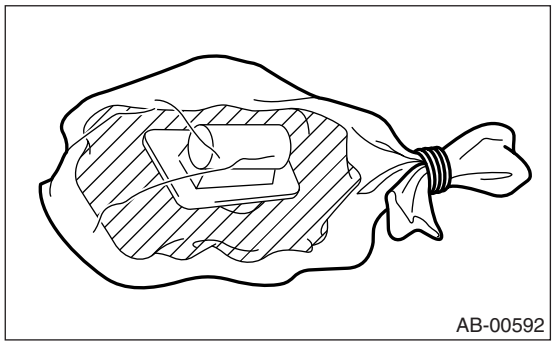
(1) 5 m (16 ft) or more

12) Connect the other cable of deployment tool to the battery positive (+) terminal, and deploy the airbag module.



CAUTION:
• After deployment, the airbag module will be especially hot, leave it unattended for 40 minutes, and then discard it.
• Do not let water get on the deployed airbag module.

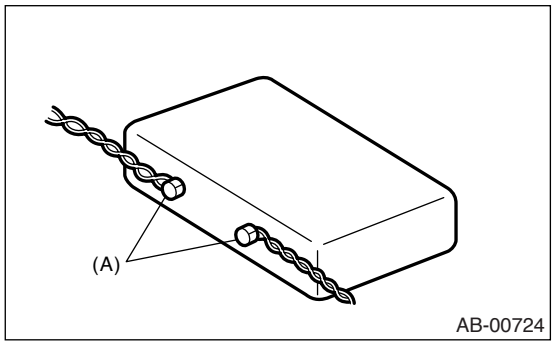
13) Wrap the deployed airbag module in airtight vinyl bag, and discard it.



AB-00592

3. SIDE AIRBAG MODULE

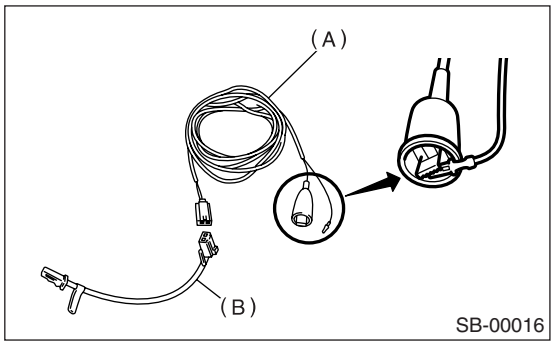
1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
3) Remove the front seats. <Ref. to SE-7, REMOVAL, Front Seat.>
4) Remove the side airbag module. <Ref. to AB-16, REMOVAL, Side Airbag Module.>
5) Install the nuts (A) to airbag module, and then bind them with bundled three automotive wire harnesses [each with a sectional area of 1.25 mm^2 (0.00194 sq in) or more].



AB-00724

6) Short the terminal to the alligator clip furnished as deployment tool (A).
7) Connect the deployment tool and deployment adapter A (B).

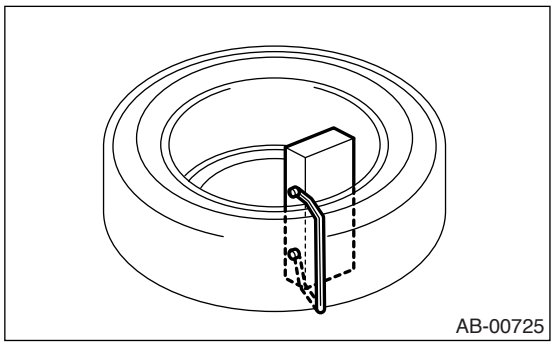
CAUTION:
The deployment tool should be kept shorted terminals until just before deployment of airbag module.



SB-00016

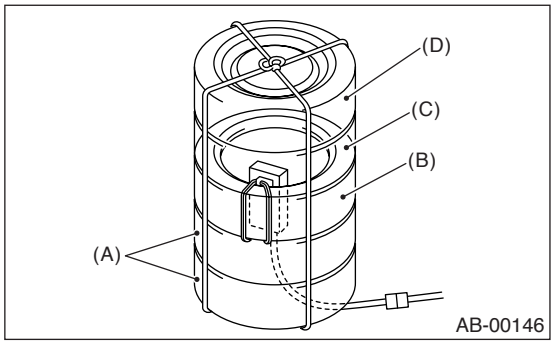
(A) Deployment tool:
(Tool number 98299PA030)
(B) Deployment adapter A:
(Tool number 98299FC030)

8) Connect the deployment adapter A connector to airbag module.
9) Install the airbag module on a 14-inch or greater size tire without wheel.



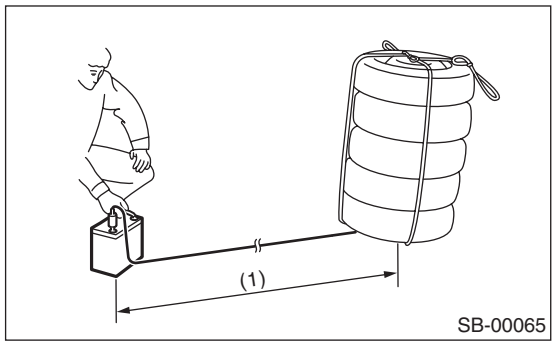
AB-00725

10) Put two tires without wheels (A) under the tire installed with the side airbag module (B). Put on an additional tire without a wheel (C), and then put a tire with a wheel (D) on top. Fasten them tight with a rope.



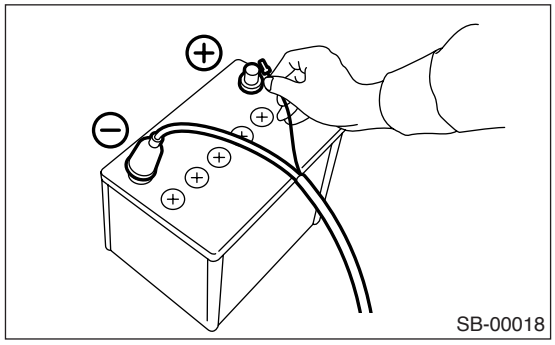
AB-00146

11) Move the battery at least 5 m (16 ft) from tires, and secure the nearby area. Connect the deployment tool alligator clip to the battery negative (−) terminal.



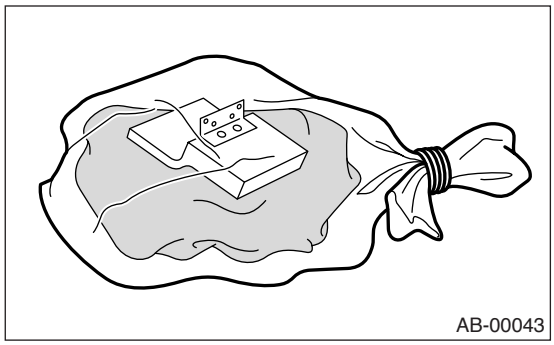
(1) 5 m (16 ft) or more

12) Connect the other cable of deployment tool to the battery positive (+) terminal, and deploy the airbag module.



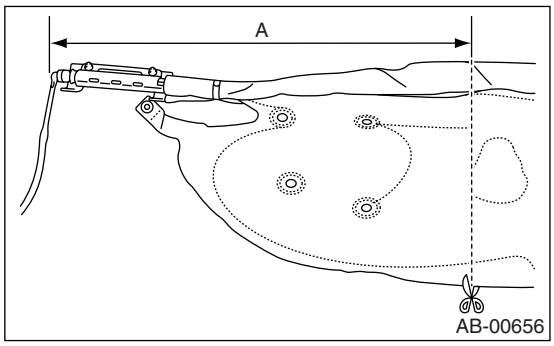
CAUTION:
• After deployment, the airbag module will be especially hot, leave it unattended for 40 minutes, and discard it.
• Do not let water get on the deployed airbag module.

13) Wrap the deployed airbag module in airtight vinyl bag, and discard it.

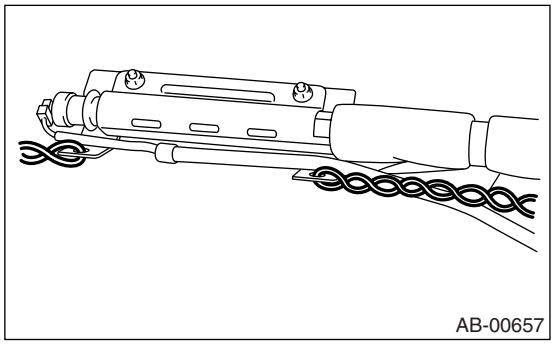


4. CURTAIN AIRBAG MODULE

1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
3) Remove the roof trim. <Ref. to EI-67, REMOVAL, Roof Trim.>
4) Remove the curtain airbag module. <Ref. to AB-18, REMOVAL, Curtain Airbag Module.>
5) Extend the airbag cloth and cut off the airbag at the position of 750 mm (29.5 in) (A) from inflator end.

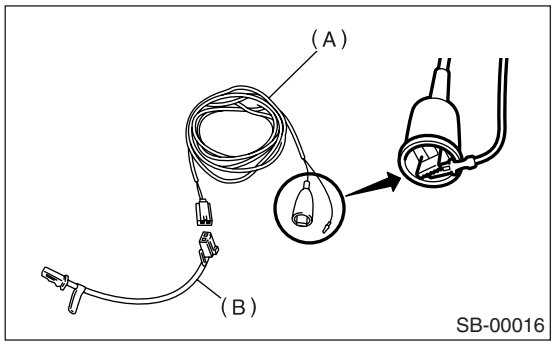


6) Bundle three automotive wire harnesses [each with a sectional area of 1.25 mm^2 (0.00194 sq in) or more], and then bind them through the holes in airbag module bracket.



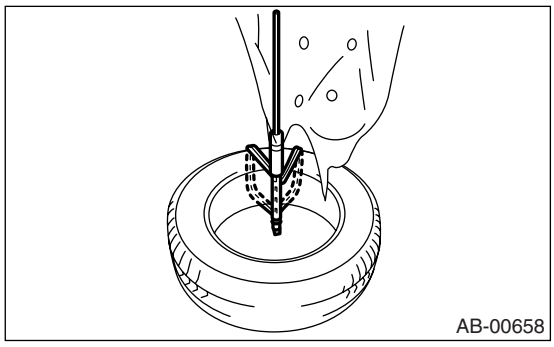
7) Short the terminal to the alligator clip furnished as deployment tool (A).
8) Connect the deployment tool and deployment adapter A (B).

CAUTION:
The deployment tool should be kept shorted terminals until just before deployment of airbag module.

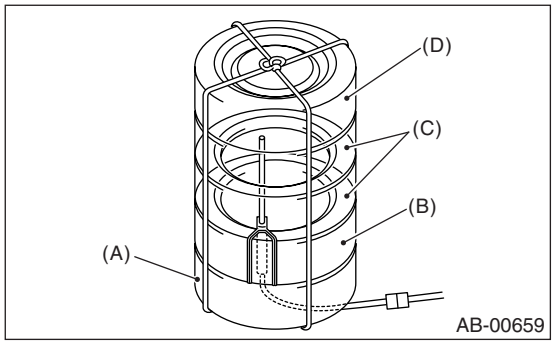


(A) Deployment tool:
(Tool number 98299PA030)
(B) Deployment adapter A:
(Tool number 98299FC030)

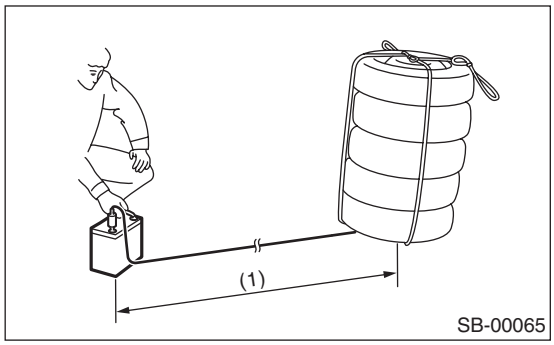
9) Connect the deployment adapter A connector to airbag module.
10) Install the airbag module on a 14-inch or greater size tire without wheel.



11) Put a tire without a wheel (A) under the tire installed with the curtain airbag module (B). Put on two additional tires without a wheels (C), and then put a tire with a wheel (D) on top. Fasten them tight with a rope.

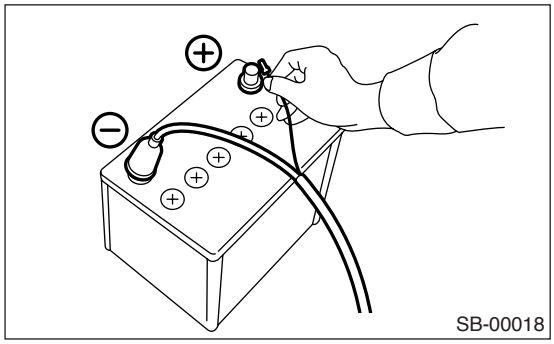


12) Move the battery at least 5 m (16 ft) from tires, and secure the nearby area. Connect the deployment tool alligator clip to the battery negative (–) terminal.



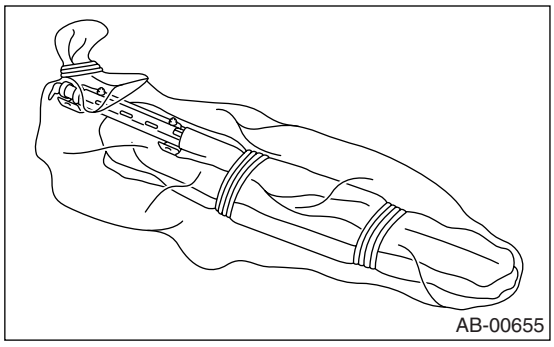
(1) 5 m (16 ft) or more

13) Connect the other cable of deployment tool to the battery positive (+) terminal, and deploy the airbag module.



CAUTION:
• After deployment, the airbag module will be especially hot, leave it unattended for 40 minutes, and discard it.
• Do not let water get on the deployed airbag module.

14) Wrap the deployed airbag module in airtight vinyl bag, and discard it.



BODY SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

1. Basic Diagnostic Procedure

A: PROCEDURE

Step		Check	Yes	No
1	**READ DTC.** <Ref. to AB(diag)-30, Read Diagnostic Trouble Code (DTC).>	Is the normal code detected?	Finish the diagnosis.	Go to step **2.**
2	**READ DTC.** <Ref. to AB(diag)-30, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Go to step **3.**	Go to “Airbag Warning Light Failure”. <Ref. to AB(diag)-33, Airbag Warning Light Failure.>
3	**PERFORM DIAGNOSIS.** 1) Judge the possible cause from “List of Diagnostic Trouble Code” <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>. 2) Inspect the DTC using “List of Diagnostic Trouble Code (DTC)”. 3) Repair the trouble cause. 4) Perform the clear memory mode. <Ref. to AB(diag)-32, Clear Memory Mode.> 5) Perform the inspection mode. <Ref. to AB(diag)-31, Inspection Mode.> 6) Read any DTC again.	Is DTC displayed?	Perform the procedure 1) to 5) in step 3.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

Customer's Name		Inspector's Name	
Date Vehicle Brought In	/ /	Registration No.

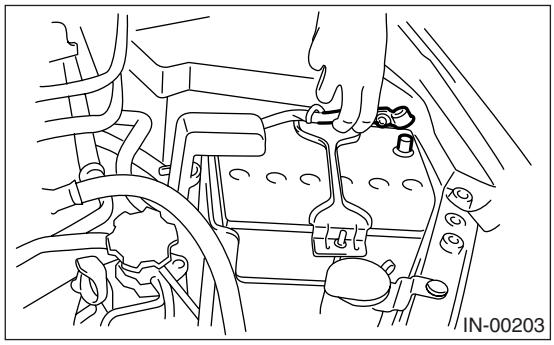
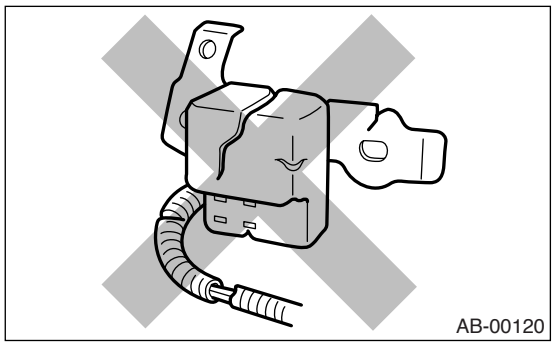
3. General Description

A: CAUTION

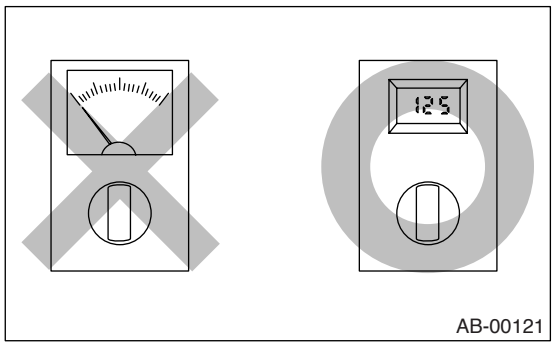
• When servicing a vehicle, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for more than 20 seconds before starting work.
• The airbag system is equipped with a backup power source. If the airbag system is serviced within 20 seconds from the ground cable is disconnected, it may inflate.



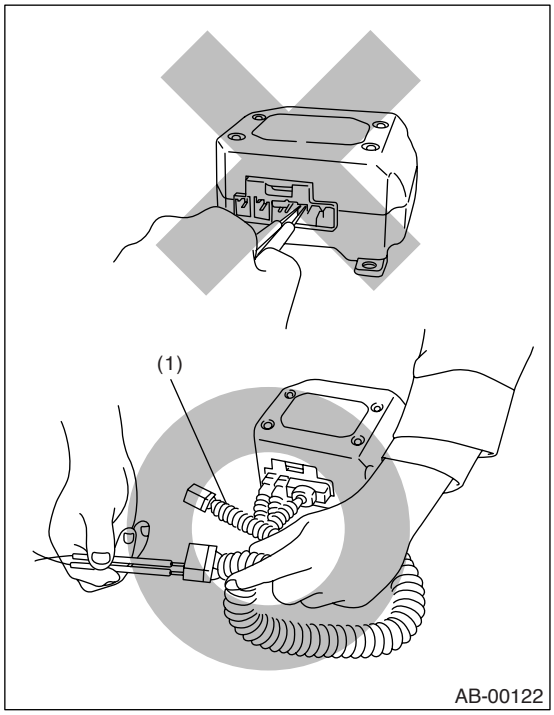
• If sensors, airbag module, airbag control module, pretensioner and harness are deformed or damaged, replace them with new parts.



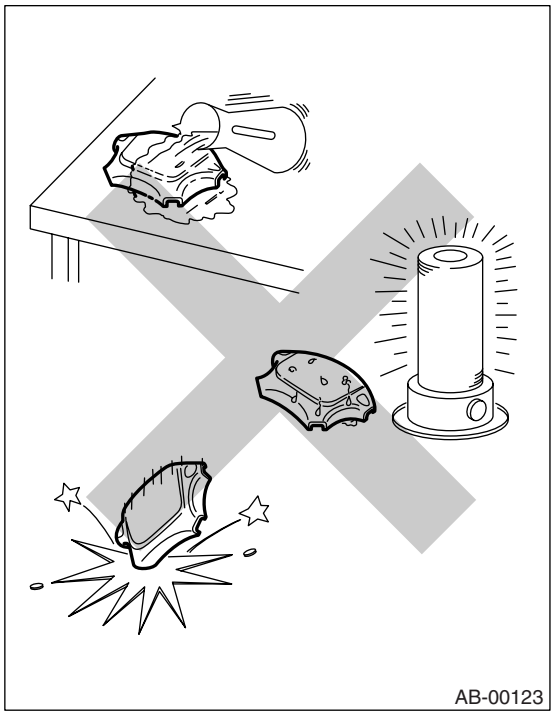
• Do not use the airbag system and pretensioners on other vehicles. When replacing parts, be sure to replace them with new ones.
• When checking the airbag system, be sure to use a digital circuit tester. Use of an analog circuit tester may cause the airbag to activate erroneously.



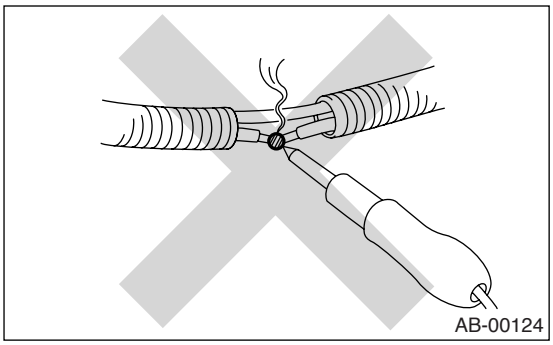
• When checking, use a test harness (1). Do not directly apply the tester probe to any connector terminal of the airbag.



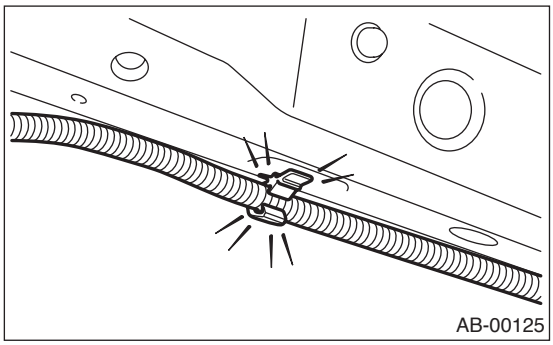
• Do not drop the airbag module, subject them to high temperature over 93°C (199°F), or let water, oil or grease get on them; the internal parts may be damaged and reliability is greatly lowered.



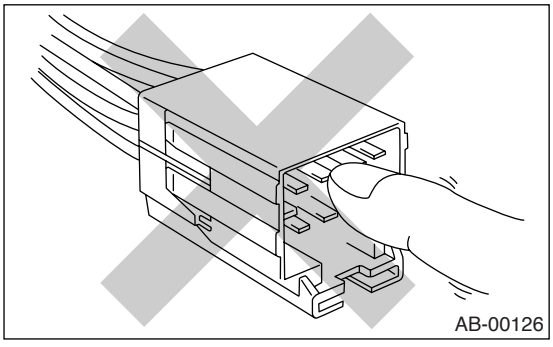
• If any damage, opening or rust is found on the airbag system wire harness, do not attempt to repair using soldering equipment. Be sure to replace the faulty harness with a new genuine part.



• Install the wire harness securely with the specified clips to avoid interference or tangled up with other parts.

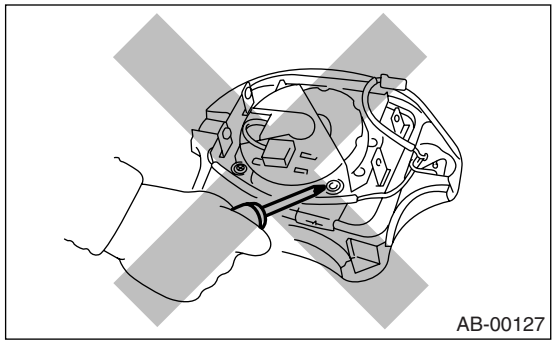


• Do not allow water or oil to come in contact with the connector terminals. Do not touch the connector terminals.

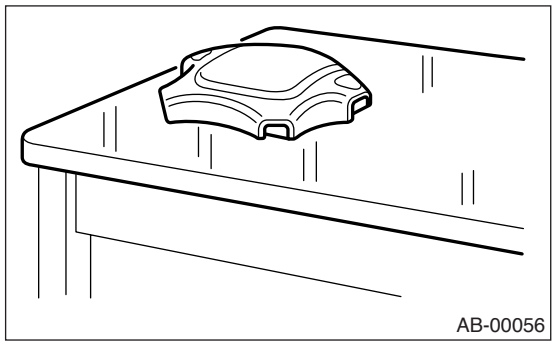


• Either of the airbag modules for driver, passenger, side or curtain, or pretensioner must not be disassembled.

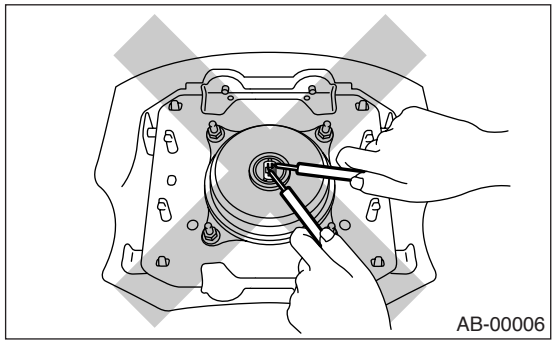
• The airbag module cannot be used again if once deployed.



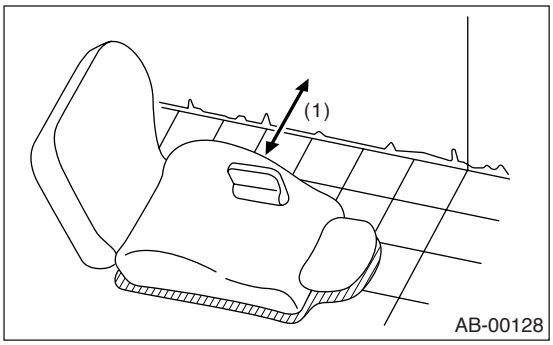
• After removal, keep the airbag module with the pad facing upward on a dry, clean and flat surface away from heat, light sources, moisture and dust.



• Do not check continuity of either of the airbag modules for driver, passenger, side or curtain, or pretensioner.

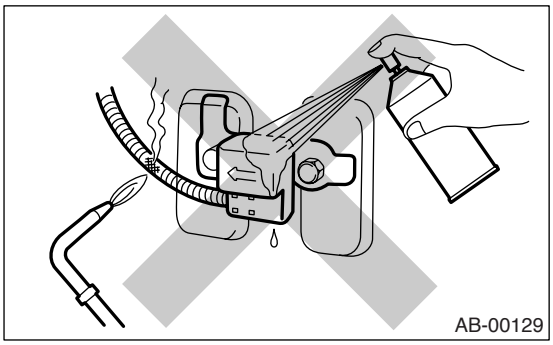


• The removed front seat with an airbag module must be kept at least 200 mm (8 in) away from walls and other objects.



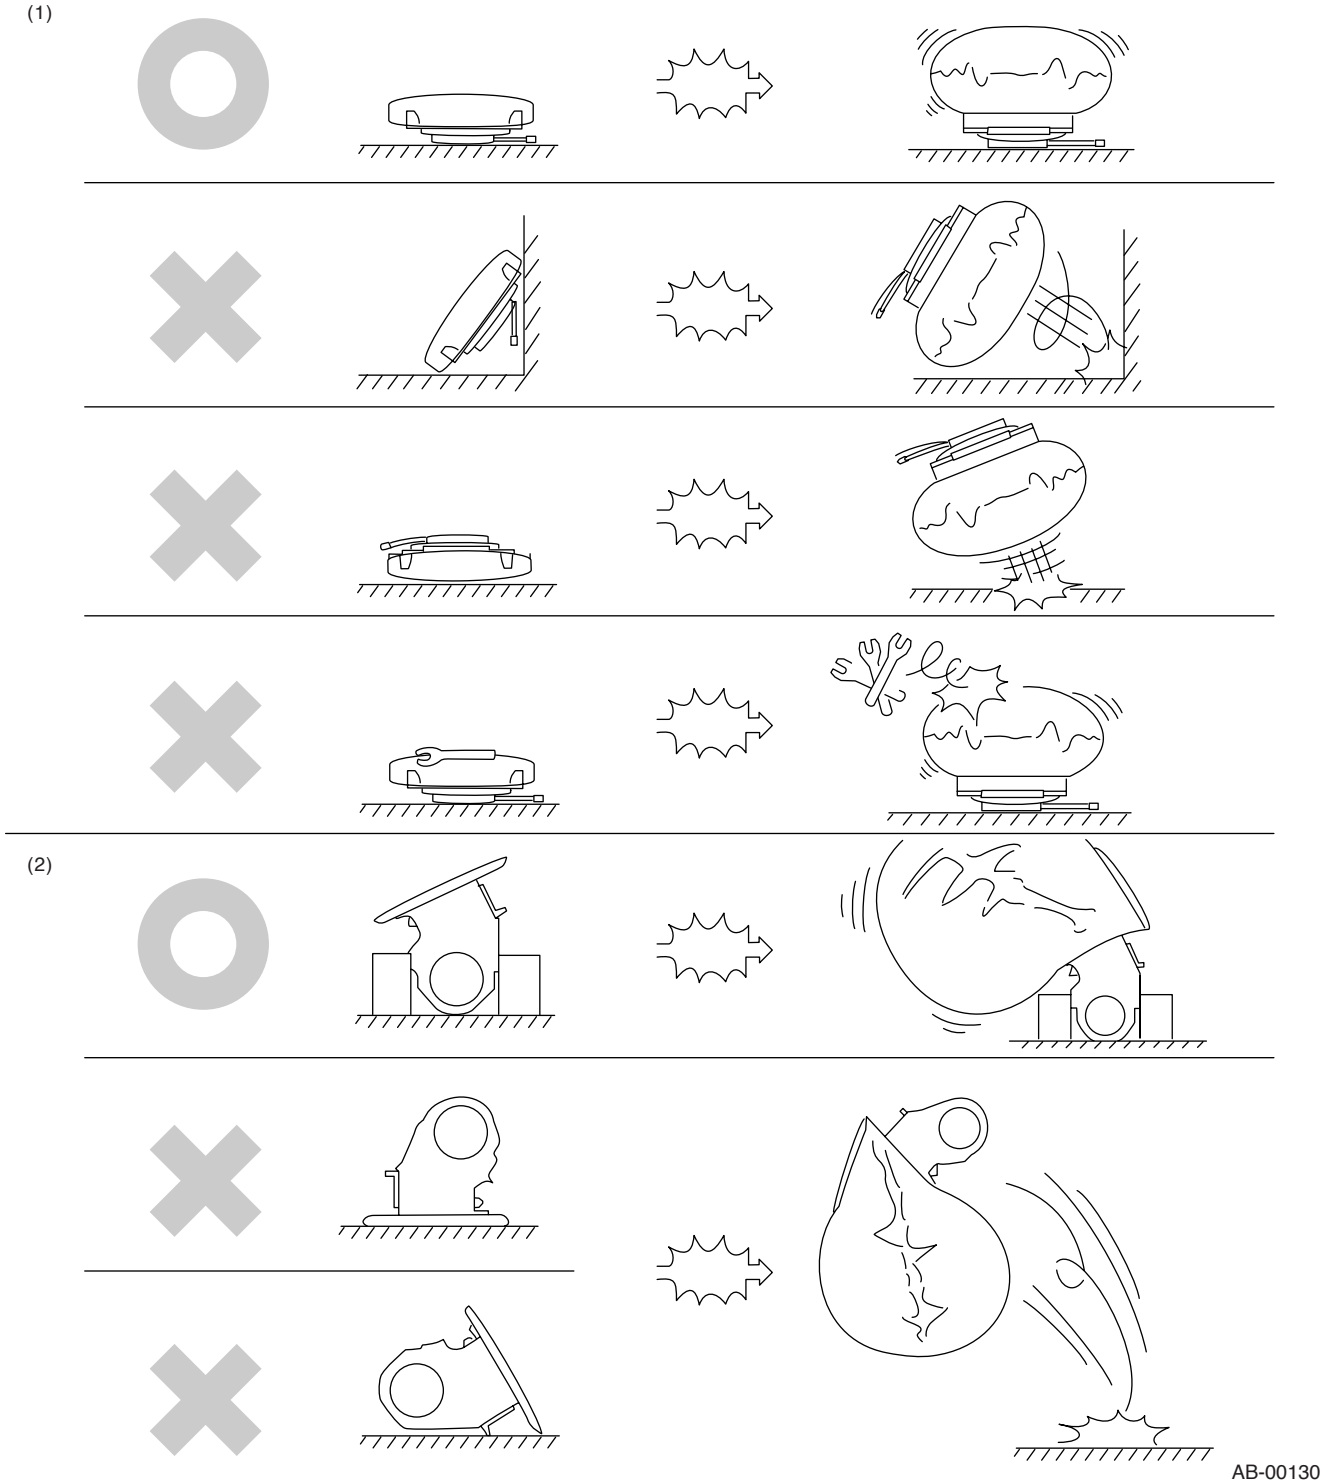
(1) 200 mm (8 in) or more

• When painting or performing sheet metal work on the front part of the vehicle, including the front wheel apron, front fender and front side frame, remove the front sub sensors and wire harness of the airbag system.
• When painting or performing sheet metal work on the side of the vehicle, including the side sill, center pillar and front and rear doors, remove the side airbag sensors and wire harness of the airbag system.



• Do not discard undeployed airbag modules. They could easily cause a serious accident if accidentally deployed.

• When storing a removed airbag module, do not place any objects on it or pile airbag modules on top of each other. If the airbag inflates for some reason when it is placed with its pad side facing downward or under any object, a serious accident may result.



(1) Driver's airbag module (2) Passenger's airbag module

B: INSPECTION

Measure the battery voltage and check electrolyte.

Standard voltage: 12 V

Specific gravity: Above 1.260

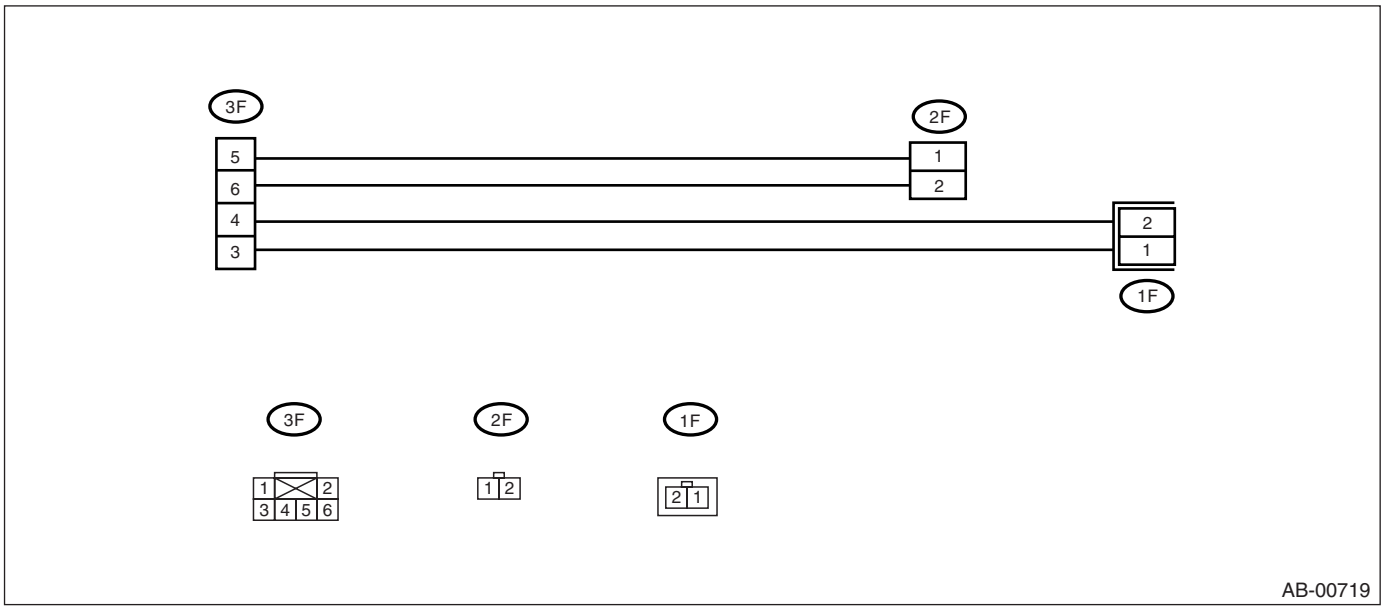
C: PREPARATION TOOL

CAUTION:
To check the voltage and resistance of airbag system component, be sure to use the specified test harness.

1. SPECIAL TOOL

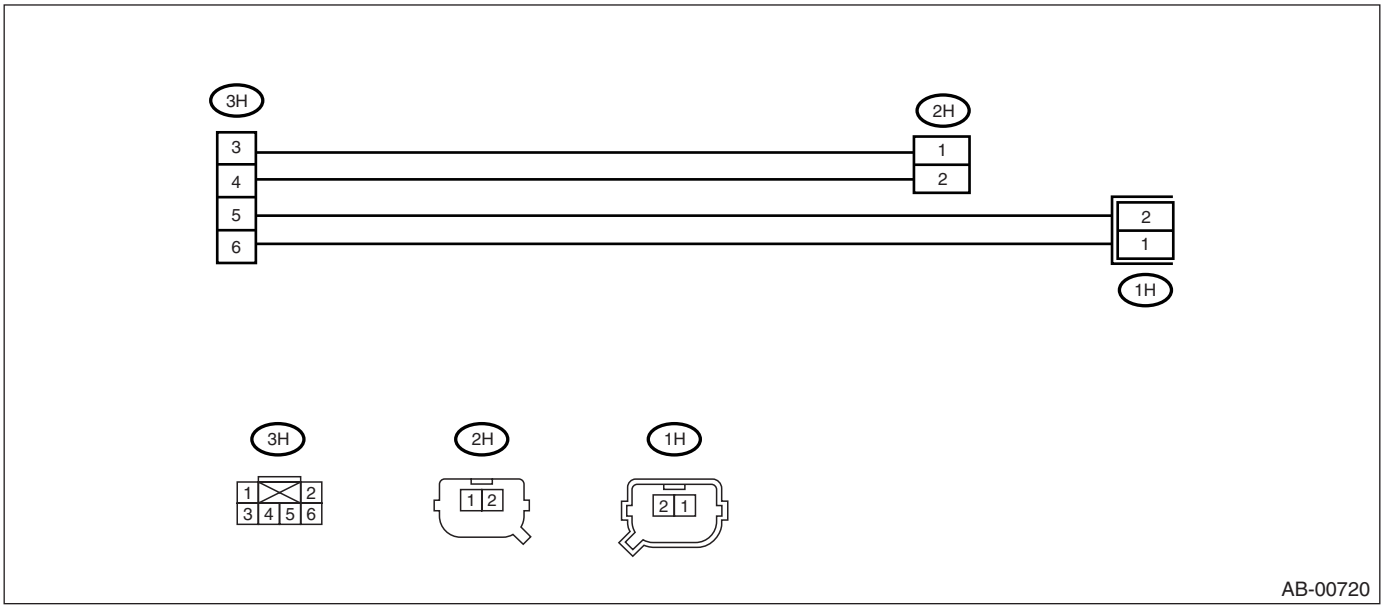
- TEST HARNESS F

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299FC010	98299FC010	TEST HARNESS F	Used when measuring voltage and resistance of airbag module harnesses.



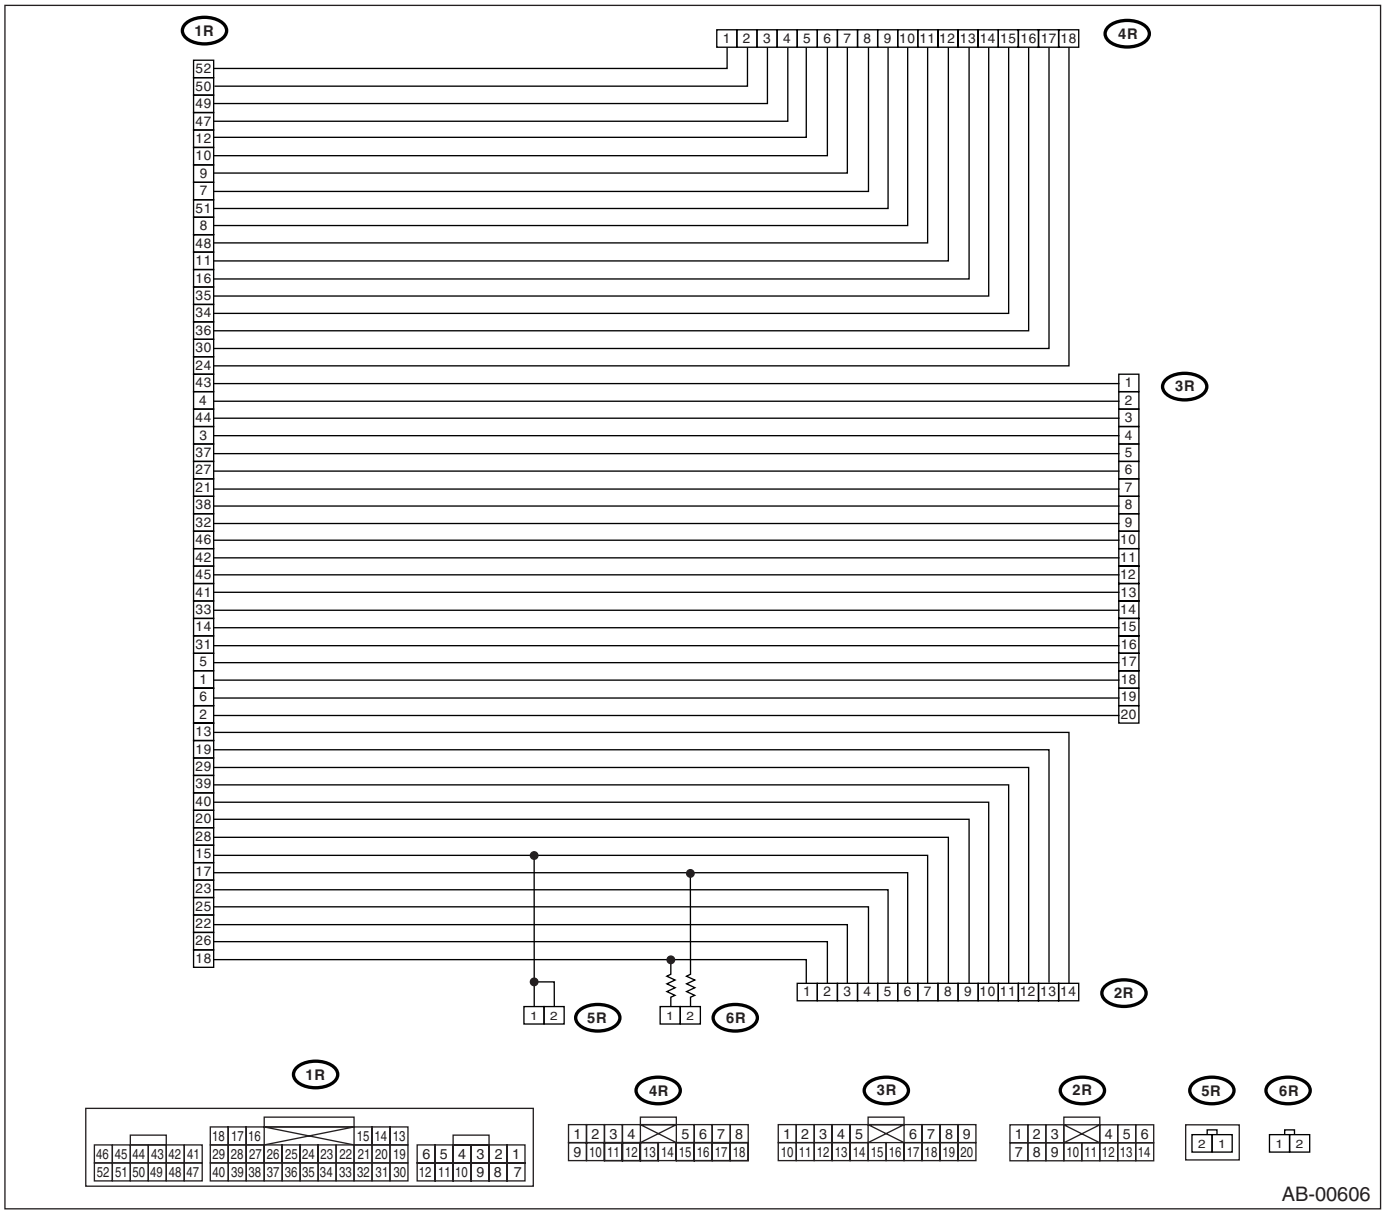
• TEST HARNESS H

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299FA030	98299FA030	TEST HARNESS H	Used when measuring voltage and resistance of front sub-sensor.



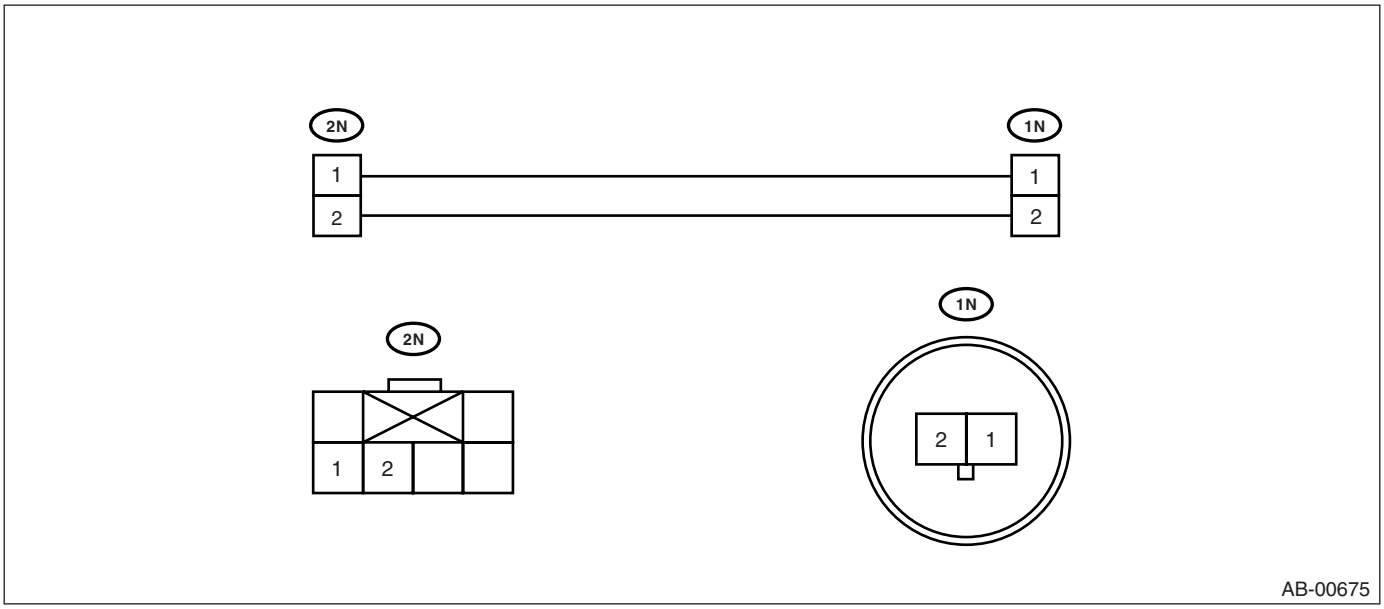
• TEST HARNESS R

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299FE030	98299FE030	TEST HARNESS R	Used when measuring voltage and resistance of airbag control module.



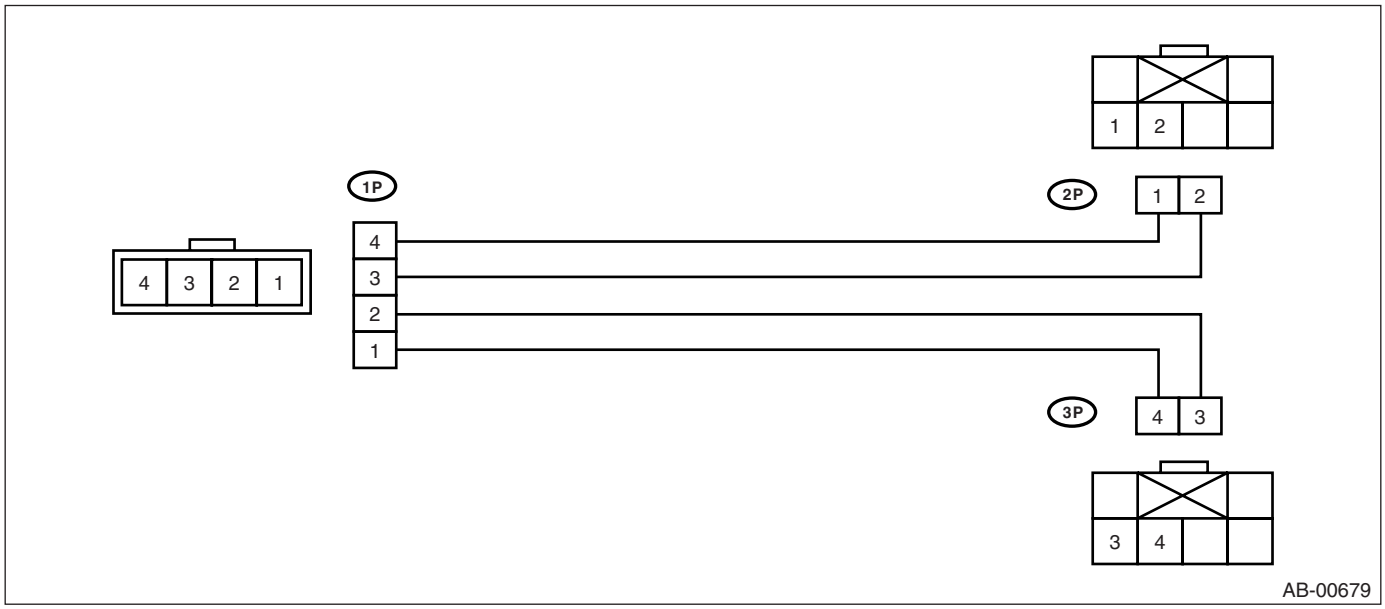
• TEST HARNESS N

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299SA000	98299SA000	TEST HARNESS N	Used when measuring voltage and resistance of driver's airbag module and seat belt pretensioner.



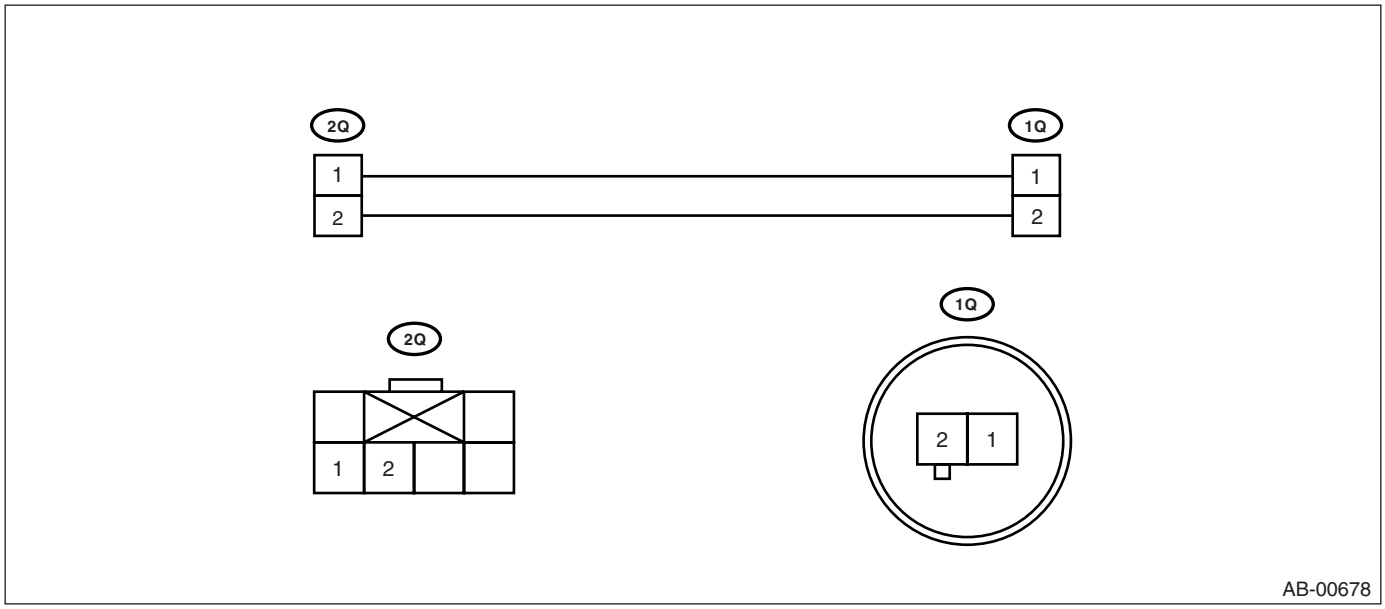
• TEST HARNESS P

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299SA020	98299SA020	TEST HARNESS P	Used when measuring voltage and resistance of driver's airbag module harness and passenger airbag module harness.



• TEST HARNESS Q

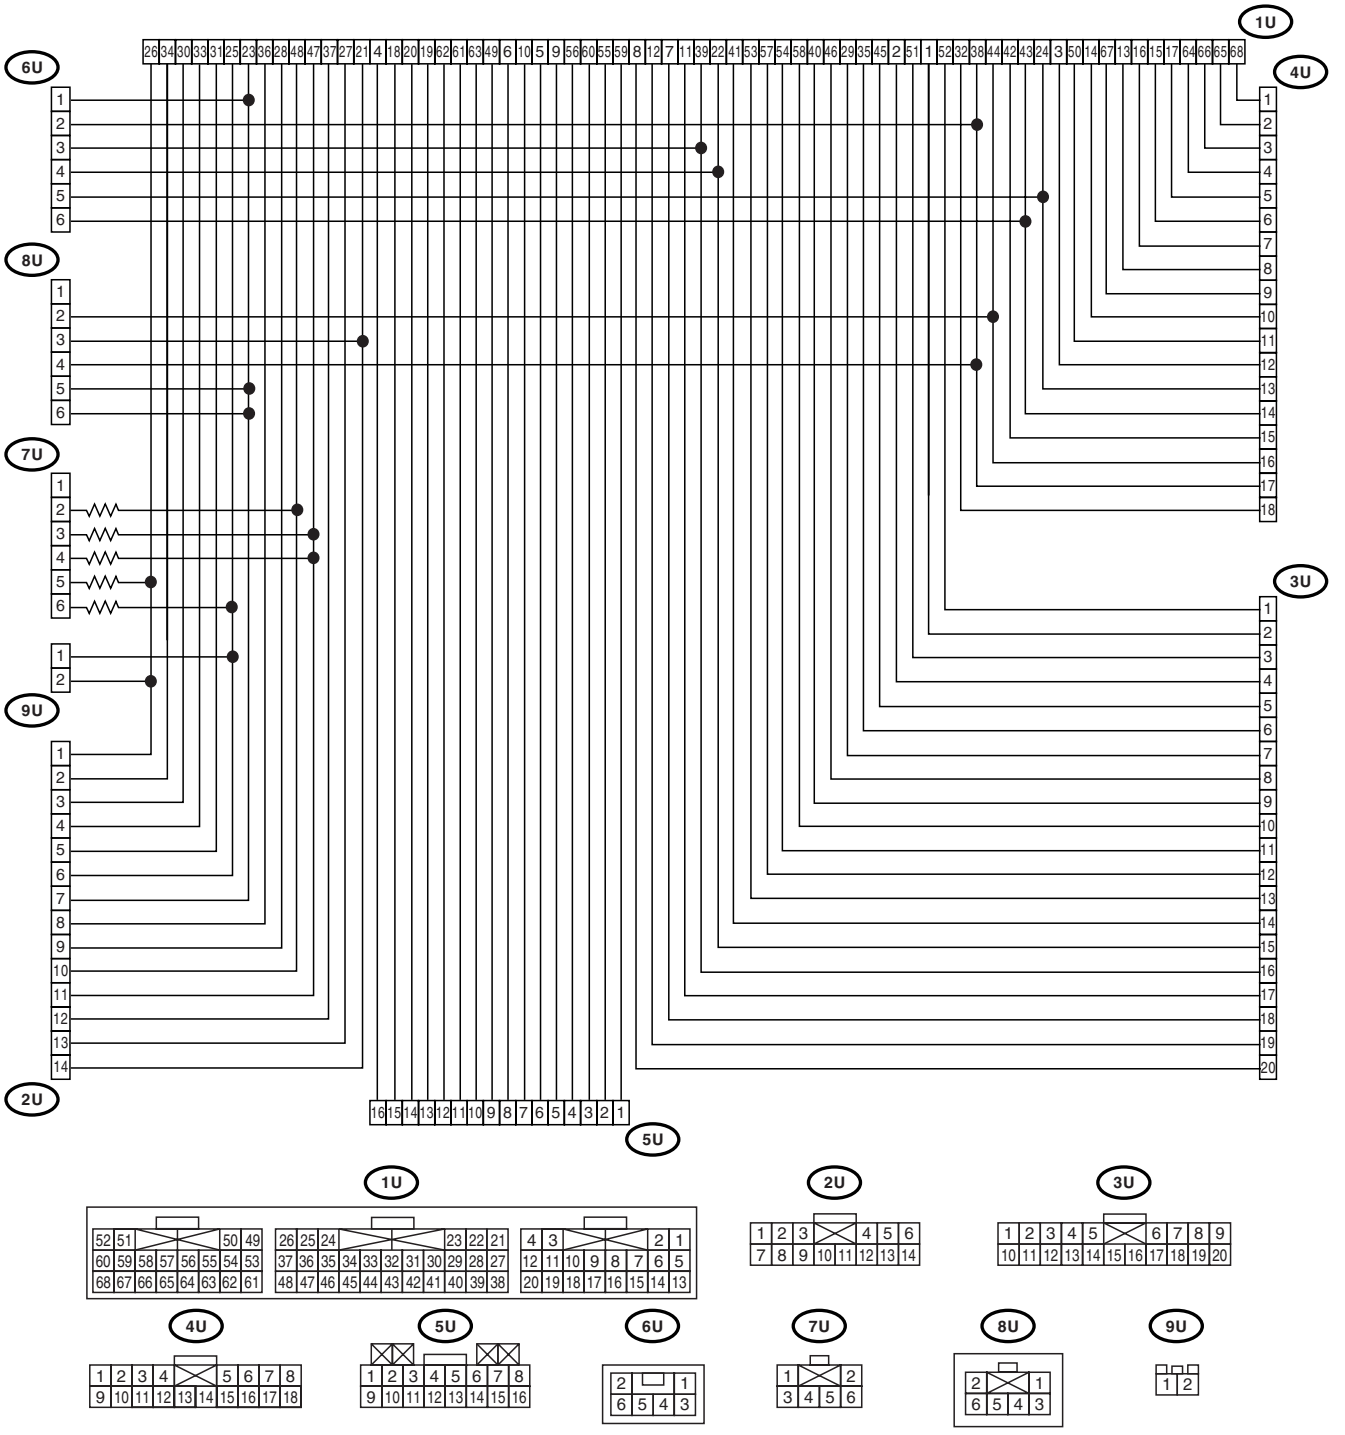
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299SA040	98299SA040	TEST HARNESS Q	Used when measuring voltage and resistance of driver's airbag module.



AB-00678

• TEST HARNESS U

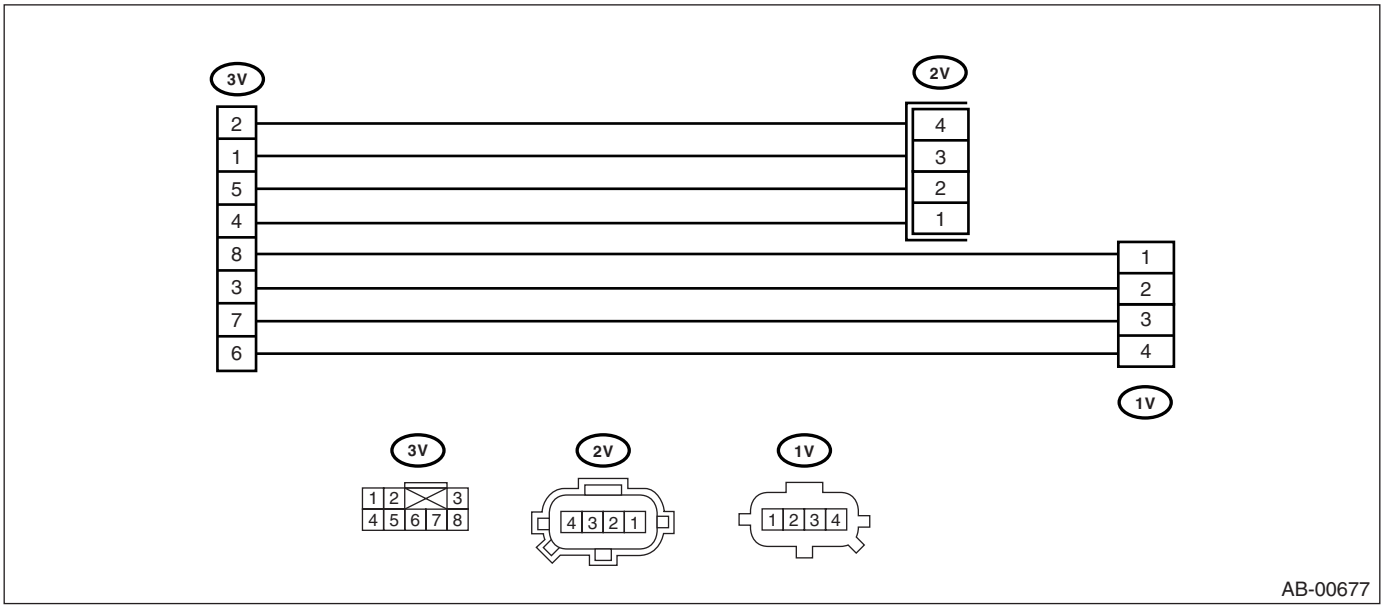
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299AG000	98299AG000	TEST HARNESS U	Used when measuring voltage and resistance of airbag control module.



AB-00676

• TEST HARNESS V

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299AG010	98299AG010	TEST HARNESS V	Used when measuring voltage and resistance of side airbag sensor and curtain airbag sensor.



• AIRBAG RESISTOR

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299PA040	98299PA040	AIRBAG RESISTOR	Used in replacement of airbag module for which resistance value is same as airbag module.

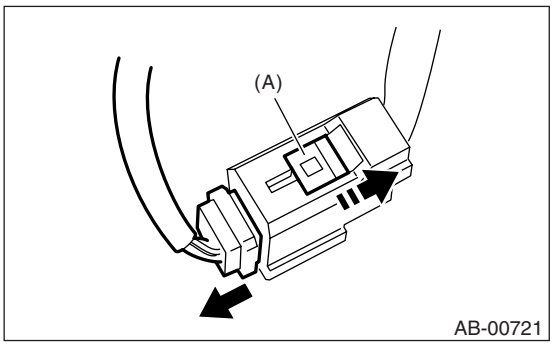
6. Airbag Connector

A: PROCEDURE

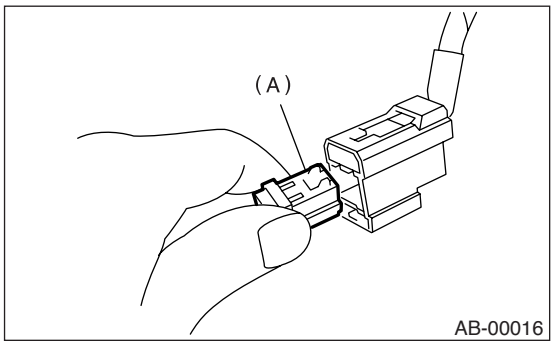
1. POWER SUPPLY

1) How to disconnect:
(1) Move the slide lock (A) in the direction of arrow.
(2) With the slide lock (A) moved, separate the connector.



CAUTION:
When pulling the slide lock or disconnecting the connector, be sure to hold onto the connector and not the wire.

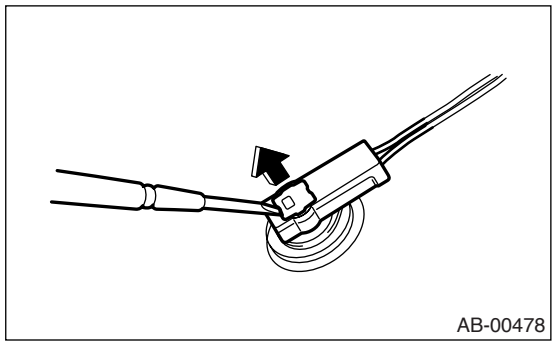
2) How to connect:
Holding the connector (A), and push it in carefully until a connecting sound is heard.



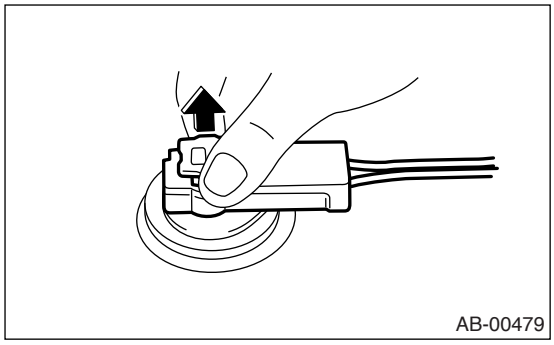
CAUTION:
Be sure to insert the connector in until it locks. Then pull on it gently to make sure that it is locked.

2. DRIVER'S AIRBAG MODULE AND PRETENSIONER

1) How to disconnect:
(1) Using a flat tip screwdriver, pry the push lock upward to unlock.

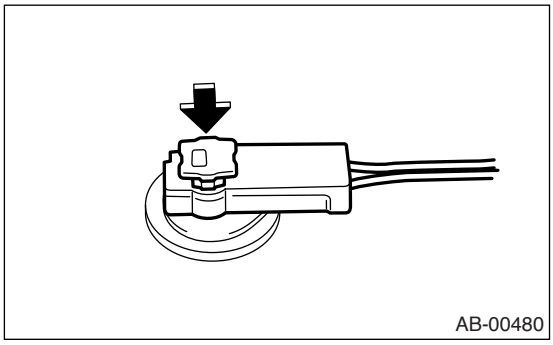


(2) Pull the connector to disconnect from driver's side airbag module assembly or retractor assembly.



2) How to connect:
Connect the connector in the reverse order of disconnecting. At this time, be sure to insert the push lock until a connecting sound is heard.

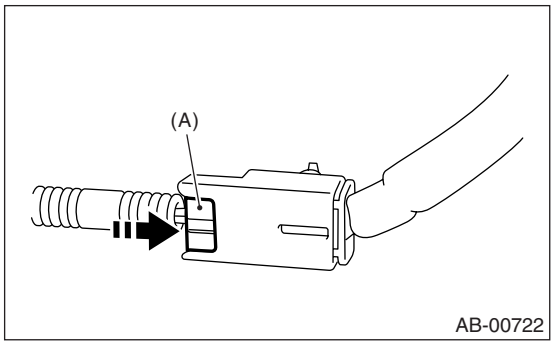
CAUTION:
• Be sure to insert the connector in until it locks. Then pull it gently to make sure that it is locked.
• Be sure to push the push lock in securely.



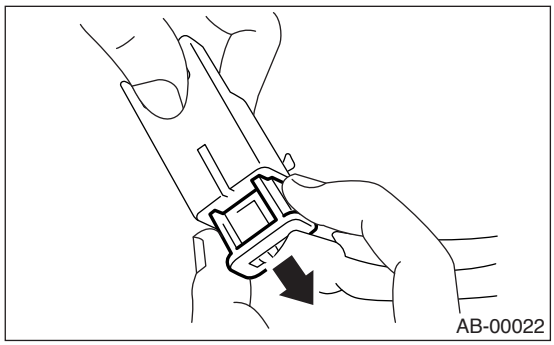
NOTE:
Connector can not be connected when the push lock is in lock position. To connect the connector, set the push lock to unlock.

3. DRIVER'S AIRBAG (BETWEEN AIRBAG MAIN HARNESS AND ROLL CONNECTOR), PASSENGER'S AIRBAG

1) How to disconnect:
(1) Push the slide lock (A) into the direction of arrow.



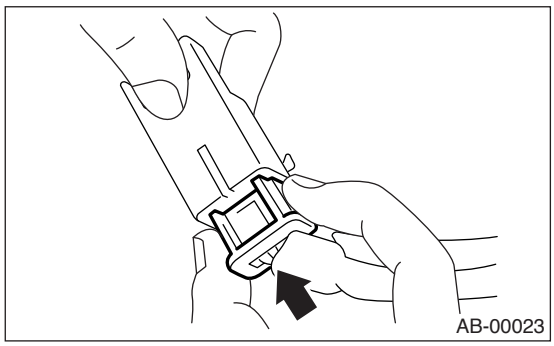
(2) With the slide lock pushed, separate the connector.



CAUTION:
Be sure to hold onto the connector and not wire when pulling the slide lock or disconnecting the connector.

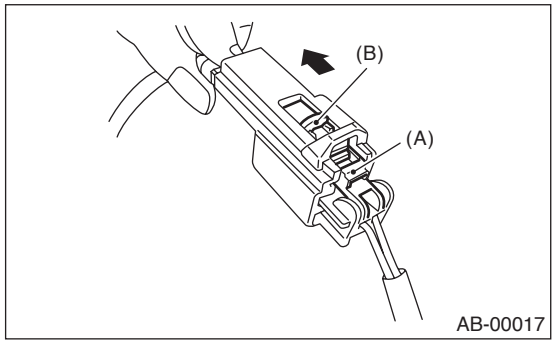
2) How to connect:
Holding the connector, push it in carefully until a connecting sound is heard.

CAUTION:
Be sure to insert the connector in until it locks. Then pull it gently to make sure that it is locked.



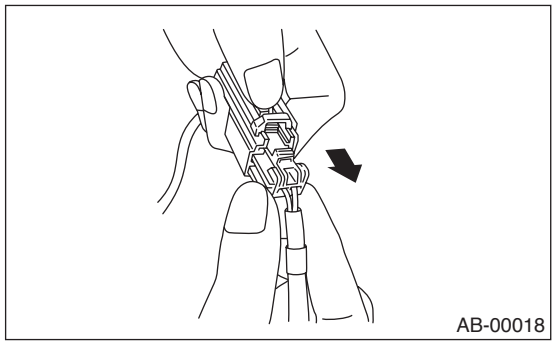
4. SIDE AIRBAG AND CURTAIN AIRBAG

1) How to disconnect:
(1) Push the lock arm (A).
(2) With the lock arm (A) pushed in, move the slide lock (B) in the direction of arrow.



(3) With the slide lock moved, release the lock arm (back to its original position), and disconnect the connector.

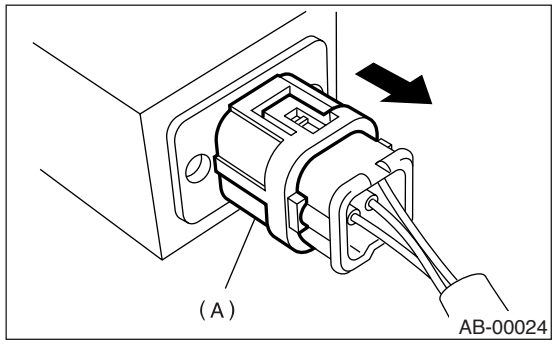
CAUTION:
Be sure to hold onto the connector and not wire when pulling the slide lock or disconnecting the connector.



5. FRONT SUB-SENSOR, SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR

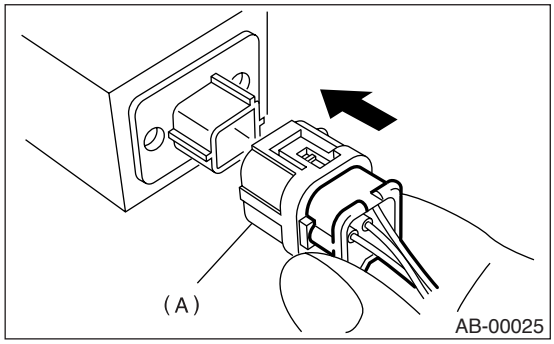
1) How to disconnect:
Holding outer part (A), pull it in the direction of arrow.

CAUTION:
Be sure to hold onto the connector and not wire when pulling the slide lock or disconnecting the connector.



2) How to connect:
Holding the connector, and push it in carefully until a connecting sound is heard.

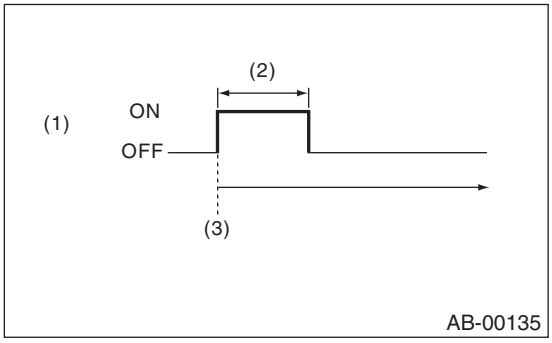
CAUTION:
• Outer side (A) move back, and so do not put your hand on the outer part.
• Be sure to insert the connector in until it locks. Then pull it gently to make sure that it is locked.



7. Airbag Warning Light Illumination Pattern

A: INSPECTION

Keep the ignition switch ON, and confirm that the airbag warning light remains off approx. 6 seconds after being turned on.

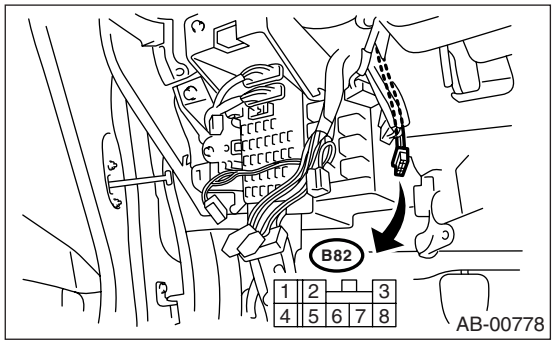


(1) Airbag warning light
(2) Approx. 6 sec.
(3) Ignition switch (ON)

8. Read Diagnostic Trouble Code (DTC)

A: OPERATION

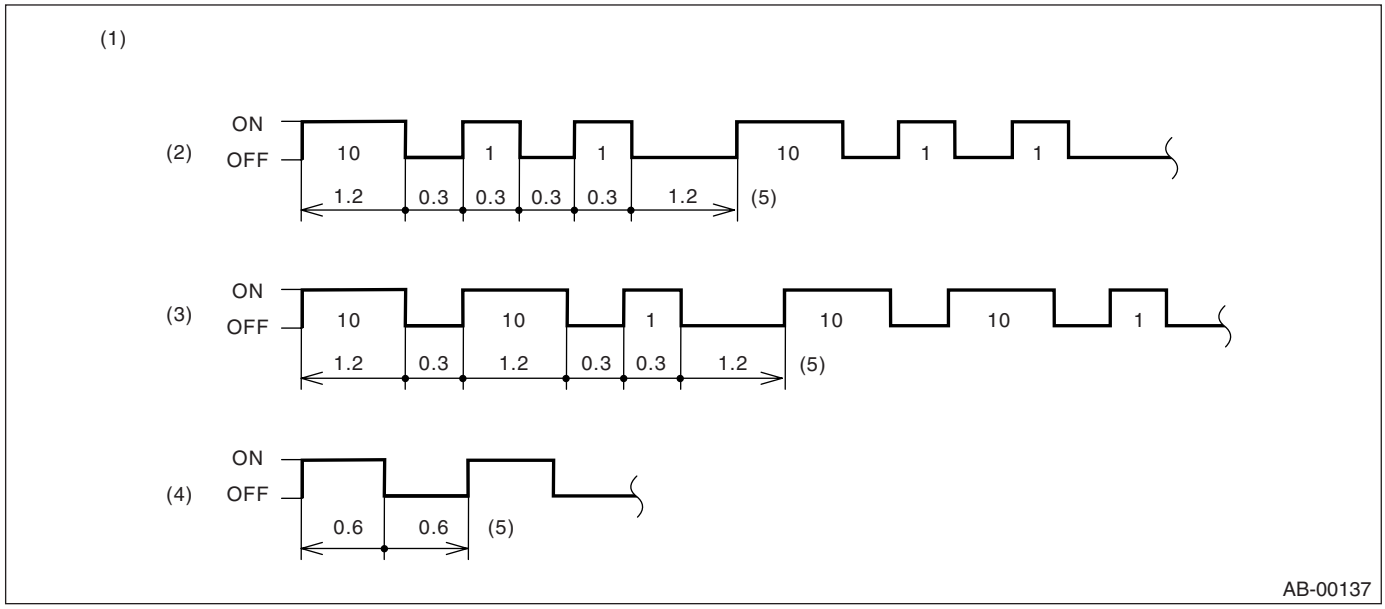
1) Remove the instrument panel lower cover upper. <Ref. to EI-50, REMOVAL, Instrument Panel Lower Cover.>
2) Turn the ignition switch to ON.
3) Connect one of the ground terminals to the diagnosis connector terminal No. 2 in the instrument panel lower cover area.



NOTE:
The harness (yellow/black) of ground terminal is wrapped by tapes with the harness (red, red/black) of diagnosis connector.

4) Read the DTC by identifying the way airbag warning light blinks.
The airbag warning light blinks a DTC corresponding to the faulty parts.
The long segment (1.2 sec. on) indicates a “ten”, and the short segment (0.3 sec. on) indicates a “one”.

NOTE:
• “List of Diagnostic Trouble Code (DTC)” <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>
• “Airbag Warning Light Failure” <Ref. to AB(diag)-33, Airbag Warning Light Failure.>.



(1) For example
(2) Blinking code 12:
(3) Blinking code 21:
(4) Blinking normal code:
(5) Sec.

5) Turn the ignition switch to OFF, and disconnect the ground terminal from diagnosis connector terminal No. 2.
6) Wind the tape around the ground terminal and return it to its original position.

9. Inspection Mode

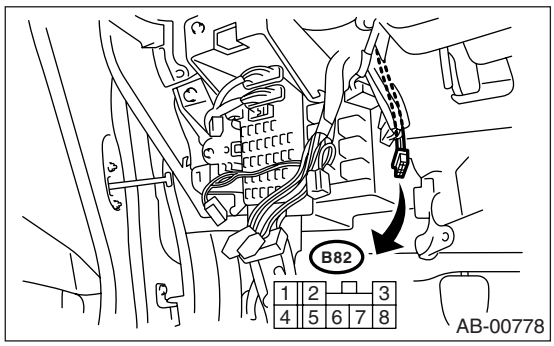
A: PROCEDURE

Recreate the circumstance by referring to the conditions described in the checklist.

10.Clear Memory Mode

A: OPERATION

1) Remove the instrument panel lower cover upper. <Ref. to EI-50, REMOVAL, Instrument Panel Lower Cover.>
2) Turn the ignition switch to ON.
3) Connect one of the ground terminals to the diagnosis connector terminal No. 2 in the instrument panel lower cover area.



4) While the warning light blinks, connect another diagnosis terminal to the diagnosis connector terminal No. 3.
5) Once the memory is erased, the warning light returns the normal blink pattern (0.6 sec. on). Failure to recover to the normal blink rate indicates that trouble parts still remain. Having repaired such parts, erase the memory again and confirm that the blink rate has returned to normal.
6) When the memory has been cleared, disconnect the diagnosis terminal from the diagnosis connector.
7) Wind the tape around the ground terminal and return it to its original position.

11.Airbag Warning Light Failure

A: AIRBAG WARNING LIGHT REMAINS ON

DETECTING CONDITION:

- Airbag warning light failure
- Airbag control module to airbag warning light circuit is shorted or open.
- Grounding circuit is faulty.
- Airbag control module is faulty.
- (AB1) and (B31) are not connected properly.
- (AB6) is not connected properly to airbag control module.

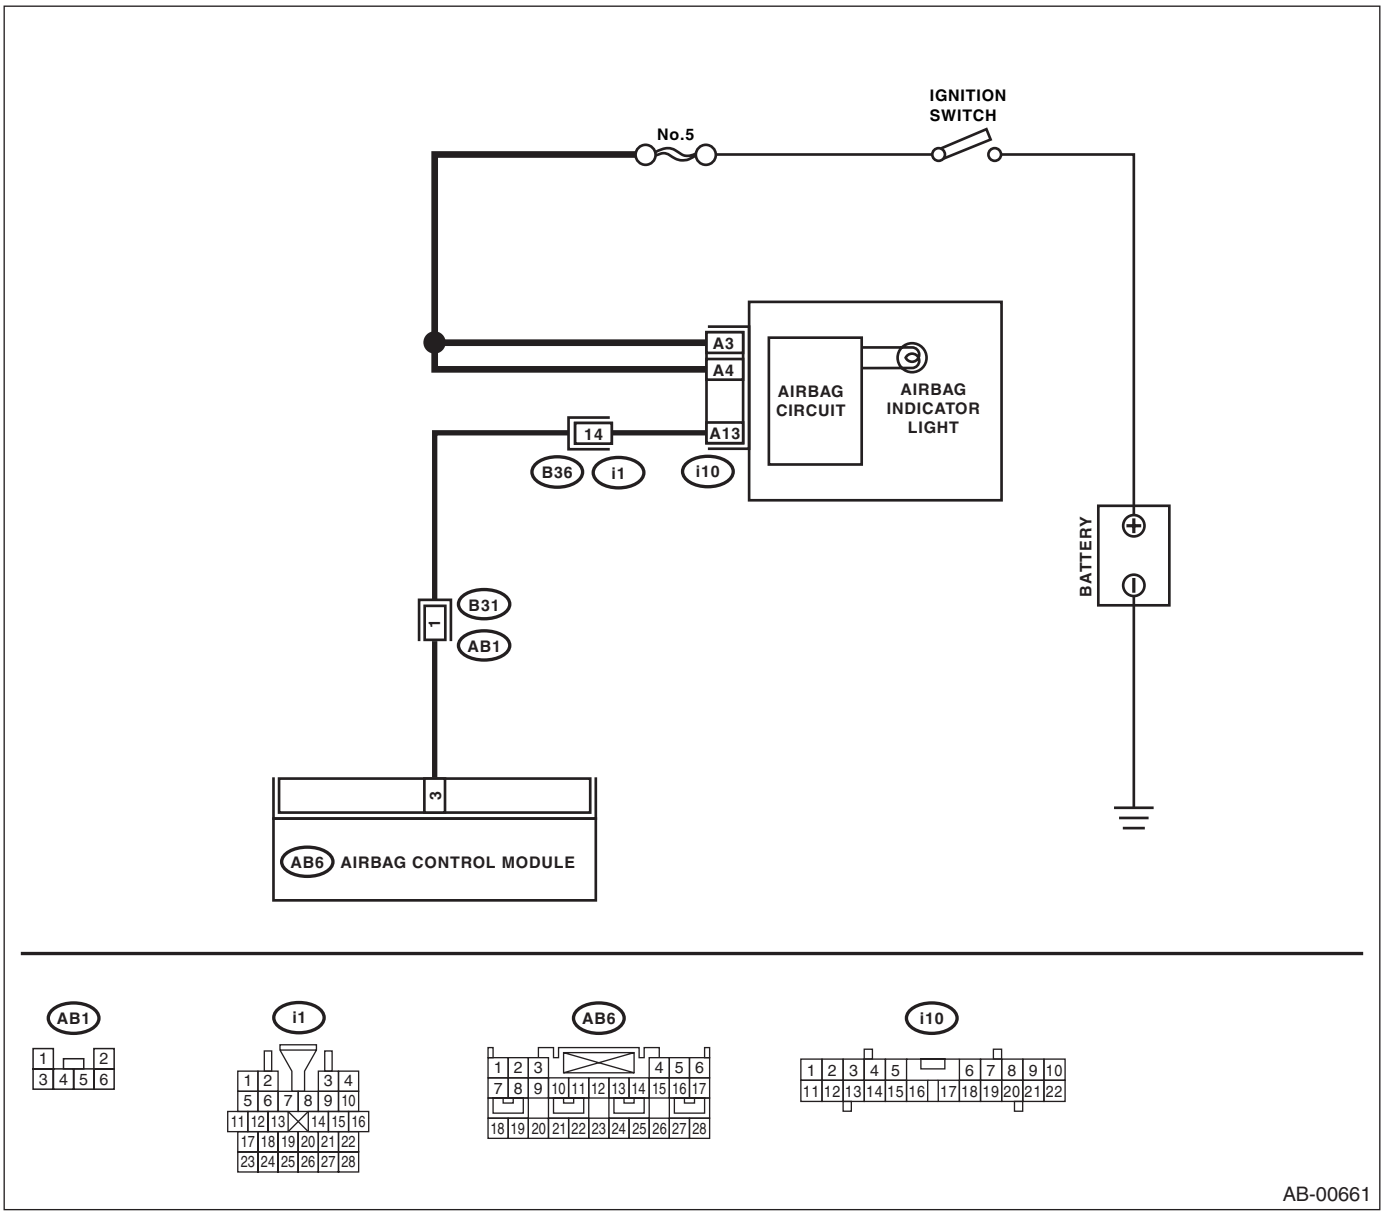
CAUTION:

• Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from the battery, and wait more than 20 seconds before starting to work.

• Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.

• When inspecting the airbag main harness, disconnect the airbag module connector of the driver's and passenger's seats for safety reasons.

WIRING DIAGRAM:



Airbag Warning Light Failure

	Step	Check	Yes	No
1	**CHECK POOR CONTACT.** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Confirm that the firm contact is secured between the airbag control module and connector (AB6). <Ref. to AB-20, Airbag Control Module.>	Is there poor contact in connector (AB6)?	Replace the airbag main harness with body harness or replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Go to step **2.**
2	**CHECK AIRBAG MAIN HARNESS.** 1) Remove the instrument panel lower cover and disconnect the connector (AB7) and (AB2). 2) Remove the instrument panel side cover of passenger side and disconnect the connector (AB10) and (AB9). 3) Disconnect the connector (AB6) from airbag control module, and connect the connector (1U) in the test harness U. <Ref. to AB-20, Airbag Control Module.> 4) Connect the battery ground terminal and turn the ignition switch ON. 5) Connect the connectors (7U) and (8U) in the test harness U. NOTE: After problem has been eliminated, disconnect the connectors (7U) and (8U).	Does the airbag warning light go off?	Go to step **3.**	Go to step **4.**
3	**CHECK GROUND CIRCUIT.** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the connector (AB6) from airbag control module. 3) Connect the connector (1U) in the test harness U to body harness connector (AB6). 4) Measure the resistance between connector (2U) in the test harness U and chassis ground. ***Connector & terminal*** ***(2U) No. 10 — Chassis ground:*** ***(2U) No. 11 — Chassis ground:***	Is the resistance less than 10 Ω?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Repair the chassis ground circuit.
4	**CHECK AIRBAG MAIN HARNESS AND BODY HARNESS.** 1) Disconnect the connector (7U) and (8U). 2) Remove the combination meter. 3) Measure the resistance between connector (i10) and connector (2U) in the test harness U. ***Connector & terminal*** ***(2U) No. 7 — (i10) No. 13:***	Is the resistance less than 10 Ω?	Replace the combination meter printed circuit. <Ref. to IDI-16, Combination Meter Assembly.>	Go to step **5.**
5	**CHECK POOR CONTACT IN CONNECTORS (AB1) AND (B31).** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Confirm that firm contact is secured between connectors (AB1) and (B31).	Is there poor contact in connectors (AB1) and (B31)?	Repair the body harness or replace the airbag main harness with body harness.	Go to step **6.**
6	**CHECK AIRBAG MAIN HARNESS.** Check the airbag main harness for abnormalities.	Is anything unusual to airbag main harness?	Replace the airbag main harness with body harness.	Repair the body harness.

B: AIRBAG WARNING LIGHT REMAINS OFF

DETECTING CONDITION:

- Fuse No. 5 (in fuse box) is blown.
- Body harness circuit is open.
- Airbag warning light is faulty.
- Airbag main harness is faulty.
- Airbag control module is faulty.

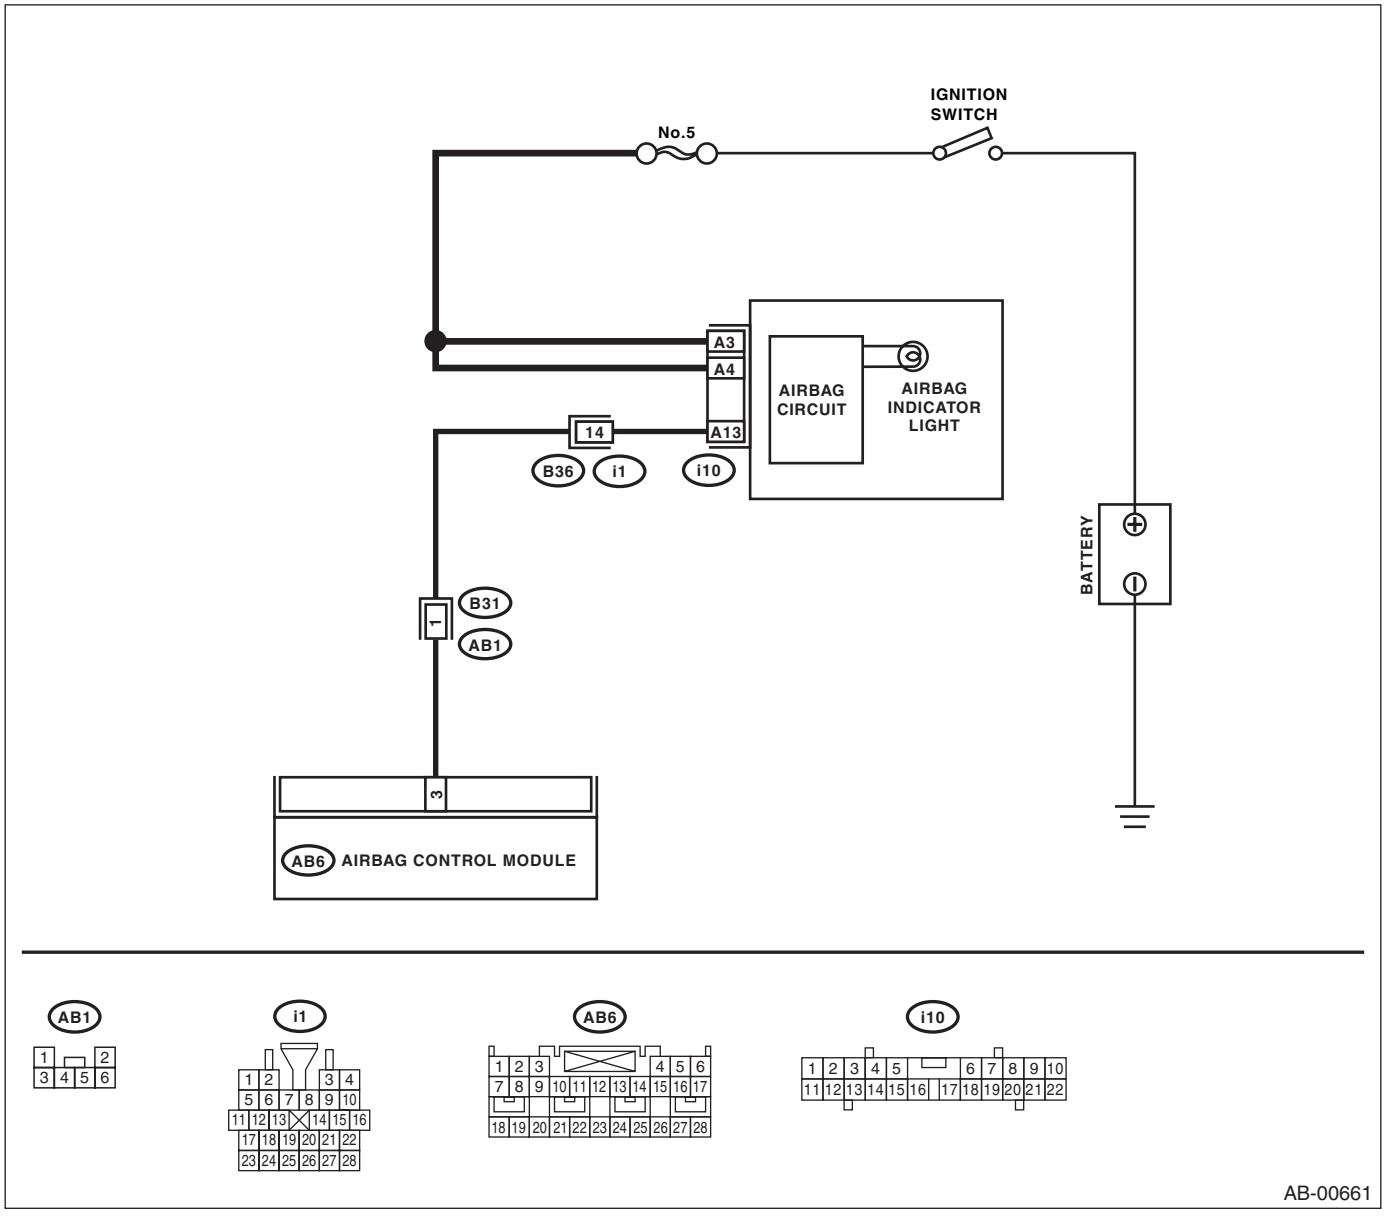
CAUTION:

• Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from battery, and wait more than 20 seconds before starting to work.

• Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.

• When inspecting the airbag main harness, disconnect the airbag module connector of the driver's and passenger's seats for safety reasons.

WIRING DIAGRAM:



Airbag Warning Light Failure

	Step	Check	Yes	No
1	**CHECK COMBINATION METER.** Turn the ignition switch to ON, and confirm that warning lights equipped in the combination meter are turned on.	Do warning lights other than the airbag turn on?	Go to step **2.**	Repair the combination meter power supply. <Ref. to IDI-3, Combination Meter System.>
2	**CHECK FUSE NO. 5 (IN MAIN FUSE BOX).** Remove the fuse No. 5 and perform visual inspection.	Is the fuse No. 5 (in main fuse box) blown out?	Replace the fuse No. 5. If the fuse No. 5 is blown again, go to step 3.	Go to step **3.**
3	**CHECK AIRBAG WARNING LIGHT CIRCUIT (IN COMBINATION METER).** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the connector (AB1) from (B31). 3) Connect the battery ground terminal and turn the ignition switch ON.	Does the airbag warning light turn on?	Go to step **4.**	Replace the airbag warning light bulb or combination meter printed circuit. <Ref. to IDI-16, Combination Meter Assembly.>
4	**CHECK AIRBAG MAIN HARNESS.** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Connect the connector (AB1) to (B31). 3) Disconnect the connector (AB6) from airbag control module. <Ref. to AB-20, Airbag Control Module.> 4) Connect the battery ground terminal and turn the ignition switch ON.	Does the airbag warning light turn on?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Replace the airbag main harness with body harness.

12.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Memory function	Content of diagnosis	Reference
11	Experienced	• Airbag main harness circuit is open, shorted or shorted to ground. • Airbag module harness (Driver's side) circuit is open, shorted or shorted to ground. • Roll connector circuit is open, shorted or shorted to ground. • Airbag control module is faulty. • Driver's airbag module is faulty.	<Ref. to AB(diag)-41, DTC 11, Diagnostic Chart with Trouble Code.>
12	Experienced	• Airbag main harness circuit is open, shorted or shorted to ground. • Airbag module harness (Passenger's side) circuit is open, shorted or shorted to ground. • Airbag control module is faulty. • Passenger's airbag module is faulty.	<Ref. to AB(diag)-44, DTC 12, Diagnostic Chart with Trouble Code.>
15	Experienced	• Airbag main harness circuit (Driver's side) is shorted to power supply. • Airbag module harness circuit (Driver's side) is shorted to power supply. • Roll connector is shorted to the power supply. • Airbag control module is faulty. • Driver's airbag module is faulty.	<Ref. to AB(diag)-46, DTC 15, Diagnostic Chart with Trouble Code.>
16	Experienced	• Airbag main harness circuit (Passenger's side) is shorted to power supply. • Airbag module harness circuit (Passenger's side) is shorted to power supply. • Airbag control module is faulty. • Passenger's airbag module is faulty.	<Ref. to AB(diag)-48, DTC 16, Diagnostic Chart with Trouble Code.>

13.Diagnostic Chart with Trouble Code

A: DTC 11

DTC DETECTING CONDITION:

- Airbag main harness circuit is open, shorted or shorted to ground.
- Airbag module harness (Driver's side) circuit is open, shorted or shorted to ground.
- Roll connector circuit is open, shorted or shorted to ground.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

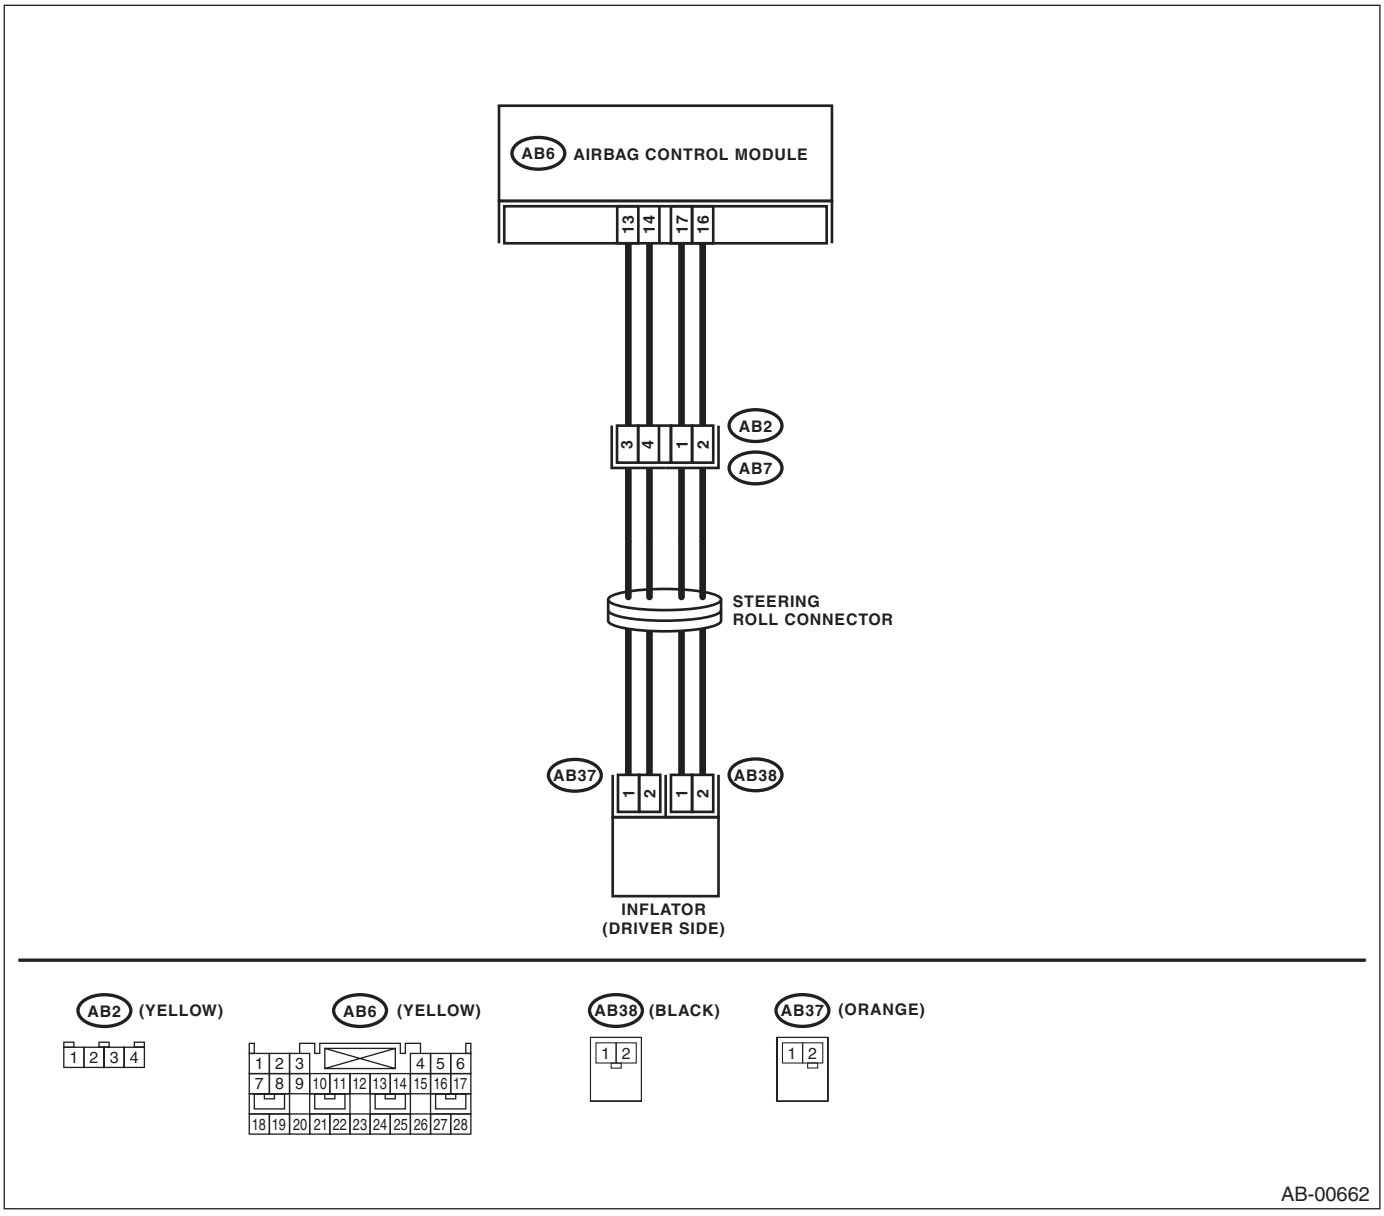
CAUTION:

• Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from battery, and wait more than 20 seconds before starting to work.

• Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.

• When inspecting the airbag main harness, disconnect the airbag module connector of the driver's and passenger's seats for safety reasons.

WIRING DIAGRAM:



Diagnostic Chart with Trouble Code

	Step	Check	Yes	No
1	**CHECK DRIVER'S AIRBAG MODULE.** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Remove the driver's airbag module. <Ref. to AB-14, Driver's Airbag Module.> 3) Connect the connector (1N) in the test harness N to connector (AB38). 4) Connect the airbag resistor to connector (2N) in the test harness N. 5) Connect the connectors (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch ON.	Does the airbag warning light operate properly?	Replace the driver's airbag module. <Ref. to AB-14, Driver's Airbag Module.>	Go to step **2.**
2	**CHECK ROLL CONNECTOR.** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the test harness N from connector (AB38). 3) Disconnect the test harness Q from connector (AB37). 4) Remove the instrument panel lower cover, disconnect the connector (AB7) from (AB2). 5) Connect the connector (1P) in the test harness P to connector (AB2). 6) Connect the airbag resistor to connector (2P) and (3P) in the test harness P. 7) Connect the battery ground terminal and turn the ignition switch ON.	Does the airbag warning light operate properly?	Replace the roll connector. <Ref. to AB-23, Roll Connector.>	Go to step **3.**
3	**CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the airbag resistor from connector (2P) and (3P) in the test harness P. 3) Remove the instrument panel side cover of passenger's side and disconnect the connector (AB10) and (AB9). <Ref. to AB-15, Passenger's Airbag Module.> 4) Disconnect the connector (AB6) from airbag control module, and connect the connector (1U) in the test harness U. <Ref. to AB-20, Airbag Control Module.> 5) Measure the resistance between connector (2U) in the test harness U and connector (2P) and (3P) in the test harness P. ***Connector & terminal*** ***(2U) No. 2 — (2P) No. 1:*** ***(2U) No. 4 — (2P) No. 2:*** ***(2U) No. 8 — (3P) No. 3:*** ***(2U) No. 12 — (3P) No. 4:***	Is the resistance less than 10 Ω?	Go to step **4.**	Replace the airbag main harness with body harness.

	Step	Check	Yes	No
4	**CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).** Measure the resistance between connector (2U) terminals in the test harness U. ***Connector & terminal*** ***(2U) No. 2 — (2U) No. 4:*** ***(2U) No. 4 — Chassis ground:*** ***(2U) No. 2 — Chassis ground:*** ***(2U) No. 8 — (2U) No. 12:*** ***(2U) No. 8 — Chassis ground:*** ***(2U) No. 12 — Chassis ground:***	Is the resistance more than 1 MΩ?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Replace the airbag main harness with body harness.

B: DTC 12

DTC DETECTING CONDITION:

- Airbag main harness circuit is open, shorted or shorted to ground.
- Airbag module harness (Passenger's side) circuit is open, shorted or shorted to ground.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:

• Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from battery, and wait more than 20 seconds before starting to work.

• Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.

• When inspecting the airbag main harness, disconnect the airbag module connector of the driver's and passenger's seats for safety reasons.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK PASSENGER'S AIRBAG MODULE.** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Remove the instrument panel side cover on the passenger's side. 3) Disconnect the connector (AB10) from (AB9). 4) Connect the connector (1P) in the test harness P to connector (AB9). 5) Connect the airbag resistor to connector (2P) and (3P) in the test harness P. 6) Connect the battery ground terminal and turn the ignition switch ON.	Does the airbag warning light operate properly?	Replace the passenger's airbag module. <Ref. to AB-15, Passenger's Airbag Module.>	Go to step **2.**
2	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the airbag resistor from connector (2P) and (3P) in the test harness P. 3) Remove the instrument panel lower cover, disconnect the connector (AB7) from (AB2). 4) Disconnect the connector (AB6) from airbag control module, and connect the connector (1U) in the test harness U. <Ref. to AB-20, Airbag Control Module.> 5) Measure the resistance between connector (2U) in the test harness U and connector (2P) and (3P) in the test harness P. ***Connector & terminal*** ***(2U) No. 3 — (2P) No. 1:*** ***(2U) No. 5 — (2P) No. 2:*** ***(2U) No. 9 — (3P) No. 3:*** ***(2U) No. 13 — (3P) No. 4:***	Is the resistance less than 10 Ω?	Go to step **3.**	Replace the airbag main harness with body harness.
3	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).** Measure the resistance between connector (2U) terminals in the test harness U and between the connector (2U) and chassis ground. ***Connector & terminal*** ***(2U) No. 3 — (2U) No. 5:*** ***(2U) No. 3 — Chassis ground:*** ***(2U) No. 5 — Chassis ground:*** ***(2U) No. 9 — (2U) No. 13:*** ***(2U) No. 9 — Chassis ground:*** ***(2U) No. 13 — Chassis ground:***	Is the resistance more than 1 MΩ?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Replace the airbag main harness with body harness.

C: DTC 15

DTC DETECTING CONDITION:

- Airbag main harness circuit (Driver's side) is shorted to power supply.
- Airbag module harness circuit (Driver's side) is shorted to power supply.
- Roll connector is shorted to the power supply.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:

• Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from battery, and wait more than 20 seconds before starting to work.

• Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.

• When inspecting the airbag main harness, disconnect the airbag module connector of the driver's and passenger's seats for safety reasons.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK DRIVER'S AIRBAG MODULE.** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Remove the driver's airbag module. <Ref. to AB-14, Driver's Airbag Module.> 3) Connect the connector (AB38) to connector (1N) in the test harness N. 4) Connect the airbag resistor to connector (2N) in the test harness N. 5) Connect the connectors (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch ON.	Does the airbag warning light operate properly?	Replace the driver's airbag module. <Ref. to AB-14, Driver's Airbag Module.>	Go to step **2.**
2	**CHECK ROLL CONNECTOR.** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the test harness N from connector (AB38). 3) Disconnect the test harness Q from connector (AB37). 4) Remove the instrument panel lower cover, disconnect the connector (AB7) from (AB2). 5) Connect the connector (1P) in the test harness P to connector (AB2). 6) Connect the airbag resistor to connector (2P) and (3P) in the test harness P. 7) Connect the battery ground terminal and turn the ignition switch ON.	Does the airbag warning light operate properly?	Replace the roll connector. <Ref. to AB-23, Roll Connector.>	Go to step **3.**
3	**CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the airbag resistor from connector (2P) and (3P) in the test harness P. 3) Remove the instrument panel side cover of passenger's side and disconnect the connector (AB10) and (AB9). 4) Disconnect the connector (AB6) from airbag control module, and connect the connector (1U) in the test harness U. <Ref. to AB-20, Airbag Control Module.> 5) Connect the battery ground terminal and turn the ignition switch ON. (engine OFF) 6) Measure the voltage between connector (2U) in the test harness U and chassis ground. ***Connector & terminal*** ***(2U) No. 4 (+) — Chassis ground (−):*** ***(2U) No. 2 (+) — Chassis ground (−):*** ***(2U) No. 8 (+) — Chassis ground (−):*** ***(2U) No. 12 (+) — Chassis ground (−):***	Is the voltage less than 1 V?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Replace the airbag main harness with body harness.

D: DTC 16

DTC DETECTING CONDITION:

- Airbag main harness circuit (Passenger's side) is shorted to power supply.
- Airbag module harness circuit (Passenger's side) is shorted to power supply.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:

• Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from battery, and wait more than 20 seconds before starting to work.

• Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.

• When inspecting the airbag main harness, disconnect the airbag module connector of the driver's and passenger's seats for safety reasons.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK PASSENGER'S AIRBAG MODULE.** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Remove the instrument panel side cover on the passenger's side. 3) Disconnect the connector (AB10) from (AB9). 4) Connect the connector (1P) in the test harness P to connector (AB9). 5) Connect the airbag resistor to connector (2P) and (3P) in the test harness P. 6) Connect the battery ground terminal and turn the ignition switch ON.	Does the airbag warning light operate properly?	Replace the passenger's airbag module. <Ref. to AB-15, Passenger's Airbag Module.>	Go to step **2.**
2	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the airbag resistor from connector (2P) and (3P) in the test harness P. 3) Remove the instrument panel lower cover, disconnect the connector (AB7) from (AB2). 4) Disconnect the connector (AB6) from airbag control module, and connect the connector (1U) in the test harness U. <Ref. to AB-20, Airbag Control Module.> 5) Measure the voltage between connector (2U) in the test harness U and chassis ground. ***Connector & terminal*** ***(2U) No. 3 (+) — Chassis ground (–):*** ***(2U) No. 5 (+) — Chassis ground (–):*** ***(2U) No. 9 (+) — Chassis ground (–):*** ***(2U) No. 13 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Replace the airbag main harness with body harness.

E: DTC 21

DTC DETECTING CONDITION:

Airbag control module is faulty.

CAUTION:

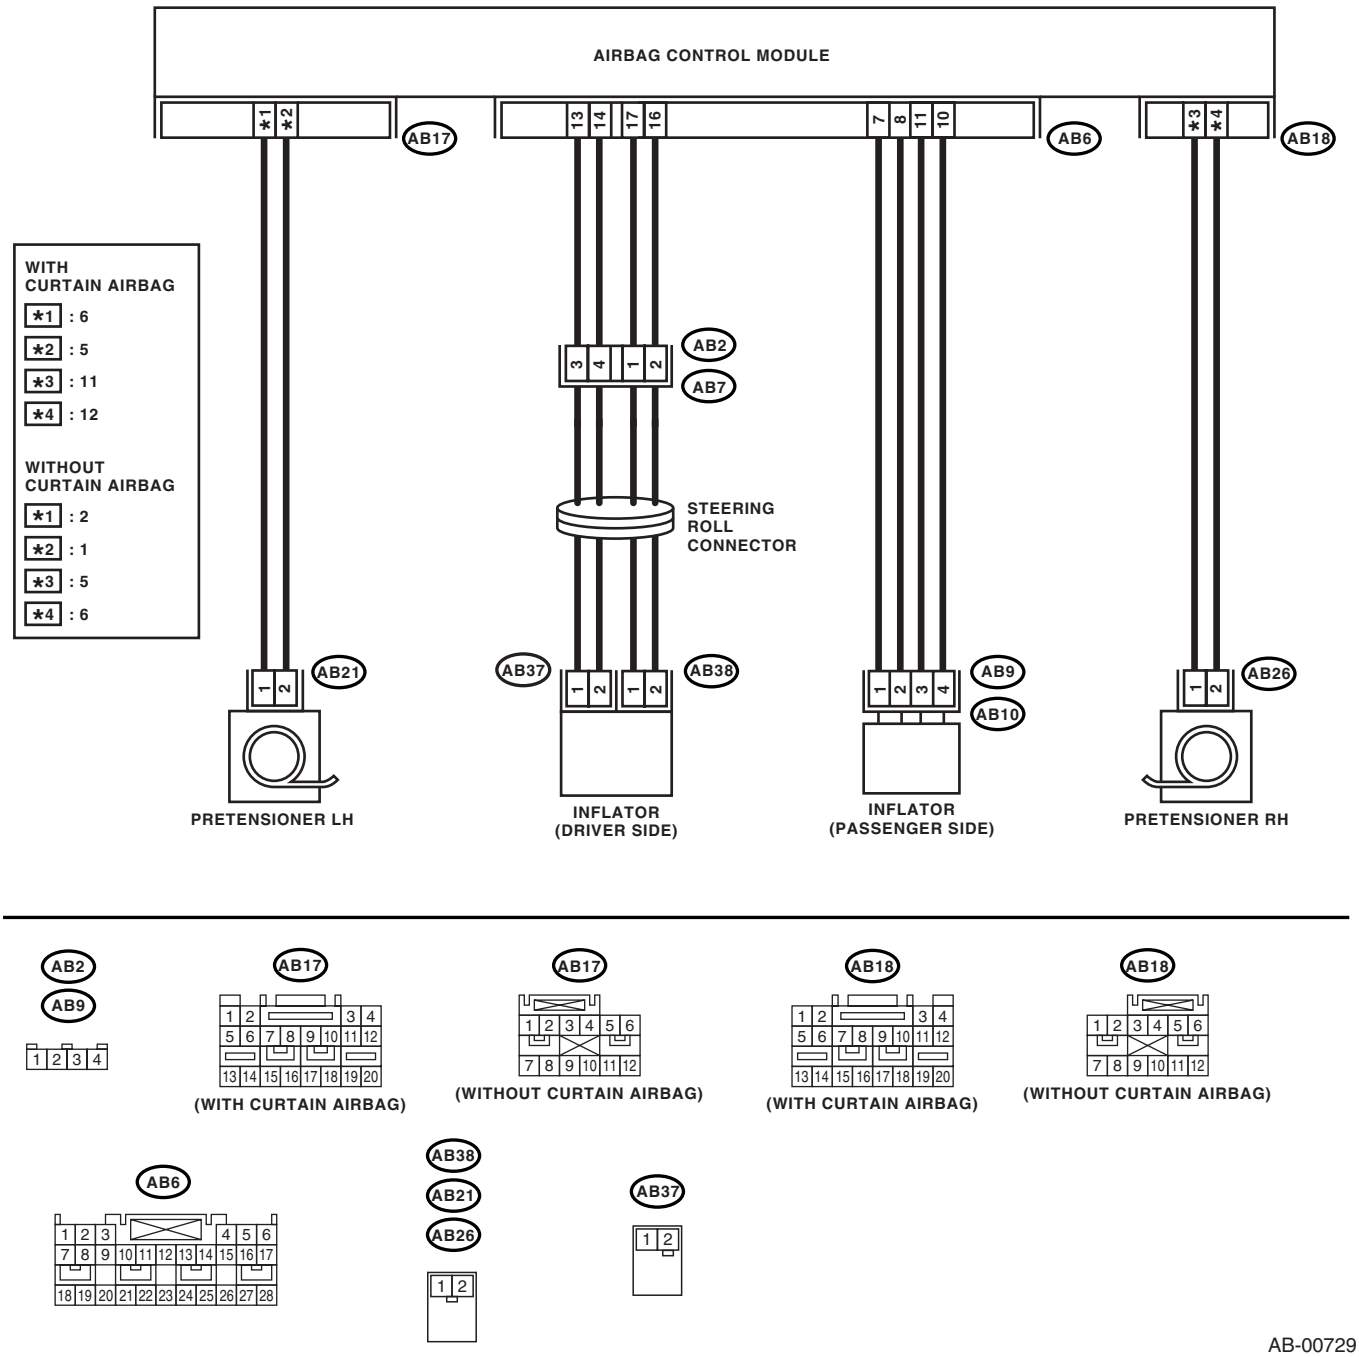
• Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from battery, and wait more than 20 seconds before starting to work.

• Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.

	Step	Check	Yes	No
1	**CHECK IF DTC 21 IS INDICATED.** Read the DTC. <Ref. to AB(diag)-30, Read Diagnostic Trouble Code (DTC).>	Is DTC 21 indicated for airbag warning light?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Perform the clear memory mode. <Ref. to AB(diag)-32, Clear Memory Mode.>

F: DTC 22

WIRING DIAGRAM:



AB-00729

This DTC is indicated when the front airbag module and the pretensioner are deployed.
Once this DTC is displayed, the memory cannot be cleared. Replace the following parts.

- Airbag control module. <Ref. to AB-20, Airbag Control Module.>
- Driver's airbag module. <Ref. to AB-14, Driver's Airbag Module.>
- Passenger's airbag module. <Ref. to AB-15, Passenger's Airbag Module.>
- Front sub-sensor of both sides. <Ref. to AB-24, Front Sub Sensor.>
- Front seat belt outer with pretensioner of both sides. <Ref. to SB-12, Front Seat Belt.>

G: DTC 23

DTC DETECTING CONDITION:

(AB6), (AB17) and (AB18) are not connected properly to airbag control module.

CAUTION:

Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from battery, and wait more than 20 seconds before starting to work.

	Step	Check	Yes	No
1	**CHECK POOR CONTACT IN CONNECTORS (AB6), (AB17) AND (AB18).** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the connectors (AB6), (AB17) and (AB18) from airbag control modules. <Ref. to AB-20, Airbag Control Module.>	Is there rust or damage on the harness connector and the control module connector?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.> Replace the body harness with airbag main harness. Replace the body harness with side airbag harness.	Go to step **2.**
2	**CHECK POOR CONTACT IN CONNECTORS (AB6), (AB17) AND (AB18).** 1) Ensure that the connectors are firmly reconnected. 2) Connect the battery ground terminal and turn the ignition switch ON.	Does the airbag warning light operate properly?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>

H: DTC 24

DTC DETECTING CONDITION:

- Airbag control module is faulty.
- Airbag main harness circuit is open.
- Fuse No. 25 (in joint box) is blown.
- Body harness circuit is open.

CAUTION:

• Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from battery, and wait more than 20 seconds before starting to work.

• Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.

• When inspecting the airbag main harness, disconnect the airbag module connector of the driver's and passenger's seats for safety reasons.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK AIRBAG CONTROL MODULE.** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the connector (AB6) from air-bag control module. <Ref. to AB-20, Airbag Control Module.> 3) Connect the connector (1U) in the test harness U to connector (AB6). 4) Connect the battery ground terminal and turn the ignition switch ON. 5) Measure the voltage between connector (2U) in the test harness U and chassis ground. ***Connector & terminal*** ***(2U) No. 1 (+) — Chassis ground (−):***	Is the voltage more than 10 V?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Go to step **2.**
2	**CHECK FUSE NO. 25 (IN JOINT BOX).** 1) Confirm that the ignition switch is turned OFF. 2) Remove the fuse No. 25 (in joint box) and perform visual inspection.	Is the fuse No. 25 blown out?	Replace the fuse No. 25. If fuse No. 25 is blown out again, repair the body harness.	Repair the body harness.

I: DTC 25

DTC DETECTING CONDITION:

- Airbag control module is faulty.
- Airbag main harness circuit is open.
- Fuse No. 12 (in joint box) is blown.
- Body harness circuit is open.

CAUTION:

• Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from the battery, and wait more than 20 seconds before starting to work.

• Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.

• When inspecting the airbag main harness, disconnect the airbag module connector of the driver's and passenger's seats for safety reasons.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK AIRBAG CONTROL MODULE.** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the connector (AB6) from air-bag control module. <Ref. to AB-20, Airbag Control Module.> 3) Connect the connector (1U) in the test harness U to connector (AB6). 4) Connect the battery ground terminal and turn the ignition switch ON. 5) Measure the voltage between connector (2U) in the test harness U and chassis ground. ***Connector & terminal*** ***(2U) No. 6 (+) — Chassis ground (−):***	Is the voltage more than 10 V?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Go to step **2.**
2	**CHECK FUSE NO. 12 (IN JOINT BOX).** 1) Confirm that the ignition switch is turned OFF. 2) Remove the fuse No. 12 (in joint box) and perform visual inspection.	Is the fuse No. 12 blown out?	Replace the fuse No. 12. If fuse No. 12 is blown out again, repair the body harness.	Repair the body harness.

J: DTC 31

DTC DETECTING CONDITION:

- Front sub-sensor harness (RH) circuit is shorted.
- Front sub-sensor harness (RH) circuit is open.
- Front sub-sensor (RH) is faulty.
- Airbag control module is faulty.

CAUTION:

• Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from the battery, and wait more than 20 seconds before starting to work.

• Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.

• When inspecting the airbag main harness, disconnect the airbag module connector of the driver's and passenger's seats for safety reasons.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK AIRBAG MAIN HARNESS (FRONT SUB-SENSOR HARNESS RH).** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Remove the instrument panel lower cover and disconnect the connector (AB7) and (AB2). 3) Remove the instrument panel side cover on passenger's side and disconnect the connector (AB10) and (AB9). 4) Disconnect the connector (AB6) from air-bag control module. <Ref. to AB-20, Airbag Control Module.> 5) Connect the connector (1U) in the test harness U to connector (AB6). 6) Disconnect the front sub-sensor (RH), and then connect the connector (1H) in the test harness H to connector (AB16). 7) Measure the resistance between connector (3U) in the test harness U and connector (3H) in the test harness H. ***Connector & terminal*** ***(3U) No. 7 — (3H) No. 5:*** ***(3U) No. 9 — (3H) No. 6:***	Is the resistance less than 10 Ω?	Go to step **2.**	Replace the airbag main harness with body harness.
2	**CHECK AIRBAG MAIN HARNESS (FRONT SUB-SENSOR HARNESS RH).** Measure the resistance between connector (3U) in the test harness U and chassis ground. ***Connector & terminal*** ***(3U) No. 7 — Chassis ground:*** ***(3U) No. 9 — Chassis ground:***	Is the resistance more than 1 MΩ?	Replace the front sub-sensor (RH). <Ref. to AB-24, Front Sub Sensor.> When the sensor is not OK, though the sensor is replaced, replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Replace the airbag main harness with body harness.

K: DTC 32

DTC DETECTING CONDITION:

- Front sub-sensor harness (LH) circuit is shorted.
- Front sub-sensor harness (LH) circuit is open.
- Front sub-sensor (LH) is faulty.
- Airbag control module is faulty.

CAUTION:

• Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from battery, and wait more than 20 seconds before starting to work.

• Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.

• When inspecting the airbag main harness, disconnect the airbag module connector of the driver's and passenger's seats for safety reasons.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK AIRBAG MAIN HARNESS (FRONT SUB-SENSOR HARNESS LH).** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Remove the instrument panel lower cover and disconnect the connector (AB7) and (AB2). 3) Remove the instrument panel side cover on passenger's side and disconnect the connector (AB10) and (AB9). 4) Disconnect the connector (AB6) from air-bag control module. <Ref. to AB-20, Airbag Control Module.> 5) Connect the connector (1U) in the test harness U to connector (AB6). 6) Disconnect the front sub-sensor (LH), and then connect the connector (1H) in the test harness H to connector (AB13). 7) Measure the resistance between connector (3U) in the test harness U and connector (3H) in the test harness H. ***Connector & terminal*** ***(3U) No. 6 — (3H) No. 5:*** ***(3U) No. 8 — (3H) No. 6:***	Is the resistance less than 10 Ω?	Go to step **2.**	Replace the airbag main harness with body harness.
2	**CHECK AIRBAG MAIN HARNESS (FRONT SUB-SENSOR HARNESS LH).** Measure the resistance between connector (3U) in the test harness U and chassis ground. ***Connector & terminal*** ***(3U) No. 6 — Chassis ground:*** ***(3U) No. 8 — Chassis ground:***	Is the resistance more than 1 MΩ?	Replace the front sub-sensor (LH). <Ref. to AB-24, Front Sub Sensor.> When the sensor is not OK, though the sensor is replaced, replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Replace the airbag main harness with body harness.

L: DTC 33

DTC DETECTING CONDITION:

Front sub-sensor (RH) is faulty.

When DTC 33 is displayed, the circuit within the front sub-sensor (RH) is faulty. Replace the front sub-sensor (RH). <Ref. to AB-24, Front Sub Sensor.>

M: DTC 34

DTC DETECTING CONDITION:

Front sub-sensor (LH) is faulty.

When DTC 34 is displayed, the circuit within the front sub-sensor (LH) is faulty. Replace the front sub-sensor (LH). <Ref. to AB-24, Front Sub Sensor.>

N: DTC 41

DTC DETECTING CONDITION:

- Side airbag harness (RH) is faulty.
- Side airbag module (RH) is faulty.
- Airbag control module is faulty.

CAUTION:

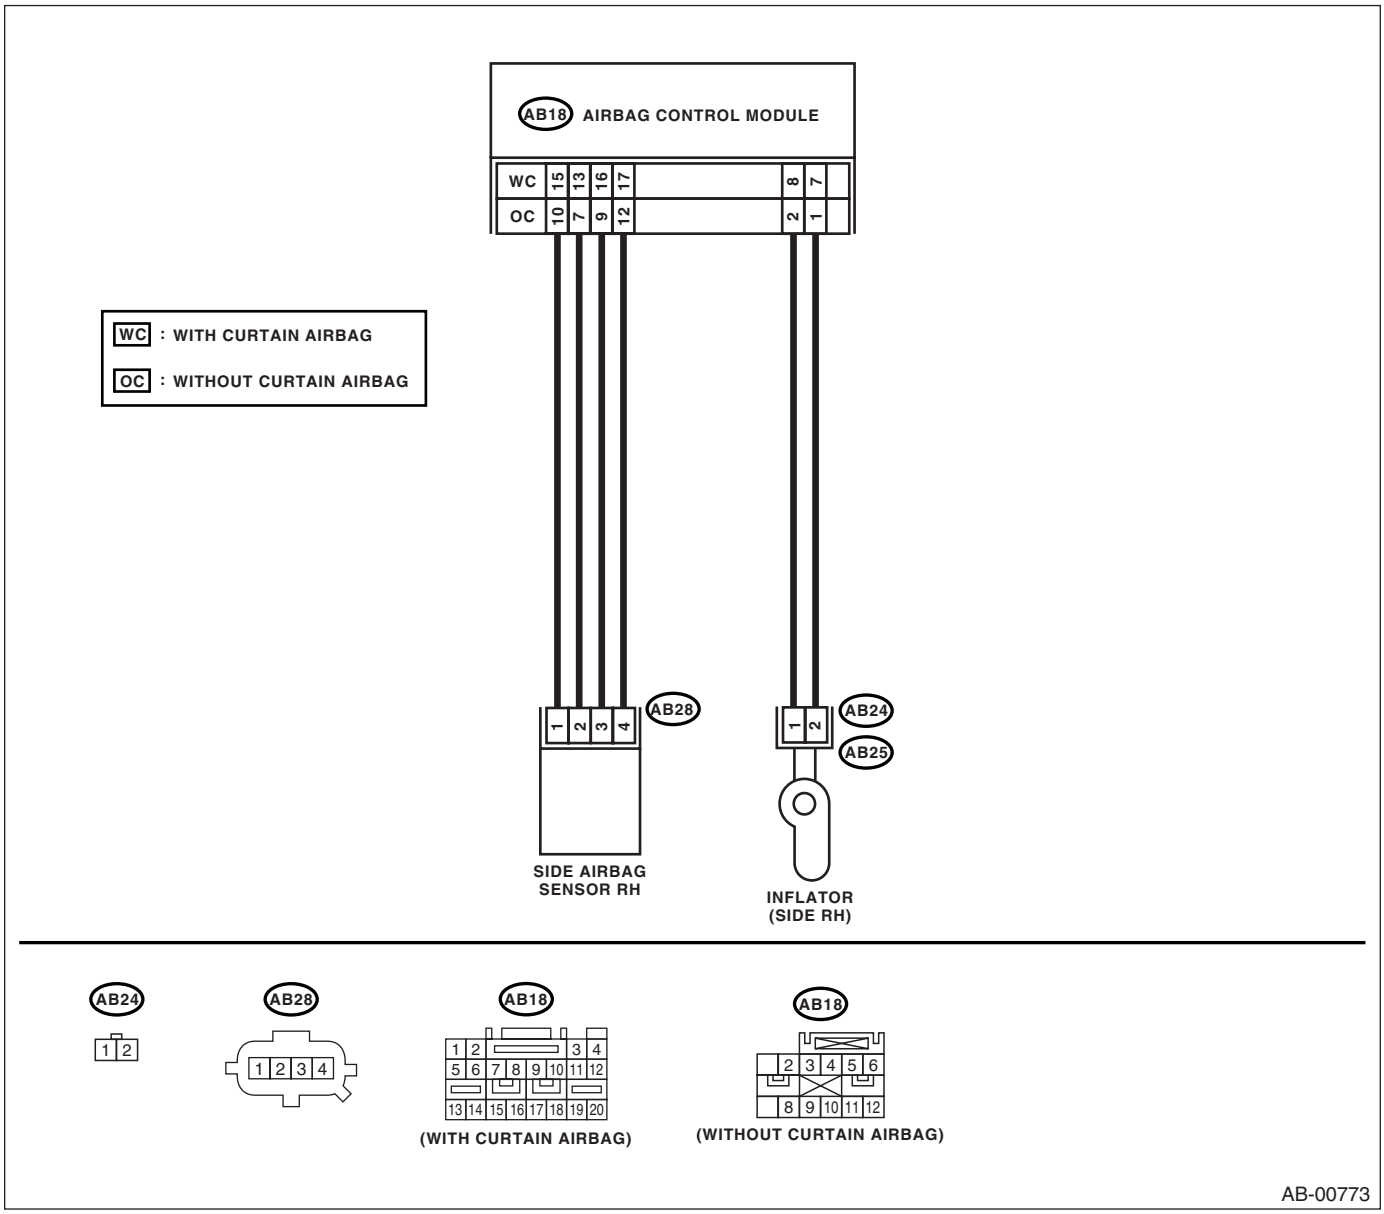
• Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from battery, and wait more than 20 seconds before starting to work.

• Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.

• When inspecting the airbag main harness, disconnect the airbag module connector of the driver's and passenger's seats for safety reasons.

• When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

WIRING DIAGRAM:



1. MODEL WITH CURTAIN AIRBAG

	Step	Check	Yes	No
1	**CHECK SIDE AIRBAG MODULE.** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the connector (AB25) from (AB24), and connect the connector (1F) in test harness F to connector (AB24). 3) Connect the airbag resistor to the connector (3F) in the test harness F. 4) Connect the battery ground terminal and turn the ignition switch ON.	Does the airbag warning light operate properly?	Replace the front seat with side airbag module (RH). <Ref. to SE-7, Front Seat.>	Go to step **2.**
2	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH).** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the connector (AB26) from seat belt pretensioner (RH). <Ref. to SB-12, Front Seat Belt.> 3) Disconnect the connector (AB33) from curtain airbag module (RH). 4) Disconnect the airbag resistor from the test harness F. 5) Disconnect the connector (AB18) from airbag control module. <Ref. to AB-20, Airbag Control Module.> 6) Connect the connector (1U) in the test harness U to connector (AB18). 7) Measure the resistance between connector (3U) in the test harness U and connector (3F) in the test harness F. ***Connector & terminal*** ***(3U) No. 20 — (3F) No. 3:*** ***(3U) No. 18 — (3F) No. 4:***	Is the resistance less than 10 Ω?	Go to step **3.**	Replace the airbag rear harness with body harness.
3	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH).** Measure the resistance between connector (3U) terminals in the test harness U. ***Connector & terminal*** ***(3U) No. 20 — (3U) No. 18:***	Is the resistance more than 1 MΩ?	Go to step **4.**	Replace the airbag rear harness with body harness.
4	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH).** Measure the resistance between the terminals of connector (3F) in the test harness F. ***Connector & terminal*** ***(3F) No. 3 — (3F) No. 4:***	Is the resistance more than 1 MΩ?	Go to step **5.**	Replace the airbag rear harness with body harness.
5	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH).** Measure the resistance between connector (3F) in the test harness F and chassis ground. ***Connector & terminal*** ***(3F) No. 3 — Chassis ground:*** ***(3F) No. 4 — Chassis ground:***	Is the resistance more than 1 MΩ?	Go to step **6.**	Replace the airbag rear harness with body harness.

	Step	Check	Yes	No
6	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH).** Measure the resistance between connector (3U) in the test harness U and chassis ground. ***Connector & terminal*** ***(3U) No. 20 — Chassis ground:*** ***(3U) No. 18 — Chassis ground:***	Is the resistance more than 1 MΩ?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Replace the airbag rear harness with body harness.

2. MODEL WITHOUT CURTAIN AIRBAG

	Step	Check	Yes	No
1	**CHECK SIDE AIRBAG MODULE.** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the connector (AB25) from (AB24), and connect the connector (1F) in test harness F to connector (AB24). 3) Connect the airbag resistor to the connector (3F) in the test harness F. 4) Connect the battery ground terminal and turn the ignition switch ON.	Does the airbag warning light operate properly?	Replace the front seat with side airbag module (RH). <Ref. to SE-7, Front Seat.>	Go to step **2.**
2	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH).** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the connector (AB26) from seat belt pretensioner (RH). <Ref. to SB-12, Front Seat Belt.> 3) Disconnect the connector (AB33) from curtain airbag module (RH). 4) Disconnect the airbag resistor from the test harness F. 5) Disconnect the connector (AB18) from airbag control module. <Ref. to AB-20, Airbag Control Module.> 6) Connect the connector (1R) in the test harness R to connector (AB18). 7) Measure the resistance between connector (3R) in the test harness R and connector (3F) in the test harness F. ***Connector & terminal*** ***(3R) No. 20 — (3F) No. 3:*** ***(3R) No. 18 — (3F) No. 4:***	Is the resistance less than 10 Ω?	Go to step **3.**	Replace the airbag rear harness with body harness.
3	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH).** Measure the resistance between connector (3R) terminals in the test harness R. ***Connector & terminal*** ***(3R) No. 20 — (3R) No. 18:***	Is the resistance more than 1 MΩ?	Go to step **4.**	Replace the airbag rear harness with body harness.

Go to step **5.**	Replace the airbag rear harness with body harness.
5	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH).** Measure the resistance between connector (3F) in the test harness F and chassis ground. ***Connector & terminal*** ***(3F) No. 3 — Chassis ground:*** ***(3F) No. 4 — Chassis ground:***	Is the resistance more than 1 MΩ?	Go to step **6.**	Replace the airbag rear harness with body harness.

	Step	Check	Yes	No
6	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH).** Measure the resistance between connector (3R) in the test harness R and chassis ground. ***Connector & terminal*** ***(3R) No. 20 — Chassis ground:*** ***(3R) No. 18 — Chassis ground:***	Is the resistance more than 1 MΩ?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Replace the airbag rear harness with body harness.

O: DTC 42

DTC DETECTING CONDITION:

- Side airbag harness (LH) is faulty.
- Side airbag module (LH) is faulty.
- Airbag control module is faulty.

CAUTION:

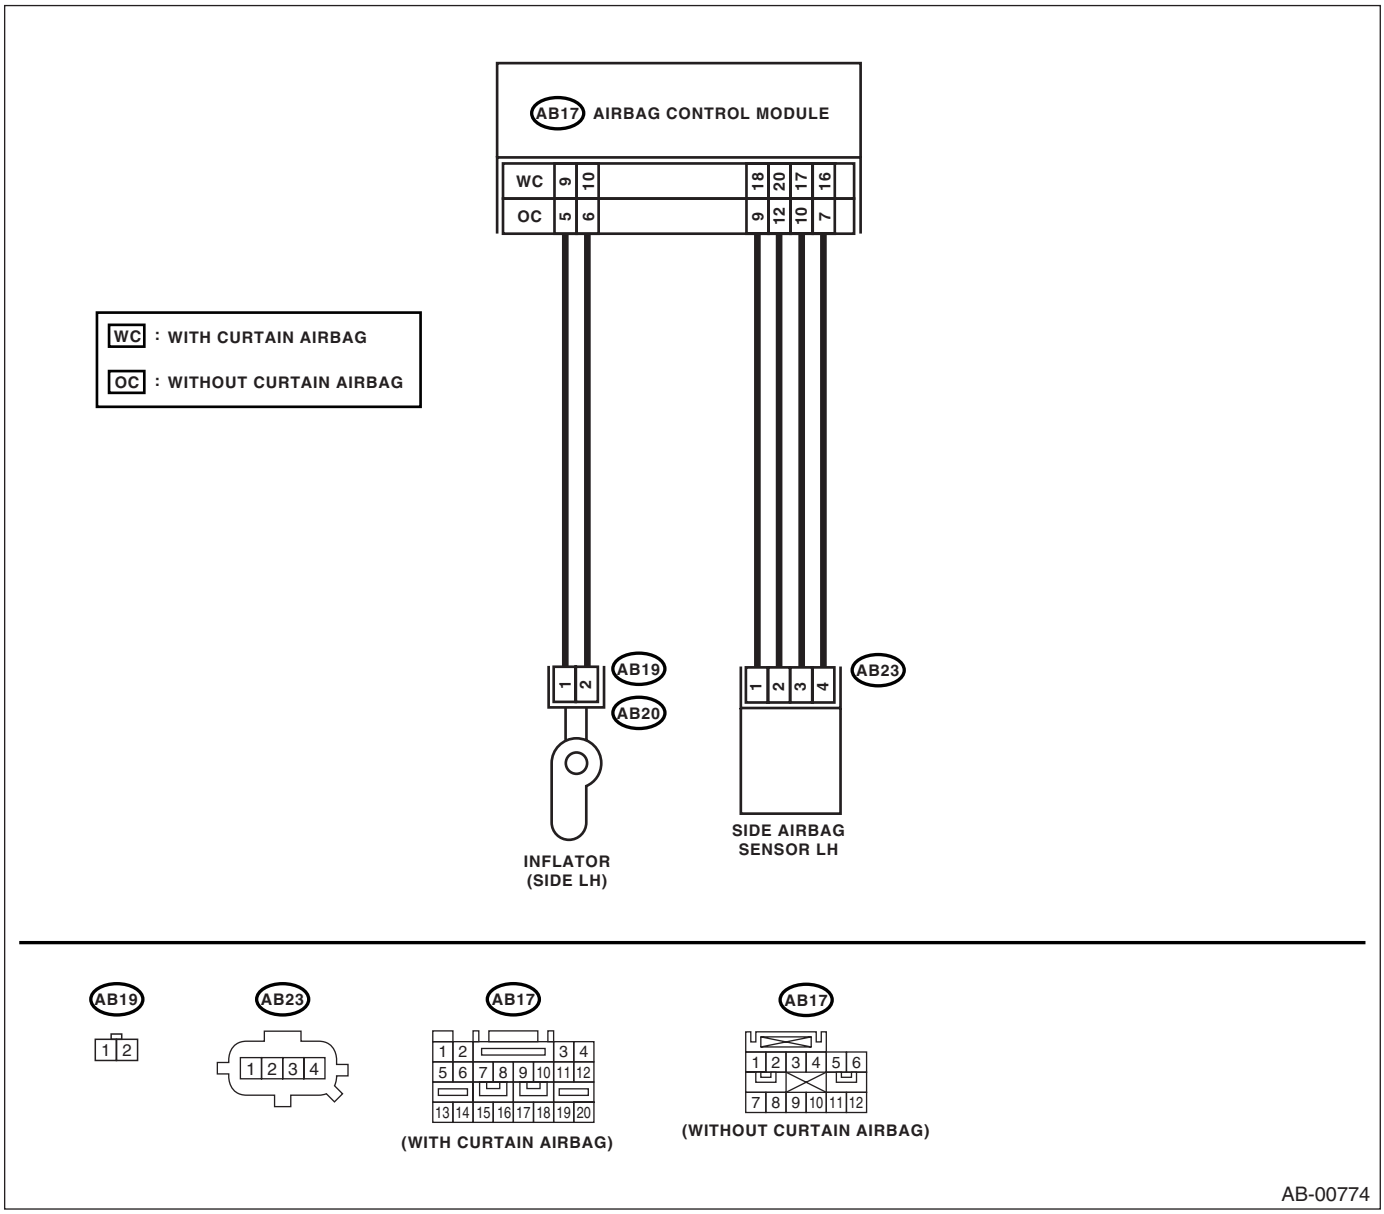
• Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from battery, and wait more than 20 seconds before starting to work.

• Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.

• When inspecting the airbag main harness, disconnect the airbag module connector of the driver's and passenger's seats for safety reasons.

• When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

WIRING DIAGRAM:



1. MODEL WITH CURTAIN AIRBAG

	Step	Check	Yes	No
1	**CHECK SIDE AIRBAG MODULE.** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the connector (AB20) from (AB19), and connect the connector (1F) in test harness F to connector (AB19). 3) Connect the airbag resistor to connector (3F) in the test harness F. 4) Connect the battery ground terminal and turn the ignition switch ON.	Does the airbag warning light operate properly?	Replace the front seat with side airbag module (LH). <Ref. to SE-7, Front Seat.>	Go to step **2.**
2	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS LH).** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the connector (AB21) from seat belt pretensioner (LH). <Ref. to SB-12, Front Seat Belt.> 3) Disconnect the connector (AB31) from curtain airbag module (LH). 4) Disconnect the airbag resistor from test harness. 5) Disconnect the connector (AB17) from airbag control module. <Ref. to AB-20, Airbag Control Module.> 6) Connect the connector (1U) in the test harness U to connector (AB17). 7) Measure the resistance between connector (3U) in the test harness U and connector (3F) in the test harness F. ***Connector & terminal*** ***(3U) No. 12 — (3F) No. 3:*** ***(3U) No. 10 — (3F) No. 4:***	Is the resistance less than 10 Ω? T: DTC 53

DTC DETECTING CONDITION:

Side airbag sensor (RH) is faulty.

When DTC 53 is displayed, the circuit within the side airbag sensor (RH) is faulty. Replace the side airbag sensor (RH). <Ref. to AB-21, Side Airbag Sensor.>

U: DTC 54

DTC DETECTING CONDITION:

Side airbag sensor (LH) is faulty.

When DTC 54 is displayed, the circuit within the side airbag sensor (LH) is faulty. Replace the side airbag sensor (LH). <Ref. to AB-21, Side Airbag Sensor.>

V: DTC 55

This code is displayed when the side airbag module and curtain airbag module are deployed.

Once this code is displayed, the memory cannot be erased. Replace the following parts.

- Airbag control module. <Ref. to AB-20, Airbag Control Module.>
- Front seat with side airbag module. (Operating side) <Ref. to SE-7, Front Seat.>
- Side airbag sensor. (Operating side) <Ref. to AB-21, Side Airbag Sensor.>
- Curtain airbag module. (Operating side) <Ref. to AB-18, Curtain Airbag Module.>
- Curtain airbag sensor. (Operating side) <Ref. to AB-22, Curtain Airbag Sensor.>

W: DTC 56

DTC DETECTING CONDITION:

- Curtain airbag sensor (RH) is faulty.
- Curtain airbag harness (RH) is faulty.
- Airbag control module is faulty.

CAUTION:

• Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from battery, and wait more than 20 seconds before starting to work.

• Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.

• When inspecting the airbag main harness, disconnect the airbag module connector of the driver's and passenger's seats for safety reasons.

• When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG SENSOR HARNESS RH).** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the connector (AB26) from seat belt pretensioner (RH). <Ref. to SB-12, Front Seat Belt.> 3) Disconnect the connector (AB24) from side airbag module (RH). 4) Disconnect the connector (AB33) from (AB40). 5) Disconnect the connector (AB18) from airbag control module. <Ref. to AB-20, Airbag Control Module.> 6) Connect the connector (1U) in the test harness U to connector (AB18). 7) Disconnect the connector (AB34) from curtain airbag sensor (RH), and connect the connector (2V) in the test harness V to connector (AB34). 8) Measure the resistance between connector (5U) in the test harness U and connector (3V) in the test harness V. ***Connector & terminal*** ***(5U) No. 14 — (3V) No. 4:*** ***(5U) No. 16 — (3V) No. 5:*** ***(5U) No. 15 — (3V) No. 1:*** ***(5U) No. 13 — (3V) No. 2:***	Is the resistance less than 10 Ω?	Go to step **2.**	Replace the airbag rear harness with body harness.
2	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG SENSOR HARNESS RH).** Measure the resistance between connector (5U) in the test harness U and chassis ground. ***Connector & terminal*** ***(5U) No. 14 — Chassis ground:*** ***(5U) No. 16 — Chassis ground:*** ***(5U) No. 15 — Chassis ground:*** ***(5U) No. 13 — Chassis ground:***	Is the resistance more than 1 MΩ?	Replace the curtain airbag sensor (RH). <Ref. to AB-22, Curtain Airbag Sensor.> When the sensor is not OK, though the sensor is replaced, replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Replace the airbag rear harness with body harness.

X: DTC 57

DTC DETECTING CONDITION:

- Curtain airbag sensor (LH) is faulty.
- Curtain airbag harness (LH) is faulty.
- Airbag control module is faulty.

CAUTION:

• Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from battery, and wait more than 20 seconds before starting to work.

• Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.

• When inspecting the airbag main harness, disconnect the airbag module connector of the driver's and passenger's seats for safety reasons.

• When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG SENSOR HARNESS LH).** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the connector (AB21) from seat belt pretensioner (LH). <Ref. to SB-12, Front Seat Belt.> 3) Disconnect the connector (AB19) from side airbag module (LH). 4) Disconnect the connector (AB31) from (AB39). 5) Disconnect the connector (AB17) from airbag control module. <Ref. to AB-20, Airbag Control Module.> 6) Connect the connector (1U) in the test harness U to connector (AB17). 7) Disconnect the connector (AB32) from curtain airbag sensor (LH), and connect the connector (2V) in the test harness V to connector (AB32). 8) Measure the resistance between connector (5U) in the test harness U and connector (3V) in the test harness V. ***Connector & terminal*** ***(5U) No. 11 — (3V) No. 4:*** ***(5U) No. 9 — (3V) No. 5:*** ***(5U) No. 10 — (3V) No. 1:*** ***(5U) No. 12 — (3V) No. 2:***	Is the resistance less than 10 Ω?	Go to step **2.**	Replace the airbag rear harness with body harness.
2	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG SENSOR HARNESS LH).** Measure the resistance between connector (5U) in the test harness U and chassis ground. ***Connector & terminal*** ***(5U) No. 11 — Chassis ground:*** ***(5U) No. 9 — Chassis ground:*** ***(5U) No. 10 — Chassis ground:*** ***(5U) No. 12 — Chassis ground:***	Is the resistance more than 1 MΩ?	Replace the curtain airbag sensor (LH). <Ref. to AB-22, Curtain Airbag Sensor.> When the sensor is not OK, though the sensor is replaced, replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Replace the airbag rear harness with body harness.

Y: DTC 58

DTC DETECTING CONDITION:

Curtain airbag sensor (RH) is faulty.

When DTC 58 is displayed, the circuit within the curtain airbag sensor (RH) is faulty. Replace the curtain airbag sensor (RH). <Ref. to AB-22, Curtain Airbag Sensor.>

Z: DTC 59

DTC DETECTING CONDITION:

Curtain airbag sensor (LH) is faulty.

When DTC 59 is displayed, the circuit within the curtain airbag sensor (LH) is faulty. Replace the curtain airbag sensor (LH). <Ref. to AB-22, Curtain Airbag Sensor.>

AA:DTC 61

DTC DETECTING CONDITION:

- Seat belt pretensioner (RH) circuit is open, shorted or shorted to ground.
- Airbag control module is faulty.
- Pretensioner is faulty.
- Pretensioner harness is faulty.

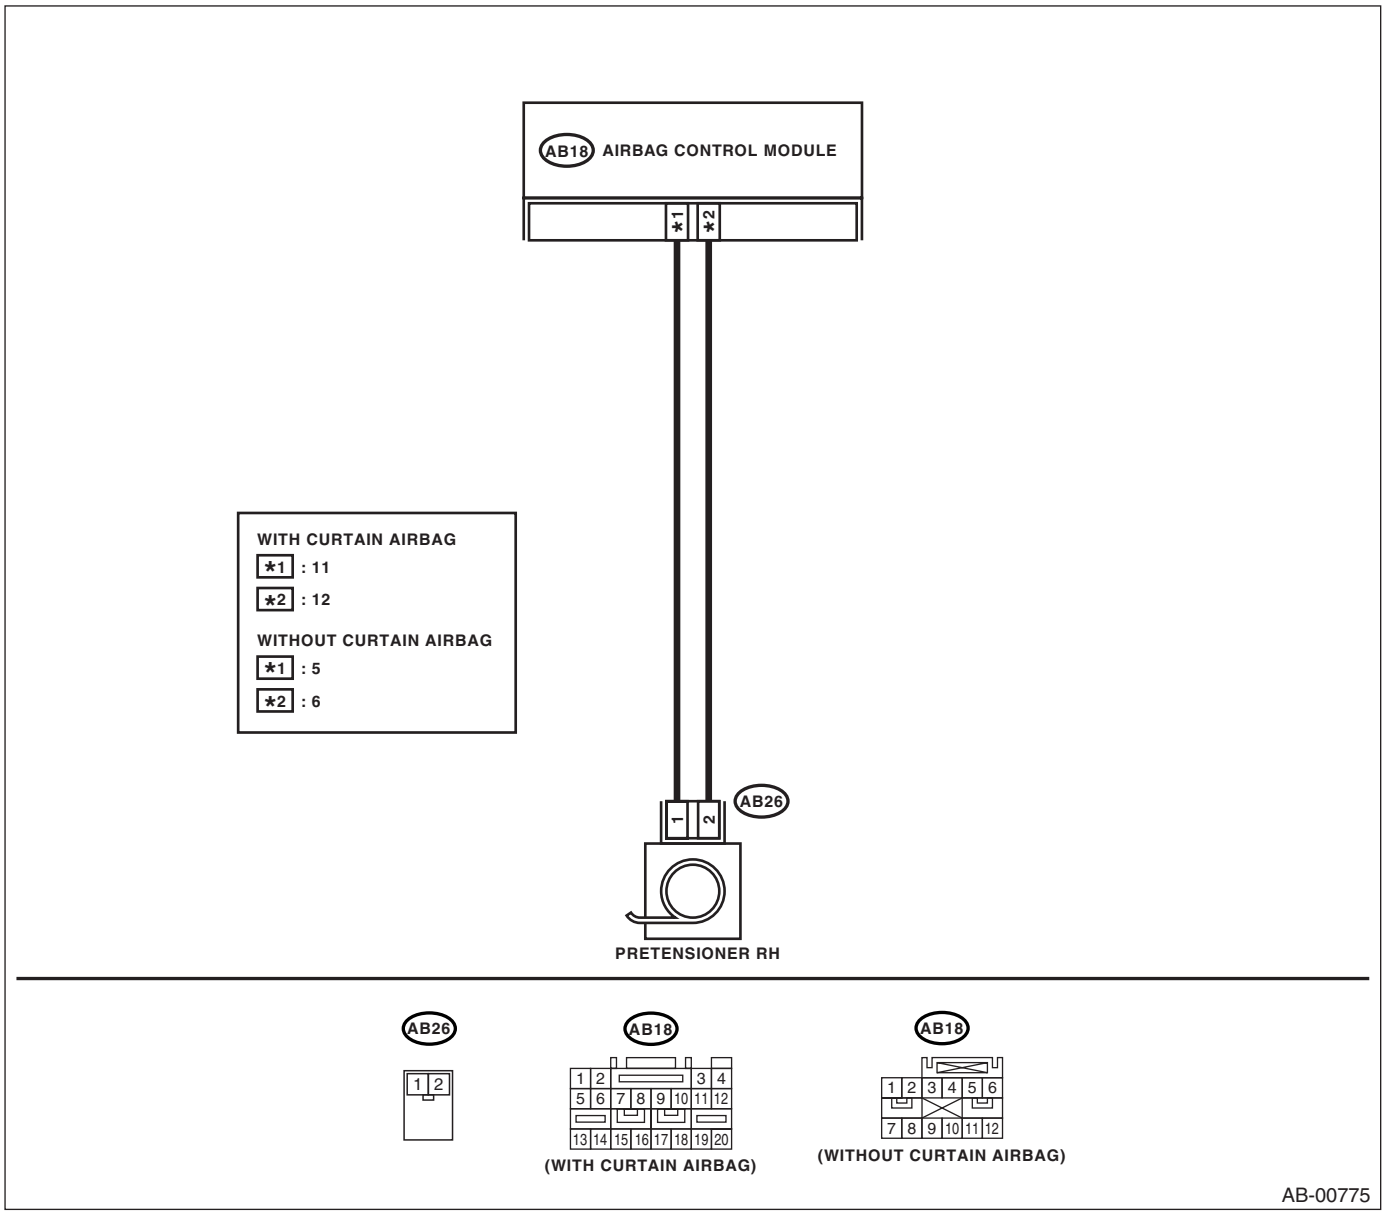
CAUTION:

• Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from battery, and wait more than 20 seconds before starting to work.

• Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.

• When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

WIRING DIAGRAM:



1. MODEL WITH CURTAIN AIRBAG

	Step	Check	Yes	No
1	**CHECK SEAT BELT PRETENSIONER.** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the connector (AB26) from seat belt pretensioner (RH). <Ref. to SB-12, Front Seat Belt.> 3) Connect the connector (1N) in the test harness N to connector (AB26). 4) Connect the airbag resistor to connector (2N) in the test harness N. 5) Connect the battery ground terminal and turn the ignition switch ON.	Does the airbag warning light operate properly?	Replace the seat belt pretensioner (RH). <Ref. to SB-12, Front Seat Belt.>	Go to step **2.**
2	**CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS RH).** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the airbag resistor from test harness. 3) Disconnect the connector (AB24) from side airbag module (RH). 4) Disconnect the connector (AB33) from curtain airbag module (RH). 5) Disconnect the connectors (AB17) and (AB18) from airbag control modules. <Ref. to AB-20, Airbag Control Module.> 6) Connect the connector (1U) in the test harness U to connector (AB18). 7) Measure the resistance between connector (3U) in the test harness U and connector (2N) in the test harness N. ***Connector & terminal*** ***(3U) No. 17 — (2N) No. 1:*** ***(3U) No. 19 — (2N) No. 2:***	Is the resistance less than 10 Ω?	Go to step **3.**	Replace the airbag rear harness with body harness.
3	**CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS RH).** Measure the resistance between connector (3U) terminals in the test harness U. ***Connector & terminal*** ***(3U) No. 19 — (3U) No. 17:***	Is the resistance more than 1 MΩ?	Go to step **4.**	Replace the airbag rear harness with body harness.
4	**CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS RH).** Measure the resistance between connector (3U) in the test harness U and chassis ground. ***Connector & terminal*** ***(3U) No. 17 — Chassis ground:*** ***(3U) No. 19 — Chassis ground:***	Is the resistance more than 1 MΩ?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Replace the airbag rear harness with body harness.

2. MODEL WITHOUT CURTAIN AIRBAG

	Step	Check	Yes	No
1	**CHECK SEAT BELT PRETENSIONER.** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the connector (AB26) from seat belt pretensioner (RH). <Ref. to SB-12, Front Seat Belt.> 3) Connect the connector (1N) in the test harness N to connector (AB26). 4) Connect the airbag resistor to connector (2N) in the test harness N. 5) Connect the battery ground terminal and turn the ignition switch ON.	Does the airbag warning light operate properly?	Replace the seat belt pretensioner (RH). <Ref. to SB-12, Front Seat Belt.>	Go to step **2.**
2	**CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS RH).** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the airbag resistor from test harness. 3) Disconnect the connectors (AB17) and (AB18) from airbag control modules. <Ref. to AB-20, Airbag Control Module.> 4) Connect the connector (1R) in the test harness R to connector (AB18). 5) Measure the resistance between connector (3R) in the test harness R and connector (2N) in the test harness N. ***Connector & terminal*** ***(3R) No. 17 — (3N) No. 1:*** ***(3R) No. 19 — (3N) No. 2:***	Is the resistance less than 10 Ω?	Go to step **3.**	Replace the airbag rear harness with body harness.
3	**CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS RH).** Measure the resistance between connector (3R) terminals in the test harness R. ***Connector & terminal*** ***(3R) No. 19 — (3R) No. 17:***	Is the resistance more than 1 MΩ?	Go to step **4.**	Replace the airbag rear harness with body harness.
4	**CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS RH).** Measure the resistance between connector (3R) in the test harness R and chassis ground. ***Connector & terminal*** ***(3R) No. 17 — Chassis ground:*** ***(3R) No. 19 — Chassis ground:***	Is the resistance more than 1 MΩ?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Replace the airbag rear harness with body harness.

AB:DTC 62

DTC DETECTING CONDITION:

- Seat belt pretensioner (LH) circuit is open, shorted or shorted to ground.
- Airbag control module is faulty.
- Pretensioner is faulty.
- Pretensioner harness is faulty.

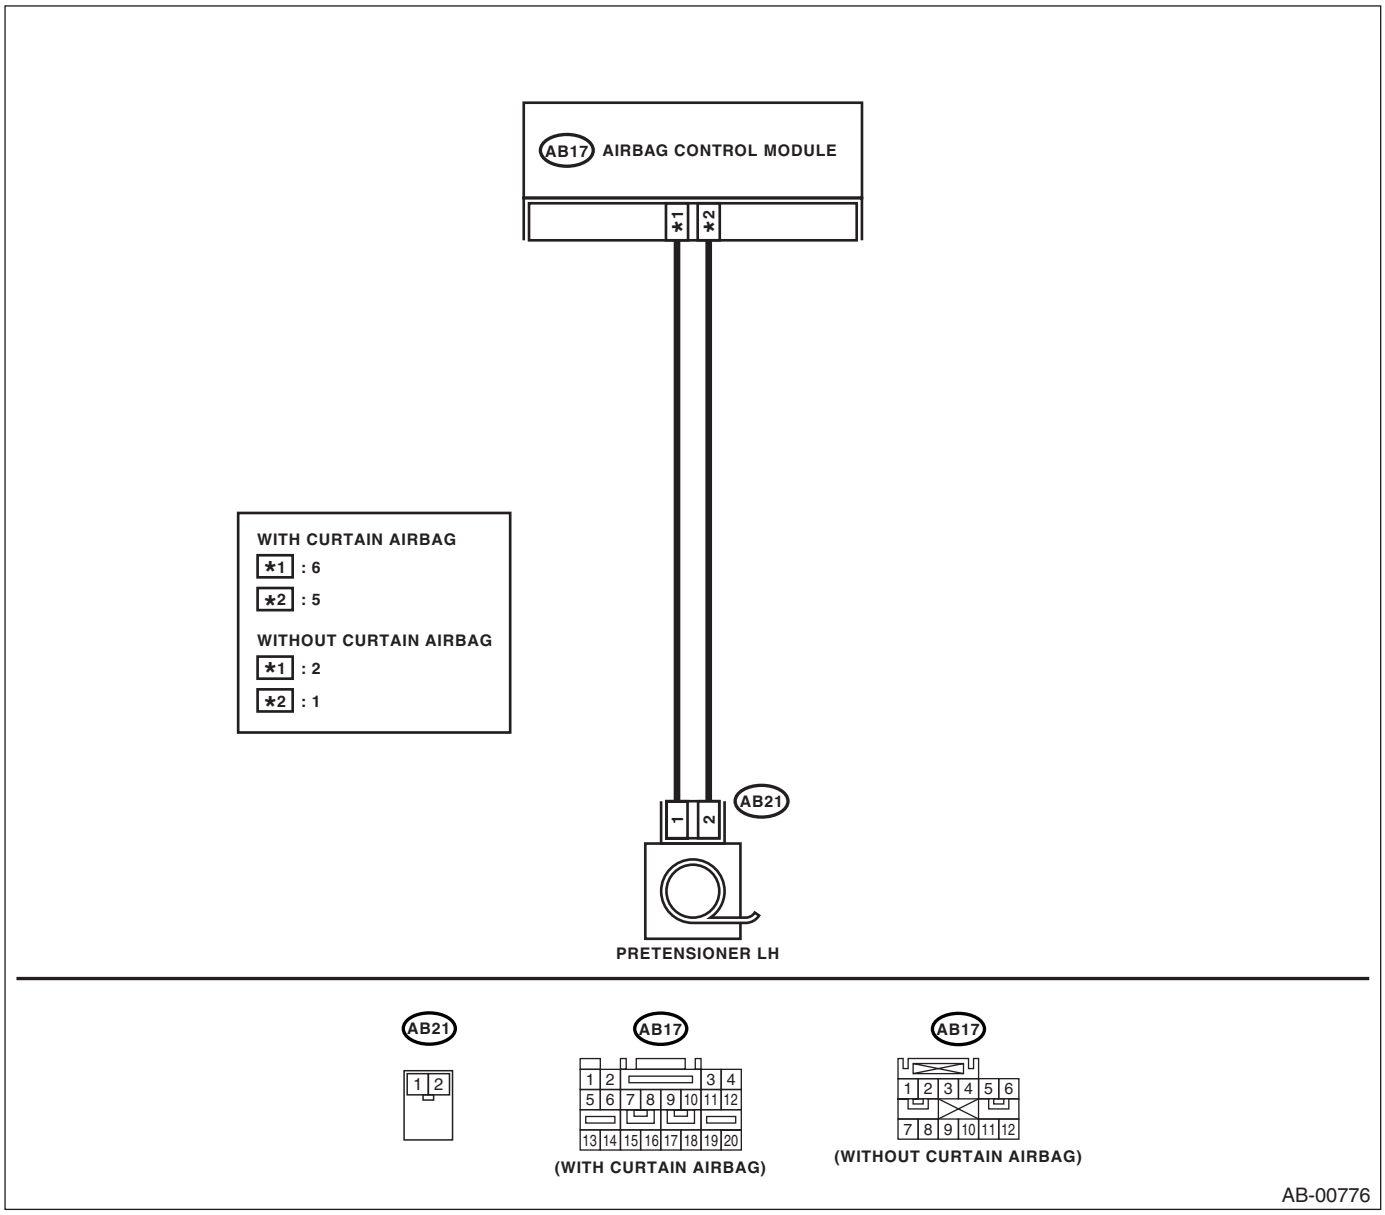
CAUTION:

• Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from battery, and wait more than 20 seconds before starting to work.

• Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.

• When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

WIRING DIAGRAM:



1. MODEL WITH CURTAIN AIRBAG

	Step	Check	Yes	No
1	**CHECK SEAT BELT PRETENSIONER.** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the connector (AB21) from seat belt pretensioner (LH). <Ref. to SB-12, Front Seat Belt.> 3) Connect the connector (1N) in the test harness N to connector (AB21). 4) Connect the airbag resistor to connector (2N) in the test harness N. 5) Connect the battery ground terminal and turn the ignition switch ON.	Does the airbag warning light operate properly?	Replace the seat belt pretensioner (LH). <Ref. to SB-12, Front Seat Belt.>	Go to step **2.**

	Step	Check	Yes	No
1	**CHECK SEAT BELT PRETENSIONER.** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the connector (AB21) from seat belt pretensioner (LH). <Ref. to SB-12, Front Seat Belt.> 3) Connect the connector (1N) in the test harness N to connector (AB21). 4) Connect the airbag resistor to connector (2N) in the test harness N. 5) Connect the battery ground terminal and turn the ignition switch ON.	Does the airbag warning light operate properly?	Replace the seat belt pretensioner (LH). <Ref. to SB-12, Front Seat Belt.>	Go to step **2.**
2	**CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS LH).** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the airbag resistor from test harness. 3) Disconnect the connectors (AB17) and (AB18) from airbag control modules. <Ref. to AB-20, Airbag Control Module.> 4) Connect the connector (1R) in the test harness R to connector (AB17). 5) Connect the battery ground terminal and turn the ignition switch ON. 6) Measure the voltage between connector (3R) in the test harness R and chassis ground. ***Connector & terminal*** ***(3R) No. 13 (+) — Chassis ground (−):*** ***(3R) No. 11 (+) — Chassis ground (−):***	Is the voltage less than 1 V?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Replace the airbag rear harness with body harness.

AE:DTC 71

DTC DETECTING CONDITION:

- Airbag main harness circuit is open, shorted or shorted to ground.
- Airbag module harness (Driver's side) circuit is open, shorted or shorted to ground.
- Roll connector circuit is open, shorted or shorted to ground.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

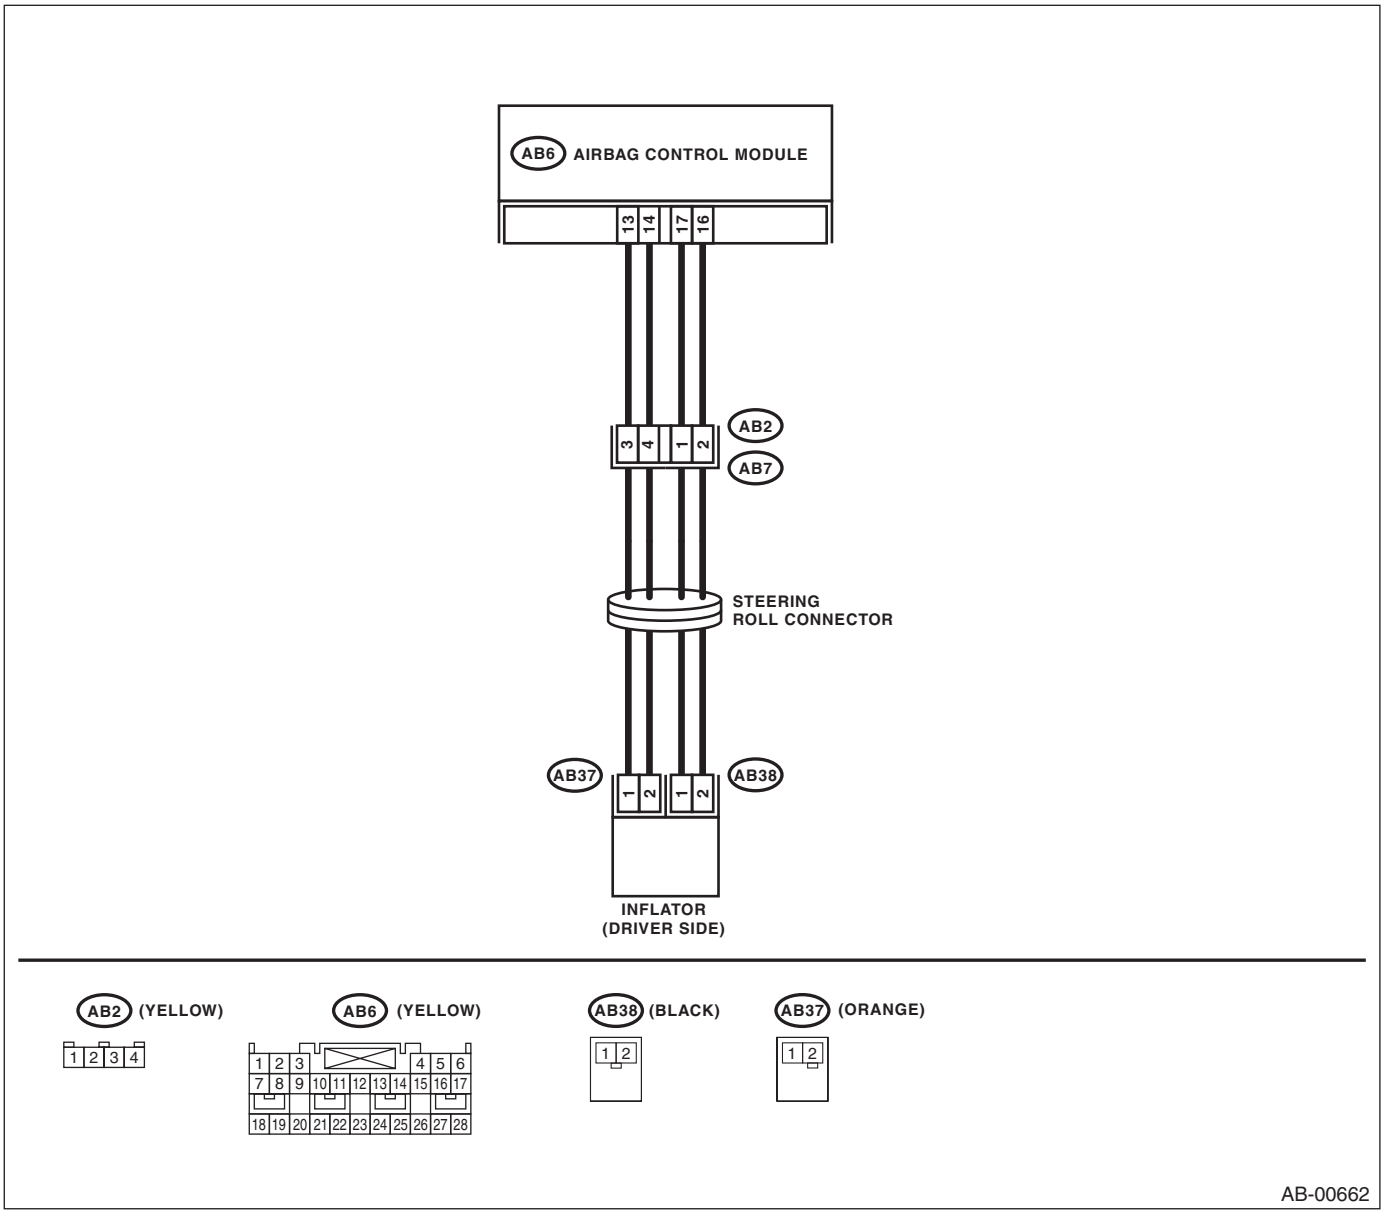
CAUTION:

• Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from battery, and wait more than 20 seconds before starting to work.

• Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.

• When inspecting the airbag main harness, disconnect the airbag module connector of the driver's and passenger's seats for safety reasons.

WIRING DIAGRAM:



Diagnostic Chart with Trouble Code

	Step	Check	Yes	No
1	**CHECK DRIVER'S AIRBAG MODULE.** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Remove the driver's airbag module. <Ref. to AB-14, Driver's Airbag Module.> 3) Connect the connector (1N) in the test harness N to connector (AB38). 4) Connect the airbag resistor to connector (2N) in the test harness N. 5) Connect the connectors (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch ON.	Does the airbag warning light operate properly?	Replace the driver's airbag module. <Ref. to AB-14, Driver's Airbag Module.>	Go to step **2.**
2	**CHECK ROLL CONNECTOR.** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the test harness N from connector (AB38). 3) Disconnect the test harness Q from connector (AB37). 4) Remove the instrument panel lower cover, disconnect the connector (AB7) from (AB2). 5) Connect the connector (1P) in the test harness P to connector (AB2). 6) Connect the airbag resistor to connector (2P) and (3P) in the test harness P. 7) Connect the battery ground terminal and turn the ignition switch ON.	Does the airbag warning light operate properly?	Replace the roll connector. <Ref. to AB-23, Roll Connector.>	Go to step **3.**
3	**CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the airbag resistor from connector (2P) and (3P) in the test harness P. 3) Remove the instrument panel side cover of passenger's side and disconnect the connector (AB10) and (AB9). <Ref. to AB-15, Passenger's Airbag Module.> 4) Disconnect the connector (AB6) from airbag control module, and connect the connector (1U) in the test harness U. <Ref. to AB-20, Airbag Control Module.> 5) Measure the resistance between connector (2U) in the test harness U and connector (2P) and (3P) in the test harness P. ***Connector & terminal*** ***(2U) No. 2 — (2P) No. 1:*** ***(2U) No. 4 — (2P) No. 2:*** ***(2U) No. 8 — (3P) No. 3:*** ***(2U) No. 12 — (3P) No. 4:***	Is the resistance less than 10 Ω?	Go to step **4.**	Replace the airbag main harness with body harness.

	Step	Check	Yes	No
4	**CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).** Measure the resistance between connector (2U) terminals in the test harness U and between the connector (2U) and chassis ground. ***Connector & terminal*** ***(2U) No. 2 — (2U) No. 4:*** ***(2U) No. 4 — Chassis ground:*** ***(2U) No. 2 — Chassis ground:*** ***(2U) No. 8 — (2U) No. 12:*** ***(2U) No. 8 — Chassis ground:*** ***(2U) No. 12 — Chassis ground:***	Is the resistance more than 1 MΩ?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Replace the airbag main harness with body harness.

AF:DTC 72

DTC DETECTING CONDITION:

- Airbag main harness circuit is open, shorted or shorted to ground.
- Airbag module harness (Passenger's side) circuit is open, shorted or shorted to ground.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:

• Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from battery, and wait more than 20 seconds before starting to work.

• Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.

• When inspecting the airbag main harness, disconnect the airbag module connector of the driver's and passenger's seats for safety reasons.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK PASSENGER'S AIRBAG MODULE.** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Remove the instrument panel side cover on the passenger's side. 3) Disconnect the connector (AB10) from (AB9). 4) Connect the connector (1P) in the test harness P to connector (AB9). 5) Connect the airbag resistor to connector (2P) and (3P) in the test harness P. 6) Connect the battery ground terminal and turn the ignition switch ON.	Does the airbag warning light operate properly?	Replace the passenger airbag module. <Ref. to AB-15, Passenger's Airbag Module.>	Go to step **2.**
2	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the airbag resistor from connector (2P) and (3P) in the test harness P. 3) Remove the instrument panel lower cover, disconnect the connector (AB7) from (AB2). 4) Disconnect the connector (AB6) from airbag control module, and connect the connector (1U) in the test harness U. <Ref. to AB-20, Airbag Control Module.> 5) Measure the resistance between connector (2U) in the test harness U and connector (2P) and (3P) in the test harness P. ***Connector & terminal*** ***(2U) No. 3 — (2P) No. 1:*** ***(2U) No. 5 — (2P) No. 2:*** ***(2U) No. 9 — (3P) No. 3:*** ***(2U) No. 13 — (3P) No. 4:***	Is the resistance less than 10 Ω?	Go to step **3.**	Replace the airbag main harness with body harness.
3	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).** Measure the resistance between connector (2U) terminals in the test harness U and between the connector (2U) and chassis ground. ***Connector & terminal*** ***(2U) No. 3 — (2U) No. 5:*** ***(2U) No. 3 — Chassis ground:*** ***(2U) No. 5 — Chassis ground:*** ***(2U) No. 9 — (2U) No. 13:*** ***(2U) No. 9 — Chassis ground:*** ***(2U) No. 13 — Chassis ground:***	Is the resistance more than 1 MΩ?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Replace the airbag main harness with body harness.

AG:DTC 75

DTC DETECTING CONDITION:

- Airbag main harness circuit (Driver's side) is shorted to power supply.
- Airbag module harness circuit (Driver's side) is shorted to power supply.
- Roll connector is shorted to the power supply.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:

• Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from battery, and wait more than 20 seconds before starting to work.

• Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.

• When inspecting the airbag main harness, disconnect the airbag module connector of the driver's and passenger's seats for safety reasons.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK DRIVER'S AIRBAG MODULE.** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Remove the driver's airbag module. <Ref. to AB-14, Driver's Airbag Module.> 3) Connect the connector (AB38) to connector (1N) in the test harness N. 4) Connect the airbag resistor to connector (2N) in the test harness N. 5) Connect the connectors (1Q) in the test harness Q to the connector (AB37). 6) Connect the airbag resistor to connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch ON.	Does the airbag warning light operate properly?	Replace the driver's airbag module. <Ref. to AB-14, Driver's Airbag Module.>	Go to step **2.**
2	**CHECK ROLL CONNECTOR.** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the test harness N from connector (AB38). 3) Disconnect the test harness Q from connector (AB37). 4) Remove the instrument panel lower cover, disconnect the connector (AB7) from (AB2). 5) Connect the connector (1P) in the test harness P to connector (AB2). 6) Connect the airbag resistor to connector (2P) and (3P) in the test harness P. 7) Connect the battery ground terminal and turn the ignition switch ON.	Does the airbag warning light operate properly?	Replace the roll connector. <Ref. to AB-23, Roll Connector.>	Go to step **3.**
3	**CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the airbag resistor from connector (2P) and (3P) in the test harness P. 3) Remove the instrument panel side cover of passenger's side and disconnect the connector (AB10) and (AB9). 4) Disconnect the connector (AB6) from airbag control module, and connect the connector (1U) in the test harness U. <Ref. to AB-20, Airbag Control Module.> 5) Connect the battery ground terminal and turn the ignition switch ON. (engine OFF) 6) Measure the voltage between connector (2U) in the test harness U and chassis ground. ***Connector & terminal*** ***(2U) No. 4 (+) — Chassis ground (−):*** ***(2U) No. 2 (+) — Chassis ground (−):*** ***(2U) No. 8 (+) — Chassis ground (−):*** ***(2U) No. 12 (+) — Chassis ground (−):***	Is the voltage less than 1 V?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Replace the airbag main harness with body harness.

AH:DTC 76

DTC DETECTING CONDITION:

- Airbag main harness circuit (Passenger's side) is shorted to power supply.
- Airbag module harness circuit (Passenger's side) is shorted to power supply.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:

• Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from battery, and wait more than 20 seconds before starting to work.

• Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.

• When inspecting the airbag main harness, disconnect the airbag module connector of the driver's and passenger's seats for safety reasons.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK PASSENGER'S AIRBAG MODULE.** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Remove the instrument panel side cover on the passenger's side. 3) Disconnect the connector (AB10) from (AB9). 4) Connect the connector (1P) in the test harness P to connector (AB9). 5) Connect the airbag resistor to connector (2P) and (3P) in the test harness P. 6) Connect the battery ground terminal and turn the ignition switch ON.	Does the airbag warning light operate properly?	Replace the passenger airbag module. <Ref. to AB-15, Passenger's Airbag Module.>	Go to step **2.**
2	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the airbag resistor from connector (2P) and (3P) in the test harness P. 3) Remove the instrument panel lower cover, disconnect the connector (AB7) from (AB2). 4) Disconnect the connector (AB6) from airbag control module, and connect the connector (1U) in the test harness U. <Ref. to AB-20, Airbag Control Module.> 5) Measure the voltage between connector (2U) in the test harness U and chassis ground. ***Connector & terminal*** ***(2U) No. 3 (+) — Chassis ground (–):*** ***(2U) No. 5 (+) — Chassis ground (–):*** ***(2U) No. 9 (+) — Chassis ground (–):*** ***(2U) No. 13 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Replace the airbag main harness with body harness.

AI: DTC 91

DTC DETECTING CONDITION:

- Curtain airbag harness (RH) is faulty.
- Curtain airbag module (RH) is faulty.
- Airbag control module is faulty.

CAUTION:

• Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from battery, and wait more than 20 seconds before starting to work.

• Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.

• When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK CURTAIN AIRBAG MODULE.** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the connector (AB33) from (AB40), and connect the connector (1F) in test harness F to connector (AB33). 3) Connect the airbag resistor to connector (3F) in the test harness F. 4) Connect the battery ground terminal and turn the ignition switch ON.	Does the airbag warning light operate properly?	Replace the curtain airbag module (RH). <Ref. to AB-18, Curtain Airbag Module.>	Go to step **2.**
2	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH).** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the connector (AB26) from seat belt pretensioner (RH). <Ref. to SB-12, Front Seat Belt.> 3) Disconnect the connector (AB24) from side airbag module (RH). 4) Disconnect the airbag resistor from the test harness F. 5) Disconnect the connector (AB18) from airbag control module. <Ref. to AB-20, Airbag Control Module.> 6) Connect the connector (1U) in the test harness U to connector (AB18). 7) Measure the resistance between connector (5U) in the test harness U and connector (3F) in the test harness F. ***Connector & terminal*** ***(5U) No. 6 — (3F) No. 3:*** ***(5U) No. 8 — (3F) No. 4:***	Is the resistance less than 10 Ω?	Go to step **3.**	Replace the airbag rear harness with body harness.
3	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH).** Measure the resistance between connector (5U) terminals in the test harness U. ***Connector & terminal*** ***(5U) No. 6 — (5U) No. 8:***	Is the resistance more than 1 MΩ?	Go to step **4.**	Replace the airbag rear harness with body harness.
4	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH).** Measure the resistance between the terminals of connector (3F) in the test harness F. ***Connector & terminal*** ***(3F) No. 3 — (3F) No. 4:***	Is the resistance more than 1 MΩ?	Go to step **5.**	Replace the airbag rear harness with body harness.
5	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH).** Measure the resistance between connector (3F) in the test harness F and chassis ground. ***Connector & terminal*** ***(3F) No. 3 — Chassis ground:*** ***(3F) No. 4 — Chassis ground:***	Is the resistance more than 1 MΩ?	Go to step **6.**	Replace the airbag rear harness with body harness.
6	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH).** Measure the resistance between connector (5U) in the test harness U and chassis ground. ***Connector & terminal*** ***(5U) No. 6 — Chassis ground:*** ***(5U) No. 8 — Chassis ground:***	Is the resistance more than 1 MΩ?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Replace the airbag rear harness with body harness.

AJ:DTC 92

DTC DETECTING CONDITION:

- Curtain airbag harness (LH) is faulty.
- Curtain airbag module (LH) is faulty.
- Airbag control module is faulty.

CAUTION:

• Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from battery, and wait more than 20 seconds before starting to work.

• Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.

• When inspecting the airbag main harness, disconnect the airbag module connector of the driver's and passenger's seats for safety reasons.

• When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK CURTAIN AIRBAG MODULE.** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the connector (AB31) from (AB39), and connect the connector (1F) in test harness F to connector (AB31). 3) Connect the airbag resistor to connector (3F) in the test harness F. 4) Connect the battery ground terminal and turn the ignition switch ON.	Does the airbag warning light operate properly?	Replace the curtain airbag module (LH). <Ref. to AB-18, Curtain Airbag Module.>	Go to step **2.**
2	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS LH).** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the connector (AB21) from seat belt pretensioner (LH). <Ref. to SB-12, Front Seat Belt.> 3) Disconnect the connector (AB19) from side airbag module (LH). 4) Disconnect the airbag resistor from the test harness F. 5) Disconnect the connector (AB17) from airbag control module. <Ref. to AB-20, Airbag Control Module.> 6) Connect the connector (1U) in the test harness U to connector (AB17). 7) Measure the resistance between connector (5U) in the test harness U and connector (3F) in the test harness F. ***Connector & terminal*** ***(5U) No. 1 — (3F) No. 4:*** ***(5U) No. 3 — (3F) No. 3:***	Is the resistance less than 10 Ω?	Go to step **3.**	Replace the airbag rear harness with body harness.
3	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS LH).** Measure the resistance between connector (5U) terminals in the test harness U. ***Connector & terminal*** ***(5U) No. 1 — (5U) No. 3:***	Is the resistance more than 1 MΩ?	Go to step **4.**	Replace the airbag rear harness with body harness.
4	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS LH).** Measure the resistance between the terminals of connector (3F) in the test harness F. ***Connector & terminal*** ***(3F) No. 3 — (3F) No. 4:***	Is the resistance more than 1 MΩ?	Go to step **5.**	Replace the airbag rear harness with body harness.
5	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS LH).** Measure the resistance between connector (3F) in the test harness F and chassis ground. ***Connector & terminal*** ***(3F) No. 3 — Chassis ground:*** ***(3F) No. 4 — Chassis ground:***	Is the resistance more than 1 MΩ?	Go to step **6.**	Replace the airbag rear harness with body harness.
6	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS LH).** Measure the resistance between connector (5U) in the test harness U and chassis ground. ***Connector & terminal*** ***(5U) No. 1 — Chassis ground:*** ***(5U) No. 3 — Chassis ground:***	Is the resistance more than 1 MΩ?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Replace the airbag rear harness with body harness.

AK:DTC 95

DTC DETECTING CONDITION:

- Curtain airbag harness (RH) is shorted to power supply.
- Airbag control module is faulty.

CAUTION:

• Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from battery, and wait more than 20 seconds before starting to work.

• Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.

• When inspecting the airbag main harness, disconnect the airbag module connector of the driver's and passenger's seats for safety reasons.

• When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK CURTAIN AIRBAG MODULE.** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the connector (AB33) from (AB40), and connect the connector (1F) in test harness F to connector (AB33). 3) Connect the airbag resistor to connector (3F) in the test harness F. 4) Connect the battery ground terminal and turn the ignition switch ON.	Does the airbag warning light operate properly?	Replace the curtain airbag module (RH). <Ref. to AB-18, Curtain Airbag Module.>	Go to step **2.**
2	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH).** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the connector (AB26) from seat belt pretensioner (RH). <Ref. to SB-12, Front Seat Belt.> 3) Disconnect the connector (AB24) from side airbag module (RH). 4) Disconnect the airbag resistor from the test harness F. 5) Disconnect the connector (AB18) from airbag control module. <Ref. to AB-20, Airbag Control Module.> 6) Connect the connector (1U) in the test harness U to connector (AB18). 7) Connect the battery ground terminal and turn the ignition switch ON. 8) Measure the voltage between connector (5U) in the test harness U and chassis ground. ***Connector & terminal*** ***(5U) No. 6 (+) — Chassis ground (−):*** ***(5U) No. 8 (+) — Chassis ground (−):***	Is the voltage less than 1 V?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Replace the airbag rear harness with body harness.

AL:DTC 96

DTC DETECTING CONDITION:

- Curtain airbag harness (LH) is shorted to power supply.
- Airbag control module is faulty.

CAUTION:

• Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from battery, and wait more than 20 seconds before starting to work.
• Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.
• When inspecting the airbag main harness, disconnect the airbag module connector of the driver's and passenger's seats for safety reasons.
• When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK SIDE AIRBAG MODULE.** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the connector (AB31) from (AB39), and connect the connector (1F) in test harness F to the connector (AB31). 3) Connect the airbag resistor to connector (3F) in the test harness F. 4) Connect the battery ground terminal and turn the ignition switch ON.	Does the airbag warning light operate properly?	Replace the curtain airbag module (LH). <Ref. to AB-18, Curtain Airbag Module.>	Go to step **2.**
2	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS LH).** 1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds. 2) Disconnect the connector (AB21) from seat belt pretensioner (LH). <Ref. to SB-12, Front Seat Belt.> 3) Disconnect the connector (AB19) from side airbag module (LH). 4) Disconnect the airbag resistor from the test harness F. 5) Disconnect the connector (AB17) from airbag control module. <Ref. to AB-20, Airbag Control Module.> 6) Connect the connector (1U) in the test harness U to connector (AB17). 7) Connect the battery ground terminal and turn the ignition switch ON. 8) Measure the voltage between connector (5U) in the test harness U and chassis ground. ***Connector & terminal*** ***(5U) No. 1 (+) — Chassis ground (−):*** ***(5U) No. 3 (+) — Chassis ground (−):***	Is the voltage less than 1 V?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Replace the airbag rear harness with body harness.

BODY SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

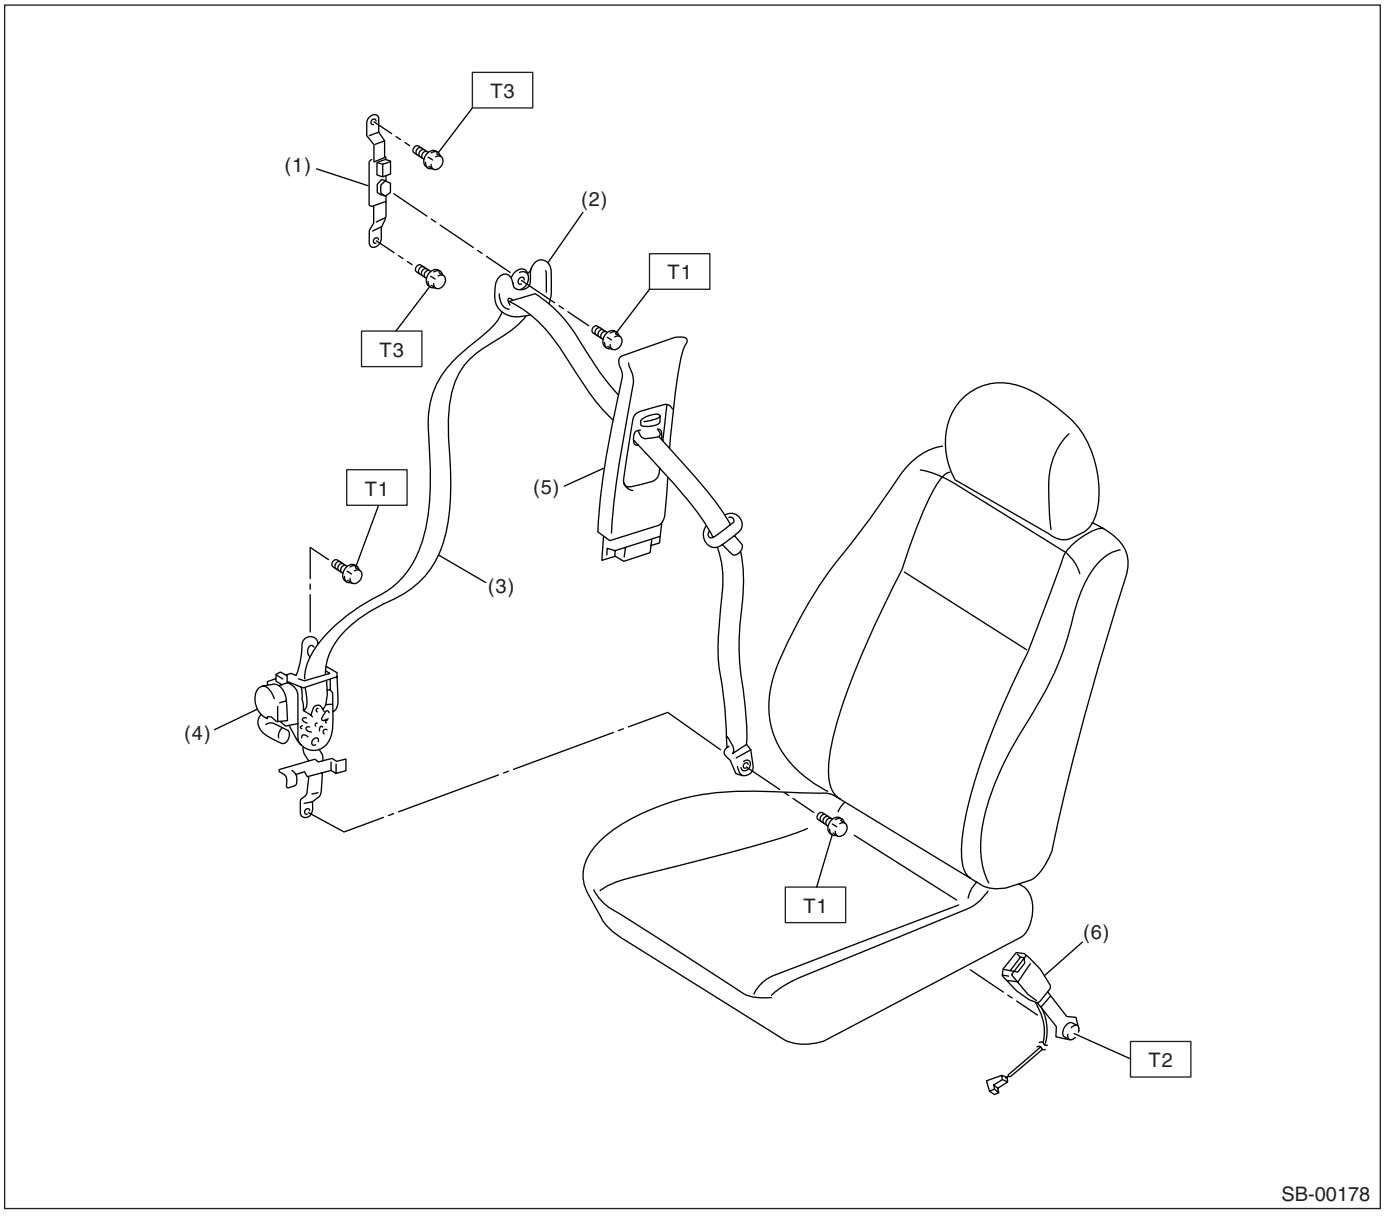
1. General Description

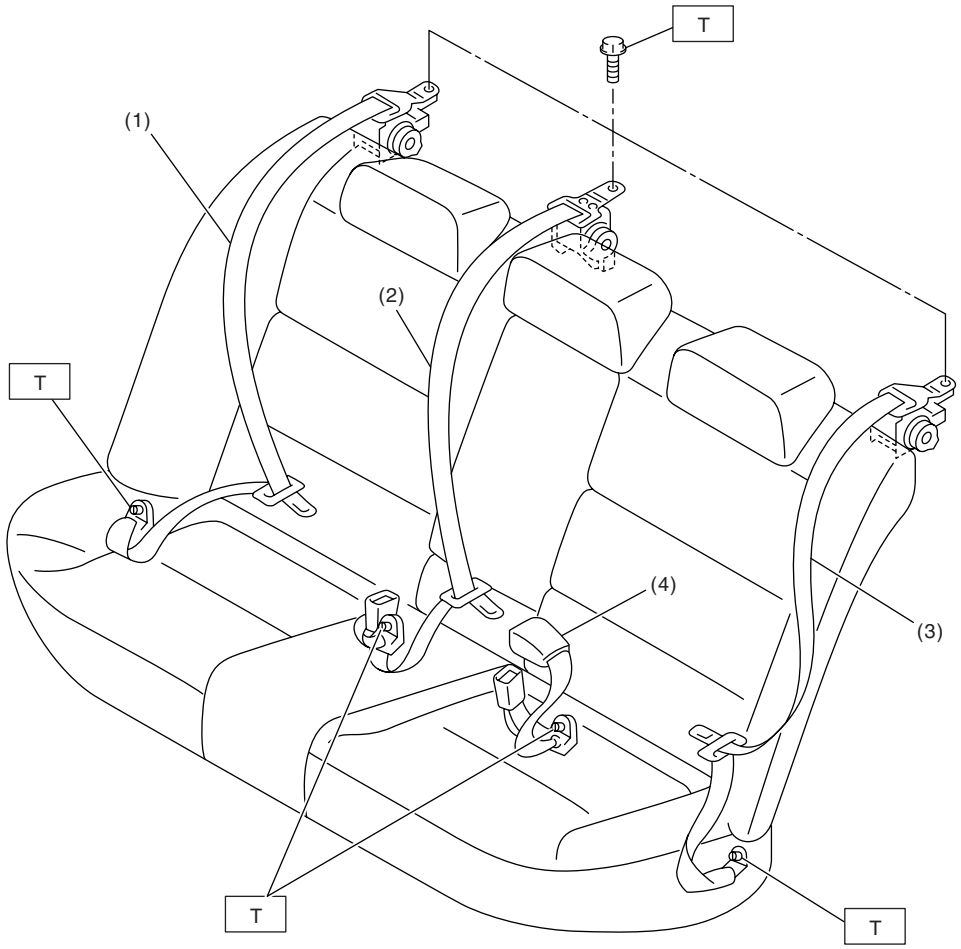
A: COMPONENT

1. FRONT SEAT BELT



(1)	Adjustable anchor ASSY	(4)	Seat belt retractor	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Shoulder anchor	(5)	Center pillar upper trim	***T1: 30 (3.1, 22)***
(3)	Outer seat belt ASSY	(6)	Inner seat belt ASSY	***T2: 38 (3.9, 28)***
				T3: 53 (5.4, 39)

2. REAR SEAT BELT (SEDAN MODEL)

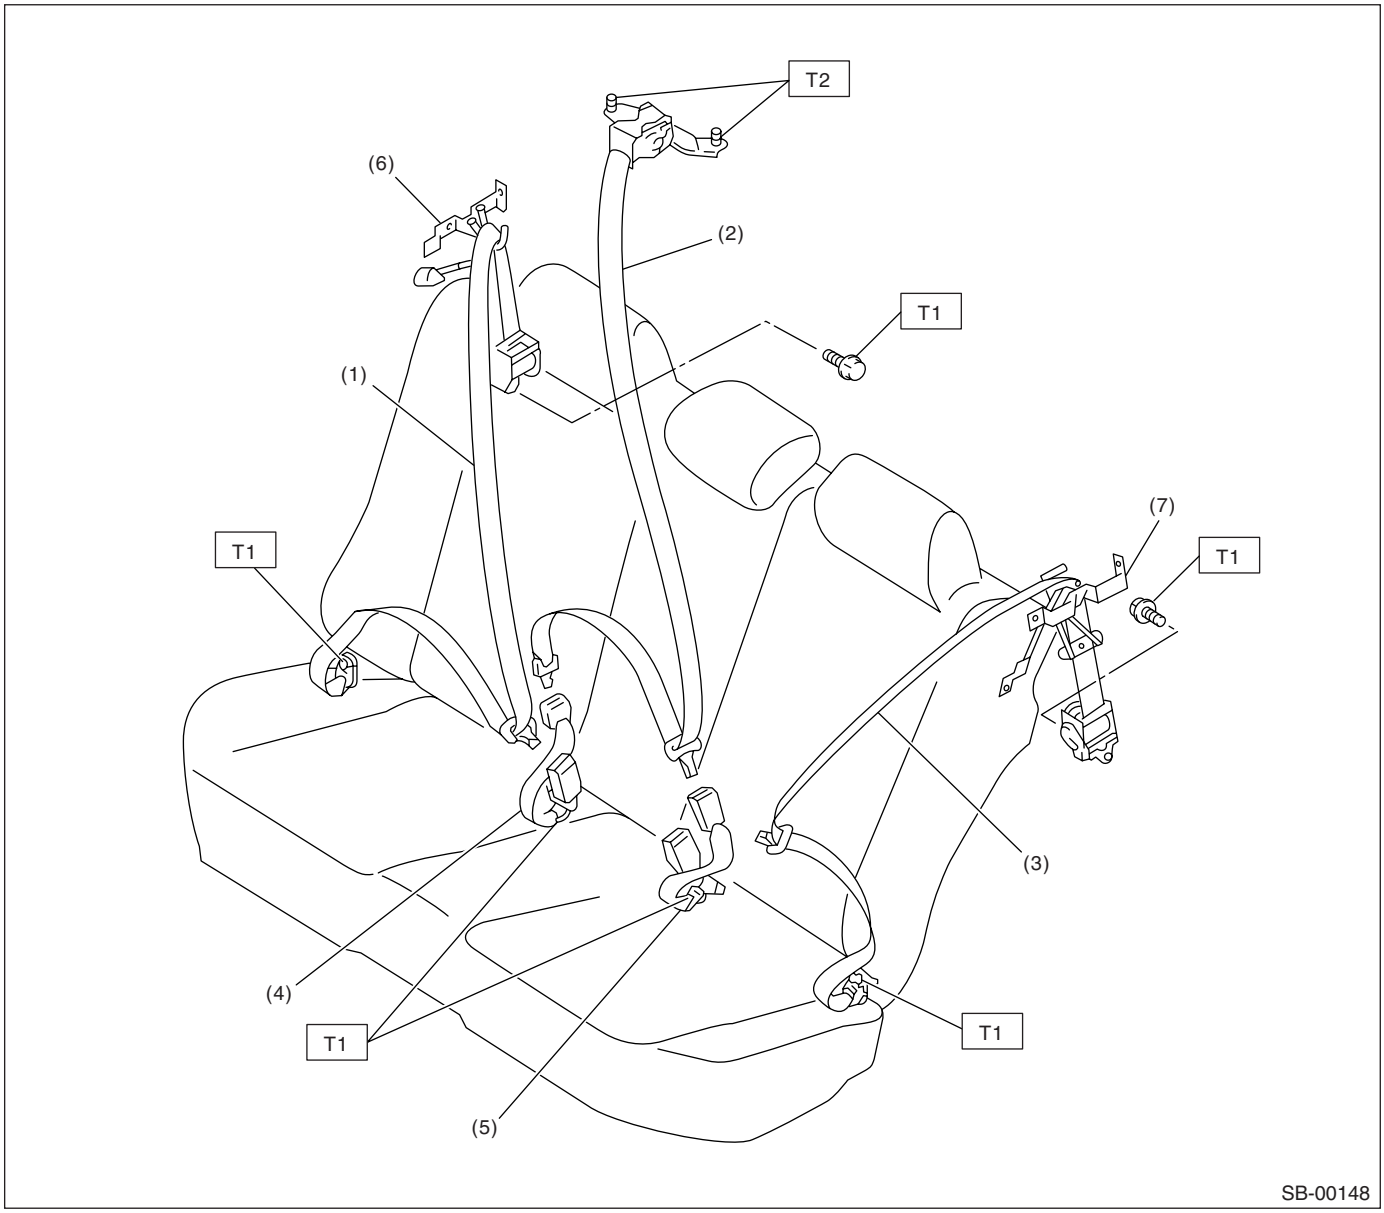


SB-00147

(1) Outer seat belt RH ASSY
(2) Shoulder seat belt CTR ASSY
(3) Outer seat belt LH ASSY
(4) Center seat belt LH ASSY

Tightening torque: N·m (kgf-m, ft-lb)
T: 30 (3.1, 22)

3. REAR SEAT BELT (WAGON MODEL)



(1) Outer seat belt RH ASSY
(2) Shoulder seat belt CTR ASSY
(3) Outer seat belt LH ASSY
(4) Center seat belt RH ASSY
(5) Center seat belt LH ASSY
(6) Outer belt guide RH
(7) Outer belt guide LH

Tightening torque: N·m (kgf-m, ft-lb)
T1: 30 (3.1, 22)
T2: 53 (5.4, 39.1)

B: CAUTION

• Before starting service, turn the ignition switch to OFF, disconnect the battery ground cable and wait for 20 seconds or more.
• The pretensioner system has a backup power source. The pretensioner might deploy if you do not wait for 20 seconds or more before starting work.
• Do not drop or apply any impact to the pretensioner.
• If oil, grease or water gets on the pretensioner, wipe it off immediately with a dry cloth.
• Do not expose the pretensioner to high temperature or flame.
• Do not allow current to flow through or voltage to reach the pretensioner. Do not use a circuit tester to check resistance of the pretensioner.
• Do not disassemble or attempt to repair the pretensioner. If it is dented, cracked or deformed, replace it with a new one.
• Do not use the airbag or pretensioner parts from other vehicles. Always replace the parts with new ones.
• When handling a seat belt with deployed pretensioner, wear gloves and goggles. Wash your hands afterwards.
• Do not reuse a seat belt with deployed pretensioner.
• If the material gets in your eyes or on your skin during deployment, wash it away with clean water, and then consult a doctor.

C: PREPARATION TOOL

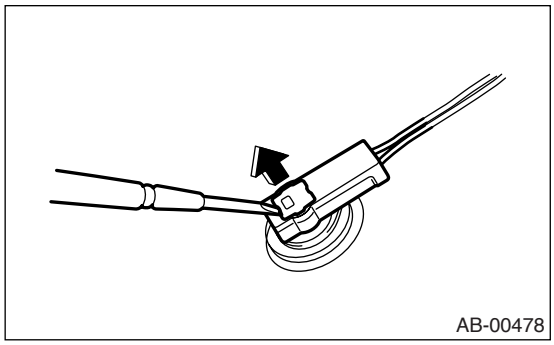
1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299SA010	98299SA010	DEPLOYMENT ADAPTER D	• Used for deploying the pretensioner. • Used with DEPLOYMENT TOOL (98299PA030).
ST98299PA030	98299PA030	DEPLOYMENT TOOL	• Used for deploying the pretensioner. • Used with DEPLOYMENT ADAPTER D (98299SA010).

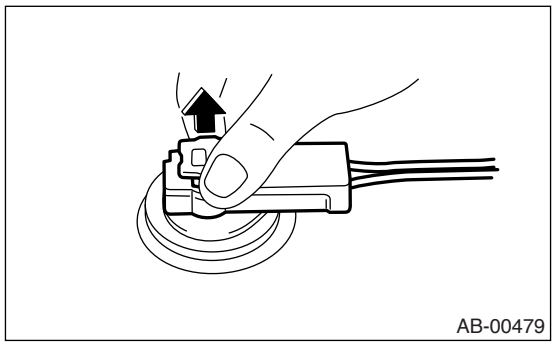
2. Pretensioner Connector

A: REMOVAL

1) Using a flat tip screwdriver, pry the push lock upward to unlock.



2) Pull out the connector to disconnect it from retractor assembly.

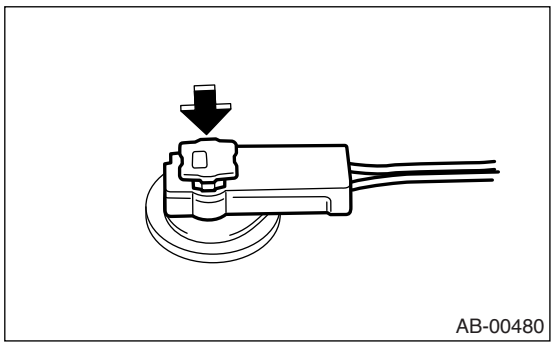


B: INSTALLATION

Connect the connector in the reverse order of disconnection. At this time, be sure to insert the push lock until a connecting sound is heard.

CAUTION:

- **Be sure to insert the connector in until it is locked. Then pull on it gently to make sure that it is locked.**
- **Be sure to push the push lock in securely.**



3. Inspection Locations After a Collision

A: INSPECTION

Check for the following, and replace with new parts if necessary.

• Center pillar lower garnish is discolored or cracked.

• Wire harness and connector are damaged.

4. Seat Belt Warning System

A: WIRING DIAGRAM

1. LHD MODEL

<Ref. to WI-308, LHD MODEL, WIRING DIAGRAM, Seat Belt Warning System.>

2. RHD MODEL

<Ref. to WI-309, RHD MODEL, WIRING DIAGRAM, Seat Belt Warning System.>

B: INSPECTION

TROUBLE SYMPTOM:

- Seat belt warning light does not come on or go off.
- Buzzer does not beep.

1. DRIVER'S SEAT

	Step	Check	Yes	No
1	**CHECK BODY INTEGRATED UNIT SYSTEM.** Check DTC of body integrated unit using Subaru Select Monitor. <Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.>	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step **2.**
2	**CHECK VEHICLE SPEED SIGNAL.** Check DTC of ABS or vehicle dynamics control (VDC) using Subaru Select Monitor. <Ref. to ABS(diag)-15, OPERATION, Subaru Select Monitor.> <Ref. to VDC(diag)-16, OPERATION, Subaru Select Monitor.>	Is DTC displayed?	Perform the diagnosis according to DTC	Go to step **3.**
3	**CHECK BODY INTEGRATED UNIT.** 1) Connect the Subaru Select Monitor to data link connector. 2) Turn the ignition switch to ON (engine OFF). 3) Turn the Subaru Select Monitor switch to ON. 4) Read the data of "Driver's Seat SW input" using Subaru Select Monitor. <Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.>	Is the data of "Driver's Seat SW input" "OFF"?	Go to step **4.**	Check the harness between body integrated unit and chassis ground.
4	**CHECK SEAT BELT WARNING LIGHT.** Read the data of "D-belt warning light O/P" using Subaru Select Monitor. <Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.>	Is the data of "D-belt warning light O/P" "ON"? Or does the seat belt warning light on combination meter illuminate?	Go to step **5.**	Check the harness between ignition switch and body integrated unit.
5	**CHECK BODY INTEGRATED UNIT.** 1) Insert the tang plate into the driver's seat belt buckle. 2) Read the data of "Driver's Seat SW input" using Subaru Select Monitor. <Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.>	Is the data of "Driver's Seat SW input" "ON"?	Go to step **6.**	Check the body integrated unit.
6	**CHECK SEAT BELT WARNING LIGHT.** Read the data of "D-belt warning light O/P" using Subaru Select Monitor. <Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.>	Is the data of "D-belt warning light O/P" "OFF"? Or is the seat belt warning light on combination meter off?	Go to step **7.**	Check the harness between ignition switch and body integrated unit.

	Step	Check	Yes	No
7	**CHECK VEHICLE MODEL.**	Is the vehicle EC, EK or KA model?	Go to step **8.**	The seat belt warning light system is normal at this time. A temporary poor contact of harness connector may be the cause. Check the poor contact.
8	**CHECK SEAT BELT WARNING SYSTEM.** 1) Hold the tang plate disconnected from seat belt buckle. 2) Turn the ignition switch to ON.	Does the seat belt warning light illuminate?	Go to step **9.**	Replace the body integrated unit.
9	**CHECK SEAT BELT WARNING SYSTEM.** 1) Lift-up the vehicle. NOTE: Raise all wheels off floor. 2) Hold the tang plate disconnected from seat belt buckle. 3) Start the engine, and set the vehicle speed to more than 24 km/h (15MPH). NOTE: The speed difference between front and rear wheels may light the ABS or VDC warning light, but this indicates no malfunction. When diagnosis is finished, perform the ABS or VDC memory clearance procedure. <Ref. to ABS(diag)-15, OPERATION, Subaru Select Monitor.> <Ref. to VDC(diag)-16, OPERATION, Subaru Select Monitor.>	Does the seat belt warning light blink and the buzzer beep?	Go to step **10.**	Replace the body integrated unit.
10	**CHECK SEAT BELT WARNING SYSTEM.** While the seat belt warning light is blinking and the buzzer is beeping, decelerate the vehicle speed to less than 21 km/h (13 MPH).	Does the buzzer stop beeping and the seat belt warning light change from blinking to illuminating?	Go to step **11.**	Replace the body integrated unit.
11	**CHECK SEAT BELT WARNING SYSTEM.** 1) Start the engine, and set the vehicle speed to more than 24 km/h (15 MPH). 2) Wait for approx. 108 seconds while the seat belt warning light is blinking and the buzzer is beeping. NOTE: The speed difference between front and rear wheels may light the ABS or VDC warning light, but this indicates no malfunction. When diagnosis is finished, perform the ABS or VDC memory clearance procedure. <Ref. to ABS(diag)-15, OPERATION, Subaru Select Monitor.> <Ref. to VDC(diag)-16, OPERATION, Subaru Select Monitor.>	Does the buzzer stop beeping and the seat belt warning light change from blinking to illuminating?	The seat belt warning system is normal. A temporary poor contact of harness connector may be the cause. Check the poor contact.	Replace the body integrated unit.

2. PASSENGER'S SEAT

	Step	Check	Yes	No
1	**CHECK BODY INTEGRATED UNIT SYSTEM.** Check DTC of body integrated unit using Subaru Select Monitor. <Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.>	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step **2.**

	Step	Check	Yes	No
2	**CHECK VEHICLE SPEED SIGNAL.** Check DTC of ABS or VDC using Subaru Select Monitor. <Ref. to ABS(diag)-15, OPERATION, Subaru Select Monitor.> <Ref. to VDC(diag)-16, OPERATION, Subaru Select Monitor.>	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step **3.**
3	**CHECK BODY INTEGRATED UNIT.** 1) Connect the Subaru Select Monitor to data link connector. 2) Turn the ignition switch to ON (engine OFF). 3) Turn the Subaru Select Monitor switch to ON. 4) Read the data of "P seatbelt SW input" using Subaru Select Monitor. <Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.>	Is the data of "P seatbelt SW input" "OFF"?	Go to step **4.**	Check the harness between body integrated unit and chassis ground.
4	**CHECK SEAT BELT WARNING LIGHT.** Read the data of "P-belt warning light O/P" using Subaru Select Monitor. <Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.>	Is the data of "P-belt warning light O/P" "ON"? Or does the passenger's seat belt warning light illuminate?	Go to step **5.**	Check the harness between ignition switch and body integrated unit.
5	**CHECK BODY INTEGRATED UNIT.** 1) Insert the tang plate into the passenger's seat belt buckle. 2) Read the data of "P seatbelt SW input" using Subaru Select Monitor. <Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.>	Is the data of "P seatbelt SW input" "ON"?	Go to step **6.**	Check the body integrated unit.
6	**CHECK SEAT BELT WARNING LIGHT.** Read the data of "P-belt warning light O/P" using Subaru Select Monitor. <Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.>	Is the data of "P-belt warning light O/P" "OFF"? Or is the passenger's seat belt warning light off?	Go to step **7.**	Check the harness between ignition switch and body integrated unit.
7	**CHECK VEHICLE MODEL.**	Is the vehicle EC, EK or KA model?	Go to step **8.**	The seat belt warning system is normal at this time. A temporary poor contact of harness connector may be the cause. Check the poor contact.
8	**CHECK SEAT BELT WARNING SYSTEM.** 1) Hold the tang plate disconnected from seat belt buckle. 2) Turn the ignition switch to ON.	Does the seat belt warning light illuminate?	Go to step **9.**	Replace the body integrated unit.

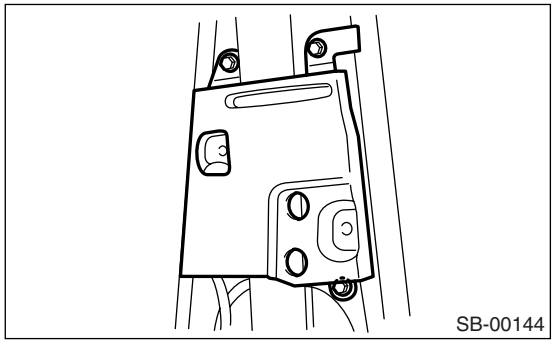
	Step	Check	Yes	No
9	**CHECK SEAT BELT WARNING SYSTEM.** 1) Lift-up the vehicle. NOTE: Raise all wheels off floor. 2) Insert the tang plate of driver's seat belt into seat belt buckle. 3) Hold the tang plate of passenger's seat belt disconnected from seat belt buckle. 4) Start the engine, and set the vehicle speed to more than 24 km/h (15 MPH). NOTE: The speed difference between front and rear wheels may light the ABS or VDC warning light, but this indicates no malfunction. When diagnosis is finished, perform the ABS or VDC memory clearance procedure. <Ref. to ABS(diag)-15, OPERATION, Subaru Select Monitor.> <Ref. to VDC(diag)-16, OPERATION, Subaru Select Monitor.>	Does the seat belt warning light blink and the buzzer beep?	Go to step **10.**	Replace the body integrated unit.
10	**CHECK SEAT BELT WARNING SYSTEM.** While the seat belt warning light is blinking and the buzzer is beeping, decelerate the vehicle speed to less than 21 km/h (13 MPH).	Does the buzzer stop beeping and the seat belt warning light change from blinking to illuminating?	Go to step **11.**	Replace the body integrated unit.
11	**CHECK SEAT BELT WARNING SYSTEM.** 1) Start the engine, and set the vehicle speed to more than 24 km/h (15 MPH). 2) Wait for approx. 108 seconds while the seat belt warning light is blinking and the buzzer is beeping. NOTE: The speed difference between front and rear wheels may light the ABS or VDC warning light, but this indicates no malfunction. When diagnosis is finished, perform the ABS or VDC memory clearance procedure. <Ref. to ABS(diag)-15, OPERATION, Subaru Select Monitor.> <Ref. to VDC(diag)-16, OPERATION, Subaru Select Monitor.>	Does the buzzer stop beeping and the seat belt warning light change from blinking to illuminating?	The seat belt warning system is normal. A temporary poor contact of harness connector may be the cause. Check the poor contact.	Replace the body integrated unit.

5. Front Seat Belt

A: REMOVAL

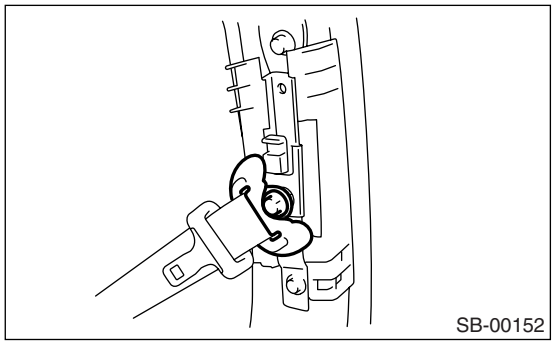
1. OUTER SEAT BELT ASSEMBLY

1) Turn the ignition switch to OFF, disconnect the battery ground cable from battery, and wait for more than 20 seconds before starting work.
2) Fold the backrest all the way forward, and then move the front seat all the way forward.
3) Remove the center pillar lower trim. <Ref. to EI-60, REMOVAL, Lower Inner Trim.>
4) Remove the center pillar upper trim. <Ref. to EI-62, REMOVAL, Upper Inner Trim.>
5) Remove the bolt, and remove the center pillar inner protector lower.



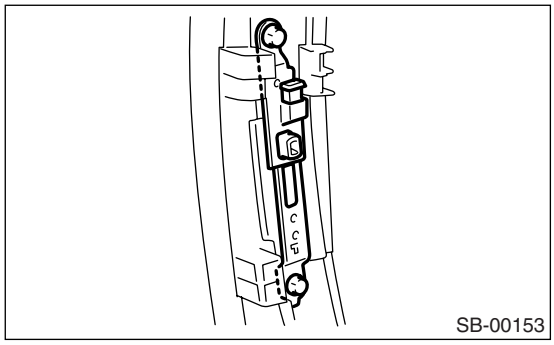
SB-00144

6) Remove the bolt, and then remove the shoulder anchor.



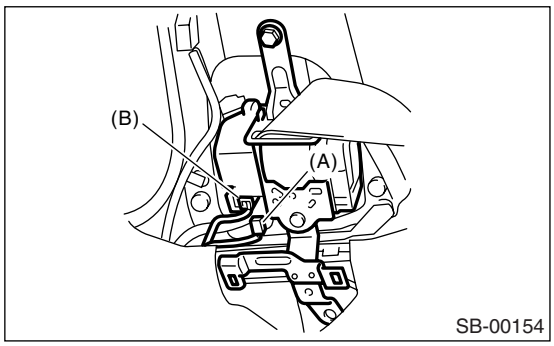
SB-00152

7) Remove the bolt, and then remove the adjustable anchor assembly.



SB-00153

8) Disconnect the pretensioner connector (A), and remove the bolt, and then remove the seat belt retractor.



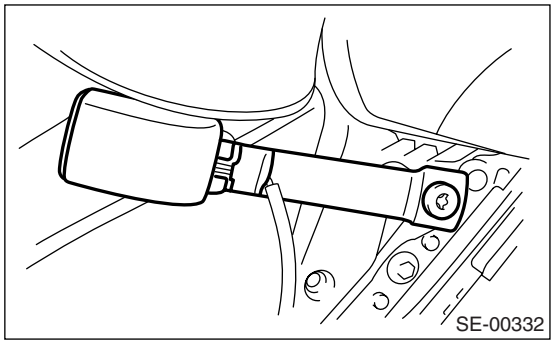
SB-00154

NOTE:
Disconnect the tension reducer connector (B) for the seat belt retractor with tension reducer function.

CAUTION:
• Do not drop or apply any impact to the pretensioner.
• Since the pretensioner and bracket are integrated as a unit, do not disassemble them.

2. INNER SEAT BELT ASSEMBLY

1) Turn the ignition switch to OFF, disconnect the battery ground cable from battery, and wait for more than 20 seconds before starting work.
2) Remove the console box. <Ref. to EI-53, REMOVAL, Console Box.>
3) Disconnect the seat belt warning light connector under the seat.
4) Remove the harness clips from seat rail.
5) Remove the TORX® bolt, and then remove the inner seat belt assembly.



SE-00332

B: INSTALLATION

1. OUTER SEAT BELT ASSEMBLY

Install in the reverse order of removal.

CAUTION:
• The parts of driver and passenger sides are not identical. Before installation, make sure that the correct part is used.
• Be careful not to twist the seat belts during installation.

Tightening torque:
<Ref. to SB-2, FRONT SEAT BELT, COMPONENT, General Description.>

2. INNER SEAT BELT ASSEMBLY

Install in the reverse order of removal.

Tightening torque:
<Ref. to SB-2, FRONT SEAT BELT, COMPONENT, General Description.>

C: INSPECTION

1. OUTER SEAT BELT ASSEMBLY

Check for the following, and replace with new parts if necessary.
• Pretensioner is cracked or deformed.
• Seat belt is slackened, bent or worn. Seat belt is abnormally wound or extended.

2. INNER SEAT BELT ASSEMBLY

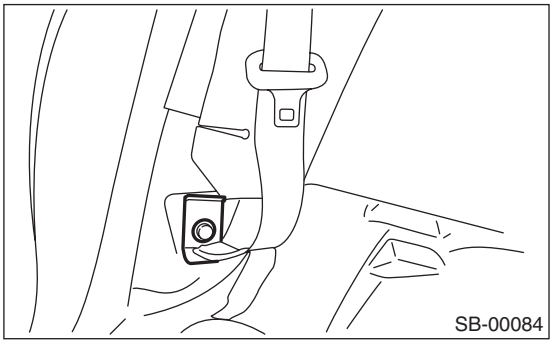
Check for the following, and replace with new parts if necessary.
• Inner seat belt assembly is deformed or damaged.
• Seat belt buckle cannot be engaged properly.

6. Rear Seat Belt

A: REMOVAL

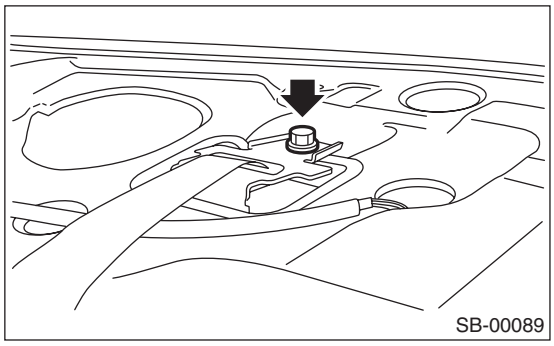
1. OUTER SEAT BELT RH ASSEMBLY AND LH ASSEMBLY (SEDAN MODEL)

1) Remove the rear seat. <Ref. to SE-14, REMOVAL, Rear Seat.>
2) Remove the seat belt lower anchor bolt.



SB-00084

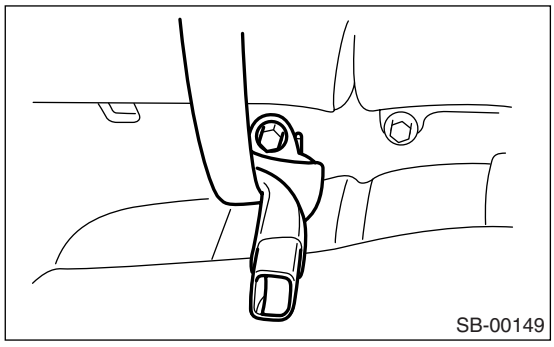
3) Remove the rear quarter trim. <Ref. to EI-63, SEDAN MODEL (MODEL WITH CURTAIN AIRBAG), REMOVAL, Rear Quarter Trim.>
4) Remove the bolt to remove outer seat belt assembly.



SB-00089

2. SHOULDER SEAT BELT CTR ASSEMBLY (SEDAN MODEL)

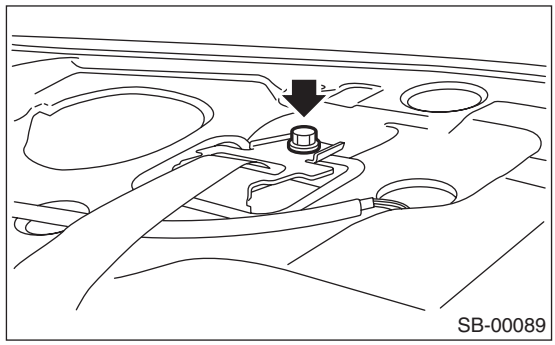
1) Remove the rear cushion seat. <Ref. to SE-14, REMOVAL, Rear Seat.>
2) Remove the seat belt lower anchor bolt.



SB-00149

NOTE:
For the model with rear seat belt warning light, disconnect the connector of seat belt warning light.

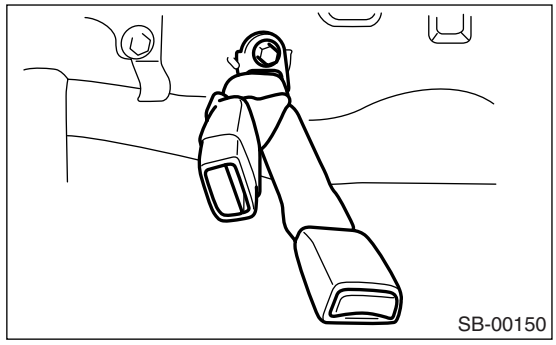
3) Remove the rear quarter trim. <Ref. to EI-63, REMOVAL, Rear Quarter Trim.>
4) Remove the rear shelf trim. <Ref. to EI-70, REMOVAL, Rear Shelf Trim.>
5) Remove the bolt to remove shoulder seat belt assembly.



SB-00089

3. CENTER SEAT BELT LH ASSEMBLY (SEDAN MODEL)

1) Remove the rear seat cushion. <Ref. to SE-14, REMOVAL, Rear Seat.>
2) Remove the bolt to remove center seat belt LH assembly.

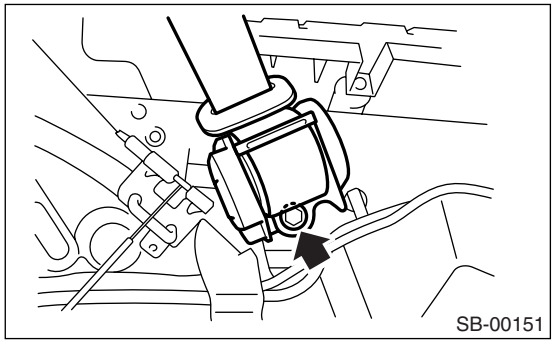


SB-00150

NOTE:
For the model with rear seat belt warning light, disconnect the connector of seat belt warning light.

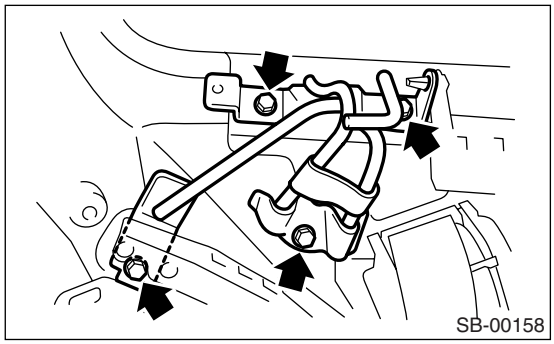
4. OUTER SEAT BELT RH ASSEMBLY AND LH ASSEMBLY (WAGON MODEL)

1) Remove the luggage floor box. <Ref. to EI-74, REMOVAL, Luggage Floor Box.>
2) Remove the rear seat cushion and backrest shoulder. <Ref. to SE-14, SEDAN MODEL, REMOVAL, Rear Seat.>
3) Remove the rear quarter lower trim. <Ref. to EI-63, WAGON MODEL, REMOVAL, Rear Quarter Trim.>
4) Remove the bolt to remove outer seat belt retractor.



SB-00151

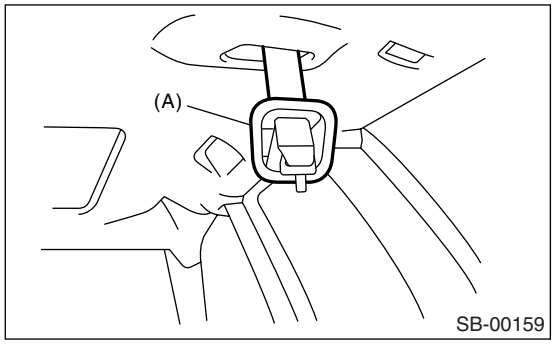
5) Remove the bolts to remove outer seat belt guide.



SB-00158

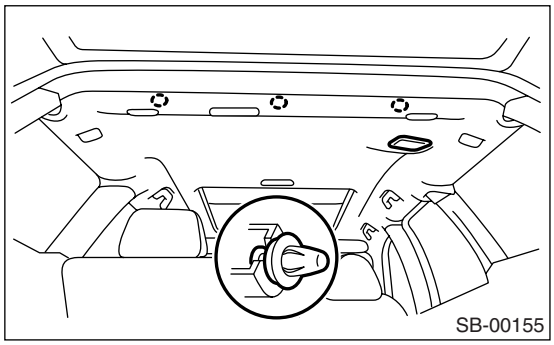
5. SHOULDER SEAT BELT CTR ASSEMBLY (WAGON MODEL)

1) Remove the quarter rear pillar trim. <Ref. to EI-63, WAGON MODEL, REMOVAL, Rear Quarter Trim.>
2) Remove the seat belt extract opening (A) from roof trim, and then inset it to the inside of roof trim.



SB-00159

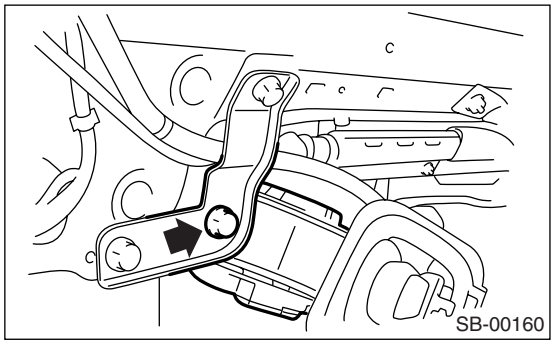
3) Remove the clips, and then lower the roof trim end.



SB-00155

CAUTION:
When removing the roof trim clip, do not pull the roof trim end backward with excessive force, otherwise roof trim may be damaged.

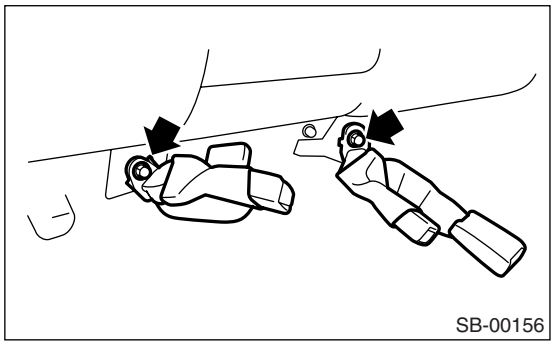
4) Remove the bolt to remove seat belt retractor.



SB-00160

6. CENTER SEAT BELT RH ASSEMBLY AND LH ASSEMBLY (WAGON MODEL)

1) Remove the rear seat cushion. <Ref. to SE-14, SEDAN MODEL, REMOVAL, Rear Seat.>
2) Remove the bolts, and then detach the center seat belt assembly.



SB-00156

NOTE:
For the model with rear seat belt warning light, disconnect the connector of seat belt warning light.

B: INSTALLATION

1. OUTER SEAT BELT RH ASSEMBLY AND LH ASSEMBLY (SEDAN MODEL)

Install in the reverse order of removal.

CAUTION:
• During installation, make sure that the seat belts are not twisted.
• After installation, make sure that the seat belts are smoothly extended and wound.

2. SHOULDER SEAT BELT CTR ASSEMBLY (SEDAN MODEL)

Install in the reverse order of removal.

CAUTION:
• During installation, make sure that the seat belts are not twisted.
• After installation, make sure that the seat belts are smoothly extended and wound.

3. CENTER SEAT BELT LH ASSEMBLY (SEDAN MODEL)

Install in the reverse order of removal.

CAUTION:
During installation, make sure that the seat belts are not twisted.

4. OUTER SEAT BELT RH ASSEMBLY AND LH ASSEMBLY (WAGON MODEL)

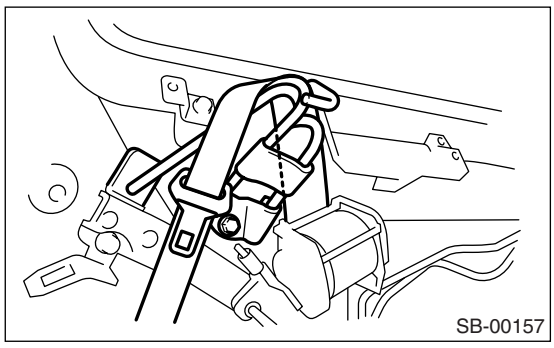
Install in the reverse order of removal.

CAUTION:
• During installation, make sure that the seat belts are not twisted.
• After installation, make sure that the seat belts are smoothly extended and wound.

5. SHOULDER SEAT BELT CTR ASSEMBLY (WAGON MODEL)

Install in the reverse order of removal.

CAUTION:
• After seat belt guide installation, make sure that the seat belts are wound.



SB-00157

• During installation, make sure that the seat belts are not twisted.
• After installation, make sure that the seat belts are smoothly extended and wound.

6. CENTER SEAT BELT RH ASSEMBLY AND LH ASSEMBLY (WAGON MODEL)

Install in the reverse order of removal.

CAUTION:
During installation, make sure that the seat belts are not twisted.

C: INSPECTION

1. OUTER SEAT BELT RH ASSEMBLY AND LH ASSEMBLY (SEDAN MODEL)

Check for the following, and replace with new parts if necessary.
• Seat belt is slackened, bent or wore. Seat belt is abnormally wound or extended.

2. SHOULDER SEAT BELT CTR ASSEMBLY (SEDAN MODEL)

Check for the following, and replace with new parts if necessary.
• Seat belt is slackened, bent or wore. Seat belt is abnormally wound or extended.

3. CENTER SEAT BELT LH ASSEMBLY (SEDAN MODEL)

Check for the following, and replace with new parts if necessary.
• Inner belt is deformed or damaged.
• Seat belt buckle cannot be engaged properly.

4. OUTER SEAT BELT RH ASSEMBLY AND LH ASSEMBLY (WAGON MODEL)

Check for the following, and replace with new parts if necessary.
• Seat belt is slackened, bent or wore. Seat belt is abnormally wound or extended.

5. SHOULDER SEAT BELT CTR ASSEMBLY (WAGON MODEL)

Check for the following, and replace with new parts if necessary.
• Seat belt is slackened, bent or wore. Seat belt is abnormally wound or extended.

6. CENTER SEAT BELT RH ASSEMBLY AND LH ASSEMBLY (WAGON MODEL)

Check for the following, and replace with new parts if necessary.
• Inner belt is deformed or damaged.
• Seat belt buckle cannot be engaged properly.

7. Disposal of Pretensioner

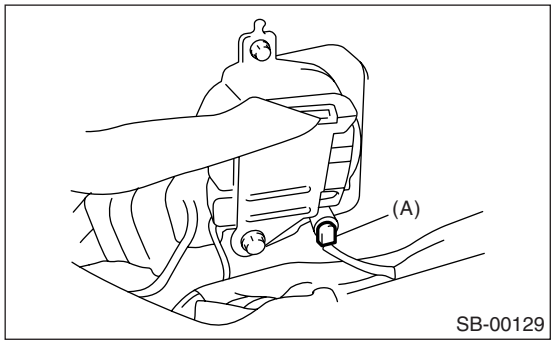
A: CAUTION

• Discard deployed pretensioners because it may cause serious personal injury when accidentally deployed.
• Deployment of the pretensioners should be done on a flat place free from any possible danger. Avoid deploying outdoors during rainy or windy weather.
• Wear protective gloves, safety goggles and earplugs during this operation. Wash your hands afterwards.
• Do not drop or damage the pretensioner.
• Because deploying of pretensioners cause a high-explosive noise, be sure to warn people in the area, and do not allow anyone within a 5 m (16 ft) radius of the disposal site.
• Some smoke will be emitted after deployment of the pretensioner. Therefore, it must be deployed in a well-ventilated place with no fire alarms nearby.
• After deployment, the pretensioner is especially hot, leave it unattended for 40 minutes or longer, and then discard it.
• Do not let water get on the deployed pretensioner.
• Wrap the deployed pretensioner in an airtight vinyl bag, and then discard it.
• If circumstances do not permit the pretensioner deployment, contact the SUBARU dealer.

B: PROCEDURE

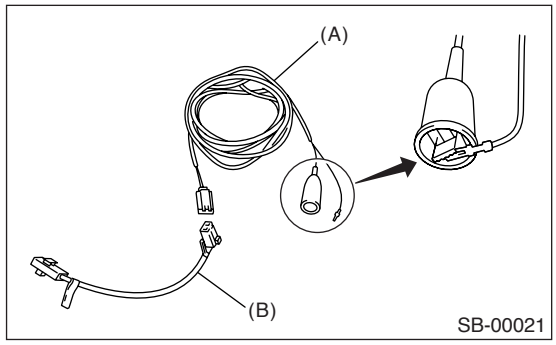
1. DEPLOYING OF PRETENSIONER WHILE INSTALLED IN VEHICLE

1) Fold the backrest all the way forward, and then move the front seat all the way forward.
2) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait more than 20 seconds.
3) Remove the center pillar lower trim. <Ref. to EI-60, REMOVAL, Lower Inner Trim.>
4) Disconnect the pretensioner connector (A).



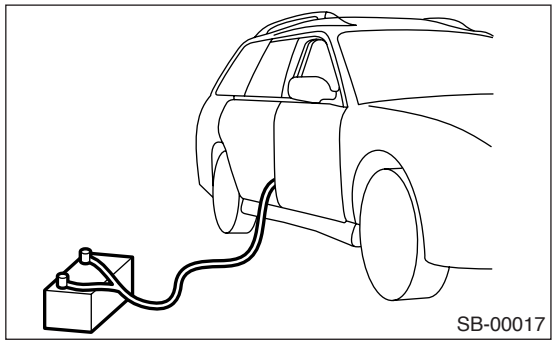
5) Short the terminal to alligator clip of deployment tool (A).
6) Connect the deployment tool and deployment adapter D (B).

CAUTION:
The terminals of deployment tool should be kept shorted until just before deployment of the pretensioner.

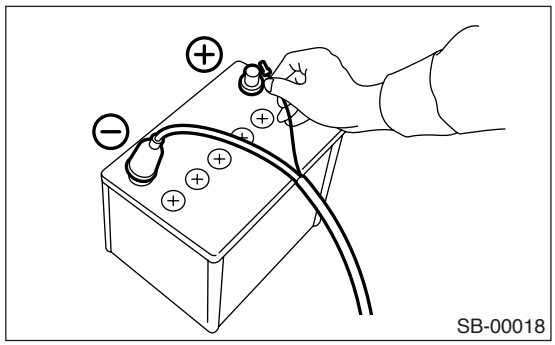


(A) Deployment tool:
(Tool number 98299PA030)
(B) Deployment adapter D:
(Tool number 98299SA010)

7) Connect the deployment adapter D connector and pretensioner connector.
8) Extend the wiring of deployment tool to the limit, and make sure that the vehicle is empty. Close all windows, sunroof and rear gate completely.

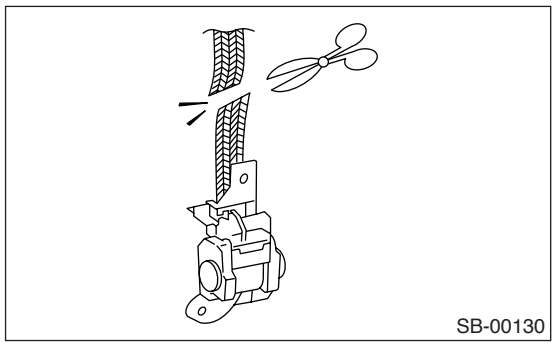


9) Move the battery at least 5 m (16 ft) from vehicle, and secure to the nearby area. Connect the deployment tool alligator clip to the battery negative (–) terminal.
10) Connect the other cable of deployment tool to the battery positive (+) terminal, and deploy the pretensioner.



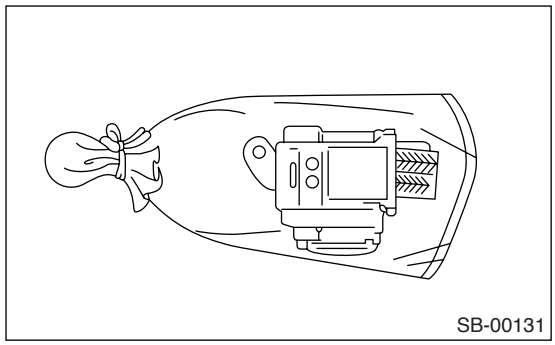
CAUTION:
• After deployment, the pretensioner is especially hot, leave it unattended for 40 minutes or longer, and then discard it.
• Do not let water get on the deployed pretensioner.

11) Remove the front outer belt. <Ref. to SB-12, REMOVAL, Front Seat Belt.>
12) Cut off the seat belt as close to retractor as possible.



SB-00130

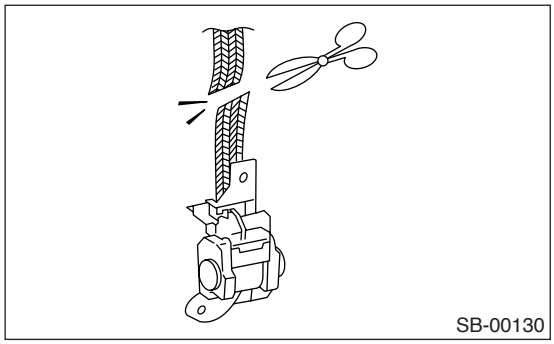
13) Wrap the deployed pretensioner in airtight vinyl bag, and discard it.



SB-00131

2. DEPLOYING OF PRETENSIONER AFTER REMOVAL FROM VEHICLE

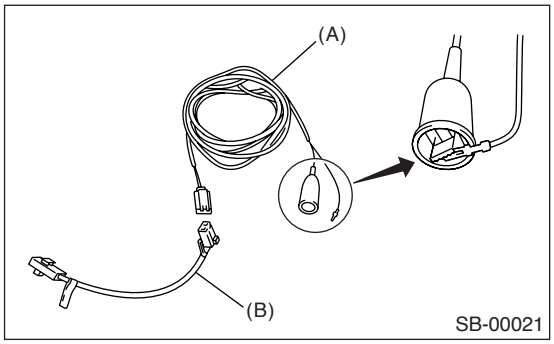
1) Fold the backrest all the way forward, and then move the front seat all the way forward.
2) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait more than 20 seconds.
3) Remove the front outer belt. <Ref. to SB-12, REMOVAL, Front Seat Belt.>
4) Cut off the seat belt as close to retractor as possible.



SB-00130

5) Short the terminal to alligator clip of deployment tool.
6) Connect the deployment tool (A) and deployment adapter D (B).

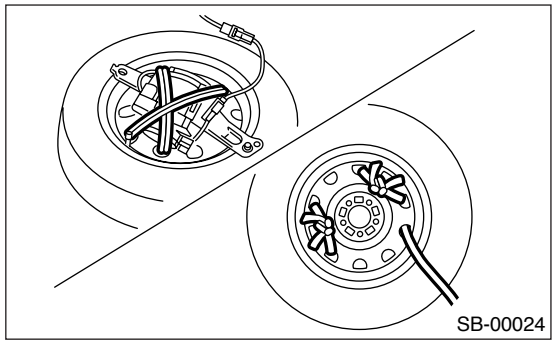
CAUTION:
The terminals of deployment tool should be kept shorted until just before deployment of the pretensioner.



SB-00021

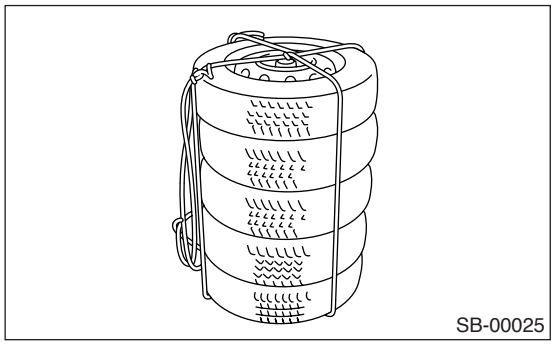
(A) Deployment tool:
(Tool number 98299PA030)
(B) Deployment adapter D:
(Tool number 98299SA010)

7) Connect the deployment adapter D connector and pretensioner connector.
8) Install the pretensioner on a wheel with tire. Then, bundle three automotive wire harness [each with a sectional area of 1.25 mm^2 (0.00194 sq in) or more], and bind them twofold around the pretensioner bracket and wheel.

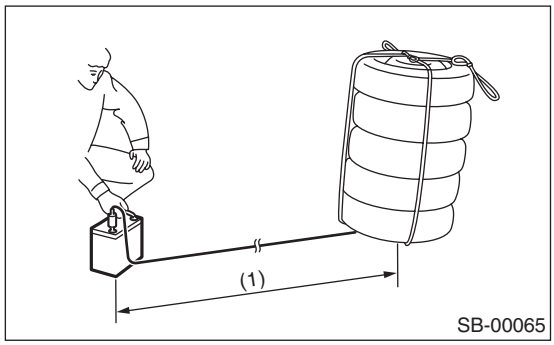


SB-00024

9) Put three tires without wheels on the tire installed with pretensioner. Put on an additional tire with a wheel on top, and then fasten them tight with a rope.

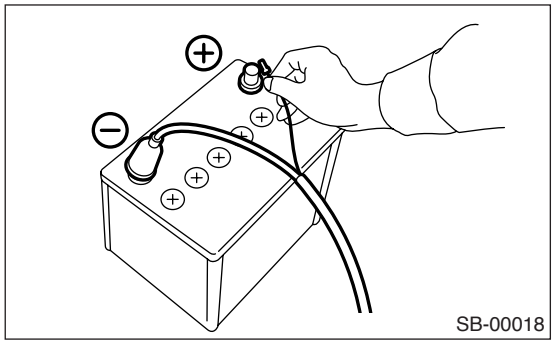


10) Move the battery at least 5 m (16 ft) from tires, and secure the nearby area. Connect the deployment tool alligator clip to the battery negative (–) terminal.



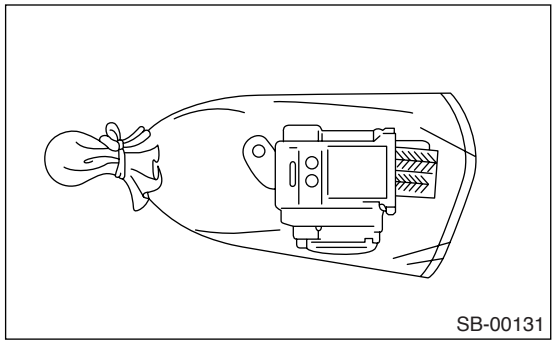
(1) 5 m (16 ft) or more

11) Connect the other cable of deployment tool to the battery positive (+) terminal, and deploy the pretensioner.



CAUTION:
• After deployment, the pretensioner is especially hot, leave it unattended for 40 minutes or longer, and then discard it.
• Do not let water get on the deployed pretensioner.

12) Wrap the deployed pretensioner in airtight vinyl bag, and discard it.



Disposal of Pretensioner

BODY SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

1. General Description

A: SPECIFICATION

Headlight	Halogen type low beam		12 V — 55 W
	Halogen type high beam		12 V — 60 W
Front turn signal light			12 V — 21 W
Clearance/parking light			12 V — 5 W
Front fog light			12 V — 55 W
Side turn signal light			12 V — 2.7 W (LED)
Rear combination light	Sedan	Tail/stop light (Model with rear fog light)	12 V — 5/21 W
		Tail light (Model without rear fog light)	12 V — 5/21 W
		Stop light (Model without rear fog light)	12 V — 21 W
	Wagon	Tail/stop light	12 V — 5/21 W
	Turn signal light		12 V — 21 W
Back-up light	Sedan		12 V — 16 W
	Wagon		12 V — 21 W
License plate light			12 V — 5 W
Rear fog light	Sedan		12 V — 21 W
	Wagon		12 V — 2 W (LED)
High-mounted stop light	Sedan		12 V — 21 W
	Wagon		12 V — 1.3 W (LED)
Interior light			12 V — 8 W
Spot map light			12 V — 8 W
Luggage room light			12 V — 13 W
Trunk room light			12 V — 5 W
Glove box light			12 V — 1.4 W
Door step light			12 V — 3.5 W

B: CAUTION

• Before removing or installing parts, always disconnect the battery ground cable from battery. When replacing the audio, control module and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable. Otherwise, the memory will be erased.
• Reassemble the parts in the reverse order of disassembly procedure unless otherwise indicated.
• Adjust parts to the given specifications.
• Connect the connectors securely during reassembly.
• After reassembly, make sure functional parts operate smoothly.

WARNING:
• The air bag system wiring harness is routed near electrical parts and switches. All air bag system wiring harnesses and connectors are yellow. Do not use the electrical test equipment on these circuits.
• Be careful not to damage the air bag system wiring harness when servicing electrical parts and switches.

C: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.

2. Headlight and Tail Light System

A: WIRING DIAGRAM

1. HALOGEN TYPE HEADLIGHT

<Ref. to WI-269, WIRING DIAGRAM, Headlight System.>

2. CLEARANCE LIGHT AND ILLUMINATION LIGHT

<Ref. to WI-259, WIRING DIAGRAM, Clearance Light and Illumination Light System.>

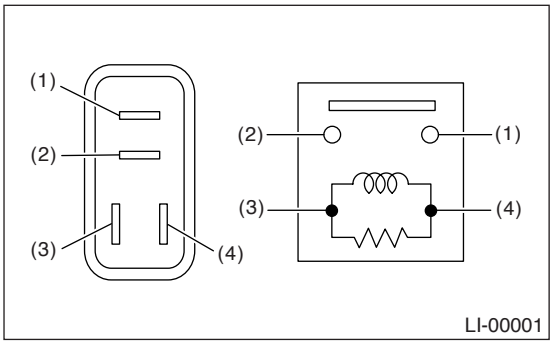
B: INSPECTION

1. HEADLIGHT SWITCH

<Ref. to LI-10, INSPECTION, Combination Switch (Light).>

2. HEADLIGHT RELAY

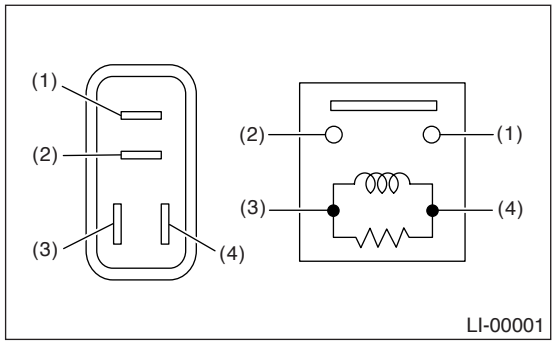
Measure the resistance between headlight relay terminals when connecting terminal No. 4 to battery positive terminal and terminal No. 3 to battery ground terminal.



Current	Terminal No.	Standard
Flow	1 and 2	Less than 1 Ω
No flow		More than 1 MΩ

3. TAIL AND ILLUMINATION RELAY

Measure the resistance between tail and illumination relay terminals when connecting terminal No. 4 to battery positive terminal and terminal No. 3 to battery ground terminal.



Current	Terminal No.	Standard
Flow	1 and 2	Less than 1 Ω
No flow		More than 1 MΩ

3. Front Fog Light System

A: WIRING DIAGRAM

1. FRONT FOG LIGHT

<Ref. to WI-267, WIRING DIAGRAM, Front Fog Light System.>

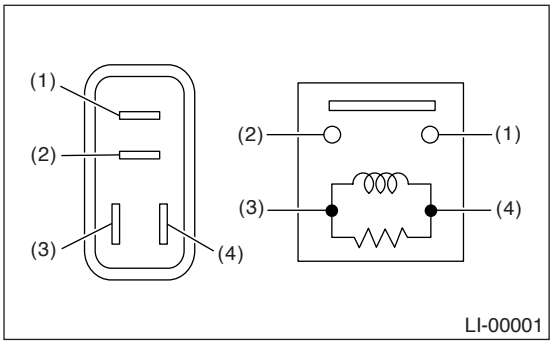
B: INSPECTION

1. FRONT FOG LIGHT SWITCH

Measure the resistance between front fog light switch terminals.
<Ref. to LI-10, INSPECTION, Combination Switch (Light).>

2. FRONT FOG LIGHT RELAY

Measure the resistance between front fog light relay terminals when connecting terminal No. 4 to battery positive terminal and terminal No. 3 to battery ground terminal.



Current	Terminal No.	Standard
Flow	1 and 2	Less than 1 Ω
No flow		More than 1 MΩ

4. Rear Fog Light System

A: WIRING DIAGRAM

1. REAR FOG LIGHT

<Ref. to WI-279, WIRING DIAGRAM, Rear Fog Light System.>

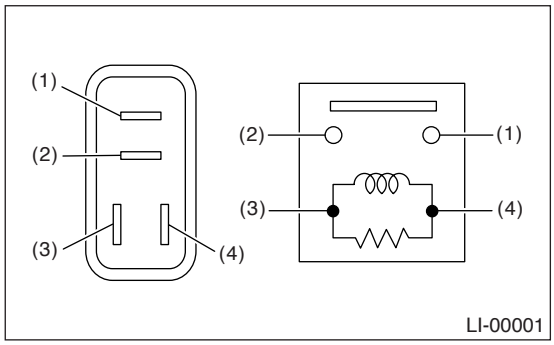
B: INSPECTION

1. REAR FOG LIGHT SWITCH

Measure the rear fog light switch resistance between terminals. <Ref. to LI-10, INSPECTION, Combination Switch (Light).>

2. REAR FOG LIGHT RELAY

Measure the resistance between rear fog light relay terminals while connecting terminal No. 4 to battery positive terminal and No. 3 to battery ground terminal.



Current	Terminal No.	Standard
Flow	1 and 2	Less than 1 Ω
No flow		More than 1 MΩ

5. Turn Signal Light and Hazard Light System

A: WIRING DIAGRAM

1. TURN SIGNAL LIGHT AND HAZARD LIGHT SYSTEM

<Ref. to WI-282, WIRING DIAGRAM, Turn Signal Light and Hazard Light System.>

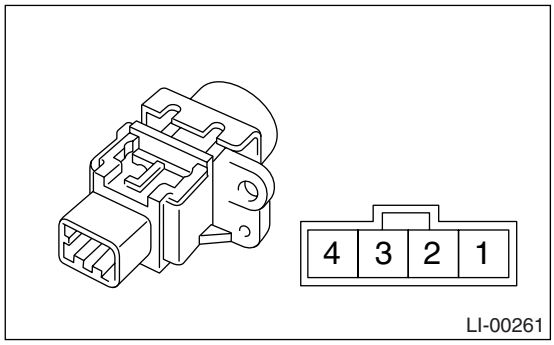
B: INSPECTION

1. TURN SIGNAL SWITCH

<Ref. to LI-10, INSPECTION, Combination Switch (Light).>

2. HAZARD SWITCH

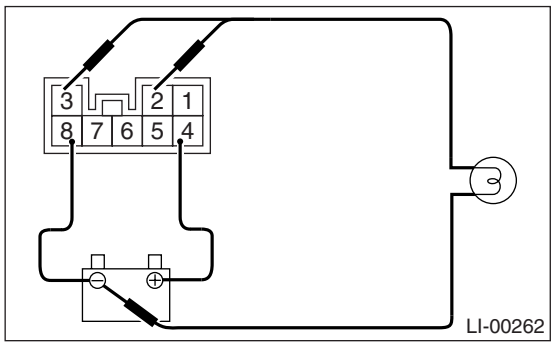
Measure the resistance between hazard switch terminals.



Switch position	Terminal No.	Standard
OFF	2 and 3	More than 1 MΩ
ON		Less than 1 Ω

3. TURN SIGNAL LIGHT AND HAZARD LIGHT MODULE

Connect the battery and turn signal light bulb to the module. The module is properly functioning if it blinks when power is supplied to the circuit.



6. Back-up Light System

A: WIRING DIAGRAM

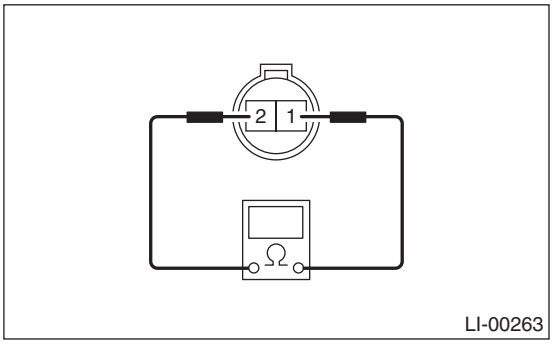
1. BACK-UP LIGHT

<Ref. to WI-257, WIRING DIAGRAM, Back-up Light System.>

B: INSPECTION

1. BACK-UP LIGHT SWITCH (MT MODEL)

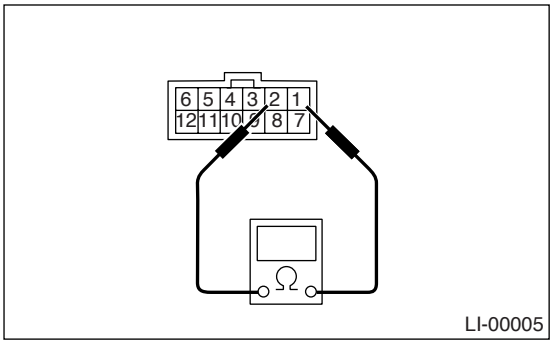
Measure the resistance between back-up light switch terminals.



Switch position	Terminal No.	Standard
When shift lever is set in reverse position	1 and 2	Less than 1 Ω
Other positions		More than 1 MΩ

2. INHIBITOR SWITCH (4AT MODEL)

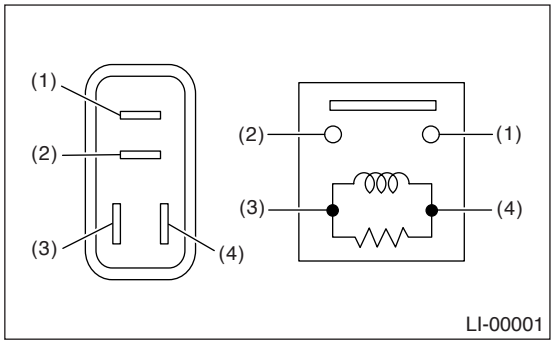
Measure the resistance between inhibitor switch terminals.



Switch position	Terminal No.	Standard
When the selector lever is in "R" range	1 and 2	Less than 1 Ω
Other positions		More than 1 MΩ

3. BACK-UP LIGHT RELAY (5AT MODEL)

Measure the resistance between back-up light relay terminals when connecting terminal No. 4 to battery positive terminal and terminal No. 3 to battery ground terminal.



Current	Terminal No.	Standard
Flow	1 and 2	Less than 1 Ω
No flow		More than 1 MΩ

NOTE:
Check other than back-up light relay. <Ref. to 4AT-52, INSPECTION, Inhibitor Switch.>

7. Stop Light System

A: WIRING DIAGRAM

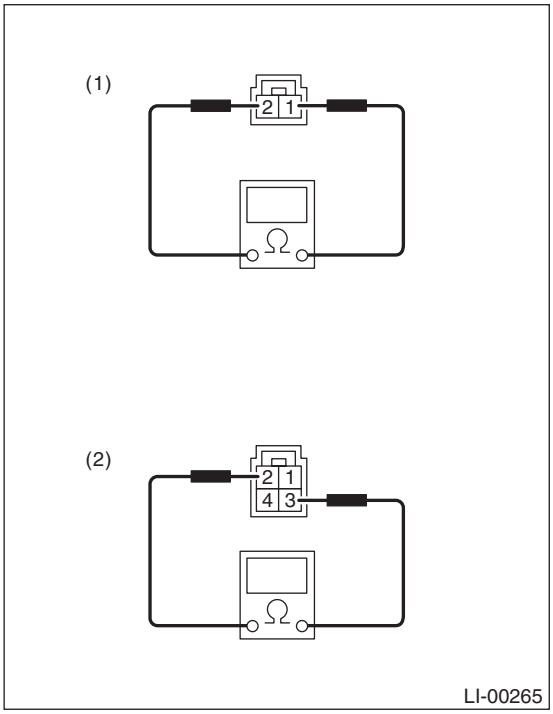
1. STOP LIGHT

<Ref. to WI-281, WIRING DIAGRAM, Stop Light System.>

B: INSPECTION

1. STOP LIGHT SWITCH

Measure the resistance between stop light switch terminals.



(1) Model without cruise control
(2) Model with cruise control

Switch position	Terminal No.	Standard
When brake pedal is depressed	Model without cruise control: 1 and 2	Less than 1 Ω
When brake pedal is released	Model with cruise control: 2 and 3	More than 1 MΩ

8. Room Light System

A: WIRING DIAGRAM

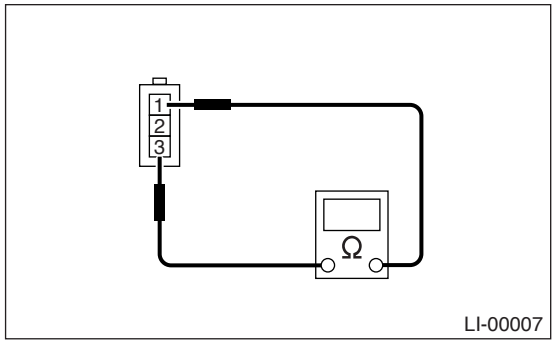
1. INTERIOR LIGHT

<Ref. to WI-271, WIRING DIAGRAM, Interior Light System.>

B: INSPECTION

1. DOOR SWITCH

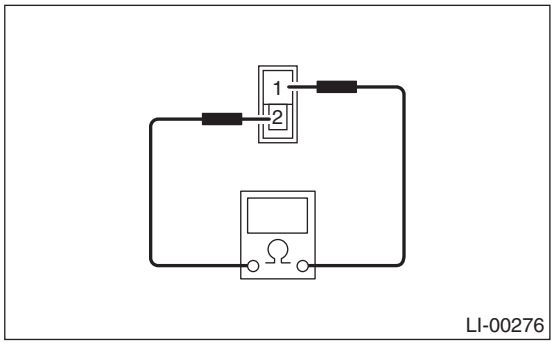
Measure the resistance between door switch terminals.



Switch position	Terminal No.	Standard
When door is opened	1 and 3	Less than 1 Ω
When door is closed		More than 1 MΩ

2. REAR GATE LATCH SWITCH

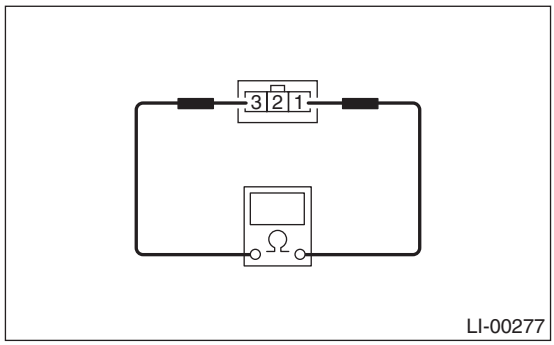
Measure the resistance between rear gate latch switch terminals.



Switch position	Terminal No.	Standard
When rear gate is opened	1 and 2	Less than 1 Ω
When rear gate is closed		More than 1 MΩ

3. TRUNK ROOM LIGHT SWITCH

Measure the resistance between trunk room light switch terminals.

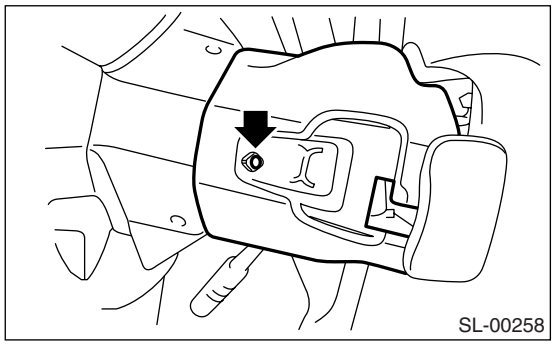


Switch position	Terminal No.	Standard
When trunk lid is opened	1 and 3	Less than 1 Ω
When trunk lid is closed		More than 1 MΩ

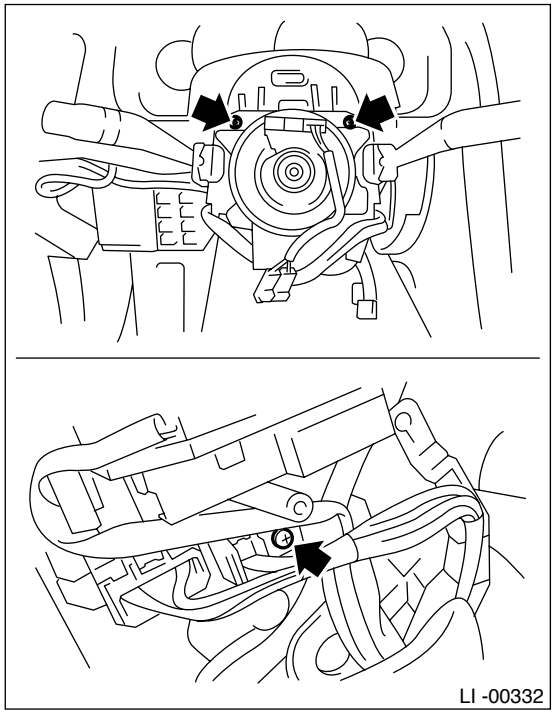
9. Combination Switch (Light)

A: REMOVAL

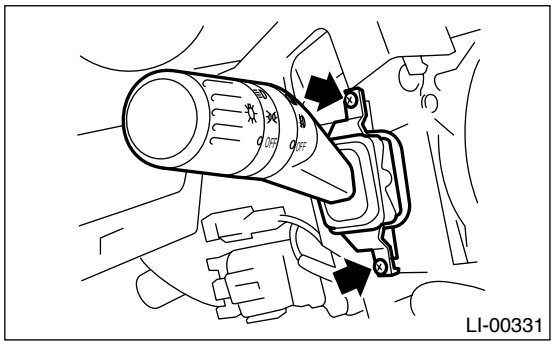
1) Disconnect the ground cable from battery.
2) Remove the instrument panel lower cover. <Ref. to EI-56, REMOVAL, Instrument Panel Assembly.>
3) Remove the screws and remove the steering column cover (upper and lower).



4) Disconnect the connector from combination switch.
5) Remove three screws, and pull the combination base switch assembly toward you. (Only for KA model)



6) Remove the screws which secure switch, then remove the combination switch.

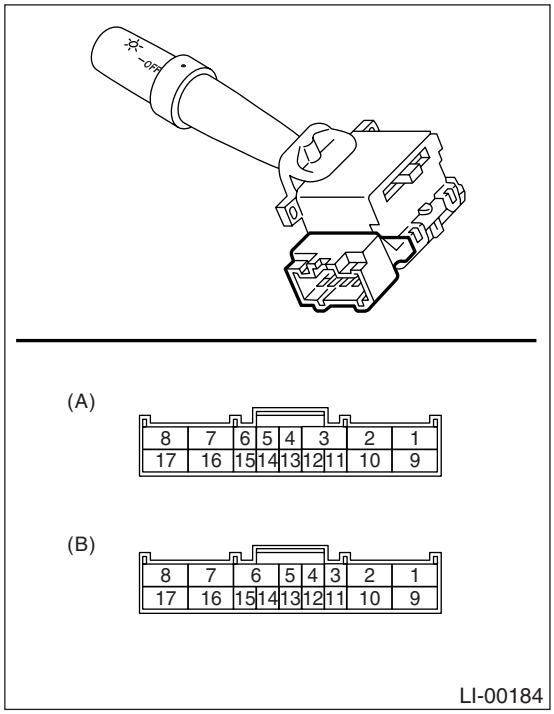


B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Measure the resistance between combination switch terminals.



(A) LHD and EK model
(B) KA model

1. LIGHTING SWITCH

• LHD model

Switch position	Terminal No.	Standard
OFF	—	More than 1 MΩ
Tail	14 and 16	Less than 1 Ω
Head	13, 14 and 16	Less than 1 Ω

• EK model

Switch position	Terminal No.	Standard
OFF	—	More than 1 MΩ
Tail	14 and 16	Less than 1 Ω
Head	13, 14 and 10	Less than 1 Ω

• KA model

Switch position	Terminal No.	Standard
OFF	—	More than 1 MΩ
Tail	15 and 9	Less than 1 Ω
Head	14, 15 and 9	Less than 1 Ω

2. DIMMER & PASSING SWITCH

• LHD model

Switch position	Terminal No.	Standard
Passing	7, 8 and 16	Less than 1 Ω
Low beam	17 and 16	Less than 1 Ω
High beam	7 and 16	Less than 1 Ω

• EK model

Switch position	Terminal No.	Standard
Passing	8, 7 and 10	Less than 1 Ω
Low beam	17 and 10	Less than 1 Ω
High beam	7 and 10	Less than 1 Ω

• KA model

Switch position	Terminal No.	Standard
Passing	1, 2 and 9	Less than 1 Ω
Low beam	10 and 9	Less than 1 Ω
High beam	2 and 9	Less than 1 Ω

3. TURN SIGNAL SWITCH

• LHD model/EK model

Switch position	Terminal No.	Standard
Left	1 and 2	Less than 1 Ω
Neutral	—	More than 1 MΩ
Right	2 and 3	Less than 1 Ω

• KA model

Switch position	Terminal No.	Standard
Left	6 and 7	Less than 1 Ω
Neutral	—	More than 1 MΩ
Right	7 and 8	Less than 1 Ω

4. FRONT FOG LIGHT

• LHD model/EK model

Switch position	Terminal No.	Standard
OFF	—	More than 1 MΩ
ON	10 and 11	Less than 1 Ω

• KA model

Switch position	Terminal No.	Standard
OFF	12 and 16	More than 1 MΩ
ON		Less than 1 Ω

5. REAR FOG LIGHT

• LHD model/EK model

Switch position	Terminal No.	Standard
OFF	—	More than 1 MΩ
ON	12 and 10	Less than 1 Ω

• KA model

Switch position	Terminal No.	Standard
OFF	16 and 13	More than 1 MΩ
ON		Less than 1 Ω

10. Headlight Beam Leveler System

A: WIRING DIAGRAM

1. HEADLIGHT BEAM LEVELER SYSTEM

<Ref. to WI-243, WIRING DIAGRAM, Headlight Beam Leveler System.>

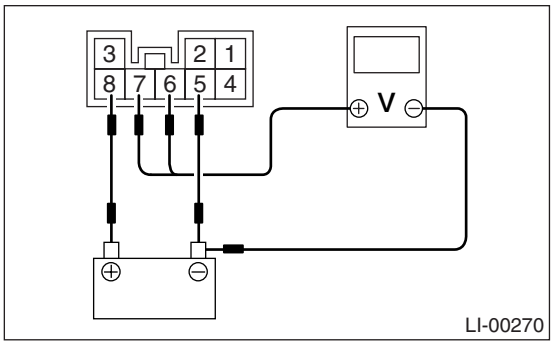
B: INSPECTION

1. HEADLIGHT BEAM LEVELER ACTUATOR

1) Turn on the headlights.
2) Confirm the headlight beam level is lowered by changing the switch position to 0 → 1 → 2 → 3 → 4 → 5.

2. HEADLIGHT BEAM LEVELER SWITCH

Connect the battery and headlight beam leveler switch connector to the circuit tester. Measure the voltage at each switch position.

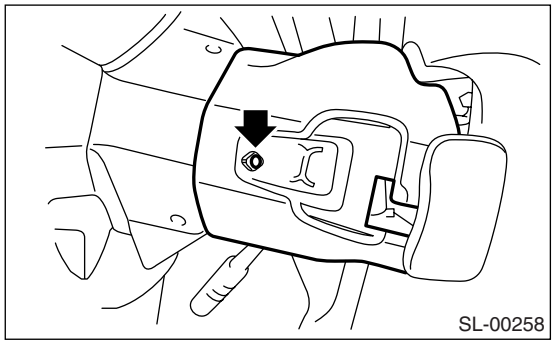


Switch position	Terminal No.	Standard
0	6, 7 (+) and battery (−)	Battery voltage
1		Battery voltage
2		Battery voltage
3		Battery voltage
4		Battery voltage
5		Battery voltage

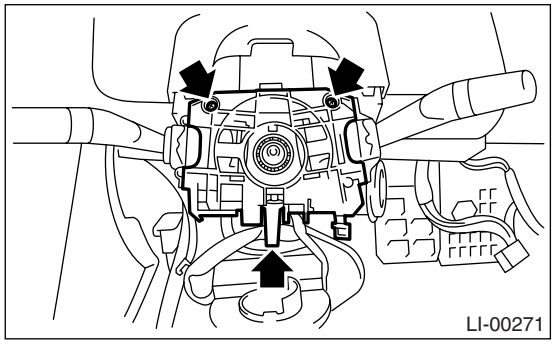
11.Combination Base Switch Assembly

A: REMOVAL

1) Remove the driver's airbag module. <Ref. to AB-14, REMOVAL, Driver's Airbag Module.>
2) Remove the steering wheel. <Ref. to PS-20, REMOVAL, Steering Wheel.>
3) Remove the screws and remove the steering column lower cover.



4) Remove the combination switch. <Ref. to LI-10, REMOVAL, Combination Switch (Light).> <Ref. to WW-8, REMOVAL, Combination Switch (Wiper).>
5) Remove the four screws and remove the roll connector.
6) Remove the three screws.



7) Disconnect the connector and remove the combination base switch assembly.

B: INSTALLATION

1) Install in the reverse order of removal.
2) Before installing steering wheel, be sure the direction of roll connector is adjusted with steering. <Ref. to AB-23, ADJUSTMENT, Roll Connector.>

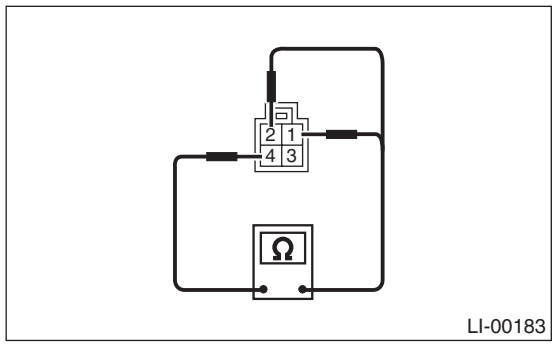
C: INSPECTION

1. COMBINATION BASE SWITCH ASSEMBLY

Inspect the combination base switch assembly and roll connector for crack or deformation. If any damage is found, replace with a new one.

2. PARKING SWITCH

Measure the resistance between parking switch terminals.

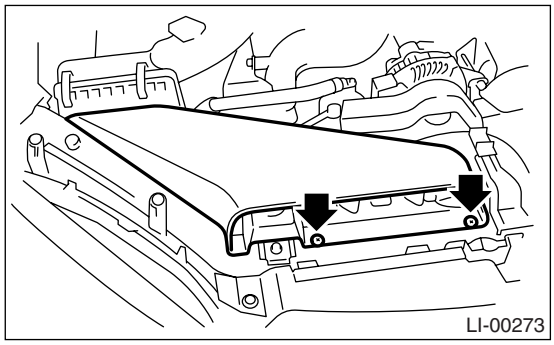


Switch position	Terminal No.	Standard
OFF	2 and 4	Less than 1 Ω
ON	1 and 4	Less than 1 Ω

12.Headlight Assembly

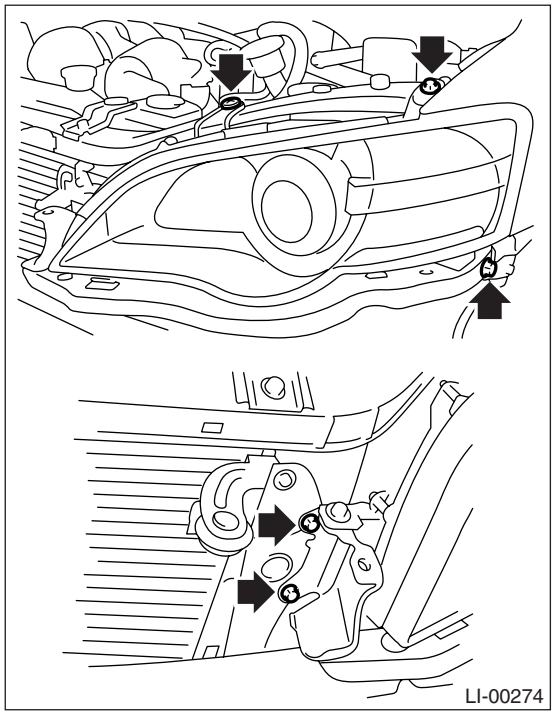
A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the air intake duct. (When removing the headlight RH)



LI-00273

3) Remove the front grille. <Ref. to EI-24, REMOVAL, Front Grille.>
4) Remove the front bumper. <Ref. to EI-30, REMOVAL, Front Bumper.>
5) Disconnect each harness connector.
6) Remove the 4 bolts and disengage clips, and then detach the headlight assembly.



LI-00274

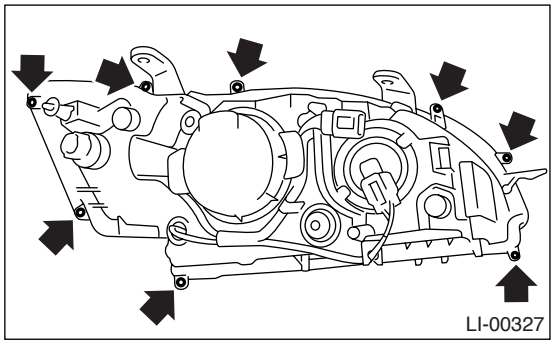
B: INSTALLATION

Install in the reverse order of removal.

C: DISASSEMBLY

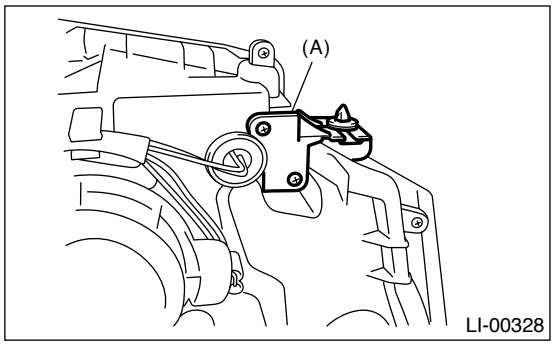
CAUTION:
- **Do not touch the bulb glass portion.**
- **Do not touch inside the lens (extension portion) or reflector portion.**
- **Replace the packing with a new one.**

1) Remove the headlight assembly. **<Ref. to LI-14,** REMOVAL**, Headlight Assembly.>**
2) Remove the eight screws.



LI-00327

3) Remove headlight side bracket.

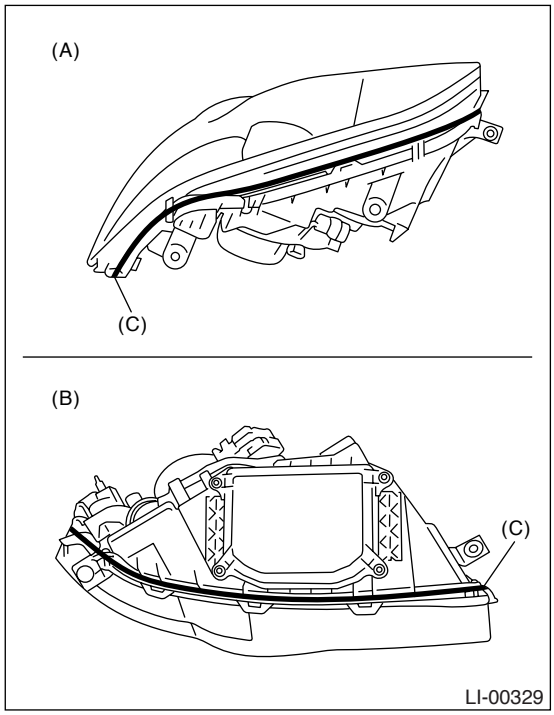


LI-00328

(A) Headlight side bracket

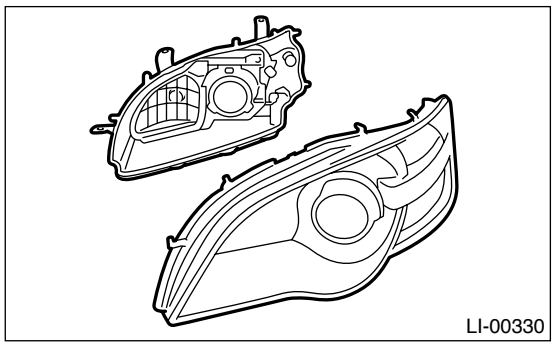
4) Heat the sealing portion between headlight assembly and lens using heating gun.

CAUTION:
Avoid heating one specific point of the seal portion and heating the headlight assembly to 100°C (212°F) or more.



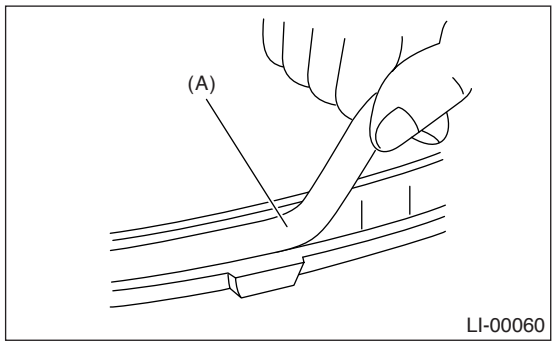
(A) Headlight ASSY upper
(B) Headlight ASSY lower
(C) Heated portion

5) Unhook the hook, and then take the lens off the headlight assembly.



6) Remove the packing (A) from seal groove.

CAUTION:
Completely remove the packing not to leave any chips behind.

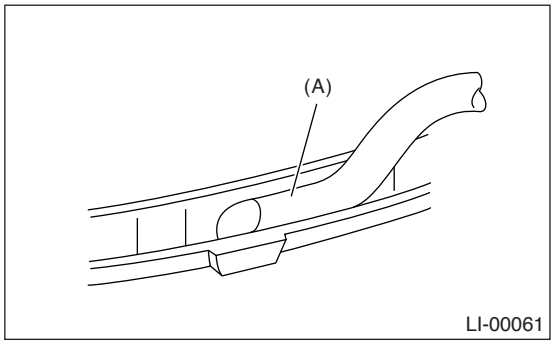


(A) Packing

D: ASSEMBLY

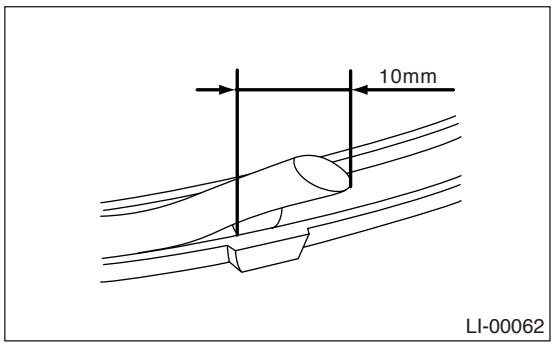
1) Cut the tip of packing (A) at an angle of 45°.
2) With the cut end facing upward, insert packing (A) into the groove around the seal.

CAUTION:
• If the packing protrudes, slowly take it off the groove.
• Do not stretch the packing. If the packing is stretched, seal fails.



(A) Packing

3) After making a round of the seal, cut its tip at an angle of 45°, with its length 10 mm (0.39 in) longer than the circumference of seal so that the tip overlaps the other. Then, press it onto the seal, using a screwdriver.



4) Match the positions of the lens and headlight assembly, and then insert the lens into the headlight assembly.

CAUTION:
Remove the turn signal light bulb and clearance/parking light bulb before removing the lens.

5) Secure the hook, and then install the clip and screw.
6) Put the seal portion of headlight assembly into the water and check that water does not enter inside the headlight.

CAUTION:
Be sure that water does not enter inside the headlight through the bulb socket and ventilation hole.

E: ADJUSTMENT

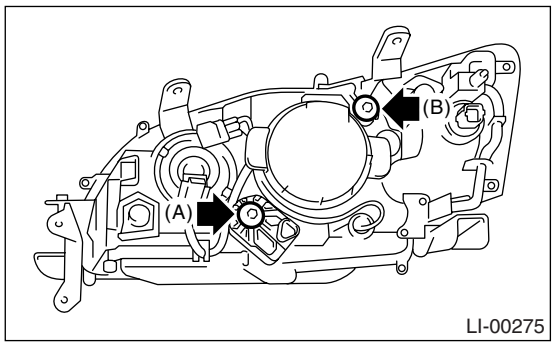
1. HEADLIGHT AIMING

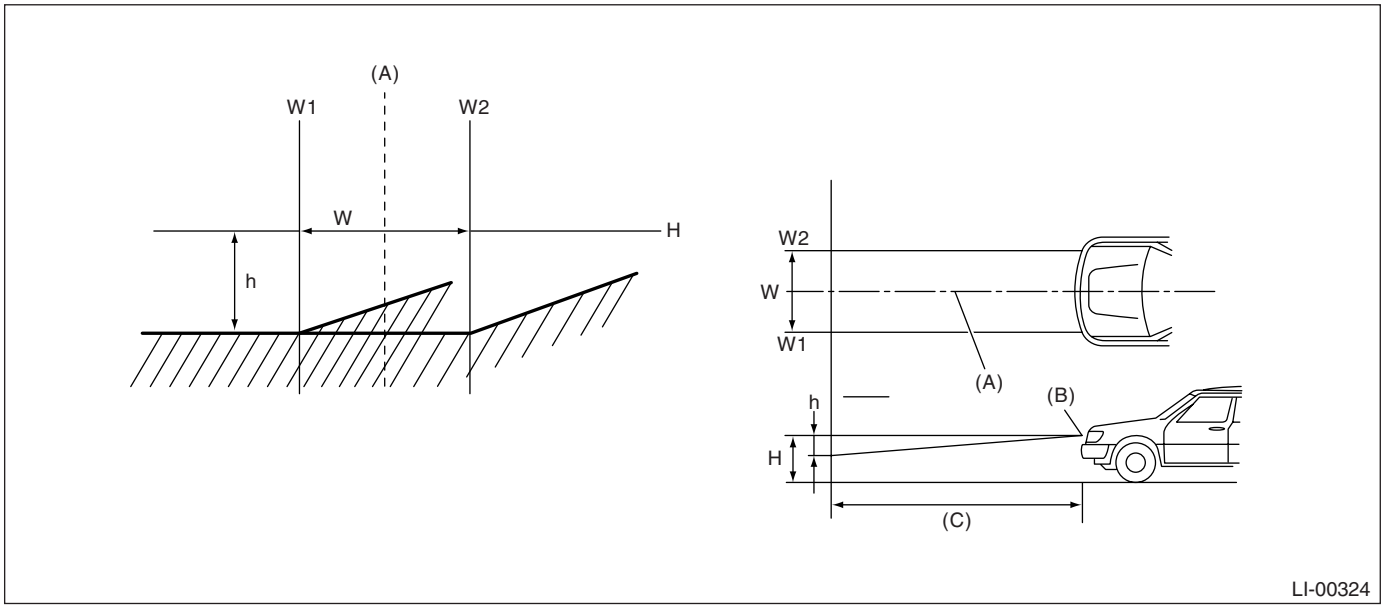
CAUTION:
Turn off the light before adjusting headlight beam level. If the light is necessary to check aiming, do not turn on for more than two minutes.

NOTE:
Before checking the headlight beam level, be sure of the following:
• The area around the headlight has not sustained any accident, damage or other type of deformation.
• Vehicle is parked on a level surface.
• The inflation pressure of tires is correct.
• Vehicle's fuel tank is fully filled.

1) Bounce the vehicle several times to normalize the suspension.
2) Make certain that someone is seated in the driver's seat.
3) Turn the headlights on and then adjust the low beam pattern.

NOTE:
• Position the headlight beam leveler switch to "0".
• Adjust the vertical aim (A) first, then horizontal aim (B).





(A) Vehicle center (B) Bulb center marking (C) 3 m (10 ft)

Illustration above shows the illumination pattern for LHD model. Illumination pattern for RHD model is symmetrically opposite.

W mm (in)	H mm (in)			h mm (in) at 3 m (10 ft)
	Sedan	Wagon		
	640 (25.20)	Except for OUTBACK	OUTBACK	
1,180 (46.46)		635 (25.00)	705 (27.76)	30 (1.18)

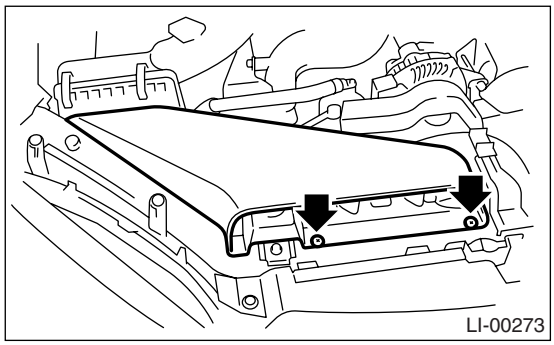
13.Headlight Bulb

A: REMOVAL

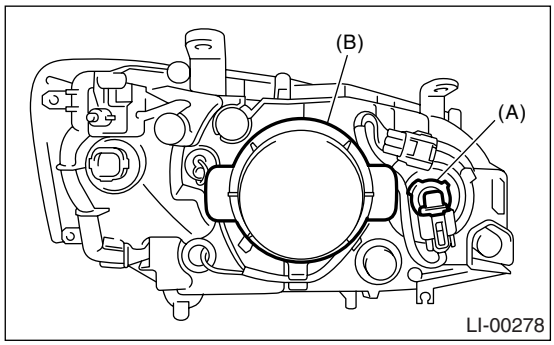
1. HIGH BEAM AND LOW BEAM

CAUTION:
• Because the halogen bulb operates at a high temperature, dirt and oil on the bulb surface reduces the bulb's service life. Hold the flange portion when replacing the bulb. Never touch the glass portion.
• Do not leave the headlight without a bulb for a long time. Dust, moisture, etc. entering the headlight may affect its performance.

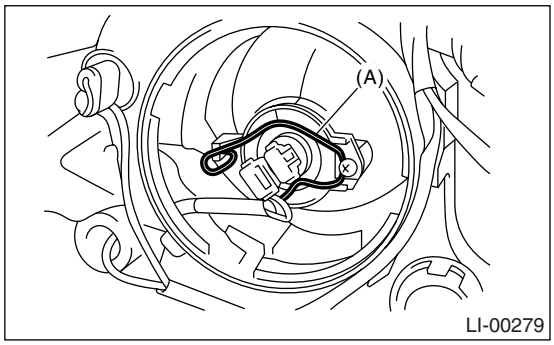
1) Disconnect the ground cable from battery.
2) Remove the air intake duct. (When removing the headlight bulb RH).



3) Remove the battery cover. (When removing the headlight bulb LH).
4) Tilt the washer tank filler neck. (When removing the headlight bulb LH).
5) Disconnect the harness connector.
6) Remove the bulb assembly (A) to remove high beam. To remove the low beam, remove the back cover (B), and then go to Step 7.



7) Remove the light bulb retaining spring (A) to remove bulb.



B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

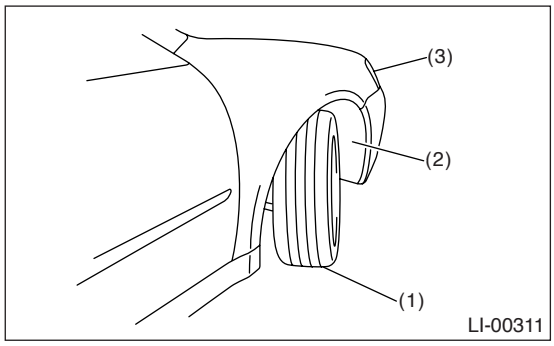
1. HALOGEN TYPE

1) Visually check the bulb for blow out.
2) Check the bulb specification.
<Ref. to LI-2, SPECIFICATION, General Description.>
3) If NG, replace the bulb with a new one.

14.Front Turn Signal Light Bulb

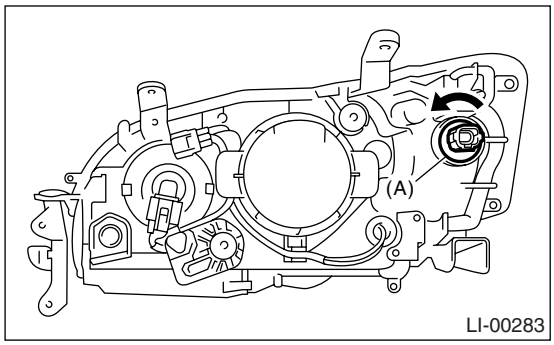
A: REMOVAL

1) When removing the turn signal light bulb, fully turn the steering wheels to opposite direction from desired turn signal light bulb.



(1) Turn the steering wheel fully.
(2) Mud guard
(3) Front turn signal light

2) Turn the mud guard inward.
3) Turn the socket (A) from wheel arch part, and then remove the front turn signal light bulb.



CAUTION:
For 5AT model, remove the turn signal light bulb LH from engine compartment with removing battery, because it can not be removed from wheel arch part.

B: INSTALLATION

Install in the reverse order of removal.

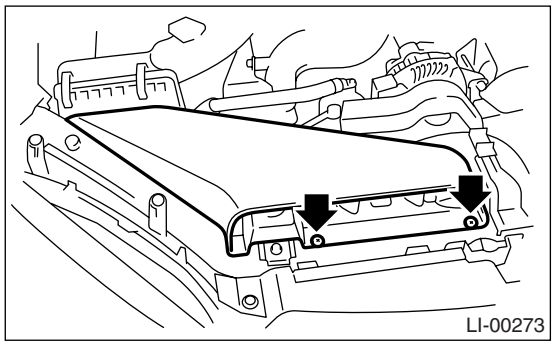
C: INSPECTION

1) Visually check the bulb for blow out.
2) Check the bulb specification.
<Ref. to LI-2, SPECIFICATION, General Description.>
3) If NG, replace the bulb with a new one.

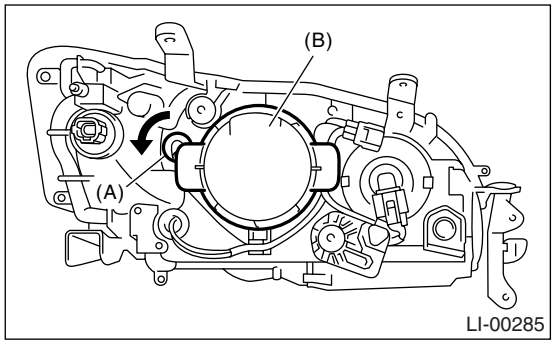
15.Clearance/Parking Light Bulb

A: REMOVAL

1) Remove the air intake duct. (When removing the clearance light/parking light bulb RH).



2) Remove the battery cover. (When removing the clearance light/parking light bulb LH)
3) Tilt the washer tank filler neck. (When removing the clearance/parking light bulb)
4) Remove the headlight low beam back cover (B).
5) Turn the socket (A) and remove the bulb.



B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

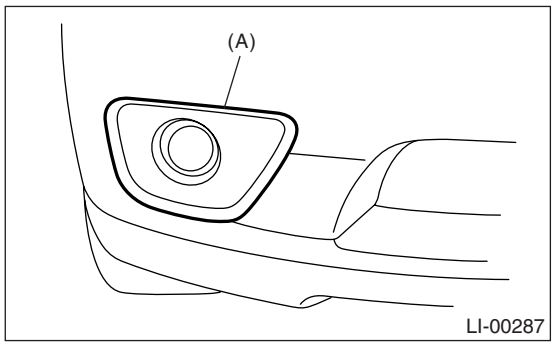
1) Visually check the bulb for blow out.
2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
3) If NG, replace the bulb with a new one.

16.Front Fog Light Assembly

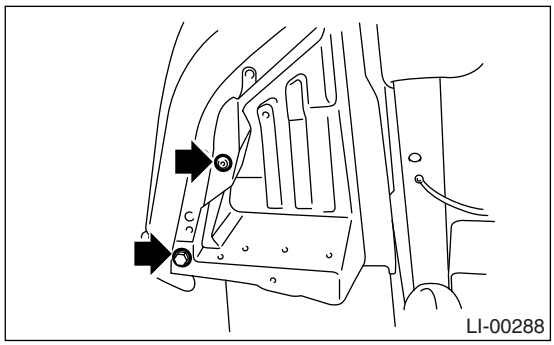
A: REMOVAL

1. EXCEPT FOR OUTBACK MODEL

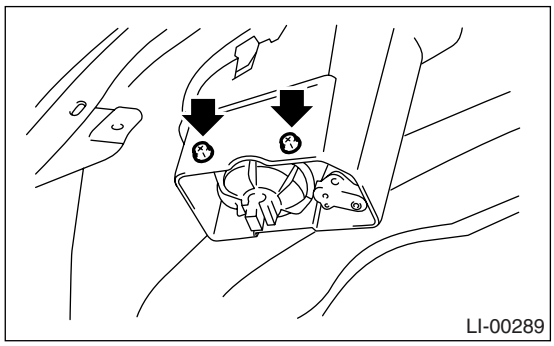
1) Disconnect the ground cable from battery.
2) Remove the front fog light cover (A).



3) Disengage the two clips, and then turn over the lower mud guard.

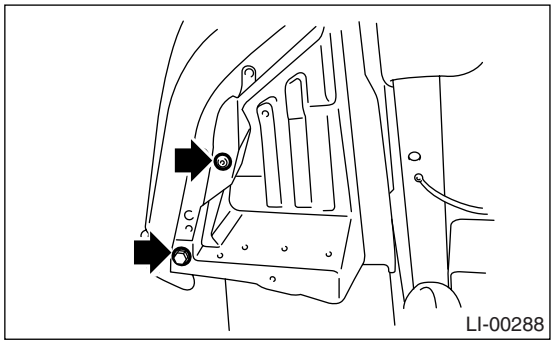


4) Disconnect the harness connector.
5) Remove the mounting bolts, and then detach the fog light assembly by pulling it.

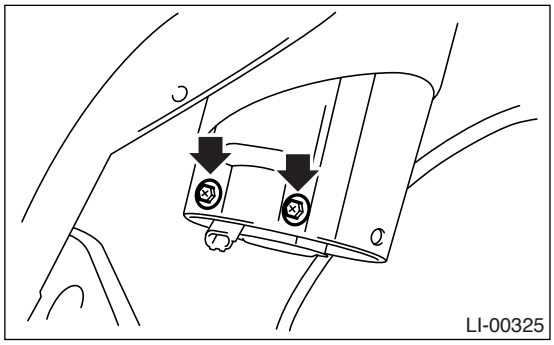


2. OUTBACK MODEL

1) Disconnect the ground cable from battery.
2) Remove the two clips, and then turn over the lower mud guard.



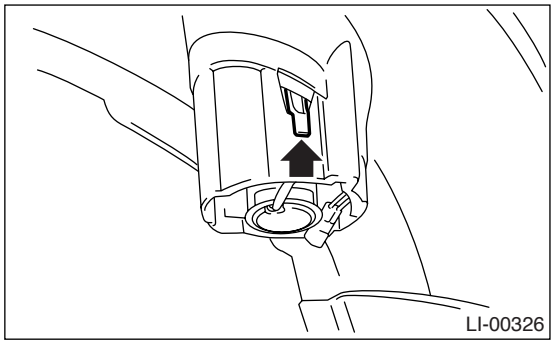
3) Disconnect the harness connector.
4) Remove the mounting bolts, and then detach the fog light assembly by pulling it.



B: INSTALLATION

Install in the reverse order of removal.

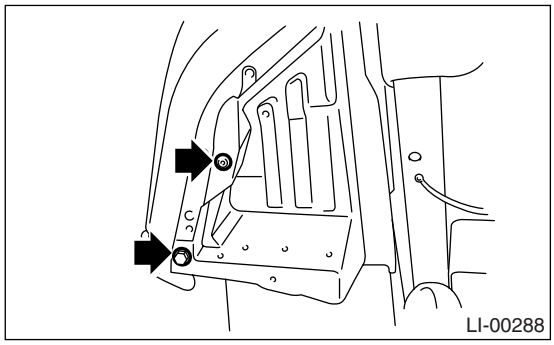
CAUTION:
When installing the fog light assembly, be sure to secure the upper hock.



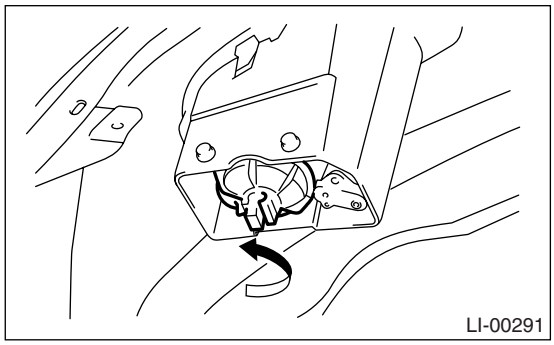
17.Front Fog Light Bulb

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Disengage the two clips, and then turn over the lower mud guard.



3) Disconnect the harness connector.
4) Remove the back cover.



5) Remove the spring retainer then detach the fog light bulb.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

1) Visually check the bulb for blow out.
2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
3) If NG, replace the bulb with a new one.

18.Rear Fog Light

A: REMOVAL

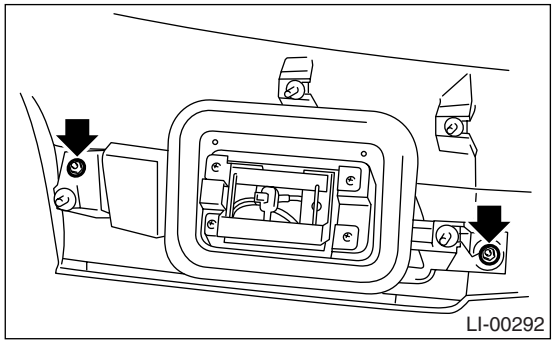
NOTE:
Rear fog light is installed to rear combination light of driver's side for sedan and rear gate garnish of driver's side for wagon.

1. SEDAN MODEL

Remove the rear combination light. <Ref. to LI-25, REMOVAL, Rear Combination Light Assembly.>

2. WAGON MODEL

1) Remove the rear gate trim. <Ref. to EI-69, REMOVAL, Rear Gate Trim.>
2) Disconnect the harness connectors and remove the rear gate garnish. <Ref. to EI-76, REMOVAL, Rear Gate Garnish.>
3) Remove the mounting nuts and detach the rear fog light assembly.



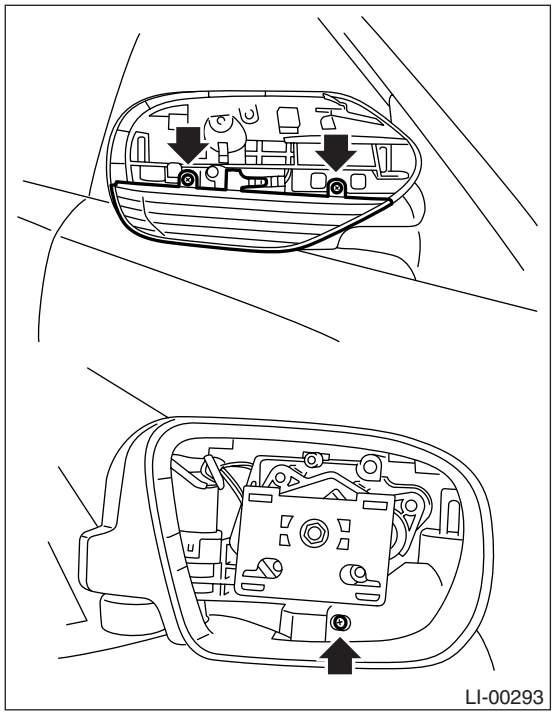
B: INSTALLATION

Install in the reverse order of removal.

19. Side Turn Signal Light Assembly

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the scalp caps. <Ref. to GW-17, REPLACEMENT, Scalp Cap.>
3) Remove the mirror. <Ref. to GW-19, REPLACEMENT, Outer Mirror.>
4) Disconnect the harness connector, remove the 3 mounting screws and then remove the side turn signal light assembly.



B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

1) Install the side turn signal light assembly and check that it blinks normally.
2) If it does not blink normally, replace the side turn signal light assembly with a new one.

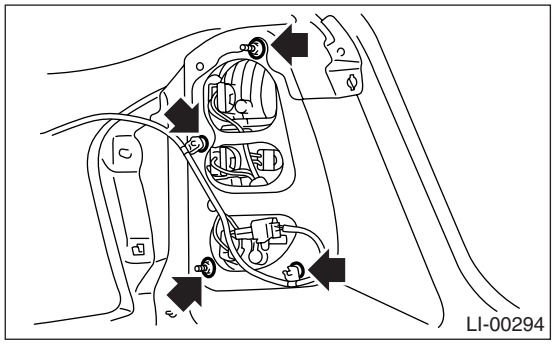
NOTE:
Since LED (Light Emitting Diode) is used for side turn signal light, replace the side turn signal light assembly when the LED is powered off.

20. Rear Combination Light Assembly

A: REMOVAL

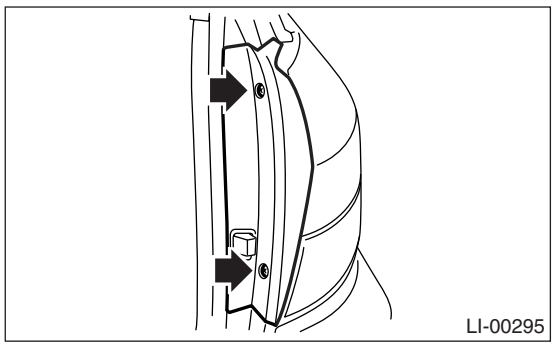
1. SEDAN MODEL

1) Disconnect the ground cable from battery.
2) Remove the trunk room side trim. <Ref. to EI-71, REMOVAL, Trunk Room Trim.>
3) Remove the four nuts, and then detach the rear combination light after disconnecting the connector.

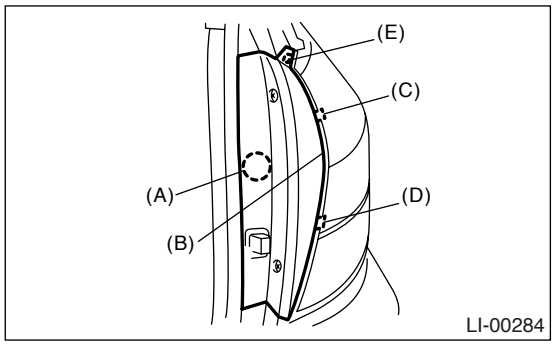


2. WAGON MODEL

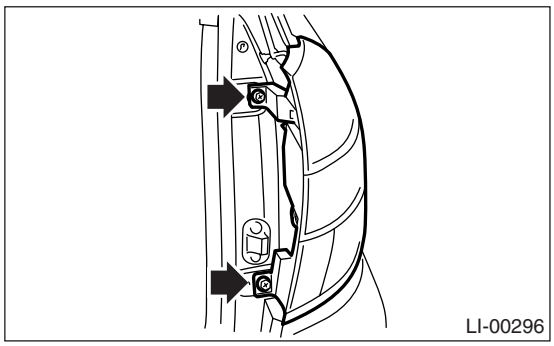
1) Disconnect the ground cable from battery.
2) Remove the clips.



3) While pressing the portion (A), insert your finger or flat-tip screwdriver wrapped with tape into the clearance (B) to remove pawls in the order of (C), (D), (E), and remove the rear combination cover.



4) Remove the two bolts, and then detach the rear combination light by pulling it to the rear side of vehicle.



5) Remove the rear combination light after turning the socket of tail/stop light bulb and rear turn signal light bulb to remove the bulbs.

B: INSTALLATION

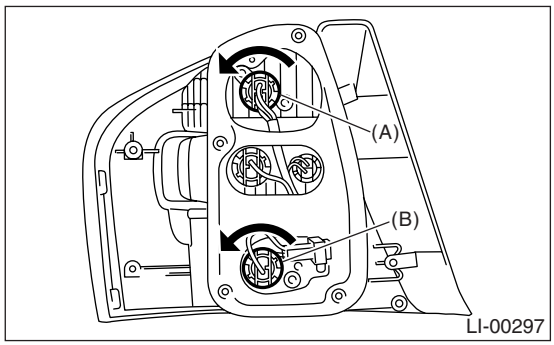
Install in the reverse order of removal.

21.Tail/Stop Light Bulb

A: REMOVAL

1. SEDAN MODEL

1) Remove the trunk side trim cover.
2) Turn the socket and remove the bulb.

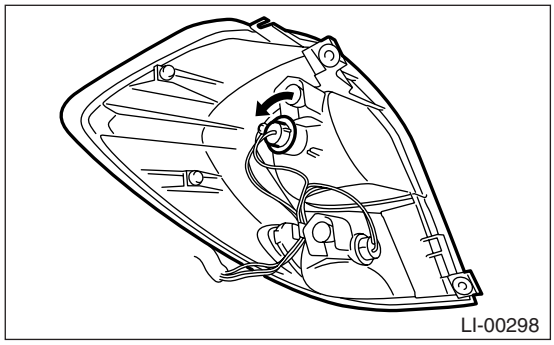


Model without rear fog light
(A) Tail light
(B) Stop light

Model with rear fog light
(A) Tail/stop light
(B) Rear fog light (Driver's side only)

2. WAGON MODEL

1) Remove the rear combination light assembly. <Ref. to LI-25, WAGON MODEL, REMOVAL, Rear Combination Light Assembly.>
2) Turn the socket and remove the bulb.



B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

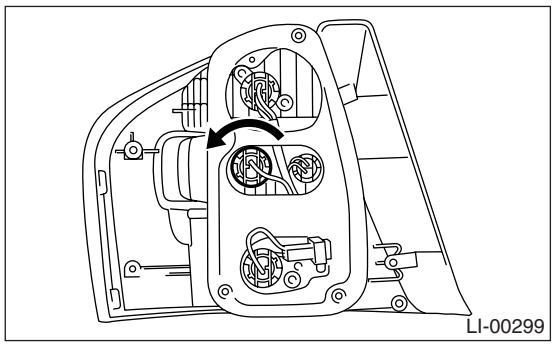
1) Visually check the bulb for blow out.
2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
3) If NG, replace the bulb with a new one.

22.Rear Turn Signal Light Bulb

A: REMOVAL

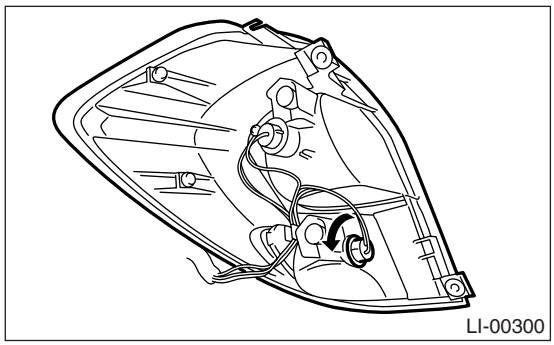
1. SEDAN MODEL

1) Remove the trunk side trim cover.
2) Turn the socket and remove the bulb.



2. WAGON MODEL

1) Remove the rear combination light assembly. <Ref. to LI-25, WAGON MODEL, REMOVAL, Rear Combination Light Assembly.>
2) Turn the socket and remove the bulb.



B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

1) Visually check the bulb for blow out.
2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
3) If NG, replace the bulb with a new one.

23.Back-up Light Assembly

A: REMOVAL

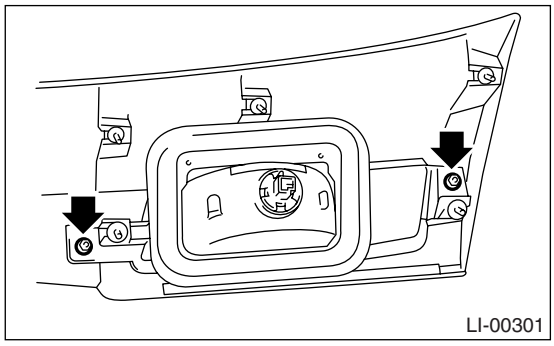
NOTE:
In case of model with rear fog light, back-up light is installed to only passenger's side.

1. SEDAN MODEL

Remove the rear combination light. <Ref. to LI-25, REMOVAL, Rear Combination Light Assembly.>

2. WAGON MODEL

1) Remove the rear gate trim. <Ref. to EI-69, REMOVAL, Rear Gate Trim.>
2) Disconnect the harness connectors and remove the rear gate garnish. <Ref. to EI-76, REMOVAL, Rear Gate Garnish.>
3) Remove the mounting nuts and detach the back-up light assembly.



B: INSTALLATION

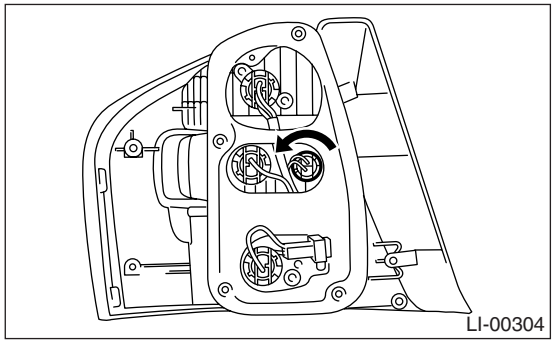
Install in the reverse order of removal.

24.Back-up Light Bulb

A: REMOVAL

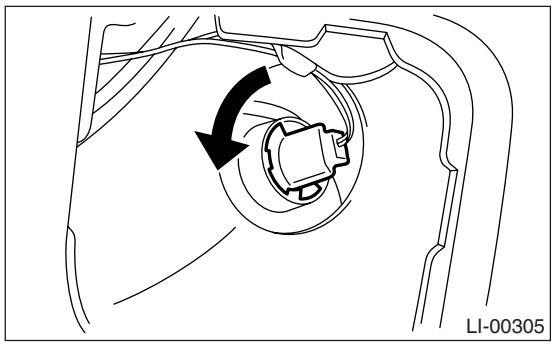
1. SEDAN MODEL

1) Remove the bulb inspection cover of trunk side trim.
2) Turn the socket and remove the bulb.



2. WAGON MODEL

1) Remove the bulb inspection cover of rear gate trim.
2) Turn the socket and remove the bulb.



B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

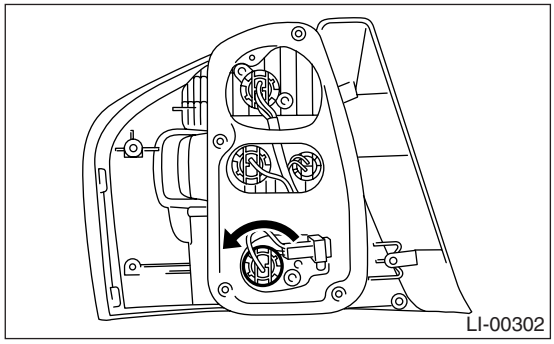
1) Visually check the bulb for blow out.
2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
3) If NG, replace the bulb with a new one.

25.Rear Fog Light Bulb

A: REMOVAL

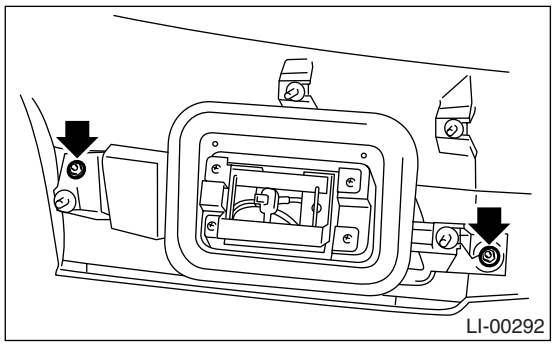
1. SEDAN MODEL

1) Remove the bulb inspection cover of trunk side trim.
2) Turn the socket and remove the bulb.



2. WAGON MODEL

1) Remove the rear fog light assembly. <Ref. to LI-23, REMOVAL, Rear Fog Light.>
2) Remove the mounting screws, and then remove the rear fog light assembly.



B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

1. SEDAN MODEL

1) Visually check the bulb for blow out.
2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
3) If NG, replace the bulb with a new one.

2. WAGON MODEL

1) Install the rear fog light assembly to check that it illuminate normally.
2) If it does not illuminate, replace the rear fog light assembly with a new one.

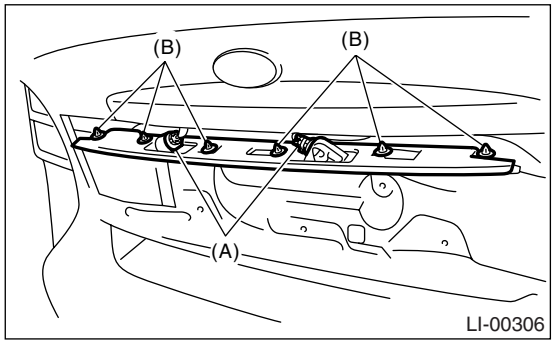
NOTE:
Since LED (Light Emitting Diode) is used for the rear fog light, replace the rear fog light assembly when the LED is powered off.

26.License Plate Light Assembly

A: REMOVAL

1. SEDAN MODEL

1) Remove the trunk lid garnish. <Ref. to EI-75, REMOVAL, Trunk Lid Garnish.>
2) Remove the trunk lid trim. <Ref. to EI-71, TRUNK LID TRIM, REMOVAL, Trunk Room Trim.>
3) Turn and remove the bulb socket (A). Disengage the clip (B) and remove the license plate light assembly.



B: INSTALLATION

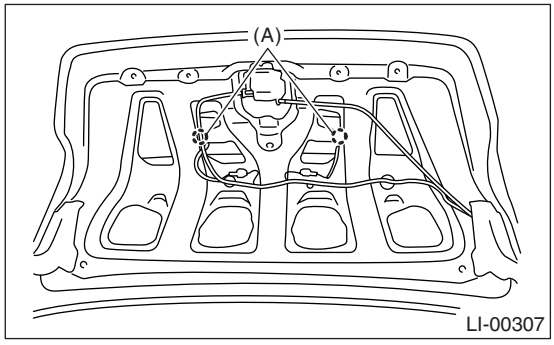
Install in the reverse order of removal.

27.License Plate Light

A: REMOVAL

1. SEDAN MODEL

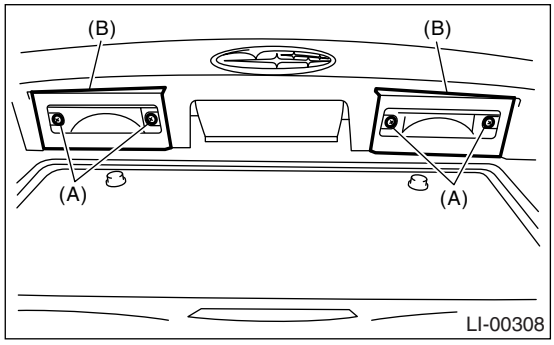
1) Remove the trunk lid trim. <Ref. to EI-71, TRUNK LID TRIM, REMOVAL, Trunk Room Trim.>
2) Turn and remove the bulb socket (A).



3) Remove the bulb.

2. WAGON MODEL

1) Remove the license plate light mounting screw (A) and then remove the lens (B).



2) Remove the bulb.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

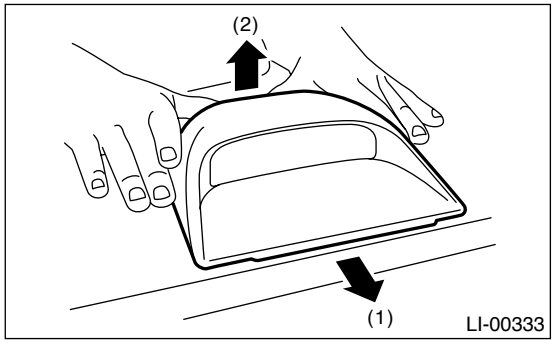
1) Visually check the bulb for blow out.
2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
3) If NG, replace the bulb with a new one.

28.High-mounted Stop Light

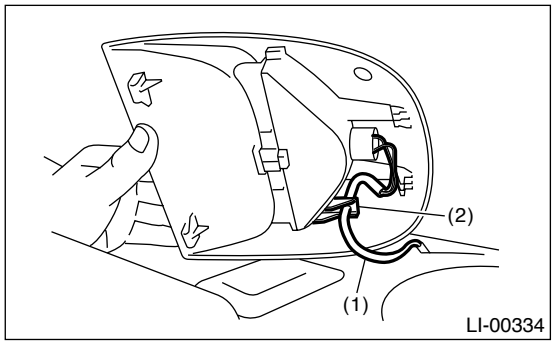
A: REMOVAL

1. SEDAN MODEL

1) Disconnect the ground cable from battery.
2) Push the high-mounted stop light backward of the vehicle (1), raise the rear portion of it (2) and remove the clips to remove it.

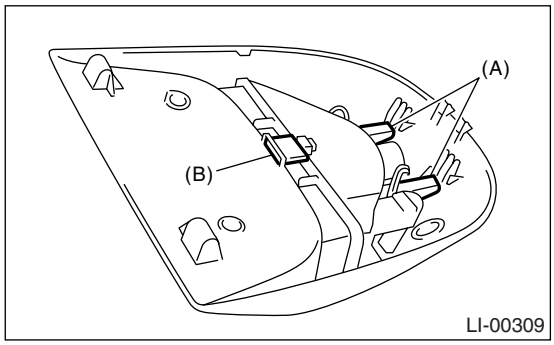


3) Remove the harness from clamp.

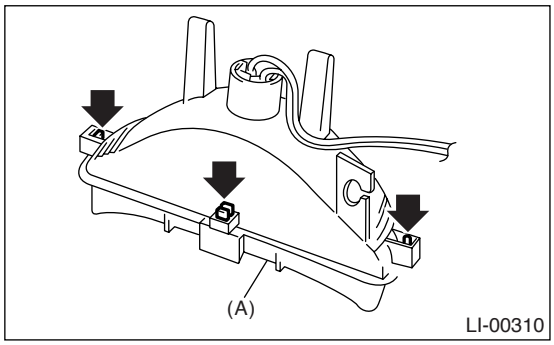


(1) Harness
(2) Clamp

4) Disengage two claws (A), pull out the high-mounted stop light from the cover and remove the claw (B).



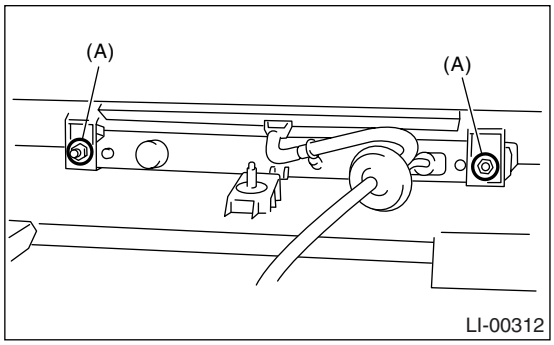
5) Disengage three claws and remove the lens (A).



6) Remove the bulb.

2. WAGON MODEL

1) Disconnect the ground cable from battery.
2) Detach the roof spoiler. <Ref. to EI-40, REMOVAL, Roof Spoiler.>
3) Remove the nuts (A), then detach the high-mounted stop light.



B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

1. SEDAN (STANDARD TYPE)

1) Visually check the bulb for blow out.
2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
3) If NG, replace the bulb with a new one.

2. SEDAN (REAR SPOILER BUILT-IN TYPE) AND WAGON

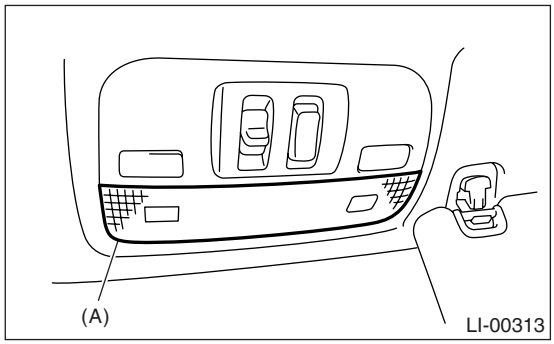
1) Install the high-mounted stop light to test if it illuminates normally.
2) If the high-mounted stop light does not illuminate, replace it with a new one.

NOTE:
Since LED (Light Emitting Diode) is used for the high-mounted stop light of wagon model, replace the high-mounted stop light assembly when the LED is powered off.

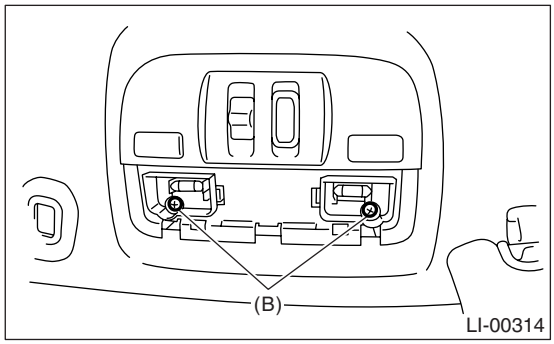
29.Spot Map Light

A: REMOVAL

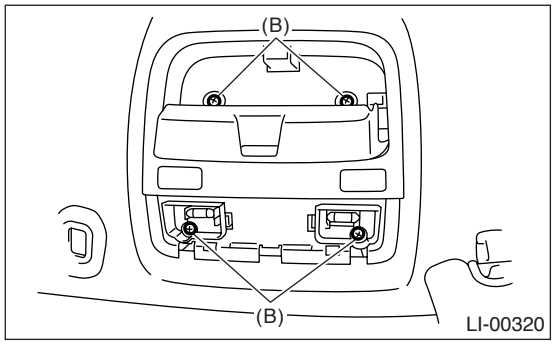
1) Disconnect the ground cable from battery.
2) Remove the lens (A) and spot map light mounting screws (B).



• Model with sunroof



• Model without sunroof



3) Disconnect the harness connectors and remove the spot map light.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

1. SPOT MAP LIGHT BULB

1) Visually check the bulb for blow out.
2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
3) If NG, replace the bulb with a new one.

2. SPOT MAP LIGHT SWITCH

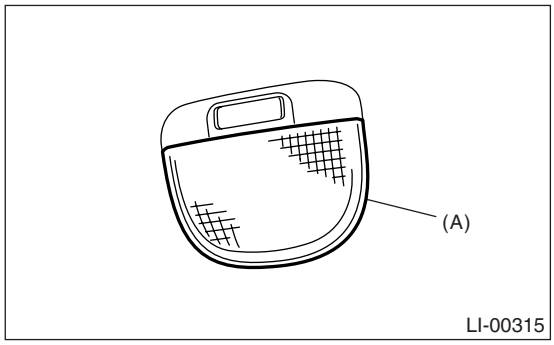
Measure the resistance between spot map light switch terminals.

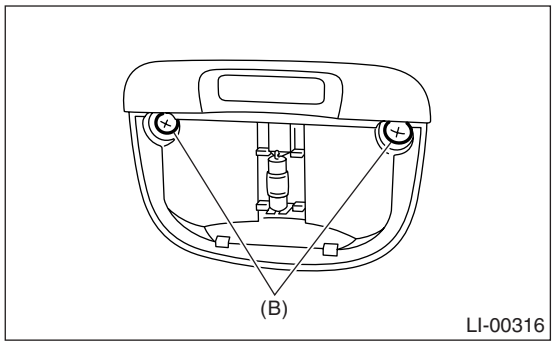
Switch position	Terminal No.	Standard
OFF	—	More than 1 MΩ
ON	1 and 2	18±5.4 Ω

30.Room Light

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the lens (A) and mounting screws (B).





3) Disconnect the harness connector and remove the room light.

B: INSTALLATION

Install in the reverse order of removal.

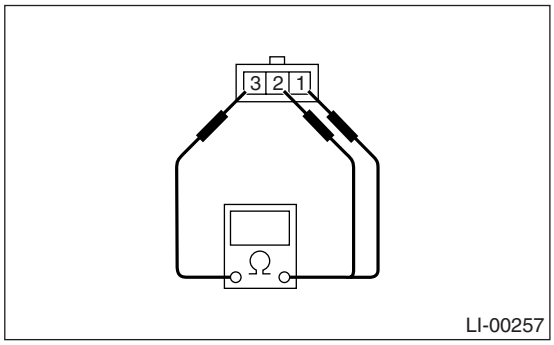
C: INSPECTION

1. ROOM LIGHT BULB

1) Visually check the bulb for blow out.
2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
3) If NG, replace the bulb with a new one.

2. ROOM LIGHT SWITCH

Measure the resistance between room light switch terminals.

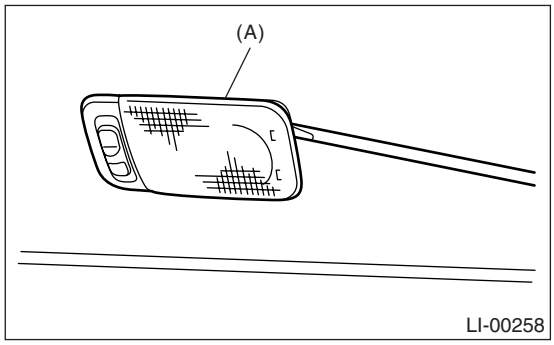


Switch position	Terminal No.	Standard
OFF	—	More than 1 MΩ
ON	1 and 3	1.5±0.5 Ω
DOOR	2 and 3	1.5±0.5 Ω

31.Luggage Room Light

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove luggage room light body (A).



3) Disconnect the harness connector and remove the lens.

B: INSTALLATION

Install in the reverse order of removal.

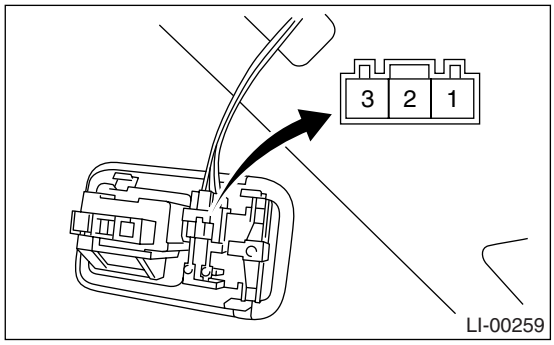
C: INSPECTION

1. LUGGAGE ROOM LIGHT BULB

1) Visually check the bulb for blow out.
2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
3) If NG, replace the bulb with a new one.

2. LUGGAGE ROOM LIGHT SWITCH

Measure the resistance between luggage room light switch terminals.

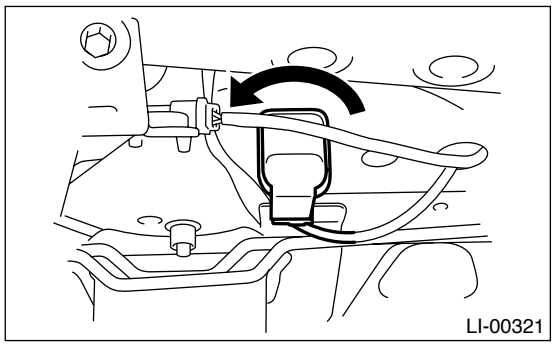


Switch position	Terminal No.	Standard
OFF	—	More than 1 MΩ
ON	1 and 2	1.5±0.5 Ω
DOOR	2 and 3	1.5±0.5 Ω

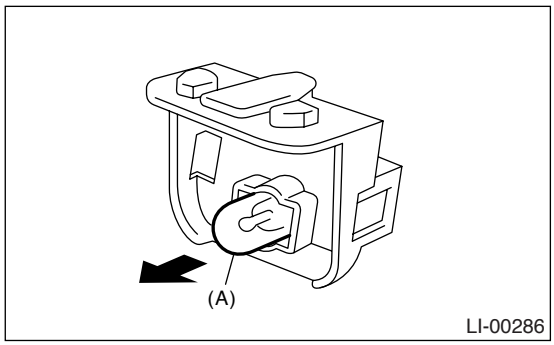
32.Trunk Room Light

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Turn the trunk room light counterclockwise to 60° to remove it and disconnect the harness connector.



3) Remove the bulb (A).



B: INSTALLATION

Install in the reverse order of removal.

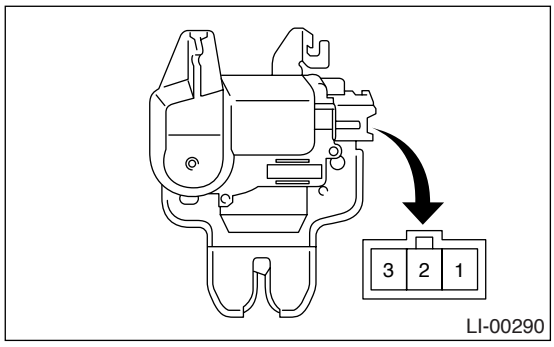
C: INSPECTION

1. TRUNK ROOM LIGHT BULB

1) Visually check the bulb for blow out.
2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
3) If NG, replace the bulb with a new one.

2. TRUNK LID SWITCH (TRUNK ROOM LIGHT SWITCH)

Measure the resistance between trunk lid switch terminals.

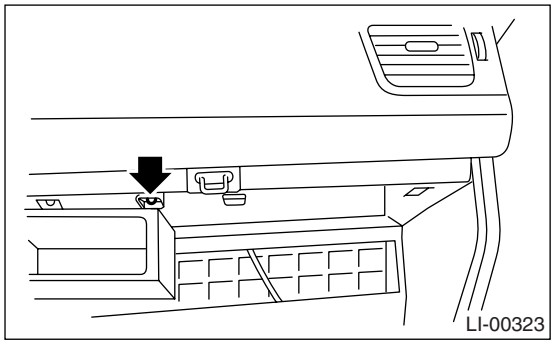


Trunk lid position	Terminal No.	Standard
Close	1 and 3	More than 1 MΩ
Open		1.5±0.5 Ω

33.Glove Box Light

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the glove box. <Ref. to EI-51, REMOVAL, Glove Box.>
3) Disconnect the harness connector.
4) Remove the glove box light.



B: INSTALLATION

Install in the reverse order of removal.

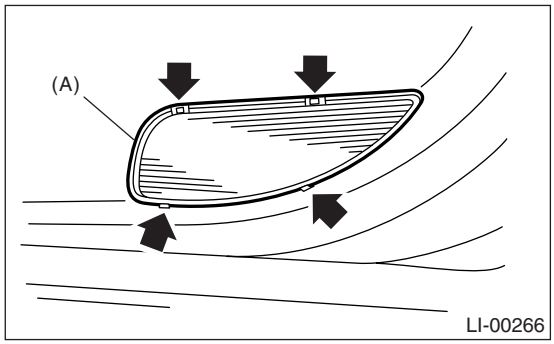
C: INSPECTION

1) Visually check the bulb for blow out.
2) Check the bulb specification.
<Ref. to LI-2, SPECIFICATION, General Description.>
3) If NG, replace the bulb with a new one.

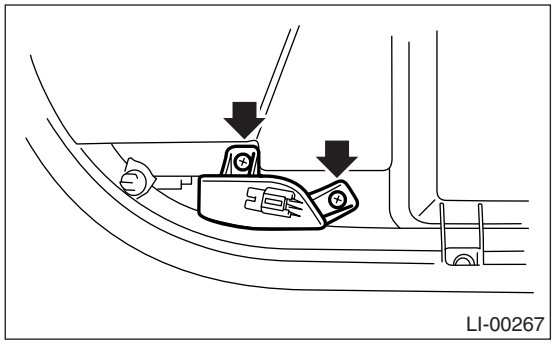
34.Door Step Light

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the lens (A), and then remove the door step light bulb.



3) Remove the front door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
4) Disconnect the harness connector.
5) Remove the mounting screw from rear side of trim and remove the door step light.



B: INSTALLATION

Install in the reverse order of removal.

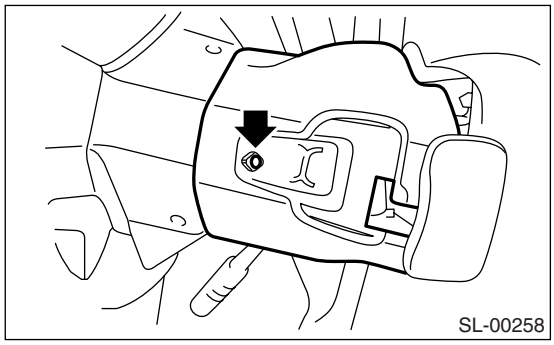
C: INSPECTION

1) Visually check the bulb for blow out.
2) Check the bulb specification.
<Ref. to LI-2, SPECIFICATION, General Description.>
3) If NG, replace the bulb with a new one.

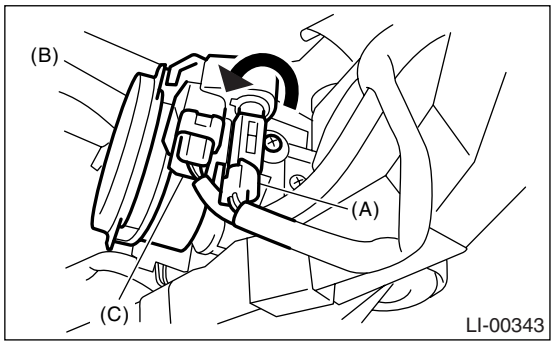
35.Ignition Switch Illumination

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the screws and detach the upper column cover and lower column cover.



3) Remove the instrument panel lower cover. <Ref. to EI-56, REMOVAL, Instrument Panel Assembly.>
4) Disconnect the ignition switch illumination connector (A).
5) Turn the ignition switch illumination connector to left and remove it.



(A) Ignition switch illumination connector
(B) Ignition switch illumination
(C) Immobilizer antenna connector

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

	Step	Check	Yes	No
1	**CHECK IGNITION SWITCH ILLUMINATION.** Make sure the ignition switch illumination illuminates when driver's side door is open.	Does the ignition switch illumination illuminate?	Ignition switch illumination is normal.	Go to step **2.**
2	**CHECK IGNITION SWITCH ILLUMINATION.** Make sure the ignition switch illumination blinks when ignition switch is turned to ON.	Does the ignition switch illumination blink?	Check the function setting of body integrated unit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Check the ignition switch illumination circuit. <Ref. to SL-27, CHECK IGNITION SWITCH ILLUMINATION, INSPECTION, Keyless Entry System.>

BODY SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

(3) Wiper arm
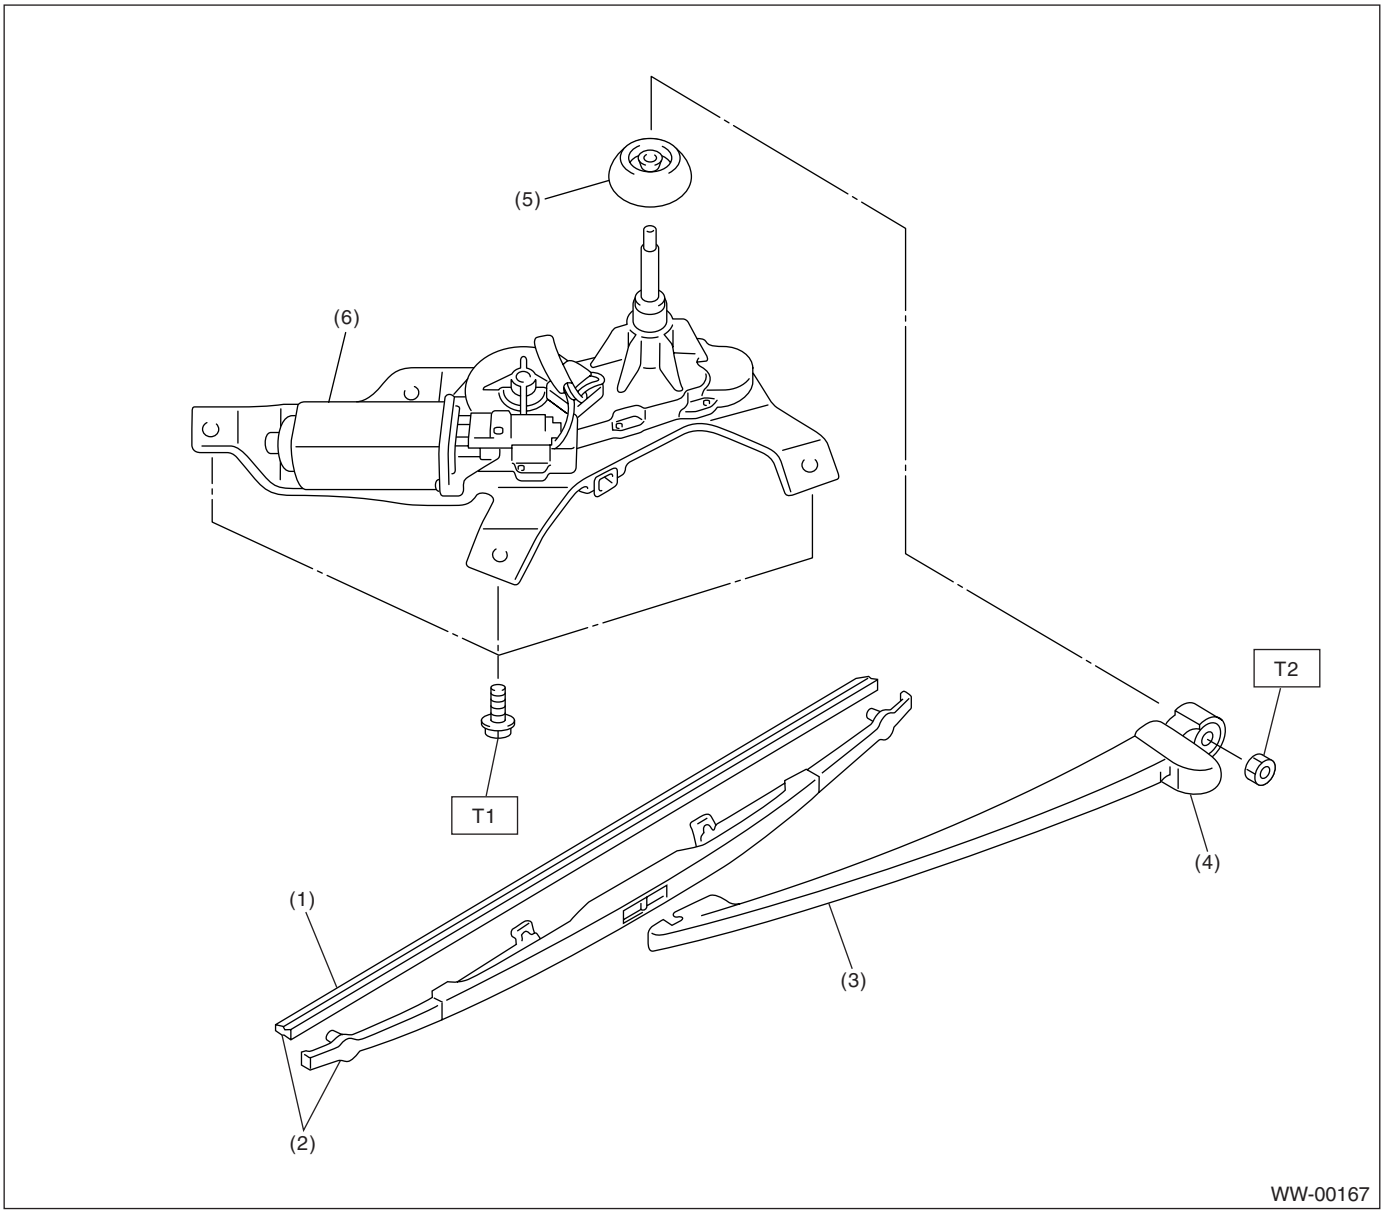
(4) Wiper motor ASSY
(5) Cushion
(6) Nozzle & hose ASSY
(7) Nut
(8) Cap
(9) Wiper arm cover

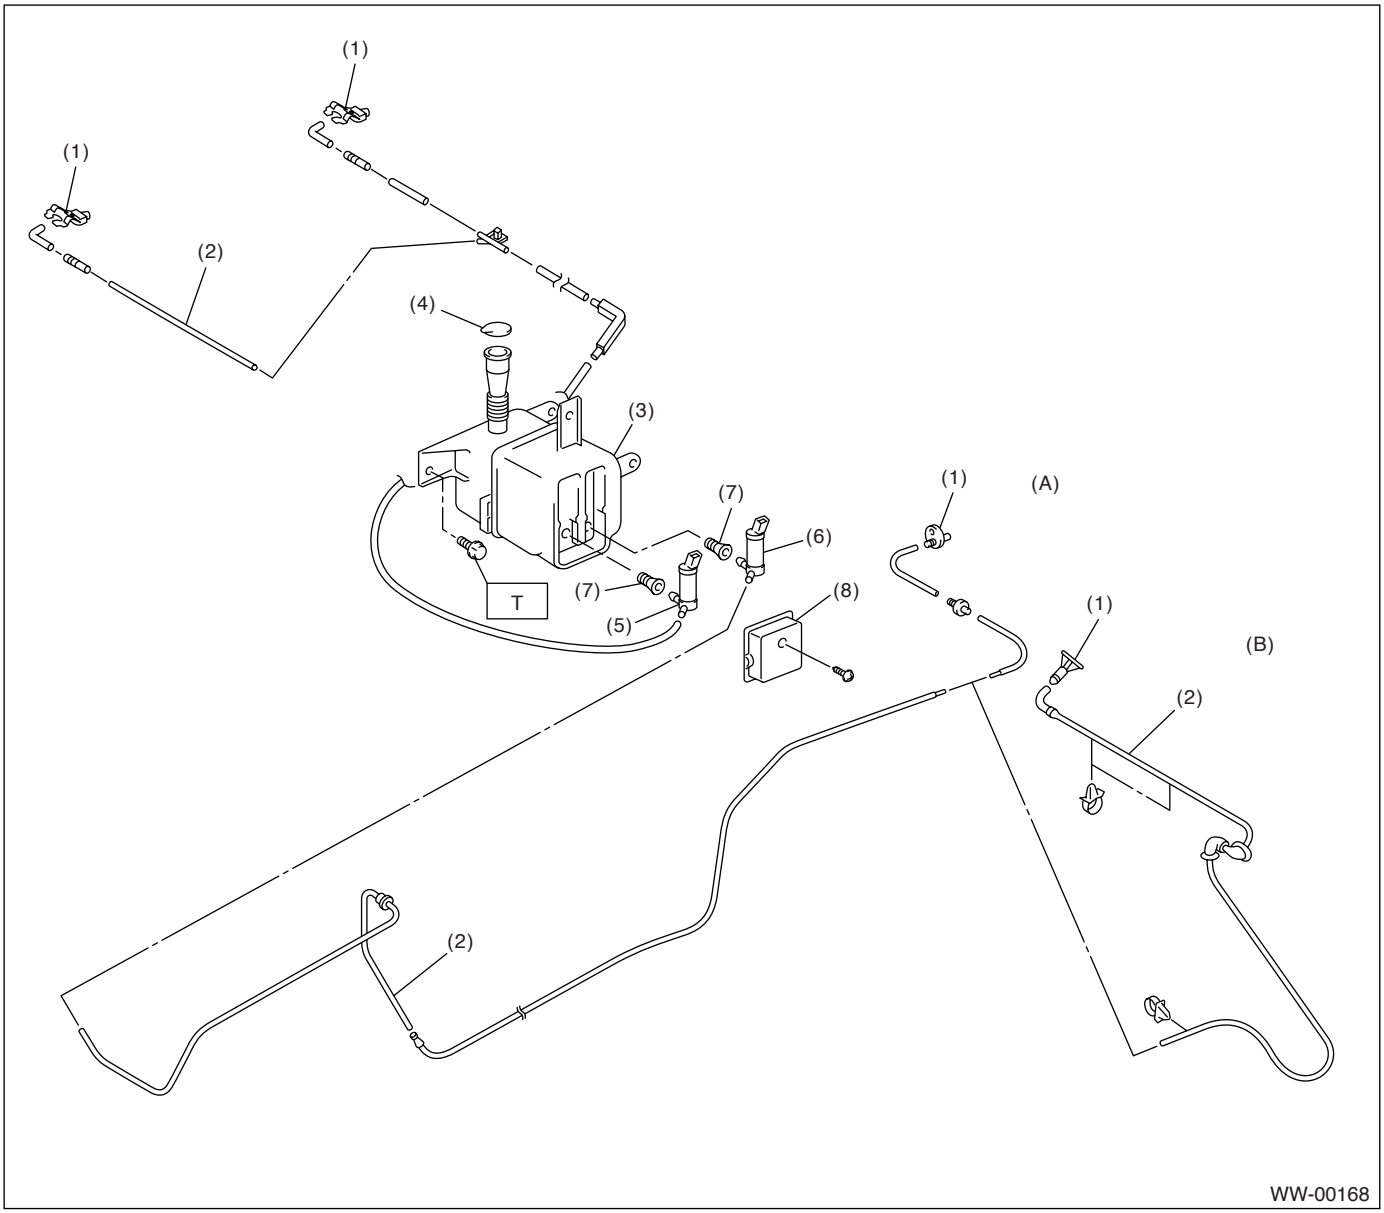
Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.76, 5.5)
T2: 8.0 (0.82, 5.9)

3. REAR WIPER (WAGON MODEL)



(1)	Wiper rubber	(4)	Wiper arm cover	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Wiper blade ASSY	(5)	Cap	***T1: 7.5 (0.77, 6.0)***
(3)	Wiper arm	(6)	Wiper motor ASSY	***T2: 8.0 (0.82, 5.9)***

4. WASHER TANK



(A) Sedan model
(B) Wagon model

Tightening torque: N·m (kgf-m, ft-lb)
T: 6.0 (0.61, 4.4)

(1) Washer nozzle
(2) Washer hose
(3) Washer tank
(4) Washer tank cap
(5) Front washer motor
(6) Rear washer motor
(7) Grommet
(8) Washer motor cover

C: CAUTION

- Connect the connectors and hoses securely during reassembly.
- After reassembly, make sure functional parts operate smoothly.
- Be careful that wiring harnesses of airbag system pass near electrical parts and switches.
- Wiring harnesses and connectors of all airbag system are yellow color. Do not use a tester equipment on these circuits.
- Care must be taken when connecting the piping hose so that no bending, jamming, etc. are caused.
- If even a little oil or grease such as silicon oil gets in the tank and washer passages, an oil film is easily formed on the glass, causing the wiper to chatter and judder, therefore, be careful not to let this happen.

2. Wiper and Washer System

A: WIRING DIAGRAM

1. WIPER AND WASHER (FRONT) LHD MODEL

<Ref. to WI-324, LHD MODEL, WIRING DIAGRAM, Front Wiper and Washer System.>

2. WIPER AND WASHER (FRONT) RHD MODEL

<Ref. to WI-325, RHD MODEL, WIRING DIAGRAM, Front Wiper and Washer System.>

3. WIPER AND WASHER (REAR) LHD MODEL

<Ref. to WI-326, LHD MODEL, WIRING DIAGRAM, Rear Wiper and Washer System.>

4. WIPER AND WASHER (REAR) RHD MODEL

<Ref. to WI-327, RHD MODEL, WIRING DIAGRAM, Rear Wiper and Washer System.>

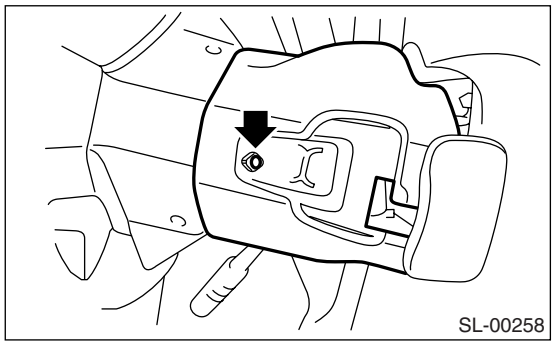
B: INSPECTION

Symptom	Repair order
Wiper and washers do not operate.	(1) Wiper fuse (Front: F/B No. 30, Rear: F/B No. 23) (2) Combination switch (3) Wiper motor ASSY (4) Wiring harness (5) Body integrated unit (rear wiper only)
Wipers do not operate in LO or HI.	(1) Combination switch (2) Wiper motor ASSY (3) Wiring harness
Wipers do not operate in INT.	(1) Combination switch (2) Wiper motor ASSY (3) Wiring harness (4) Body integrated unit (rear wiper only)
Washer motor does not operate.	(1) Washer switch (2) Washer motor (3) Wiring harness
Wipers do not operate when washer switch is ON.	(1) Washer motor (2) Wiring harness
Washer fluid spray does not operate properly.	(1) Washer motor (2) Washer hose and nozzle

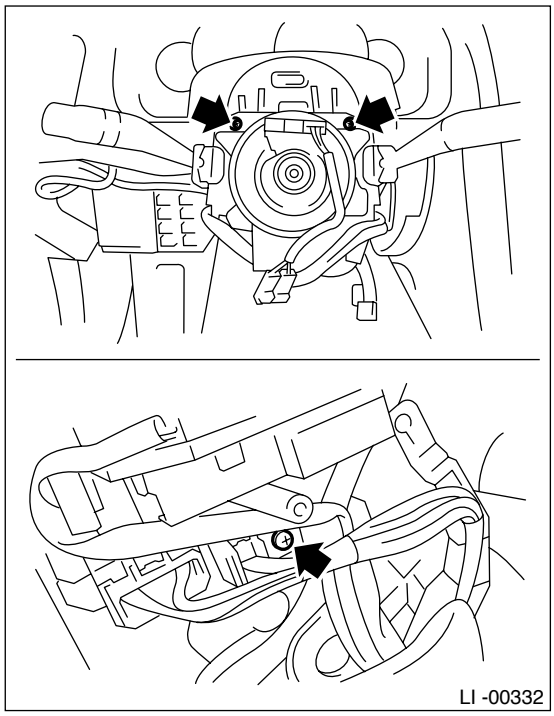
3. Combination Switch (Wiper)

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the instrument panel lower cover. <Ref. to EI-50, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the screw to remove steering column cover (upper and lower).



4) Disconnect the connector from combination switch.
5) Remove the three screws, and pull out the combination base switch assembly toward you. (EC, EK, KS and K4 model)



6) Remove the switch securing screw to remove combination switch.

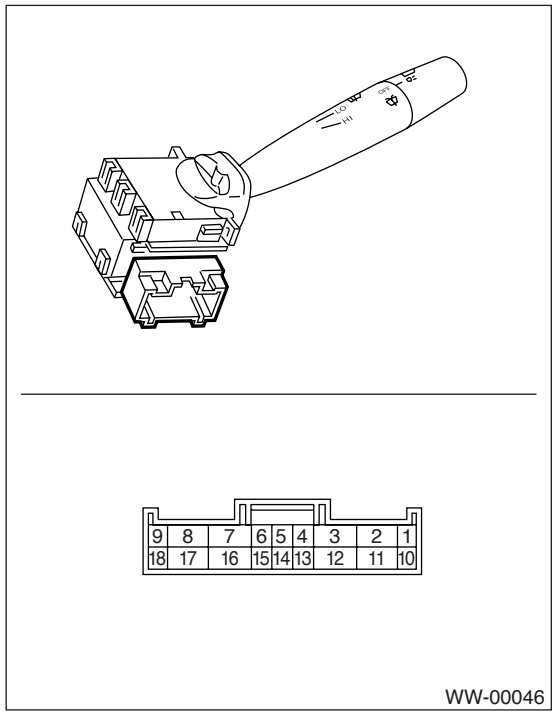
B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

1. COMBINATION SWITCH

1) Inspect the continuity between each connector terminal.



• EC, EK, KS and K4 model

	Switch position	Terminal No.	Standard
Front	OFF	7 and 16	Less than 1 Ω
	INT	7 and 16	Less than 1 Ω
	LO	7 and 17	Less than 1 Ω
	HI	8 and 17	Less than 1 Ω
	Washer ON	2 and 11	Less than 1 Ω
Rear	Washer ON	2 and 11 12 and 10 2 and 10	Less than 1 Ω
	OFF	—	More than 1 MΩ
	INT	2 and 13	Less than 1 Ω
	ON	2 and 10	Less than 1 Ω
	Washer ON	2 and 12 12 and 10 2 and 10	Less than 1 Ω

• KA model

	Switch position	Terminal No.	Standard
Front	OFF	3 and 12	Less than 1 Ω
	INT	3 and 12	Less than 1 Ω
	LO	3 and 11	Less than 1 Ω
	HI	2 and 11	Less than 1 Ω
	Washer ON	8 and 17	Less than 1 Ω
Rear	Washer ON	8 and 16 16 and 18 8 and 18	Less than 1 Ω
	OFF	—	More than 1 MΩ
	INT	8 and 15	Less than 1 Ω
	ON	8 and 18	Less than 1 Ω
	Washer ON	8 and 16 16 and 18 8 and 18	Less than 1 Ω

2) If continuity is not as specified, replace the switch.

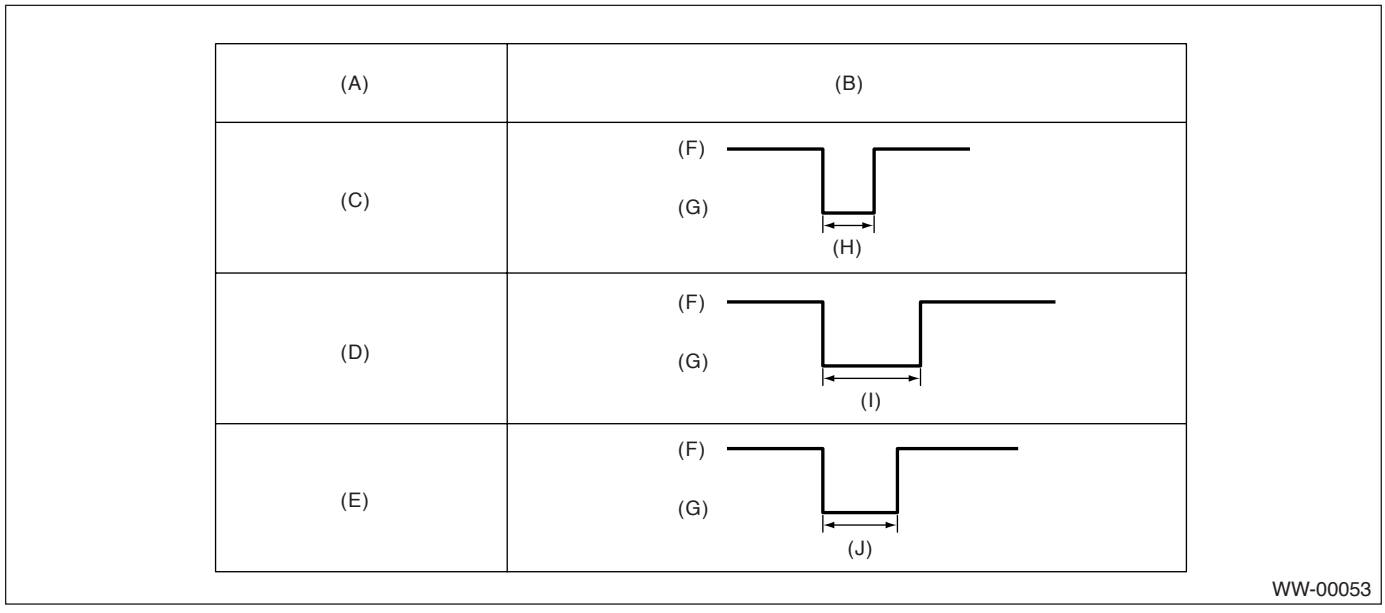
2. FRONT WIPER

1) Check with Subaru Select Monitor

	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL TO BODY INTEGRATED UNIT.** When the front wiper switch is operated, check the input signal using Subaru Select Monitor. 1) Connect the Subaru Select Monitor to data link connector. 2) Turn the ignition switch to ON. 3) Select {Body Integrated Unit} from the main menu. 4) Select {Current Data Display & Save}. 5) When the front wiper switch is set to LO or HI, check the input signal.	Is the input signal normal?	End.	Replace the body integrated unit. <Ref. to SL-46, Body Integrated Unit.>

2) Intermittent operation inspection
   (1) Turn the wiper switch to INT.
   (2) Adjust the intermittent control switch to MAX.
   (3) Apply the battery voltage to switch terminal No. 16 and 2 (EC, EK, KS and K4 model) or terminal No. 12 and 8 (KA model).
   (4) Measure the voltage between combination switch terminals.

Terminals
No. 7 — No. 2: EC, EK, KS and K4 model
No. 3 — No. 8: KA model



(A) Switch position
(B) Voltage
(C) MIN.
(D) MAX.
(E) Non-intermittent type
(F) 12 V
(G) 0 V
(H) Approx. 2 sec.
(I) 16±6 sec.
(J) 3±1 sec.

3) If operation is not as specified, replace the switch.

3. REAR WIPER

1) Check with Subaru Select Monitor

	Step	Check	Yes	No
1	**CHECK INPUT OF REAR WIPER.** Check the input from body integrated unit using Subaru Select Monitor. 1) Connect the Subaru Select Monitor to data link connector. 2) Turn the ignition switch to ON. 3) Select {Body Integrated Unit} from the main menu. 4) Select {Current Data Display & Save}. 5) Check the input of rear wiper switch.	Is the input normal?	Go to step **2.**	Check the rear wiper switch. <Ref. to WW-8, INSPECTION, Combination Switch (Wiper).>
2	**CHECK OUTPUT OF BODY INTEGRATED UNIT.** When the rear wiper switch is operated, check the output using Subaru Select Monitor. 1) Turn the ignition switch to ON. 2) Operate the rear wiper switch to set to each position of ON and INT. 3) At this time, check the output of body integrated unit.	When it is set to ON, is ON output continuously? When it is set to INT, is ON/OFF output repeatedly? (INT OFF time (when vehicle parked): 3 seconds for Sedan, 12 seconds for Wagon)	Check the rear wiper motor. <Ref. to WW-23, INSPECTION, Rear Wiper Motor.>	Replace the body integrated unit. <Ref. to SL-46, Body Integrated Unit.>

2) Rear wiper motor circuit check

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY CIRCUIT OF REAR WIPER MOTOR.** 1) Disconnect the harness connector of rear wiper motor. 2) Turn the ignition switch to ACC. 3) Measure the voltage between the rear wiper motor harness connector terminal and chassis ground. ***Connector & terminal*** ***Sedan model*** ***(R132) No. 1 (+) — Chassis ground (−):*** ***Wagon model*** ***(D43) No. 1 (+) — Chassis ground (−):***	Is the voltage more than 10 V?	Go to step **2.**	• Check the fuse (No. 23 in fuse & relay box). • Check the fusible link (No. 7 in main fuse box).
2	**CHECK GROUND CIRCUIT OF REAR WIPER MOTOR.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between the rear wiper motor harness connector terminal and chassis ground. ***Connector & terminal*** ***Sedan model*** ***(R132) No. 3 — Chassis ground:*** ***Wagon model*** ***(D43) No. 3 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **3.**	Repair the open circuit of rear wiper motor ground cable.

Step		Check	Yes	No
3	**CHECK HARNESS BETWEEN BODY INTEGRATED UNIT AND REAR WIPER MOTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of body integrated unit. 3) Disconnect the harness connector of rear wiper motor. 4) Measure the resistance between the harness connector terminals of body integrated unit and rear wiper motor. ***Connector & terminal*** ***Sedan model*** ***(B280) No. 1 — (R132) No. 2:*** ***(B280) No. 8 — (R132) No. 4:*** ***Wagon model*** ***(B280) No. 1 — (D43) No. 2:*** ***(B280) No. 8 — (D43) No. 4:***	Is the resistance less than 10 Ω?	Go to step **4.**	Repair the open circuit of harness between body integrated unit and rear wiper motor.
4	**CHECK OPERATION OF REAR WIPER MOTOR.** 1) Remove the rear wiper motor. 2) Check the rear wiper motor. <Ref. to WW-23, INSPECTION, Rear Wiper Motor.>	Does the rear wiper motor rotate normally?	End.	Replace the rear wiper motor.

NOTE:
Rear wiper intermittent time (AT model only)

Select lever position (AT model only)	Vehicle speed (km/h (MPH))	Intermittent stopping time (sec.)	
		Sedan	Wagon
Rev	—	Continuous operation	
Except for reverse mode	80 — (50 —)	12	3
	50 — 80 (31 — 50)	9	6
	20 — 50 (12 — 31)	6	9
	0 — 20 (0 — 12)	3	12

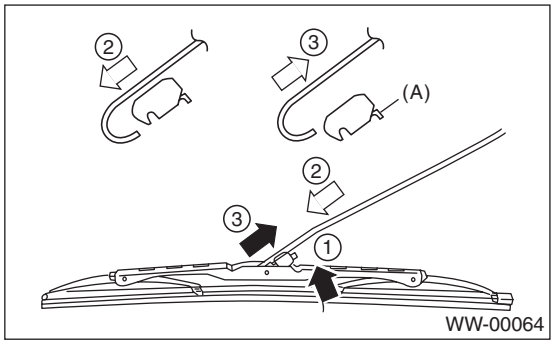
4. Wiper Blade

A: REMOVAL

CAUTION:
When replacing wiper blades or etc., be sure to stand up the driver side wiper arm first, then passenger side wiper arm next. Also, when putting the wiper arms back, be sure to start with passenger side first, then driver side next. Doing this in the reverse order may result in damage of passenger side wiper arm by hitting with driver side wiper blade.

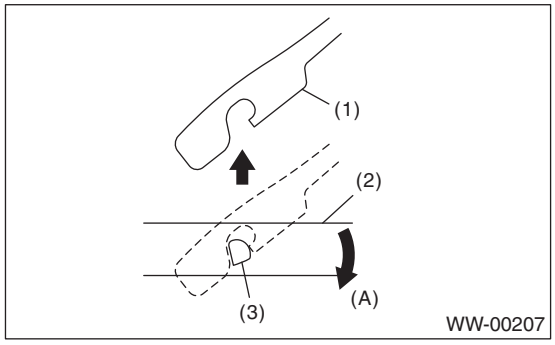
1. FRONT

While pushing the locking clip (A) up, pull out the blade from arm to the arrow direction.



2. REAR

Turn the blade in the direction of arrow (A) and remove it from arm.



(A) Turn the wiper blade.
(1) Wiper arm
(2) Wiper blade
(3) Installing part of wiper blade

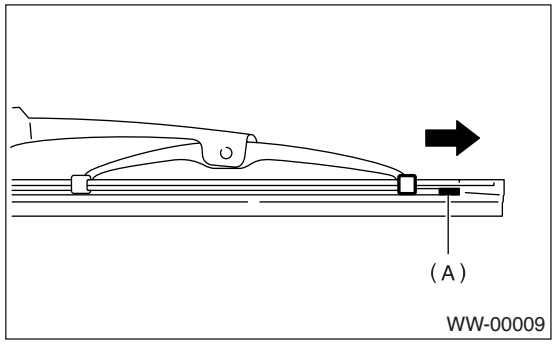
B: INSTALLATION

1) Install in the reverse order of removal.
2) Confirm that the clip is locked securely.

C: DISASSEMBLY

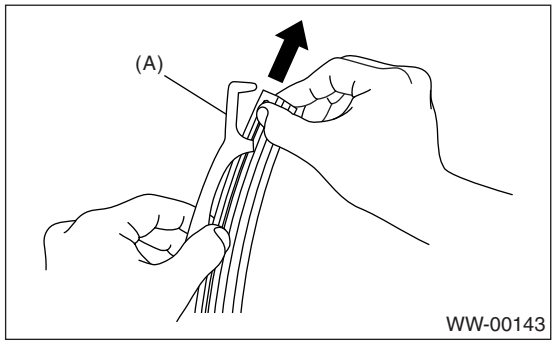
1. METAL TYPE

Pull side (A) of the wiper rubber stopper and remove the rubber from blade assembly.



2. RESIN TYPE

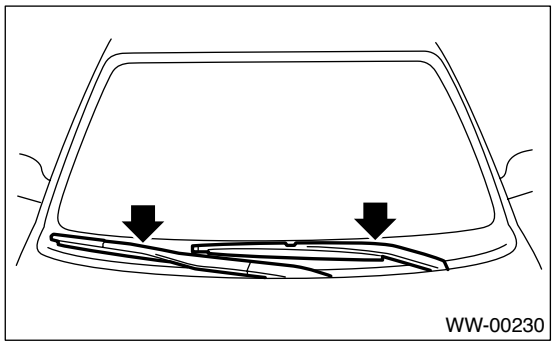
Pull the wiper rubber top slightly from the stopper (A) and pull out fully.



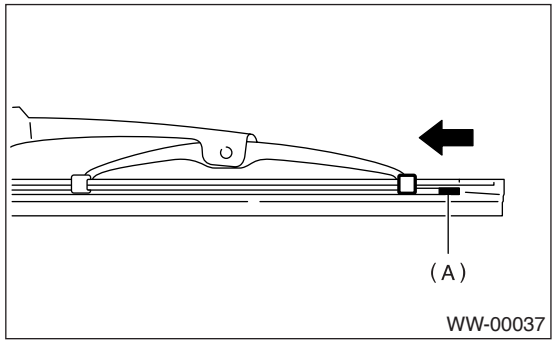
D: ASSEMBLY

1. METAL TYPE

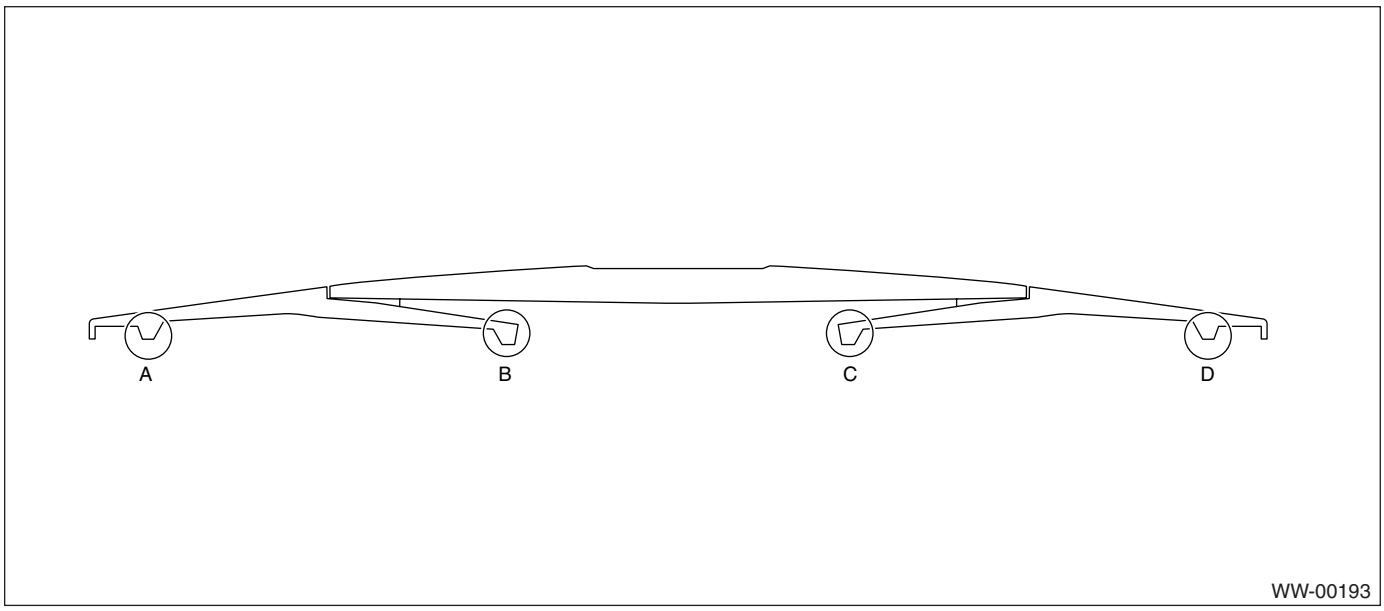
1) Insert the wiper rubber onto blade so that the stopper is in the position shown in the figure.



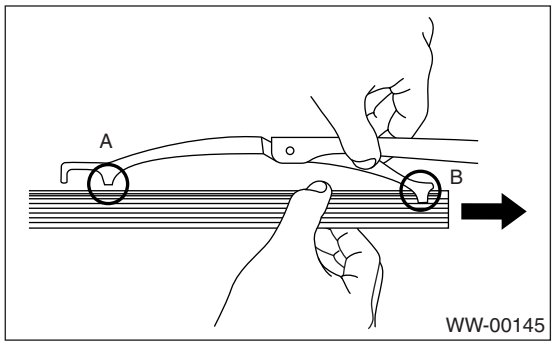
2) Make sure the wiper rubber is securely fastened to the pull stopper (A).



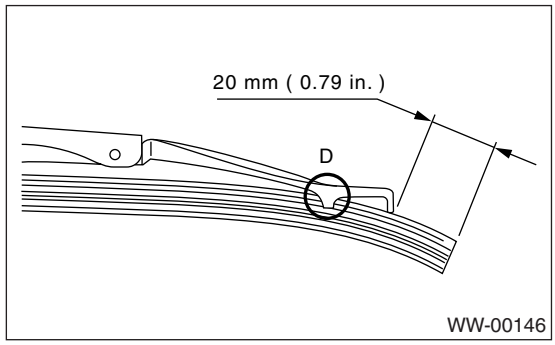
2. RESIN TYPE



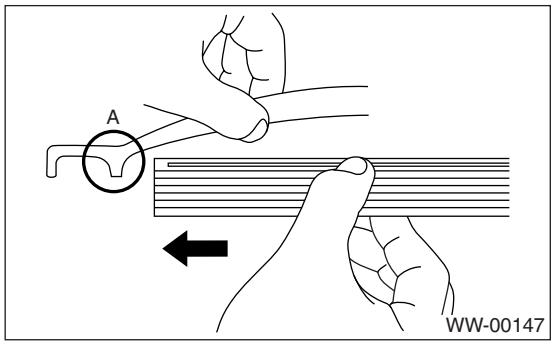
1) Insert the wiper rubber through the claw (B).



2) Insert the wiper rubber until its top end protrudes approx. 20 mm (0.79 in) from stopper (D).



3) Insert the wiper rubber into the claw (A).



E: INSPECTION

1) When the wiper does not perform well, inspect the followings:

• Make sure the movable part of the wiper blade assembly moves smoothly.

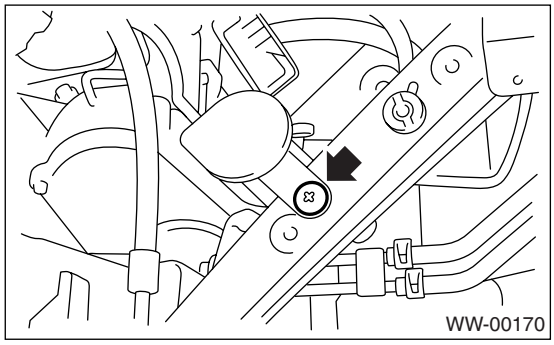
• Make sure the wiper rubber is not deformed or damaged.

2) If damaged, replace with new one.

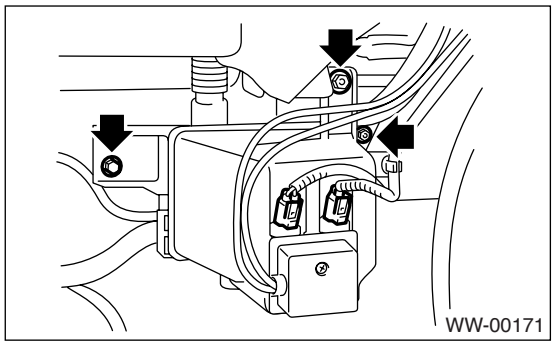
5. Washer Tank and Motor

A: REMOVAL

1) Open the hood.
2) Disconnect the ground cable from battery.
3) Remove the front bumper. <Ref. to EI-30, REMOVAL, Front Bumper.>
4) Remove the clip holding washer water supply tap.



5) Remove the two bolts and one nut, hose, connector and washer motor cover, and then remove the washer tank.



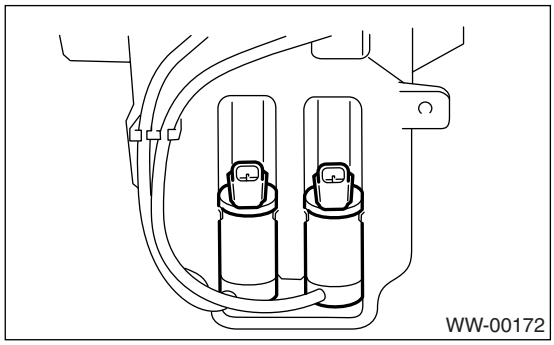
B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:
6.0 N·m (0.61 kgf-m, 4.4 ft-lb)

C: DISASSEMBLY

Pull out the washer motor from tank.

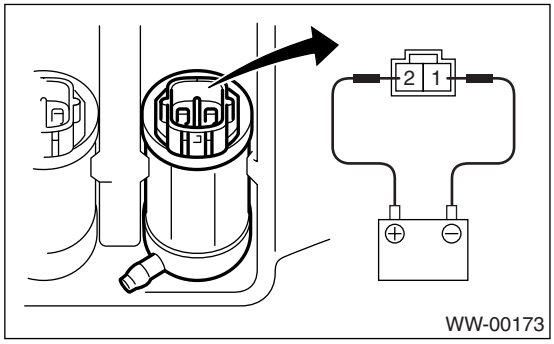


D: ASSEMBLY

1) Assemble in the reverse order of disassembly.
2) Confirm that water does not leak from installation area of motor.

E: INSPECTION

Apply battery voltage to the connector terminal of the washer motor and make sure the motor operates.

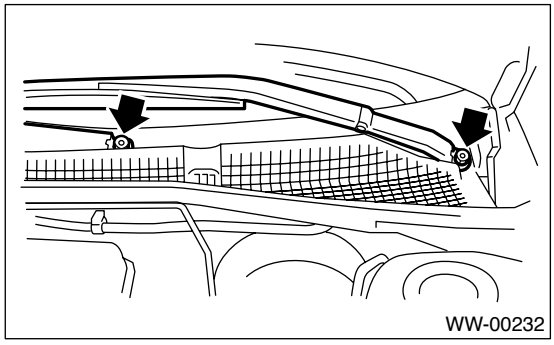


6. Front Wiper Arm

A: REMOVAL

CAUTION:
When replacing wiper blades or etc., be sure to stand up the driver side wiper arm first, then passenger side wiper arm next. Also, when putting the wiper arms back, be sure to start with passenger side first, then driver side next. Doing this in the reverse order may result in damage of passenger side wiper arm by hitting with driver side wiper blade.

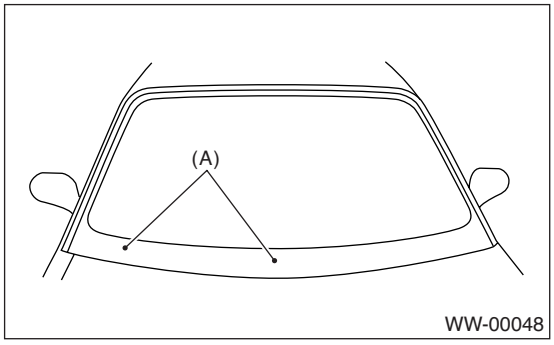
1) Open the hood.
2) Remove the cap.
3) Remove the nut to remove wiper arm.



WW-00232

B: INSTALLATION

1) Install in the reverse order of removal.
2) Operate the wiper once.
3) Align the wiper blade to ceramic print point mark (A) of front window panel.

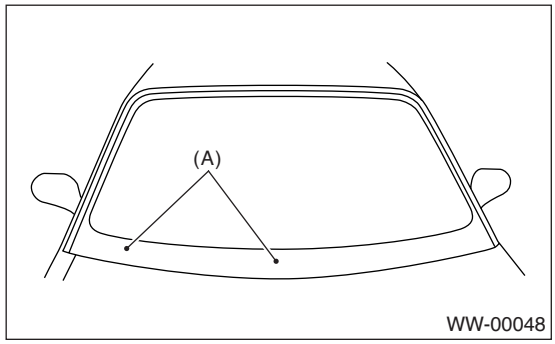


WW-00048

Tightening torque:
Refer to "COMPONENT" of "General Description".
<Ref. to WW-2, FRONT WIPER, COMPONENT, General Description.>

C: ADJUSTMENT

Operate the wiper once. Align the wiper blade to ceramic print point mark (A) of front window panel.

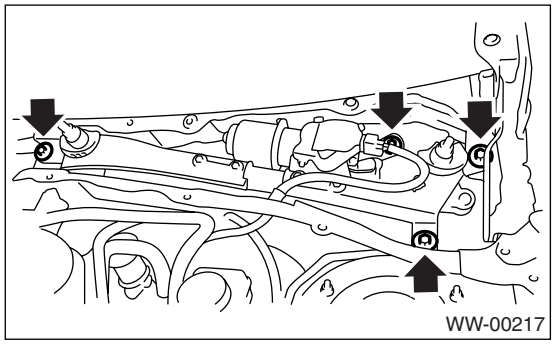


WW-00048

7. Front Wiper Motor and Link

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the cowl panel. <Ref. to EI-39, REMOVAL, Cowl Panel.>
3) Disconnect the connector of wiper motor assembly.
4) Remove the bolt to remove wiper assembly.



WW-00217

NOTE:
Wiper motor and wiper link can not be disassembled, because those are assembly part.

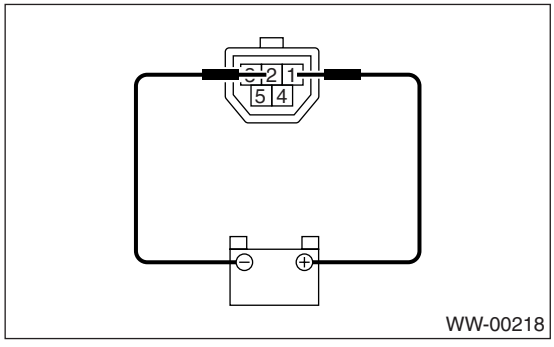
B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:
Refer to "COMPONENT" of "General Description".
<Ref. to WW-2, FRONT WIPER, COMPONENT, General Description.>

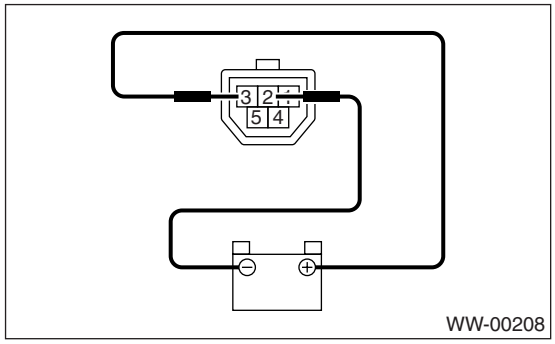
C: INSPECTION

1) When the battery is connected to the terminal of connectors, confirm that the wiper motor operates at low speed.
• LHD model



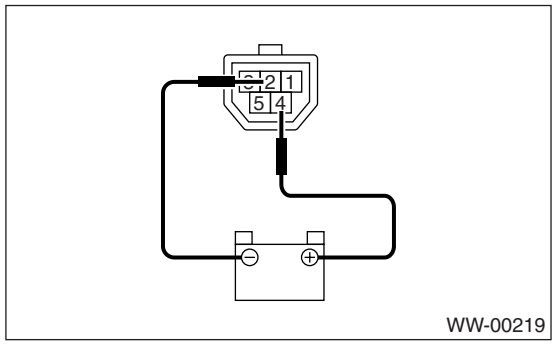
WW-00218

• RHD model



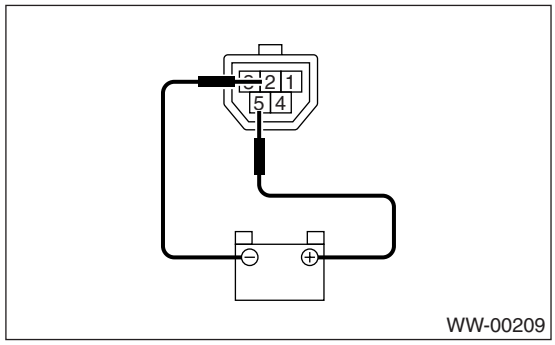
WW-00208

2) When the battery is connected to the terminal of connectors, confirm that the wiper motor operates at high speed.
• LHD model



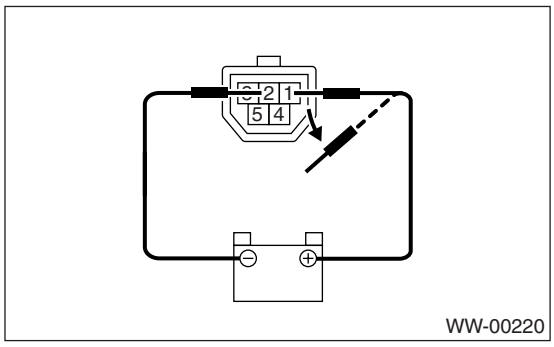
WW-00219

• RHD model



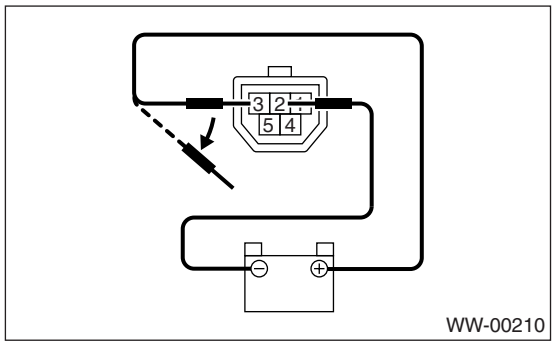
WW-00209

3) Connect the battery to terminals of connector, and remove the terminal connection with wiper motor rotated at low speed, and stop the wiper motor through operation.
• LHD model



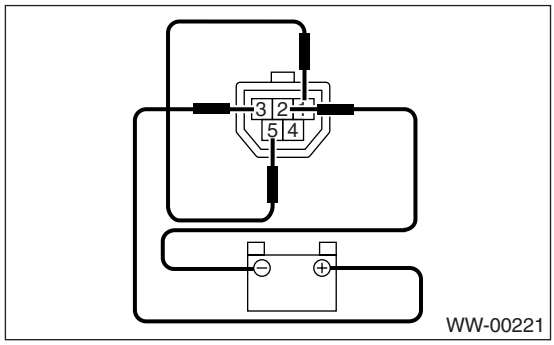
WW-00220

• RHD model

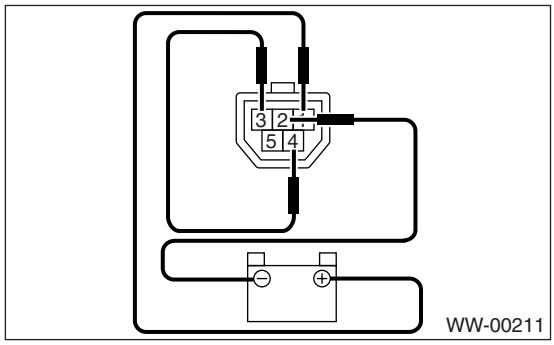


4) Connect the battery and confirm that the wiper motor stops at automatic stop position after the wiper motor operates at low speed again.

• LHD model



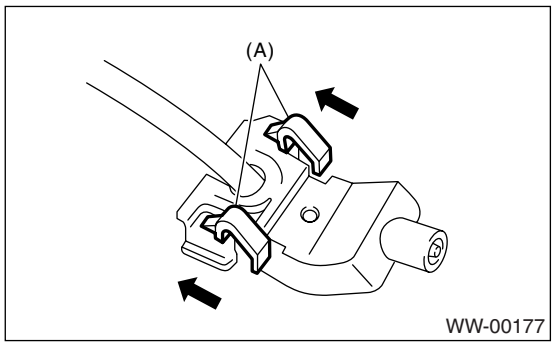
• RHD model



8. Front Washer Nozzle

A: REMOVAL

1) Remove the front hood insulator. <Ref. to EB-13, FRONT HOOD INSULATOR, REMOVAL, Front Hood.>
2) Hold the pawl of washer nozzle (A) toward the arrow direction, and remove the washer nozzle.



3) Remove the washer hose from washer nozzle.

B: INSTALLATION

1) Install in the reverse order of removal.
2) Adjust the washer nozzle position. <Ref. to WW-20, ADJUSTMENT, Front Washer Nozzle.>

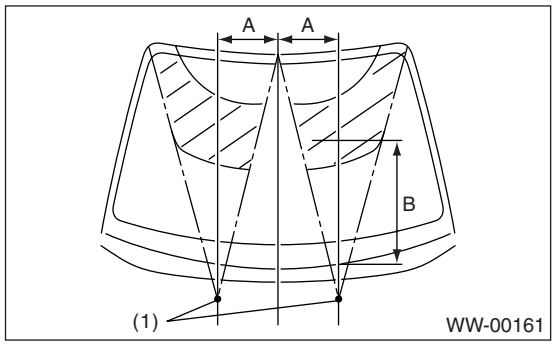
C: INSPECTION

- Make sure the nozzle and hose are not clogged.
- Make sure the hose is not bent.

D: ADJUSTMENT

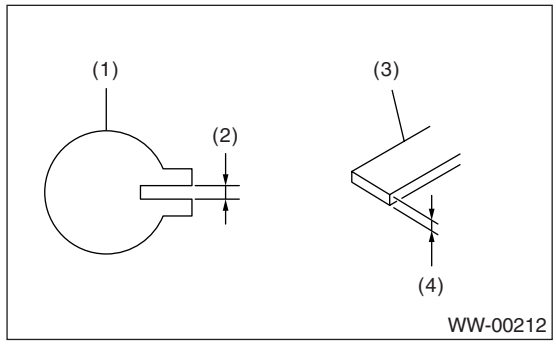
1) Turn the wiper switch to OFF position.
2) While the vehicle is at standstill, adjust the washer injection position as shown in the figure.

Injection position:
A: 250 mm (9.84 in)
B: 435 mm (17.13 in)



(1) Nozzle

Injection angle should be adjusted with 0.5 mm (0.020 in) thickness steel scale. Use maximum thickness of 0.5 mm steel scale, because the injection slit width of washer nozzle is 0.6 mm (0.024 in). Adjusting with a flat tip driver may damage the injection slit and cause the faulty injection.



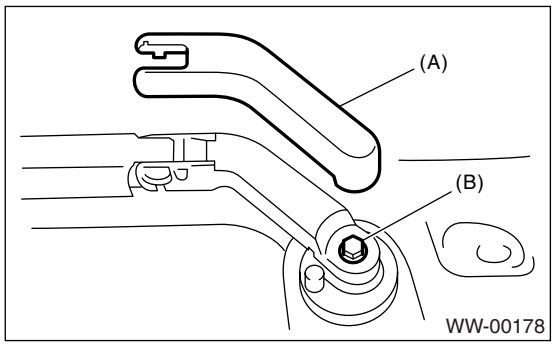
(1) Inside of washer nozzle injection
(2) 0.6 mm (0.024 in)
(3) Steel scale
(4) Max. 0.5 mm (0.020 in)

9. Rear Wiper Arm

A: REMOVAL

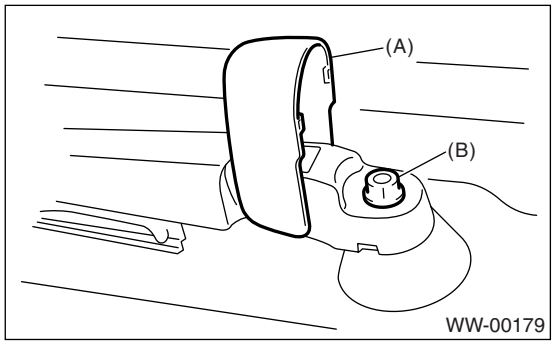
1. SEDAN MODEL

1) Detach the wiper arm cover (A).
2) Remove the nut (B) to remove wiper arm.



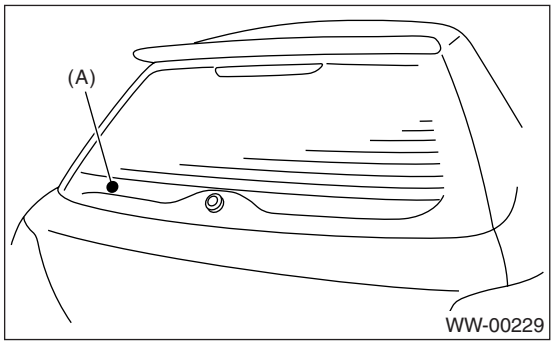
2. WAGON MODEL

1) Detach the wiper arm cover (A).
2) Remove the nut (B) to remove wiper arm.



B: INSTALLATION

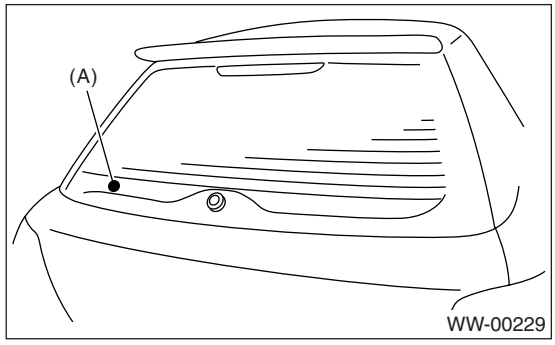
1) Install in the reverse order of removal.
2) Operate the rear wiper once.
3) Align the blade with the marking (A) of glass.



Tightening torque:
Refer to "COMPONENT" of "General Description".
<Ref. to WW-4, REAR WIPER (SEDAN MODEL), COMPONENT, General Description.>

C: ADJUSTMENT

1) Operate the rear wiper once.
2) Align the blade with the marking (A) of glass.

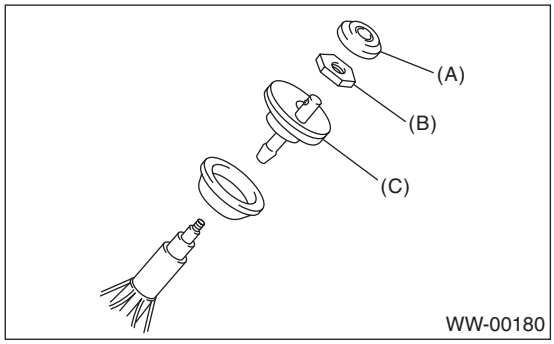


10.Rear Wiper Motor

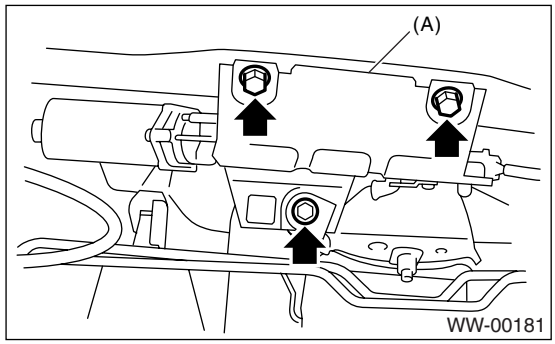
A: REMOVAL

1. SEDAN MODEL

1) Disconnect the ground cable from battery.
2) Remove the rear wiper arm. <Ref. to WW-21, SEDAN MODEL, REMOVAL, Rear Wiper Arm.>
3) Remove the cap (A) and nut (B) from rear wiper shaft.
4) Raise the nozzle & hose assembly (C) to disconnect the washer tube and remove the nozzle & hose assembly (C).

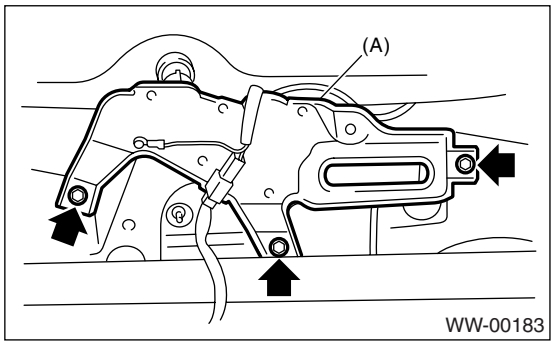


5) Disconnect the harness connector of wiper motor assembly.
6) Remove the bolts to remove wiper motor assembly (A).



2. WAGON MODEL

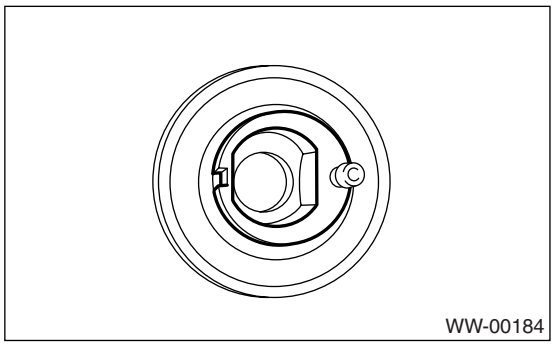
1) Disconnect the ground cable from battery.
2) Remove the rear wiper arm. <Ref. to WW-21, WAGON MODEL, REMOVAL, Rear Wiper Arm.>
3) Remove the rear gate lower trim. <Ref. to EI-69, REMOVAL, Rear Gate Trim.>
4) Disconnect the harness connector of wiper motor assembly.
5) Remove the bolts to remove wiper motor assembly (A).



B: INSTALLATION

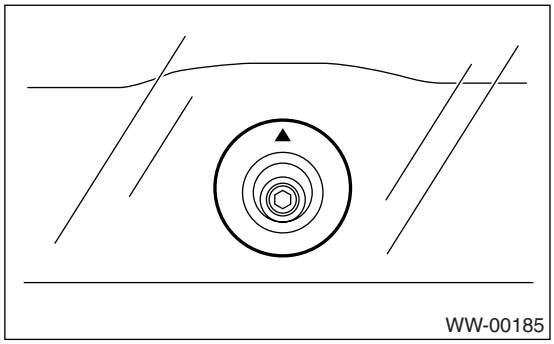
1. SEDAN MODEL

1) Install in the reverse order of removal.
2) Align the cutout of reverse side of nozzle & hose assembly with the cutout of rear wiper shaft for installation.



2. WAGON MODEL

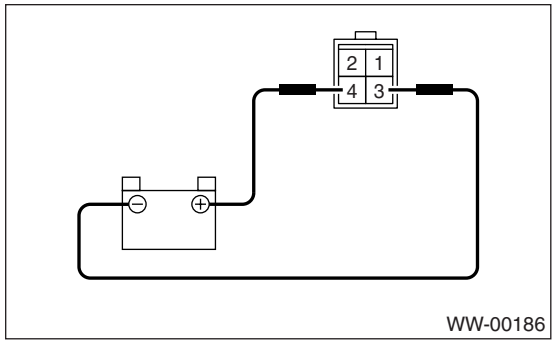
1) Install in the reverse order of removal.
2) Be sure that the pivot cap with the arrow mark facing up, as shown in the figure.



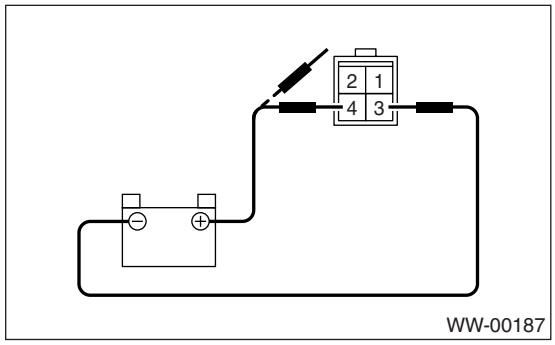
Tightening torque:
Refer to "COMPONENT" of "General Description".
<Ref. to WW-5, REAR WIPER (WAGON MODEL), COMPONENT, General Description.>

C: INSPECTION

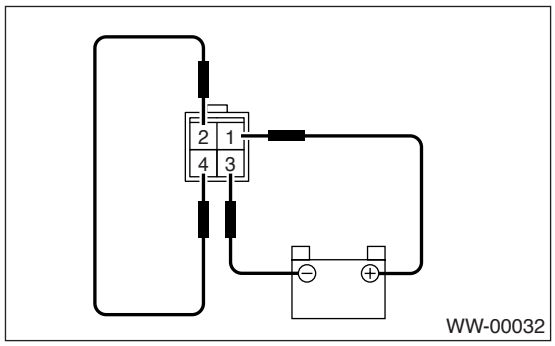
1) Connect the battery to wiper motor connector and confirm that wiper motor operates.



2) Connect the battery to terminals of connector, and remove the terminal connection with wiper motor rotated, and stop the wiper motor through operation.



3) Connect the battery and confirm that the wiper motor stops at automatic stop position after the wiper motor operates at low speed again.

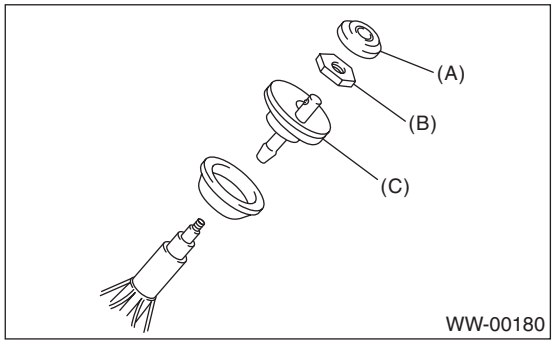


11.Rear Washer

A: REMOVAL

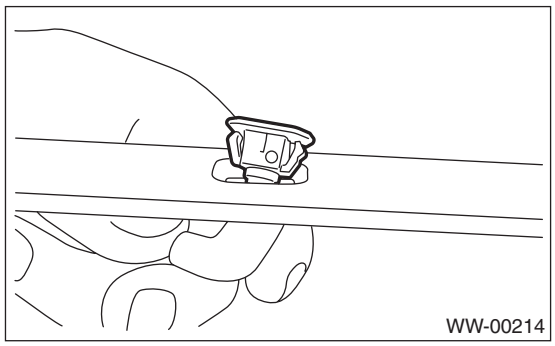
1. SEDAN MODEL

1) Remove the rear wiper arm. <Ref. to WW-21, SEDAN MODEL, REMOVAL, Rear Wiper Arm.>
2) Remove the cap (A) and nut (B) from rear wiper shaft.
3) Raise the nozzle & hose assembly (C) to disconnect the washer hose, and remove the nozzle & hose assembly (C).



2. WAGON MODEL

1) Detach the roof spoiler. <Ref. to EI-40, REMOVAL, Roof Spoiler.>
2) Remove the washer hose from washer nozzle.
3) Push the pawl of nozzle from the reverse side of roof spoiler with a flat tip screwdriver or equivalent, and remove the washer nozzle.



B: INSTALLATION

1) Install in the reverse order of removal.
2) Adjust the washer nozzle. <Ref. to WW-24, ADJUSTMENT, Rear Washer.>

C: INSPECTION

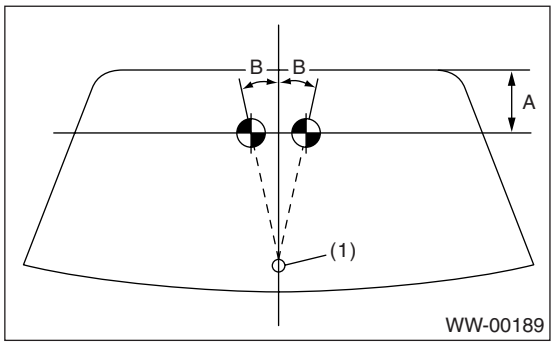
- Make sure the nozzle and hose are not clogged.
- Make sure the hose is not bent.

D: ADJUSTMENT

1) Turn the wiper switch to OFF position.
2) While the vehicle is at standstill, adjust the washer injection position as shown in the figure.

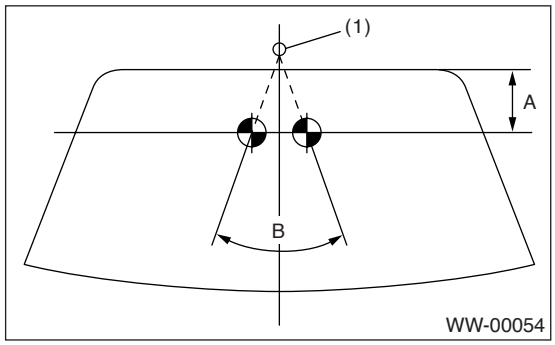
NOTE:
Injection position of rear washer nozzle is adjustable only for sedan model.

- Sedan model



(1) Nozzle
(A) 310 mm (12.20 in)
(B) 5.5°

- Wagon model



(1) Nozzle
(A) 70 mm (2.76 in)
(B) 70°

BODY SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

1. General Description

A: CAUTION

• Before disassembling or reassembling parts, always disconnect the battery ground cable. When replacing the audio, control unit, and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable. Otherwise, the memory will be erased.
• Reassemble the parts in the reverse order of disassembly unless otherwise indicated.
• Adjust parts to the given specifications.
• Connect the connectors securely during reassembly.
• After reassembly, make sure the functional parts operate smoothly.

B: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.
Conductive silver composition (DUPONT No. 4817 or equivalent)	Used for repairing antenna wire.

2. Audio System

A: WIRING DIAGRAM

<Ref. to WI-116, WIRING DIAGRAM, Audio System.>

B: INSPECTION

Symptom	Repair order
No power coming in. (No display and no sound from speakers)	(1) Check the fuse and power supply for audio. (2) Check the audio ground. (3) Remove the audio and repair it.
A specific speaker does not operate.	(1) Check the speaker. (2) Check the output circuit between audio and speaker.
Audio generates noise with engine running.	(1) Check the audio ground. (2) Check the generator. (3) Check the ignition coil. (4) Remove the audio and repair it.
AM (MW, LW: Europe only) and FM modes are weak or noisy.	(1) Check the antenna. (2) Check the antenna amplifier. (3) Check the noise suppressor. (4) Check the audio ground. (5) Remove the audio and repair it.

3. Front Accessory Power Supply Socket System

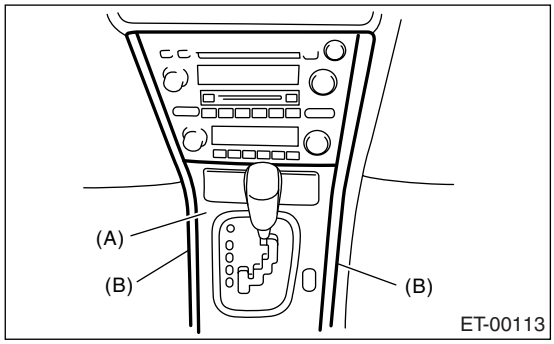
A: WIRING DIAGRAM

<Ref. to WI-242, WIRING DIAGRAM, Front Accessory Power Supply Socket System.>

4. Audio

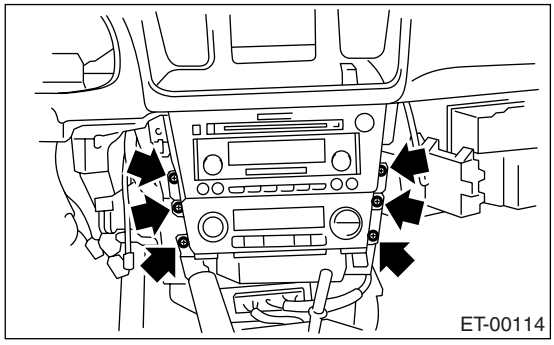
A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the console box. <Ref. to EI-53, REMOVAL, Console Box.>
3) Remove the console front panel. <Ref. to EI-54, REMOVAL, Center Console.>
4) Remove the console side garnish. <Ref. to EI-54, REMOVAL, Center Console.>



(A) Console front panel
(B) Console side garnish

5) Remove the screws, and slightly pull the audio out from center console.



6) Disconnect the harness connector and antenna feeder cord, and then remove the audio.

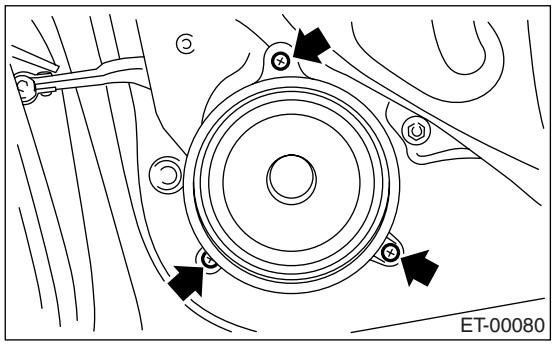
B: INSTALLATION

Install in the reverse order of removal.

5. Front Speaker

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the front door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Remove the front speaker mounting screws.



4) Disconnect the harness connector and remove front speaker.

B: INSTALLATION

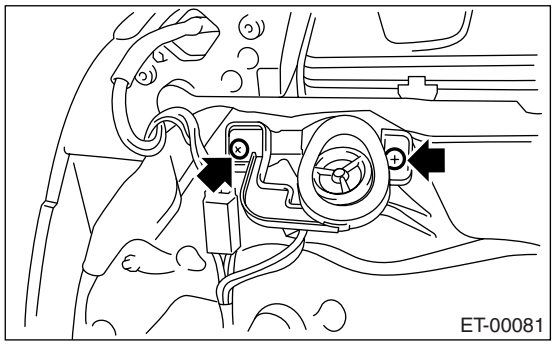
Install in the reverse order of removal.

6. Tweeter

A: REMOVAL

1. MODEL WITH TWEETER

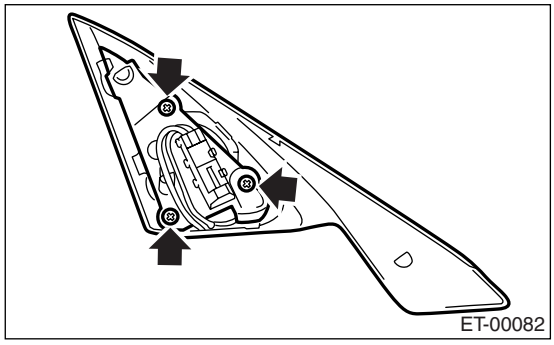
1) Disconnect the ground cable from battery.
2) Remove the front door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Remove the tweeter mounting screws.



4) Disconnect the harness connector and remove tweeter.

2. MODEL WITH MCINTOSH AUDIO SYSTEM

1) Disconnect the ground cable from battery.
2) Remove the front door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Remove the gusset cover. <Ref. to GW-18, REMOVAL, Outer Mirror Assembly.>
4) Disconnect the harness connector and remove tweeter.



B: INSTALLATION

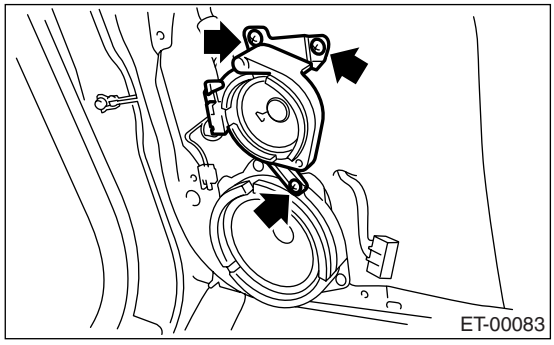
Install in the reverse order of removal.

7. Squawker

A: REMOVAL

NOTE:
Model with McIntosh audio system only.

1) Disconnect the ground cable from battery.
2) Remove the front door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Remove the squawker mounting screws.



4) Disconnect the harness connectors and remove squawker.

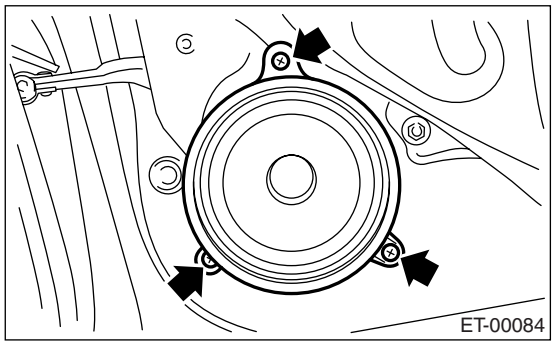
B: INSTALLATION

Install in the reverse order of removal.

8. Rear Speaker

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the rear door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Remove the rear speaker mounting screws.



4) Disconnect the harness connector and remove the rear speaker.

B: INSTALLATION

Install in the reverse order of removal.

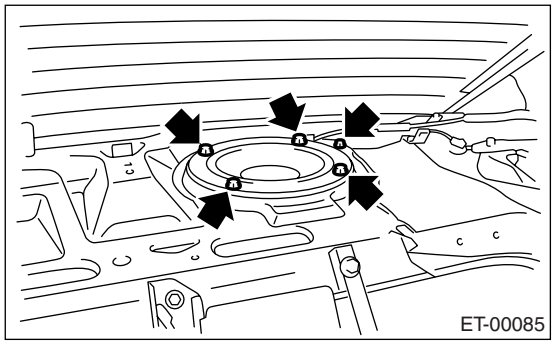
9. Woofer

A: REMOVAL

1. SEDAN MODEL

NOTE:
Model with McIntosh audio system only.

1) Disconnect the ground cable from battery.
2) Remove the rear shelf trim. <Ref. to EI-70, REMOVAL, Rear Shelf Trim.>
3) Remove the woofer mounting screws.

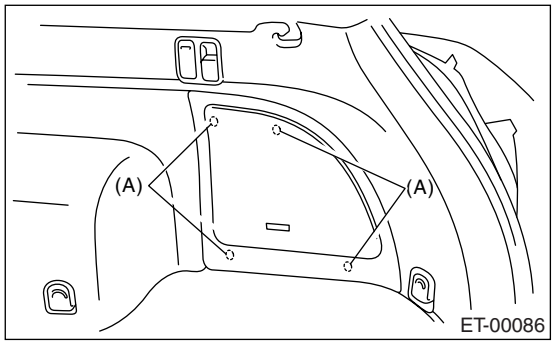


4) Disconnect the harness connector and detach woofer.

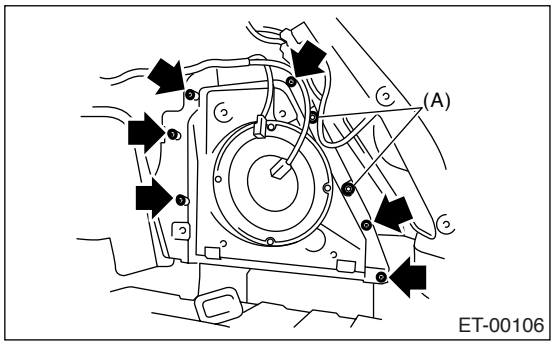
2. WAGON MODEL

NOTE:
Model with McIntosh audio system only.

1) Disconnect the ground cable from battery.
2) Remove the hooks (A) and detach woofer cover. <Ref. to EI-63, REMOVAL, Rear Quarter Trim.>



3) Remove the quarter lower trim. <Ref. to EI-63, REMOVAL, Rear Quarter Trim.>
4) Remove the woofer bracket mounting clips (A) and screws, and then remove the woofer bracket.



5) Disconnect the harness connector and detach woofer.

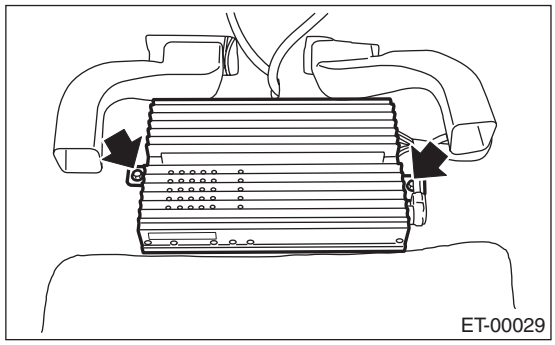
B: INSTALLATION

Install in the reverse order of removal.

10.Power Amplifier

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the passenger's seat. <Ref. to SE-7, REMOVAL, Front Seat.>
3) Disconnect the harness connector.
4) Remove the nuts to remove power amplifier.



B: INSTALLATION

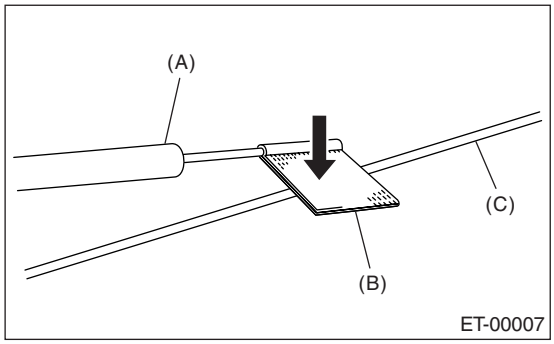
Install in the reverse order of removal.

11.Antenna

A: INSPECTION

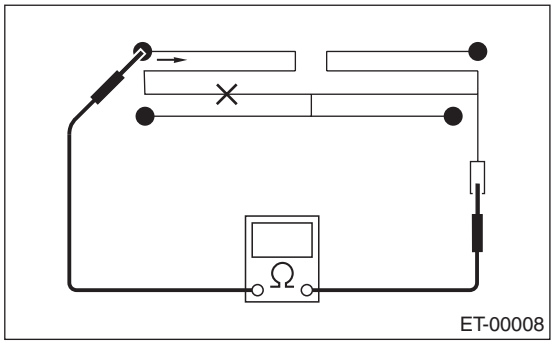
Measure the resistance between antenna terminal and each antenna wire.
If an antenna wire is OK, resistance will be less than 1 Ω. If an antenna wire is broken, resistance will be more than 1 MΩ.

NOTE:
When checking the continuity, wind a piece of aluminum foil around the tip of tester probe and press the foil against wire with your finger.



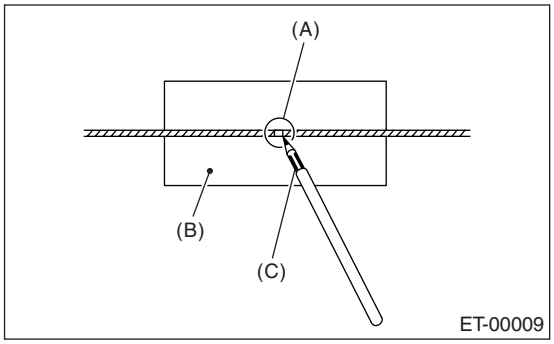
(A) Tester probe
(B) Aluminum foil
(C) Antenna wire

To locate the broken point, move the probe along antenna wire.



B: REPAIR

1) Clean the antenna wire and surrounding area with a cloth dampened by alcohol.
2) Paste a thin masking film on the glass along broken wire.
3) Apply conductive silver composition (DUPONT No. 4817) on the broken portion with a drawing pen.



(A) Broken portion
(B) Masking film
(C) Conductive silver composition

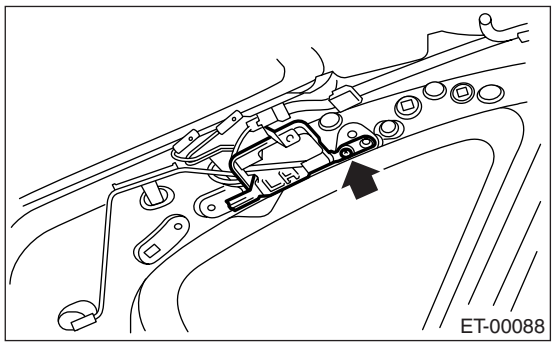
4) Dry out the deposited portion.
5) After repair has been completed, measure the resistance in repaired wire.

12.Antenna Amplifier

A: REMOVAL

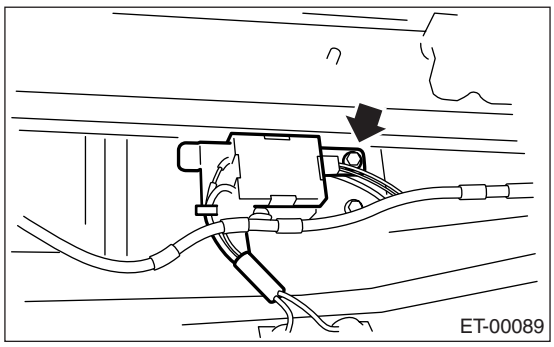
1. SEDAN MODEL

1) Disconnect the ground cable from battery.
2) Remove the rear quarter trim. <Ref. to EI-63, SEDAN MODEL (MODEL WITH CURTAIN AIR-BAG), REMOVAL, Rear Quarter Trim.>
3) Disconnect the harness connectors and terminals.
4) Remove the curtain airbag module. <Ref. to AB-18, REMOVAL, Curtain Airbag Module.>
5) Remove the screw and detach antenna amplifier.



2. WAGON MODEL

1) Disconnect the ground cable from battery.
2) Remove the rear gate trim. <Ref. to EI-69, REMOVAL, Rear Gate Trim.>
3) Disconnect the harness connectors and terminals.
4) Remove the screw and detach antenna amplifier.



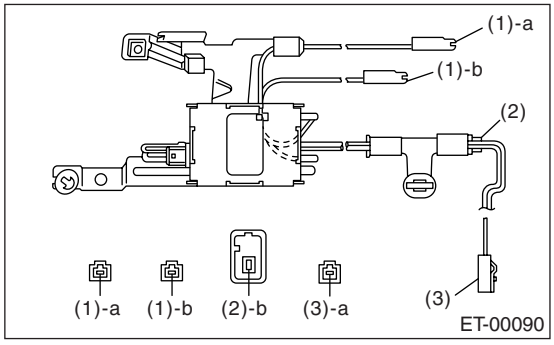
B: INSTALLATION

Install in the reverse order of removal.

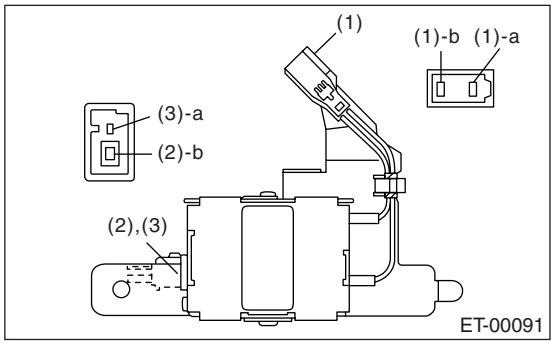
C: INSPECTION

Measure the resistance of antenna amplifier.

- Sedan model



- Wagon model



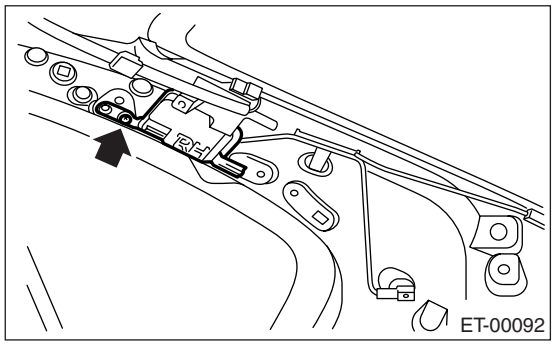
Terminal No.	Standard
1-a and Amplifier body	More than 10 kΩ
1-b and Amplifier body	More than 10 kΩ
2-a and Amplifier body	More than 10 kΩ
3-a and Amplifier body	More than 10 kΩ

13.Noise Suppressor

A: REMOVAL

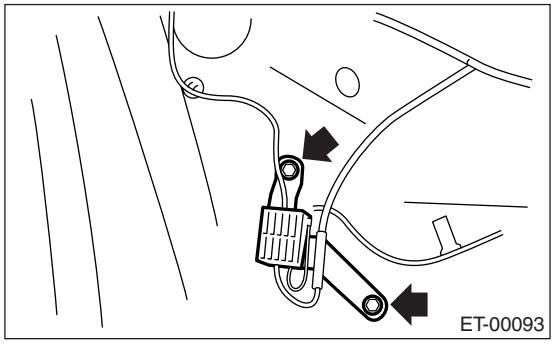
1. SEDAN MODEL

1) Disconnect the ground cable from battery.
2) Remove the rear quarter trim. <Ref. to EI-63, SEDAN MODEL (MODEL WITH CURTAIN AIR-BAG), REMOVAL, Rear Quarter Trim.>
3) Remove the curtain airbag module. <Ref. to AB-18, REMOVAL, Curtain Airbag Module.>
4) Disconnect the harness connector from noise suppressor.
5) Remove the harness clip.
6) Remove the screw and detach noise suppressor.



2. WAGON MODEL

1) Disconnect the ground cable from battery.
2) Remove the rear gate trim. <Ref. to EI-69, REMOVAL, Rear Gate Trim.>
3) Disconnect the harness connector from noise suppressor.
4) Remove the screws and detach noise suppressor.



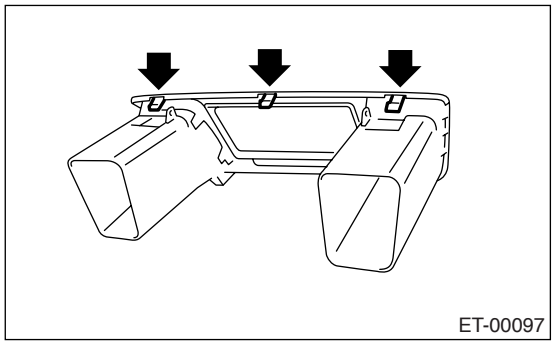
B: INSTALLATION

Install in the reverse order of removal.

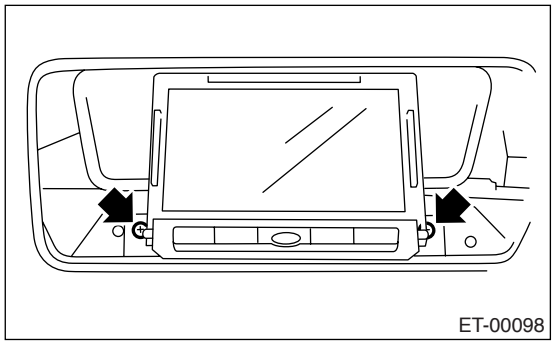
14.Navigation Display

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the clips, and then remove the center upper panel.



3) Remove the display mounting screws.



4) Disconnect the harness connector, and then remove the navigation display.

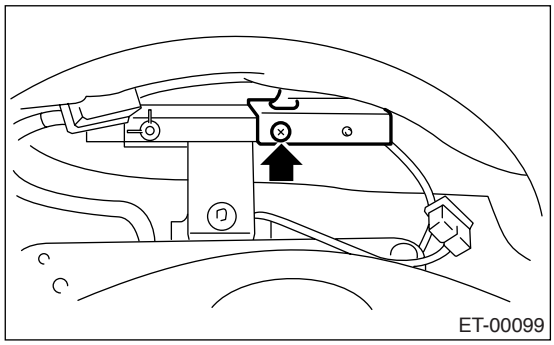
B: INSTALLATION

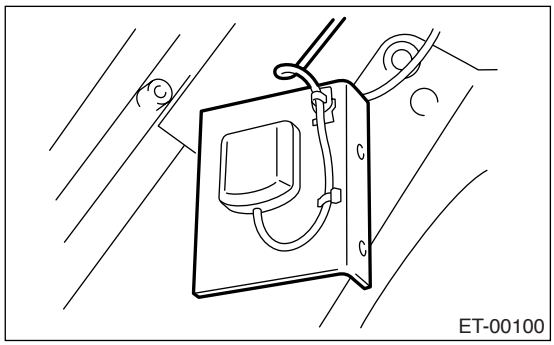
Install in the reverse order of removal.

15.GPS Antenna

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the combination meter. <Ref. to IDI-16, REMOVAL, Combination Meter Assembly.>
3) Remove the GPS antenna mounting screw, and then remove the GPS antenna.





4) Remove the audio. <Ref. to ET-5, REMOVAL, Audio.>
5) Remove the GPS antenna cord connector from steering support beam stay (on the driver's side).

B: INSTALLATION

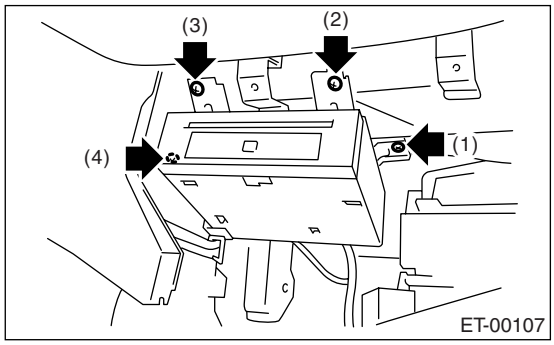
Install in the reverse order of removal.

16.Navigation Body

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the glove box. <Ref. to EI-51, REMOVAL, Glove Box.>
3) Remove the navigation body mounting screws in numerical order and pull it out.

NOTE:
To remove the screw (4) easier, move the navigation body after removing the screw (3).



4) Remove the harness connector and antenna cable, and then remove the navigation body.

B: INSTALLATION

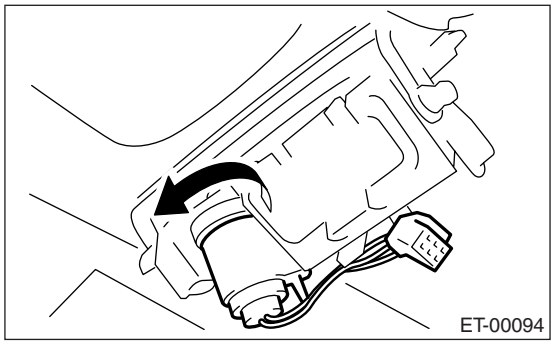
Install in the reverse order of removal.

17.Front Accessory Power Supply Socket

A: REMOVAL

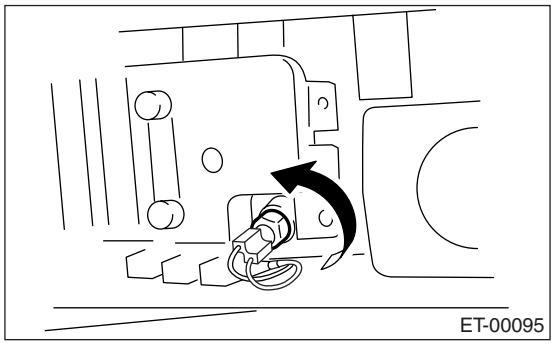
1. FRONT

1) Disconnect the ground cable from battery.
2) Remove the console front panel. <Ref. to EI-54, REMOVAL, Center Console.>
3) Disconnect the harness connector, and remove the accessory power supply socket.



2. REAR

1) Disconnect the ground cable from battery.
2) Remove the console box. <Ref. to EI-53, REMOVAL, Console Box.>
3) Disconnect the harness connector, and remove the accessory power supply socket.



B: INSTALLATION

Install in the reverse order of removal.

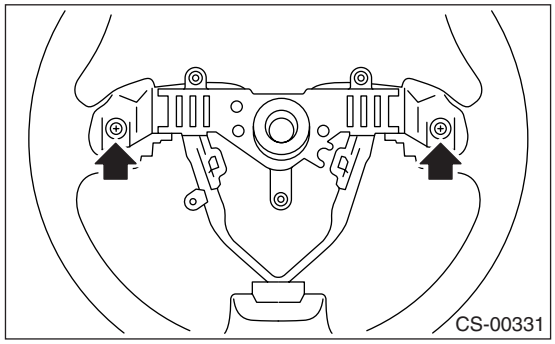
18.Steering Satellite Switch

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Set the tire to the straight-ahead position.
3) Remove the airbag module. <Ref. to AB-14, REMOVAL, Driver's Airbag Module.>

WARNING:
With the airbag module equipped, always refer to "Airbag System" when performing the airbag module repair service. <Ref. to AB-14, INSPECTION, Driver's Airbag Module.>

4) Remove the steering wheel. <Ref. to PS-20, REMOVAL, Steering Wheel.>
5) Remove the cover from steering wheel.
6) Remove each one of satellite switch mounting screw from the LH and RH side.

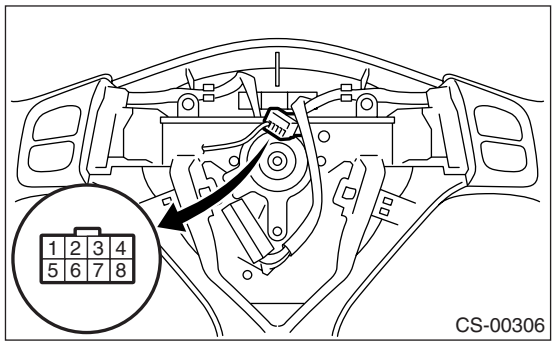


7) Remove the satellite switch.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION



Step		Check	Yes	No
1	**MUTE SWITCH CONTINUITY CHECK.** 1) Press the mute switch. 2) Measure the resistance between satellite switch connector terminals. ***Terminals*** ***No. 7 — No. 6:***	Is the resistance approx. 22 Ω?	Go to step **2.**	Replace the satellite switch.
2	**VOLUME SWITCH CONTINUITY CHECK.** 1) Press the volume switch. 2) Measure the resistance between satellite switch connector terminals. ***Terminals*** ***No. 7 — No. 6: Volume up*** ***No. 7 — No. 6: Volume down***	Is the resistance approx. 90 Ω? (Volume up) Is the resistance approx. 200 Ω? (Volume down)	Go to step **3.**	Replace the satellite switch.
3	**MODE SWITCH CONTINUITY CHECK.** 1) Press the mode switch. 2) Measure the resistance between satellite switch connector terminals. ***Terminals*** ***No. 7 — No. 6:***	Is the resistance approx. 360 Ω?	Go to step **4.**	Replace the satellite switch.
4	**SEEK SWITCH CONTINUITY CHECK.** 1) Press the seek switch. 2) Measure the resistance between satellite switch connector terminals. ***Terminals*** ***No. 7 — No. 6: Seek up*** ***No. 7 — No. 6: Seek down***	Is the resistance approx. 690 Ω? (Seek up) Is the resistance approx. 1.5 kΩ? (Seek down)	Go to step **5.**	Replace the satellite switch.
5	**CHECK SATELLITE SWITCH INSULATION.** 1) Not to operate the satellite switch. 2) Measure the resistance between satellite switch connector terminals. ***Terminals*** ***No. 7 — No. 6:***	Is the resistance approx. 4.7 kΩ?	Satellite switch is normal.	Replace the satellite switch.

BODY SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

1. General Description 2
2. Horn System 3
3. Horn 4
4. Horn Switch 5

1. General Description

A: CAUTION

• Before disassembling or reassembling parts, always disconnect the battery ground cable from battery. When replacing audio, control module, and other parts provided with memory functions, record memory contents before disconnecting the battery ground cable. Otherwise, the memory will be erased.
• Reassemble in reverse order of disassembly, unless otherwise indicated.
• Adjust parts to the given specifications.
• Connect the connectors securely during reassembly.
• After reassembly, make sure functional parts operate smoothly.

B: PREPARATION TOOL

1. GENERAL TOOLS

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.

2. Horn System

A: WIRING DIAGRAM

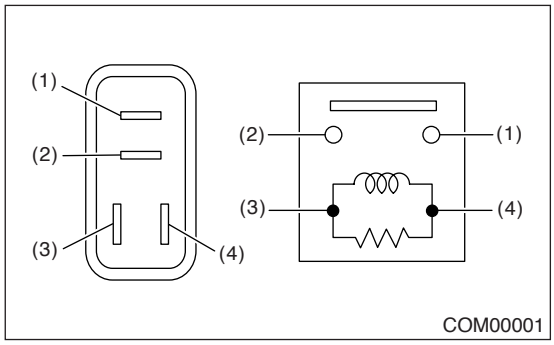
1. HORN

<Ref. to WI-245, WIRING DIAGRAM, Horn System.>

B: INSPECTION

1. HORN RELAY

Measure the horn relay resistance between terminals (indicated in table below) when connecting the terminal No. 4 to battery positive terminal and terminal No. 3 to battery ground cable.

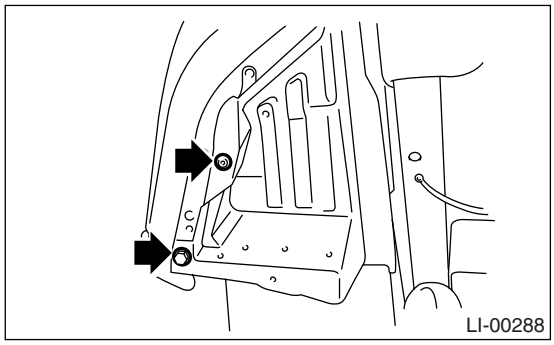


Current	Terminal No.	Standard
Flow	1 and 2	Less than 1 Ω
No Flow		More than 1 MΩ

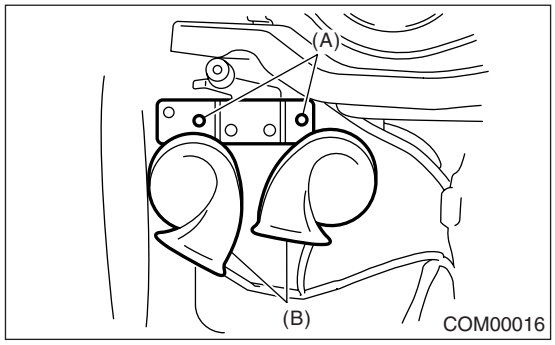
3. Horn

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the two clips and turn up the lower mud guard RH.



3) Remove the horn bracket mounting bolt (A).
4) Disconnect the harness connector and remove the horn assembly (B).

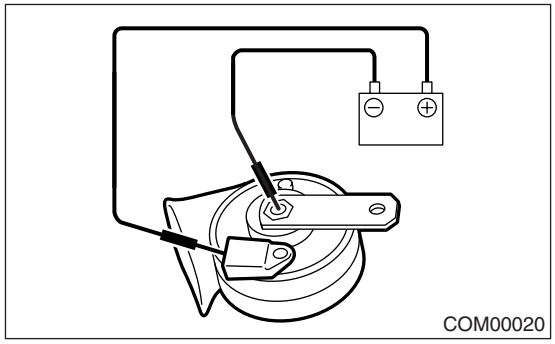


B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

With 12 V direct current supplied between horn terminals, check that the horn sounds properly.



4. Horn Switch

A: REMOVAL

WARNING:
Before servicing, be sure to read the notes in AB section for proper handling of driver's airbag module. <Ref. to AB-4, CAUTION, General Description.>

NOTE:
Horn switch is a unit with the driver's airbag module.

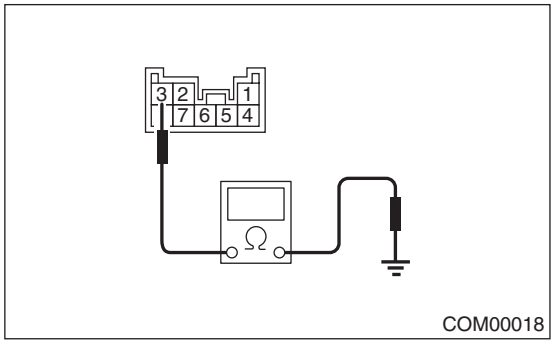
1) Disconnect the ground cable from battery.
2) Remove the driver's airbag module. <Ref. to AB-14, REMOVAL, Driver's Airbag Module.>

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Measure the resistance between horn switch terminal and chassis ground.



Switch position	Terminal No.	Resistance
When horn switch is pushed.	3 and Chassis ground	Less than 1 Ω
When horn switch is not pushed.		More than 1 MΩ

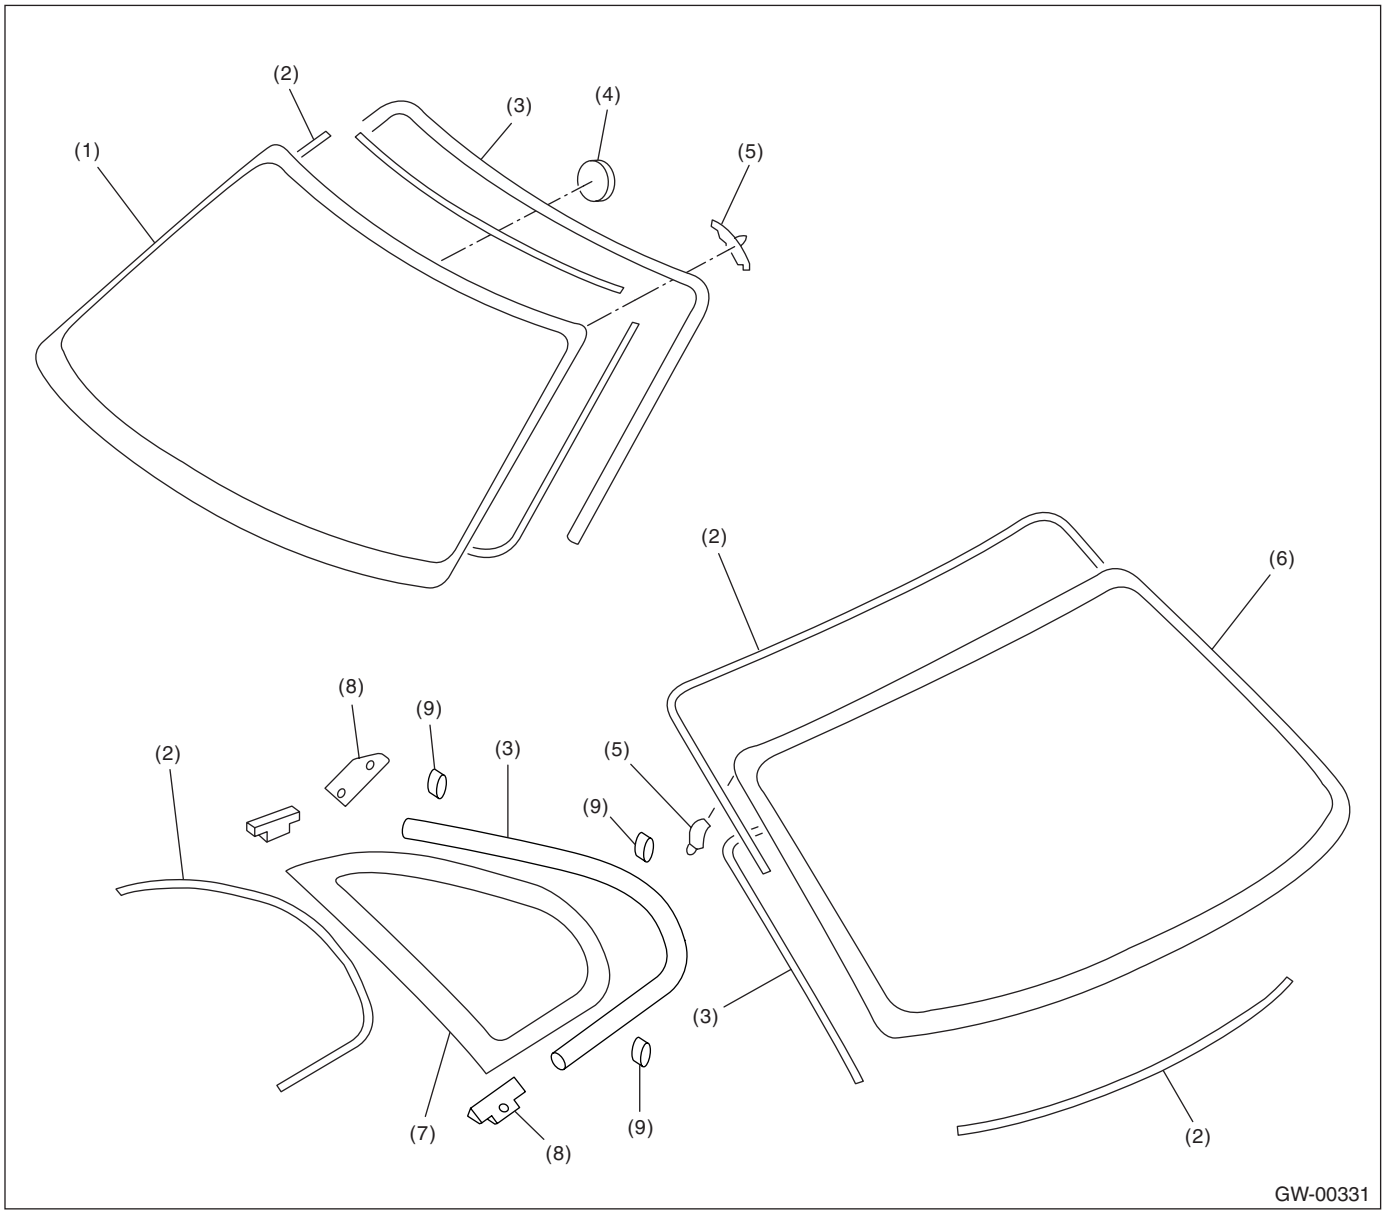
1. General Description

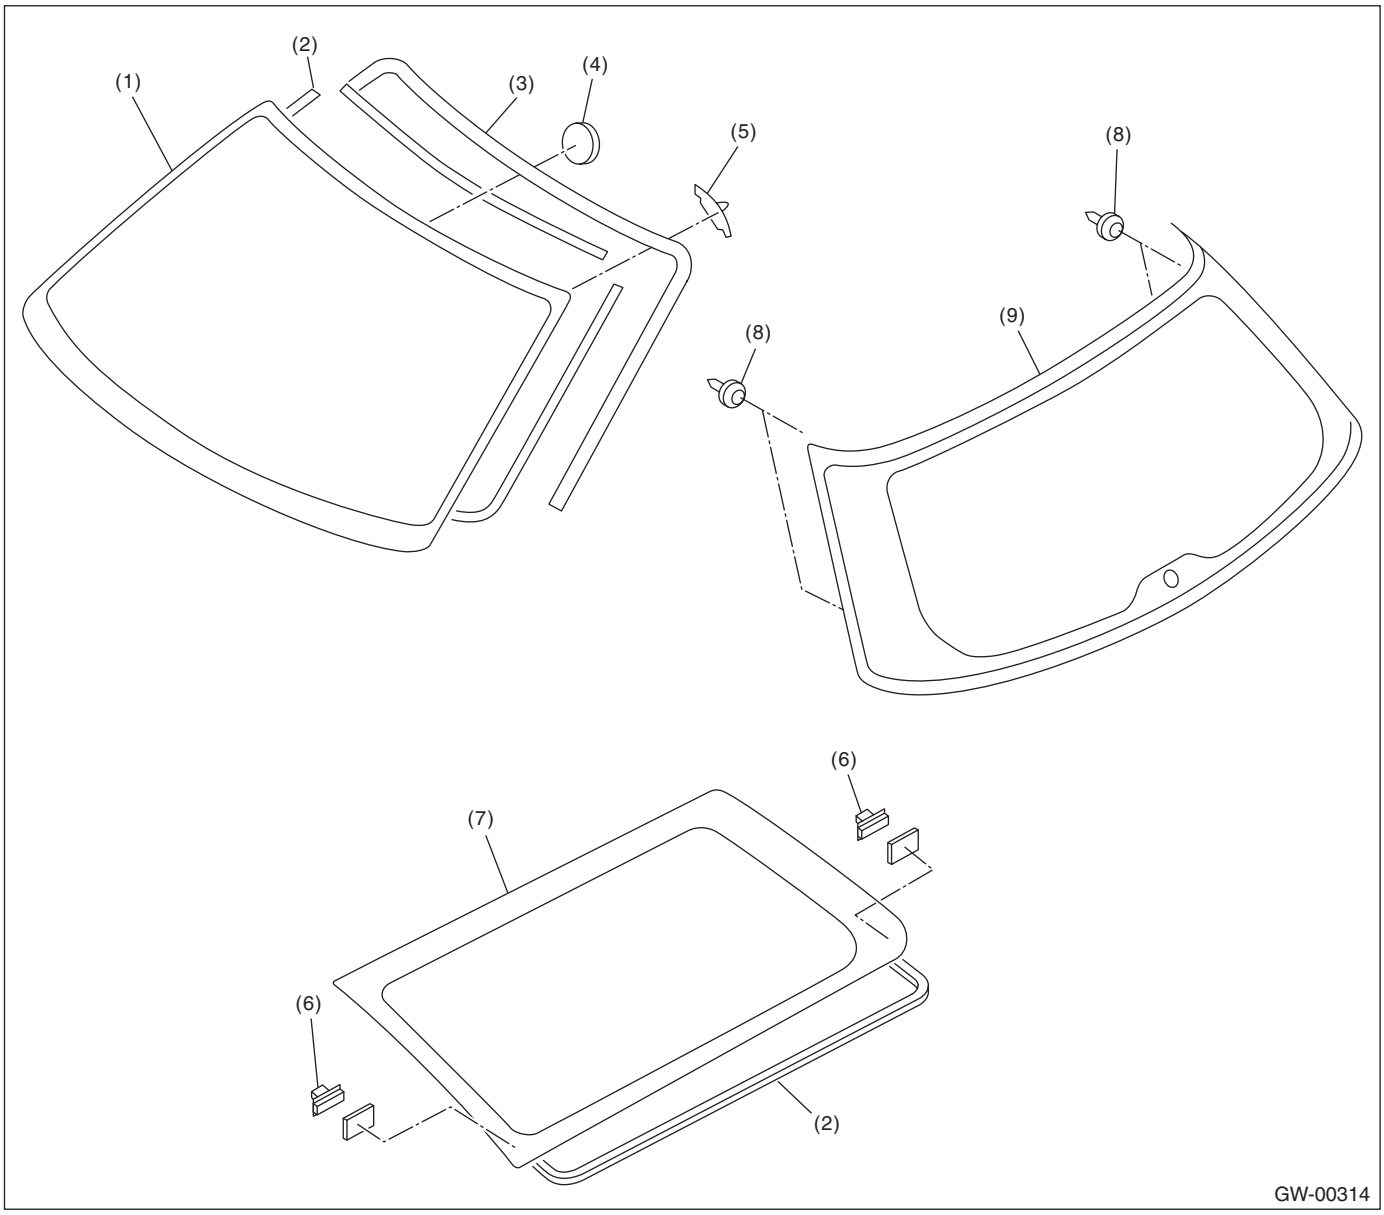
A: COMPONENT

1. FIXED GLASS (SEDAN MODEL)



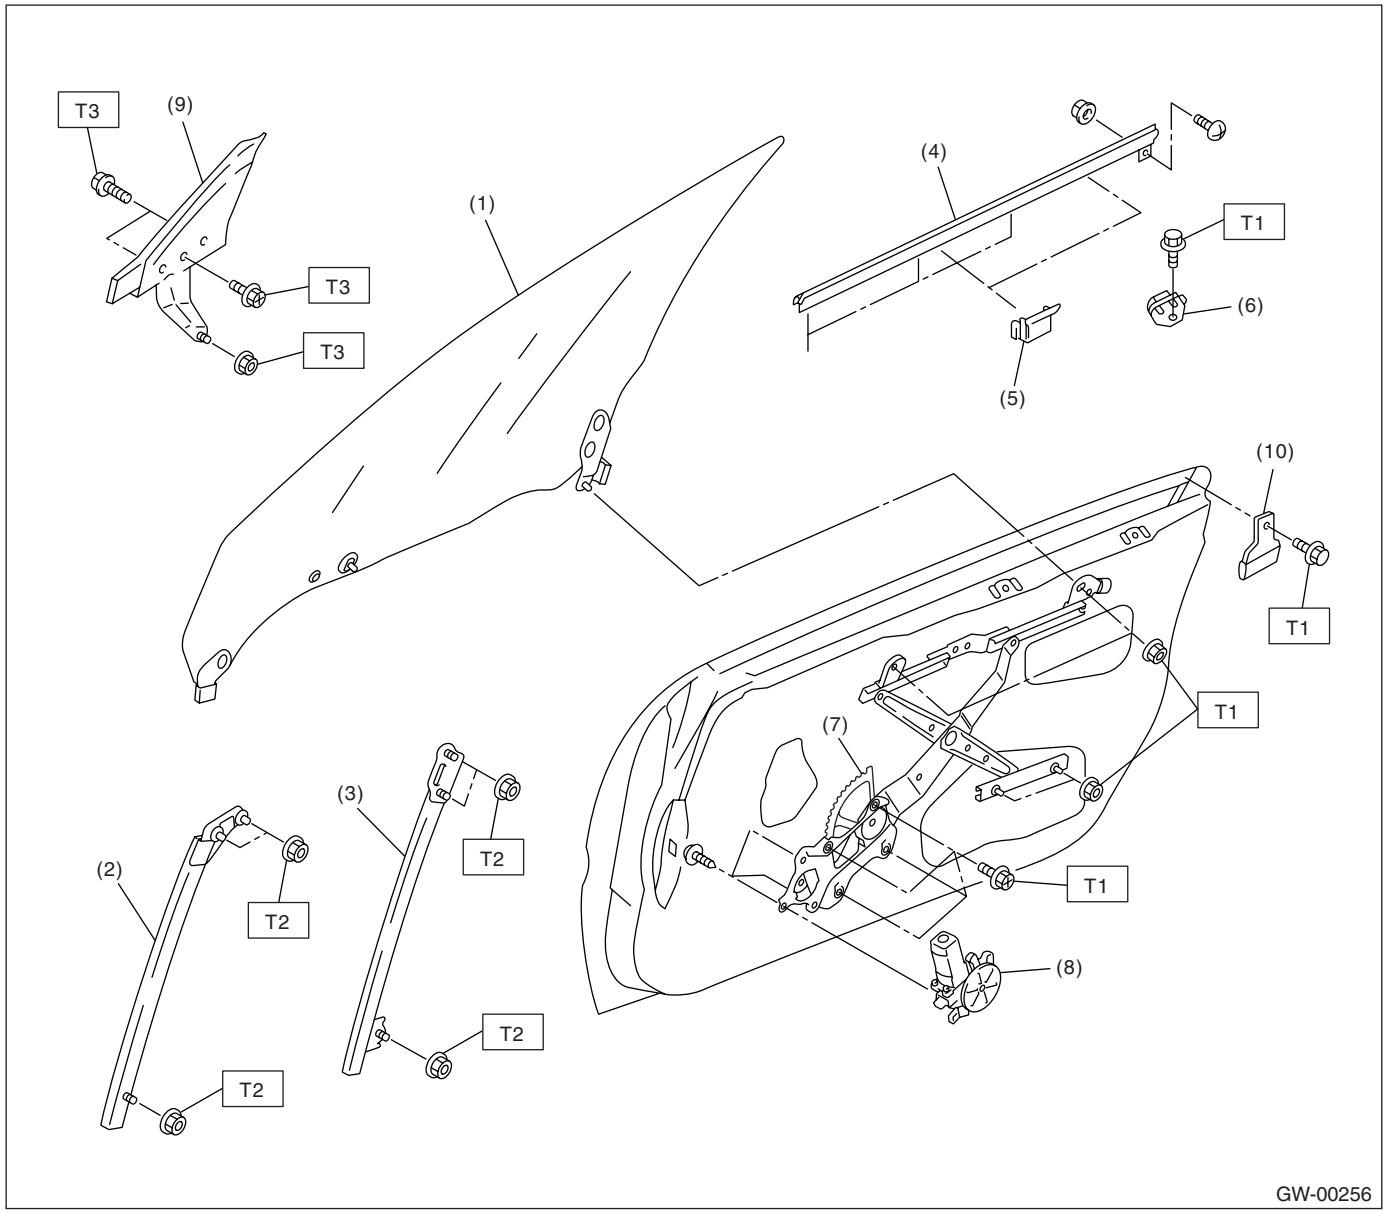
(1) Windshield glass
(2) Dam rubber
(3) Molding
(4) Rearview mirror mount
(5) Locating pin
(6) Rear window glass
(7) Six light glass
(8) Bracket
(9) Clip

2. FIXED GLASS (WAGON MODEL)



(1) Windshield glass
(2) Dam rubber
(3) Molding
(4) Rearview mirror mount
(5) Locating pin
(6) Fastener
(7) Rear quarter glass
(8) Locating pin
(9) Glass

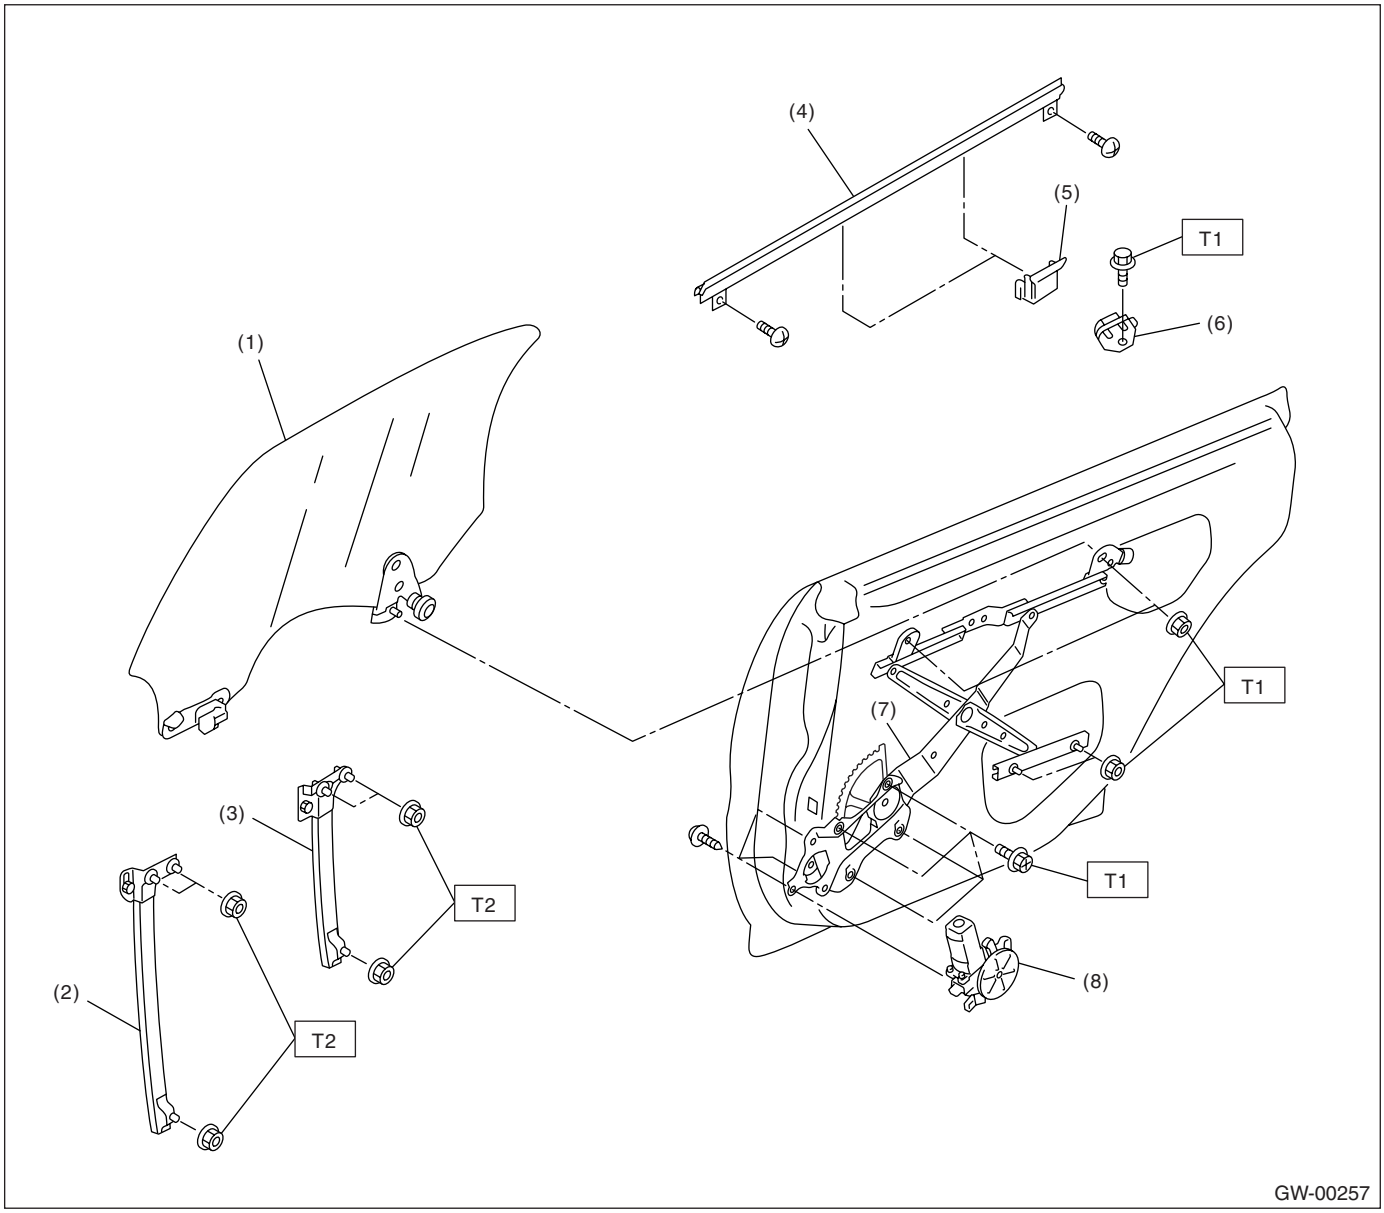
3. FRONT DOOR GLASS



(1)	Glass	(6)	Stabilizer (Inner)
(2)	Door sash (Front)	(7)	Regulator ASSY
(3)	Door sash (Rear)	(8)	Motor ASSY
(4)	Weather strip	(9)	Mirror gusset
(5)	Stabilizer (Outer)	(10)	Guide ASSY

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.4 (0.75, 5.5)
T2: 13.7 (1.4, 10.1)
T3: 5.9 (0.60, 4.4)

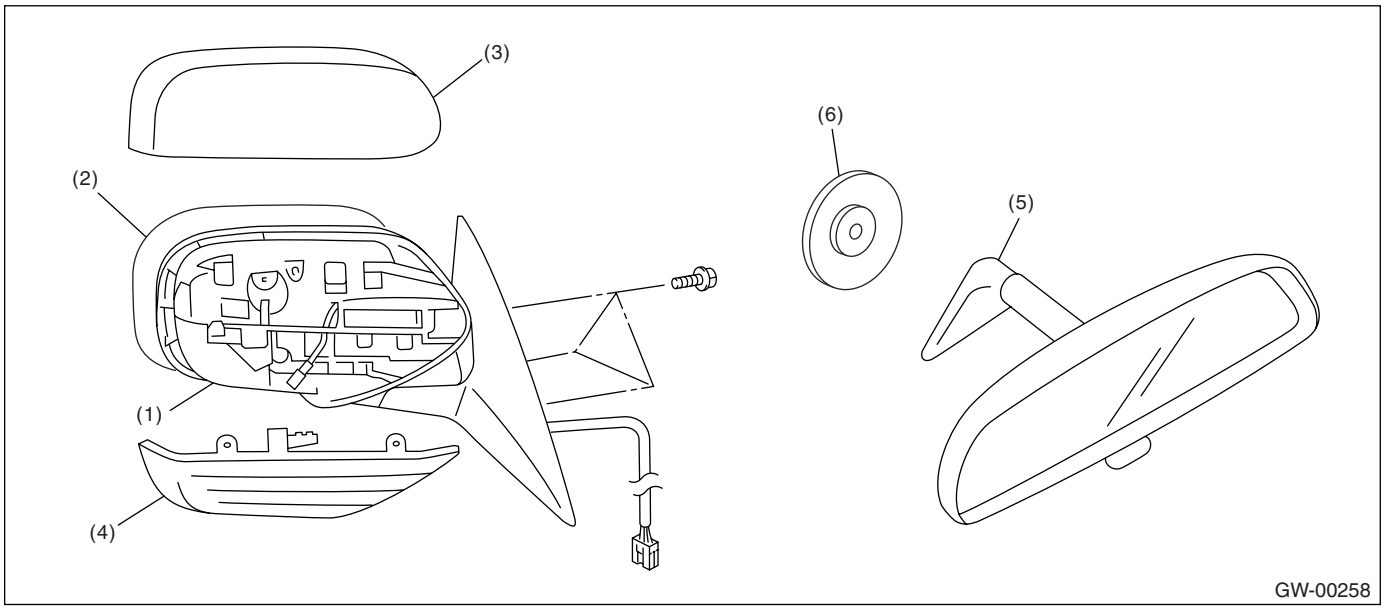
4. REAR DOOR GLASS



(1) Glass
(2) Door sash (Front)
(3) Door sash (Rear)
(4) Weather strip
(5) Stabilizer (Outer)
(6) Stabilizer (Inner)
(7) Regulator ASSY
(8) Motor ASSY

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.4 (0.75, 5.5)
T2: 13.7 (1.4, 10.1)

5. MIRROR



(1) Outer mirror
(2) Mirror
(3) Scalp cap
(4) Side turn signal light
(5) Rearview mirror
(6) Mount

B: CAUTION

• When electrical connectors are disconnected, always conduct an operational check after connecting them again.
• Avoid impact and damage to the glass.

C: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST61299AE000	61299AE000	SPACER	Used for adjusting the upper end position of front door glass. (Glass thickness: 5 mm (0.197 in))
 ST61299AE010	61299AE010	SPACER	Used for adjusting the upper end position of rear door glass. (Glass thickness: 4 mm (0.157 in))

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for checking voltage and continuity.
Piano wire	Used for removing the window glass.
Windshield glass knife	Used for removing the window glass.

2. Power Window System

A: WIRING DIAGRAM

<Ref. to WI-294, Power Window System.>

B: INSPECTION

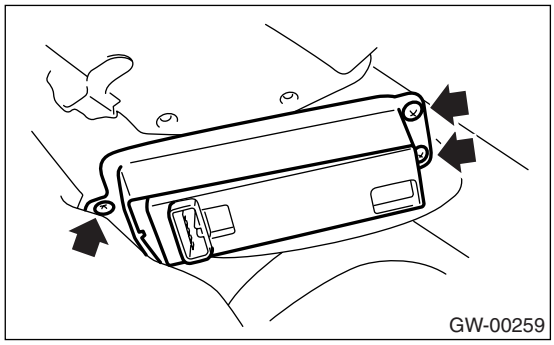
Symptom	Repair order
All power windows do not operate.	(1) Fuse (SBF-5) (2) Power window circuit breaker (3) Power window relay (4) Wiring harness (5) Body integrated unit
One window does not operate.	(1) Power window main switch (2) Power window sub switch (3) Power window motor (4) Wiring harness
“Window Lock” does not operate.	Power window main switch

3. Power Window Control Switch

A: REMOVAL

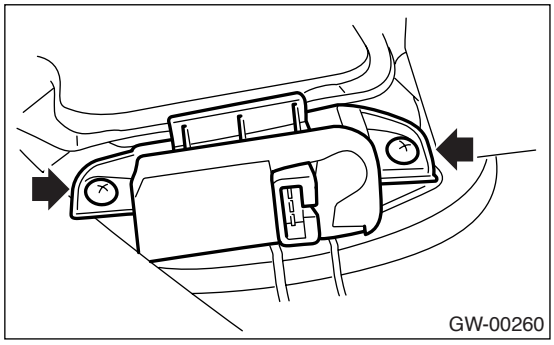
1. MAIN SWITCH

1) Disconnect the ground cable from battery.
2) Remove the front door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Disconnect the harness connector.
4) Remove the screws from the reverse side of front door trim to remove the power window main switch.



2. SUB SWITCH

1) Disconnect the ground cable from battery.
2) Remove the door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Disconnect the connector.
4) Remove the screws from the reverse side of door trim to remove the power window sub switch.



B: INSTALLATION

1. MAIN SWITCH

Install in the reverse order of removal.

2. SUB SWITCH

Install in the reverse order of removal.

C: INSPECTION

1. MAIN SWITCH

Measure switch resistance.
• LHD model

	Switch position	Terminal No.	Standard
Driver's seat	AUTO UP	10 and 2, 7 and 1	Less than 1 Ω
	UP	10 and 2, 7 and 1	Less than 1 Ω
	DOWN	10 and 1, 7 and 2	Less than 1 Ω
	AUTO DOWN	10 and 1, 7 and 2	Less than 1 Ω

• RHD model

	Switch position	Terminal No.	Standard
Driver's seat	AUTO UP	11 and 1, 14 and 2	Less than 1 Ω
	UP	11 and 1, 14 and 2	Less than 1 Ω
	DOWN	11 and 2, 14 and 1	Less than 1 Ω
	AUTO DOWN	11 and 2, 14 and 1	Less than 1 Ω

Replace the main switch if faulty.

2. SUB SWITCH

Measure switch resistance.

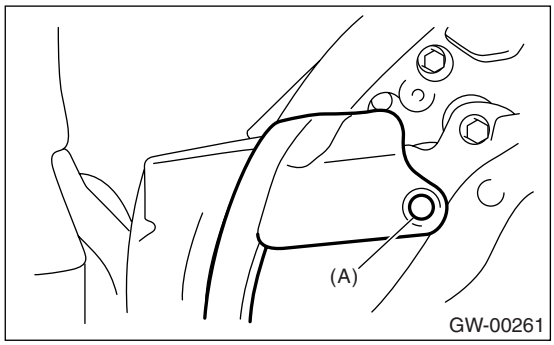
	Switch position	Terminal No.	Standard
Passenger's seat and rear	UP	2 and 3, 4 and 5	Less than 1 Ω
	OFF	1 and 2, 4 and 5	Less than 1 Ω
	DOWN	1 and 2, 3 and 4	Less than 1 Ω

Replace the sub switch if faulty.

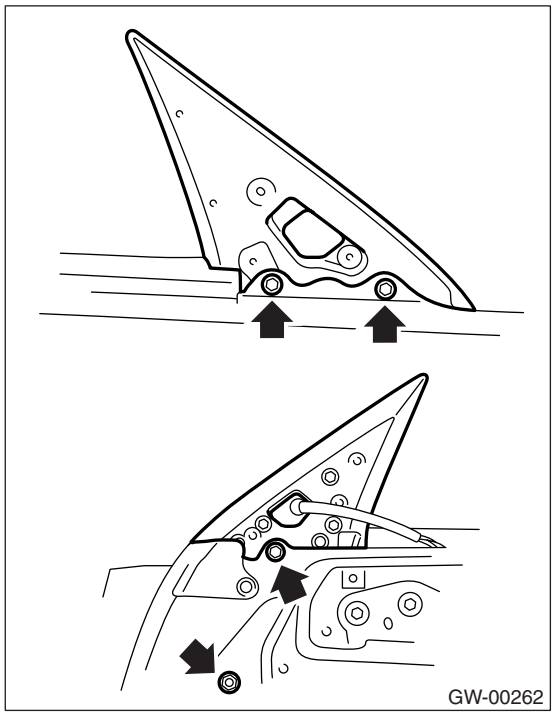
4. Front Door Glass

A: REMOVAL

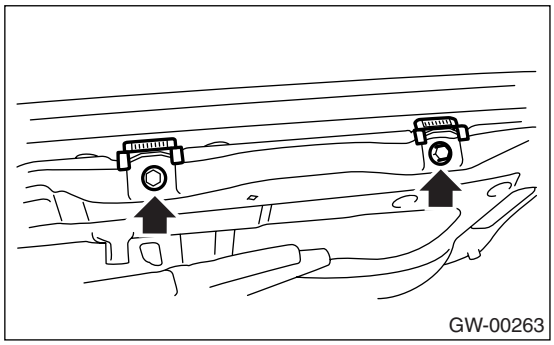
1) Remove the front door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
2) Remove the sealing cover. <Ref. to EB-20, REMOVAL, Front Sealing Cover.>
3) Remove the outer mirror assembly. <Ref. to GW-18, REMOVAL, Outer Mirror Assembly.>
4) Remove the clip (A), and remove the front end of weather strip.



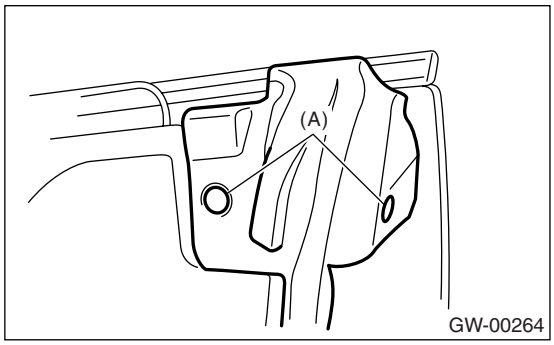
5) Remove the gusset.



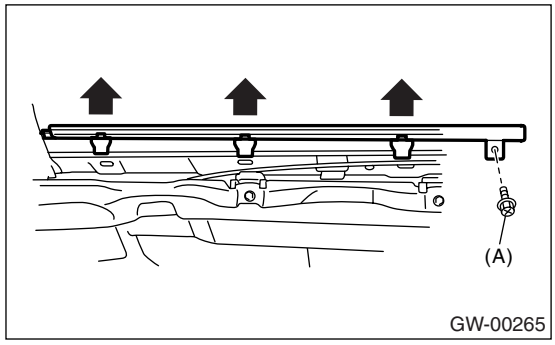
6) Remove the stabilizer.



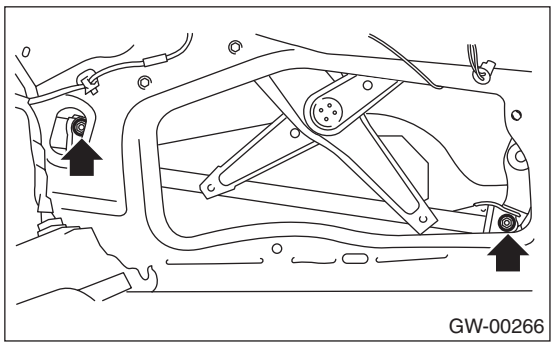
7) Remove the clips (A), and remove the rear end of weather strip.



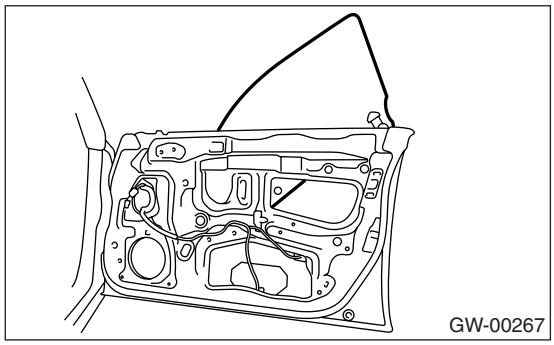
8) Remove the screw (A) from the rear end of weather strip outer to remove weather strip outer.



9) Remove the screws to remove guide assembly.
10) Operate the power window switch to move glass to position shown in the figure, and then remove the two nuts through service holes.



11) Remove the door glass.



CAUTION:
• Since the gear may be disengaged, do not turn regulator in the closing direction after removal of the glass.
• Avoid impact and damage to the glass.

B: INSTALLATION

1) Install in the reverse order of removal.

CAUTION:
Make sure that glass stay is placed securely in sash.

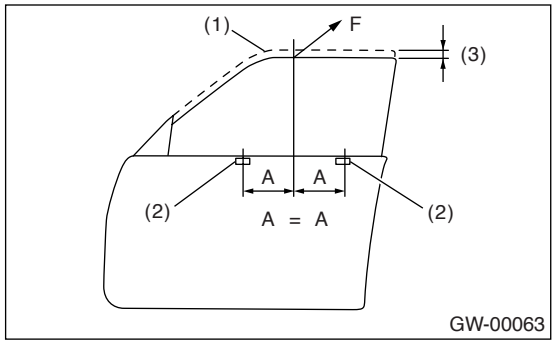
2) Adjust the front door glass. <Ref. to GW-11, ADJUSTMENT, Front Door Glass.>

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to GW-4, FRONT DOOR GLASS, COMPONENT, General Description.>

C: ADJUSTMENT

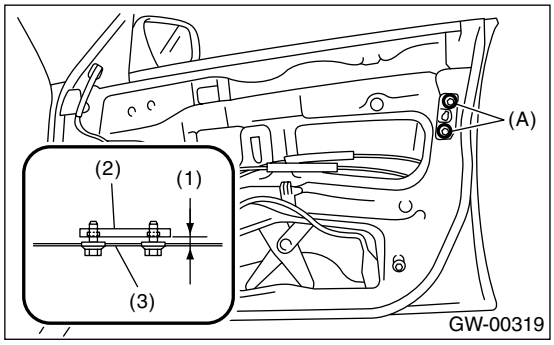
NOTE:
Before adjustment, ensure that all adjusting bolts of stabilizer, upper stopper and sash are loose and door glass is raised so that it is in contact with weather strip.

1) Temporarily tighten one adjusting bolt on one side of rear sash at the midpoint of slotted hole in the inner panel.
2) Temporarily tighten the regulator B-channel in a position at the top of slotted hole.
3) Lower the door glass 10 — 15 mm (0.39 — 0.59 in) from fully closed position. While applying outward pressure of 45.0± 5.0 N (4.5±0.5 kgf, 9.9±1.1 lb) (F) to upper edge of glass above midpoint of two outer stabilizers, press the inner stabilizer at pressure of 25±5 N (2.5±0.5 kgf, 5.5±1.1 lb) to the glass, then secure it.

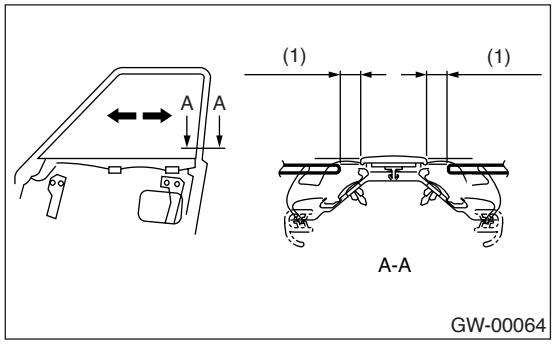


(1) Fully closed position
(2) Stabilizer
(3) 10 — 15 mm (0.39 — 0.59 in)

4) For adjustment of clearance between front glass and center pillar cover, loosen the nuts (A), and move the glass sash back and forward until clearance becomes the value shown.

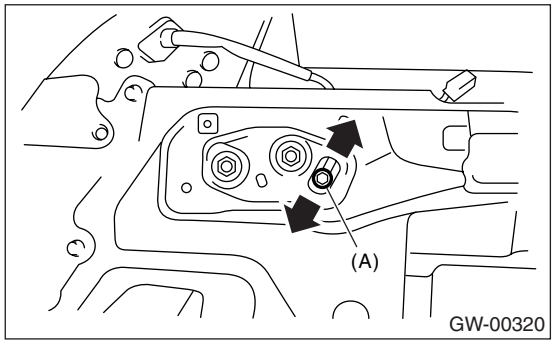


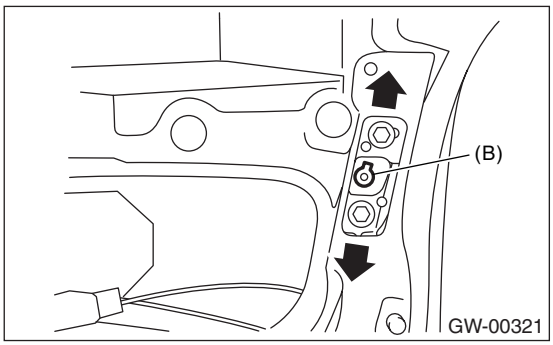
(1) Adjust a line parallel
(2) Sash
(3) Inner panel



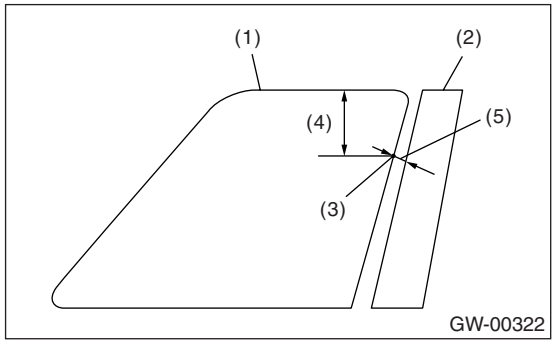
(1) 11 mm (0.433 in)

5) To adjust the upper end and lower end of center pillar, loosen the stopper bolt (A) or nut (B) securing door sash, move the stopper position until the clearance between center pillar cover is equal.



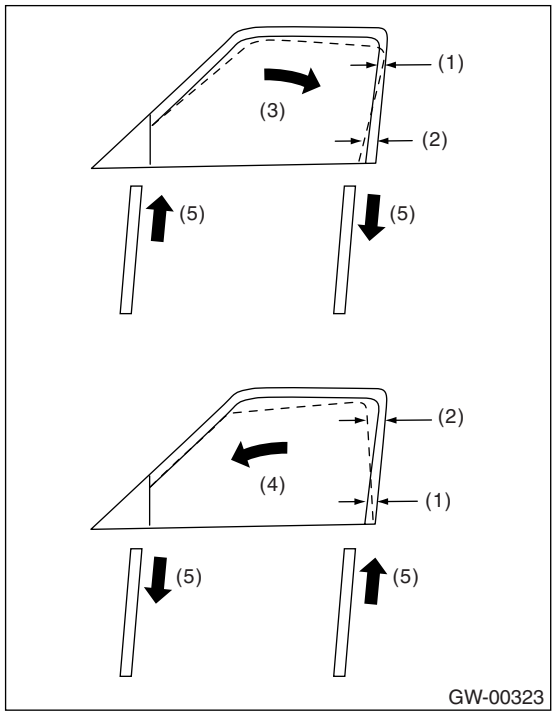


CAUTION:
Perform the measurement of clearance between center pillar at less than 50 mm (1.969 in) from upper end of window glass.



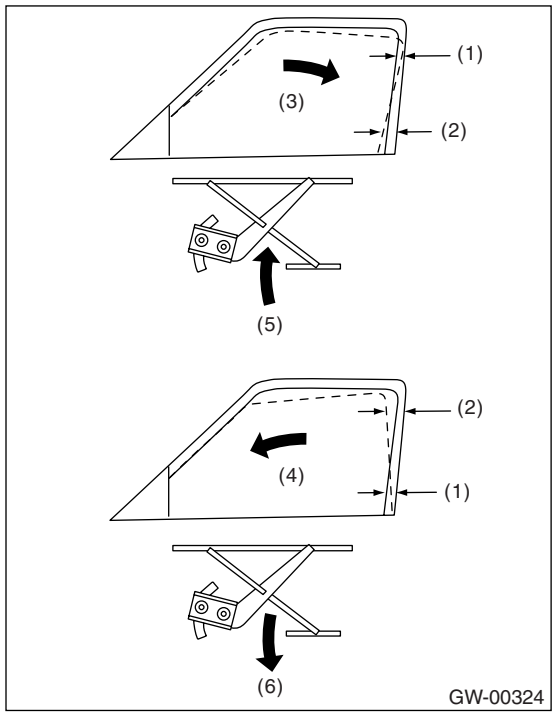
(1) Glass
(2) Center pillar cover
(3) Check point
(4) 50 mm (1.969 in)
(5) 11 mm (0.433 in)

6) Adjust so that the upper and lower ends of center pillar are the same size.



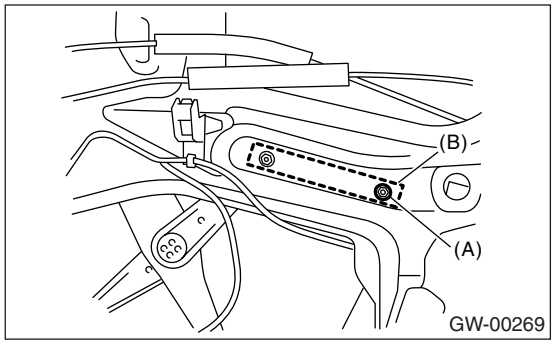
(1) Narrow
(2) Wide
(3) Glass tilts too far rearward
(4) Glass tilts too far forward
(5) Stopper adjusting direction

7) After adjusting the clearance between center pillar, up and down the glass several times to check glass contact to stopper when glass is fully closed. Adjust it to contact the front and rear stopper simultaneously.



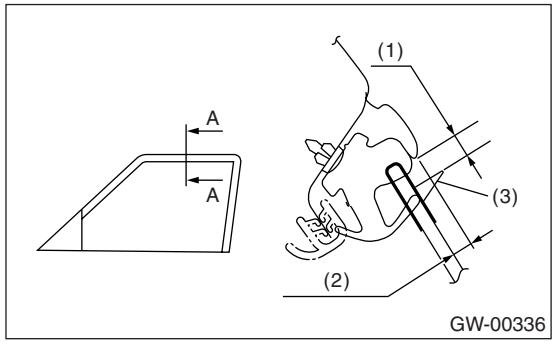
(1) Narrow
(2) Wide
(3) When the stopper of door sash (rear) contacts first
(4) When the stopper of door sash (front) contacts first
(5) Raise B channel
(6) Lower B channel

8) For adjustment of the upper and lower ends of center pillar, loosen the adjusting nut (A) of B-channel (B).



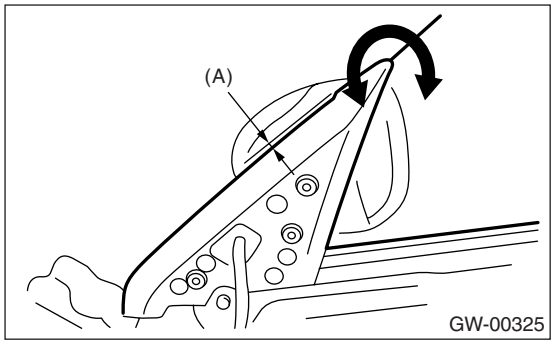
9) For glass stroke adjustment, install the ST to glass, close the door, and raise the glass with regulator until positional relationship between glass and weather strip becomes as shown. And secure the glass so that the upper stopper correctly touches the glass holder.

ST 61299AE000 SPACER
(Glass thickness: 5 mm (0.197 in) for front door glass)



(1) 3.2 — 4.8 mm (0.126 — 0.189 in)
(2) 7 mm (0.276 in)
(3) ST

For preventing wind noise, adjust the glass at the position where tip of gusset is raised up a little.

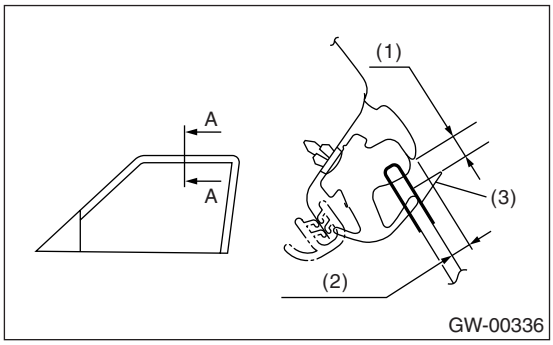


(A) 0 — 1.5 mm (0 — 0.059 in)

10) After stabilizer adjustment, carry out the glass cohesion adjustment. First, visually ensure the positional relationship between retainer & molding and glass of the roof side, and then begin with rear sash adjustment. Install the ST to glass and adjust two adjusting bolts alternately step by step to obtain dimensions shown below (cross-section A).

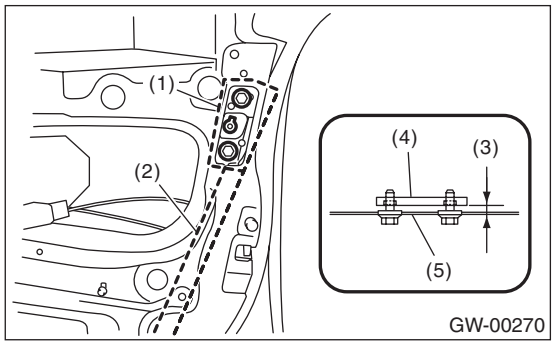
NOTE:
If two nuts are loosened at the same time, the sash moves back and forth. Therefore, when one nut is adjusted, secure the other.

11) Make the same adjustment of two adjusting bolts of rear sash.
ST 61299AE000 SPACER
(Glass thickness: 5 mm (0.197 in) for front door glass)



(1) 3.2 — 4.8 mm (0.126 — 0.189 in)
(2) 7 mm (0.276 in)
(3) ST

NOTE:
Do not tilt the sash bracket to inner panel during adjustment. Otherwise smooth regulator operation cannot be achieved.

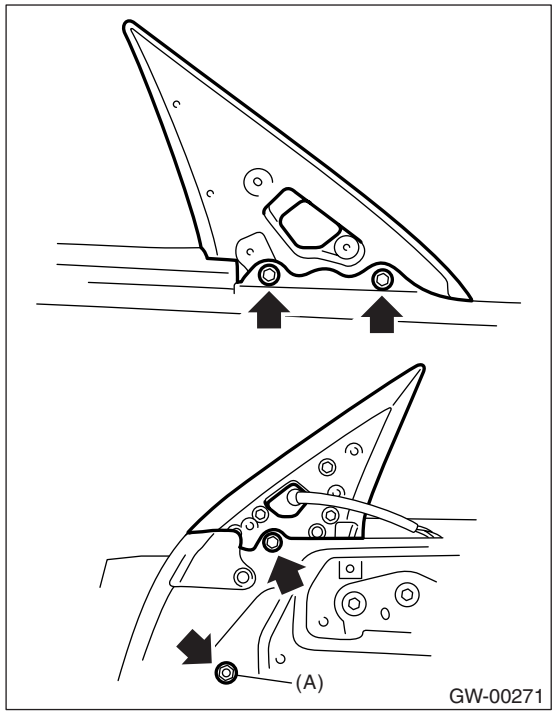


(1) Sash bracket
(2) Rear sash
(3) Adjust a line parallel
(4) Sash
(5) Inner panel

12) Make adjustment of front sash in the same manner as that of rear sash.

NOTE:
Although front and rear sashes must, as a rule, be adjusted in the same manner, in some door installation, the adjustment in a different manner may be required. However, adjustment of one sash to the maximum amount and the other to the minimum amount is not permitted. Such adjustment may result in application of excessive load to regulator.

13) After adjustments, tighten the nuts.
14) After adjustment of the glass, close the door. If there is a gap between outer lip of gusset and glass surface, adjust the gap with adjusting bolt (A) in lower fitting part of gusset to prevent generation of wind noise.
15) During adjustment, loosen the other three clamping bolts.

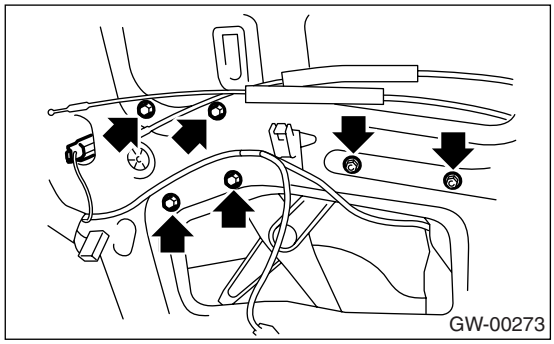


16) After adjustment, tighten the bolts and nuts.

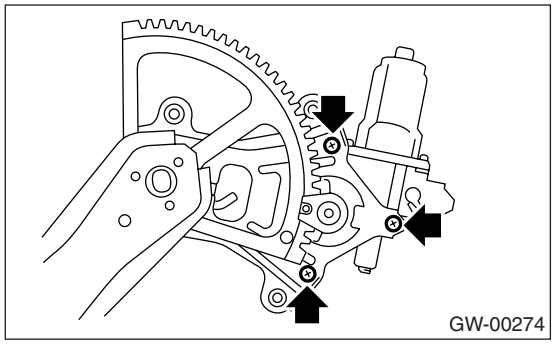
5. Front Regulator and Motor Assembly

A: REMOVAL

1) Remove the door glass. <Ref. to GW-10, REMOVAL, Front Door Glass.>
2) Disconnect the motor connector.
3) Remove the four bolts and two nuts to remove regulator assembly.



4) Remove the screws to remove motor assembly.



NOTE:
When removing the motor assembly, secure the arm correctly, because the regulator arm moves in the force of balancing spring.

B: INSTALLATION

1) Install in the reverse order of removal.
2) Adjust the front door glass. <Ref. to GW-11, ADJUSTMENT, Front Door Glass.>

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to GW-4, FRONT DOOR GLASS, COMPONENT, General Description.>

C: INSPECTION

1) Make sure that the power window motor rotates properly when the battery voltage is applied to the terminals of motor connector.
2) Change polarity of battery connection to terminals to ensure that the motor rotates in reverse direction.

6. Remote Control Mirror System

A: WIRING DIAGRAM

<Ref. to WI-306, Remote Control Mirror System.>

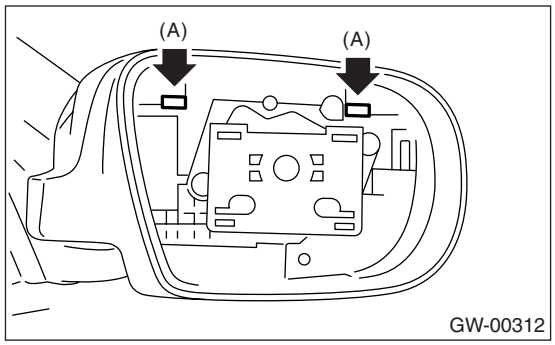
B: INSPECTION

Symptom	Repair order
All function does not operate.	(1) Fuse (F/B No. 6) (2) Mirror switch (3) Wiring harness
One side of the mirror motor does not operate.	(1) Mirror switch (2) Mirror motor (3) Wiring harness
Mirror heater does not operate.	(1) Mirror switch (2) Mirror heater (3) Wiring harness

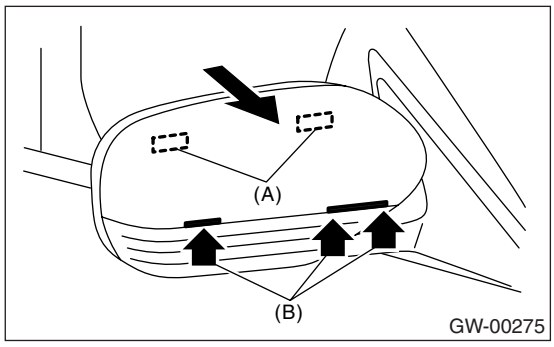
7. Scalp Cap

A: REPLACEMENT

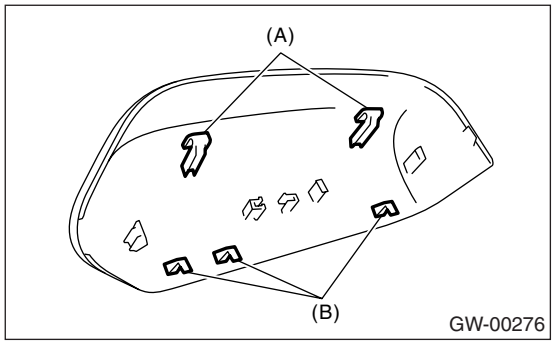
1) Remove the outer mirror. <Ref. to GW-19, REPLACEMENT, Outer Mirror.>
2) Press-in the upper side clips (A) from inside of door mirror.



3) Pull the scalp cap frontward of door mirror, remove the upper side clips (A) and lower side hooks (B), and then remove the scalp cap.



4) Insert the lower hooks (B) of scalp cap to door mirror and push the upper clips (A) in.



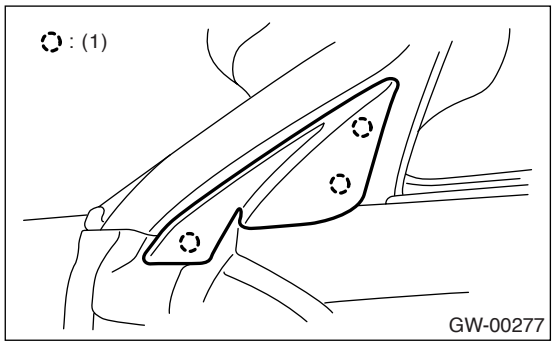
5) Install the scalp cap securely.

CAUTION:
Do not remove the scalp cap forcibly. The lower hooks may be damaged.

8. Outer Mirror Assembly

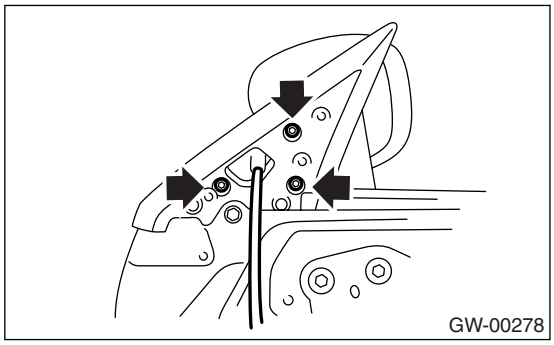
A: REMOVAL

1) Remove the mirror gusset cover.



(1) Hook

2) Remove the door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Disconnect the mirror connector.
4) Remove the screws to remove mirror assembly.



B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Check that the rearview mirror moves properly when the battery voltage is applied to terminals.

- Model without mirror heater

Switch position	Terminal No.
OFF	—
UP	6 (+) and 3 (–) or 8 (–)
DOWN	3 (+) or 8 (+) and 6 (–)
LEFT	7 (+) and 3 (–) or 8 (–)
RIGHT	3 (+) or 8 (+) and 7 (–)

- Model with mirror heater

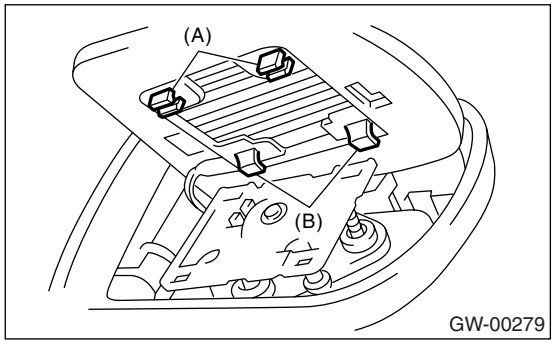
Switch position	Terminal No.
OFF	—
UP	7 (+) and 3 (–) or 9 (–)
DOWN	3 (+) or 9 (+) and 7 (–)
LEFT	8 (+) and 3 (–) or 9 (–)
RIGHT	3 (+) or 9 (+) and 8 (–)

Replace the outer mirror assembly if defective.

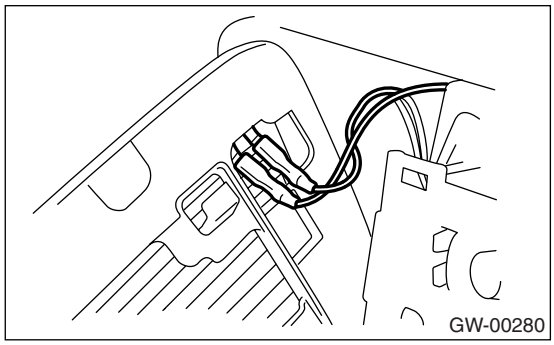
9. Outer Mirror

A: REPLACEMENT

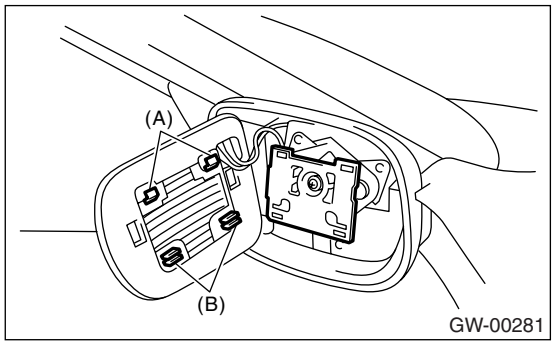
1) Face the mirror upward.
2) Use a flat tip screwdriver to remove clip (A).
3) Lift the lower mirror up to remove hooks (B).



4) Disconnect the mirror heater connector from the end of mirror. (Model with mirror heater)



5) Catch the hooks (A) and install clips (B).

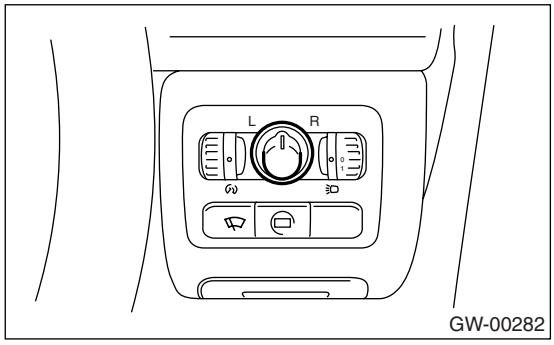


CAUTION:
• When removing the mirror, be careful not to damage the back side of mirror with a flat tip screwdriver.
• When installing the mirror, insert the hook and clip securely.

10. Remote Control Mirror Switch

A: REMOVAL

1) Remove the instrument panel lower cover. <Ref. to EI-50, REMOVAL, Instrument Panel Lower Cover.>
2) Disconnect the connector.



3) Remove the remote control mirror switch from instrument panel lower cover.

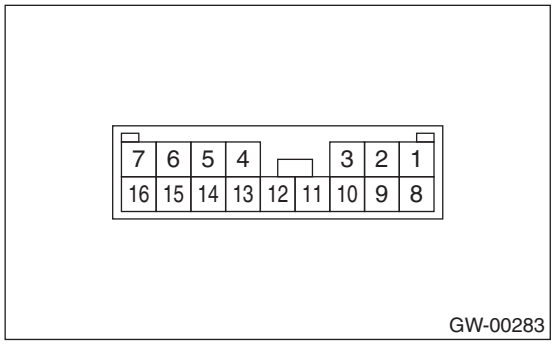
B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

1. REMOTE CONTROL MIRROR SWITCH

Move the remote control mirror switch to each position and check continuity between terminals.



• Change over switch R

Switch position	Terminal No.	Standard
OFF	—	More than 1 MΩ
UP	10 and 12, 15 and 14	Less than 1 Ω
DOWN	10 and 15, 12 and 14	Less than 1 Ω
LEFT	10 and 11, 15 and 14	Less than 1 Ω
RIGHT	10 and 15, 11 and 14	Less than 1 Ω

• Change over switch L

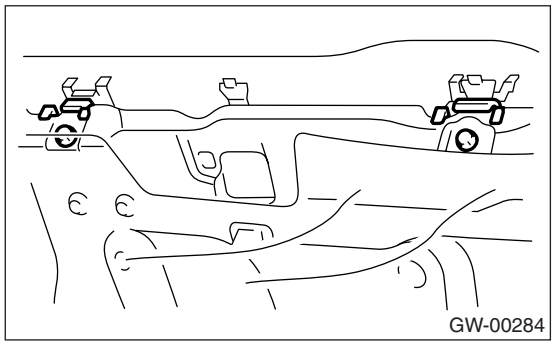
Switch position	Terminal No.	Standard
OFF	—	More than 1 MΩ
UP	10 and 8, 15 and 14	Less than 1 Ω
DOWN	10 and 15, 8 and 14	Less than 1 Ω
LEFT	10 and 9, 15 and 14	Less than 1 Ω
RIGHT	10 and 15, 9 and 14	Less than 1 Ω

Replace the remote control mirror switch if defective.

11.Rear Door Glass

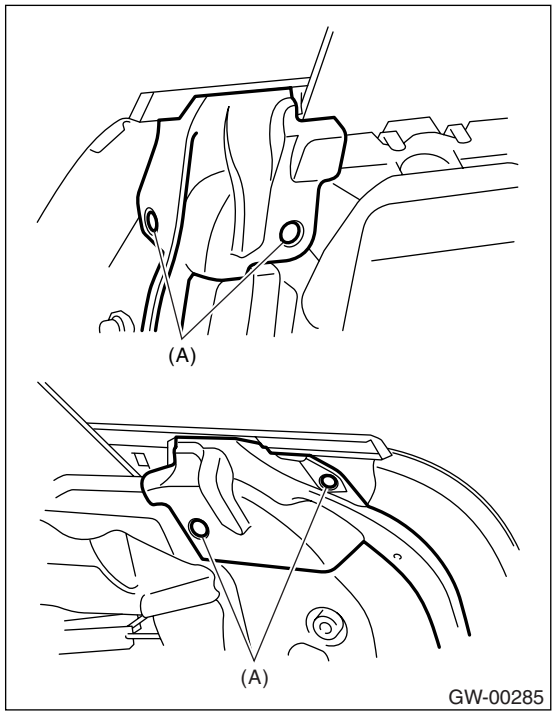
A: REMOVAL

1) Remove the rear door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
2) Remove the sealing cover. <Ref. to EB-24, REMOVAL, Rear Sealing Cover.>
3) Remove the stabilizer.



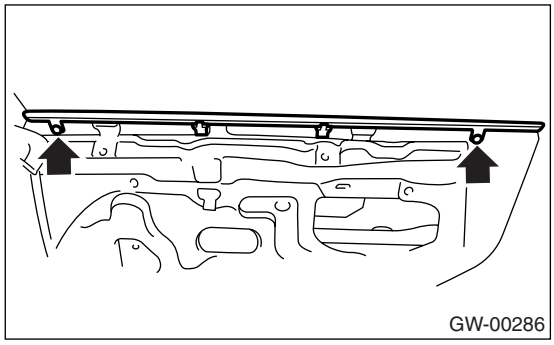
GW-00284

4) Remove the clips (A), and remove the front end and rear end of weather strip.



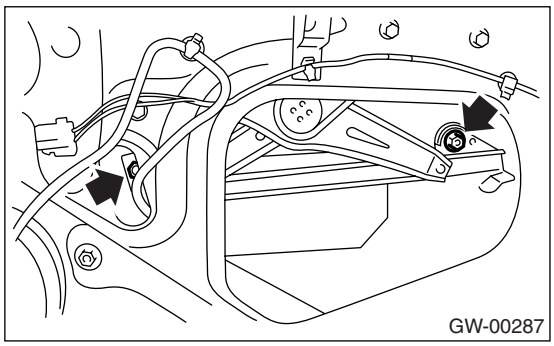
GW-00285

5) Loosen the two screws to remove weather strip outer.



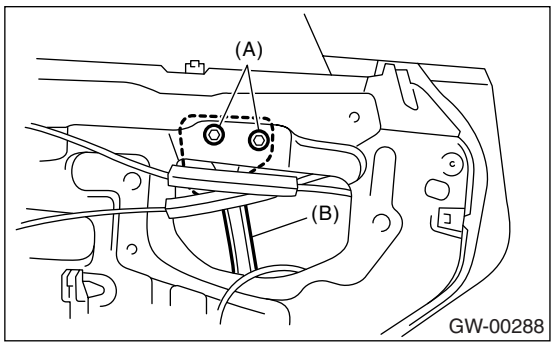
GW-00286

6) Operate the power window switch to move the glass to position shown in the figure, and then remove the two nuts through service holes.



GW-00287

7) Remove the rear sash retaining nuts (A) and move rear sash (B) backward.



GW-00288

8) Remove the door glass.

CAUTION:
• Since the gear may be disengaged, do not turn regulator in the closing direction after removal of the glass.
• Avoid impact and damage to the glass.

B: INSTALLATION

1) Install in the reverse order of removal.

CAUTION:
Make sure that glass stay is placed securely in sash.

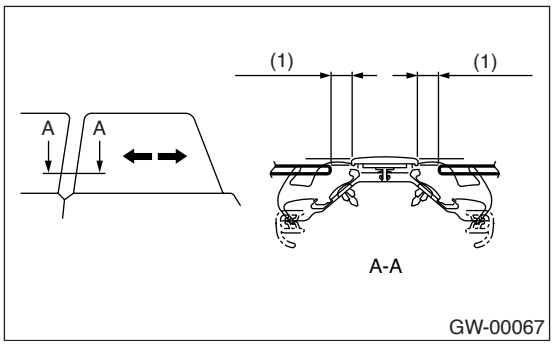
2) Adjust the rear door glass. <Ref. to GW-23, ADJUSTMENT, Rear Door Glass.>

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to GW-5, REAR DOOR GLASS, COMPONENT, General Description.>

C: ADJUSTMENT

NOTE:
The rear door glass, as a rule, should be adjusted in the same manner as front door glass, although they are different in dimension. <Ref. to GW-11, ADJUSTMENT, Front Door Glass.>

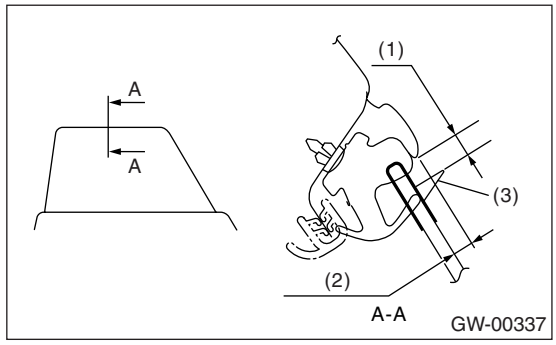
1) Adjust the glass position using the following dimensions as a guide line.



(1) 11 mm (0.433 in)

NOTE:
• If dimensions are smaller than the given dimensions, glass may get caught in weather strip during lifting/lowering operation and may not be fully open.
• After adjustment, move the glass up and down to check whether it is caught.

2) Install the ST to glass and adjust the glass adhesion to the value shown.
ST 61299AE010 SPACER
(Glass thickness: 4 mm (0.157 in) for rear door glass)



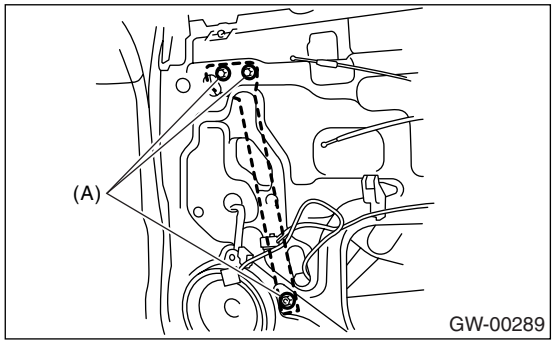
(1) 3.2 — 4.8 mm (0.126 — 0.189 in)
(2) 7 mm (0.276 in)
(3) ST

NOTE:
• If rear glass adhesion is higher than necessary, glass may get caught in weather strip of center pillar corner, resulting in early wear of weather strip. Care should be taken for adjustment.
• After adjustment, move the glass up and down to check whether it is caught.

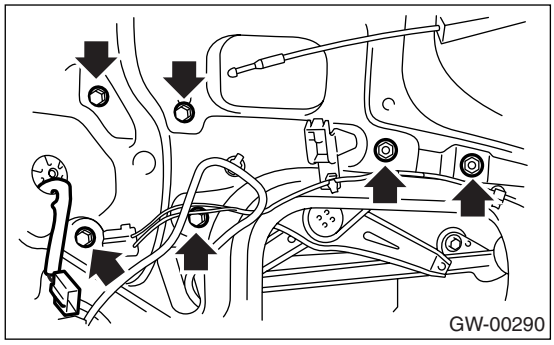
12. Rear Regulator and Motor Assembly

A: REMOVAL

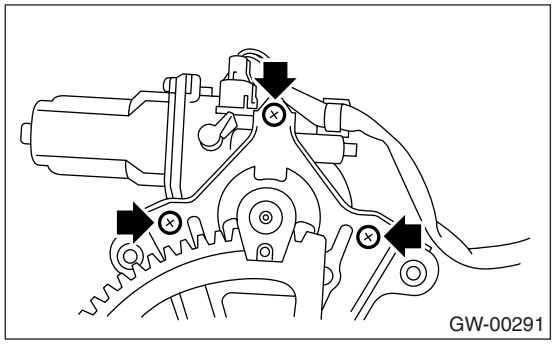
1) Remove the rear door glass. <Ref. to GW-22, REMOVAL, Rear Door Glass.>
2) Remove the nut (A) to remove front sash.



3) Disconnect the motor connector.
4) Remove the four bolts and two nuts to remove regulator assembly.



5) Remove the screws to remove motor assembly.



B: INSTALLATION

1) Install in the reverse order of removal.
2) Adjust the rear door glass. <Ref. to GW-23, ADJUSTMENT, Rear Door Glass.>

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to GW-5, REAR DOOR GLASS, COMPONENT, General Description.>

C: INSPECTION

1) Make sure that the power window motor rotates properly when the battery voltage is applied to the terminals of motor connector.
2) Change polarity of battery connection to terminals to ensure that the motor rotates in reverse direction.

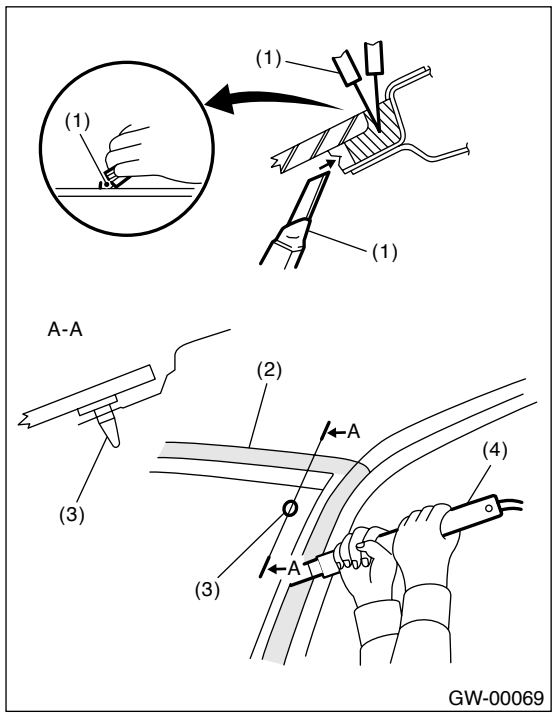
13.Windshield Glass

A: REMOVAL

1. USING WINDSHIELD GLASS KNIFE

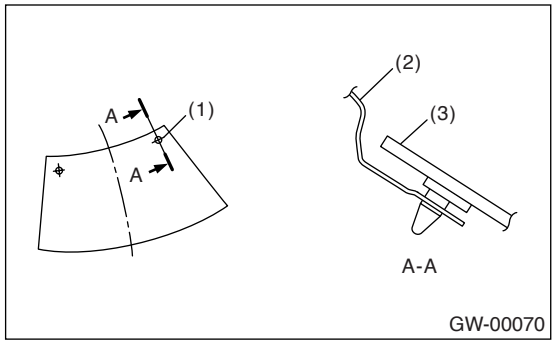
1) Remove the cowl panel. <Ref. to EI-39, REMOVAL, Cowl Panel.>
2) Remove the glass molding.
3) Tape the body side of the circumference of windshield glass for protection.
4) Apply sufficient amount of soapy water to the adhesive part.
5) Insert the windshield glass knife into adhesive part.
6) While holding the knife edge and windshield glass edge at a right angle, move the windshield glass knife in parallel to the windshield glass edge along face and edge of windshield glass to cut the adhesive part.

NOTE:
• Do not twist windshield glass knife.
• Cutting of adhesive part shall be started with wider gap between windshield glass and body.



(1) Putty knife
(2) Tape for protection
(3) Locating pin
(4) Windshield glass knife

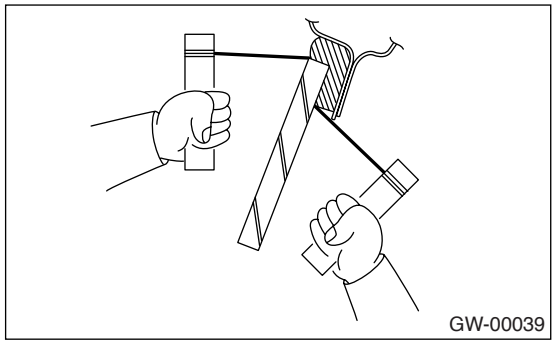
• Because the locating pins are bonded to the corners of glass, use piano wire to cut the pin.



(1) Locating pin
(2) Body panel
(3) Windshield glass

2. USING PIANO WIRE

1) Remove the cowl panel. <Ref. to EI-39, REMOVAL, Cowl Panel.>
2) Remove the molding.
3) Tape the body side of the circumference of windshield glass for protection.
4) Make a hole in the adhesive part using drill or knife.
5) Pass the piano wire through the hole, and attach securely both the wire ends to pieces of wood.



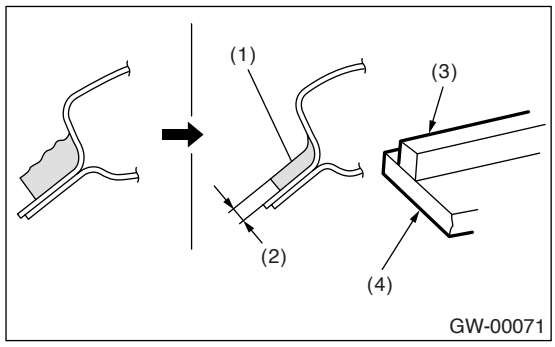
6) Pull the wire ends alternately to cut off the adhesive part.

CAUTION:
• Do not tightly pull the piano wire against the windshield glass edge.
• Be careful not to damage interior and exterior parts.
• When removal is made with area close to instrument panel, place a protection plate over it. Pay particular attention to the removal.
• Do not cross piano wires. Otherwise they may be cut.

B: INSTALLATION

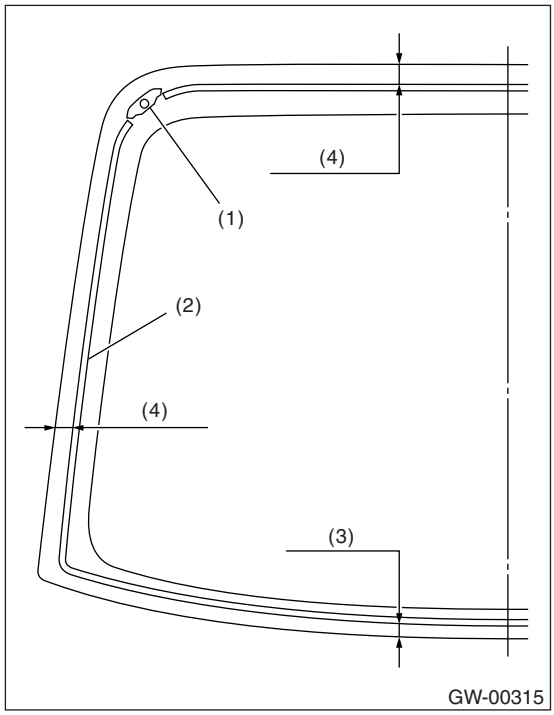
1) Clean the external circumference of windshield glass with alcohol or white gasoline.
2) Remove the adhesive layer on the body using cutter knife to obtain smooth face of 2 mm (0.08 in) thick.

CAUTION:
Be careful not to damage the body and paint surface.



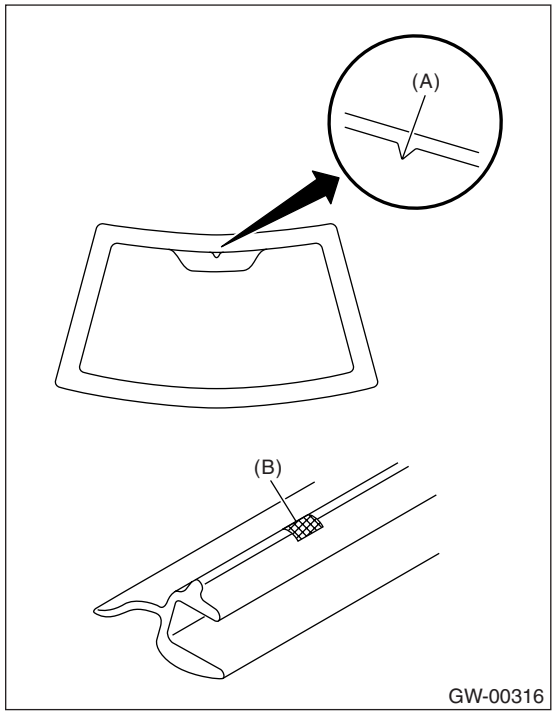
(1) Adhesive
(2) 2 mm (0.08 in)
(3) Dam rubber
(4) Glass

3) Clean the body with alcohol or white gasoline to eliminate cutting power, dust and dirt completely from body.
4) Align the locating pin of glass side with the hole of body side, and place the glass on the body.
5) Adjust the glass position to make uniform clearance between body and glass in four corners.



(1) Locating pin
(2) Dam rubber
(3) 9 mm (0.354 in)
(4) 11 mm (0.433 in)

6) Remove the glass temporarily from body.
7) Install the dam rubber.
8) Fit molding mark (B) to notch (A) of glass side and install the molding to entire perimeter of glass.



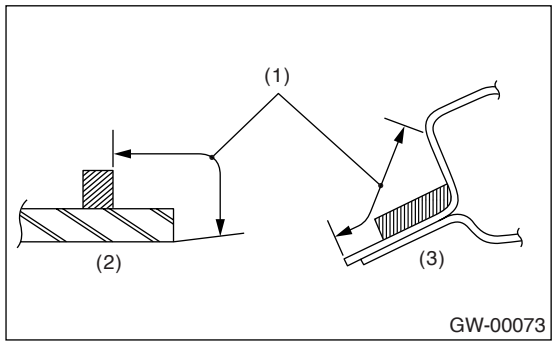
9) Apply two types of primers to the adhesive layer of glass using sponge.

Glass primer:
Betawipe VP04604
Betaprime 5001

10) Apply primer to the adhesive layer of body.

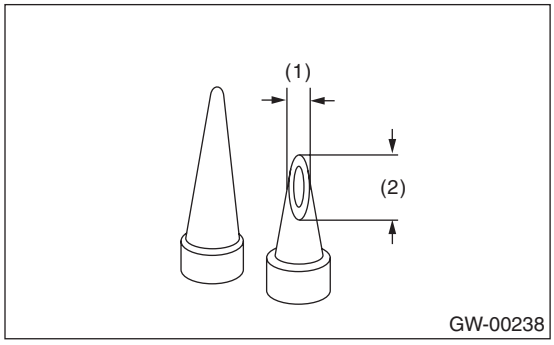
Painted surface primer:
Betaprime 5402

NOTE:
• Primer once attached to the painted surface of the body and internal trim is hard to wipe off. Mask the circumference of such area.
• Let primer dry for about ten minutes before installing the glass.
• Do not touch the surface coated with primer.



(1) Application of primer
(2) Glass side
(3) Body side

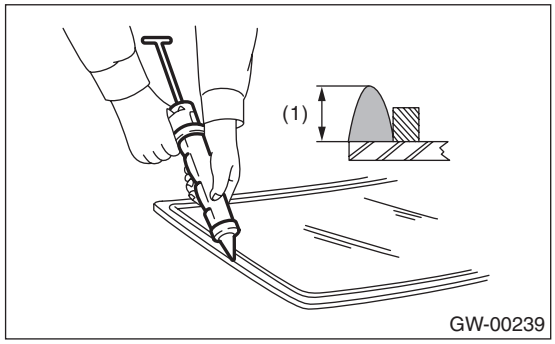
11) Cut off the cartridge nozzle tip as shown and set it in sealant gun.



(1) 10 mm (0.39 in)
(2) 15 mm (0.59 in)

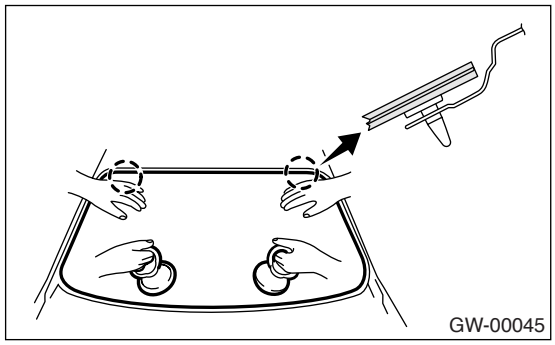
12) Apply adhesive to the glass end surface as shown.

Adhesive:
Gurit-ESSEX
Betaseal 1502 or equivalent



(1) 9 — 12 mm (0.35 — 0.47 in)

13) Fit the locating pins using suction rubber cup to install windshield glass.



14) Lightly press the windshield glass for tight fit.
15) Make flush the adhesive surface jutted out using spatula.
16) After completion of all work, allow the vehicle to stand for about 24 hours.

NOTE:
• When door is opened/closed after glass is bonded, always lower the door glass and then open/close it carefully.
• Move the vehicle slowly.
• For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

17) After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

NOTE:
When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

18) Install the cowl panel. <Ref. to EI-39, INSTALLATION, Cowl Panel.>

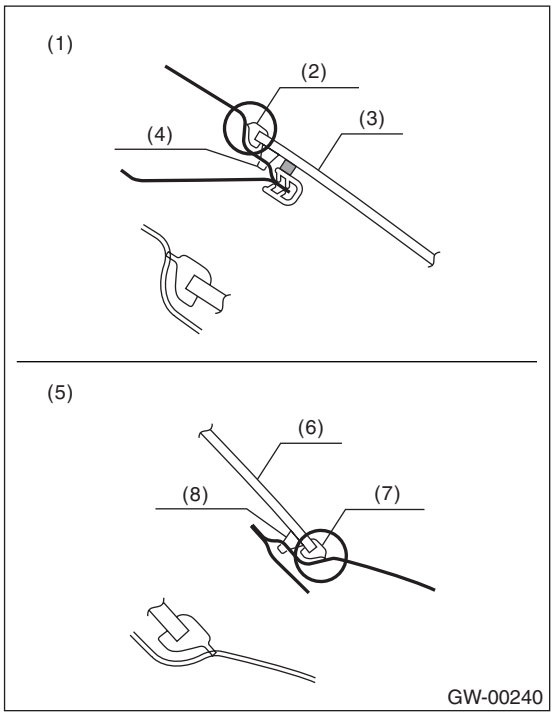
14.Rear Gate Glass

A: REMOVAL

1) Remove the rear wiper motor. <Ref. to WW-22, REMOVAL, Rear Wiper Motor.>
2) Disconnect the electrical connectors from rear defogger terminal.
3) Remove the glass in the same procedure as for windshield glass. <Ref. to GW-25, REMOVAL, Windshield Glass.>

B: INSTALLATION

1) Apply adhesive in the same procedure as for windshield glass. <Ref. to GW-26, INSTALLATION, Windshield Glass.>
2) Insert the glass clip pin into rear gate hole, and after pushing on the area around the clip pin to secure it, push lightly all around the area to seal it.
3) About one hour after installation, conduct a leak test.



(1) Upside
(2) Molding
(3) Glass
(4) Adhesive
(5) Downside
(6) Glass
(7) Molding
(8) Adhesive

4) After completion of all work, allow the vehicle to stand for about 24 hours.

NOTE:
• When door is opened/closed after glass is bonded, always lower the door glass and then open/close it carefully.
• Move the vehicle slowly.
• For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.
• When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

5) Connect the rear defogger terminals.
6) Install the rear wiper. <Ref. to WW-22, INSTALLATION, Rear Wiper Motor.>

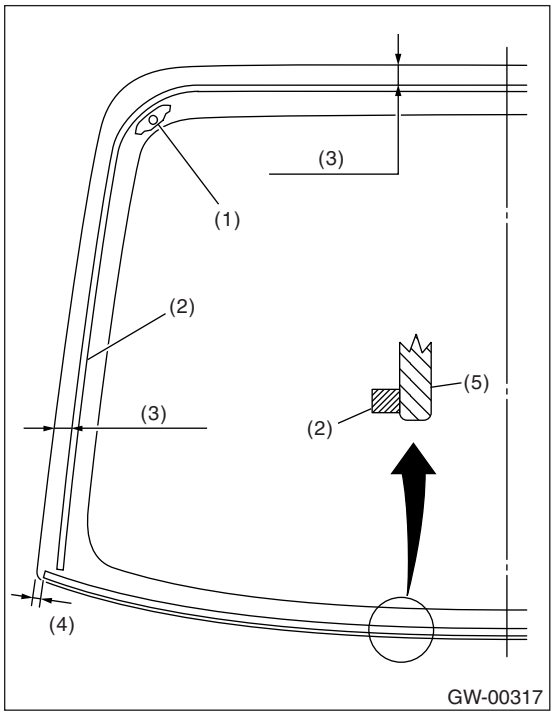
15.Rear Window Glass

A: REMOVAL

1) Disconnect the electrical connectors from rear defogger terminal.
2) Remove the glass in the same procedure as for windshield glass. <Ref. to GW-25, REMOVAL, Windshield Glass.>

B: INSTALLATION

1) Bond the dam rubber.



(1) Locating pin (bonded)
(2) Dam rubber
(3) 11 mm (0.433 in)
(4) 4 mm (0.157 in)
(5) Rear window glass

2) Install the glass in the same procedure as for windshield glass. <Ref. to GW-26, INSTALLATION, Windshield Glass.>
3) Connect the connector to the rear defogger and antenna terminals.
4) After completion of all work, allow the vehicle to stand for about 24 hours.

NOTE:
• When door is opened/closed after glass is bonded, always lower the door glass and then open/close it carefully.
• Move the vehicle slowly.
• For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

5) After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

NOTE:
When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

16.Rear Window Defogger System

A: WIRING DIAGRAM

<Ref. to WI-304, Rear Window Defogger System.>

B: INSPECTION

Symptom	Repair order
Rear window defogger does not operate.	(1) Fuse (M/B No. 10) (F/B No. 22) (2) Rear defogger relay (3) Defogger switch (4) Rear defogger condenser (5) Defogger wire (6) Wiring harness (7) Body integrated unit

NOTE:
Rear window defogger system can be customized on the touch panel in center display or Subaru Select Monitor.

System name	Initial setting	Customize setting
Rear window defogger timer	OFF after 15 min.	Repeat 15 min. operation and 2 min. stop.

17.Rear Window Defogger

A: INSPECTION

1. WITH SUBARU SELECT MONITOR

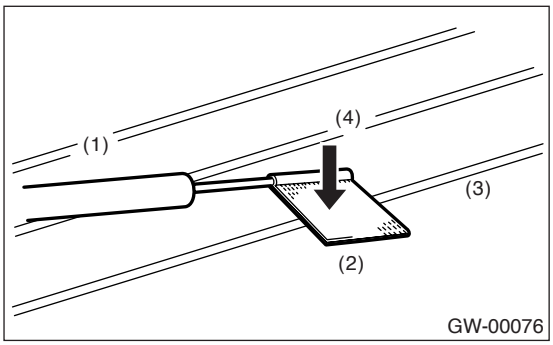
CAUTION:
Check that the rear window defogger timer is in initial setting or customize setting before inspection.

	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL TO BODY INTEGRATED UNIT.** When the rear window defogger switch is operated, check the input signal using Subaru Select Monitor. 1) Connect the Subaru Select Monitor to data link connector. 2) Turn the ignition switch to ON. 3) Select {Body Integrated Unit} from «Main Menu». 4) Select {Current Data Display & Save}. 5) When the rear window defogger switch is set to ON, check the input signal.	After rear defogger switch is set to ON, does it turn to OFF in 15 minutes? Or does it repeat 15 minutes operation and 2 minutes stop?	END.	Replace the body integrated unit. <Ref. to SL-46, REMOVAL, Body Integrated Unit.>

2. HEAT WIRE INSPECTION

CAUTION:
When wiping stain on glass off with cloth, use a dry and soft cloth and move it along the heat wire to avoid damage to the heat wire.

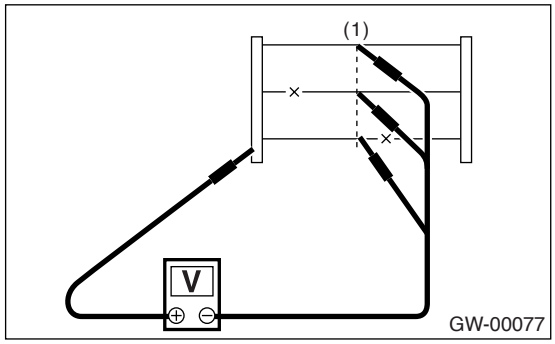
1) Turn the ignition switch to ON.
2) Turn the defogger switch to ON.
3) Wrap the tips of tester probe with aluminum foil to avoid damage to heat wire.



(1) Tester probe
(2) Aluminum foil
(3) Heat wire
(4) Push

4) Measure the voltage at heat wire center with DC voltmeter.

Standard voltage:
Approx. 6 V



(1) Center of heat wire

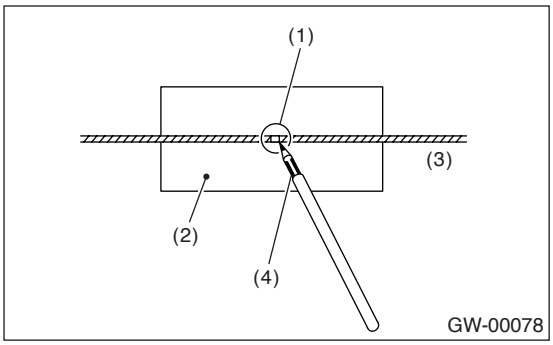
Voltage	Criteria
Approx. 6 V	Normal Operation
Approx. 12 V or 0 V	Broken

NOTE:
• If the measured value is 12 volts, heat wire is open between heat wire center and positive (+) terminal of tester probe.
• If zero volt, heat wire is open between wire center and ground.

5) Connect the tester probe of positive lead of voltmeter to positive terminal of heat wire and move tester probe of negative lead along the heat wire up to the negative terminal end. If voltage changes from zero to several volts during movement of tester probe, heat wire is open at the voltage change point.

B: REPAIR

1) Clean the broken portion with alcohol or white gasoline.
2) Mask both side of wire with thin film.
3) Apply the conductive silver composition (DU-PONT No. 4817) to the broken portion.



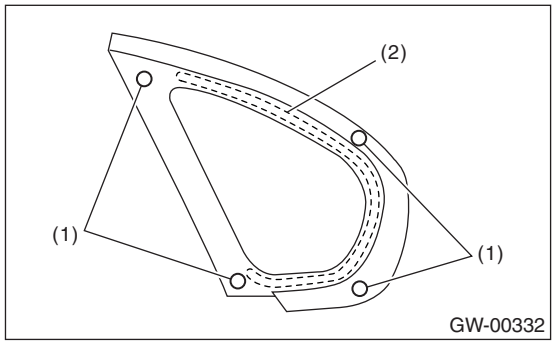
(1) Broken portion
(2) Thin film
(3) Broken wire
(4) Conductive silver composition (DUPONT No. 4817)

4) After repair, check the wire.

18.Rear Quarter Glass

A: REMOVAL

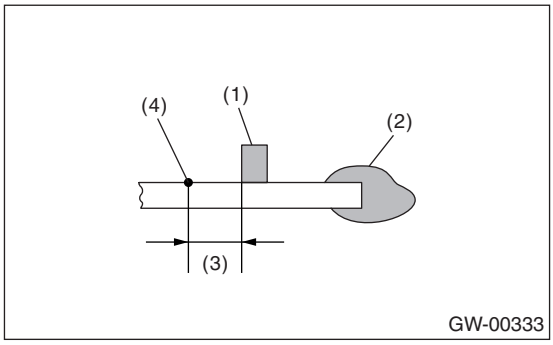
Remove the glass in the same procedure as for windshield glass. <Ref. to GW-25, REMOVAL, Windshield Glass.>



(1) Locating pin
(2) Dam rubber

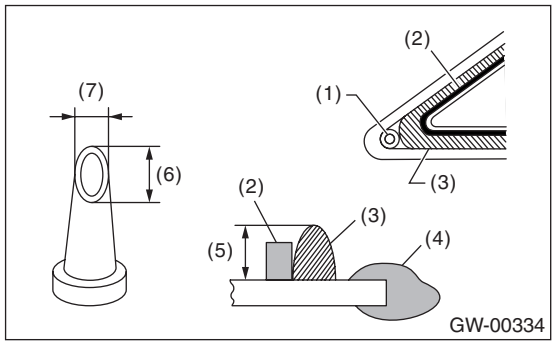
B: INSTALLATION

1) Install the dam rubber.



(1) Dam rubber
(2) Molding
(3) 10.5 mm (0.413 in) (constant)
(4) Ceramic terminal

2) Cut out the nozzle head and apply adhesive to the glass end surface as shown.



(1) Locating pin
(2) Dam rubber
(3) Adhesive
(4) Molding
(5) 8 — 10 mm (0.31 — 0.39 in)
(6) 15 mm (0.59 in)
(7) 10 mm (0.39 in)

3) Install the glass in the same procedure as for windshield glass. <Ref. to GW-26, INSTALLATION, Windshield Glass.>
4) After completion of all work, allow the vehicle to stand for about 24 hours.

NOTE:
• When door is opened/closed after glass is bonded, always lower the door glass and then open/close it carefully.
• Move the vehicle slowly.
• For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

5) After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

NOTE:
When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

19.Sun Roof Glass

A: REMOVAL

<Ref. to SR-6, REMOVAL, Glass Lid.>

B: INSTALLATION

<Ref. to SR-7, INSTALLATION, Glass Lid.>

C: ADJUSTMENT

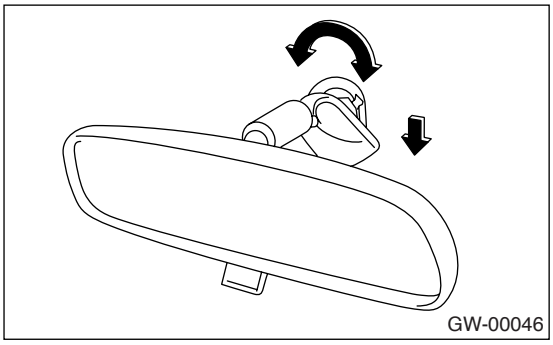
<Ref. to SR-7, ADJUSTMENT, Glass Lid.>

20.Rearview Mirror

A: REMOVAL

NOTE:
Never reuse the spring. Prepare a new spring before removal.

1) Turn the mirror base 90° clockwise or counterclockwise to remove it.



2) Remove the spring from rearview mirror mount.

CAUTION:
Be careful not to damage the mirror surface.

3) When the rearview mirror mount is damaged, use the piano wire or spatula to remove.

CAUTION:
Be careful not to damage the windshield glass.

B: INSTALLATION

1) When the rearview mirror mount is removed, clean the old adhesive, and mate with the windshield glass mark to install.

Adhesive:
REPAIR KIT IN MR (Part No. 65029FC000) or equivalent

2) Ensure the rearview mirror mount is securely attached and then install the spring to it.
3) Install in the reverse order of removal.

C: INSPECTION

Check that the mirror is not damaged.
Check that the spring is not damaged.

21.Wiper Deicer System

A: WIRING DIAGRAM

<Ref. to WI-328, Wiper Deicer System.>

B: INSPECTION

Symptom	Repair order
Wiper deicer does not operate.	(1) Fuse (F/B No. 4, 9) (2) Wiper deicer relay (3) Wiper deicer switch (4) Wiring harness (5) Body integrated unit

Refer to “Rear Window Defogger” for inspection.
<Ref. to GW-31, INSPECTION, Rear Window Defogger.>

NOTE:
Wiper deicer system can be customized on the touch panel in center display or Subaru Select Monitor.

System name	Initial setting	Customize setting
Wiper deicer timer	OFF after 15 min.	Continuous operation*

*: When one of following items is occurred, finish the continuous operation and goes to OFF after 15 min.
- Ambient temperature that is more than 10°C (41°F) continues for 10 sec.
- Malfunction occurs on ambient temperature sensor
- Vehicle speed that is below 15 km/h (9 MPH) continues 15 min.
- Malfunction occurs on CAN communication

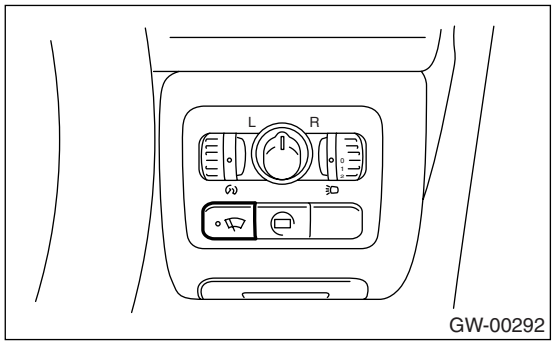
C: REPAIR

Refer to “Rear Window Defogger” for repair.
<Ref. to GW-32, REPAIR, Rear Window Defogger.>

22.Wiper Deicer Switch

A: REMOVAL

1) Remove the instrument panel lower cover. <Ref. to EI-50, REMOVAL, Instrument Panel Lower Cover.>
2) Disconnect the harness connector and remove the wiper deicer switch.



B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

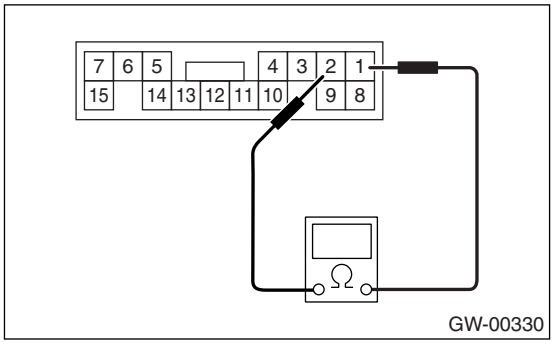
1. WITH SUBARU SELECT MONITOR

CAUTION:
Check that the wiper deicer timer is in initial setting or customize setting before inspection.

	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL TO BODY INTEGRATED UNIT.** When the wiper deicer switch is operated, check the input signal using Subaru Select Monitor. 1) Connect the Subaru Select Monitor to data link connector. 2) Turn the ignition switch to ON. 3) Select {Body Integrated Unit} from «Main Menu». 4) Select {Current Data Display & Save}. 5) When the wiper deicer switch is set to ON, check the input signal.	After the wiper deicer switch is set to ON, does it turn to OFF in 15 minutes? Or does it operates continuously?	END.	Replace the body integrated unit. <Ref. to SL-46, REMOVAL, Body Integrated Unit.>

2. CHECK SWITCH

Remove the wiper deicer switch and measure the switch resistance.



Switch position	Terminal No.	Standard
OFF	1 and 2	More than 1 MΩ
ON		Less than 1 Ω

Replace the wiper deicer switch if faulty.

BODY SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

B: CAUTION

- Be careful not to damage the meters and instrument panel.
- Be careful not to damage the meter glass.
- Make sure the electrical connector is connected securely.
- After installation, make sure that each meter operates normally.
- Use gloves to avoid damage and getting fingerprints on the glass surface and meter surfaces.
- Do not apply an excessive force on the printed circuit.
- Do not drop or otherwise apply impact.
- When the combination meter of model with immobilizer has been replaced, be sure to perform the registration procedure of immobilizer.

C: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.

2. Combination Meter System

A: WIRING DIAGRAM

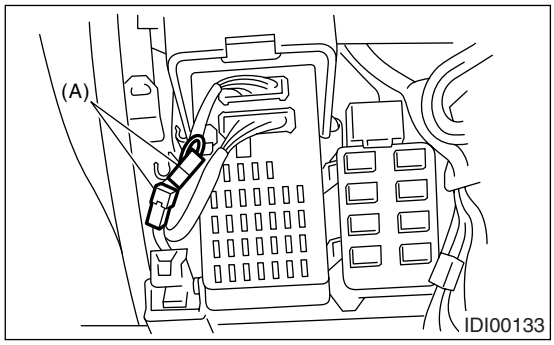
1. COMBINATION METER

<Ref. to WI-130, WIRING DIAGRAM, Combination Meter.>

B: INSPECTION

1. SELF-DIAGNOSIS

The self-diagnosis (checking of each meter, warning light, indicator, illumination, LCD, buzzer sound) of combination meter can be performed in the following procedure.
1) Connect the diagnostic connector (A) near the fuse & relay box.



2) Turn the ignition switch to ON.
3) While meter indicator needle deflecting, press the odo/trip meter knob twice.

NOTE:
When odo/trip meter knob is pressed only once, display mode is shifted to DTC display mode. <Ref. to IDI-12, DTC DISPLAY MODE, INSPECTION, Combination Meter System.>

When the self-diagnosis function is operated, the checking of warning light, indicator, and LCD display is performed, hereafter, every pressing the odo/trip meter knob, the operation check is performed in the order of meter, illumination and buzzer. <Ref. to IDI-4, LIST OF SELF-DIAGNOSIS MODE OPERATION, INSPECTION, Combination Meter System.> To cancel the self-diagnosis mode, set the ignition switch to OFF or disconnect the diagnosis connector.

NOTE:
When the engine starts during diagnosis, the self-diagnosis mode is not cancelled, however, once the vehicle starts driving, the self-diagnosis mode is cancelled automatically for safety.

2. LIST OF SELF-DIAGNOSIS MODE OPERATION

Speedometer, tachometer, fuel gauge, water temperature gauge	Microcomputer running type warning light, indicator light	AT select lever position indicator light	Odo/Trip indicator	SPORT shift indicator	Illumination (indicator needle, plate, ring, LCD)	Buzzer (SPORT shift buzzer, speed warning buzzer)
Step 0. Processing to self-diagnosis mode						
Operating initial operation	Initial illuminating	Normal	Normal	Initial illuminating	Initial illuminating	Not beep.
Step 1-1. Check each indication after initial operation						
Repeat the sweep operation (After holding on lowest position for one second, reaches to highest position within 5 seconds, and after holding on highest position for one second, reaches to lowest position within 5 seconds).	Light ON	With the highest brightness, illuminate the position sequentially at a cycle of 1.5 seconds.	Perform the segment check. For the illumination order, refer to the illumination order table.	Perform the segment check. For the illumination order, refer to the illumination order table.	Light at the highest brightness.	Not beep.
Step 1-2. Press the trip knob (trip knob input is not accepted till the meter indicator needle reaches the highest position): sweep complete, AT select lever position indicator display is set						
After completing sweep in step 1-1, back to lowest position.	Light ON	Keep the position indicated when the trip knob is pressed.	Underbar " _ " is displayed.	"1" is displayed.	Light at the highest brightness.	Not beep.
Step 2-1. Press the trip knob, and hold it: Check each meter						
All meters are moved simultaneously in every 0.5 sec. from the lowest position to highest position. Speedometer/ Tachometer: Approx. 5 degrees at every movement. Water temperature gauge/Fuel gauge: Approx. 2 degrees at every movement.	Light OFF	Keep the position indicated that set in step 1-2.	Display the current meter directing angle on odometer. Ex.) Display "135054" when Speedometer/ Tachometer: 135 degree, Water temperature gauge/Fuel gauge: 54 degree.	"▼2" is displayed.	Light at the highest brightness.	Not beep.
Step 2-2. Release the trip knob: Specifying the meter directing position						
Stop at directing position when the trip knob is released.	Light OFF	Keep the position indicated that specified at step 1-2.	Display the current meter directing angle on odometer.	"2" is displayed.	Light at the highest brightness.	Not beep.
Step 3-1. Press the trip knob, and hold it: Check illumination						

Speedometer, tachometer, fuel gauge, water temperature gauge	Microcomputer running type warning light, indicator light	AT select lever position indicator light	Odo/Trip indicator	SPORT shift indicator	Illumination (indicator needle, plate, ring, LCD)	Buzzer (SPORT shift buzzer, speed warning buzzer)
Keep the position that specified at step 2-2.	Light OFF	Varying from the highest brightness (ILL6) to the lowest luminescence (ILL1) every second. After reaching at ILL1, repeat it from ILL6.	Illumination brightness is displayed. (From ILL6 to ILL1)	"▼3" is displayed.	Varying from the highest brightness (ILL6) to the lowest luminescence (ILL1) every second. After reaching at ILL1, repeat it from ILL6.	Not beep.
Step 3-2. Release the trip knob: Specifying the illumination brightness						
Keep the position that specified at step 2-2.	Light OFF	Keep the brightness at the time when the trip knob is released.	Display the brightness at the time when the trip knob is released.	"3" is displayed.	Keep the brightness at the time when the trip knob is released.	Not beep.
Step 4-1. Press the trip knob: Check the beeping of SPORT shift buzzer (AT model)						
All meter indicator needle returns to lowest position.	Light OFF	Light at the highest brightness. Keep the position indicated that set in step 1-2.	Illumination brightness is displayed.	"▲▼8" is displayed. Blinks with buzzer.	Light at the highest brightness.	SPORT shift buzzer beeps.
Step 4-2. Press the trip knob: Check the VDC indicator light (Model with VDC)						
All meter indicator needle returns to lowest position.	VDC warning light and VDC operation indicator light blink.	Light at the highest brightness. Keep the position indicated that set in step 1-2.	Illumination brightness is displayed.	"4" is displayed.	Light at the highest brightness.	Not beep.
Step 4-3. Press the trip knob: Check the speed warning buzzer (KS model)						
Speedometer indicates the vehicle speed, which was detected when the speed warning started.	Light OFF	Light at the highest brightness. Keep the position indicated that set in step 1-2.	Illumination brightness is displayed.	"4" is displayed.	Light at the highest brightness.	Speed warning buzzer beeps.
Step 5. Press the trip knob: Complete the self-diagnosis 1 cycle						
All meter indicator needle returns to lowest position, and go back to step 1 after completion.						

• Illuminating order table

Illuminating order	1	2	3	4	5	6	7	8	9	10	11

3. SYMPTOM CHART

Symptom	Repair order	Reference
Combination meter assembly does not operate.	(1) Power supply (2) Ground circuit (3) Combination meter	<Ref. to IDI-8, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Combination Meter System.>
Speedometer does not operate.	(1) ABSCM or VDCCM (2) Harness (3) Combination meter	<Ref. to IDI-8, CHECK ABSCM OR VDCCM, INSPECTION, Combination Meter System.>
Tachometer does not operate.	(1) ECM (2) Harness (3) Combination meter	<Ref. to IDI-9, CHECK ENGINE CONTROL MODULE, INSPECTION, Combination Meter System.>
Fuel gauge does not operate.	(1) Communication circuit (2) Fuel level sensor (3) Harness (4) Combination meter	<Ref. to IDI-9, CHECK FUEL LEVEL SENSOR., INSPECTION, Combination Meter System.>
Water temperature gauge does not operate.	(1) Communication circuit (2) Engine coolant temperature sensor (3) Harness (4) Combination meter	<Ref. to IDI-11, CHECK ENGINE COOLANT TEMPERATURE SENSOR., INSPECTION, Combination Meter System.>
Error display is shown on the odo/trip meter.	Communication circuit	<Ref. to IDI-11, COMMUNICATION ERROR DISPLAY, INSPECTION, Combination Meter System.>

CAUTION:
When measuring the voltage and resistance of each control module or sensor, use a tapered pin with a diameter of less than 0.64 mm (0.025 in) in order to avoid poor contact. Do not insert the pin of more than 2 mm (0.08 in) in diameter.

4. CHECK POWER SUPPLY AND GROUND CIRCUIT

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY FOR COMBINATION METER.** 1) Remove the combination meter. <Ref. to IDI-16, REMOVAL, Combination Meter Assembly.> 2) Disconnect the combination meter harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between combination meter connector and chassis ground. ***Connector & terminal*** ***(i10) No. 3, No. 4 (+) — Chassis ground (–):***	Is the voltage more than 10 V?	Go to step **2.**	Check the harness for open or short between the ignition switch and combination meter.
2	**CHECK POWER SUPPLY FOR COMBINATION METER.** Measure the voltage between combination meter connector and chassis ground. ***Connector & terminal*** ***(i10) No. 1, No. 2 (+) — Chassis ground (–):***	Is the voltage more than 10 V?	Go to step **3.**	Check the harness for open or short between the fuse and combination meter.
3	**CHECK GROUND CIRCUIT OF COMBINATION METER.** 1) Turn the ignition switch to OFF. 2) Measure the resistance of harness between combination meter connector and chassis ground. ***Connector & terminal*** ***(i10) No. 11, No. 12 — Chassis ground:***	Is the resistance less than 10 Ω?	Replace the meter case assembly.	Repair the wiring harness.

5. CHECK ABSCM OR VDCCM

	Step	Check	Yes	No
1	**CHECK VEHICLE SPEED SIGNAL.** 1) Lift up the vehicle and support it with rigid racks. 2) Drive the vehicle faster than 10 km/h (6 MPH). **Warning:** **Be careful not to get caught in the running wheels.** 3) Measure the voltage between combination meter connector and chassis ground. ***Connector & terminal*** ***(i10) No. 19 (+) — Chassis ground (–):***	Is the voltage less than 1 V ←→ 5 V or more?	Replace the meter case assembly.	Go to step **2.**
2	**CHECK HARNESS BETWEEN ABSCM OR VDCCM AND COMBINATION METER.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ABSCM or VDCCM and combination meter. 3) Measure the resistance between ABSCM or VDCCM harness connector and combination meter harness connector. ***Connector & terminal*** ***Model without VDC*** ***(B301) No. 23 — (i10) No. 19:*** ***Model with VDC*** ***(B310) No. 36 — (i10) No. 19:***	Is the resistance less than 10 Ω?	Model without VDC: Check the ABSCM. <Ref. to ABS(diag)-2, Basic Diagnostic Procedure.> Model with VDC: Check the VDCCM. <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>	Repair the wiring harness.

6. CHECK ENGINE CONTROL MODULE

Step		Check	Yes	No
1	**CHECK ECM SIGNAL.** 1) Start the engine. 2) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***2.0 L non-turbo model and 2.5 L KS, KA model*** ***(B135) No. 27 (+) — Chassis ground (−):*** ***2.0 L turbo model, 3.0 L model and 2.5 L EC, K4, EK model*** ***(B134) No. 23 (+) — Chassis ground (−):***	Is the voltage more than 0 ←→ 14 V?	Go to step **2.**	Check the ECM. <Ref. to EN(H4SO 2.0)(diag)-2, Basic Diagnostic Procedure.> <Ref. to EN(H4SO 2.5)(diag)-2, Basic Diagnostic Procedure.> <Ref. to EN(H4DOTC)(diag)-2, Basic Diagnostic Procedure.> <Ref. to EN(H6DO)(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK HARNESS BETWEEN COMBINATION METER AND ECM.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM and combination meter. 3) Measure the resistance between ECM harness connector and combination meter harness connector. ***Connector & terminal*** ***2.0 L non-turbo model and 2.5 L KS, KA model*** ***(B135) No. 27 — (i10) No. 20:*** ***2.0 L turbo model, 3.0 L model and 2.5 L EC, K4, EK model*** ***(B134) No. 23 — (i10) No. 20:***	Is the resistance less than 10 Ω?	Replace the meter case assembly.	Repair the wiring harness.

7. CHECK FUEL LEVEL SENSOR.

Step		Check	Yes	No
1	**CHECK COMMUNICATION ERROR DISPLAY.** 1) Set the ignition switch to ON. 2) Check that the error code is displayed in odo/trip meter.	Is the error code “Er xx” displayed in odo/trip meter?	Check the communication circuit. <Ref. to IDI-11, COMMUNICATION ERROR DISPLAY, INSPECTION, Combination Meter System.>	Go to step **2.**
2	**CHECK FUEL LEVEL SENSOR.** 1) Remove the fuel level sensor. <Ref. to FU(H4SO 2.0)-49, REMOVAL, Fuel Level Sensor.> <Ref. to FU(H4SO 2.5)-51, REMOVAL, Fuel Level Sensor.> <Ref. to FU(H4DOTC)-51, REMOVAL, Fuel Level Sensor.> <Ref. to FU(H6DO)-50, REMOVAL, Fuel Level Sensor.> 2) Measure the resistance between fuel level sensor terminals when the float is in FULL or EMPTY position. ***Terminals*** ***No. 1 — No. 4:***	Is the resistance 1.0 — 3.0 Ω (FULL) or 31 — 33 Ω (EMPTY)?	Go to step **3.**	Replace the fuel level sensor.

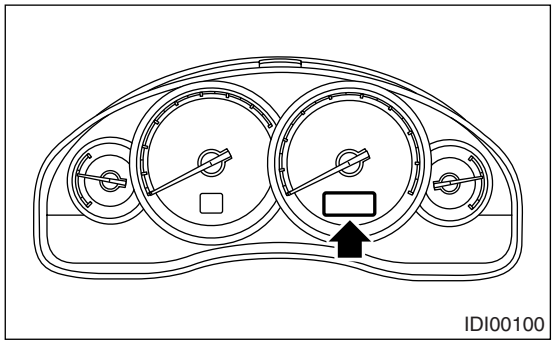
	Step	Check	Yes	No
3	**CHECK FUEL SUB LEVEL SENSOR.** 1) Remove the fuel sub level sensor. <Ref. to FU(H4SO 2.0)-50, REMOVAL, Fuel Sub Level Sensor.> <Ref. to FU(H4SO 2.5)-52, REMOVAL, Fuel Sub Level Sensor.> <Ref. to FU(H4DOTC)-52, REMOVAL, Fuel Sub Level Sensor.> <Ref. to FU(H6DO)-51, REMOVAL, Fuel Sub Level Sensor.> 2) Measure the resistance between fuel sub level sensor terminals when the float is in FULL or EMPTY position. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 1.0 — 3.0 Ω (FULL) or 61 — 63 Ω (EMPTY)?	Go to step **4.**	Replace the fuel sub level sensor.
4	**CHECK HARNESS BETWEEN FUEL SUB-LEVEL SENSOR AND BODY INTEGRATED UNIT.** 1) Disconnect the connector from body integrated unit. 2) Measure the resistance between fuel sub level sensor harness connector terminal and body integrated unit harness connector terminal. ***Connector & terminal*** ***(R59) No. 1 — (B281) No. 19:***	Is the resistance less than 10 Ω?	Go to step **5.**	Repair the wiring harness.
5	**CHECK HARNESS BETWEEN FUEL LEVEL SENSOR AND FUEL SUB LEVEL SENSOR.** Measure the resistance between fuel level sensor harness connector terminal and fuel sub level sensor harness connector terminal. ***Connector & terminal*** ***(R58) No. 1 — (R59) No. 2:***	Is the resistance less than 10 Ω?	Go to step **6.**	Repair the wiring harness.
6	**CHECK FUEL LEVEL SENSOR GROUND CIRCUIT.** Measure the resistance between fuel level sensor harness connector terminal and chassis ground. ***Connector & terminal*** ***(R58) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Replace the meter case assembly.	Repair the wiring harness.

8. CHECK ENGINE COOLANT TEMPERATURE SENSOR.

	Step	Check	Yes	No
1	**CHECK COMMUNICATION ERROR DISPLAY.** 1) Set the ignition switch to ON. 2) Check that the error code is displayed in odo/trip meter.	Is the error code “Er xx” displayed in odo/trip meter?	Check the communication circuit. <Ref. to IDI-11, COMMUNICATION ERROR DISPLAY, INSPECTION, Combination Meter System.>	Go to step **2.**
2	**CHECK ENGINE COOLANT TEMPERATURE SENSOR.** Check the engine coolant temperature sensor. <Ref. to EN(H4SO 2.0)(diag)-2, Basic Diagnostic Procedure.> <Ref. to EN(H4DOTC)(diag)-2, Basic Diagnostic Procedure.> <Ref. to EN(H6DO)(diag)-2, Basic Diagnostic Procedure.>	Is the engine coolant temperature sensor OK?	Replace the meter case assembly.	Replace the engine coolant temperature sensor.

9. COMMUNICATION ERROR DISPLAY

When the following error code is displayed in the odo/trip meter, inspect the communication circuit since the communication malfunction is generated between each control module. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>



IDI00100

Error code	Remarks
Er IU	Malfunction in integrated unit
Er ––	Simultaneous malfunction of high/low speed CAN communication
Er HC	Malfunction of high-speed CAN communication
Er LC	Malfunction of low-speed CAN communication
Er EG	EGI Communication malfunction
Er TC	TCM Communication malfunction
Er Ab	ABSCM/VDCCM Communication malfunction
Er SP	ABSCM/VDCCM DTC information, vehicle speed pulse malfunction
Er SS	Wheel speed data malfunction

10.DTC DISPLAY MODE

When DTC display mode is operated, {ECM}, {TCM}, {ABSCM/VDCCM} is displayed repeatedly in this order by pressing the odo/trip meter button. DTC is displayed in the following table according to type of control module, receiving DTC, DTC detected, No DTC. If CAN communication is broken down, "-----" is displayed.

Control module	Condition	Display
ECM	Receiving DTC	Trip "A" + "P (blinking)"
	DTC detected	Trip "A" + "Pxxxx"
	No DTC	Trip "A" + "P----"
TCM	Receiving DTC	Trip "B" + "P (blinking)"
	DTC detected	Trip "B" + "Pxxxx"
	No DTC	Trip "B" + "P----"
ABSCM/VDCCM	Receiving DTC	Trip "A" + "C (blinking)"
	DTC detected	Trip "A" + "Cxxxx"
	No DTC	Trip "A" + "C----"
When CAN communication is broken down.	—	"-----"

3. Clock System

A: WIRING DIAGRAM

1. CLOCK

<Ref. to WI-129, WIRING DIAGRAM, Clock System.>

B: INSPECTION

1. SYMPTOM CHART

Symptom	Repair order	Reference
No display is shown.	(1) Power supply (2) Clock body	<Ref. to IDI-14, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Clock System.>
Illumination does not illuminate.	(1) Illumination power supply (2) Clock body	<Ref. to IDI-14, CHECK ILLUMINATION CIRCUIT, INSPECTION, Clock System.>
Brightness does not change even when bright switch is pressed.	(1) Bright switch (2) Clock body	<Ref. to IDI-14, CHECK BRIGHT CIRCUIT, INSPECTION, Clock System.>
“Acc” or “ign” is displayed.	ACC or ignition power supply	<Ref. to IDI-15, CHECK ACC OR IGNITION POWER SUPPLY, INSPECTION, Clock System.>
“Err” is displayed in all items.	(1) Communication circuit between combination meter and clock (2) Clock body	<Ref. to IDI-15, CHECK COMMUNICATION CIRCUIT, INSPECTION, Clock System.>
“Err” is displayed when a specified item is selected.	Communication circuit between combination meter and each control module	<Ref. to IDI-11, COMMUNICATION ERROR DISPLAY, INSPECTION, Combination Meter System.>

2. CHECK POWER SUPPLY AND GROUND CIRCUIT

	Step	Check	Yes	No
1	**CHECK CLOCK POWER SUPPLY.** 1) Disconnect the clock harness connector. 2) Measure the voltage between clock harness connector and chassis ground. ***Connector & terminal*** ***(i59) No. 10 (+) — Chassis ground (–):***	Is the voltage more than 10 V?	Go to step **2.**	Check the harness for open or short between fuse and clock.
2	**CHECK CLOCK GROUND CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between clock harness connector and chassis ground. ***Connector & terminal*** ***(i59) No. 6 — Chassis ground:***	Is the resistance less than 10 Ω?	Replace the clock body.	Repair the wiring harness.

3. CHECK ILLUMINATION CIRCUIT

	Step	Check	Yes	No
1	**CHECK ILLUMINATION CIRCUIT POWER SUPPLY.** 1) Turn the ignition switch to OFF. 2) Disconnect the clock harness connector. 3) Turn the ignition switch and lighting switch to ON. 4) Measure the voltage between clock harness connector and chassis ground. ***Connector & terminal*** ***(i59) No. 1 (+) — Chassis ground (–):***	Is the voltage more than 10 V?	Replace the clock body.	Check the harness for open or short between fuse and clock.

4. CHECK BRIGHT CIRCUIT

	Step	Check	Yes	No
1	**CHECK BRIGHT CIRCUIT POWER SUPPLY.** 1) Turn the ignition switch to OFF. 2) Disconnect the clock harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between clock harness connector and chassis ground. ***Connector & terminal*** ***(i59) No. 2 (+) — Chassis ground (–):***	Is the voltage more than 10 V?	Replace the clock body.	Go to step **2.**
2	**CHECK HARNESS BETWEEN CLOCK AND BODY INTEGRATED UNIT.** 1) Turn the ignition switch to OFF. 2) Disconnect harness connector of body integrated unit. 3) Measure the resistance between clock harness connector and body integrated unit harness connector. ***Connector & terminal*** ***(i59) No. 2 — (i84) No. 30:***	Is the resistance less than 10 Ω?	Replace the body integrated unit.	Repair the wiring harness.

5. CHECK ACC OR IGNITION POWER SUPPLY

	Step	Check	Yes	No
1	**CHECK ACC POWER SUPPLY.** 1) Turn the ignition switch to OFF. 2) Disconnect the clock harness connector. 3) Turn the ignition switch to ACC. 4) Measure the voltage between clock harness connector and chassis ground. ***Connector & terminal*** ***(i59) No. 9 (+) — Chassis ground (–):***	Is the voltage more than 10 V?	Go to step **2.**	Check the open circuit in harness between fuse and clock.
2	**CHECK THE IGNITION POWER SUPPLY.** 1) Turn the ignition switch to ON. 2) Measure the voltage between clock harness connector and chassis ground. ***Connector & terminal*** ***(i59) No. 8 (+) — Chassis ground (–):***	Is the voltage more than 10 V?	Replace the clock body.	Check the open circuit in harness between fuse and clock.

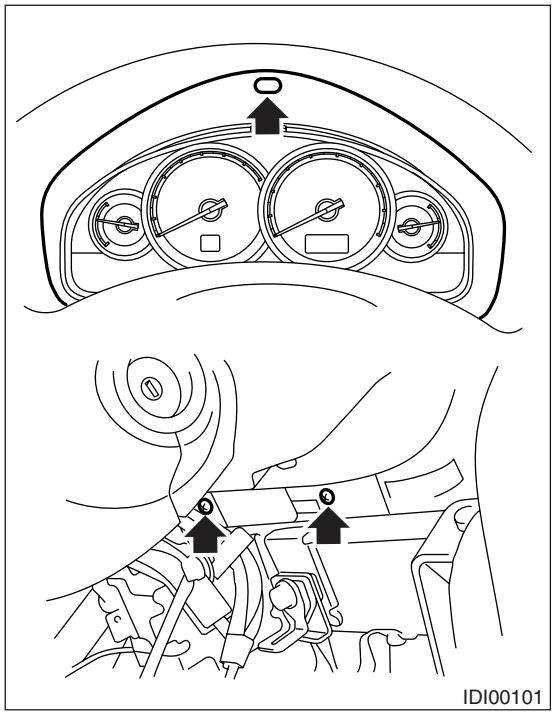
6. CHECK COMMUNICATION CIRCUIT

	Step	Check	Yes	No
1	**CHECK THE HARNESS BETWEEN CLOCK AND COMBINATION METER.** 1) Turn the ignition switch to OFF. 2) Disconnect the harness of clock and combination meter. 3) Measure the resistance between harness connectors of clock and combination meter. ***Connector & terminal*** ***(i59) No. 5 — (i10) No. 18:***	Is the resistance less than 10 Ω?	Go to step **2.**	Repair the wiring harness.
2	**CHECK COMMUNICATION ERROR DISPLAY.** 1) Connect all the disconnected connectors. 2) Turn the ignition switch to ON. 3) Check that the error code is displayed in odo/trip meter.	Is the error code “Er xx” displayed in odo/trip meter?	Check the communication circuit. <Ref. to IDI-11, COMMUNICATION ERROR DISPLAY, INSPECTION, Combination Meter System.>	Replace the clock body.

4. Combination Meter Assembly

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Set the tilt steering at the lowest position.
3) Remove the instrument panel under cover and lower cover of driver's seat side. <Ref. to EI-56, REMOVAL, Instrument Panel Assembly.>
4) Remove the screws of combination meter (one for upper side, two for lower side) and pull tilting the meter toward you.



5) Disconnect the connector in the rear side of combination meter to remove meter.

CAUTION:
• Be careful not to damage the meter or instrument panel.
• Pay particular attention to avoid damaging the meter glass.

B: INSTALLATION

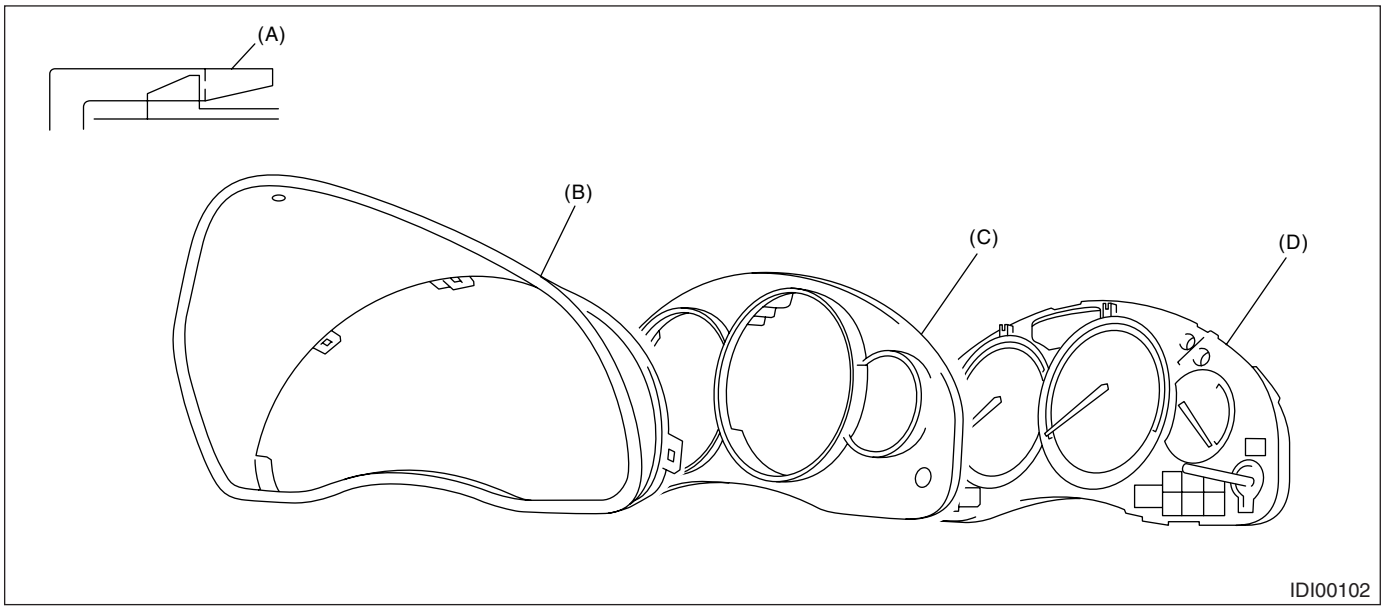
Install in the reverse order of removal.

CAUTION:
• Make sure the electrical connector is connected securely.
• Make sure that each meter operates normally.
• When the combination meter of model with immobilizer has been replaced, be sure to perform the registration procedure of immobilizer.

C: DISASSEMBLY

CAUTION:
- **Use gloves to avoid damage and getting fingerprints on the glass surface and meter surfaces.**
- **Be careful not to apply excessive force to the trip knob.**
- **Be sure not to touch the meter indicator needle.**

Remove the pawl (A), and then detach the meter glass assembly (B) and meter panel assembly (C) from meter case assembly (D).



1. BULB REPLACEMENT

LEDs are used for all of warning lights and indicator lights of combination meters, replace the meter case assembly if faulty.

D: ASSEMBLY

Assemble in the reverse order of disassembly.

5. Speedometer

A: SPECIFICATION

Since the meter case assembly cannot be disassembled, do not remove or inspect the speedometer alone. (Do not remove the cover on the back side.)

6. Tachometer

A: SPECIFICATION

Since the meter case assembly cannot be disassembled, do not remove or inspect the tachometer alone. (Do not remove the cover on the back side.)

7. Fuel Gauge

A: SPECIFICATION

Since the meter case assembly cannot be disassembled, do not remove or inspect the fuel gauge alone. (Do not remove the cover on the back side.)

8. Water Temperature Gauge

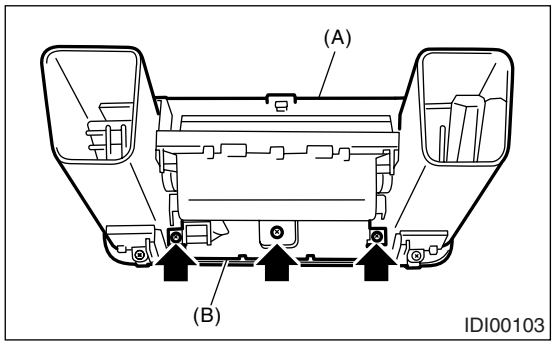
A: SPECIFICATION

Since the meter case assembly cannot be disassembled, do not remove or inspect the water temperature gauge alone. (Do not remove the cover on the back side.)

9. Clock

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the center air vent grille. <Ref. to AC-44, REMOVAL, Air Vent Grille.>
3) Loosen the screws, and then remove the clock (B) from center air vent grille (A).



B: INSTALLATION

Install in the reverse order of removal.

BODY SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

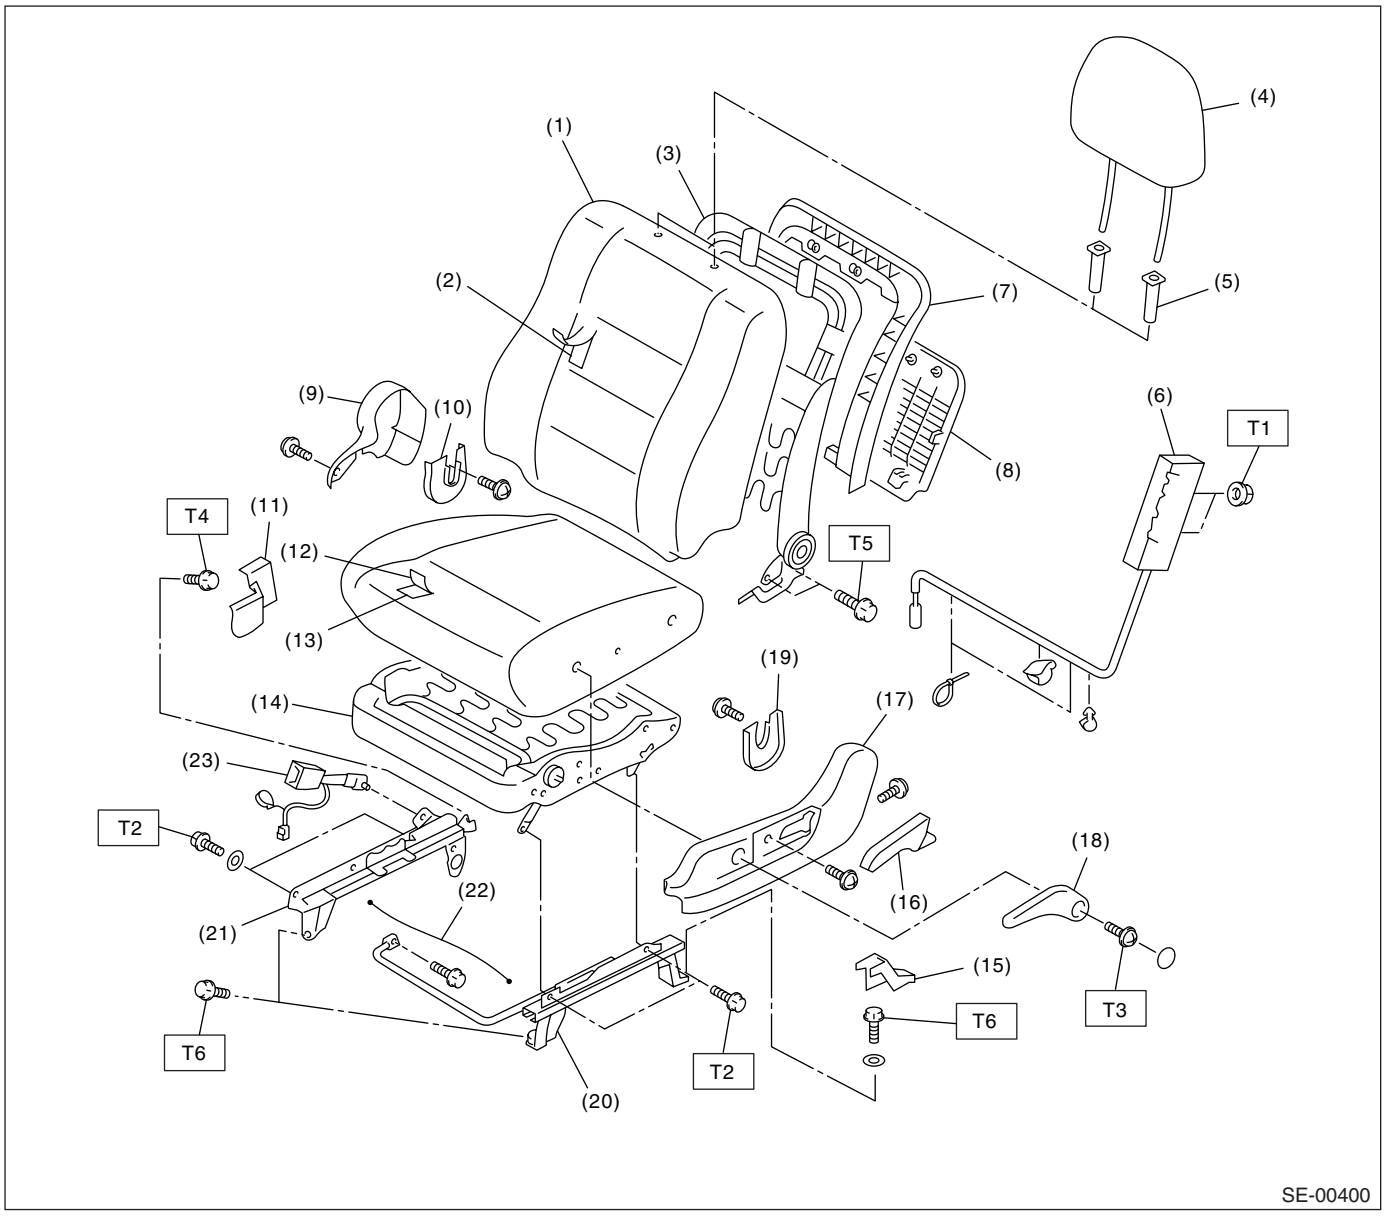
3. Rear Seat 14
4. Seat Heater System 19

1. General Description

A: COMPONENT

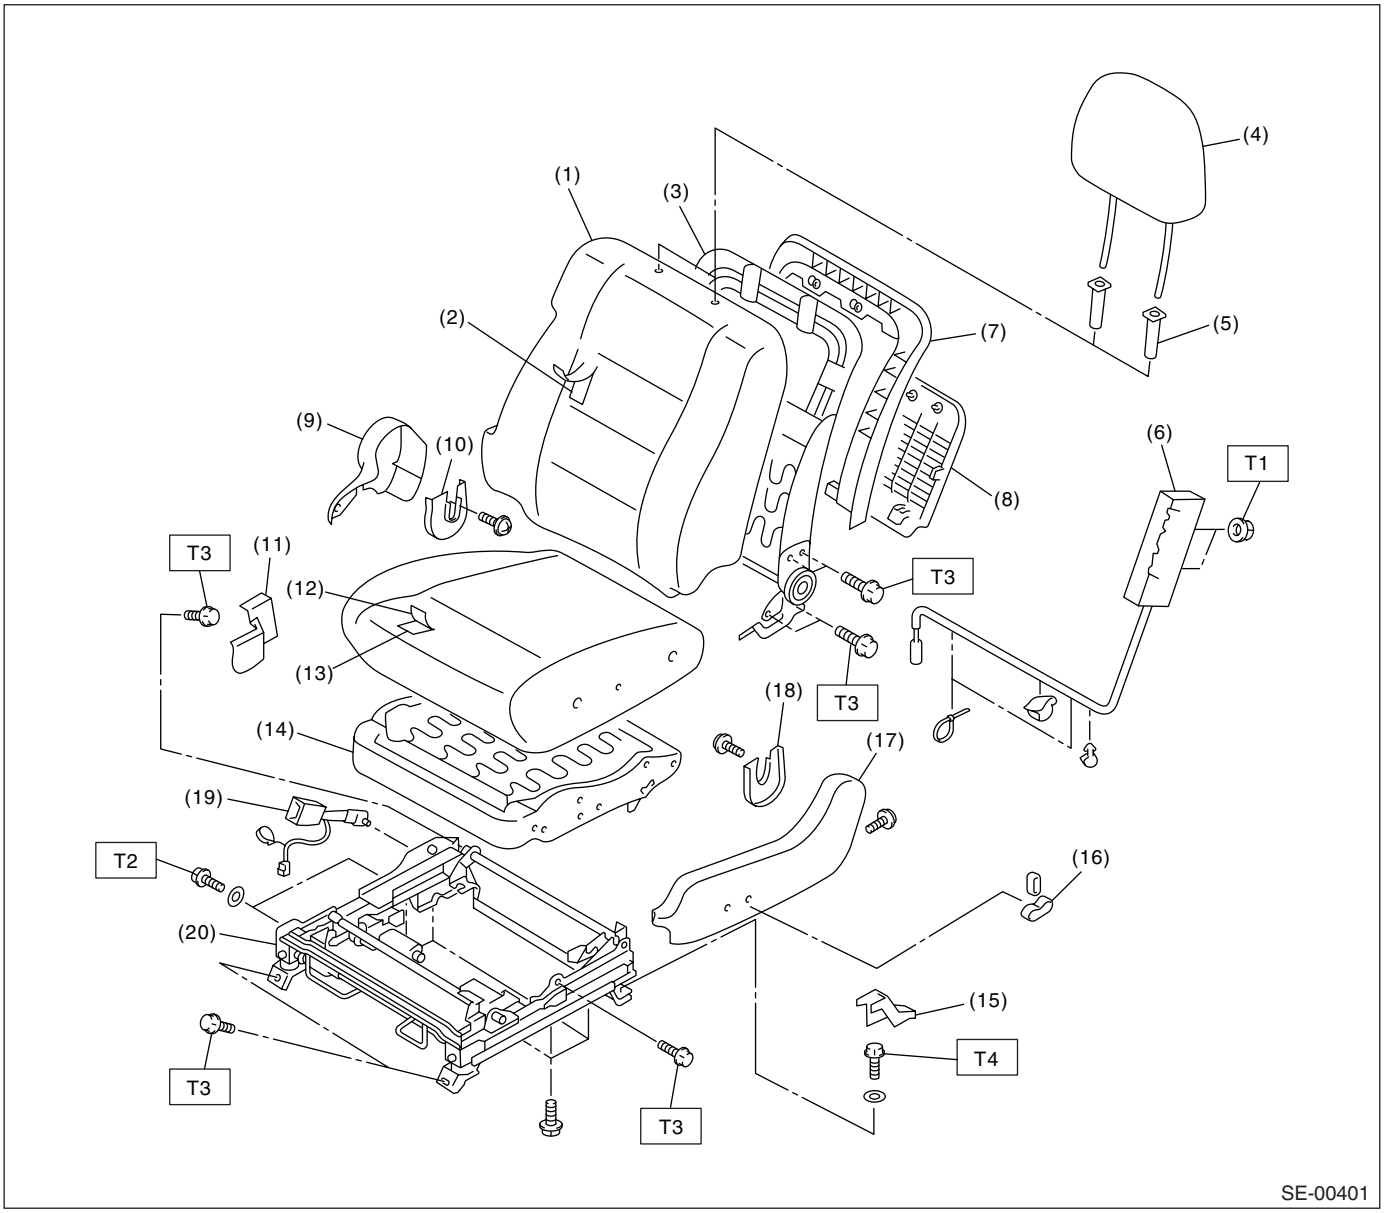
1. FRONT SEAT (STANDARD SEAT)



(1) Backrest cover
(2) Backrest pad
(3) Backrest frame ASSY
(4) Headrest ASSY
(5) Headrest lock bushing
(6) Side airbag module
(7) Cover frame
(8) Backrest back cover
(9) Seat hinge inner cover
(10) Hinge inner cover RH
(11) Bolt cover inner
(12) Seat cushion cover
(13) Seat cushion pad
(14) Seat cushion frame ASSY
(15) Bolt cover outer
(16) Reclining lever
(17) Seat hinge outer cover
(18) Lifter lever
(19) Hinge inner cover LH
(20) Outer slide rail
(21) Inner slide rail
(22) Connecting wire
(23) Inner belt

Tightening torque: N·m (kgf-m, ft-lb)
T1: 6 (0.61, 4.43)
T2: 10 (1.02, 7.38)
T3: 22 (2.24, 16.2)
T4: 30 (3.06, 22.1)
T5: 52 (5.30, 38.4)
T6: 53 (5.40, 39.1)

2. FRONT SEAT (POWER SEAT)



(1) Backrest cover
(2) Backrest pad
(3) Backrest frame ASSY
(4) Headrest ASSY
(5) Headrest lock bushing
(6) Side airbag module
(7) Cover frame
(8) Backrest back cover
(9) Seat hinge inner cover
(10) Hinge inner cover RH
(11) Bolt cover inner
(12) Seat cushion cover
(13) Seat cushion pad
(14) Seat cushion frame ASSY
(15) Bolt cover outer
(16) Seat switch
(17) Seat hinge outer cover
(18) Hinge inner cover LH
(19) Inner belt
(20) Seat rail ASSY

Tightening torque: N·m (kgf-m, ft-lb)

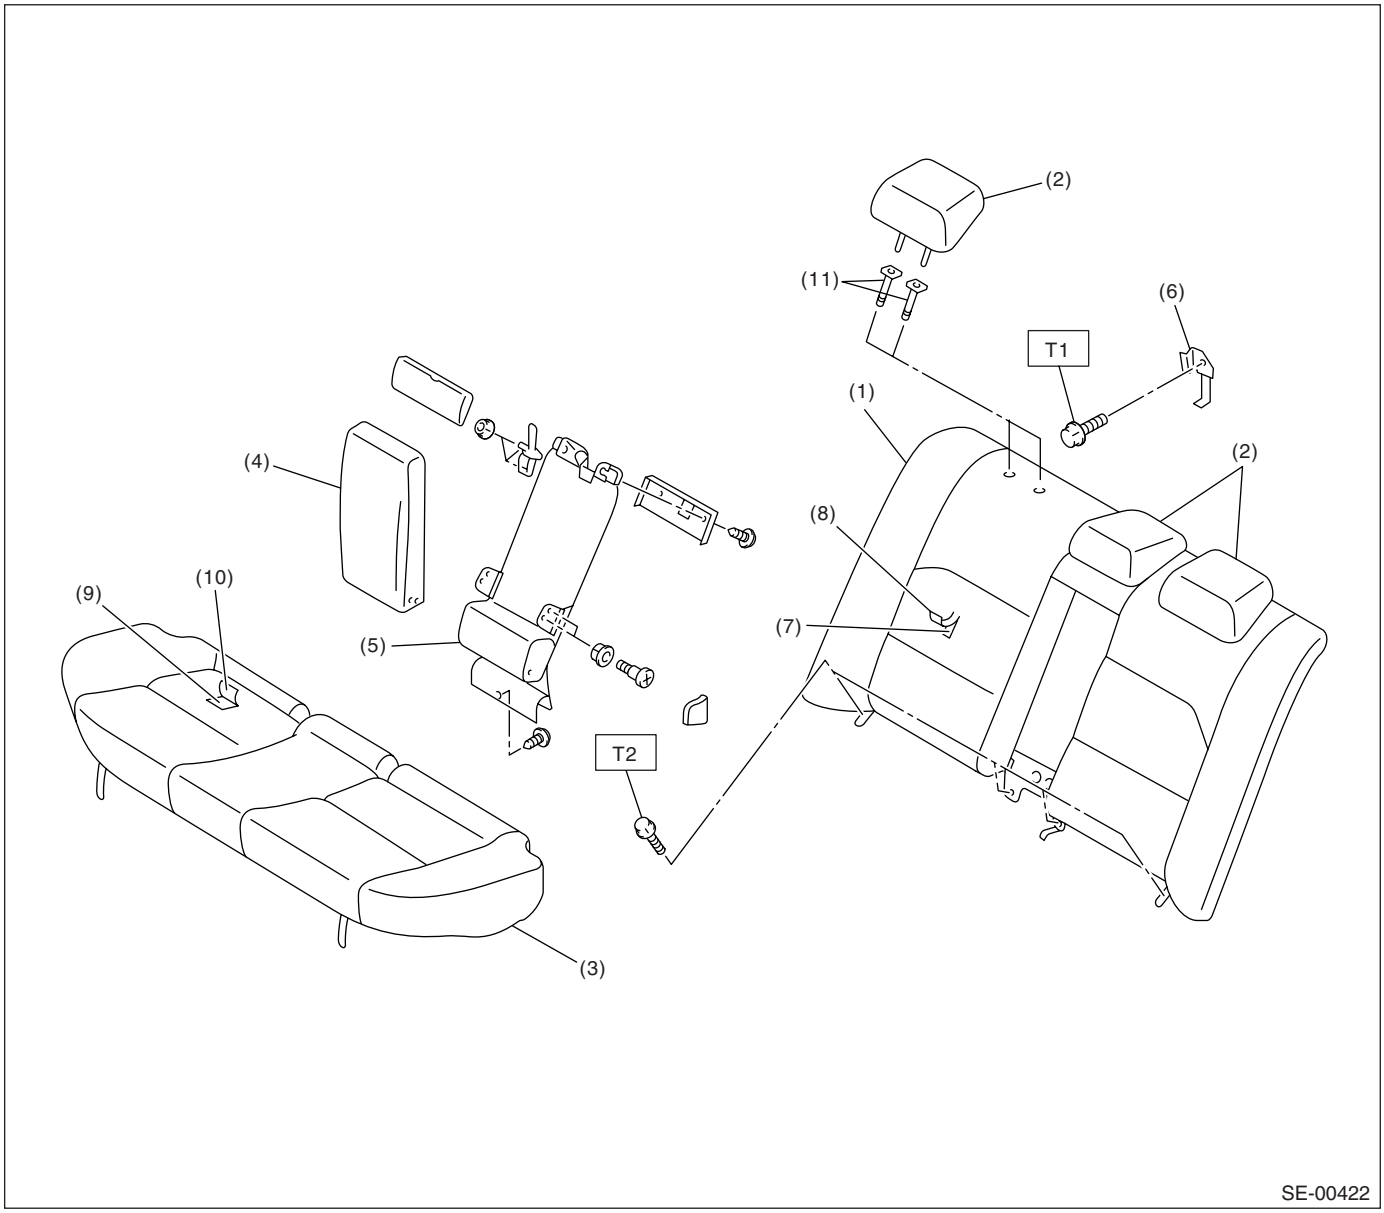
T2: 22 (2.24, 16.2)
T3: 52 (5.30, 38.4)
T4: 53 (5.40, 39.1)

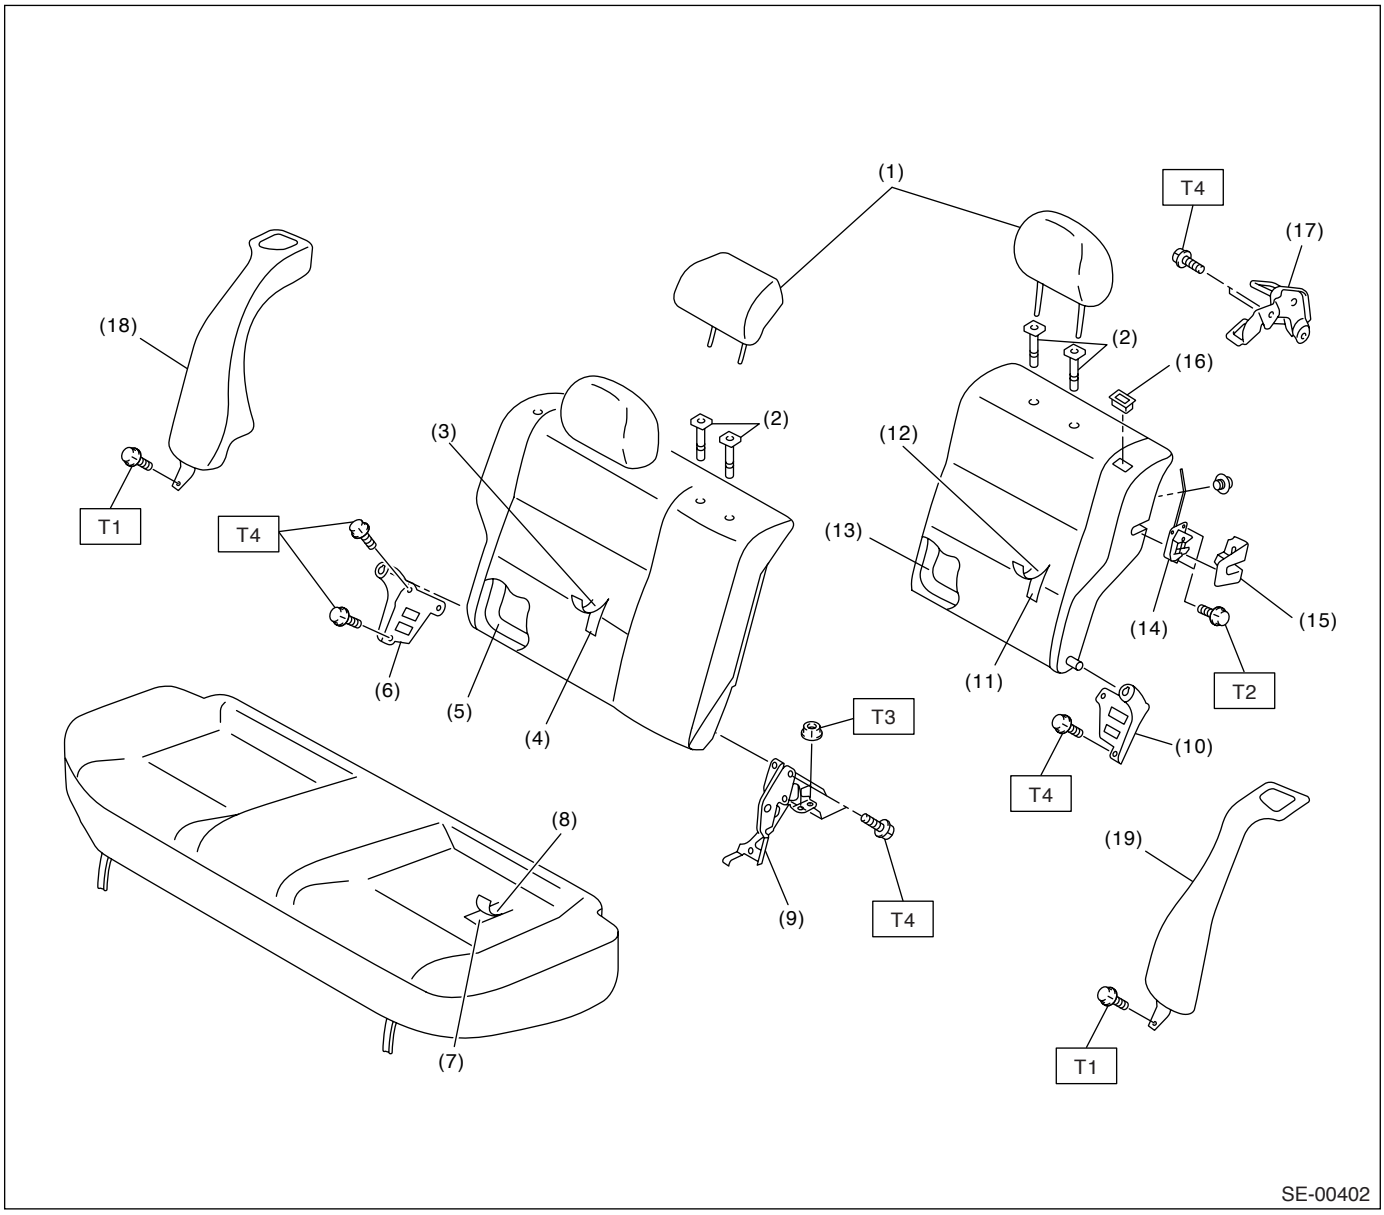
3. REAR SEAT (SEDAN MODEL)



(1) Backrest
(2) Headrest
(3) Cushion
(4) Armrest
(5) Center through frame
(6) Hook
(7) Backrest pad ASSY
(8) Backrest cover ASSY
(9) Rear pad & cushion frame ASSY
(10) Rear cushion cover
(11) Headrest bushing

Tightening torque: N·m (kgf-m, ft-lb)
T1: 10 (1.02, 7.38)
T2: 24.5 (2.5, 18.1)

4. REAR SEAT (WAGON MODEL)



(1) Headrest
(2) Headrest bushing
(3) Backrest cover RH
(4) Backrest pad RH
(5) Backrest frame RH
(6) Hinge ASSY RH
(7) Seat cushion pad
(8) Seat cushion cover
(9) Hinge ASSY CTR
(10) Hinge ASSY LH
(11) Backrest pad LH
(12) Backrest cover LH
(13) Backrest frame LH
(14) Seat back latch
(15) Seat back latch cover
(16) Holder & button
(17) Striker
(18) Backrest shoulder RH
(19) Backrest shoulder LH

Tightening torque: N·m (kgf-m, ft-lb)
T1: 13.7 (1.40, 10.1)
T2: 22 (2.24, 16.2)
T3: 24.5 (2.5, 18.1)
T4: 33 (3.3, 24.6)

B: CAUTION

When removing the front seat from a side airbag loaded vehicle, follow cautions given in the airbag section. <Ref. to AB-4, CAUTION, General Description.>

C: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Long nose pliers	Used for removing the hog ring.
Hog ring pliers	Used for installing the hog ring.
TORX® T50	Used for removing and installing the inner seat belt.

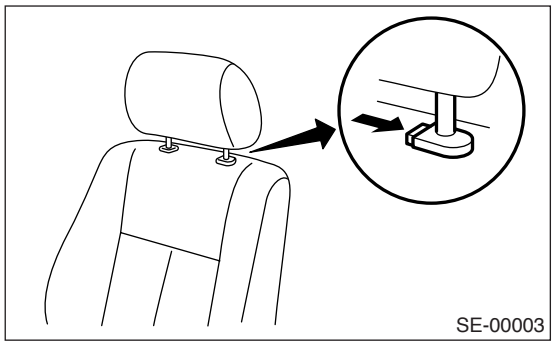
2. Front Seat

A: REMOVAL

1) Disconnect the ground cable from battery, and wait for more than 20 seconds before starting work.

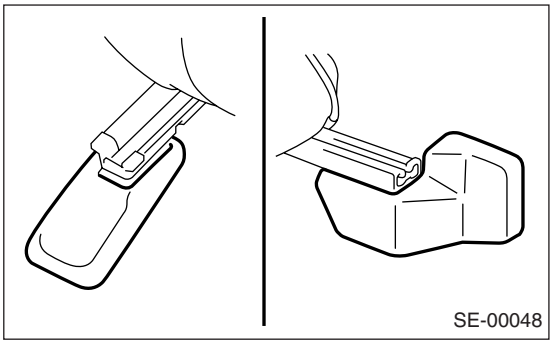
CAUTION:
The airbag system is fitted with a backup power source. After disconnecting the battery ground cable, the airbag may deploy if you do not wait for 20 seconds before starting the repair of air-bag system.

2) While pressing the headrest lock button, remove the headrest.



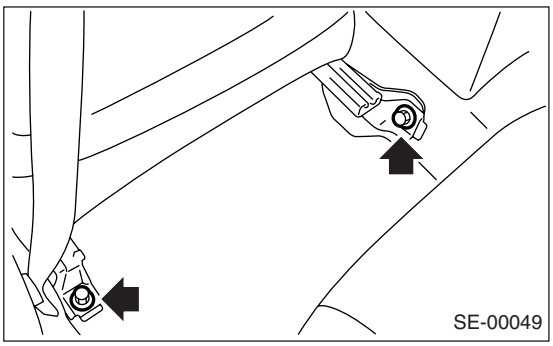
SE-00003

3) Tilt the backrest forward.
4) Move the seat to full front end.
5) Remove the bolt cover at the rear side of slide rail.



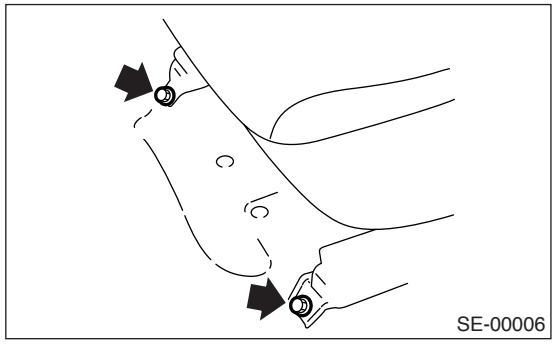
SE-00048

6) Remove the two bolts at the rear side of slide rail.



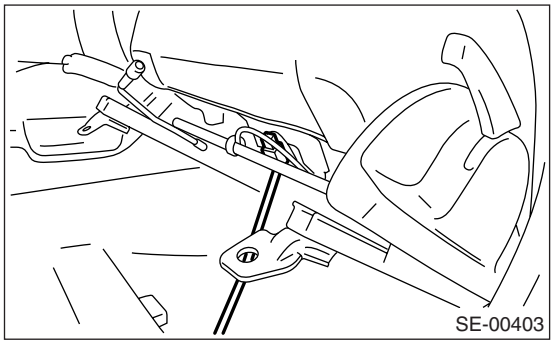
SE-00049

7) Move the seat to full rear end.
8) Remove the two bolts at the front side of slide rail.



SE-00006

9) Disconnect the connector under the seat.
- Seat belt warning light connector
- Side airbag connector (model with side airbag)
- Seat heater connector (model with seat heater)



SE-00403

10) Remove the front seat from vehicle.

B: INSTALLATION

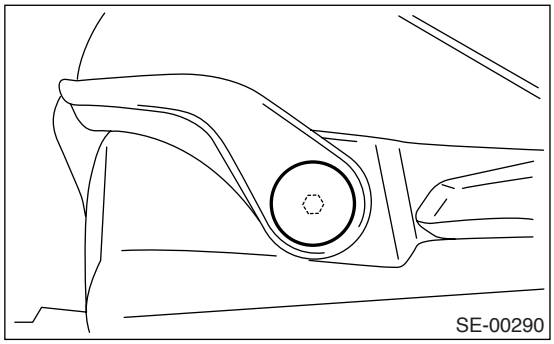
Install in the reverse order of removal.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to SE-2, FRONT SEAT (STANDARD SEAT), COMPONENT, General Description.>

C: DISASSEMBLY

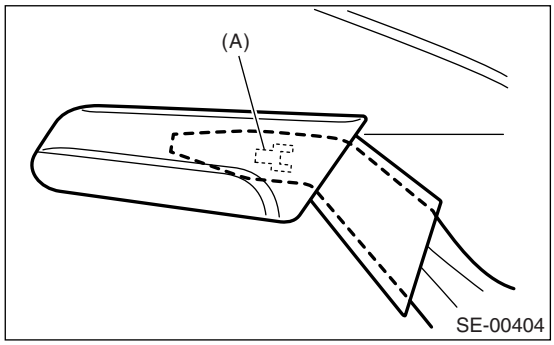
1. STANDARD SEAT

1) Remove the seat from vehicle. <Ref. to SE-7, REMOVAL, Front Seat.>
2) Remove the seat lifter cover using a flat tip screwdriver and loosen the inner bolt to remove seat lifter lever.

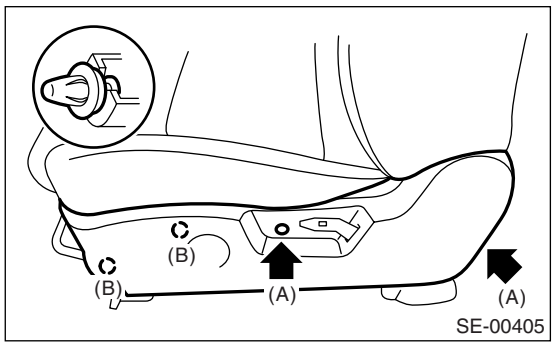


SE-00290

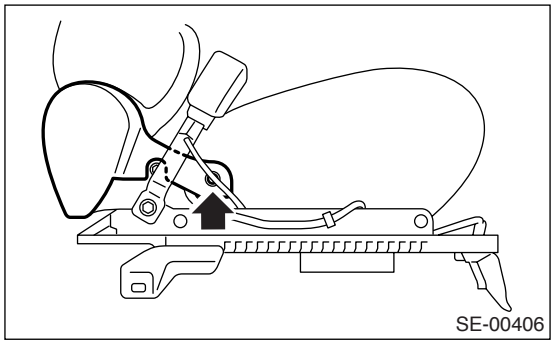
3) Remove the hook (A) and detach reclining lever cover.



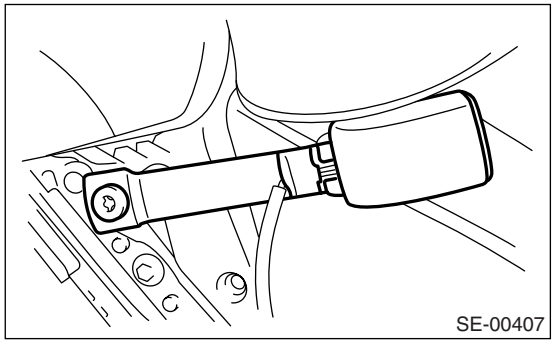
4) Remove the screws (A) and clips (B), and then detach the seat hinge outer cover.



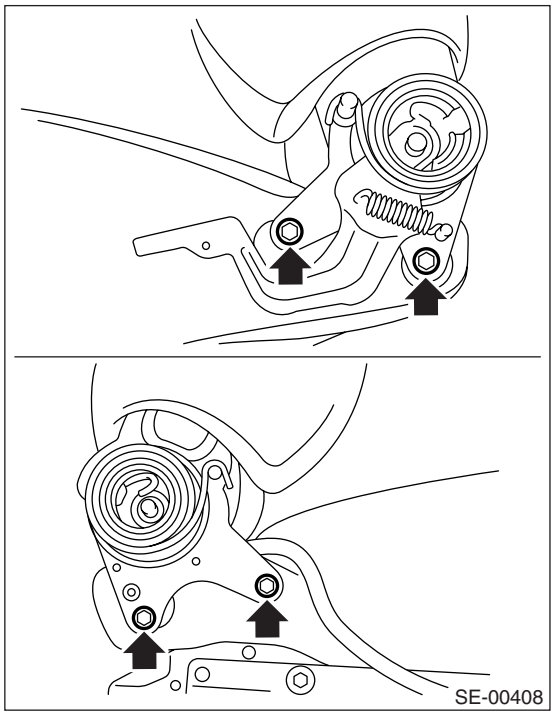
5) Loosen the screws to detach seat hinge inner cover.



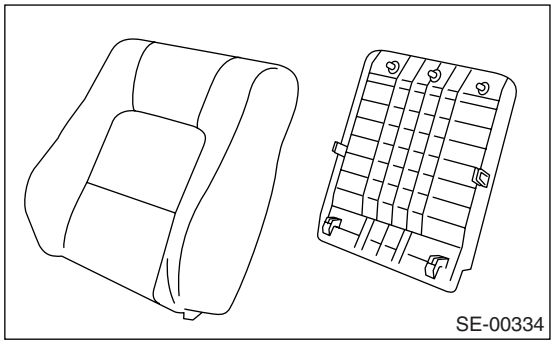
6) Remove the TORX® bolt, and then remove the inner belt.



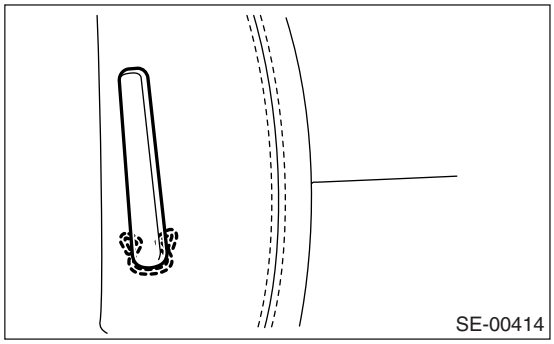
7) Remove the two bolts from reclining hinge on each side.



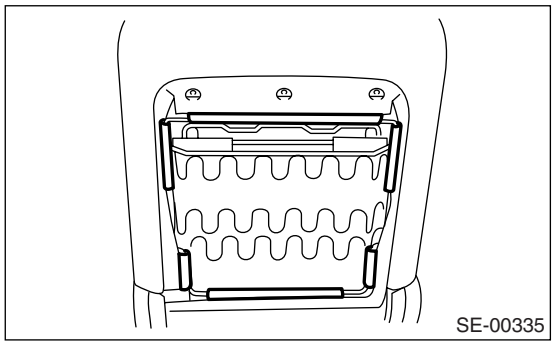
8) Remove the clips and hooks, and then detach the backrest back cover.



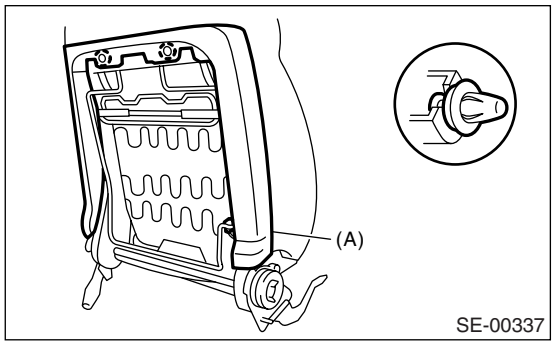
9) Remove the lock clip, and then remove the lumber support lever.



10) Remove the hooks at the rear side of backrest.

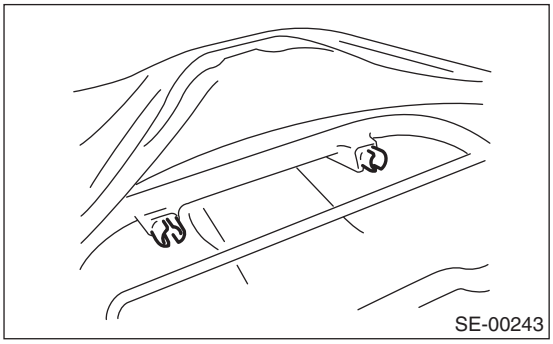


11) Remove the cover frame (A).

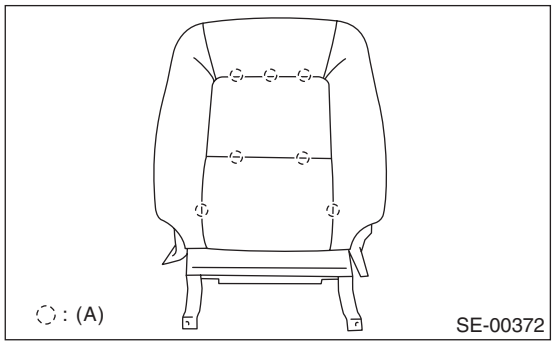


12) Remove the headrest lock bushing.

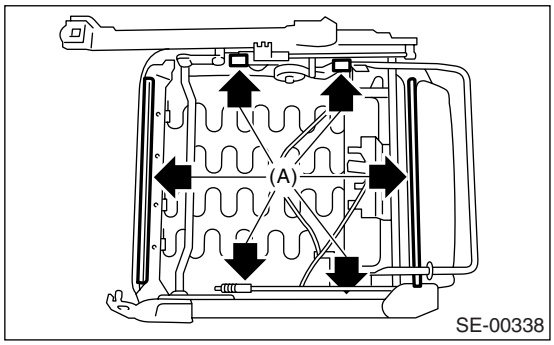
NOTE:
Push outside to remove it from the inside of seat.



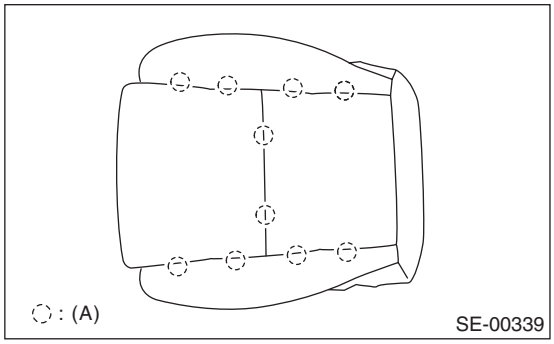
13) Pull out the backrest frame assembly.
14) Remove the hog rings (A) on the front side of backrest, and then remove the backrest cover from backrest.



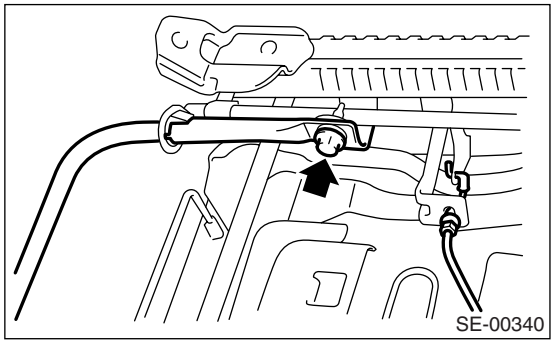
15) Remove the hooks (A), and then remove the seat cushion frame assembly.



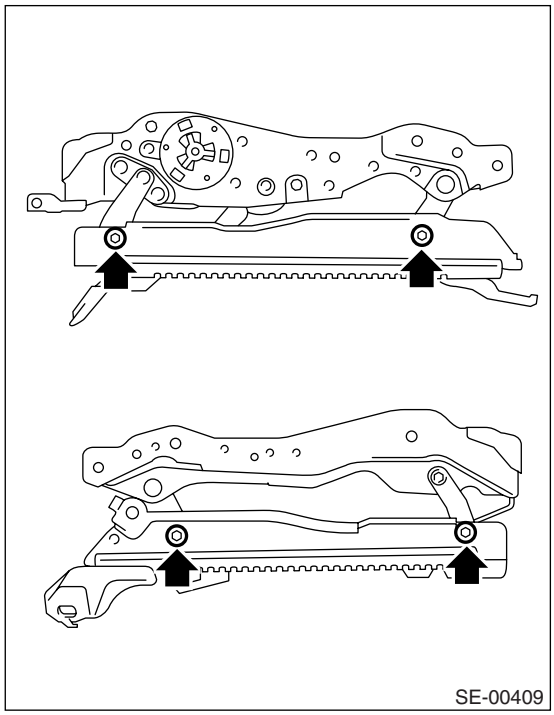
16) Remove the hog rings (A), and then remove the seat cushion cover from seat cushion pad.



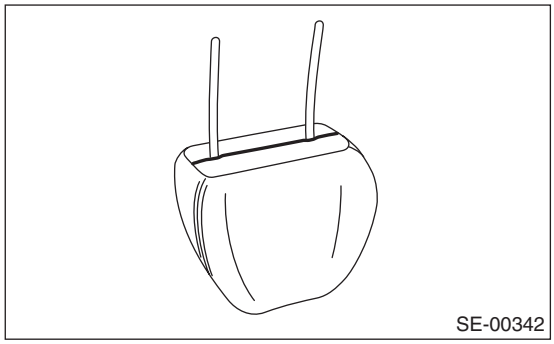
17) Remove the bolt of sliding adjustment bar and connecting wire.



18) Remove the bolts, and then remove the slide rail.

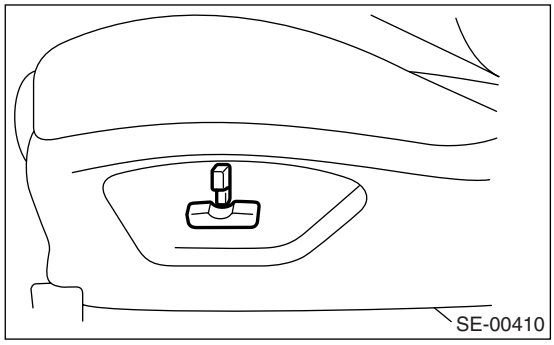


19) Remove the hooks and hog rings at the bottom of headrest, and then remove the headrest cover from headrest.

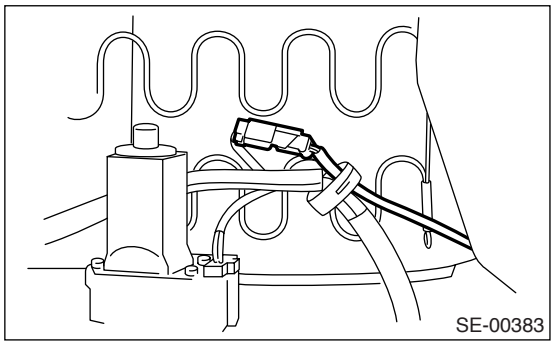


2. POWER SEAT

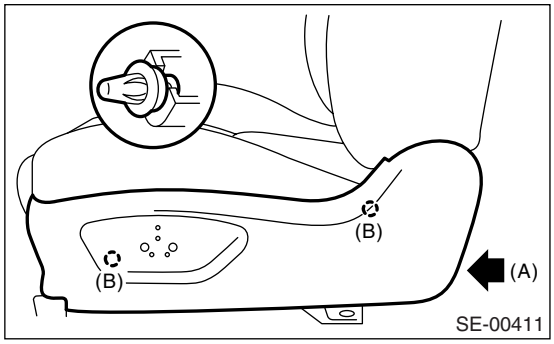
1) Remove the seat from vehicle. <Ref. to SE-7, REMOVAL, Front Seat.>
2) Remove the seat switch knob.



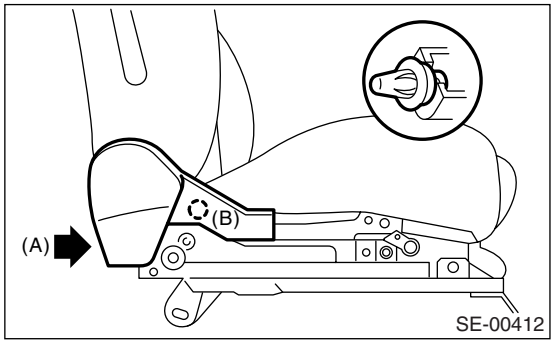
3) Disconnect the connector of reclining motor from the back of seat cushion.



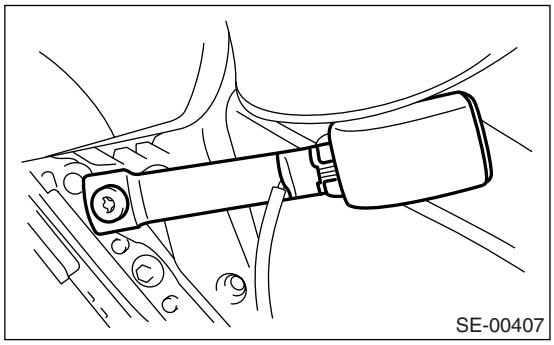
4) Remove the screw (A) and clips (B), and then disconnect the seat switch connector to remove seat hinge outer cover.



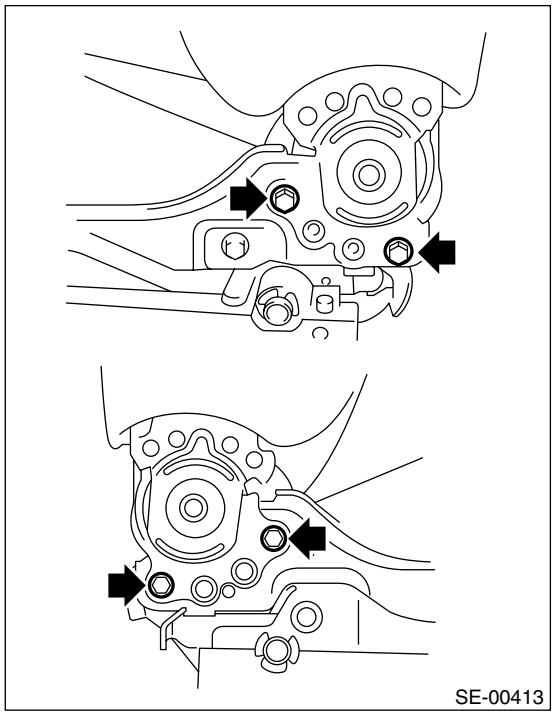
5) Remove the screw (A) and clip (B), and then remove the seat hinge inner cover.



6) Remove the TORX® bolt, and then remove the inner belt.

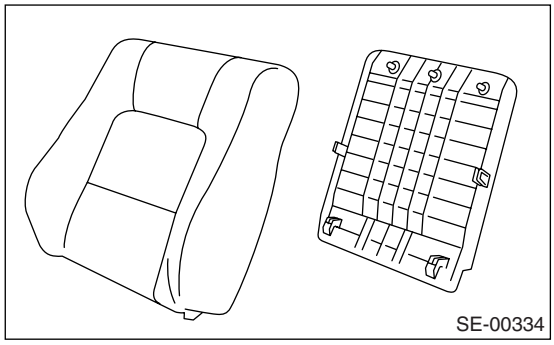


7) Remove the two bolts from the reclining hinge on each left and right side.



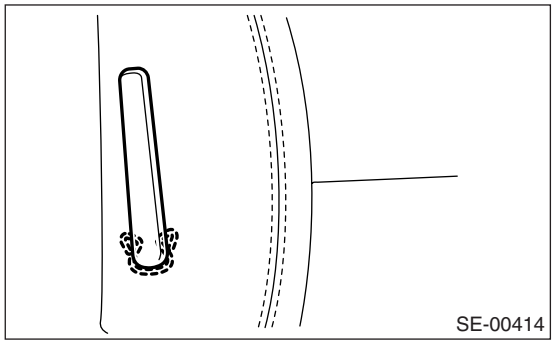
SE-00413

8) Remove the clips and hooks, and then detach the backrest back cover.



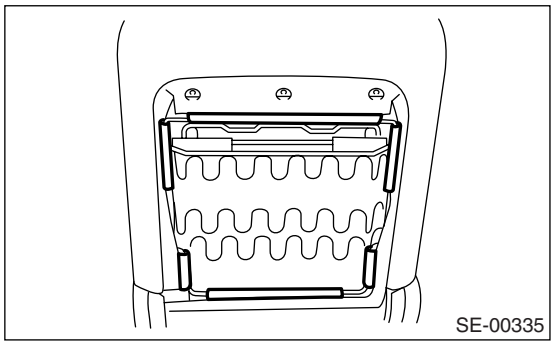
SE-00334

9) Remove the lock clip, and then remove the lumber support lever.



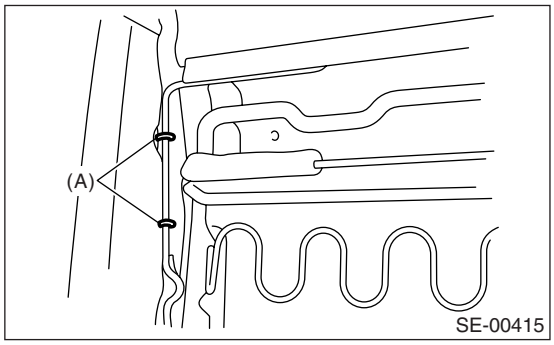
SE-00414

10) Remove the hooks at the rear side of backrest.



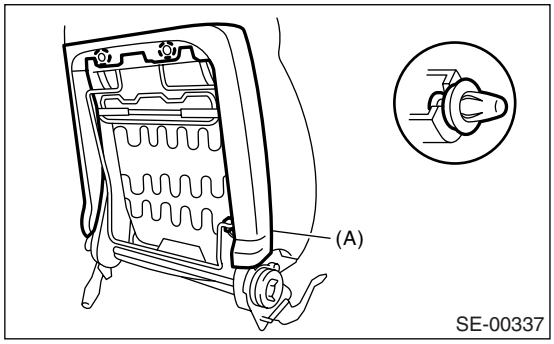
SE-00335

NOTE:
For the seat with side airbag, the airbag module installation side is secured with hog rings (A).



SE-00415

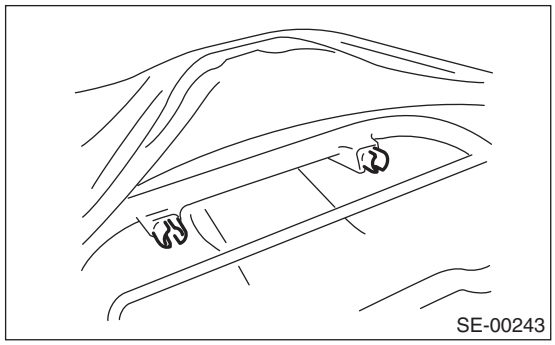
11) Remove the cover frame (A).



SE-00337

12) Remove the headrest lock bushing.

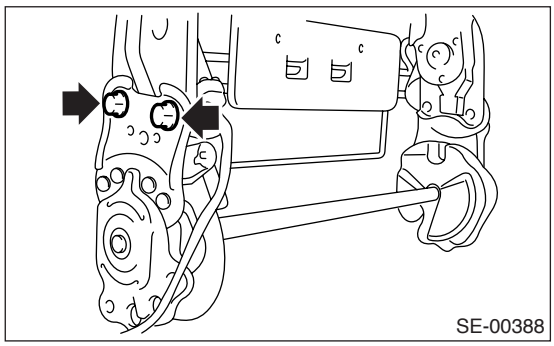
NOTE:
Push outside to remove it from the inside of seat.



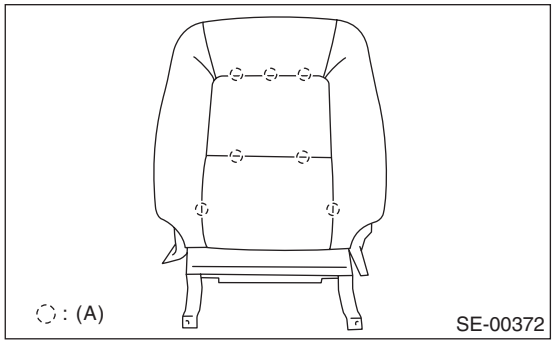
SE-00243

13) Pull out the backrest frame assembly.

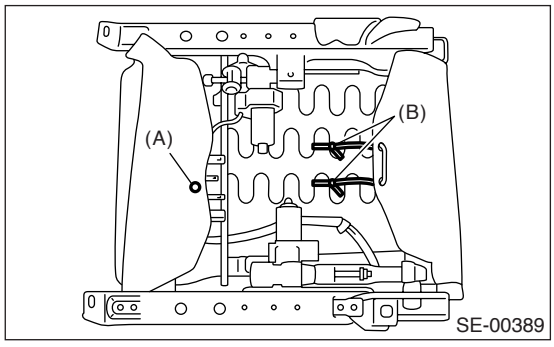
14) Remove the two bolts on each left and right side, and then remove the reclining motor assembly.



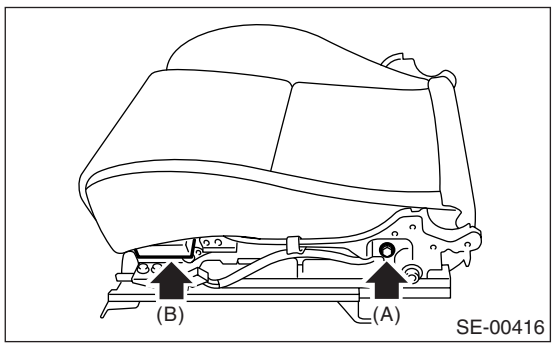
15) Remove the hog rings (A) on the front side of backrest, and then remove the backrest cover from backrest.



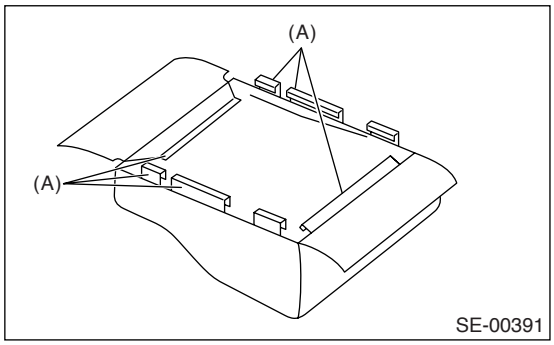
16) Remove the clip (A) and straps (B) on the back of seat cushion.



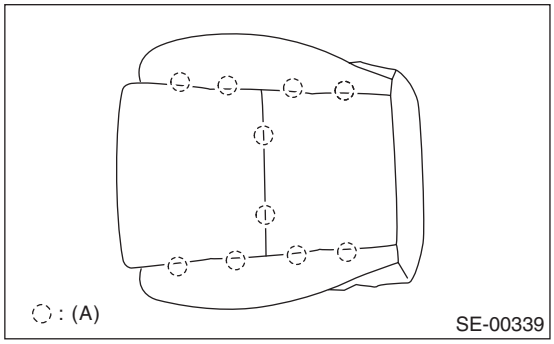
17) Remove the bolt (A) and hook (B) on left and right side, and then remove the seat cushion frame from seat rail assembly.



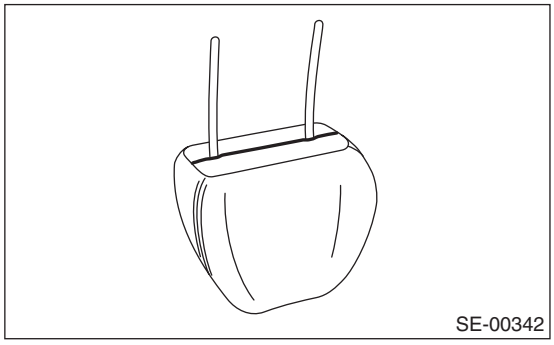
18) Remove the hooks (A), and then remove the seat cushion from seat cushion frame.



19) Remove the hog rings (A), and then remove the seat cushion cover from seat cushion pad.



20) Remove the hooks and hog rings at the bottom of headrest, and then remove the headrest cover from headrest.



D: ASSEMBLY

1. STANDARD SEAT

Assemble in the reverse order of disassembly.

2. POWER SEAT

Assemble in the reverse order of disassembly.

CAUTION:
When the backrest cover is not installed securely, the side airbag module may not be deployed properly, therefore keep strictly to the following procedure.

- **Be careful not to stain or damage the backrest cover during assembly.**
- **Always use new hog rings.**

• Secure the hog ring using hog ring pliers.
• Install the hog rings to the specified points securely and make sure that no wrinkle or twisting on the backrest cover.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to SE-2, FRONT SEAT (STANDARD SEAT), COMPONENT, General Description.>

E: INSPECTION

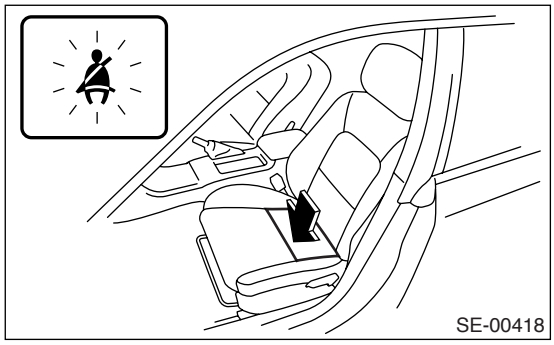
1. SEAT COVER

Check that no tear or fray on the backrest cover and seat cushion cover.

NOTE:
When the side airbag equipped model has tear or fray on the door side of backrest cover, the side airbag may not be deployed properly. Replace it with new one in such a case.

2. SEATING SENSOR

Make sure the passenger's seat belt warning light illuminates when applying load to the rear surface of passenger's seat cushion. If not, replace the seat cushion pad with a new one.



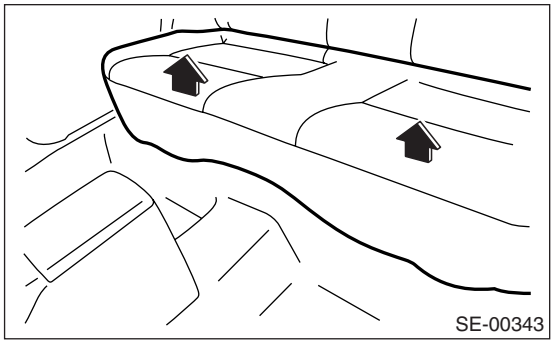
SE-00418

3. Rear Seat

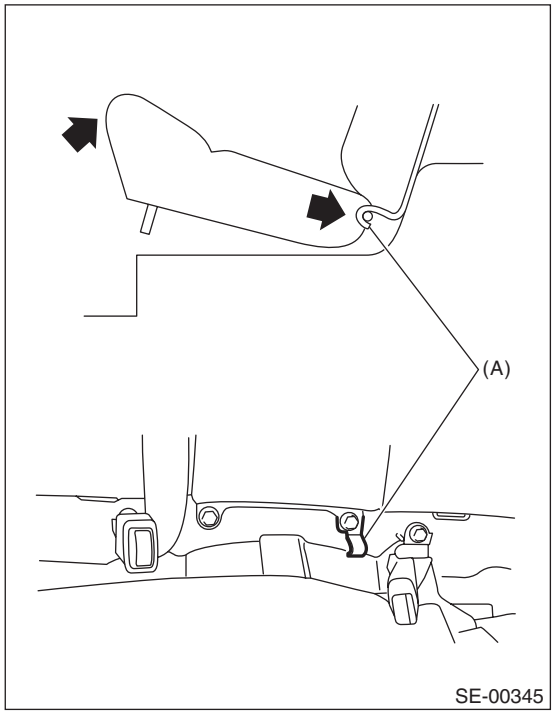
A: REMOVAL

1. SEDAN MODEL

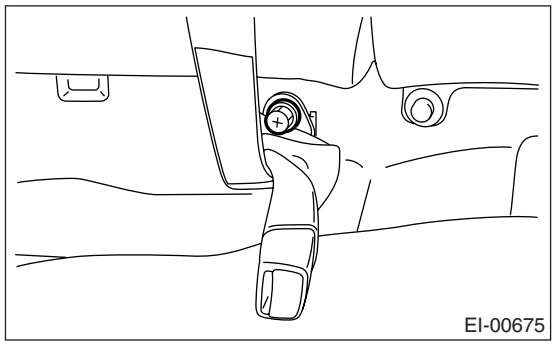
1) Remove the two hooks while lifting up the rear seat cushion.



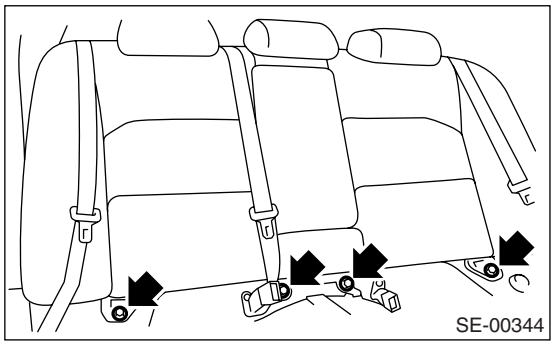
2) Remove the hook (A) by pushing it backward while lifting up the front side of seat cushion to detach seat cushion.



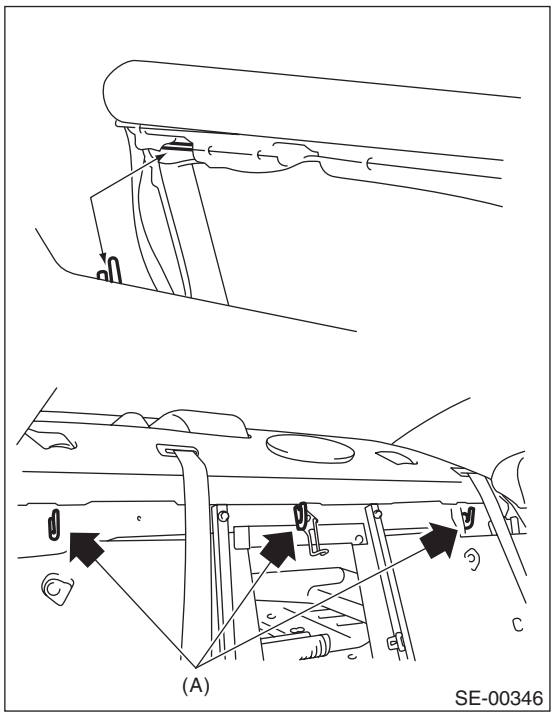
3) Remove the lower anchor bolt of rear center seat belt.



4) Remove the bolts which secure the bottom of backrest.

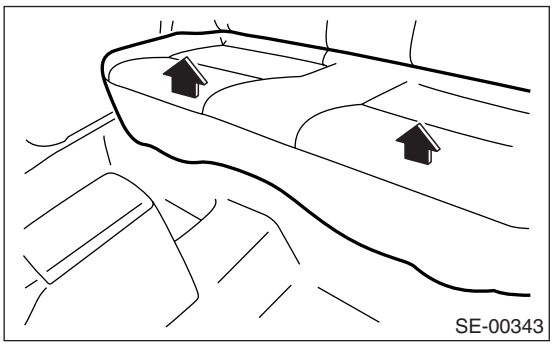


5) Remove the anchor part on backrest side from the hook on body side (A) while lifting up the backrest to detach it from vehicle.

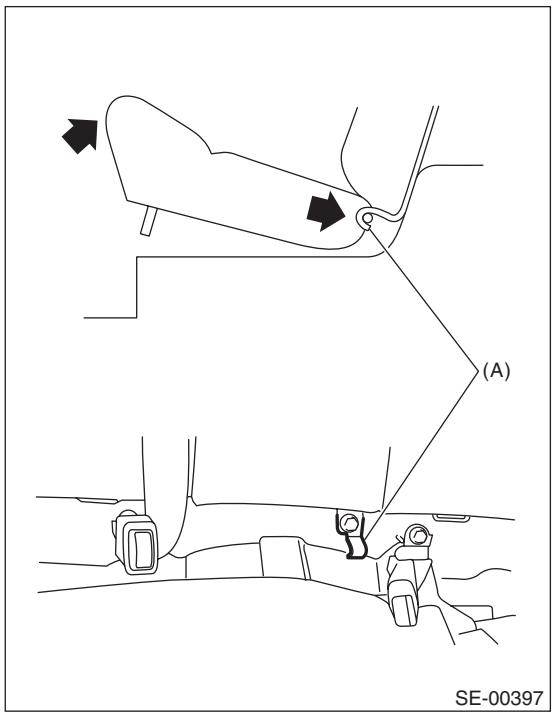


2. WAGON MODEL

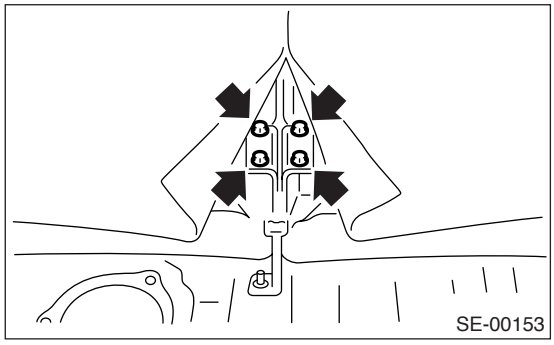
1) Disconnect the ground cable from battery.
2) Remove the two hooks while lifting up the rear seat cushion.



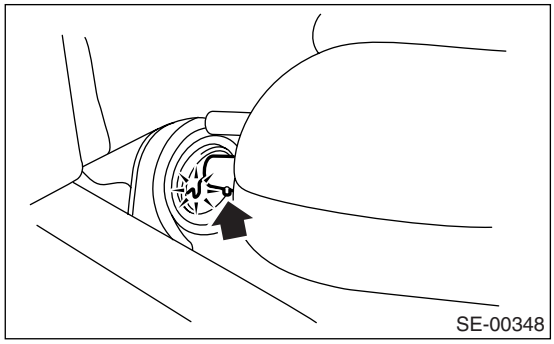
3) Remove the hook (A) by pushing it backward while lifting up the front side of seat cushion to detach seat cushion.



4) Remove the headrest, and then tilt the backrest forward.
5) Remove the luggage floor box. <Ref. to EI-74, REMOVAL, Luggage Floor Box.>
6) Remove the hinge assembly CTR bolts.

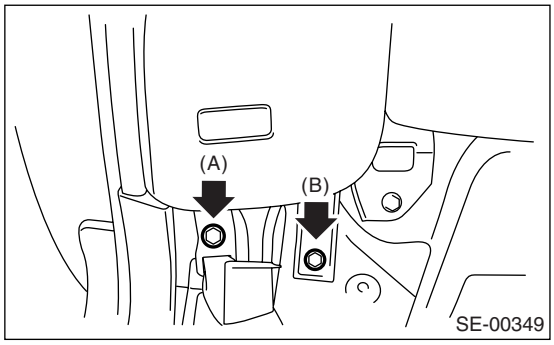


7) Remove the backrest from hinge assembly LH (hinge assembly RH).

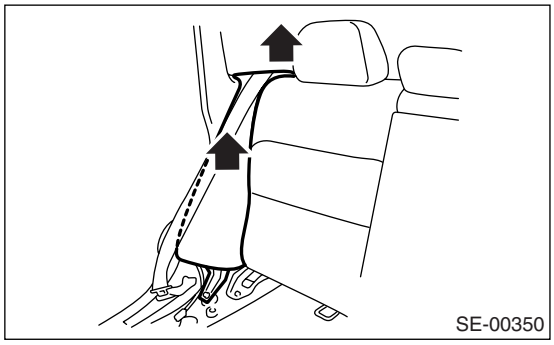


NOTE:
The backrest cannot be detached when the hinge assembly side does not mate with the backrest pin position.

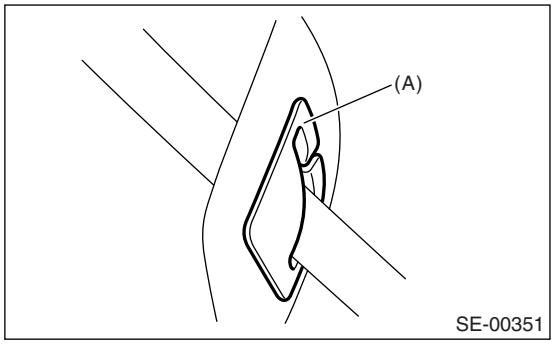
8) Remove the lower anchor bolt (A) of outer seat belt and backrest shoulder bolt (B).



9) Remove the backrest shoulder with lifting it up.



10) Remove the belt cover (A) from backrest shoulder cover, and then pull out the seat belt.



B: INSTALLATION

1. SEDAN MODEL

Install in the reverse order of removal.

NOTE:
• After installing the backrest, make sure that each seat belt operates normally.
• Make sure that they are secured on each hook of vehicle side.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to SE-4, REAR SEAT (SEDAN MODEL), COMPONENT, General Description.>

2. WAGON MODEL

Install in the reverse order of removal.

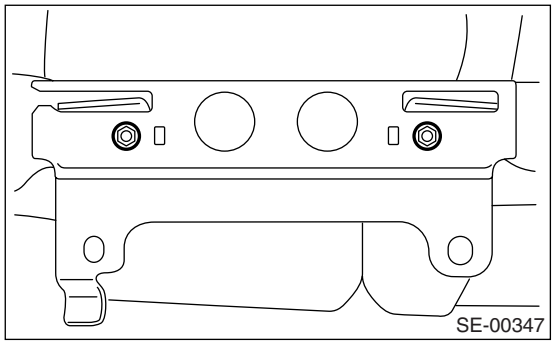
NOTE:
• After installing the backrest, make sure that each seat belt operates normally.
• Make sure that they are secured on each hook of vehicle side.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to SE-5, REAR SEAT (WAGON MODEL), COMPONENT, General Description.>

C: DISASSEMBLY

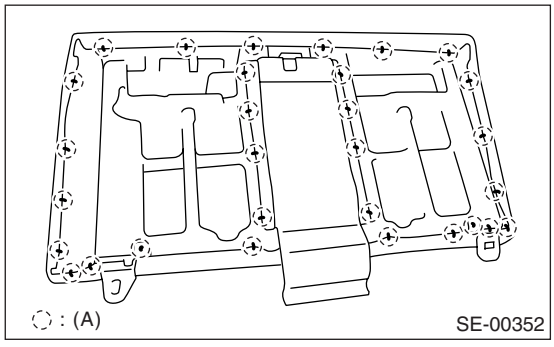
1. SEDAN MODEL

1) Remove the rear seat. <Ref. to SE-14, SEDAN MODEL, REMOVAL, Rear Seat.>
2) Remove the headrest.
3) Remove the nuts, and then detach the trunk through assembly.



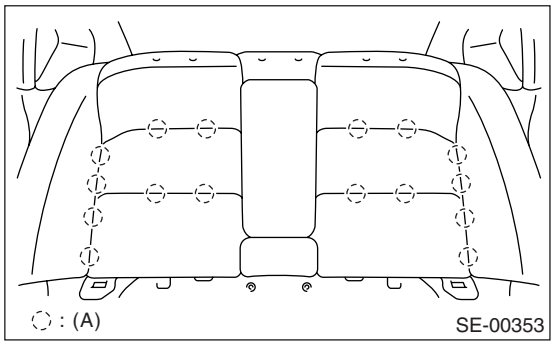
SE-00347

4) Remove the hog rings (A) on the rear side of backrest.



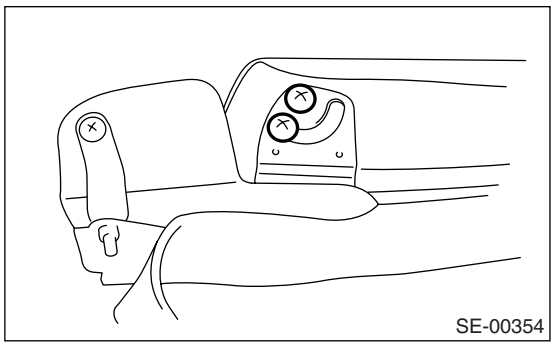
SE-00352

5) Remove the hog rings (A) on the front side of backrest.



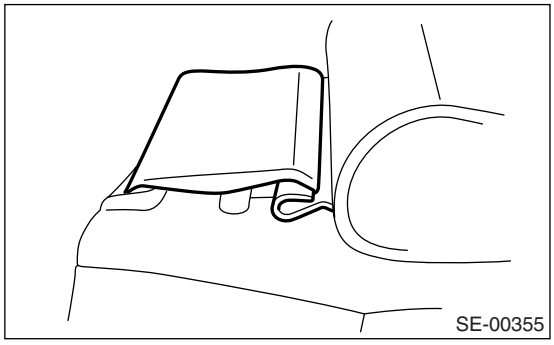
SE-00353

6) Remove both sides of armrest hinge covers, and loosen the screws to remove armrest.



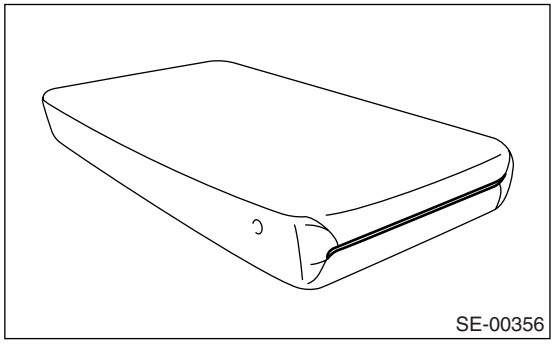
SE-00354

7) Remove the hook, and then detach the center through cover.



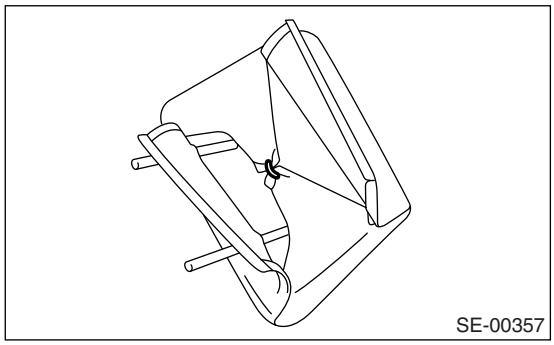
SE-00355

8) Remove the hook, and then remove the armrest cover.

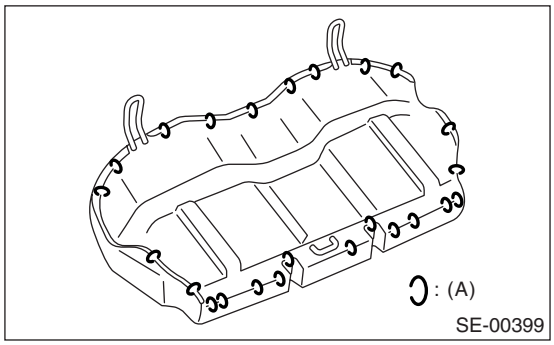


SE-00356

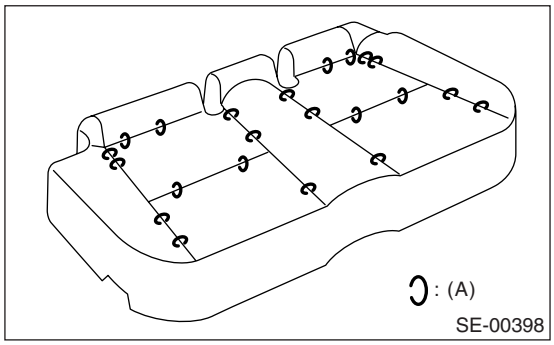
9) Remove the hook and hog ring, and then remove the headrest cover.



10) Remove the hog rings (A) on the rear side of seat cushion.



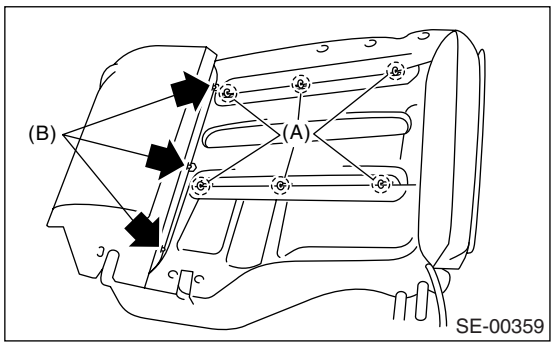
11) Remove the hog rings (A), and then remove the seat cushion cover.



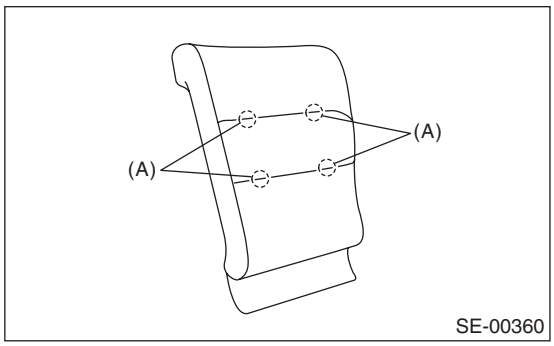
2. WAGON MODEL

1) Remove the rear seat. <Ref. to SE-14, WAGON MODEL, REMOVAL, Rear Seat.>

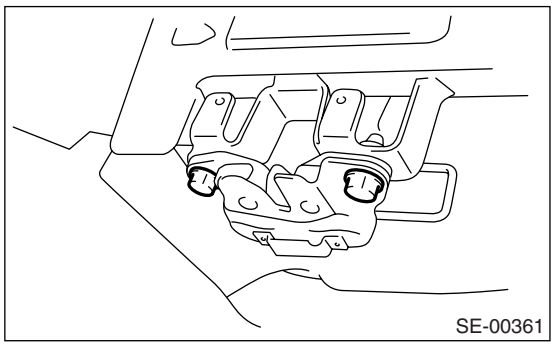
2) Remove the hooks at the bottom of backrest assembly LH, and then turn over the backrest cover to remove the hog rings (A) and hooks (B).



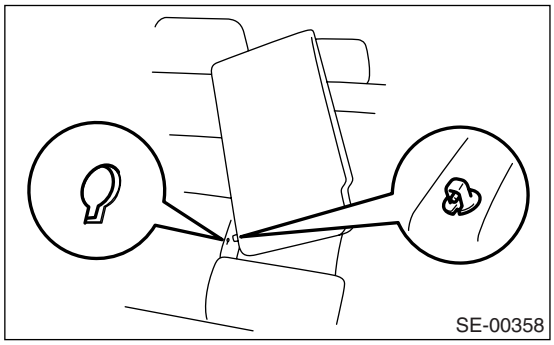
3) Remove the hog rings (A) on the front side of backrest, and then remove the backrest cover.



4) Remove the bolts, and then remove the backrest latch.

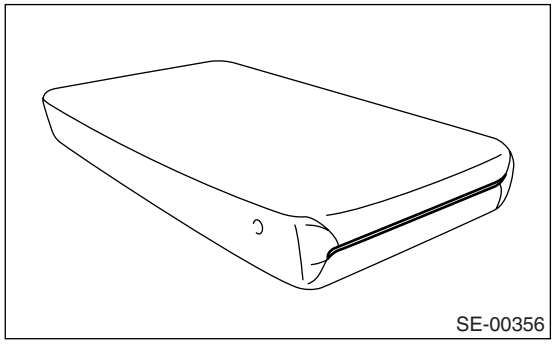


5) Loosen the screws to remove the armrest from backrest assembly RH.



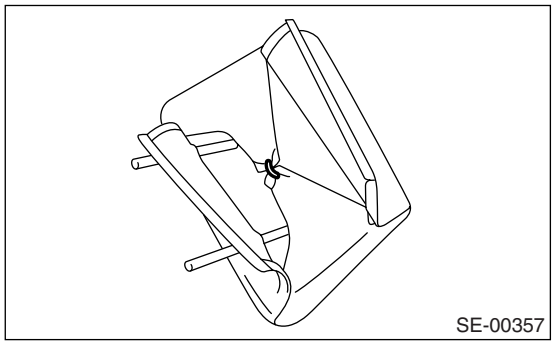
NOTE:
Armrest cannot be removed when backrest assembly RH side does not mate with armrest side pin position.

6) After this operation, refer to the step 2) to disassemble backrest assembly RH.
7) Remove the hook, and then remove the armrest cover.



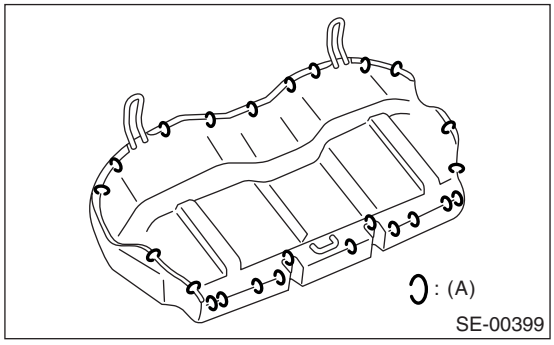
SE-00356

8) Remove the hook and hog ring, and then remove the headrest cover.



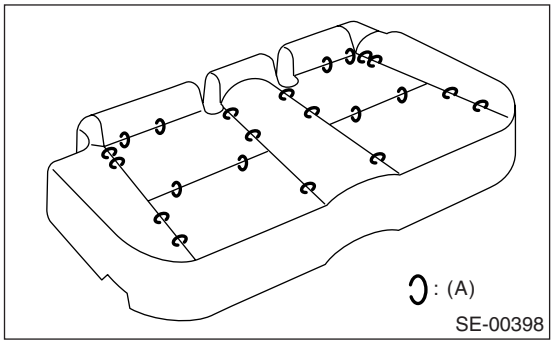
SE-00357

9) Remove the hog rings (A) on the rear side of seat cushion.



SE-00399

10) Remove the hog rings (A), and then remove the seat cushion cover.



SE-00398

D: ASSEMBLY

1. SEDAN MODEL

Assemble in the reverse order of disassembly.

NOTE:
• Do not contaminate or damage the cover.
• While installing the hog rings, prevent the seat from getting wrinkled.

CAUTION:
• Always use new hog rings.
• Secure the hog ring using hog ring pliers.
• Install the hog rings to the specified points securely and be sure to prevent backrest cover from wrinkle or twisting.

2. WAGON MODEL

Assemble in the reverse order of disassembly.

NOTE:
• Do not contaminate or damage the cover.
• While installing the hog rings, prevent the seat from getting wrinkled.

CAUTION:
• Always use new hog rings.
• Secure the hog ring using hog ring pliers.
• Install the hog rings to the specified points securely and be sure to prevent backrest cover from wrinkle or twisting.

E: INSPECTION

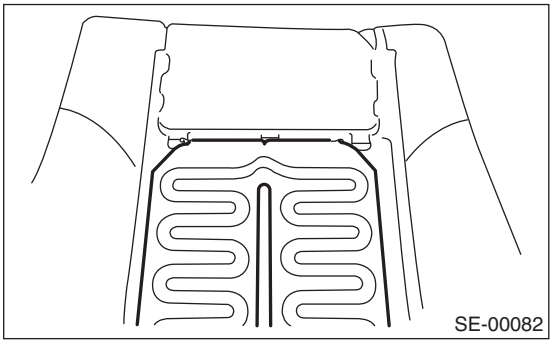
Check that no tear or fray on the seat cover.

4. Seat Heater System

A: REMOVAL

1. SEAT HEATER UNIT

1) Remove the front seats. <Ref. to SE-7, REMOVAL, Front Seat.>
2) Remove the backrest cover and seat cushion cover of front seat. <Ref. to SE-7, DISASSEMBLY, Front Seat.>
3) Remove the hog ring, and then remove the seat heater unit.



2. SEAT HEATER SWITCH

1) Remove the console box. <Ref. to EI-53, REMOVAL, Console Box.>
2) Remove the seat heater switch from console box.

B: INSTALLATION

1. SEAT HEATER UNIT

Install in the reverse order of removal.

2. SEAT HEATER SWITCH

Install in the reverse order of removal.

BODY SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

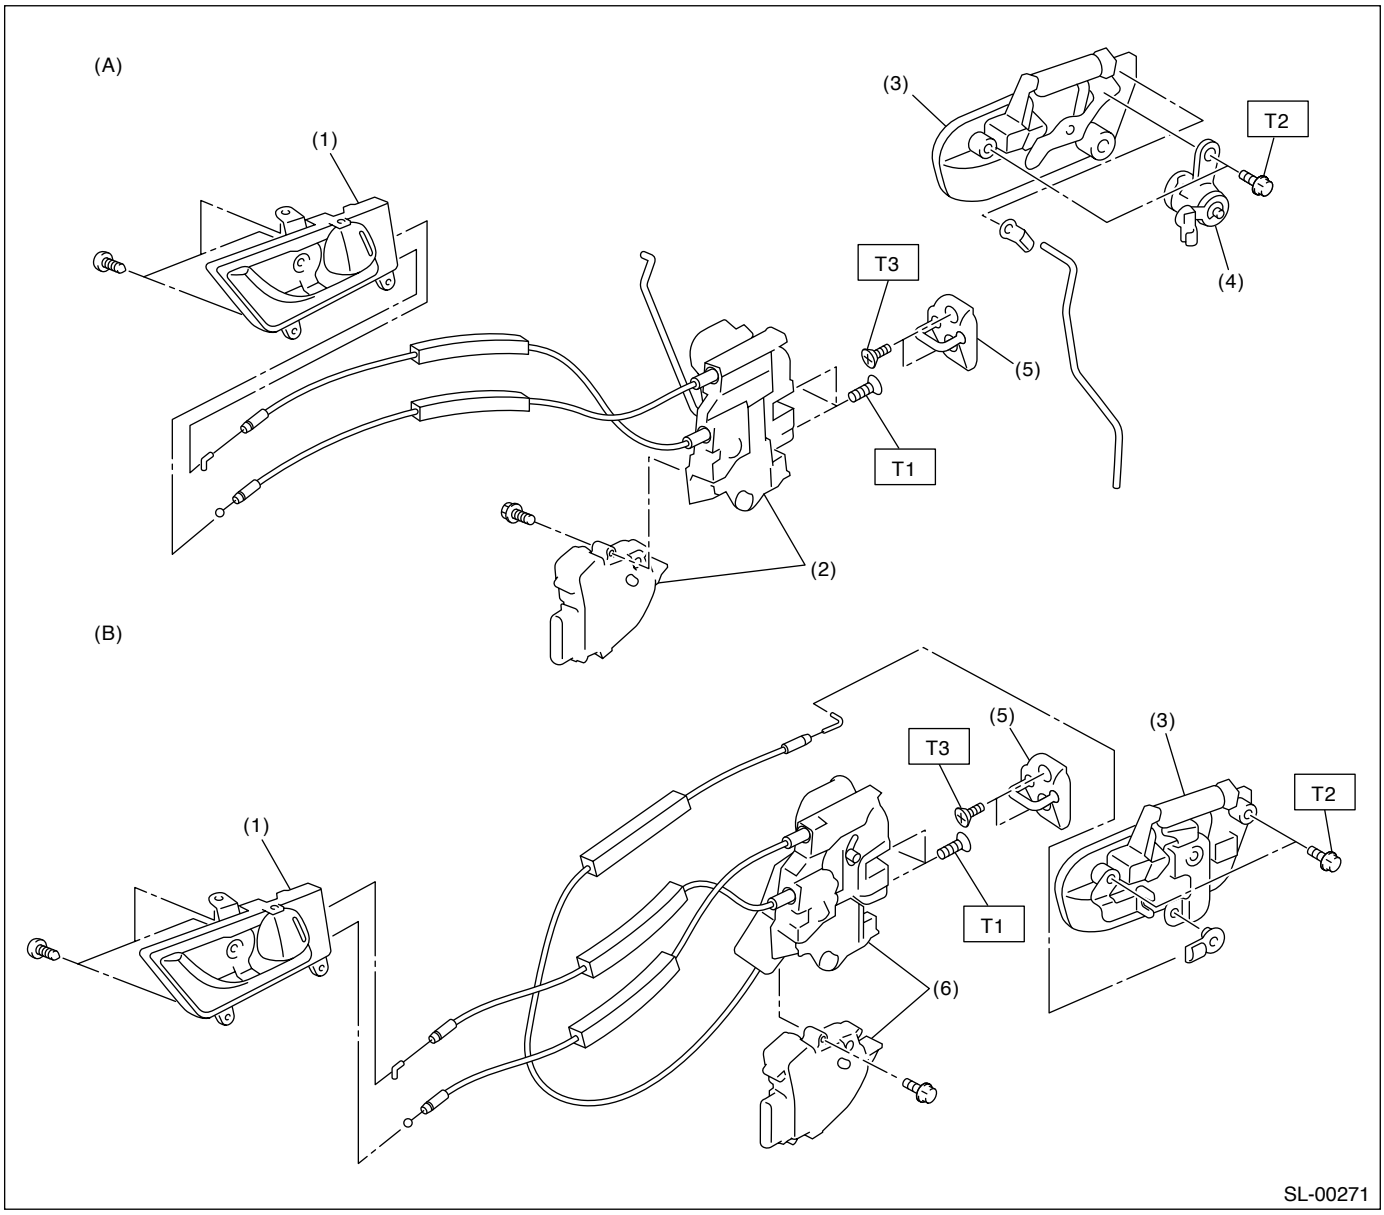
1. General Description

A: COMPONENT

1. DOOR LOCK ASSEMBLY

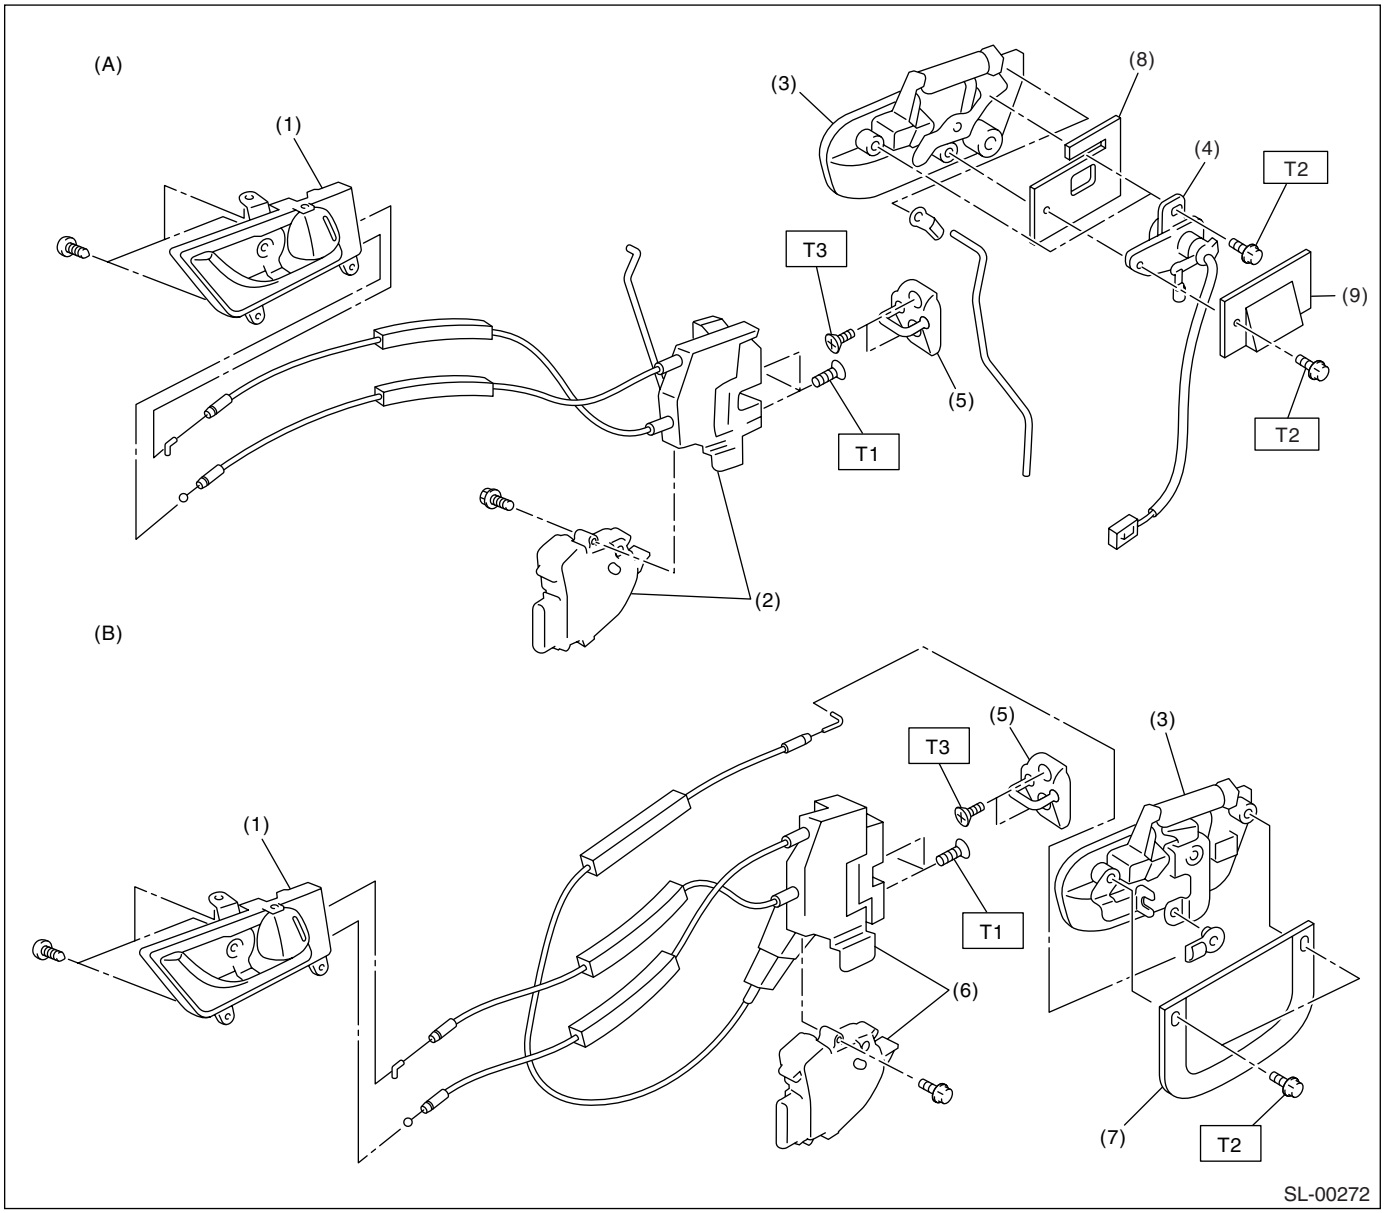
- Model without double lock



(A)	Front	(B)	Rear
(1)	Inner remote ASSY	(4)	Key cylinder
(2)	Front door latch & door lock actuator ASSY	(5)	Striker
(3)	Door outer handle	(6)	Rear door latch & door lock actuator ASSY

Tightening torque: N·m (kgf-m, ft-lb)
T1: 6.5 (0.66, 4.8)
T2: 7.5 (0.76, 5.5)
T3: 18 (1.8, 13.3)

• Model with double lock



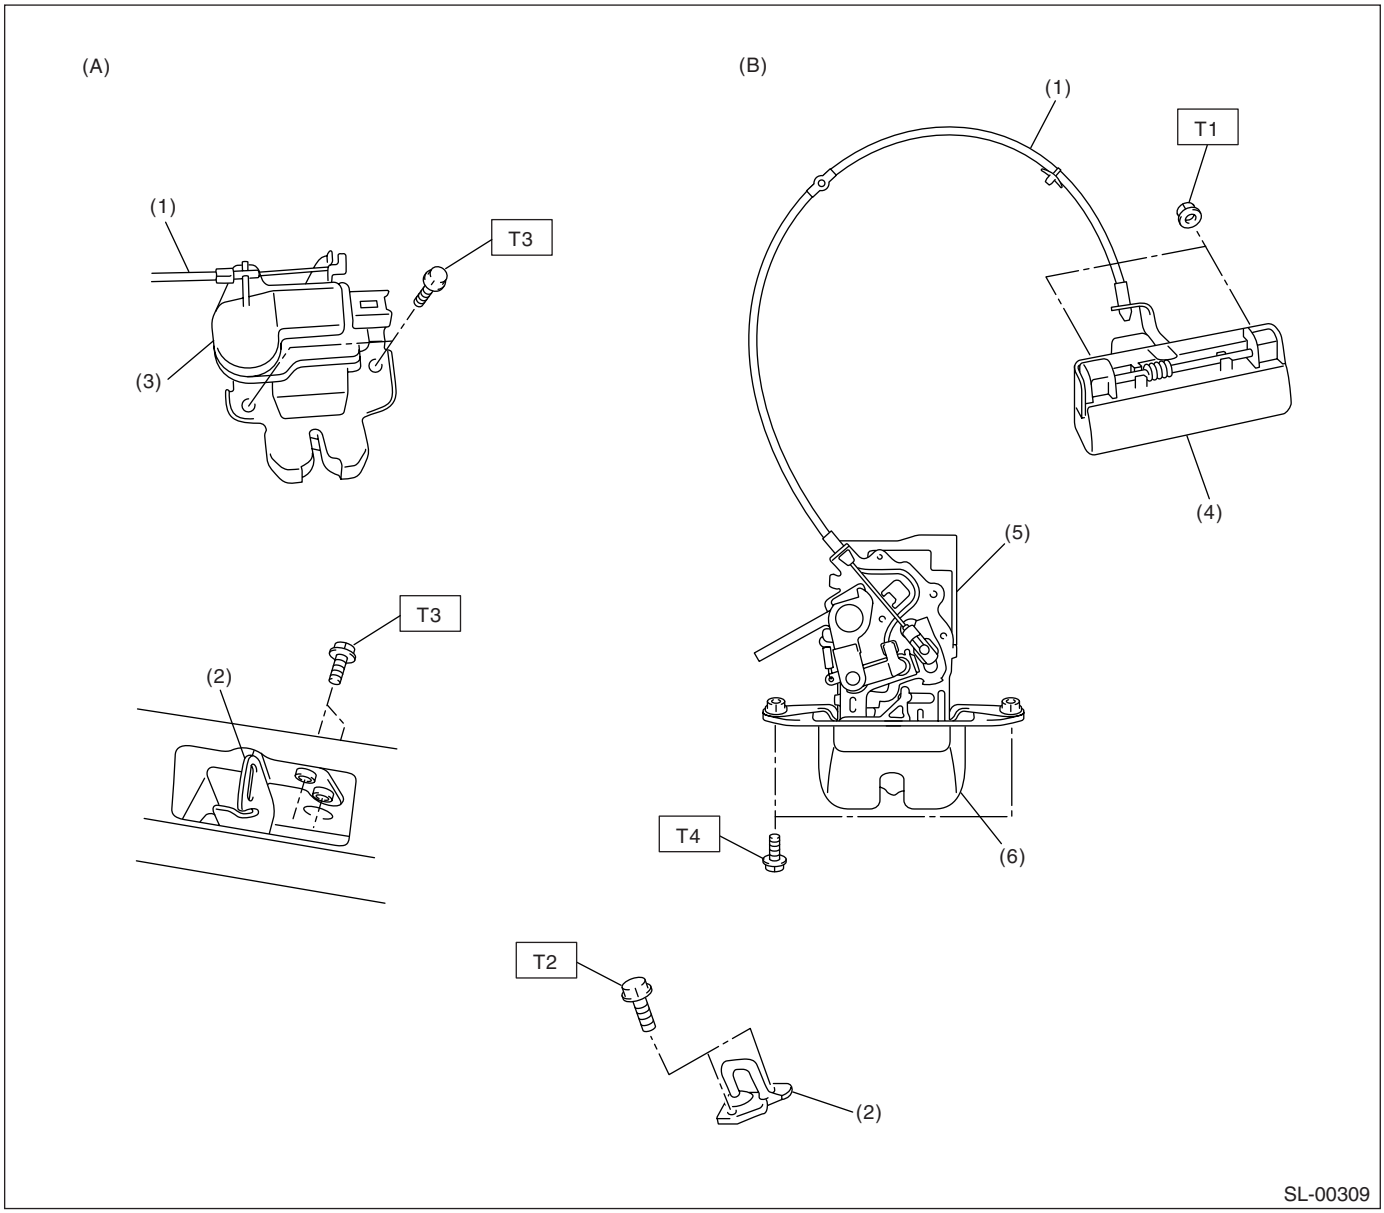
(A) Front
(B) Rear

(1) Inner remote ASSY
(2) Front door latch & door lock actuator ASSY
(3) Door outer handle
(4) Key cylinder (switch)
(5) Striker
(6) Rear door latch & door lock actuator ASSY
(7) Outer handle bracket
(8) Key cylinder cover A
(9) Key cylinder cover B

Tightening torque: N·m (kgf-m, ft-lb)
T1: 6.5 (0.66, 4.8)
T2: 7.5 (0.76, 5.5)
T3: 18 (1.8, 13.3)

2. TRUNK LID AND REAR GATE LOCK

• Model without double lock

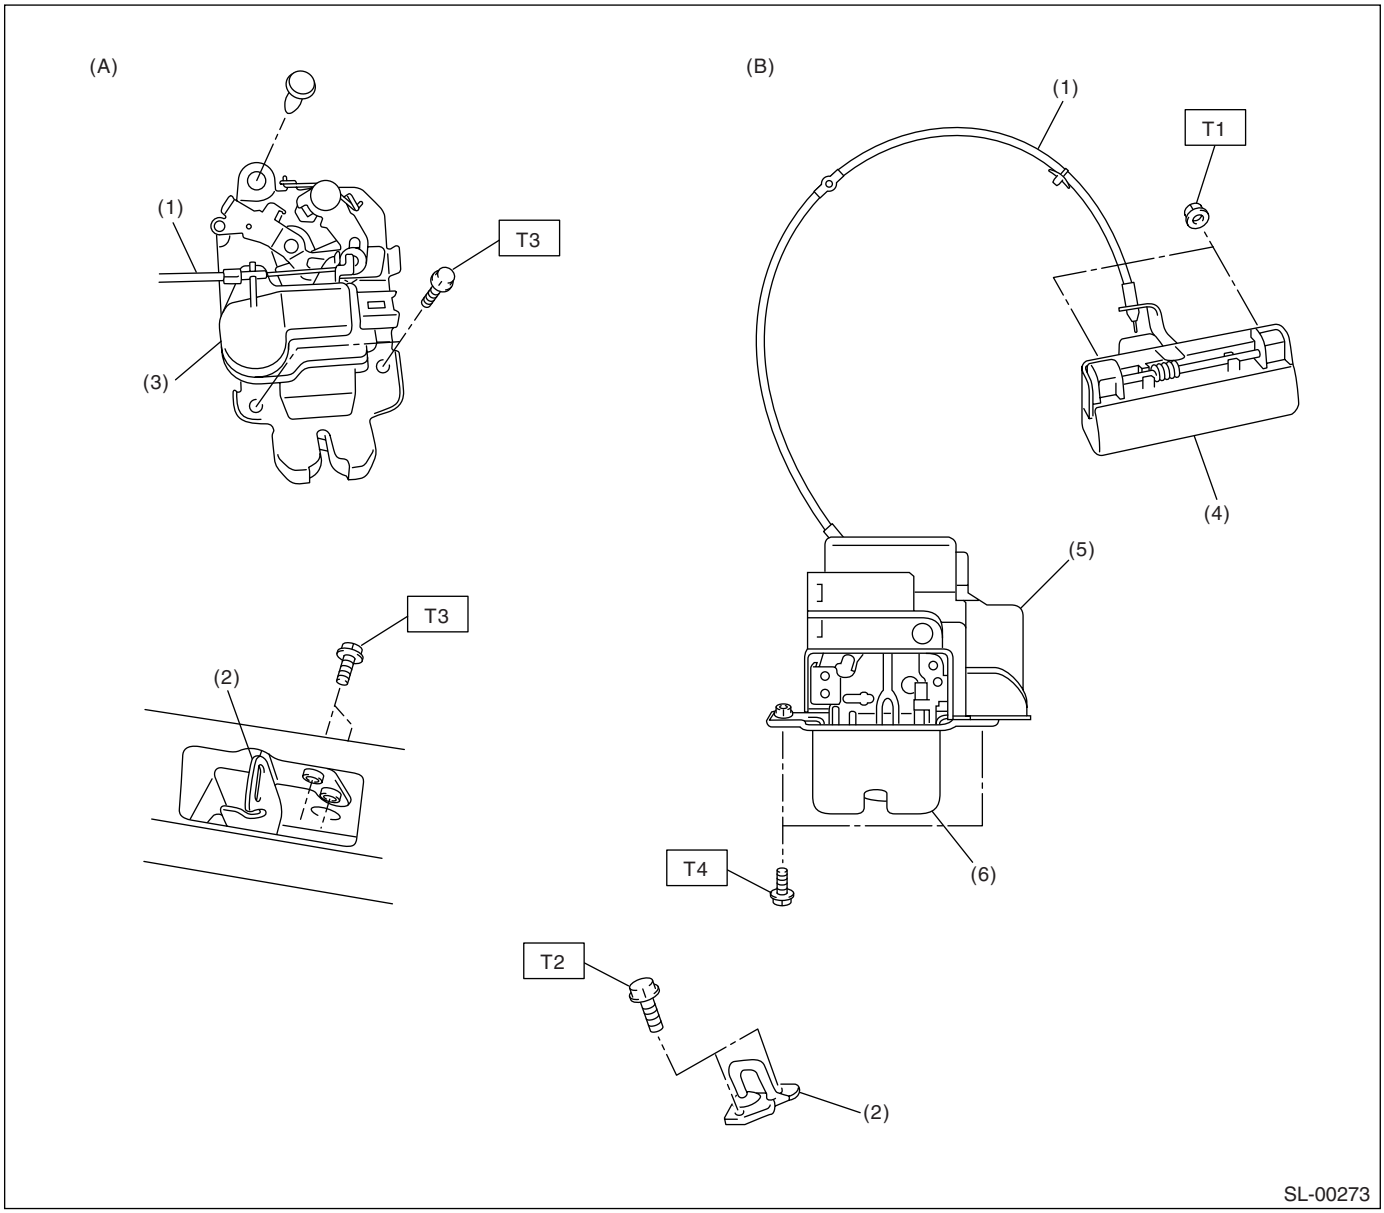


(A) Trunk
(B) Rear gate

(1) Cable
(2) Striker
(3) Trunk lid lock ASSY
(4) Rear gate outer handle
(5) Rear gate actuator
(6) Rear gate latch

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.76, 5.5)
T2: 25 (2.5, 18.4)
T3: 7.35 (0.75, 5.39)
T4: 18 (1.8, 13.3)

• Model with double lock



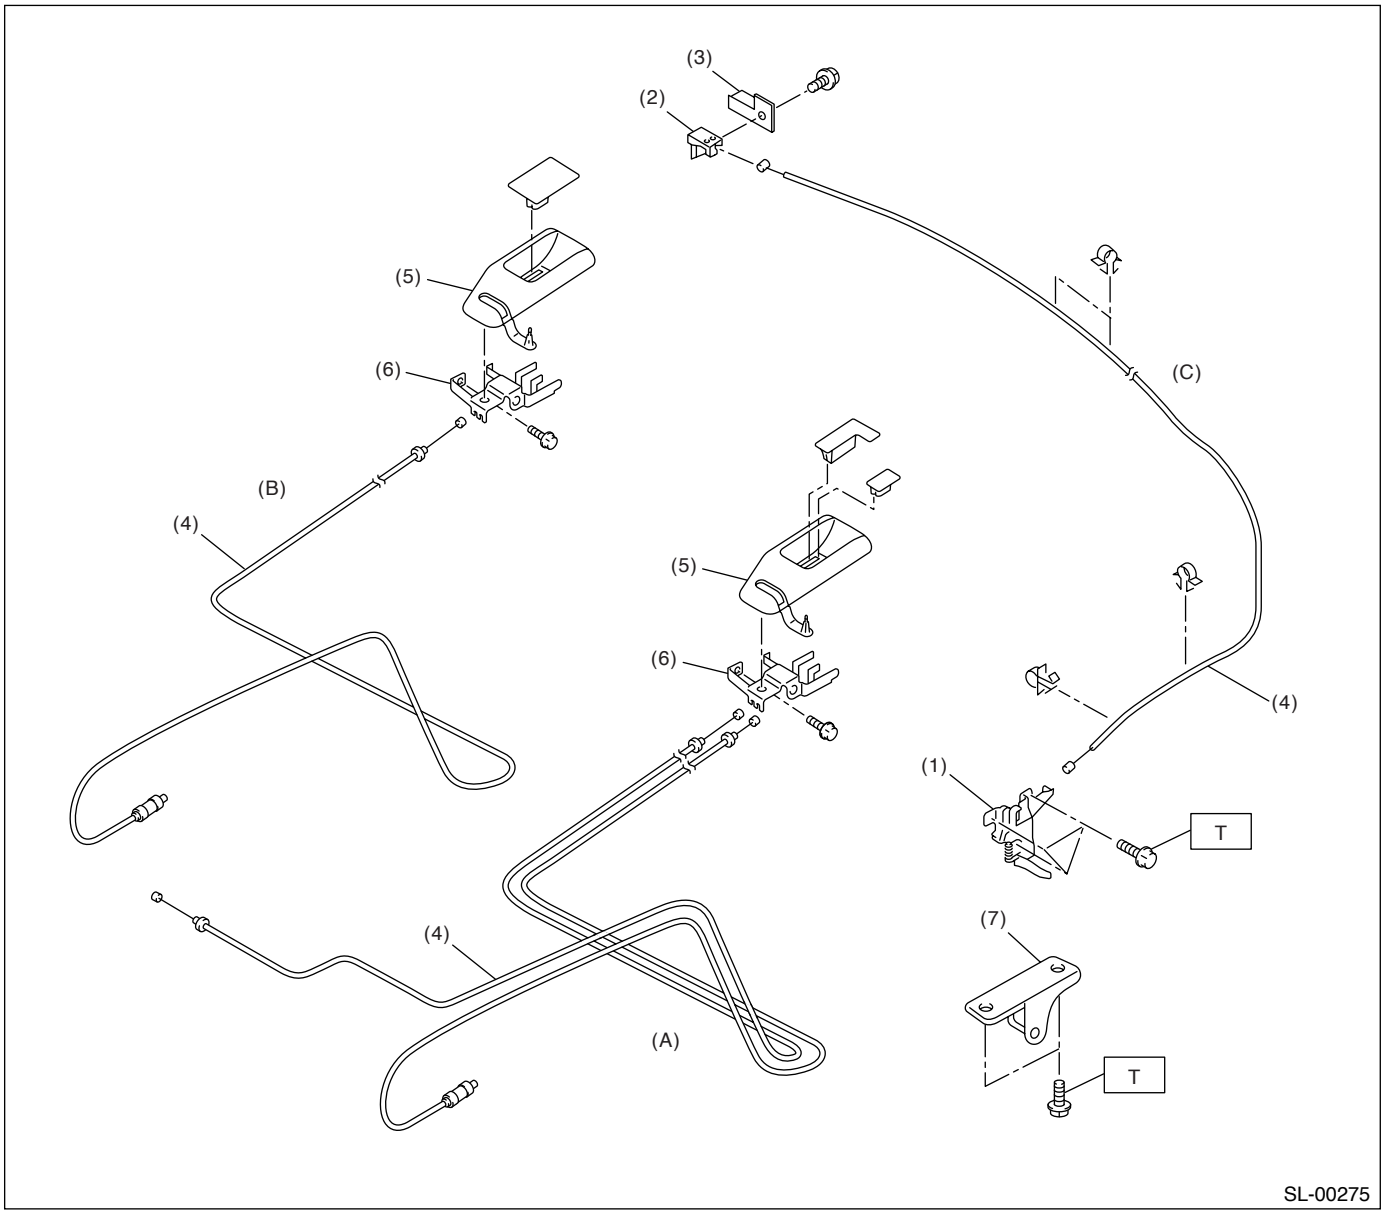
(A) Trunk

(B) Rear gate

(1) Cable
(2) Striker
(3) Trunk lid lock ASSY
(4) Rear gate outer handle
(5) Rear gate actuator
(6) Rear gate latch ASSY

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.76, 5.5)
T2: 25 (2.5, 18.4)
T3: 7.35 (0.75, 5.39)
T4: 18 (1.8, 13.3)

3. FRONT HOOD LOCK AND REMOTE OPENERS

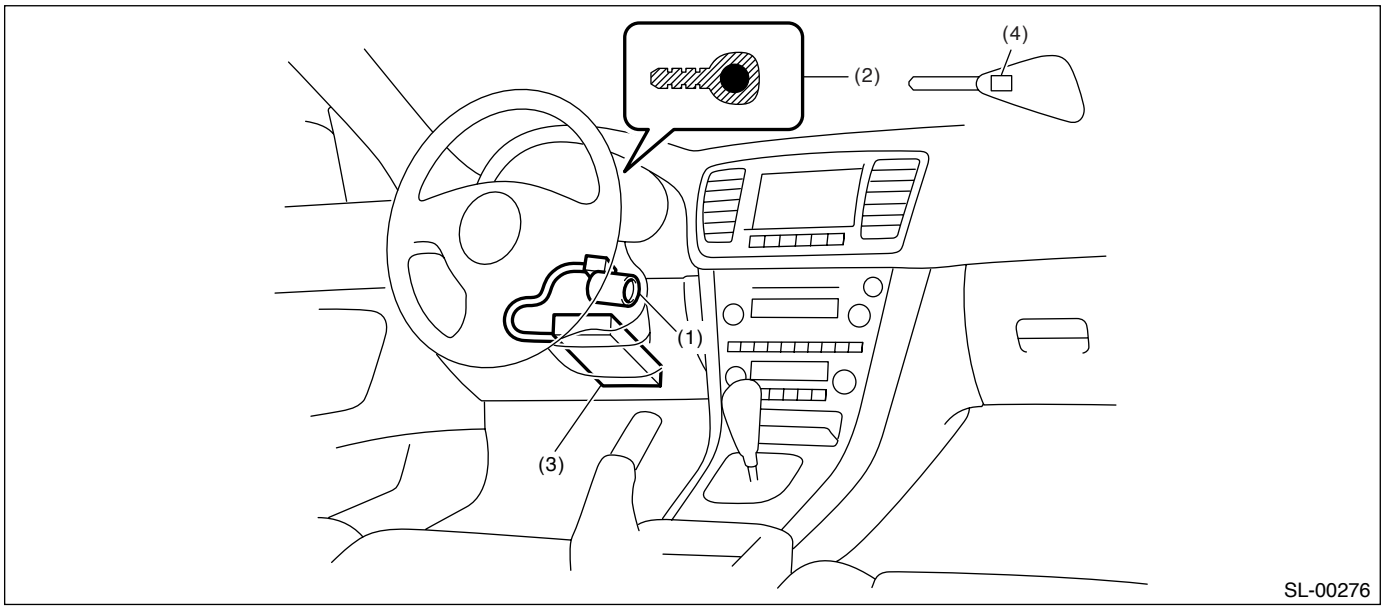


(A) Sedan model
(B) Wagon model
(C) Hood

(1) Front hood lock ASSY
(2) Lever ASSY
(3) Lever ASSY bracket
(4) Cable
(5) Cover
(6) Pull handle ASSY
(7) Striker

Tightening torque: N·m (kgf-m, ft-lb)
T: 33 (3.36, 24.2)

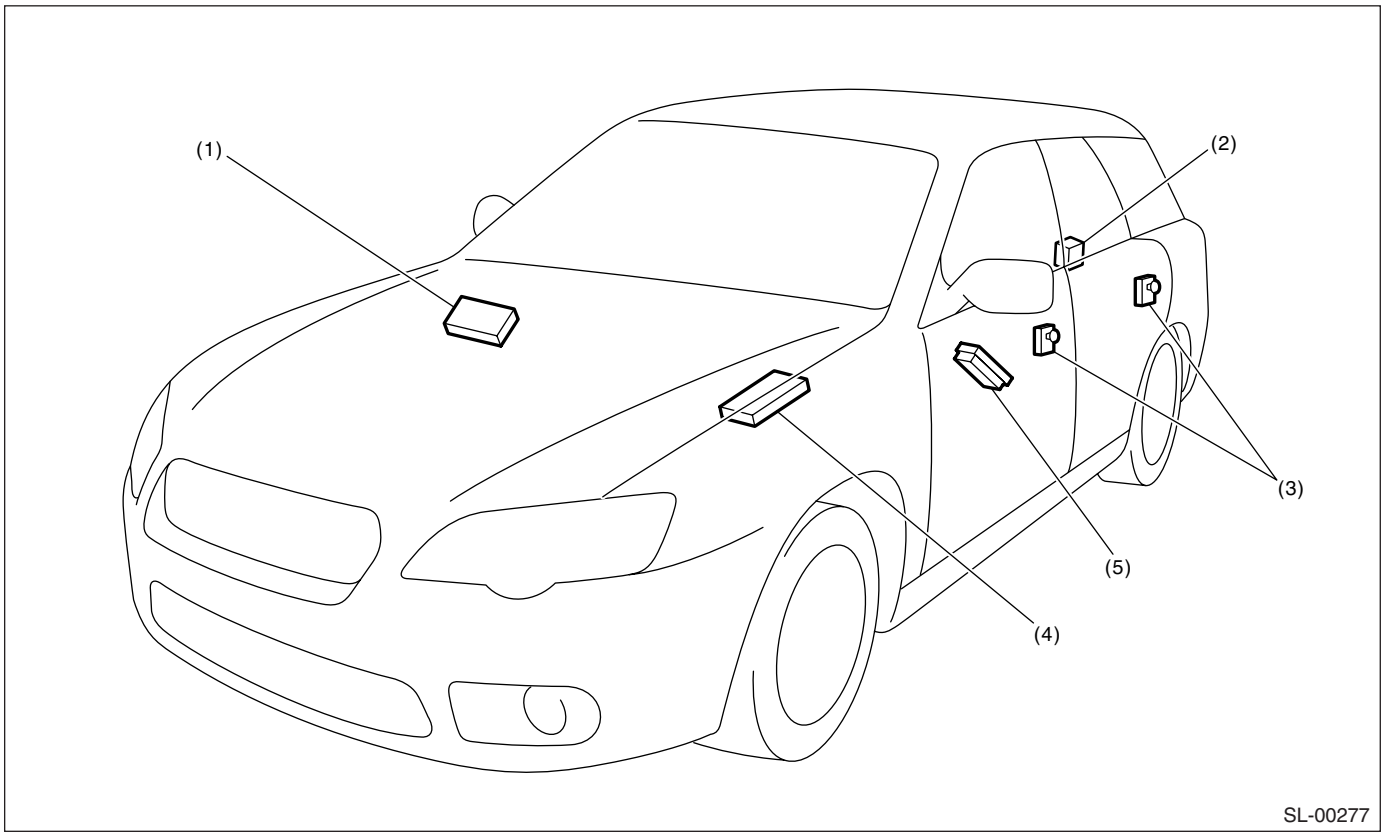
4. IMMOBILIZER SYSTEM



(1) Antenna
(2) Immobilizer indicator light (LED bulb)
(3) Body integrated unit
(4) Transponder

NOTE:
Body integrated unit location for RHD model is symmetrically opposite.

5. KEYLESS ENTRY SYSTEM



(1) Keyless Entry Control Module
(2) Rear gate latch switch (Wagon)
(3) Door switch
(4) Body integrated unit
(5) Power window main switch

B: CAUTION

• Before disassembling or reassembling parts, always disconnect the battery ground cable. When repairing the audio, control module, etc. which are provided with memory functions, record the memory contents before disconnecting the ground cable from battery. Otherwise, these contents are erased upon disconnection.
• Reassemble the parts in the reverse order of disassembly unless otherwise indicated.
• Adjust the parts to the specifications described in this manual if so designated.
• Connect the connectors securely during reassembly.
• After reassembly, ensure the functional parts operate smoothly.
• The air bag system wiring harness is routed near electrical parts and switches.
• All air bag system wiring harnesses and connectors are yellow. Do not use the electrical test equipment on these circuits.
• Be careful not to damage the airbag system wiring harness when servicing the ignition key cylinder.

C: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-925580000	925580000	PULLER	Used for removing trim clip.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.
Drill	Used for replacing ignition key lock.

2. Door Lock Control System

A: WIRING DIAGRAM

1. DOOR LOCK CONTROL

<Ref. to WI-248, WIRING DIAGRAM, Keyless Entry System.>

B: INSPECTION

1. SYMPTOM CHART

Symptom	Repair order	Reference
The door lock control system does not operate.	1. Check the fuse.	<Ref. to SL-11, CHECK FUSE, INSPECTION, Door Lock Control System.>
	2. Check the power supply and ground circuit for body integrated unit.	<Ref. to SL-11, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Door Lock Control System.>
	3. Check the door lock switch and circuit.	<Ref. to SL-11, CHECK DOOR LOCK SWITCH, INSPECTION, Door Lock Control System.>
	4. Check the door lock actuator and circuit.	<Ref. to SL-12, CHECK DOOR LOCK ACTUATOR AND CIRCUIT, INSPECTION, Door Lock Control System.>
The door lock switch does not operate.	Check the door lock switch.	<Ref. to SL-11, CHECK DOOR LOCK SWITCH, INSPECTION, Door Lock Control System.>
A specific door lock actuator does not operate.	Check the door lock actuator and circuit.	<Ref. to SL-12, CHECK DOOR LOCK ACTUATOR AND CIRCUIT, INSPECTION, Door Lock Control System.>
The key cylinder lock switch does not operate. (Model with double lock)	Check the key cylinder lock switch and circuit.	<Ref. to SL-13, CHECK KEY CYLINDER LOCK SWITCH AND CIRCUIT, INSPECTION, Door Lock Control System.>
The double lock does not operate. (Model with double lock)	Check the door lock actuator (double lock) and circuit.	<Ref. to SL-14, CHECK DOOR LOCK ACTUATOR (DOUBLE LOCK) AND CIRCUIT, INSPECTION, Door Lock Control System.>

2. CHECK FUSE

	Step	Check	Yes	No
1	**CHECK FUSE.** Remove and visually check the fuse No. 3 (in the fuse and relay box) and No. 7 (in the fuse and relay box).	Is the fuse blown out?	Replace the fuse with a new one.	Check the power supply and ground circuit. <Ref. to SL-11, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Door Lock Control System.>

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY.** 1) Disconnect the harness connector of body integrated unit. 2) Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***(i84) No. 34 (+) — Chassis ground (–):*** ***(B281) No. 2 (+) — Chassis ground (–):***	Is the voltage more than 10 V?	Go to step **2.**	Check the harness for open or short circuit between body integrated unit and fuse.
2	**CHECK GROUND CIRCUIT.** Measure the resistance between harness connector terminal and chassis ground. ***Connector & terminal*** ***(B280) No. 22 — Chassis ground:*** ***(B281) No. 8, 9, 22 — Chassis ground:***	Is the resistance less than 10 Ω?	The power supply and ground circuit are OK.	Repair the harness.

4. CHECK DOOR LOCK SWITCH

	Step	Check	Yes	No
1	**CHECK DOOR LOCK SWITCH.** Check the input from door lock switch to body integrated unit using Subaru Select Monitor. 1) Connect the Subaru Select Monitor to data link connector. 2) Turn the ignition switch to ON. 3) Select {body integrated unit} from main menu. 4) Select {Current Data Display & Save}. 5) Check the input to body integrated unit by operating the door lock switch.	Is the normal input signal displayed when the door lock switch is moved to LOCK/UNLOCK?	The door lock switch is OK.	Go to step **2.**
2	**CHECK DOOR LOCK SWITCH CIRCUIT.** 1) Disconnect the body integrated unit harness connector. 2) Measure the resistance between the harness connector terminal and chassis ground when moving the door lock switch to LOCK. ***Connector & terminal*** ***(i84) No. 15 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **3.**	Go to step **4.**

	Step	Check	Yes	No
3	**CHECK DOOR LOCK SWITCH CIRCUIT.** Measure the resistance between the harness connector terminal and chassis ground when the door lock switch is moved to UNLOCK. ***Connector & terminal*** ***(i84) No. 29 — Chassis ground:***	Is the resistance less than 10 Ω?	The door lock switch is OK.	Go to step **4.**
4	**CHECK DOOR LOCK SWITCH.** 1) Disconnect the door lock switch harness connector. 2) Measure the resistance between the door lock switch terminals when moving the door lock switch to LOCK. ***Connector & terminal*** ***LHD model:*** ***(D7) No. 4 — No. 7:*** ***RHD model:*** ***(D7) No. 4 — No. 14:***	Is the resistance less than 1 Ω?	Go to step **5.**	Replace the door lock switch.
5	**CHECK DOOR LOCK SWITCH.** Measure the resistance between the door lock switch terminals when moving the door lock switch to UNLOCK. ***Connector & terminal*** ***LHD model:*** ***(D7) No. 5 — No. 7:*** ***RHD model:*** ***(D7) No. 5 — No. 14:***	Is the resistance less than 1 Ω?	Check the harness for open circuits or shorts between the body integrated unit and the door lock switch.	Replace the door lock switch.

5. CHECK DOOR LOCK ACTUATOR AND CIRCUIT

	Step	Check	Yes	No
1	**CHECK OUTPUT SIGNAL.** Measure the voltage between the harness connector terminal and chassis ground of body integrated unit when moving the door lock switch to LOCK. ***Connector & terminal*** ***(i84) No. 7 (+) — Chassis ground (−):***	Is the voltage more than 10 V?	Go to step **2.**	Replace the body integrated unit. <Ref. to SL-46, Body Integrated Unit.>
2	**CHECK OUTPUT SIGNAL.** Measure the voltage between the harness connector terminal and chassis ground of body integrated unit when moving the door lock switch to UNLOCK. ***Connector & terminal*** ***(i84) No. 8 (+) — Chassis ground (−):***	Is the voltage more than 10 V?	Go to step **3.**	Replace the body integrated unit. <Ref. to SL-46, Body Integrated Unit.>
3	**CHECK POWER WINDOW MAIN SWITCH OUTPUT SIGNAL.** Measure the voltage between the harness connector terminal of power window main switch and chassis ground when moving the door lock switch to LOCK. ***Connector & terminal*** ***(D7) No. 4 (+) — Chassis ground (−):***	Is the voltage more than 10 V?	Go to step **4.**	Replace the power window main switch. <Ref. to GW-9, Power Window Control Switch.>

	Step	Check	Yes	No
4	**CHECK POWER WINDOW MAIN SWITCH OUTPUT SIGNAL.** Measure the voltage between the harness connector terminal of power window main switch and chassis ground when moving the door lock switch to UNLOCK. ***Connector & terminal*** ***(D7) No. 5 (+) — Chassis ground (−):***	Is the voltage more than 10 V?	Go to step **5.**	Replace the power window main switch. <Ref. to GW-9, Power Window Control Switch.>
5	**CHECK DOOR LOCK ACTUATOR.** Check the door lock actuator. • Front Door Lock Actuator <Ref. to SL-31, Front Door Lock Actuator.> • Rear Door Lock Actuator <Ref. to SL-35, Rear Door Lock Actuator.> • Rear Gate Latch Lock Actuator <Ref. to SL-37, Rear Gate Latch Assembly.>	Is the door lock actuator OK?	Check the harness for open or short circuit between body integrated unit and door lock actuator.	Replace the door lock actuator.

6. CHECK KEY CYLINDER LOCK SWITCH AND CIRCUIT

	Step	Check	Yes	No
1	**CHECK KEY CYLINDER LOCK SWITCH CIRCUIT.** 1) Disconnect the body integrated unit harness connector. 2) Measure the resistance between harness connector terminal and chassis ground when turning the key cylinder lock switch to LOCK. ***Connector & terminal*** ***(i84) No. 3 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **2.**	Go to step **3.**
2	**CHECK KEY CYLINDER LOCK SWITCH CIRCUIT.** Measure the resistance between harness connector terminal and chassis ground when turning the key cylinder lock switch to UNLOCK. ***Connector & terminal*** ***(i84) No. 12 — Chassis ground:***	Is the resistance less than 10 Ω?	Key cylinder lock switch is OK.	Go to step **3.**
3	**CHECK KEY CYLINDER LOCK SWITCH.** 1) Disconnect the key cylinder lock switch connector. 2) Measure the resistance between key cylinder lock switch terminals when turning the key cylinder lock switch to LOCK. ***Terminals*** ***No. 1 — No. 2***	Is the resistance less than 1 Ω?	Go to step **4.**	Replace the key cylinder lock switch.
4	**CHECK KEY CYLINDER LOCK SWITCH.** Measure the resistance between key cylinder lock switch terminals when turning the key cylinder lock switch to UNLOCK. ***Terminals*** ***No. 2 — No. 3***	Is the resistance less than 1 Ω?	Check the harness for open or short circuits between body integrated unit and key cylinder lock switch.	Replace the key cylinder lock switch.

7. CHECK DOOR LOCK ACTUATOR (DOUBLE LOCK) AND CIRCUIT

	Step	Check	Yes	No
1	**CHECK OUTPUT SIGNAL.** Measure the resistance between body integrated unit harness connector terminal and chassis ground when turning the key cylinder lock switch to LOCK. ***Connector & terminal*** ***(i84) No. 35 (+) — Chassis ground (–):***	Is the voltage more than 10 V?	Go to step **2.**	Replace the body integrated unit.
2	**CHECK OUTPUT SIGNAL.** Measure the resistance between body integrated unit harness connector terminal and chassis ground when turning the key cylinder lock switch to UNLOCK. ***Connector & terminal*** ***(i84) No. 35 (+) — Chassis ground (–):***	Is the voltage more than 10 V?	Go to step **3.**	Replace the body integrated unit.
3	**CHECK DOOR LOCK ACTUATOR.** Check the door lock actuator. Front door lock actuator: <Ref. to SL-31, Front Door Lock Actuator.> Rear door lock actuator: <Ref. to SL-35, Rear Door Lock Actuator.>	Is the door lock actuator normal?	Check the harness for open or short circuits between body integrated unit and door lock actuator.	Replace the door lock actuator.

3. Keyless Entry System

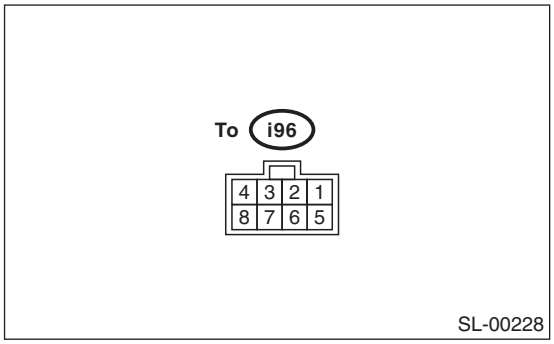
A: WIRING DIAGRAM

1. KEYLESS ENTRY

<Ref. to WI-248, WIRING DIAGRAM, Keyless Entry System.>

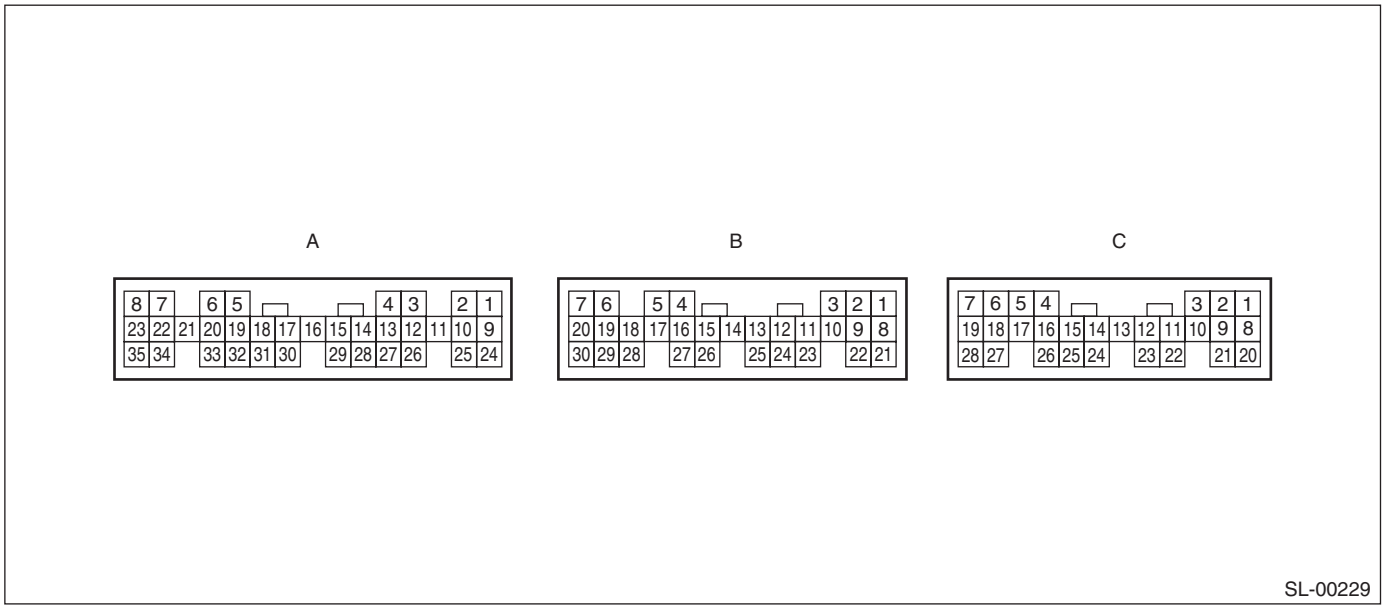
B: ELECTRICAL SPECIFICATION

1. KEYLESS ENTRY CONTROL UNIT



Remarks	Terminal No.	Measuring conditions
Body integrated unit	3 (OUTPUT)	Battery voltage cannot be measured because of digital signal.
Power supply (Backup)	4	Battery voltage is constantly present.
Ground	7	0 V is constantly present.

2. BODY INTEGRATED UNIT



Remarks	Terminal No.	Measuring conditions
Ignition switch (ON)	A1 (INPUT)	Battery voltage is present when ignition switch is turned ON.
Door and rear gate lock actuator (Model without double lock) Front double lock actuator RH, door and rear gate lock actuator (Model with double lock)	A7 (OUTPUT)	Battery voltage is present when pressing the LOCK button of keyless transmitter.
Door and rear gate lock actuator	A8 (OUTPUT)	Battery voltage is present when pressing the UNLOCK button of keyless transmitter.
Keyless entry control module	A9 (INPUT)	Communication line (Cannot be measured because of digital signal)
Double lock condition detecting switch (Model with double lock)	A16 (OUTPUT)	Battery voltage is present when pressing the LOCK button of keyless transmitter.
Trunk lid switch or rear gate latch switch	A17 (INPUT)	0 V is present when opening the trunk lid or rear gate.
Rear door switch RH	A18 (INPUT)	0 V is present when opening the rear door RH.
Front door switch RH	A19 (INPUT)	0 V is present when opening the front door RH.
Ground	A21	0 V is constantly present.
Trunk lid actuator	A22 (OUTPUT)	Battery voltage is present when pressing the TRUNK button of keyless transmitter.
Front door actuator driver's side (Model without double lock)	A23 (OUTPUT)	Battery voltage is present when pressing the UNLOCK button of keyless transmitter.
Power window main switch (door lock switch)	A26	CAN communication line (Cannot be measured because of digital signal)
	A27	
Rear door switch LH	A31 (INPUT)	0 V is present when opening the rear door LH.
Front door switch LH	A32 (INPUT)	0 V is present when opening the front door LH.
Power supply	A34	Battery voltage is constantly present.
Front double lock actuator RH (Model with double lock)	A35 (OUTPUT)	Battery voltage is present when pressing the LOCK button of keyless transmitter.
Room light	B3 (INPUT)	• 0 V is present when pressing the UNLOCK button of keyless transmitter. • 0 V is present when opening the door.
Power supply	B7	Battery voltage is constantly present.
Turn signal & hazard circuit	B12 (OUTPUT)	Battery voltage is present when pressing the LOCK button or UNLOCK button of keyless transmitter.
Ground	B22	0 V is constantly present.

Remarks	Terminal No.	Measuring conditions
Power supply	C1	Battery voltage is constantly present.
Power supply	C2	Battery voltage is constantly present.
Key warning switch	C7 (INPUT)	Battery voltage is present when inserting the key into ignition switch.
Ground	C8	0 V is constantly present.
Ground	C9	0 V is constantly present.
Registration connector	C22	0 V is present when connecting the registration connector.

C: INSPECTION

1. SYMPTOM CHART

Symptom	Repair order	Reference
None of the functions of keyless entry system operate.	1. Check the keyless transmitter battery.	<Ref. to SL-20, CHECK KEYLESS TRANSMITTER BATTERY AND FUNCTION, INSPECTION, Keyless Entry System.>
	2. Check the fuse.	<Ref. to SL-21, CHECK FUSE, INSPECTION, Keyless Entry System.>
	3. Check the keyless entry control module.	<Ref. to SL-21, CHECK KEYLESS ENTRY CONTROL MODULE, INSPECTION, Keyless Entry System.>
	4. Check the power supply and ground circuit for the body integrated unit.	<Ref. to SL-22, CHECK BODY INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Keyless Entry System.>
	5. Check the key warning switch.	<Ref. to SL-24, CHECK KEY WARNING SWITCH, INSPECTION, Keyless Entry System.>
	6. Check the door switch.	<Ref. to SL-23, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.>
	7. Check the body integrated unit.	<Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
The keyless transmitter cannot be registered.	1. Check the keyless transmitter battery.	<Ref. to SL-20, CHECK KEYLESS TRANSMITTER BATTERY AND FUNCTION, INSPECTION, Keyless Entry System.>
	2. Check registration connector circuit.	<Ref. to SL-22, CHECK REGISTRATION CONNECTOR., INSPECTION, Keyless Entry System.>
	3. Check the key warning switch.	<Ref. to SL-24, CHECK KEY WARNING SWITCH, INSPECTION, Keyless Entry System.>
	4. Check the door lock switch signal.	<Ref. to SL-26, CHECK DOOR LOCK SWITCH, INSPECTION, Keyless Entry System.>
	5. Check the body integrated unit.	<Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
Door lock or unlock does not operate. NOTE: If the door lock control system does not operate when using the door lock switch, check the door lock control system. <Ref. to SL-10, INSPECTION, Door Lock Control System.>	1. Check the keyless transmitter battery.	<Ref. to SL-20, CHECK KEYLESS TRANSMITTER BATTERY AND FUNCTION, INSPECTION, Keyless Entry System.>
	2. Check the keyless entry control module.	<Ref. to SL-21, CHECK KEYLESS ENTRY CONTROL MODULE, INSPECTION, Keyless Entry System.>
	3. Check the key warning switch.	<Ref. to SL-24, CHECK KEY WARNING SWITCH, INSPECTION, Keyless Entry System.>
	4. Check the door switch.	<Ref. to SL-23, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.>
	5. Check the body integrated unit.	<Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

Symptom	Repair order	Reference
Trunk lid unlock does not operate. (Sedan model)	1. Check the keyless transmitter battery.	<Ref. to SL-20, CHECK KEYLESS TRANSMITTER BATTERY AND FUNCTION, INSPECTION, Keyless Entry System.>
	2. Check the keyless entry control module.	<Ref. to SL-21, CHECK KEYLESS ENTRY CONTROL MODULE, INSPECTION, Keyless Entry System.>
	3. Check the key warning switch.	<Ref. to SL-24, CHECK KEY WARNING SWITCH, INSPECTION, Keyless Entry System.>
	4. Check the trunk lid lock actuator.	<Ref. to SL-25, CHECK TRUNK LID LOCK ACTUATOR, INSPECTION, Keyless Entry System.>
	5. Check the body integrated unit.	<Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
Hazard light does not operate.	1. Check the hazard light operation.	<Ref. to SL-25, CHECK HAZARD LIGHT OPERATION, INSPECTION, Keyless Entry System.>
	2. Check the body integrated unit.	<Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
Room light does not operate.	1. Check the room light operation.	<Ref. to SL-24, CHECK ROOM LIGHT OPERATION, INSPECTION, Keyless Entry System.>
	2. Check the body integrated unit.	<Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
Ignition switch illumination does not operate.	1. Check the ignition switch illumination.	<Ref. to SL-27, CHECK IGNITION SWITCH ILLUMINATION, INSPECTION, Keyless Entry System.>
	2. Check the body integrated unit.	<Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

2. CHECK KEYLESS TRANSMITTER BATTERY AND FUNCTION

	Step	Check	Yes	No
1	**CHECK KEYLESS TRANSMITTER BATTERY.** 1) Remove the battery from keyless transmitter. <Ref. to SL-47, REMOVAL, Keyless Transmitter.> 2) Check the battery voltage. <Ref. to SL-47, INSPECTION, Keyless Transmitter.>	Is the voltage more than 2 V?	Go to step **2.**	Replace the keyless transmitter battery. <Ref. to SL-47, Keyless Transmitter.>
2	**CHECK KEYLESS TRANSMITTER.** Register the keyless transmitter which operates normally on other vehicles to inspection target vehicle. <Ref. to SL-47, REGISTRATION OF KEYLESS TRANSMITTER, REPLACEMENT, Keyless Transmitter.> 1) Close all the doors and rear gate of inspection target vehicle. 2) Using keyless transmitter, lock and unlock the doors and rear gate of inspection target vehicle.	Is the inspection target vehicle operates lock and unlock normally?	Go to step **3.**	Due to vehicle malfunction, continue the keyless entry system diagnosis.
3	**CHECK KEYLESS TRANSMITTER.** Register the keyless transmitter of inspection target vehicle to another vehicle which operates keyless system normally. <Ref. to SL-47, REGISTRATION OF KEYLESS TRANSMITTER, REPLACEMENT, Keyless Transmitter.>	Is the keyless transmitter registered correctly?	Go to step **4.**	Replace the keyless transmitter. <Ref. to SL-47, REGISTRATION OF KEYLESS TRANSMITTER, REPLACEMENT, Keyless Transmitter.>
4	**CHECK KEYLESS TRANSMITTER.** Check the registered keyless transmitter. 1) Close all the doors and rear gate of the vehicle which operates keyless system normally. 2) Using keyless transmitter, lock and unlock the doors and rear gate of vehicle.	Is the vehicle operates lock and unlock normally?	Keyless transmitter is normal.	Replace the keyless transmitter. <Ref. to SL-47, REGISTRATION OF KEYLESS TRANSMITTER, REPLACEMENT, Keyless Transmitter.>

CAUTION:
Be sure to reset the keyless transmitter, which is registered from other vehicle to inspection target vehicle, and the vehicle, to which is registered keyless transmitter, to the condition of before inspection. (Register the keyless transmitter to original condition.)

3. CHECK FUSE

Step		Check	Yes	No
1	**CHECK FUSE.** Remove and visually check the fuse No. 3 (in the fuse and relay box) and No. 7 (in the fuse and relay box).	Is the fuse blown out?	Replace the fuse with a new one.	Check the power supply and ground circuit. <Ref. to SL-22, CHECK BODY INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Keyless Entry System.>

4. CHECK KEYLESS ENTRY CONTROL MODULE

Step		Check	Yes	No
1	**CHECK DIAGNOSTIC TROUBLE CODE (DTC)** 1) Connect the Subaru Select Monitor to data link connector. 2) Turn the ignition switch to ON. 3) Select {Body integrated unit} from main menu. 4) Select the {Diagnostic Trouble Code}. 5) Check that the DTC is displayed.	Is DTC B0500 “Keyless UART com. Malfunction” displayed?	Go to step **2.**	Keyless entry control module is normal.
2	**CHECK POWER SUPPLY.** 1) Disconnect the keyless entry control module harness connector. 2) Measure the voltage between the harness connector terminal and chassis ground. ***Connector & terminal*** ***(i96) No. 4 (+) — Chassis ground (–):***	Is the voltage more than 10 V?	Go to step **3.**	Check the harness for open circuits and shorts between the keyless entry control module and fuse.
3	**CHECK GROUND CIRCUIT.** Measure the resistance between the harness connector terminal and chassis ground. ***Connector & terminal*** ***(i96) No. 7 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **4.**	Repair the harness.
4	**CHECK KEYLESS ENTRY CONTROL MODULE CIRCUIT.** 1) Disconnect harness connector of body integrated unit. 2) Measure the resistance between harness connector terminals. ***Connector & terminal*** ***(i84) No. 9 — (i96) No. 3:***	Is the resistance less than 10 Ω?	Replace the keyless entry control module. <Ref. to SL-45, Keyless Entry Control Unit.>	Repair the harness.

5. CHECK BODY INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY OF BODY INTEGRATED UNIT.** 1) Disconnect the harness connector of body integrated unit. 2) Measure the voltage between the harness connector terminal and chassis ground. ***Connector & terminal*** ***(B280) No. 7 (+) — Chassis ground (–):*** ***(B281) No. 2 (+) — Chassis ground (–):***	Is the voltage more than 10 V?	Go to step **2.**	Check the harness for open or short between body integrated unit and fuse.
2	**CHECK BODY INTEGRATED UNIT GROUND CIRCUIT.** 1) Disconnect the harness connector of body integrated unit. 2) Measure the resistance between the harness connector terminal and chassis ground. ***Connector & terminal*** ***(B280) No. 22 — Chassis ground:*** ***(B281) No. 8 — Chassis ground:*** ***(B281) No. 9 — Chassis ground:***	Is the resistance less than 10 Ω?	Check the body integrated unit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Repair the harness.

6. CHECK REGISTRATION CONNECTOR.

	Step	Check	Yes	No
1	**CHECK REGISTRATION CONNECTOR INPUT VOLTAGE.** 1) Disconnect the registration connector. 2) Measure the voltage between the body integrated unit harness connector and chassis ground. ***Connector & terminal*** ***(B281) No. 22 (+) — Chassis ground (–):***	Is the voltage more than 10 V?	Go to step **2.**	Repair the harness.
2	**CHECK REGISTRATION CONNECTOR INPUT VOLTAGE.** 1) Connect the registration connector. 2) Measure the voltage between the body integrated unit harness connector and chassis ground. ***Connector & terminal*** ***(B281) No. 22 (+) — Chassis ground (–):***	Is the voltage 0 V?	Registration connector circuit is OK.	Repair the harness.

7. CHECK DOOR SWITCH

	Step	Check	Yes	No
1	**CHECK DOOR SWITCH CIRCUIT.** Measure the voltage between the body integrated unit harness connector terminal and chassis ground. ***Connector & terminal*** ***Front door RH:*** ***(i84) No. 19 (+) — Chassis ground (−):*** ***Front door LH:*** ***(i84) No. 32 (+) — Chassis ground (−):*** ***Rear door RH:*** ***(i84) No. 18 (+) — Chassis ground (−):*** ***Rear door LH:*** ***(i84) No. 31 (+) — Chassis ground (−):*** ***Rear gate:*** ***(i84) No. 17 (+) — Chassis ground (−):***	Is the voltage 0 V when each door or rear gate is opened?	Go to step **2.**	Go to step **3.**
2	**CHECK DOOR SWITCH CIRCUIT.** Measure the voltage between the body integrated unit harness connector terminal and chassis ground. ***Connector & terminal*** ***Front door RH:*** ***(i84) No. 19 (+) — Chassis ground (−):*** ***Front door LH:*** ***(i84) No. 32 (+) — Chassis ground (−):*** ***Rear door RH:*** ***(i84) No. 18 (+) — Chassis ground (−):*** ***Rear door LH:*** ***(i84) No. 31 (+) — Chassis ground (−):*** ***Rear gate:*** ***(i84) No. 17 (+) — Chassis ground (−):***	Is the voltage more than 10 V when each door or rear gate is closed?	The door switch is OK.	Go to step **3.**
3	**CHECK DOOR SWITCH.** 1) Disconnect the door switch harness connector. 2) Measure the resistance between door switch terminals. ***Connector & terminal*** ***(R12) Front RH door switch:*** ***(R9) Front LH door switch:*** ***(R16) Rear RH door switch:*** ***(R22) Rear LH door switch:*** ***No. 1 — No. 3:*** ***Rear gate latch switch (Wagon model):*** ***(D46) No. 1 — No. 2:***	Is the resistance more than 1 MΩ when door switch is pushed?	Go to step **4.**	Replace the door switch.
4	**CHECK DOOR SWITCH.** Measure the resistance between door switch terminals. ***Connector & terminal*** ***(R12) Front RH door switch:*** ***(R9) Front LH door switch:*** ***(R16) Rear RH door switch:*** ***(R22) Rear LH door switch:*** ***No. 1 — No. 3:*** ***Rear gate latch switch (Wagon model):*** ***(D46) No. 1 — No. 2:***	Is the resistance less than 1 Ω when door switch is released?	Check the harness for open or short between body integrated unit and door switch.	Replace the door switch.

8. CHECK KEY WARNING SWITCH

	Step	Check	Yes	No
1	**CHECK FUSE.** Remove and visually check the fuse No. 14 (in the main fuse box).	Is the fuse blown out?	Replace the fuse with a new one.	Go to step **2.**
2	**CHECK KEY WARNING SWITCH CIRCUIT.** 1) Disconnect the harness connector of body integrated unit. 2) Insert the key into ignition switch. (LOCK position) 3) Measure the voltage between the harness connector terminal and chassis ground. ***Connector & terminal*** ***(B281) No. 7 (+) — Chassis ground (−):***	Is the voltage more than 10 V?	Go to step **3.**	Go to step **4.**
3	**CHECK KEY WARNING SWITCH CIRCUIT.** 1) Remove the key from ignition switch. 2) Measure the voltage between the harness connector terminal and chassis ground. ***Connector & terminal*** ***(B281) No. 7 (+) — Chassis ground (−):***	Is the voltage 0 V?	The key warning switch is OK.	Go to step **4.**
4	**CHECK KEY WARNING SWITCH.** 1) Disconnect the key warning switch harness connector. 2) Insert the key into ignition switch. (LOCK position) 3) Measure the resistance between key warning switch terminals. ***Connector & terminal*** ***(B350) No. 3 — No. 4:***	Is the resistance less than 1 Ω?	Go to step **5.**	Replace the key warning switch.
5	**CHECK KEY WARNING SWITCH.** 1) Remove the key from ignition switch. 2) Measure the resistance between key warning switch terminals. ***Connector & terminal*** ***(B350) No. 3 — No. 4:***	Is the resistance more than 1 MΩ?	Check the following: • Harness for open circuits and shorts between the key warning switch and fuse • Harness for open or short between the body integrated unit and key warning switch	Replace the key warning switch.

9. CHECK ROOM LIGHT OPERATION

	Step	Check	Yes	No
1	**CHECK ROOM LIGHT OPERATION.** Make sure the room light illuminates when the room light switch is turned to ON.	Does the room light illuminate?	Go to step **2.**	Check the room light circuit.
2	**CHECK HARNESS BETWEEN ROOM LIGHT AND BODY INTEGRATED UNIT.** 1) Disconnect the body integrated unit harness connector and room light harness connector. 2) Measure the resistance between the body integrated unit harness connector terminal and room light harness connector terminal. ***Connector & terminal*** ***(B280) No. 3 — (R52) No. 2:***	Is the resistance less than 10 Ω?	The room light operation circuit is OK.	Check the harness for open or short between body integrated unit and room light.

10.CHECK HAZARD LIGHT OPERATION

	Step	Check	Yes	No
1	**CHECK HAZARD LIGHT OPERATION.** Make sure the hazard light blinks when hazard switch is turned to ON.	Does the hazard light blink?	Go to step **2.**	Check the hazard light circuit.
2	**CHECK OUTPUT TO HAZARD LIGHT.** 1) Turn the ignition switch to OFF. 2) Disconnect the key warning switch harness connector. 3) Connect the Subaru Select Monitor to data link connector. 4) Turn the ignition switch to ON. 5) Select {Body integrated unit} from main menu. 6) Select {ECM customizing}. 7) Check {Hazard answer-back setup}, and then switch to ON setting if necessary. 8) Select {Current Data Display & Save}. 9) When operating the LOCK/UNLOCK button of keyless transmitter, check the hazard output signal of body integrated unit.	Is output signal present when operating the keyless transmitter LOCK/UNLOCK button?	Go to step **3.**	Check the body integrated unit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
3	**CHECK CIRCUIT OF HAZARD LIGHT.** 1) Disconnect the harness connector of body integrated unit. 2) Disconnect the turn signal & hazard unit harness connector. 3) Measure the resistance between harness connector terminals. ***Connector & terminal*** ***(B280) No. 12 — (B32) No. 8:***	Is the resistance less than 10 Ω?	Check the body integrated unit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Repair the harness.

11.CHECK TRUNK LID LOCK ACTUATOR

	Step	Check	Yes	No
1	**CHECK TRUNK LID LOCK ACTUATOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the key warning switch harness connector. 3) Connect the Subaru Select Monitor to data link connector. 4) Turn the ignition switch to ON. 5) Select {Body integrated unit} from main menu. 6) Select {Current Data Display & Save}. 7) When operating the TRUNK button of keyless transmitter, check the trunk unlock output signal of body integrated unit.	Is output signal present when operating the keyless transmitter TRUNK button?	Go to step **2.**	Check the body integrated unit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK THE CIRCUIT OF TRUNK LID ACTUATOR.** 1) Disconnect harness connector of body integrated unit. 2) Disconnect the trunk lid actuator harness connector. 3) Measure the resistance between harness connectors. ***Connector & terminal*** ***(i84) No. 22 — (R186) No. 2:***	Is the resistance less than 10 Ω?	Go to step **3.**	Repair the harness.

	Step	Check	Yes	No
3	**CHECK THE GROUND CIRCUIT OF TRUNK LID ACTUATOR.** 1) Disconnect the trunk lid actuator harness connector. 2) Measure the resistance between the harness connector terminal and chassis ground. ***Connector & terminal*** ***(R186) No. 1 — Chassis ground:***	Is the resistance less than 10 Ω?	Check the trunk lid lock actuator. <Ref. to SL-39, Trunk Lid Lock Assembly.>	Repair the harness.

12.CHECK DOOR LOCK SWITCH

	Step	Check	Yes	No
1	**CHECK DOOR LOCK SWITCH.** Check the input signal from door lock switch to body integrated module using Subaru Select Monitor. 1) Connect the Subaru Select Monitor to data link connector. 2) Turn the ignition switch to ON. 3) Select {Body integrated unit} from main menu. 4) Select {Current Data Display & Save}. 5) Check the input signal to body integrated unit by operating the door lock switch.	Is the normal input signal displayed when the door lock switch is moved to LOCK/UNLOCK?	The door lock switch is OK.	Go to step **2.**
2	**CHECK DOOR LOCK SWITCH CIRCUIT.** 1) Disconnect the body integrated unit harness connector. 2) Measure the resistance between the harness connector terminal and chassis ground when moving the door lock switch to LOCK. ***Connector & terminal*** ***(i84) No. 15 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **3.**	Go to step **4.**
3	**CHECK DOOR LOCK SWITCH CIRCUIT.** Measure the resistance between the harness connector terminal and chassis ground when the door lock switch is moved to UNLOCK. ***Connector & terminal*** ***(i84) No. 29 — Chassis ground:***	Is the resistance less than 10 Ω?	The door lock switch is OK.	Go to step **4.**
4	**CHECK DOOR LOCK SWITCH.** 1) Disconnect the door lock switch harness connector. 2) Measure the resistance between the door lock switch terminals when moving the door lock switch to LOCK. ***Connector & terminal*** ***LHD model:*** ***(D7) No. 4 — No. 7:*** ***RHD model:*** ***(D7) No. 4 — No. 14:***	Is the resistance less than 1 Ω?	Go to step **5.**	Replace the door lock switch.
5	**CHECK DOOR LOCK SWITCH.** Measure the resistance between the door lock switch terminals when moving the door lock switch to UNLOCK. ***Connector & terminal*** ***LHD model:*** ***(D7) No. 5 — No. 7:*** ***RHD model:*** ***(D7) No. 5 — No. 14:***	Is the resistance less than 1 Ω?	Check the harness for open circuits or shorts between the body integrated unit and the door lock switch.	Replace the door lock switch.

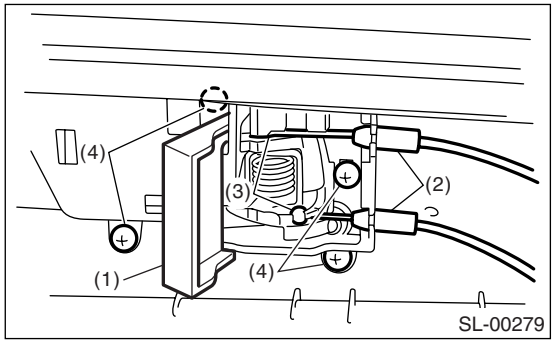
13.CHECK IGNITION SWITCH ILLUMINATION

	Step	Check	Yes	No
1	**CHECK FUSE.** Remove and visually check the fuse No. 14 (in the main fuse box).	Is the fuse blown out?	Replace the fuse with a new one.	Go to step **2.**
2	**CHECK POWER SUPPLY.** 1) Disconnect the ignition switch illumination harness connector. 2) Measure the voltage between the harness connector terminal and chassis ground. ***Connector & terminal*** ***(B224) No. 2 (+) — Chassis ground (−):***	Is the voltage more than 10 V?	Go to step **3.**	Check the harness for open circuits and shorts between the ignition switch illumination and fuse.
3	**CHECK IGNITION SWITCH ILLUMINATION CIRCUIT.** 1) Disconnect the harness connector of body integrated unit and ignition switch illumination harness connector. 2) Measure the resistance between body integrated unit harness connector terminal and ignition switch illumination harness connector terminal. ***Connector & terminal*** ***(B280) No. 4 — (B224) No. 1:***	Is the resistance less than 10 Ω?	Replace the ignition switch illumination bulb with a new one. <Ref. to LI-40, REMOVAL, Ignition Switch Illumination.>	Check the harness for open circuits and shorts between the body integrated unit and ignition switch illumination.

4. Front Inner Remote

A: REMOVAL

1) Remove the door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
2) Remove the back cover (1) of inner remote.
3) Remove the outer cable (2).
4) Remove the wire end ball (3).
5) Remove the screws (4), and detach the inner remote handle.



B: INSTALLATION

Install in the reverse order of removal.

NOTE:
Make sure the inner remote works correctly after installation.

C: INSPECTION

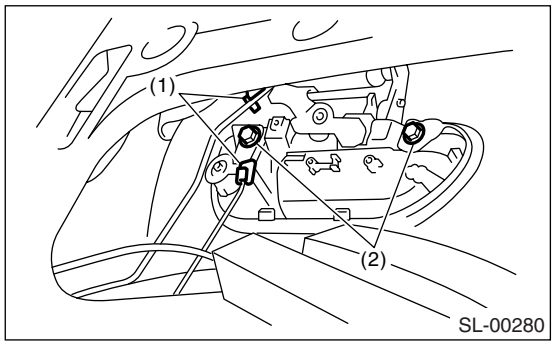
1) Check the outer wire and inner wire for deformation. When it is deformed, straighten it because failure operations may occur. When it is unrepairable, replace the front door latch & door lock actuator assembly.
2) Check the lever, rod and wire for smooth operation.

5. Front Outer Handle

A: REMOVAL

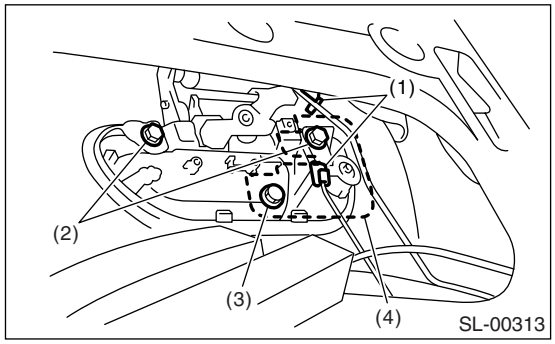
1. MODEL WITHOUT DOUBLE LOCK

1) Raise the front door glass to the top position.
2) Remove the door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Remove the wire from front inner remote. <Ref. to SL-28, REMOVAL, Front Inner Remote.>
4) Remove the sealing cover. <Ref. to EB-20, REMOVAL, Front Sealing Cover.>
5) Remove the rod clamps (1).
6) Remove the bolts (2), and then detach the front outer handle.



2. MODEL WITH DOUBLE LOCK

1) Raise the front door glass to the top position.
2) Remove the door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Remove the wire from front inner remote. <Ref. to SL-28, REMOVAL, Front Inner Remote.>
4) Remove the sealing cover. <Ref. to EB-20, REMOVAL, Front Sealing Cover.>
5) Remove the bolt (3), and then remove the key cylinder cover B (4).
6) Remove the rod clamps (1).
7) Remove the bolt (2), and then remove the key cylinder.
8) Remove the key cylinder cover A, and then detach the front outer handle.



CAUTION:
Do not apply excessive force to remove the handle from door panel. Otherwise door panel may be deformed.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:
Make sure the outer handle works correctly after installation.

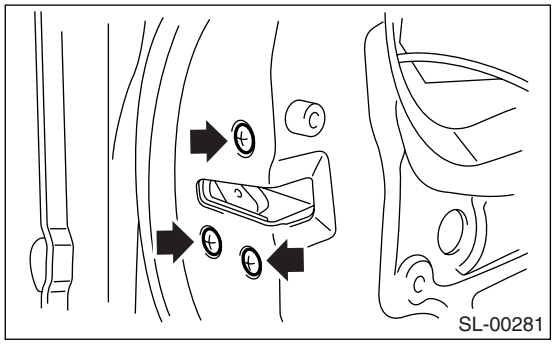
C: INSPECTION

1) Check the rod for deformation.
2) Check the lever and rod for smooth operation.

6. Front Door Latch and Door Lock Actuator Assembly

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the front door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Remove the wires from front inner remote. <Ref. to SL-28, REMOVAL, Front Inner Remote.>
4) Remove the sealing cover. <Ref. to EB-20, REMOVAL, Front Sealing Cover.>
5) Remove the front door glass. <Ref. to GW-10, REMOVAL, Front Door Glass.>
6) Remove the rear sash. <Ref. to GW-15, REMOVAL, Front Regulator and Motor Assembly.>
7) Remove the key cylinder cover B, and remove the key rod from key cylinder. (Model with double lock)
8) Open the handle rod cover of latch assembly.
9) Remove the three screws.



10) Remove the front door latch & door lock actuator assembly, and disconnect the connector.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:
Make sure the lock works correctly after installation.

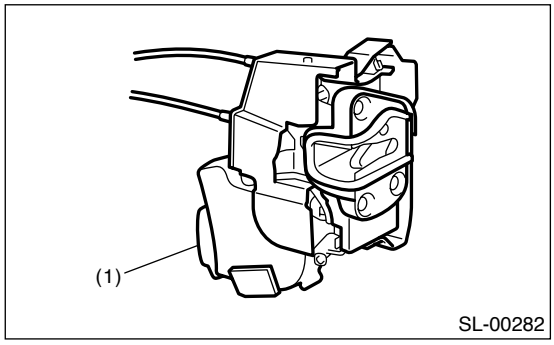
C: INSPECTION

1) Check the rod, outer wire and inner wire for deformation. When it is deformed, straighten it because failure operations may occur. When it is unrepairable, replace the front door latch & door lock actuator assembly.
2) Check the lever, rod and wire for smooth operation.

7. Front Door Lock Actuator

A: REMOVAL

1) Remove the front door latch & door lock actuator assembly. <Ref. to SL-30, REMOVAL, Front Door Latch and Door Lock Actuator Assembly.>
2) Remove the pawl of front door latch security cover, and then remove the cover. (Model without double lock)
3) Remove the screw from the front door latch and door lock actuator, and then remove the door lock actuator. (Model without double lock)



(1) Front door lock actuator

B: INSTALLATION

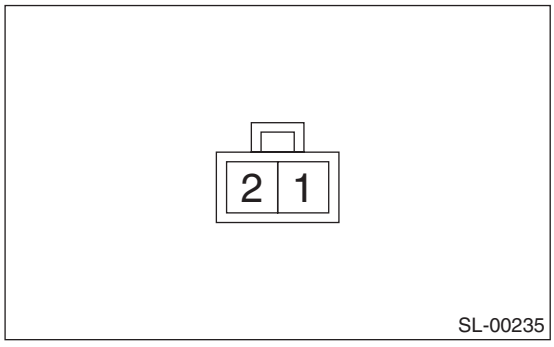
Install in the reverse order of removal.

NOTE:
Make sure the lock works correctly after installation.

C: INSPECTION

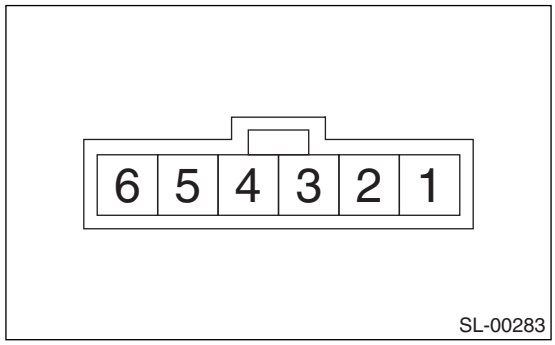
1) Disconnect the door lock actuator harness connector.
2) Connect the battery to door lock actuator terminals.
If defective, replace the door lock actuator.

1. Model without double lock



Terminal No.	Actuator operation
No. 2 (+) and No. 1 (–)	Unlocked → Locked
No. 1 (+) and No. 2 (–)	Locked → Unlocked

2. Model with double lock



DOOR ACTUATOR RH:

Terminal No.	Actuator operation
No. 5 (+) and No. 1 (–)	Unlocked → Locked
No. 1 (+) and No. 5 (–)	Locked → Unlocked
No. 6 (+) and No. 1 (–)	Double lock released → Double lock set
No. 1 (+) and No. 6 (–)	Double lock set → Double lock released

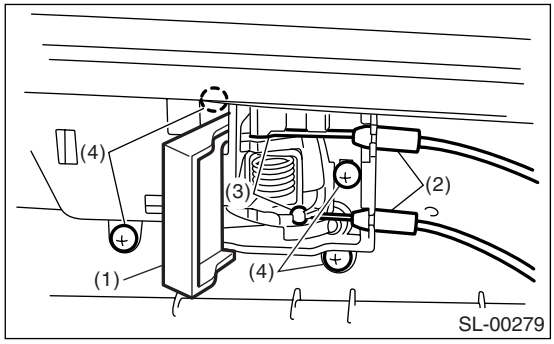
DOOR ACTUATOR LH:

Terminal No.	Actuator operation
No. 2 (+) and No. 6 (–)	Unlocked → Locked
No. 6 (+) and No. 2 (–)	Locked → Unlocked
No. 1 (+) and No. 6 (–)	Double lock released → Double lock set
No. 6 (+) and No. 1 (–)	Double lock set → Double lock released

8. Rear Inner Remote

A: REMOVAL

1) Remove the rear door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
2) Remove the back cover (1) of inner remote.
3) Remove the outer cable (2).
4) Remove the wire end ball (3).
5) Remove the screws (4), and detach the inner remote handle.



B: INSTALLATION

Install in the reverse order of removal.

NOTE:
Make sure the inner remote works correctly after installation.

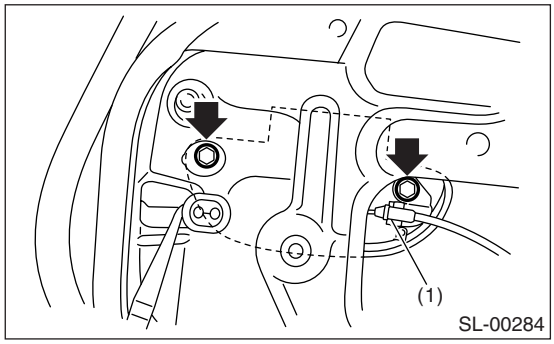
C: INSPECTION

1) Check the outer wire and inner wire for deformation. When it is deformed, straighten it because failure operations may occur. When it is unrepairable, replace the rear door latch & door lock actuator assembly.
2) Check the lever, rod and wire for smooth operation.
3) Check the child safety lock for correct operations.

9. Rear Outer Handle

A: REMOVAL

1) Raise the rear door glass to the top position.
2) Remove the rear door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Remove the sealing cover. <Ref. to EB-24, REMOVAL, Rear Sealing Cover.>
4) Remove the rear door latch assembly. <Ref. to SL-34, REMOVAL, Rear Door Latch and Door Lock Actuator Assembly.>
5) Remove the wire from wire clamp (1) of outer handle.
6) Remove the two bolts.



7) Detach the outer handle bracket. (Model with double lock)
8) Detach the rear outer handle.

CAUTION:
Do not apply excessive force to remove the handle from door panel. Otherwise door panel may be deformed.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:
Make sure the outer handle works correctly after installation.

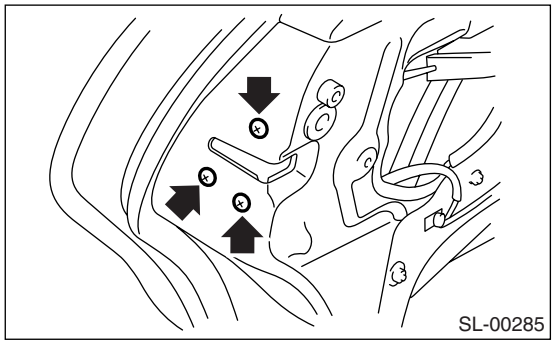
C: INSPECTION

1) Check the wires for deformation. When it is deformed, straighten it because failure operations may occur. When it is unrepairable, replace the rear door latch & door lock actuator assembly.
2) Check the lever and wire for smooth operation.

10. Rear Door Latch and Door Lock Actuator Assembly

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the rear door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Remove the wires from rear inner remote. <Ref. to SL-32, REMOVAL, Rear Inner Remote.>
4) Remove the sealing cover. <Ref. to EB-24, REMOVAL, Rear Sealing Cover.>
5) Remove the rear door glass. <Ref. to GW-22, REMOVAL, Rear Door Glass.>
6) Remove the rear sash. <Ref. to GW-24, REMOVAL, Rear Regulator and Motor Assembly.>
7) Take out the wire from wire clamp of outer handle.
8) Detach the outer handle bracket. (Model with double lock)
9) Remove the three screws.



10) Disconnect the connectors, and then remove the rear door latch & door lock actuator assembly.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:
Make sure the lock works correctly after installation.

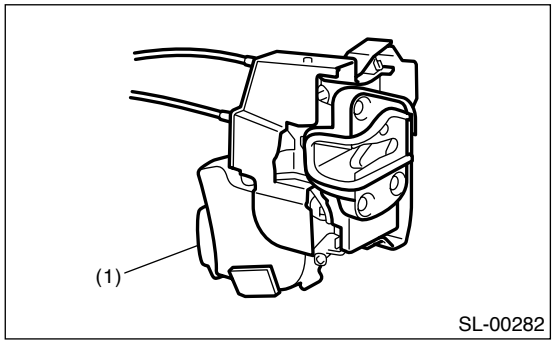
C: INSPECTION

1) Check the wires for deformation. When it is deformed, straighten it because failure operations may occur. When it is unrepairable, replace the rear door latch & door lock actuator assembly.
2) Check the lever and wire for smooth operation.

11.Rear Door Lock Actuator

A: REMOVAL

1) Remove the rear door latch & door lock actuator assembly. <Ref. to SL-34, REMOVAL, Rear Door Latch and Door Lock Actuator Assembly.>
2) Remove the pawl of rear door latch security cover, and then remove the cover. (Except for EK model)
3) Remove the screw from the rear door latch and door lock actuator, and then remove the door lock actuator. (Except for EK model)



(1) Rear door lock actuator

B: INSTALLATION

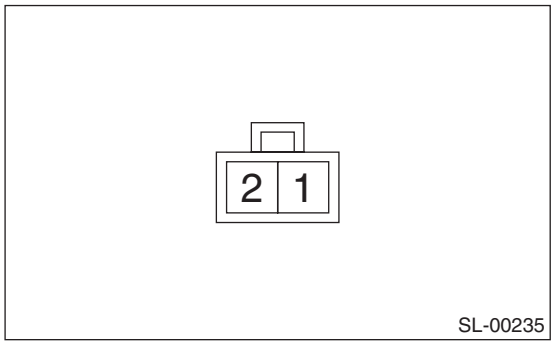
Install in the reverse order of removal.

NOTE:
Make sure the lock works correctly after installation.

C: INSPECTION

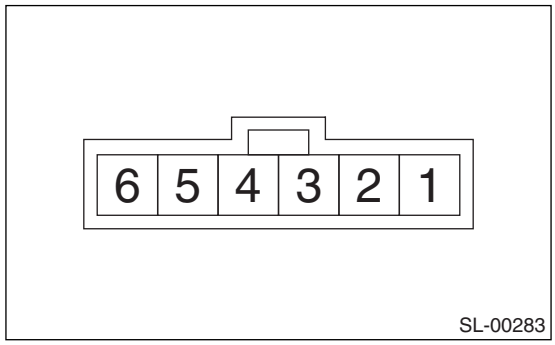
1) Disconnect the door lock actuator harness connector.
2) Connect the battery to door lock actuator terminals.
If defective, replace the door lock actuator.

1. Model without double lock



Terminal No.	Actuator operation
No. 2 (+) and No. 1 (–)	Unlocked → Locked
No. 1 (+) and No. 2 (–)	Locked → Unlocked

2. Model with double lock



DOOR ACTUATOR RH:

Terminal No.	Actuator operation
No. 5 (+) and No. 1 (–)	Unlocked → Locked
No. 1 (+) and No. 5 (–)	Locked → Unlocked
No. 6 (+) and No. 1 (–)	Double lock released → Double lock set
No. 1 (+) and No. 6 (–)	Double lock set → Double lock released

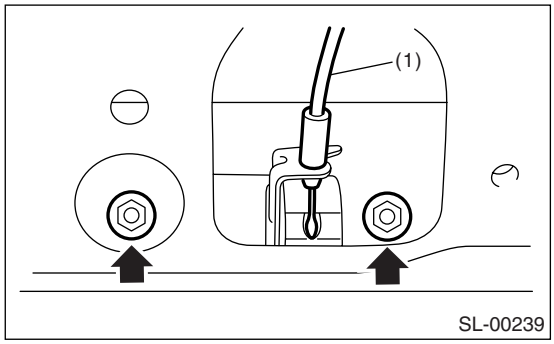
DOOR ACTUATOR LH:

Terminal No.	Actuator operation
No. 2 (+) and No. 6 (–)	Unlocked → Locked
No. 6 (+) and No. 2 (–)	Locked → Unlocked
No. 1 (+) and No. 6 (–)	Double lock released → Double lock set
No. 6 (+) and No. 1 (–)	Double lock set → Double lock released

12.Rear Gate Outer Handle

A: REMOVAL

1) Remove the rear gate trim. <Ref. to EI-69, REMOVAL, Rear Gate Trim.>
2) Remove the rear gate garnish. <Ref. to EI-76, REMOVAL, Rear Gate Garnish.>
3) Remove the two nuts to take out the rear gate outer handle.
4) Remove the rear gate outer handle cable.



(1) Rear gate handle cable

B: INSTALLATION

Install in the reverse order of removal.

NOTE:
Make sure the outer handle works correctly after installation.

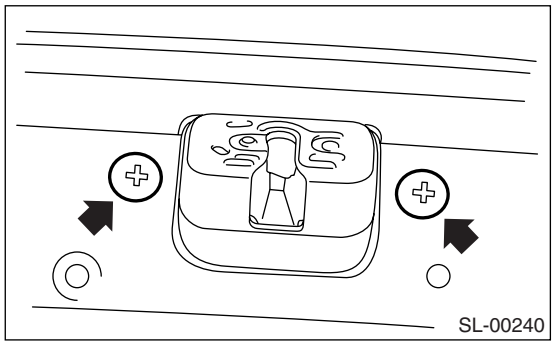
C: INSPECTION

1) Check the rear gate handle cable for deformation.
2) Check the rear gate outer handle and rear gate handle cable for smooth operation.

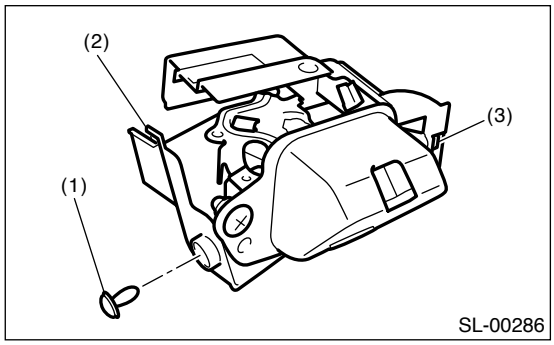
13.Rear Gate Latch Assembly

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the rear gate trim. <Ref. to EI-69, REMOVAL, Rear Gate Trim.>
3) Remove the two screws.

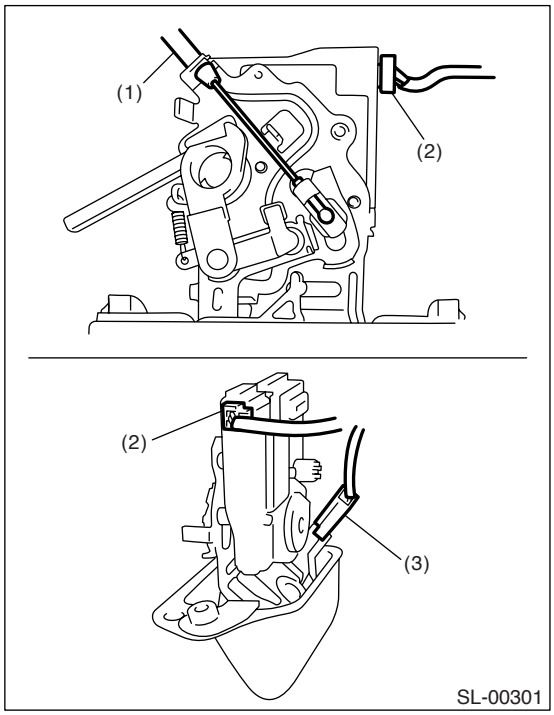


4) Remove the rear gate latch cover. (Model with double lock)



(1) Clip
(2) Claw
(3) Hook

5) Disconnect the each connector and rear gate handle cable.



(1) Rear gate handle cable
(2) Rear gate lock actuator connector
(3) Rear gate latch switch connector

6) Remove the rear gate latch assembly.

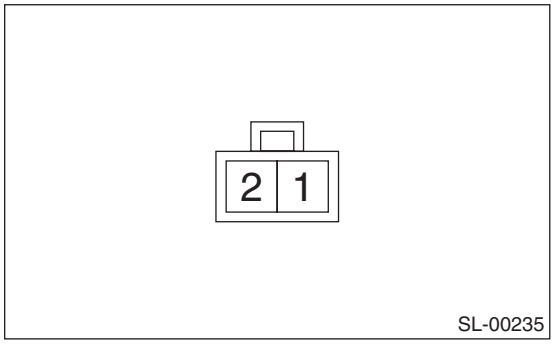
B: INSTALLATION

Install in the reverse order of removal.

NOTE:
Make sure the lock works correctly after installation.

C: INSPECTION

1) Disconnect the rear gate lock actuator harness connector.
2) Connect the battery to rear gate lock actuator terminals.



Terminal No.	Actuator operation
No. 2 (+) and No. 1 (–)	Unlocked → Locked
No. 1 (+) and No. 2 (–)	Locked → Unlocked

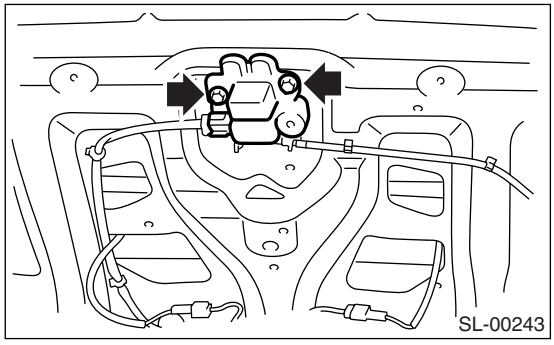
Replace the rear gate latch assembly if faulty.
3) Check the rear gate handle cable for deformation.
4) Check the lever and rear gate handle cable for smooth operation.

14.Trunk Lid Lock Assembly

A: REMOVAL

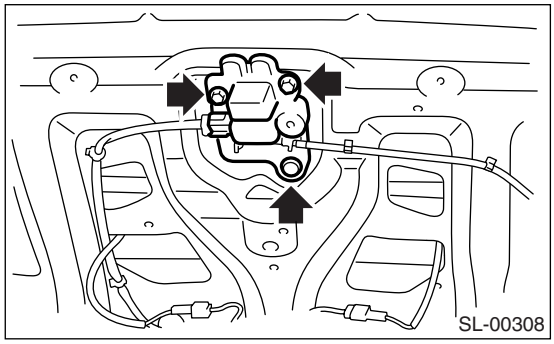
1. MODEL WITHOUT DOUBLE LOCK

1) Disconnect the connectors and detach the trunk opener cable.
2) Remove the two bolts to remove trunk lid lock assembly.



2. MODEL WITH DOUBLE LOCK

1) Disconnect the connectors and detach the trunk opener cable.
2) Remove the two bolts and clip to remove trunk lid lock assembly.



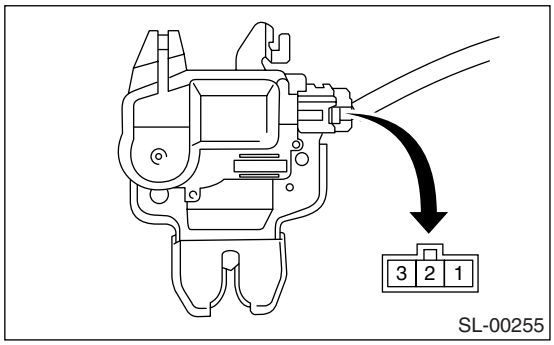
B: INSTALLATION

Install in the reverse order of removal.

NOTE:
• Apply grease to the movable part.
• Make sure the lock works correctly after installation.

C: INSPECTION

1) Disconnect the trunk lid actuator harness connector.
2) Connect the battery to trunk lid actuator terminals.



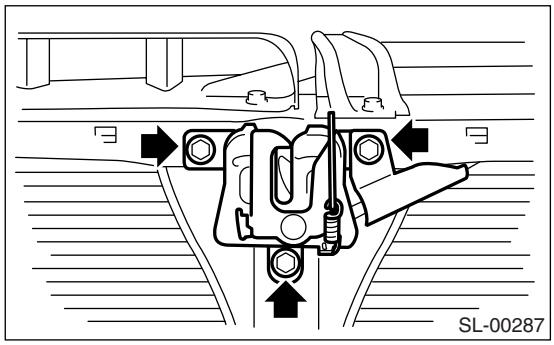
Terminal No.	Actuator operation
No. 2 (+) and No. 1 (–)	Locked → Unlocked

If defective, replace the trunk lid actuator.
3) Check the striker for deformation or abnormal wear.
4) Check the safety lever for improper movement.
5) Check other levers and the spring for rust formation and unsmooth movement.
6) Check the trunk opener cable for smooth operation.

15.Front Hood Lock Assembly

A: REMOVAL

1) Open the front hood.
2) Remove the bolts, and then detach the front hood lock assembly.
3) Remove the release cable from lock assembly.



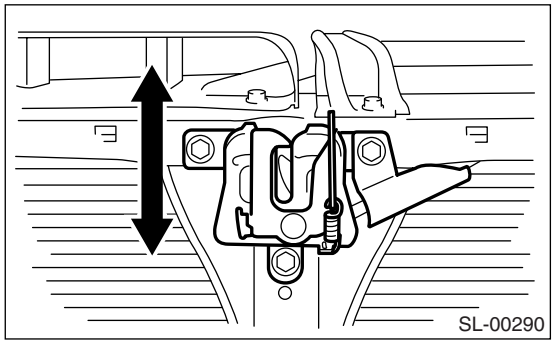
B: INSTALLATION

Install in the reverse order of removal.

NOTE:
- Apply grease to the movable part.
- Make sure the release cable works correctly after installation.

C: ADJUSTMENT

Loosen the bolt, and adjust the lock assembly while moving it up and down.



D: INSPECTION

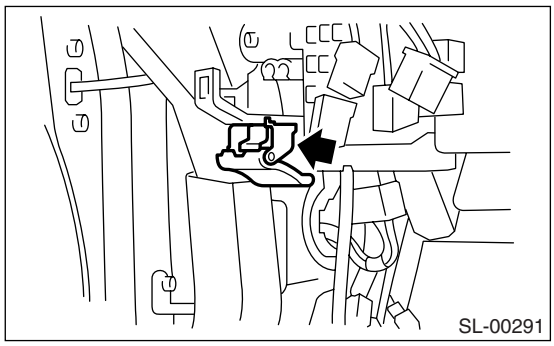
1) Check the striker for deformation or abnormal wear.
2) Check the safety lever for improper movement.
3) Check other levers and the spring for rust formation and unsmooth movement.

16.Remote Openers

A: REMOVAL

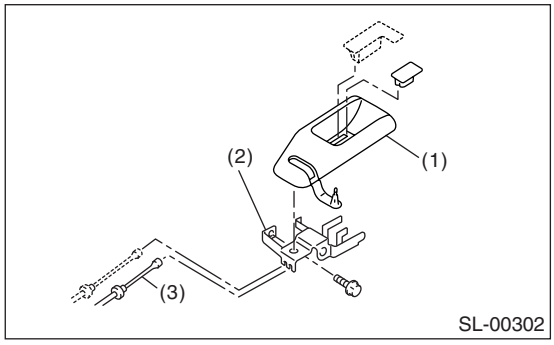
1. FRONT HOOD OPENER

1) Remove the release cable from hood lock.
2) Remove the bolt, and then detach the opener lever.



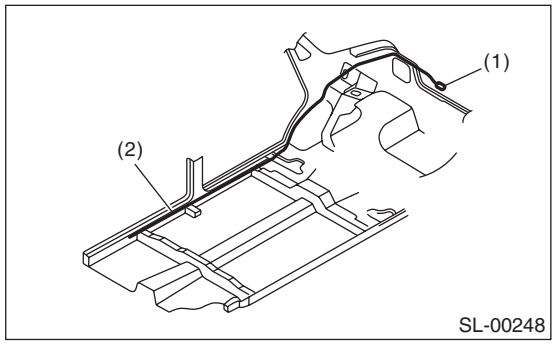
2. TRUNK LID OPENER

1) Remove the rear seat. <Ref. to SE-14, REMOVAL, Rear Seat.>
2) Remove the center pillar lower trim, side sill cover, rear pillar lower trim and floor mat on the driver's side. Remove the clip holding cable.
3) Remove the bolt, and then detach the opener pull handle.



(1) Cover
(2) Pull handle ASSY
(3) Cable

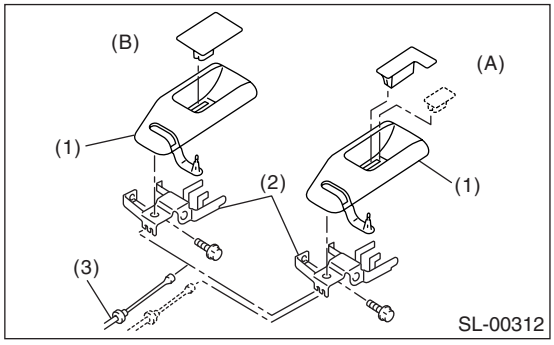
4) Remove the cable from opener pull handle.
5) Remove the trunk lid lock assembly from trunk lid.
6) Remove the cable from trunk lid lock assembly.



(1) Trunk lid lock ASSY
(2) Cable

3. FUEL FLAP OPENER

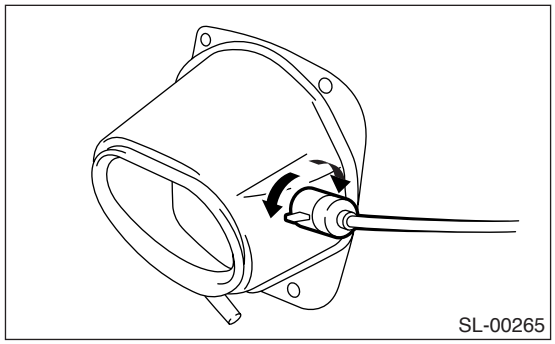
1) Remove the rear seat. <Ref. to SE-14, REMOVAL, Rear Seat.>
2) Remove the center pillar lower trim, side sill cover, rear pillar lower trim and floor mat on the driver's side. Remove the clip holding cable.
3) Remove the bolt, and then detach the opener pull handle.



(A) Sedan model
(B) Wagon model
(1) Cover
(2) Pull handle ASSY
(3) Cable

4) Remove the cable from opener pull handle.
5) Remove the rear quarter trim RH. <Ref. to EI-63, REMOVAL, Rear Quarter Trim.>

6) Rotate the fuel lock inside of the quarter panel to 90° and remove. (Either right or left turn)



B: INSTALLATION

1. FRONT HOOD OPENER

Install in the reverse order of removal.

2. TRUNK LID OPENER

Install in the reverse order of removal.

3. FUEL FLAP OPENER

Install in the reverse order of removal.

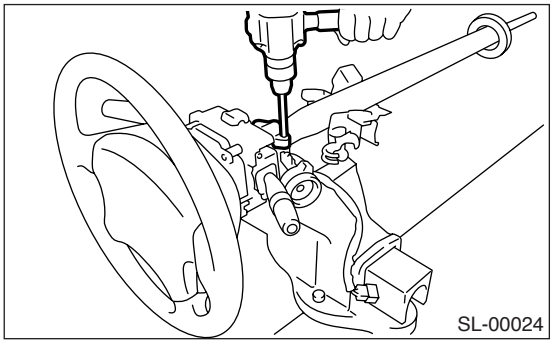
C: INSPECTION

Make sure the front hood, trunk lid and fuel flap open and close smoothly.

17.Ignition Key Lock

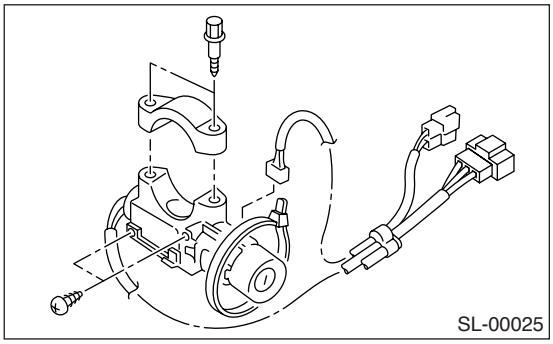
A: REPLACEMENT

1) Disconnect the ground cable from battery.
2) Remove the steering column. <Ref. to PS-23, REMOVAL, Tilt Steering Column.>
3) Secure the steering column in a vise. Remove the bolt with a drill.



SL-00024

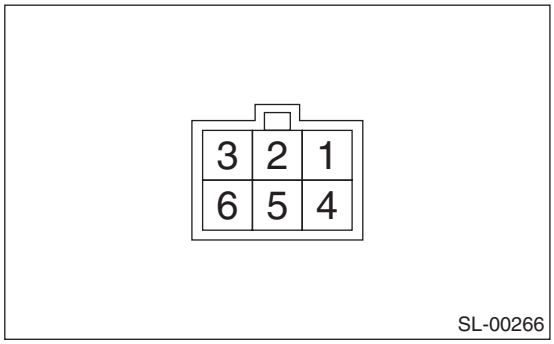
4) Remove the ignition key lock.
5) Using a new bolt, tighten the bolts all the way.



SL-00025

B: INSPECTION

1) Remove the instrument panel lower panel.
2) Remove the lower column cover.
3) Unfasten the fixing clip which secures harness, and then disconnect the connector of the ignition switch from body harness.
4) Turn the ignition key plate to each position and check the continuity between terminals of ignition connector.



SL-00266

Switch position	Terminal No.	Standard
LOCK	—	—
ACC	No. 3 and No. 4	Less than 1 Ω
ON	No. 3 and No. 1 and No. 4 No. 3 and No. 6	Less than 1 Ω
ST	No. 3 and No. 1 No. 3 and No. 2 and No. 6	Less than 1 Ω

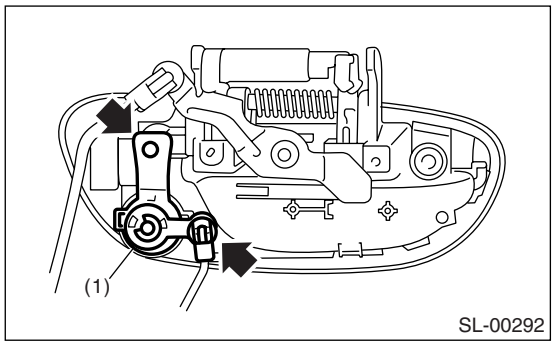
If NG, replace the ignition switch.

18.Key Lock Cylinders

A: REPLACEMENT

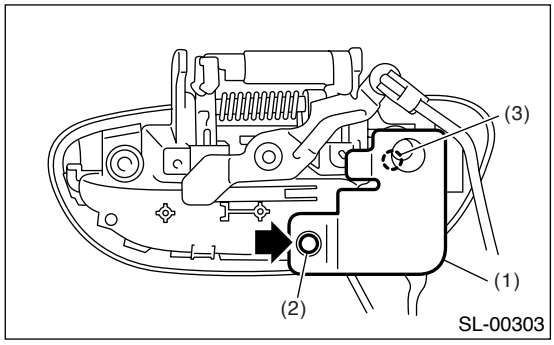
1. MODEL WITHOUT DOUBLE LOCK

1) Raise the front door glass to the top position.
2) Remove the door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Remove the sealing cover.
4) Remove the rod clamp. Remove the bolt. Replace the key cylinder (1).



2. MODEL WITH DOUBLE LOCK

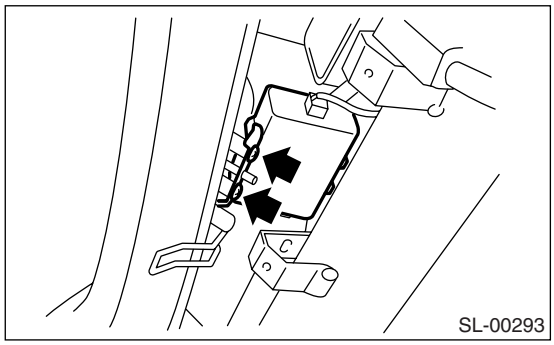
1) Raise the front door glass to the top position.
2) Remove the door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Remove the sealing cover.
4) Remove the bolt (2), and remove the key cylinder cover (1).
5) Remove the rod clamp. Remove the bolt (3). Replace the key cylinder.



19.Keyless Entry Control Unit

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the glove box. <Ref. to EI-51, REMOVAL, Glove Box.>
3) Remove the screw, then remove the keyless entry control unit while disconnecting the connector.



B: INSTALLATION

Install in the reverse order of removal.

20. Body Integrated Unit

A: REMOVAL

NOTE:
• Prepare the security ID plate.
• Prepare all registered immobilizer keys for the model with immobilizer.
• Make a registration of immobilizer for the model with immobilizer. For detailed operation procedure, refer to “IMMOBILIZER REGISTRATION MANUAL”.
• If replacing the body integrated unit, check the current setting and note it. <Ref. to LAN(diag)-17, CONFIRMATION OF CURRENT SETTING, OPERATION, Subaru Select Monitor.>

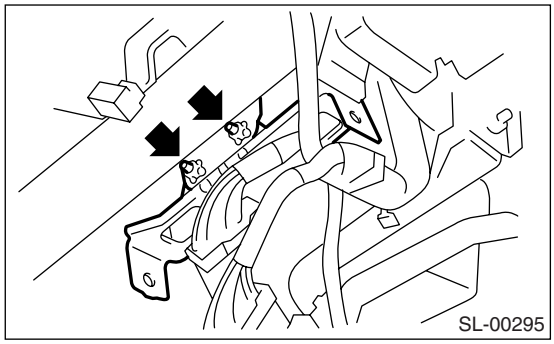
1) Disconnect the ground cable from battery.
2) Remove the instrument panel lower panel on driver’s side. <Ref. to EI-56, REMOVAL, Instrument Panel Assembly.>
3) Disconnect the connector of body integrated unit.

CAUTION:
Be careful to keep water and other foreign materials away from body integrated unit.

4) Remove the body integrated unit from the body integrated unit mounting bracket using flat tip screwdriver.

CAUTION:
Be careful not to damage the unit when removing it forcibly from the bracket.

5) Remove the clutch pedal stopper arm. (MT model) <Ref. to CL-26, REMOVAL, Clutch Pedal.>
6) Remove two body integrated unit bracket mounting bolts, and remove the bracket.



B: INSTALLATION

Install in the reverse order of removal.

NOTE:
Make sure it comforms to the current setting condition after installation. <Ref. to LAN(diag)-17, CONFIRMATION OF CURRENT SETTING, OPERATION, Subaru Select Monitor.>

21.Keyless Transmitter

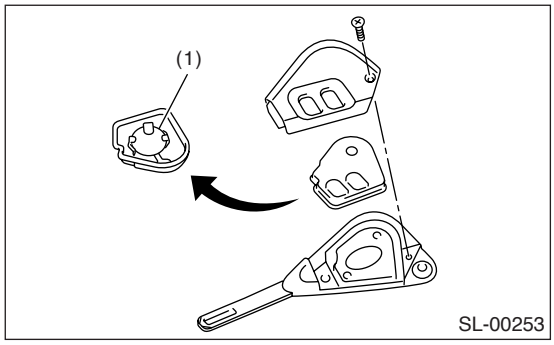
A: REMOVAL

1. KEYLESS TRANSMITTER BATTERY

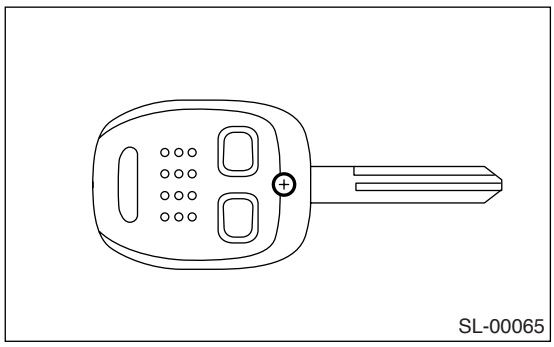
Remove the screw from keyless transmitter, and remove the keyless transmitter battery (1).

NOTE:
To prevent static electricity damage to the keyless transmitter printed circuit board, touch the steel area of building with hand to discharge static electricity carried on body or clothes before disassembling the keyless transmitter.

• Except for EK model



• EK model



B: INSTALLATION

1. KEYLESS TRANSMITTER BATTERY

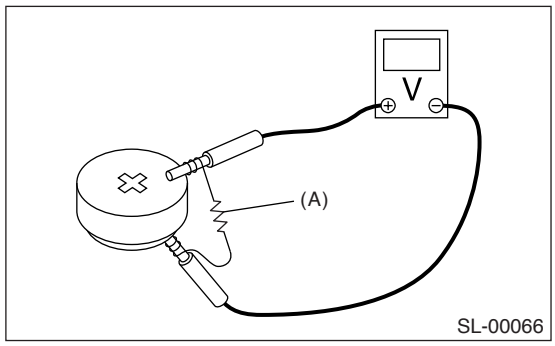
Install in the reverse order of removal.

C: INSPECTION

1. KEYLESS TRANSMITTER BATTERY

Measure the voltage between the keyless transmitter battery (+) terminal and (−) terminal.

NOTE:
• Battery discharge occurs during the measurement. Complete the measurement within 5 seconds.
• During the battery voltage measurement, the voltage falls more than 1.8 volts in 3 seconds period.



(A) Resistance 47 Ω

Tester connection		Standard
(+)	(−)	
Battery Positive terminal	Battery Ground terminal	2.5 — 3.0 V

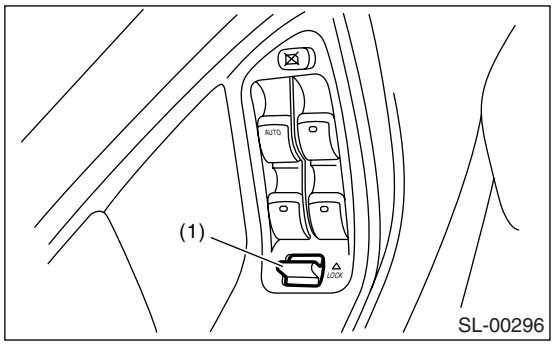
If NG, replace the battery. (Use CR1620 or equivalent.)

D: REPLACEMENT

1. REGISTRATION OF KEYLESS TRANSMITTER

NOTE:
• A maximum of four keyless transmitter can be registered for each individual vehicle.
• When replacing or adding the keyless transmitter, new registration of keyless transmitter is necessary.
• When replacing the keyless transmitter, registration to immobilizer system is also necessary.

1) Remove the keyless transmitter from the ignition switch.
2) Remove the lower trim cover at driver's side, then connect the registration connectors. (1 pole white connector)
3) Press the door lock switch (1) located under the power window main switch to UNLOCK. (Make sure the room light blinks and buzzer sounds, and then system is in registration mode.)



4) While pressing the button of keyless transmitter to be registered twice with door lock switch pressed to UNLOCK. (Button for LOCK, UNLOCK and TRUNK are acceptable)
5) When the registration is completed normally, the door lock actuator will lock → unlock. If the lock → unlock operation is not carried out, repeat the procedure 4).

NOTE:
• When pressing the keyless transmitter button, slowly press for first and second (press longer for second) to check operation of door lock actuator.
• Do not press the button of keyless transmitter more than twice.
• Do not batter the button of keyless transmitter.

6) Repeat the steps 4) if there is an additional keyless transmitter to be registered.
7) Pull out the registration connector, and install the lower trim cover at driver's side.

NOTE:
• The transmitter can be registered only when the door lock switch is remain pushed to UNLOCK.
• Continuing to press the door lock switch to UNLOCK again allows to be registered although the door lock switch is released for once.
• When adding the keyless transmitter, re-registration of keyless transmitter which was already registered is necessary.

2. CLEAR OF KEYLESS TRANSMITTER

1) Remove the keyless transmitter from ignition switch.
2) Remove the lower trim cover at driver's side, then connect the registration connectors. (1 pole white connector)
3) Press the door lock switch located under the power window main switch to LOCK. (Make sure the room light blinks and buzzer sounds, and system becomes in clear mode.)
4) While pressing door lock switch to LOCK, insert and remove the key on ignition switch 10 times within 10 seconds.
5) When the clearing is completed normally, the door lock actuator will lock → unlock. If the lock → unlock operation is not carried out, repeat the procedure 4).
6) Pull out the registration connector, and install the lower trim cover at driver's side.

NOTE:
• The transmitter can be cleared only when the door lock switch is remain pushed to LOCK.
• Continuing to press the door lock switch to LOCK again allows to be cleared although the door lock switch is released for once.
• If changing from registration mode to clear mode, you cannot go to clear mode unless completing the registration mode. The reverse case is same as this.

22.Immobilizer Control Unit

A: NOTE

The control of immobilizer system is carried out in body integrated unit.

B: REMOVAL

<Ref. to SL-46, REMOVAL, Body Integrated Unit.>

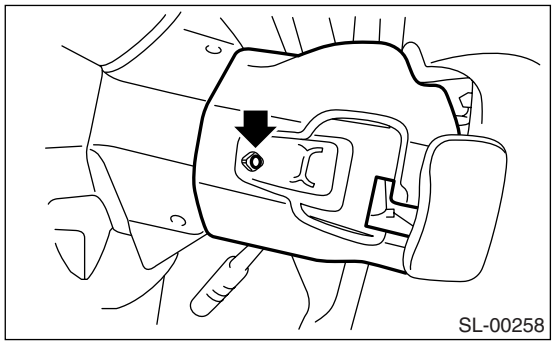
C: INSTALLATION

Install in the reverse order of removal.

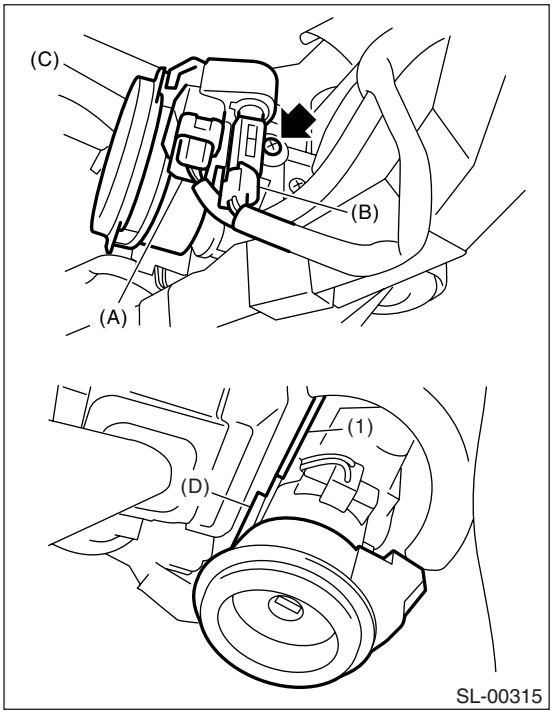
23.Immobilizer Antenna

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the screws, and detach the upper column cover and lower column cover.



3) Remove the instrument panel lower cover. <Ref. to EI-50, REMOVAL, Instrument Panel Lower Cover.>
4) Disconnect the immobilizer antenna connector (A) and ignition switch lighting connector (B).
5) Loosen the screw and release the lock (D) at opposite side using flat-tip screwdriver (1), and then detach the immobilizer antenna (C).



CAUTION:
Do not apply excessive force to remove the immobilizer antenna and lock. Otherwise they may be broken because those parts are the products made of a plastic.

B: INSTALLATION

Install in the reverse order of removal.

BODY SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

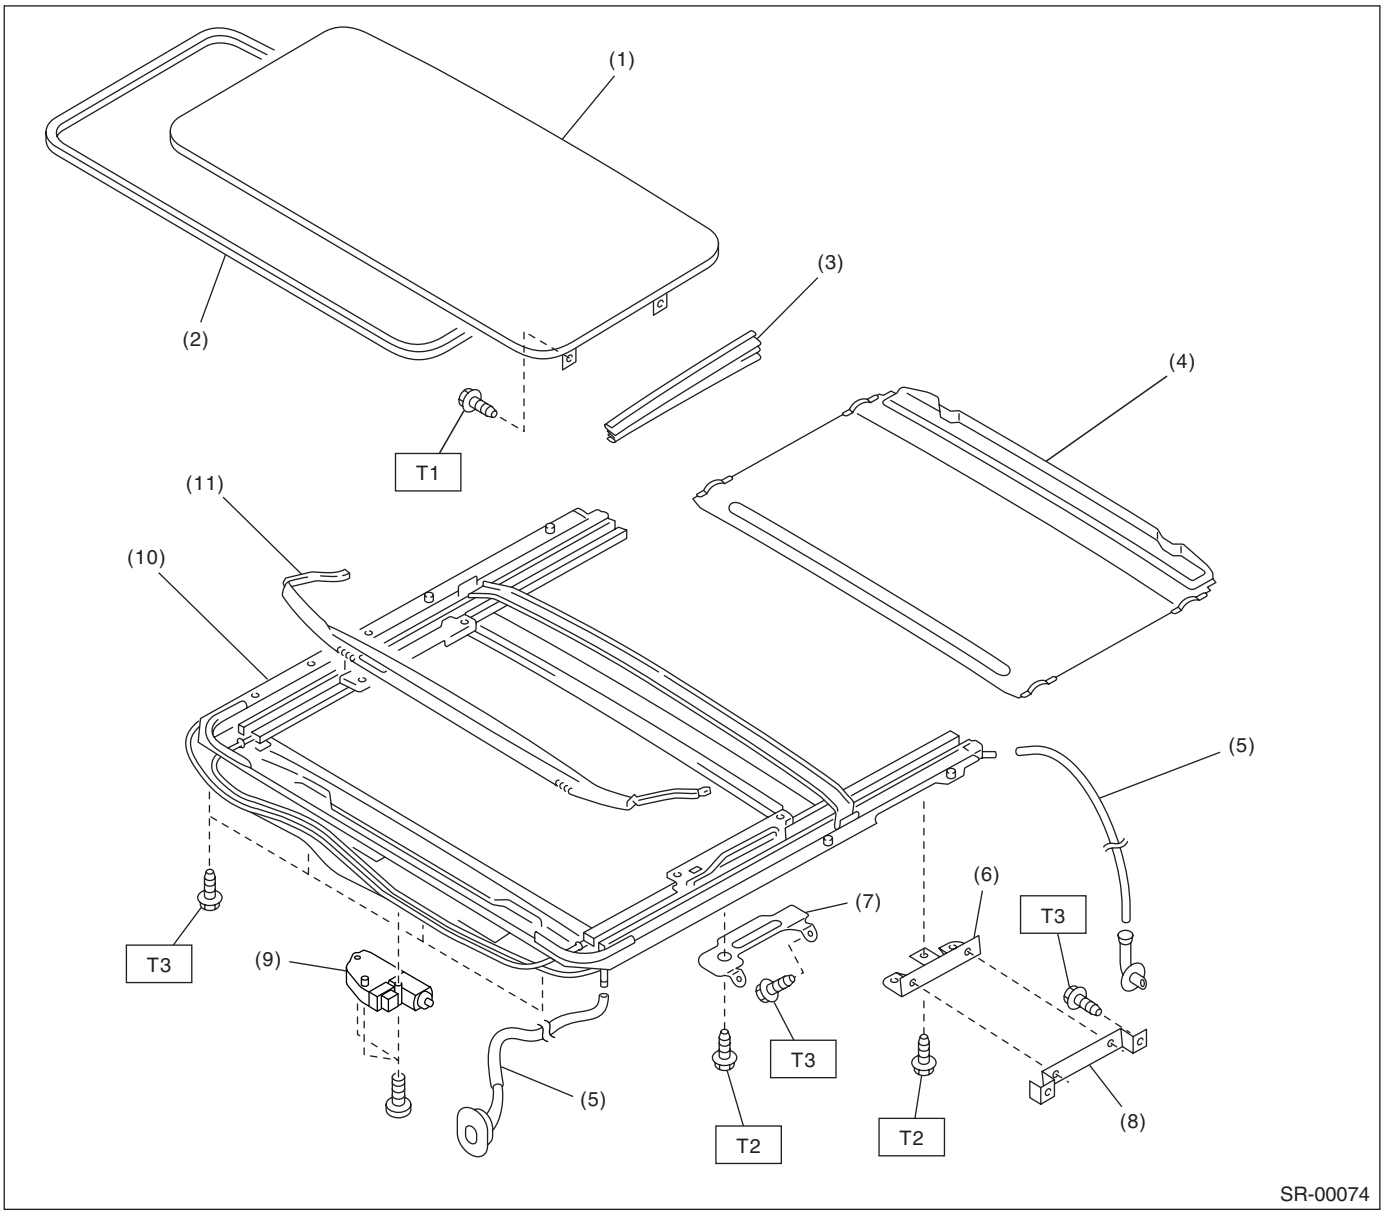
		Page
1.	General Description	2
2.	Sunroof Control System	5
3.	Glass Lid	6
4.	Sunroof Assembly	9
5.	Sunroof Motor	12
6.	Sunroof Switch	15

1. General Description

A: COMPONENT

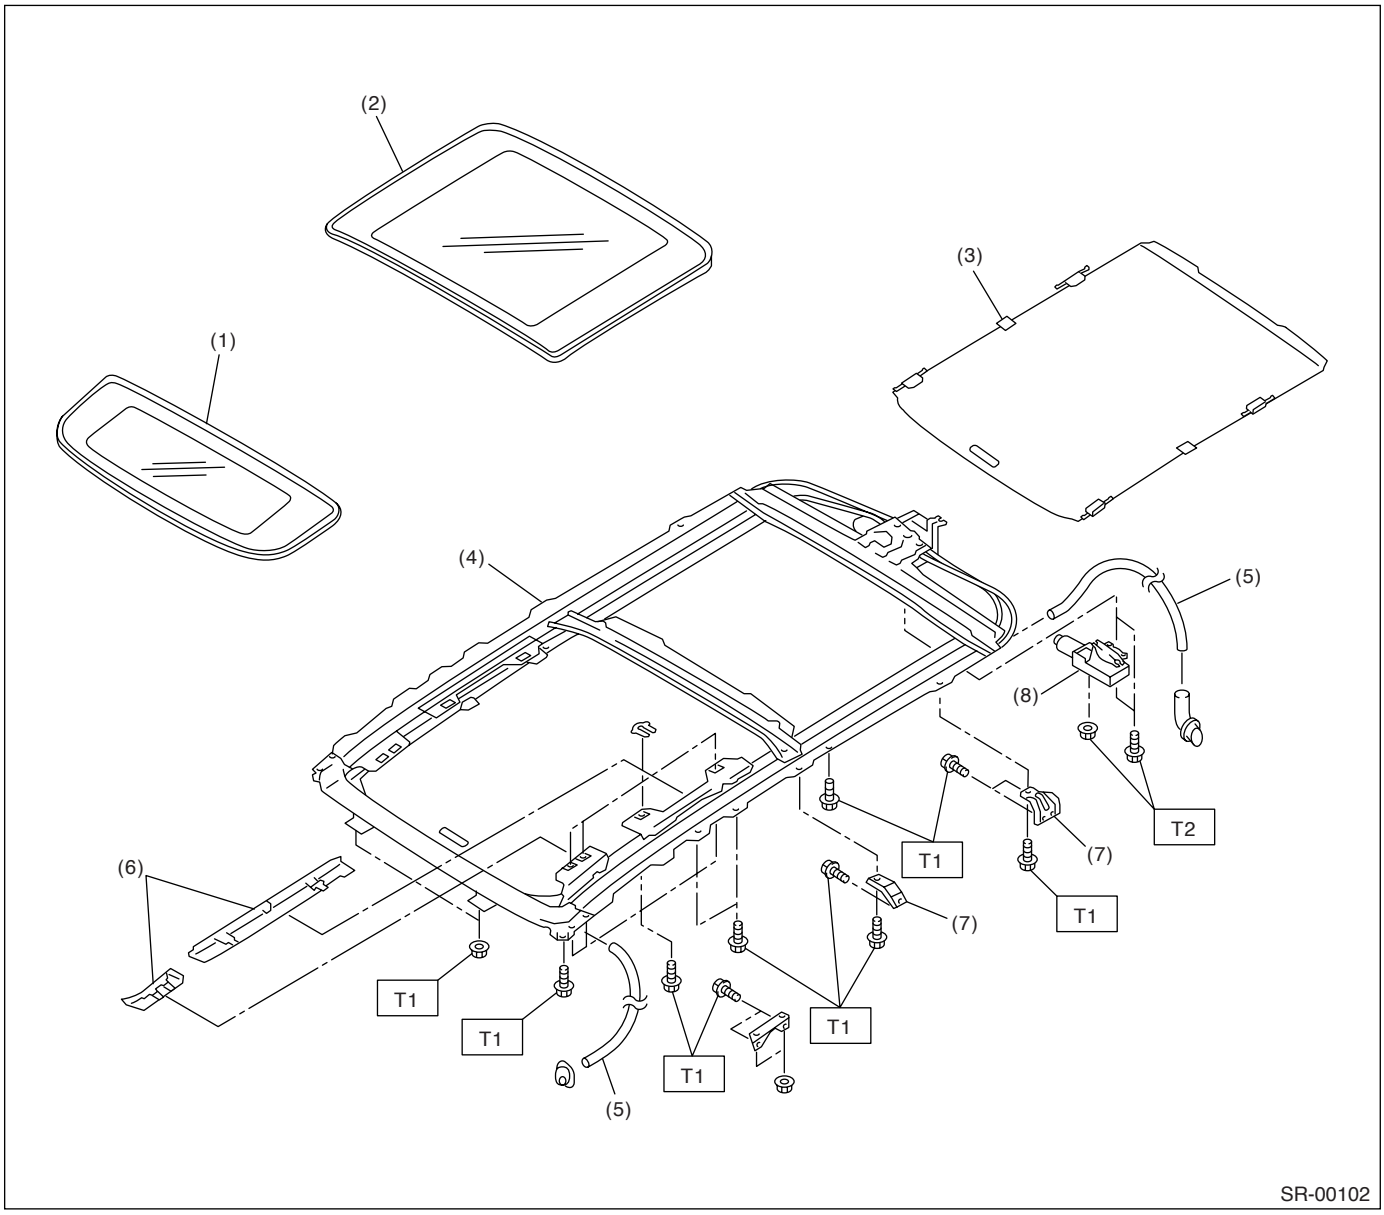
1. SEDAN MODEL



(1) Glass lid
(2) Weatherstrip
(3) Guide rail cover
(4) Sunshade
(5) Drain tube
(6) Assist rail bracket (Rear)
(7) Assist rail bracket (Front)
(8) Sunroof bracket (Rear)
(9) Motor ASSY
(10) Frame ASSY
(11) Deflector

Tightening torque: N·m (kgf-m, ft-lb)
T1: 4.5 (0.46, 3.3)
T2: 6.0 (0.61, 4.4)
T3: 7.5 (0.76, 5.3)

2. WAGON MODEL



(1) Glass lid (Front)
(2) Glass lid (Rear)
(3) Sunshade
(4) Frame ASSY
(5) Drain tube
(6) Cover (Front and rear)
(7) Frame bracket
(8) Motor ASSY

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.76, 5.3)
T2: 4.5 (0.46, 3.0)

B: CAUTION

• Before disassembling or reassembling parts, always disconnect the battery ground cable. When replacing the audio, control unit, and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable in order to prevent memory deletion.
• Reassemble the parts in the reverse order of disassembly unless otherwise indicated.
• Adjust parts to the given specifications.
• Connect the connectors securely for reassembly.
• After reassembly, make sure functional parts operate smoothly.

C: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.

2. Sunroof Control System

A: WIRING DIAGRAM

1. SUNROOF

<Ref. to WI-316, WIRING DIAGRAM, Sunroof System.>

B: INSPECTION

Symptom	Inspection order
Water leakage	(1) Check roof panel and glass lid for improper or poor sealing. (2) Check drain tube for clogging. (3) Check sunroof frame seal and body for improper fit.
Booming noise, wind noise and other noise	(1) Check glass lid and roof panel for improper clearance. (2) Check sunshade and roof trim for improper clearance.
Motor noise	(1) Check installing part of motor for looseness. (2) Check gears and bearings for wear. (3) Check cable for wear. (4) Check cable pipe for deformities.
Failure of sunroof (Motor operates properly.)	(1) Check guide rail for foreign particles. (2) Check guide rail for improper installation. (3) Check parts for mutual interference. (4) Check cable slider for improper clinching. (5) Check cable for improper installation.
Motor does not rotate or rotate improperly.	(1) Check fuse for blown out. (2) Check switch for improper function. (3) Check motor for incorrect terminal voltage. (4) Check the relay for improper operation. (5) Check poor grounding system. (6) Check harness for open or short and terminals for poor connections.
Failure turn of glass lid	Check guide rail for foreign particles.

• Failure turn of glass lid while driving rough road.

Glass lid has auto-reverse function. When applied above specified force to the glass lid, the lid turns back and stops. When operating the glass lid (open or close) while driving the rough road, the lid judges vibration as a force and may causes failure turns. When the failure turn is occurred, the initialize operation is required with following procedure.

1. INITIALIZE OPERATION (SEDAN MODEL)

1) Tilt up the glass lid.
2) Release the switch once, and press the tilt up switch again for 15 seconds.
3) When the glass lid is raised a little and returned to tilt up position, release the switch for the moment. (Initialization of position detecting function)
4) Keep pressing the tilt up switch within 5 seconds from releasing the switch, glass lid tilts down → slides open → slides close operation automatically. (Time gap of more than 5 seconds will result in cancellation of position detecting function.)
5) Initialize operation is completed.

2. INITIALIZE OPERATION (WAGON MODEL)

1) Apply the force to glass lid in the direction of glass lid open while glass lid (rear) is closing, and then reverse the lid five times in a row.

However, in the following situation, the initialize operation is canceled.

• When the lid is fully closed once during auto-reverse operation five times in a row.
• When the interval of auto-reverse operation is more than 30 seconds once.

2) When the operation of glass lid shift to brink operation*, fully close the lid on switch operation.
3) Initialize operation is completed.

*Brink operation: Although keep pressing the switch, glass lid operates only at a moment when the switch is pressed.

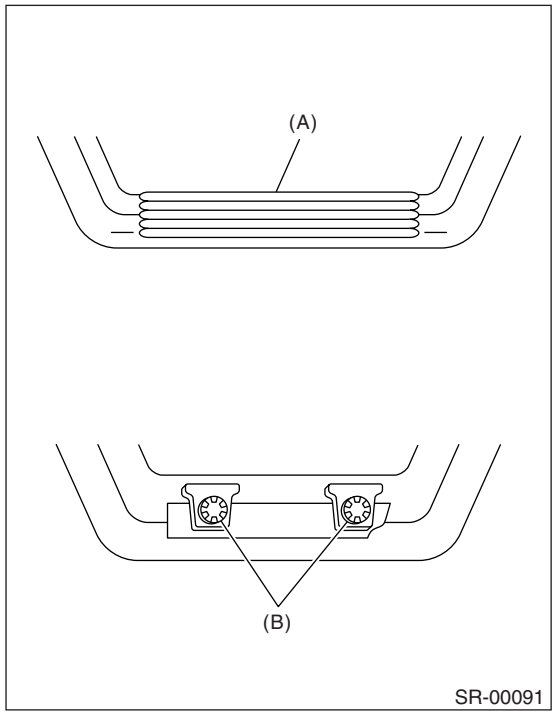
3. Glass Lid

A: REMOVAL

1. SEDAN MODEL

1) Completely close the glass lid, and then open the sunshade.
2) Remove the cover (A), and then remove the TORX® bolts (B).

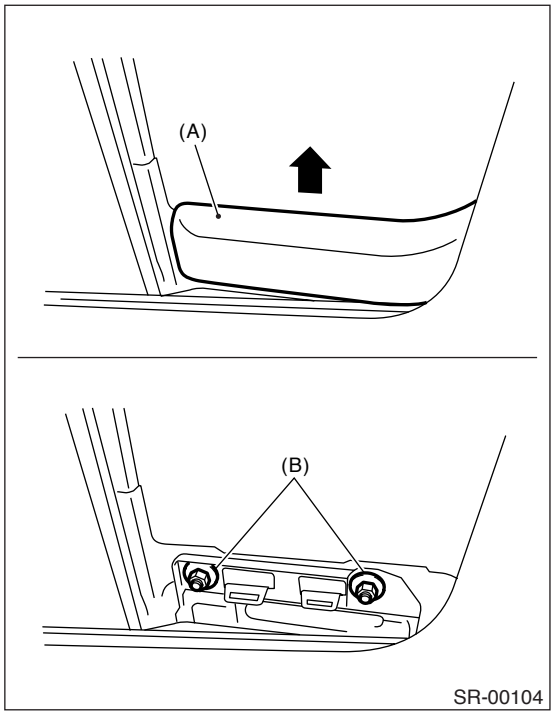
CAUTION:
TORX® bolts are applied with thread locker. If they are removed, replace with new ones.



3) Remove the glass lid carefully.

2. WAGON MODEL (FRONT)

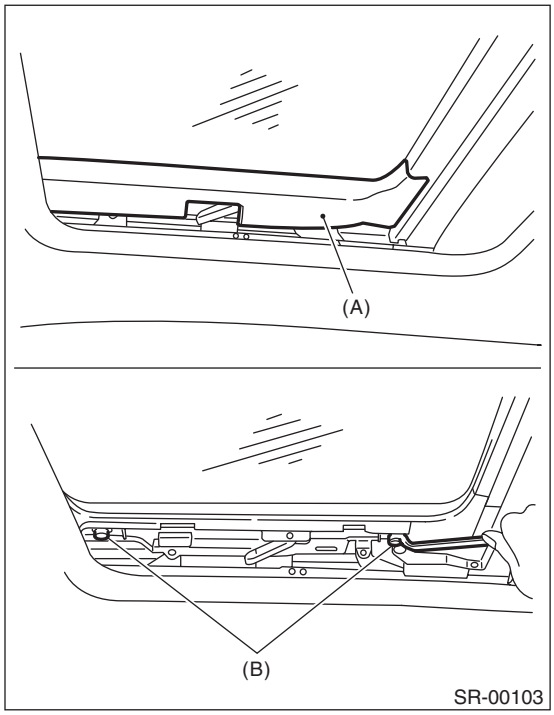
1) Open the sunshade.
2) Pull out the cover (A) toward arrow mark, and then remove the nut (B).



3) Remove the glass lid (front) carefully.

3. WAGON MODEL (REAR)

1) Tilt up the glass lid (front), and then open the sunshade.
2) Remove the cover (A), and then remove the nut (B).



3) Remove the glass lid carefully.

B: INSTALLATION

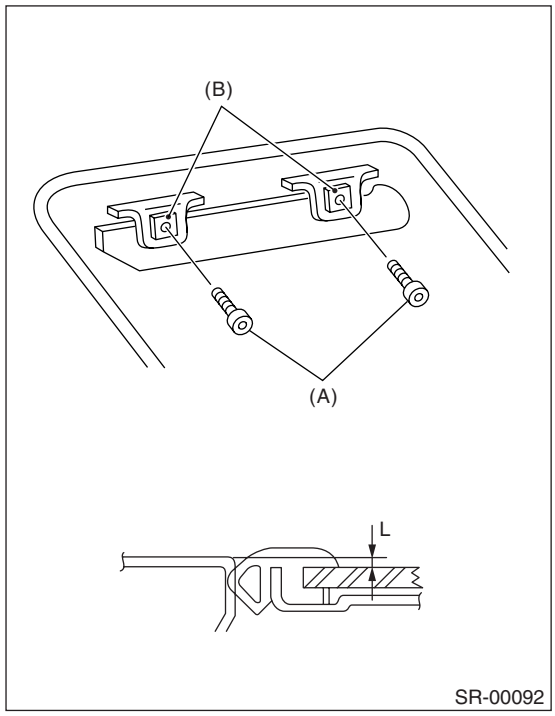
Install in the reverse order of removal.

C: ADJUSTMENT

1. SEDAN MODEL

Loosen the glass lid mounting TORX® bolts (A), and then adjust the height with moving 9.5 mm (0.374 in) nut (B) on lid side.

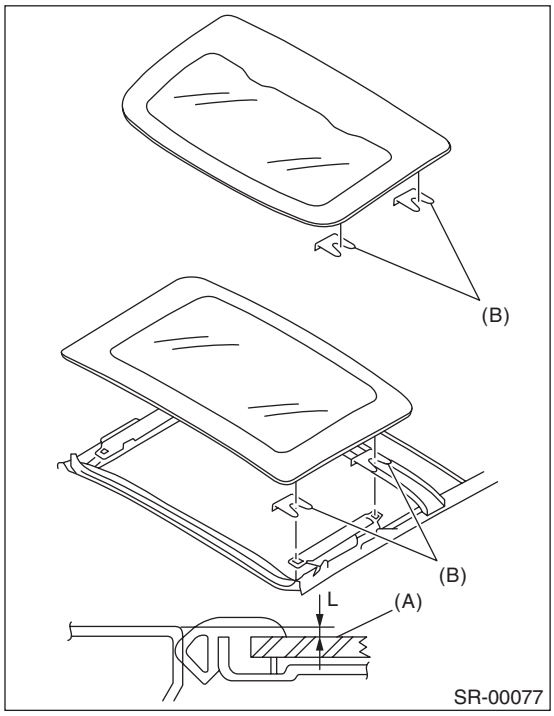
Difference in height between glass lid and roof panel L:
2.0±1.0 mm (0.079±0.039 in)



2. WAGON MODEL

Loosen the glass lid installation nuts, and then adjust the height by adding (max: four pieces) or extracting (min: zero piece) shims (B) (standard: two pieces) which installed between glass lid (A) and body.

Difference in height between glass lid and roof panel L:
2.0±1.0 mm (0.079±0.039 in)

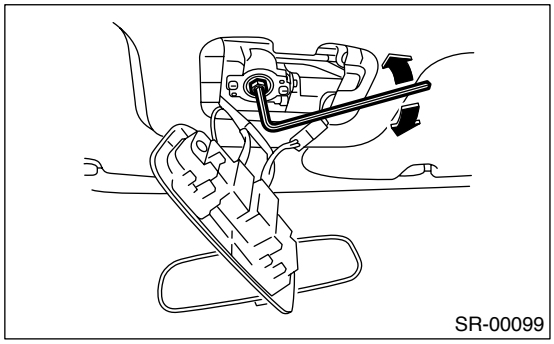


D: FORCED DRIVE

If glass lid dose not operate or is not supplied with power, move the glass lid using the emergency handle (wrench)*.
*: Emergency handle (L shape general purpose hexagon wrench)
Sedan model: bolt width 4 mm (0.16 in)
Wagon model: bolt width 5 mm (0.20 in)

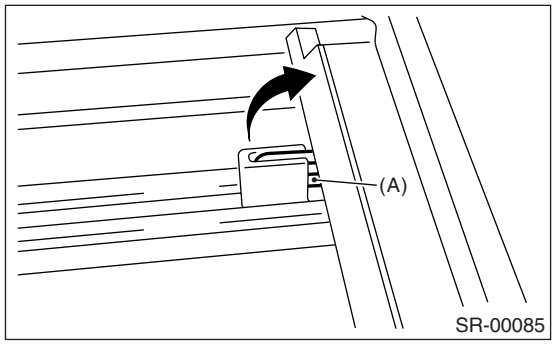
1. SEDAN MODEL

1) Remove the spot map light. <Ref. to LI-34, REMOVAL, Spot Map Light.>
2) Insert the wrench securely until it touches the motor shaft edge.
3) Turn the wrench, and move the glass lid.
- Turning right, the glass lid open.
- Turning left, the glass lid close.

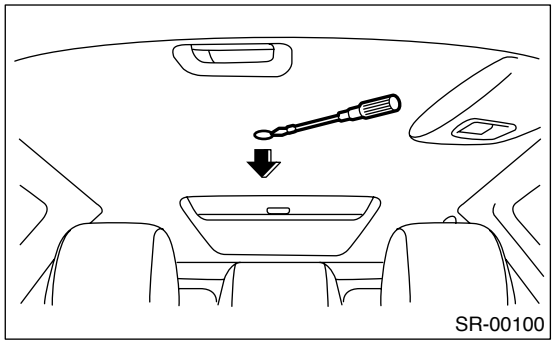


2. WAGON MODEL

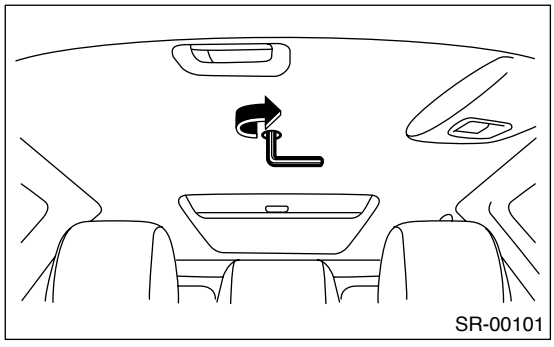
1) Raise the left and right side hook (A) of sunshade.



2) Slide the sunshade forward.
3) Remove the plug in the rear side of roof trim.



4) Insert the wrench securely until it touches the motor shaft edge.
5) Turn the wrench to right, and close the glass lid (front and rear).



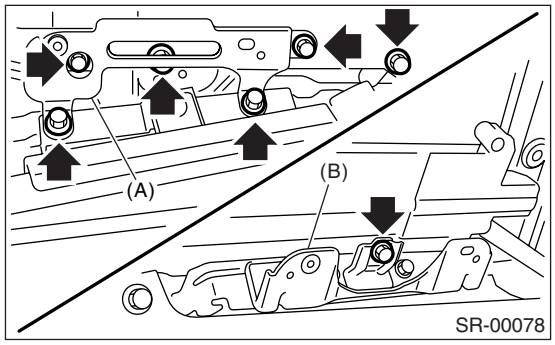
CAUTION:
After forced drive, the initialize operation is required. <Ref. to SR-5, INSPECTION, Sunroof Control System.>

4. Sunroof Assembly

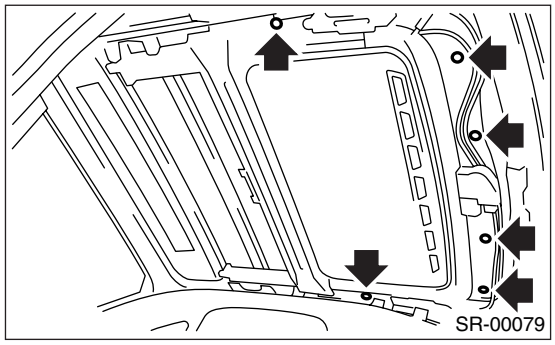
A: REMOVAL

1. SEDAN MODEL

1) Disconnect the ground cable from battery.
2) Remove the roof trim. <Ref. to EI-67, SEDAN MODEL, REMOVAL, Roof Trim.>
3) Disconnect the harness connector of sunroof motor.
4) Remove the glass lid. <Ref. to SR-6, SEDAN MODEL, REMOVAL, Glass Lid.>
5) Remove the drain tube from frame assembly.
6) Remove the assist rail bracket (front) (A) and sunroof bracket (rear) (B).

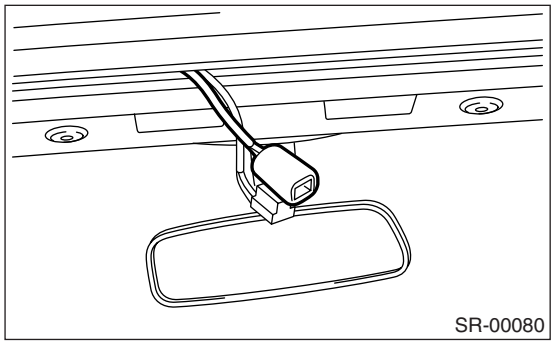


7) Remove the nuts, and then remove the frame assembly.

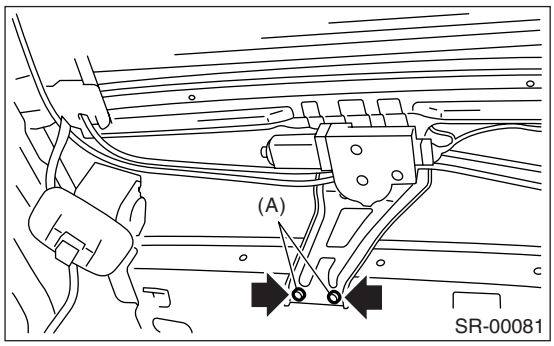


2. WAGON MODEL

1) Disconnect the ground cable from battery.
2) Remove the roof trim. <Ref. to EI-67, WAGON MODEL, REMOVAL, Roof Trim.>
3) Disconnect the harness connector of motor assembly.

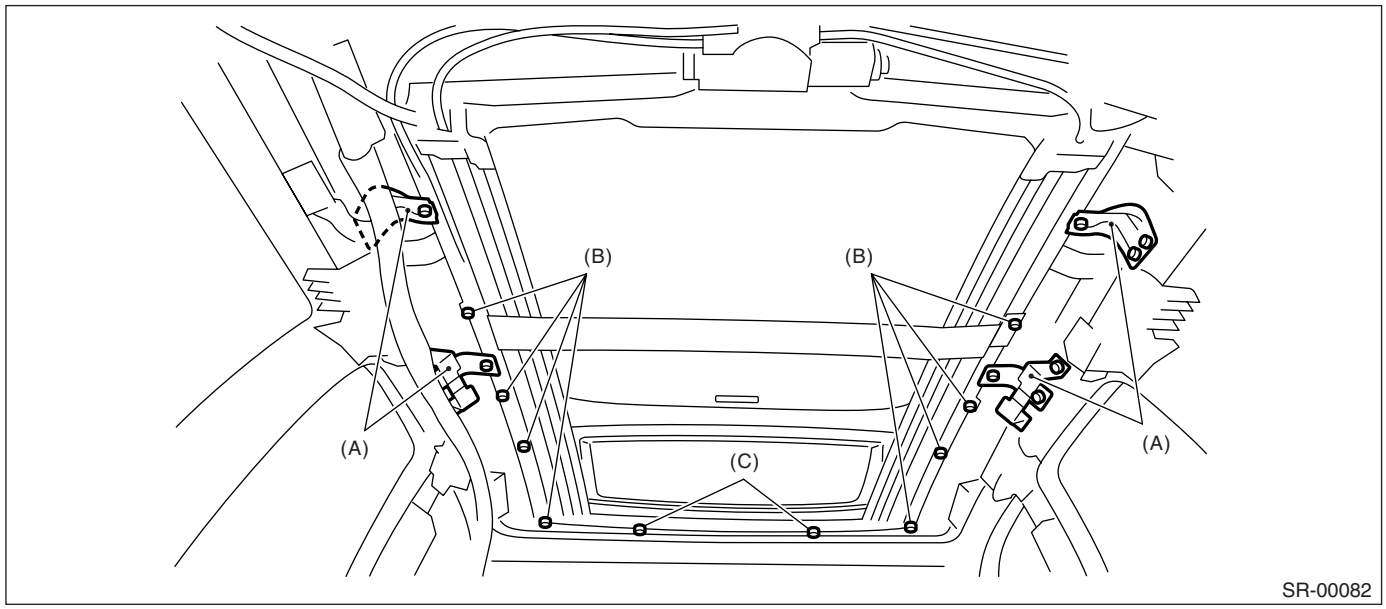


4) Remove the front and rear glass lid. <Ref. to SR-6, WAGON MODEL (FRONT), REMOVAL, Glass Lid.> <Ref. to SR-6, WAGON MODEL (REAR), REMOVAL, Glass Lid.>
5) Remove the installation bolts (A) on rear side frame bracket of frame assembly.



6) Remove the drain tube from frame assembly.
7) Remove the frame bracket (A).

8) Remove the bolts (B) and nuts (C), and then remove the frame assembly.



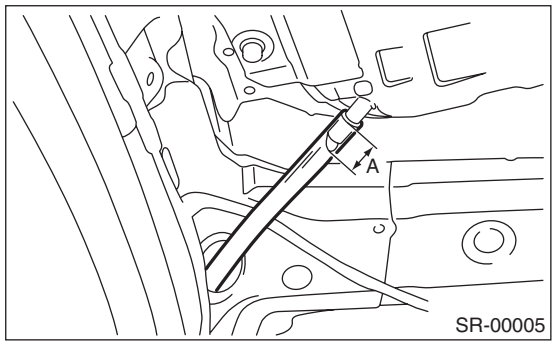
B: INSTALLATION

Install in the reverse order of removal.

CAUTION:
Be careful not to snag the harness.

NOTE:
• Be sure to connect the harness connector.
• When installing the drain tube, insert it securely into drain pipe.

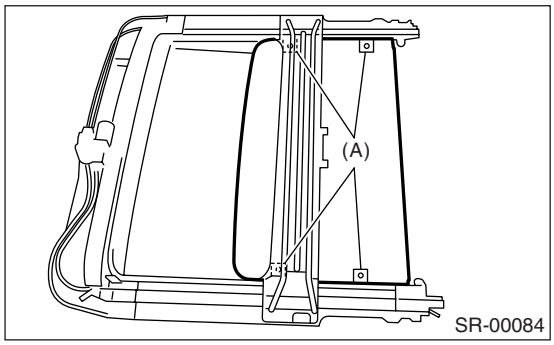
Length A:
15 mm (0.59 in) or more



C: DISASSEMBLY

1. SEDAN MODEL

1) Remove the glass lid.
2) Slide the sunshade to full front end.
3) Remove the screw from the slider bracket (A) of roof side.

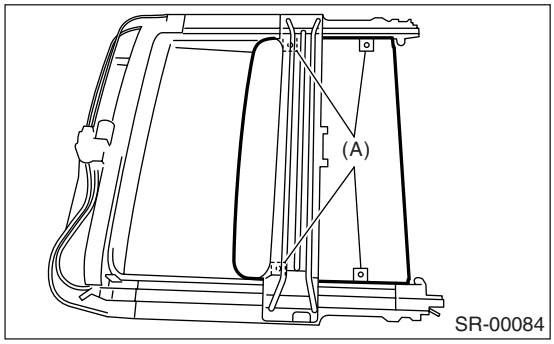


4) Pull out the sunshade from roof opening.

NOTE:
For sedan model, sunshade can be removed/installed with frame assembly installed to the vehicle.

2. WAGON MODEL (FRONT)

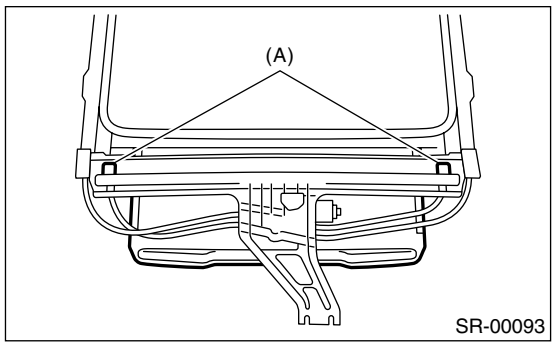
1) Remove the frame assembly. <Ref. to SR-9, REMOVAL, Sunroof Assembly.>
2) Slide the sunshade to fully open position, and then remove the screw from slider bracket (A).



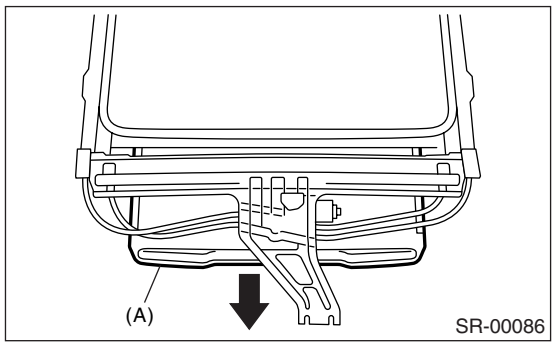
3) Pull out the sunshade to backward.

3. WAGON MODEL (REAR)

1) Remove the frame assembly.
2) Remove the shade stopper (A) of sunshade.



3) Pull out the sunshade (A) from sunroof frame.



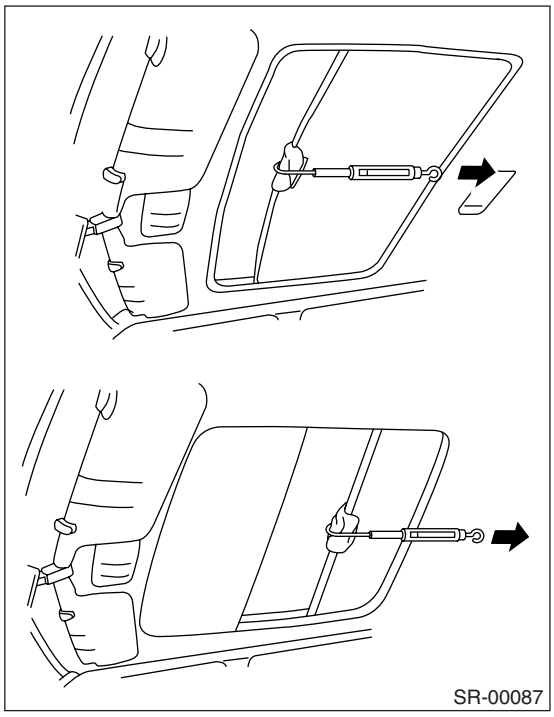
D: ASSEMBLY

Assemble in the reverse order of disassembly.

E: INSPECTION

1. CHECK FOR MOVING LOAD OF SUNSHADE

1) Attach a spring balance to sunshade edge using a cloth.



2) Pull the spring balance to measure moving load of the sunshade.

Moving load of sunshade:
Standard value
18.0±5.0 N (1.8±0.5 kgf, 13±3.7 lb)

NOTE:
Moving load is larger at the beginning of pulling a spring balance, so take a spring balance reading while sunshade sliding smoothly.

3) If moving load exceeds specifications, check the glass lid, sunshade and frame assembly for improper installation.

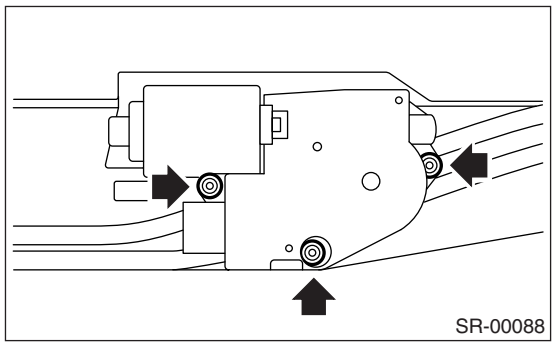
5. Sunroof Motor

A: REMOVAL

CAUTION:
• When removing the clip, use great care not to damage the roof trim.
• Never rotate the sunroof motor after removing it.

1. SEDAN MODEL

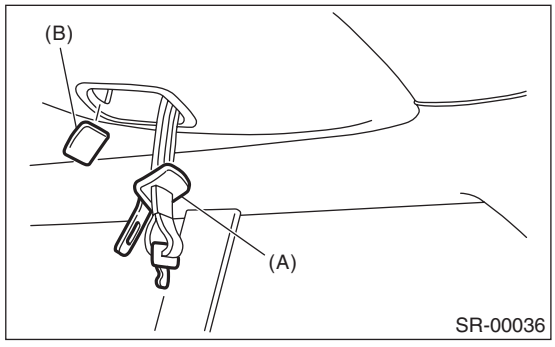
1) Completely close the glass lid.
2) Disconnect the ground cable from battery.
3) Remove the roof trim. <Ref. to EI-67, SEDAN MODEL, REMOVAL, Roof Trim.>
4) Disconnect the harness connector, and then remove the motor assembly mounting screw.



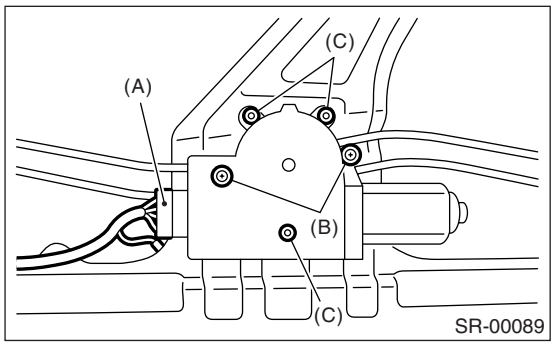
CAUTION:
When removing the motor assembly, secure the cable wires to prevent moves.

2. WAGON MODEL

1) Fully close the glass lid (front) and glass lid (rear).
2) Disconnect the ground cable from battery.
3) Remove the luggage room light. <Ref. to LI-36, REMOVAL, Luggage Room Light.>
4) Remove the roof trim. <Ref. to EI-67, WAGON MODEL, REMOVAL, Roof Trim.>
5) Pass the seat belt tongue (A) located on center of rear seat through the hole, and then pull it out to the opposite side of trim.



6) Remove the clips, and then drop the rear end of roof trim.
7) Disconnect the harness connector (A), and then remove the motor assembly mounting bolt (B) and nuts (C).

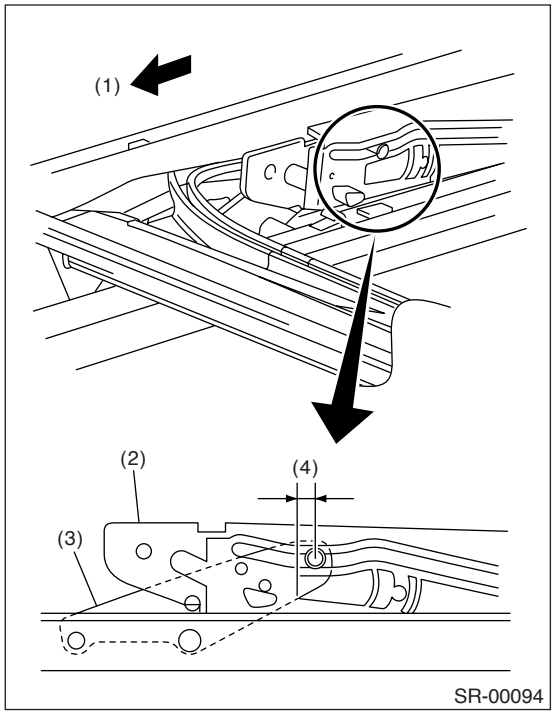


B: INSTALLATION

CAUTION:
When installing the motor assembly, be careful not to move the sunroof cable.

1. SEDAN MODEL

1) Align the coulisse assembly and link assembly in the same position.



(1) Front
(2) Coulisse ASSY
(3) Link ASSY
(4) 4.7 mm (0.185 in)

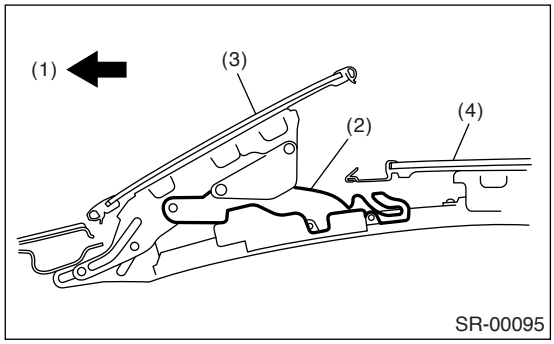
2) Install the motor assembly.
3) Connect the harness connector of motor assembly, and then connect the battery ground cable to battery.
4) Perform the initialize operation of motor.
   (1) Tilt up the glass lid.
   (2) Release the switch once, and press the tilt up switch again for 15 seconds.
   (3) When the glass lid is raised a little and on tilt up position, release the switch for the moment.
   (4) Keep pressing the tilt up switch within 5 seconds from releasing the switch, glass lid tilts down → slides open → slides close operation automatically, and then initialize operation is completed.
5) Check the operation of sunroof with following table.

Operation	Switch position
(1) Glass lid closes completely.	Close
(2) Glass lid tilt up to the top position.	Tilt up
(3) Glass lid lowers completely.	Tilt down
(4) Glass lid opens completely.	Open
(5) Glass lid closes 150 mm (5.91 in) away from completely closed position.	Close
(6) Glass lid closes completely.	Close

6) Install the trim in the reverse order of removal.

2. WAGON MODEL

Check that the wedge of glass lid (front) bracket part is contacting in the direction of vehicle front.
At this time, the lid is at fully open position.



(1) Front
(2) Wedge
(3) Glass lid (Front)
(4) Glass lid (Rear)

1) Install the motor assembly.
2) After the installation of motor assembly, check again that the wedge of glass lid (front) bracket part is contacting in the direction of vehicle front.
3) Connect the harness connector of motor assembly, and then connect the battery ground cable to battery.
4) Perform the initialize operation of motor.
• When replacing the motor with a new one, fully close the glass once and perform the initialization of position, because the movement of glass lid shifts to brink operation.
• When reusing the motor, operate the auto-reverse function five times in a row to shifts brink operation, and then perform the initialization of position.
5) Check the operation of sunroof with following table.

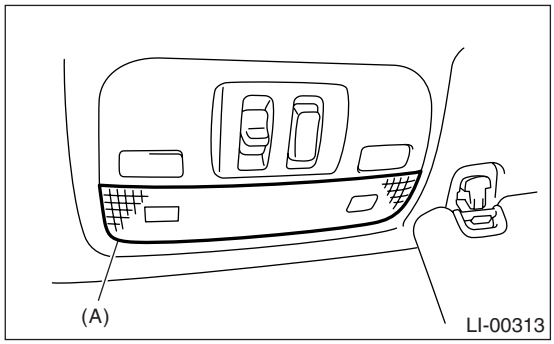
Operation	Switch position
(1) Glass lid (front) and glass lid (rear) closes completely.	Close
(2) Glass lid (front) tilt up to the ventilating position.	Open
(3) Glass lid (front) tilts up to top position, and glass lid (rear) opens near the completely open position.	Open
(4) Glass lid (rear) opens completely.	Open
(5) Glass lid (rear) closes on 150 mm (5.91 in) from rear end of tilted up glass lid (front).	Close
(6) Glass lid (rear) closes completely.	Close
(7) Glass lid (front) lowers, and then glass lid (front) and glass lid (rear) closes completely.	Close

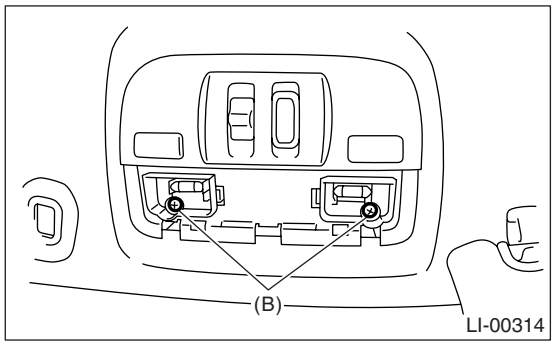
6) Install the trim in the reverse order of removal.

6. Sunroof Switch

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the spot map light lens (A) and sunroof switch mounting screws (B).





3) Disconnect the harness connector, and then remove the sunroof switch.

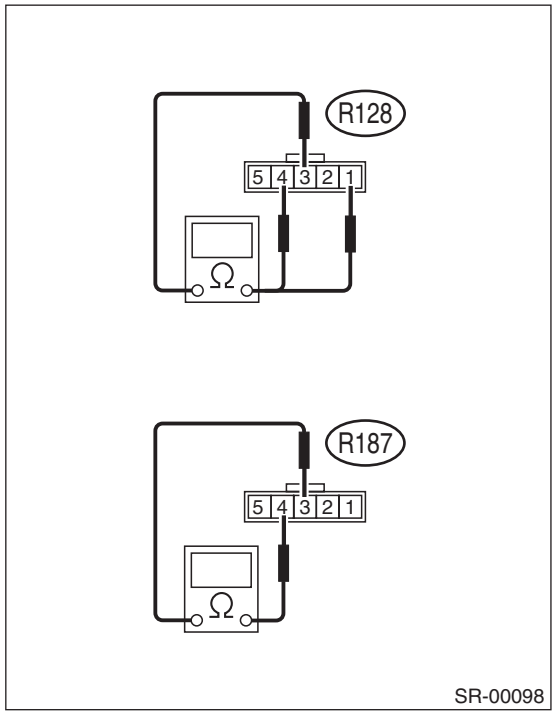
B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

1. SEDAN MODEL

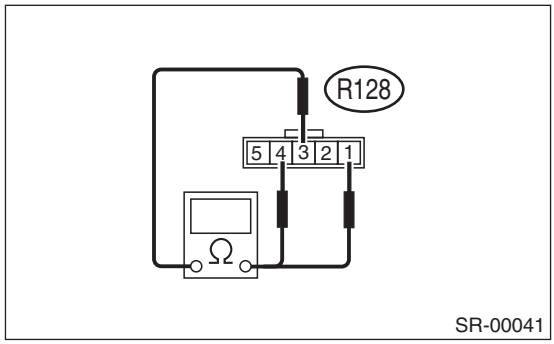
Measure the sunroof switch resistance.



Switch position	Terminal No.	Standard	Connector No.
Open	1 and 3	Less than 1 Ω	R128
Close	3 and 4	Less than 1 Ω	
Tilt up	4 and 3	Less than 1 Ω	R187
Tilt down	3 and 4	Less than 1 Ω	

2. WAGON MODEL

Measure the sunroof switch resistance.



Switch position	Terminal No.	Standard
Open	1 and 3	Less than 1 Ω
Close	3 and 4	Less than 1 Ω

NOTE:
If glass lid does not operate or is not supplied with power, move the glass lid using the emergency handle. <Ref. to SR-7, FORCED DRIVE, Glass Lid.>

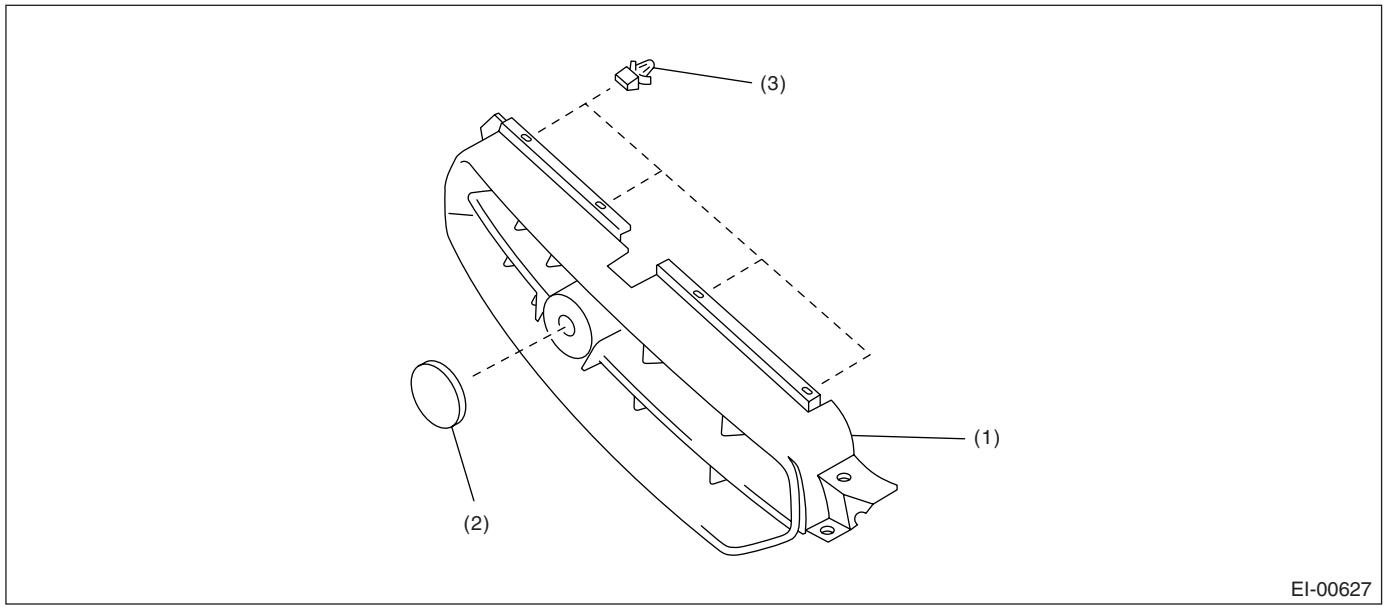
1. General Description

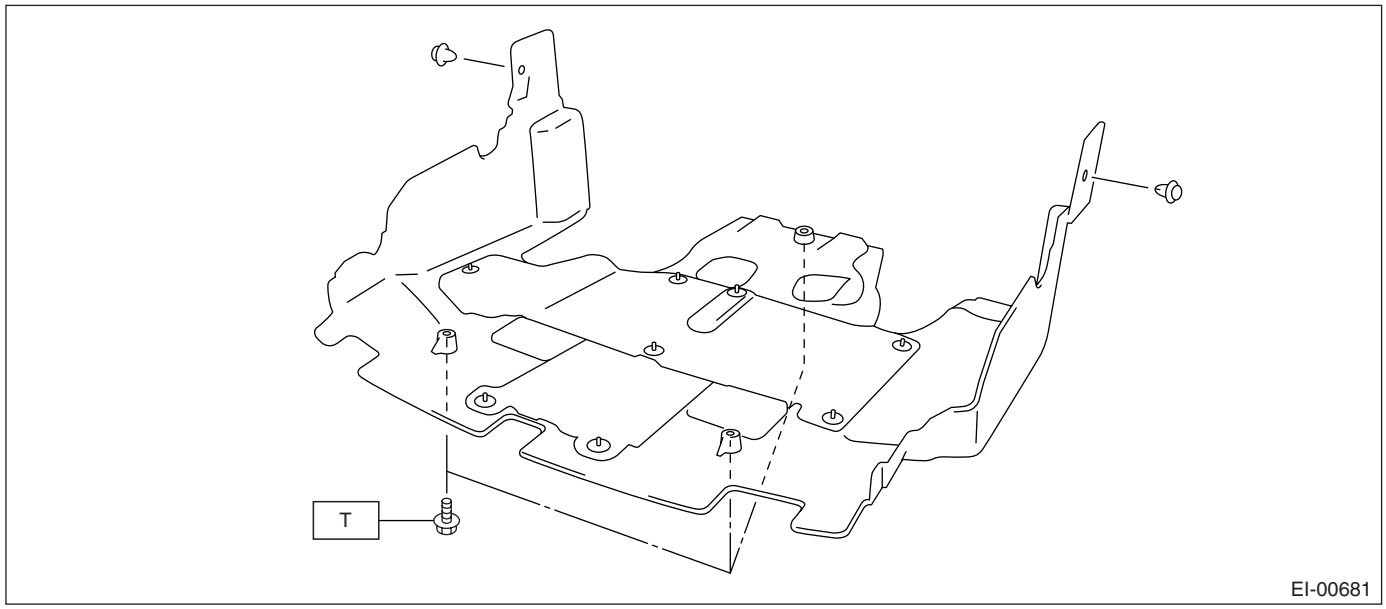
A: COMPONENT

1. FRONT GRILLE



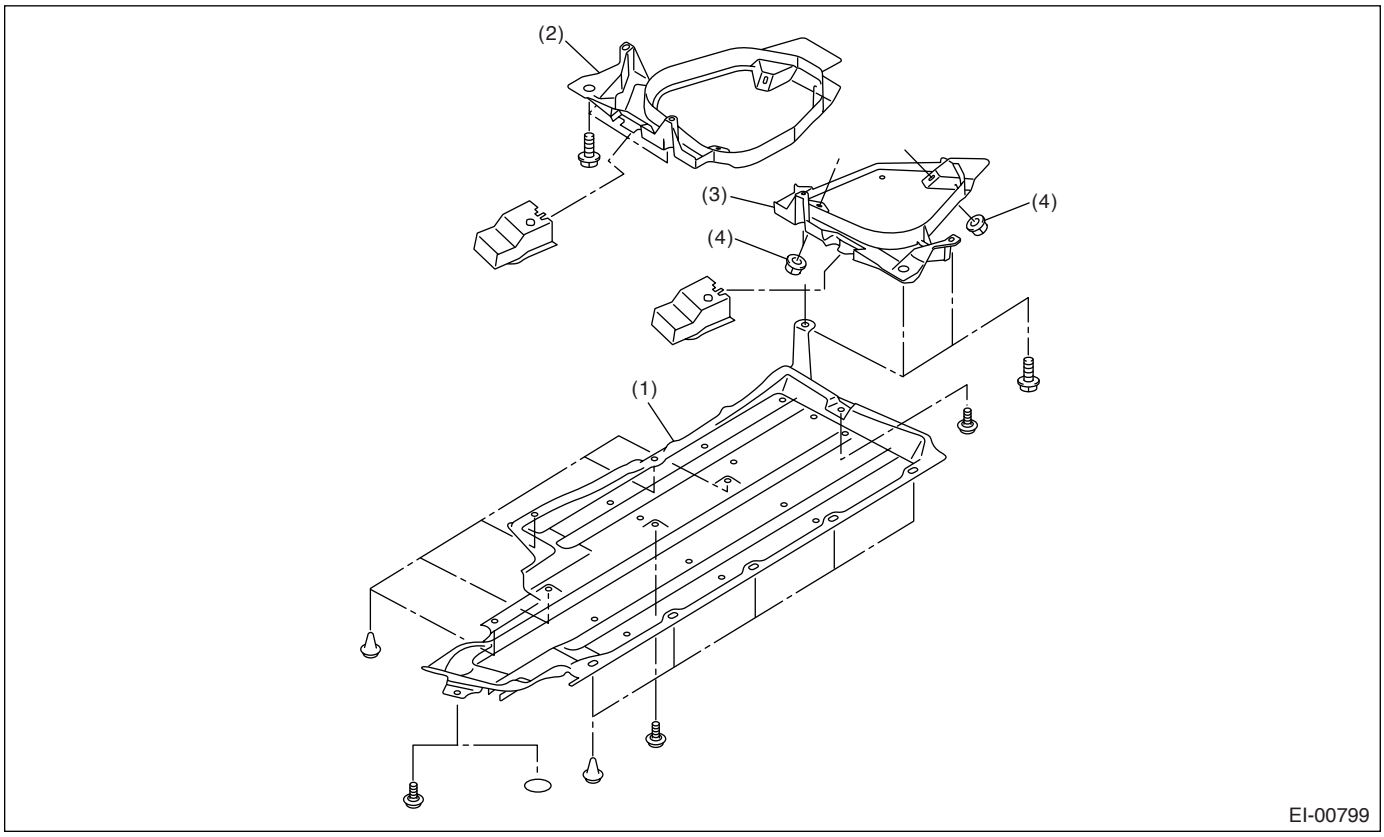
(1) Front grille
(2) Front grille emblem
(3) Front grille clip

2. UNDER COVER



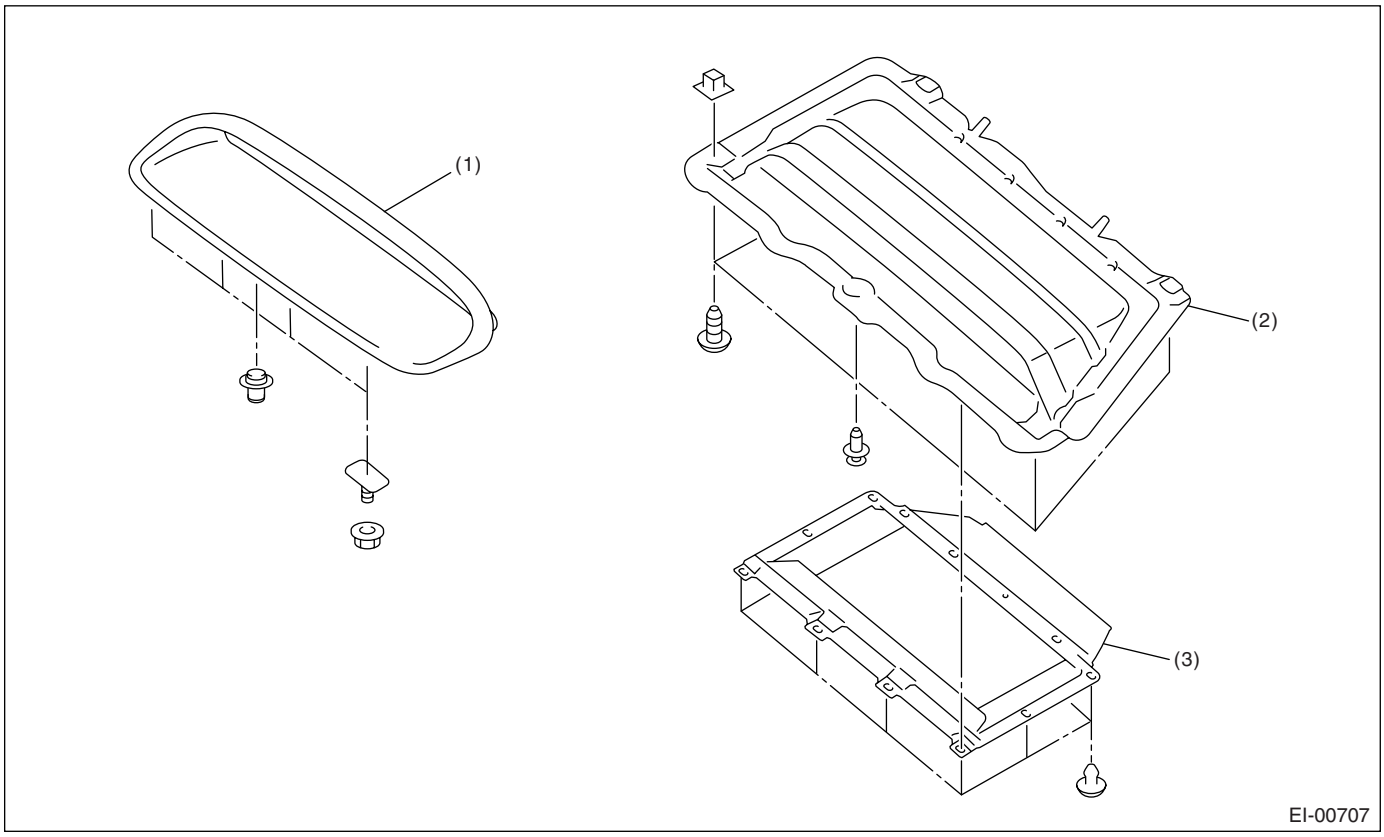
Tightening torque: N·m (kgf-m, ft-lb)
T: 14 (1.42, 10.3)

3. UNDER PROTECTOR



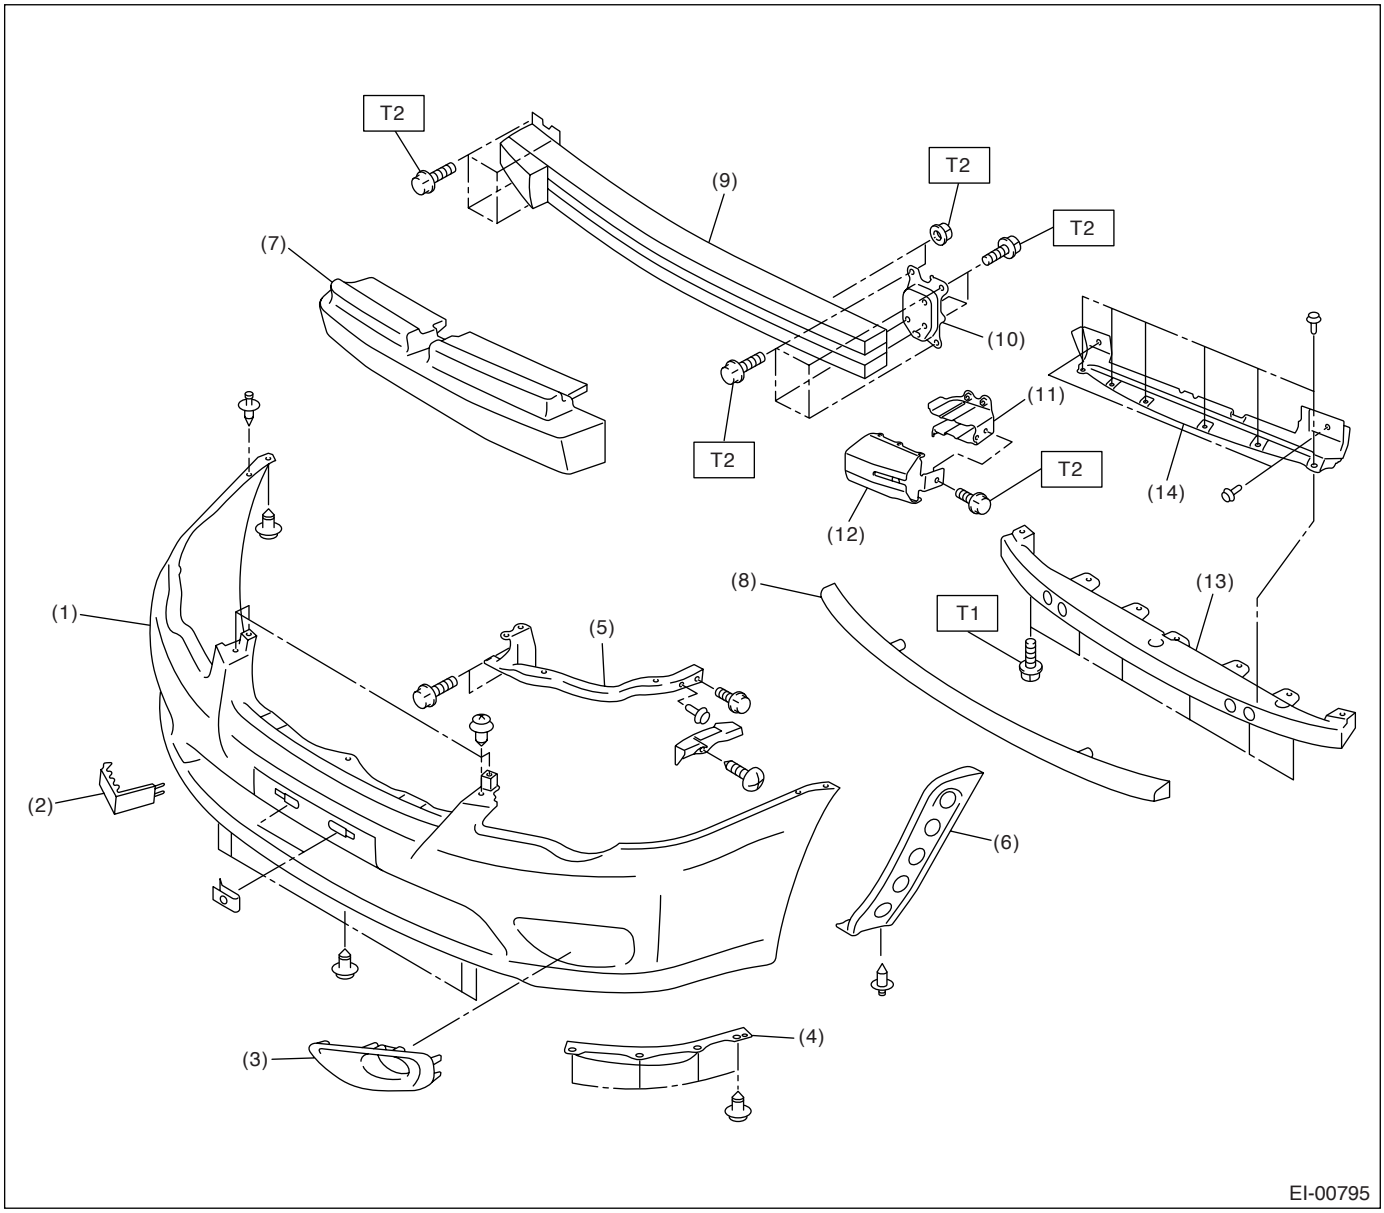
(1) Floor under protector
(2) Fuel tank protector RH
(3) Fuel tank protector LH
(4) Plastic nut

4. FRONT HOOD GRILLE



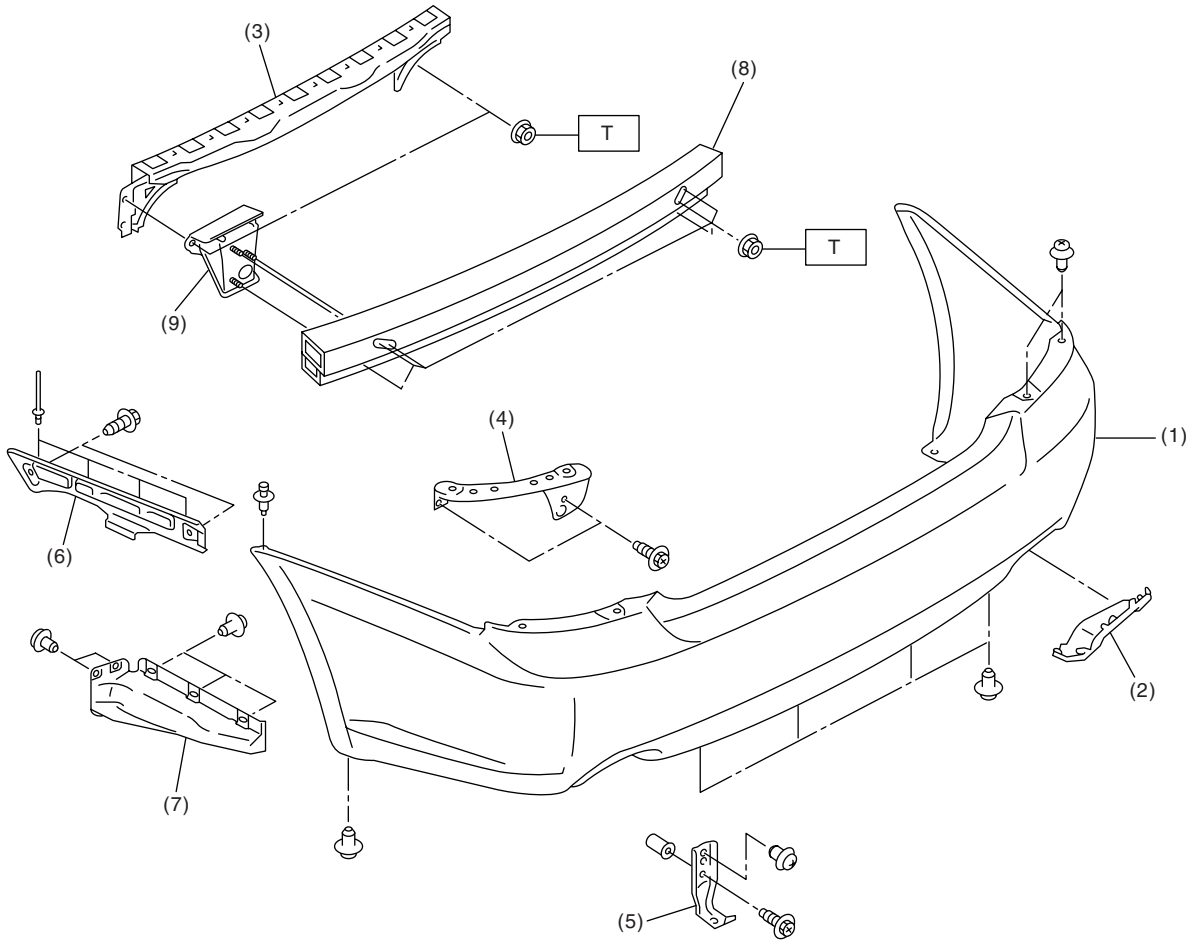
(1) Front hood grille
(2) Grille duct upper
(3) Grille duct lower

5. FRONT BUMPER



(1)	Bumper face	(7)	Energy absorber foam upper	(13)	Lower center bracket
(2)	Towing hook cover	(8)	Energy absorber foam lower	(14)	Radiator guide
(3)	Fog light cover	(9)	Main beam reinforcement		
(4)	Lower side bracket	(10)	Main beam bracket	***Tightening torque: N·m (kgf-m, ft-lb)***	
(5)	Upper bracket	(11)	Bracket support	***T1:***	***7.5 (0.77, 5.5)***
(6)	Side bracket	(12)	Energy absorber side	***T2:***	***33 (3.4, 24)***

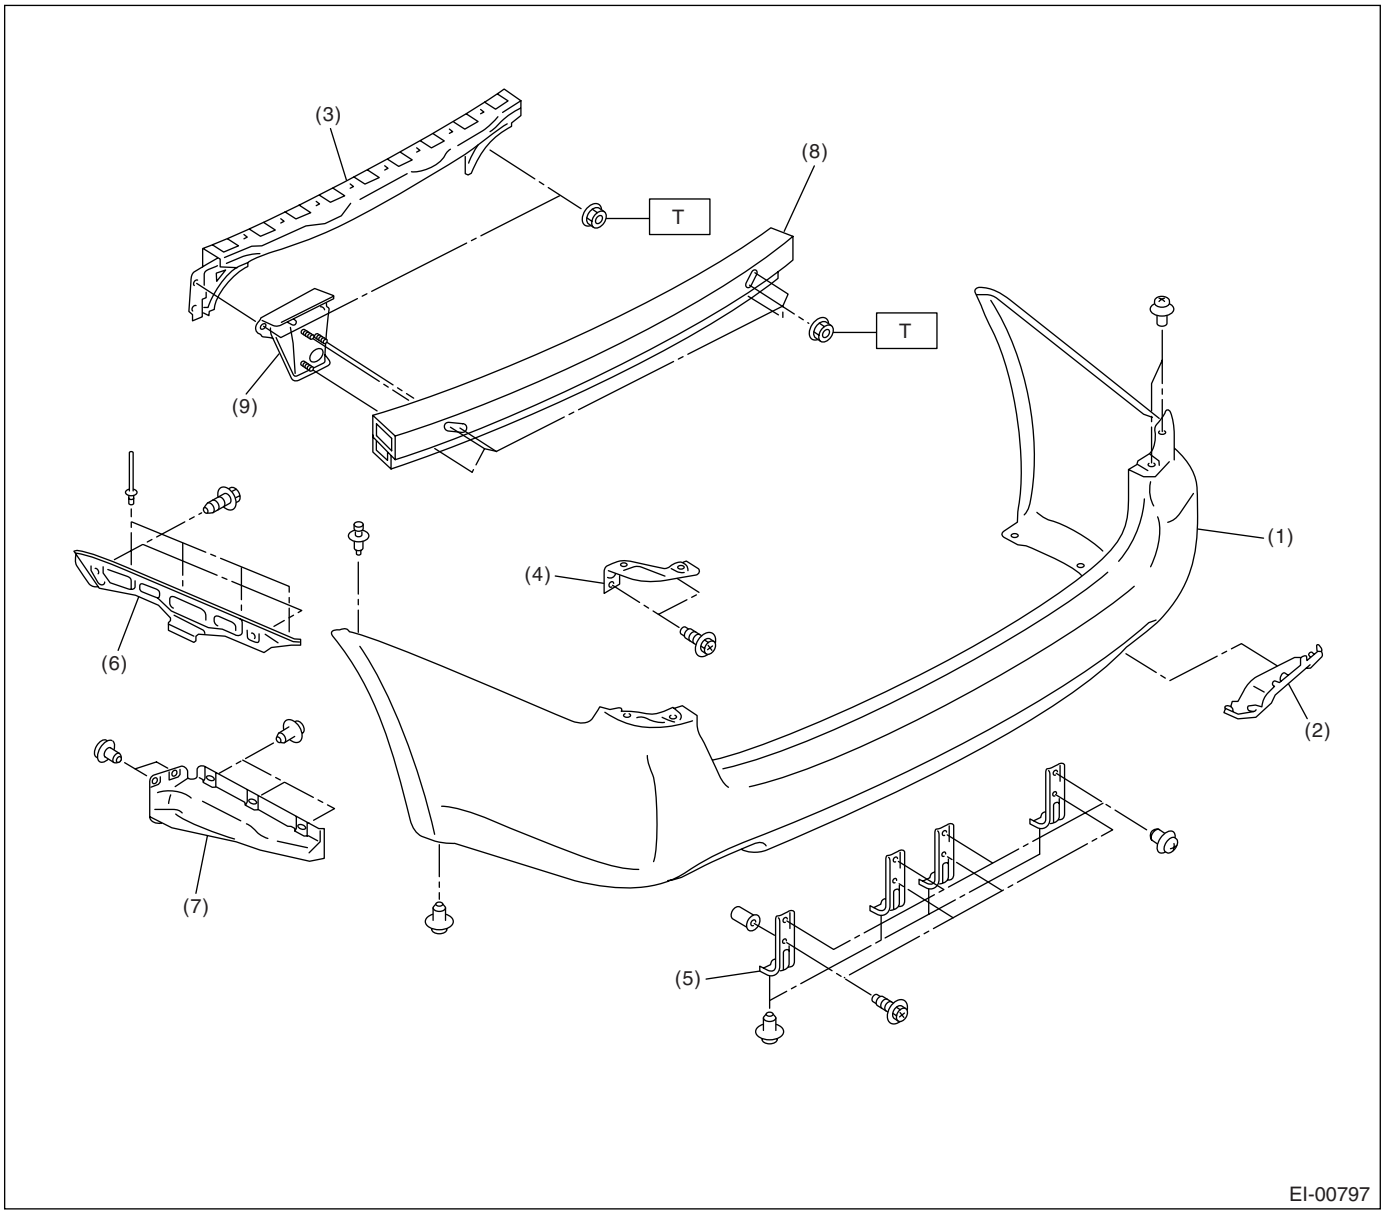
6. REAR BUMPER (SEDAN MODEL)



(1) Bumper face
(2) Exhaust end cover
(3) Beam upper rear
(4) Bracket corner
(5) Lower bracket
(6) Bumper side support upper
(7) Bumper side support lower
(8) Beam main reinforcement
(9) Bumper beam bracket

Tightening torque: N·m (kgf-m, ft-lb)
T: 33 (3.4, 24)

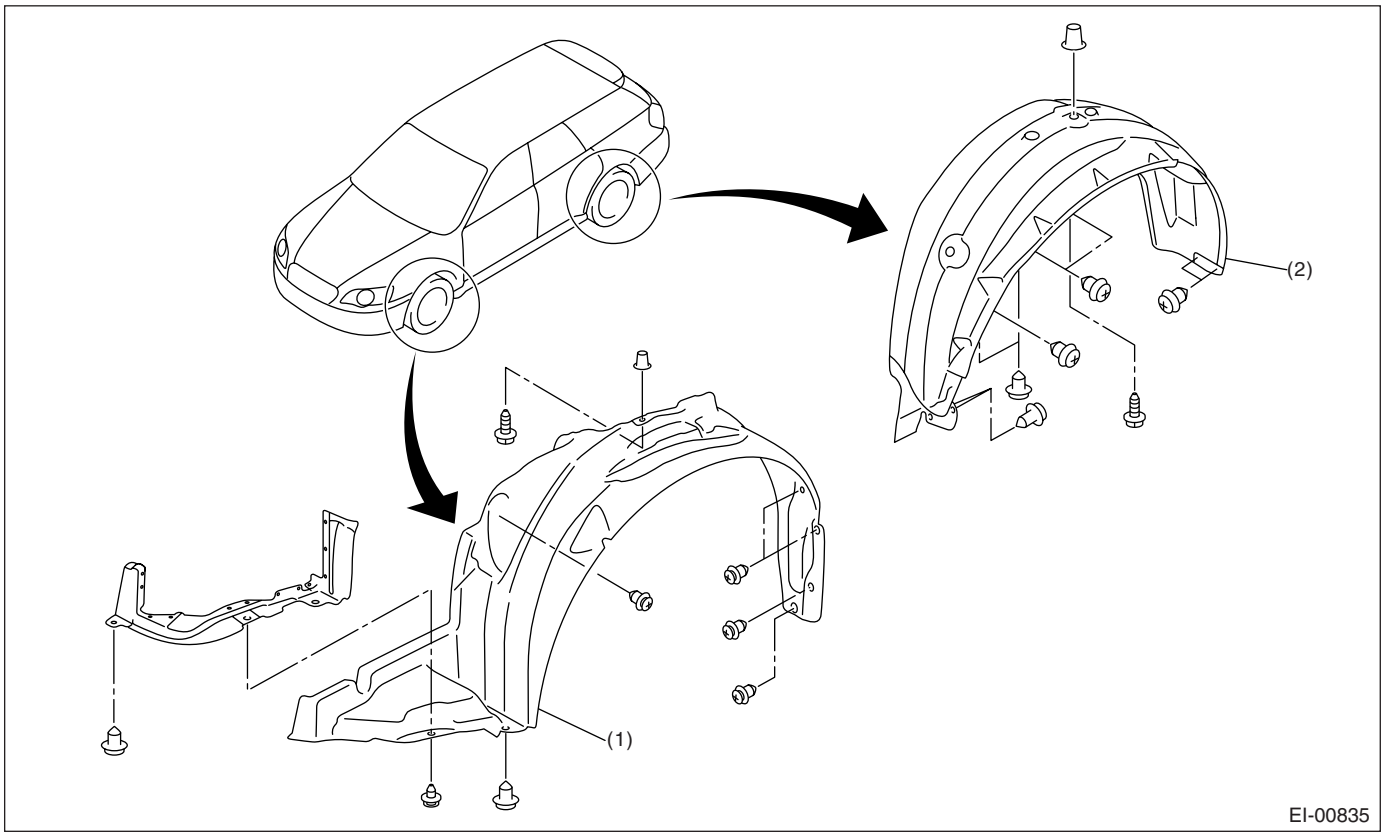
7. REAR BUMPER (WAGON MODEL)



(1) Bumper face
(2) Exhaust end cover
(3) Beam upper rear
(4) Bracket corner
(5) Lower bracket
(6) Bumper side support upper
(7) Bumper side support lower
(8) Beam main reinforcement
(9) Bumper beam bracket

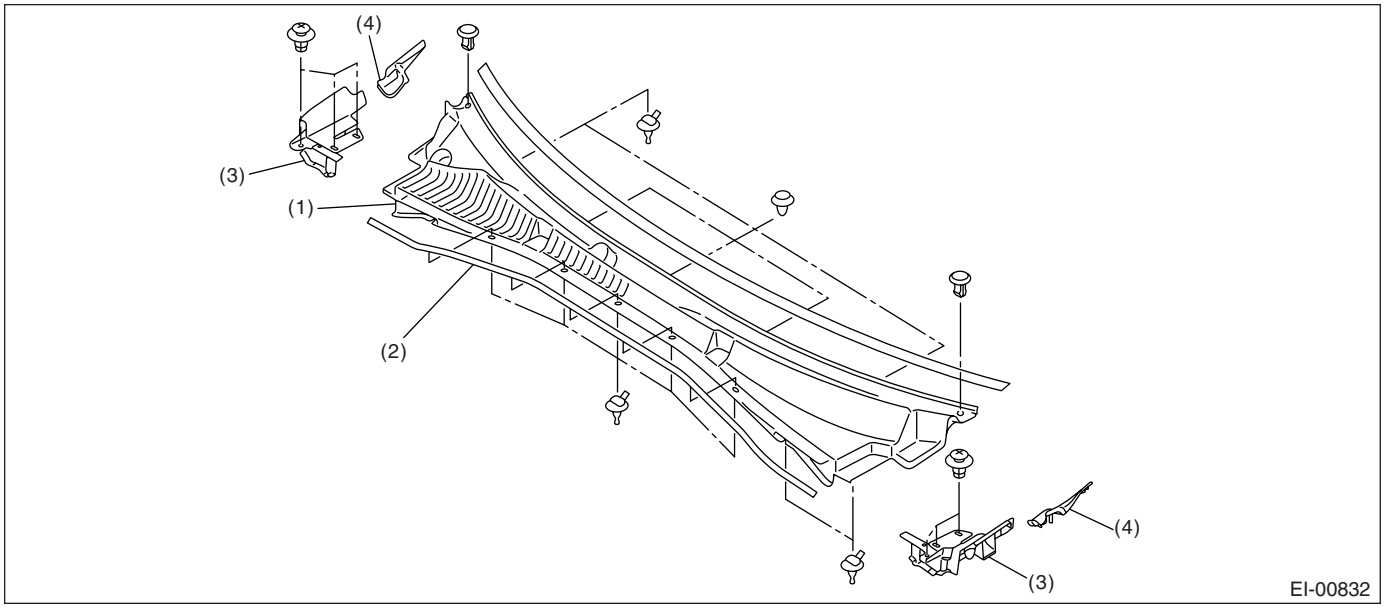
Tightening torque: N·m (kgf-m, ft-lb)
T: 33 (3.4, 24)

8. MUD GUARD



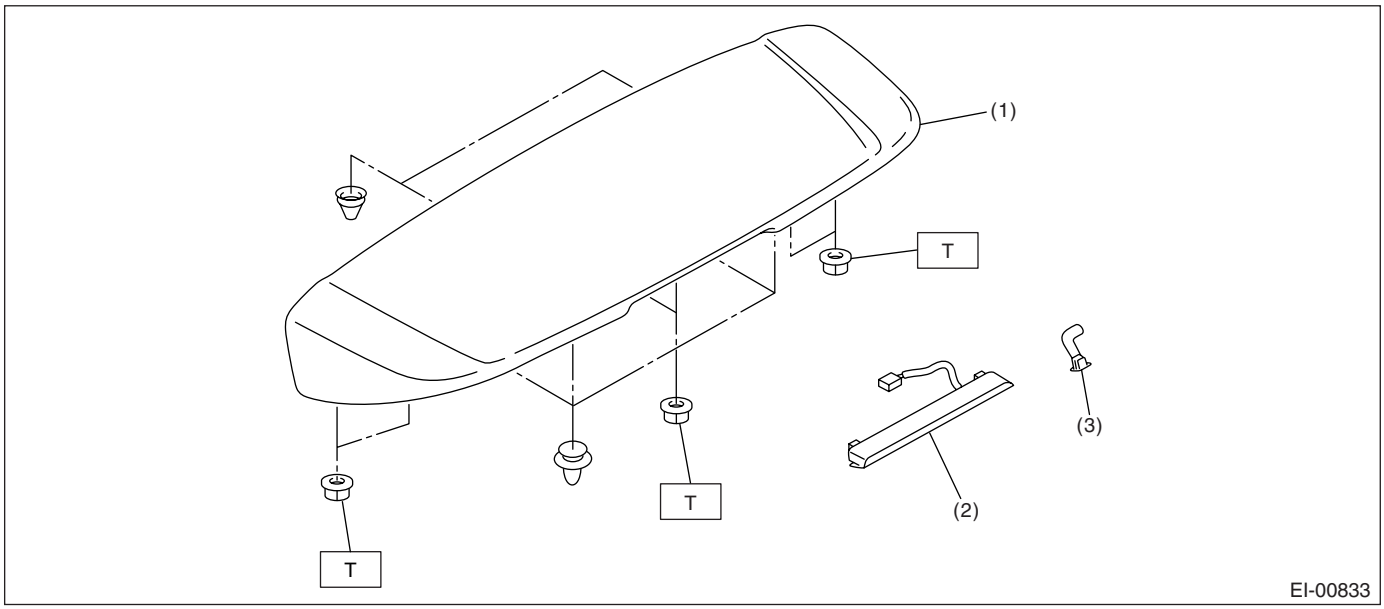
(1) Front mud guard
(2) Rear mud guard

9. COWL PANEL



(1) Cowl panel
(2) Weather strip
(3) Cover cowl panel
(4) Cowl side panel

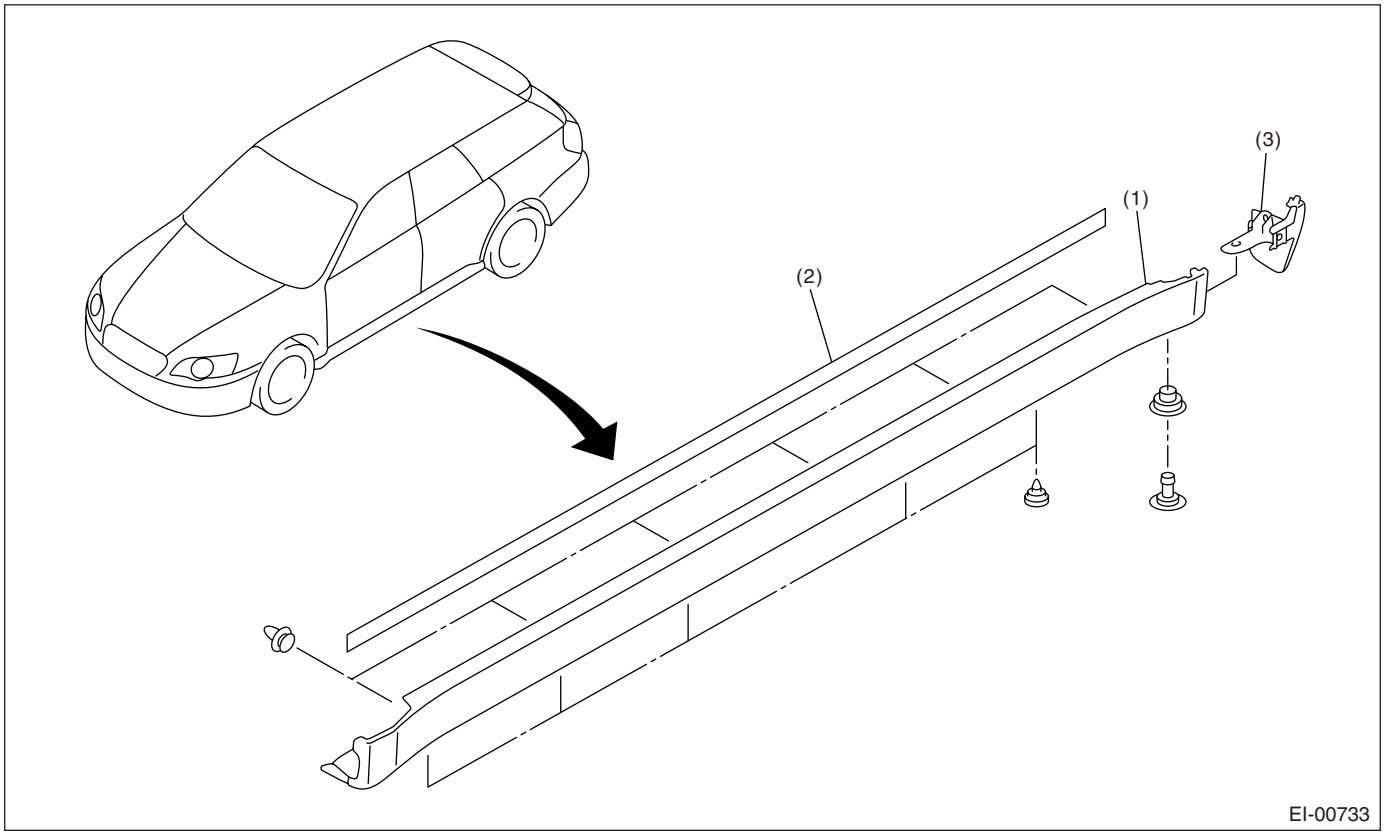
10.ROOF SPOILER



(1) Roof spoiler
(2) High-mounted stop light
(3) Washer nozzle

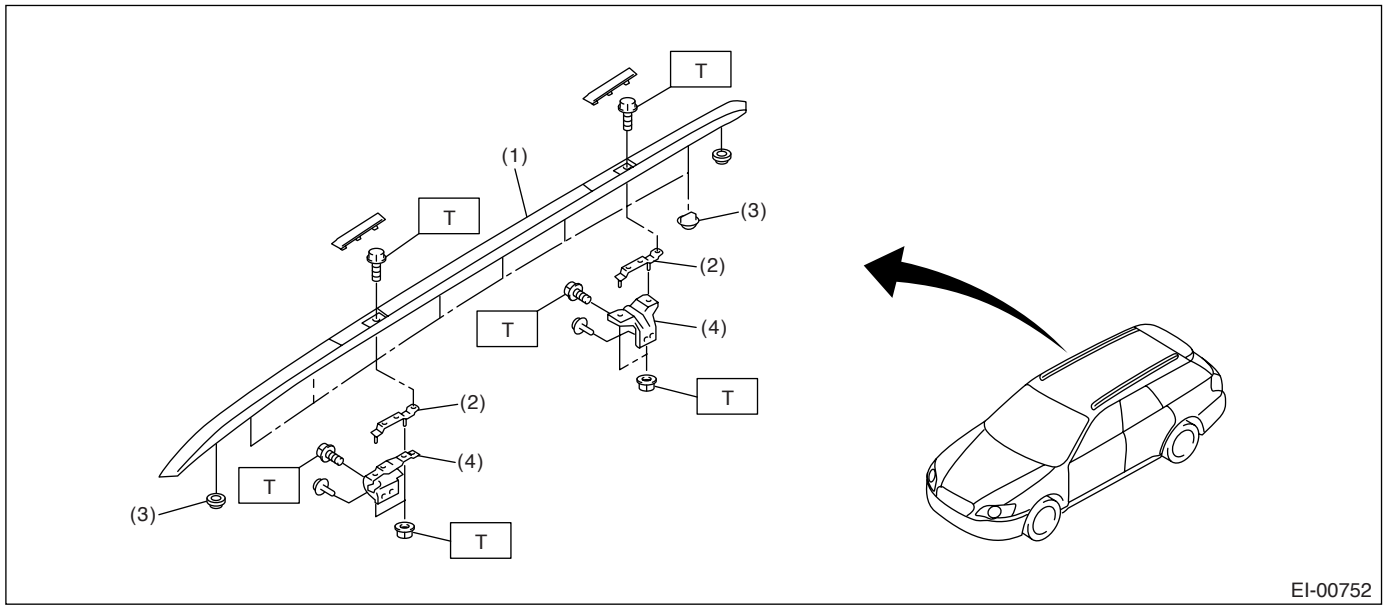
Tightening torque: N·m (kgf-m, ft-lb)
T: 4.5 (0.46, 3.32)

11.SIDE SILL SPOILER



(1) Side sill spoiler
(2) Double-sided tape
(3) Air flap side sill end

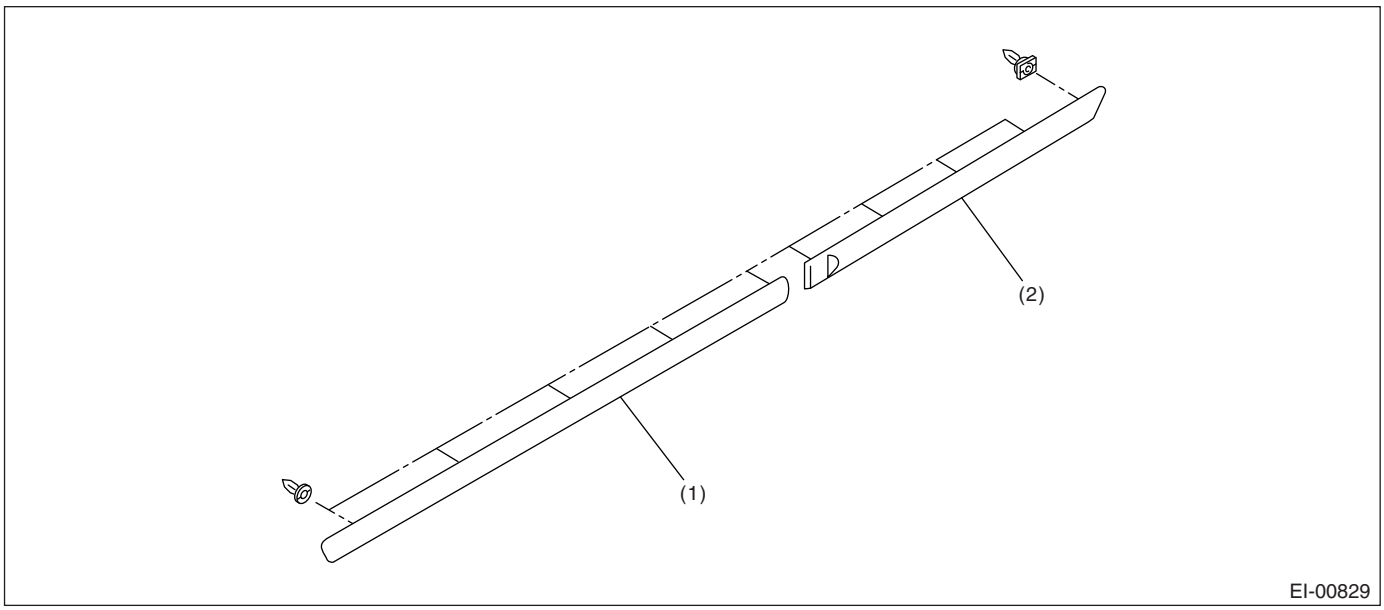
12.ROOF MOLDING



(1) Roof molding
(2) Roof carrier attachment
(3) Clip
(4) Roof carrier attachment bracket

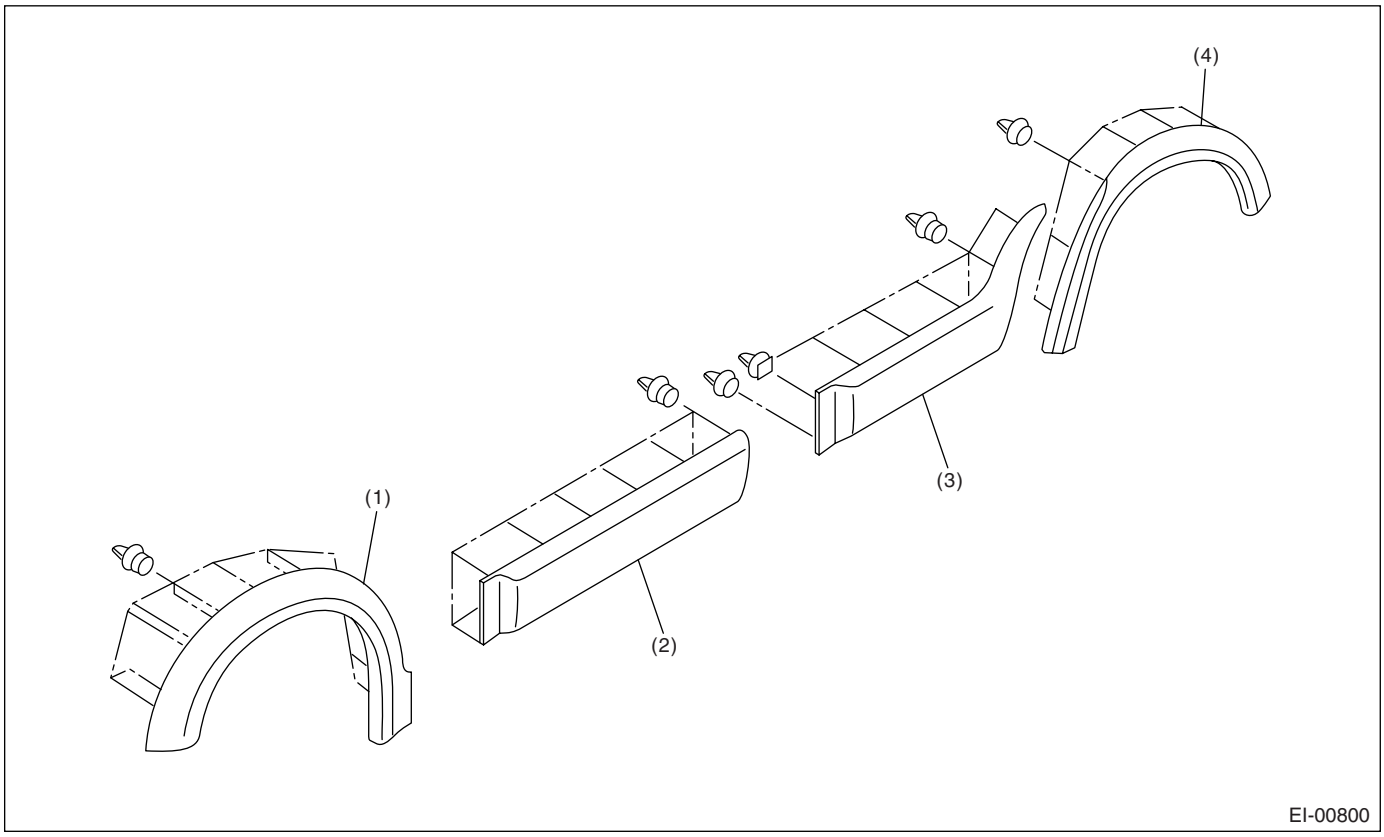
Tightening torque: N·m (kgf-m, ft-lb)
T: 4.5 (0.46, 3.32)

13.SIDE PROTECTOR



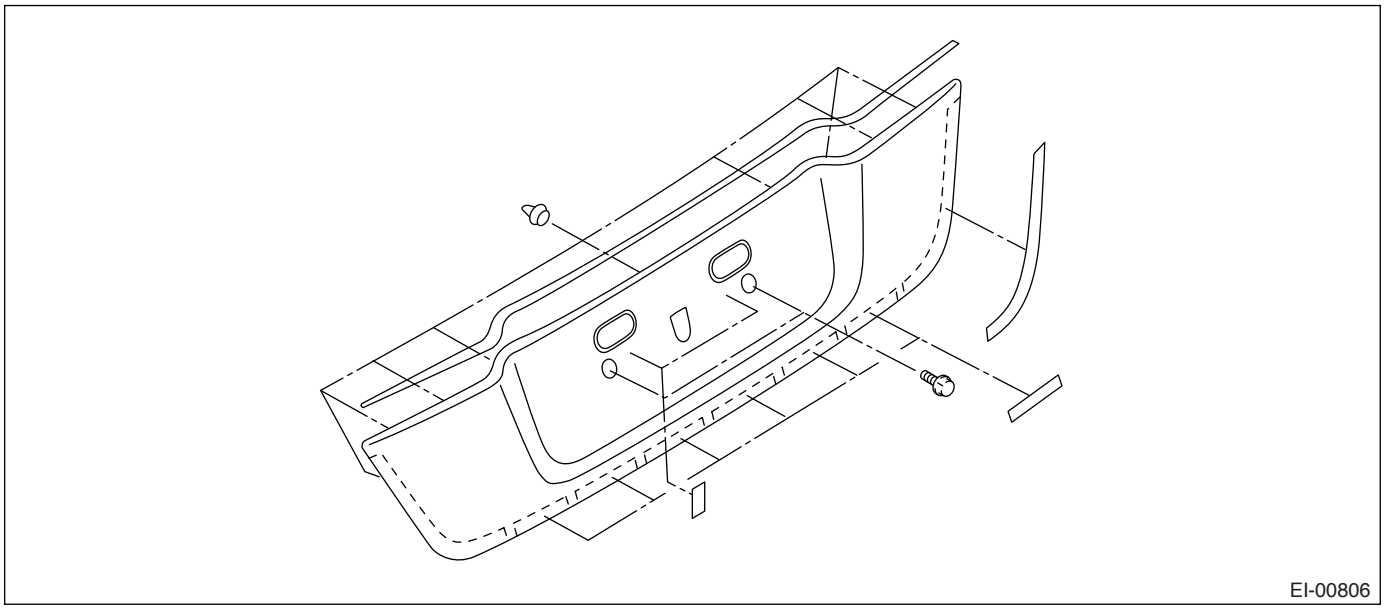
(1) Front door protector
(2) Rear door protector

14.SIDE GARNISH

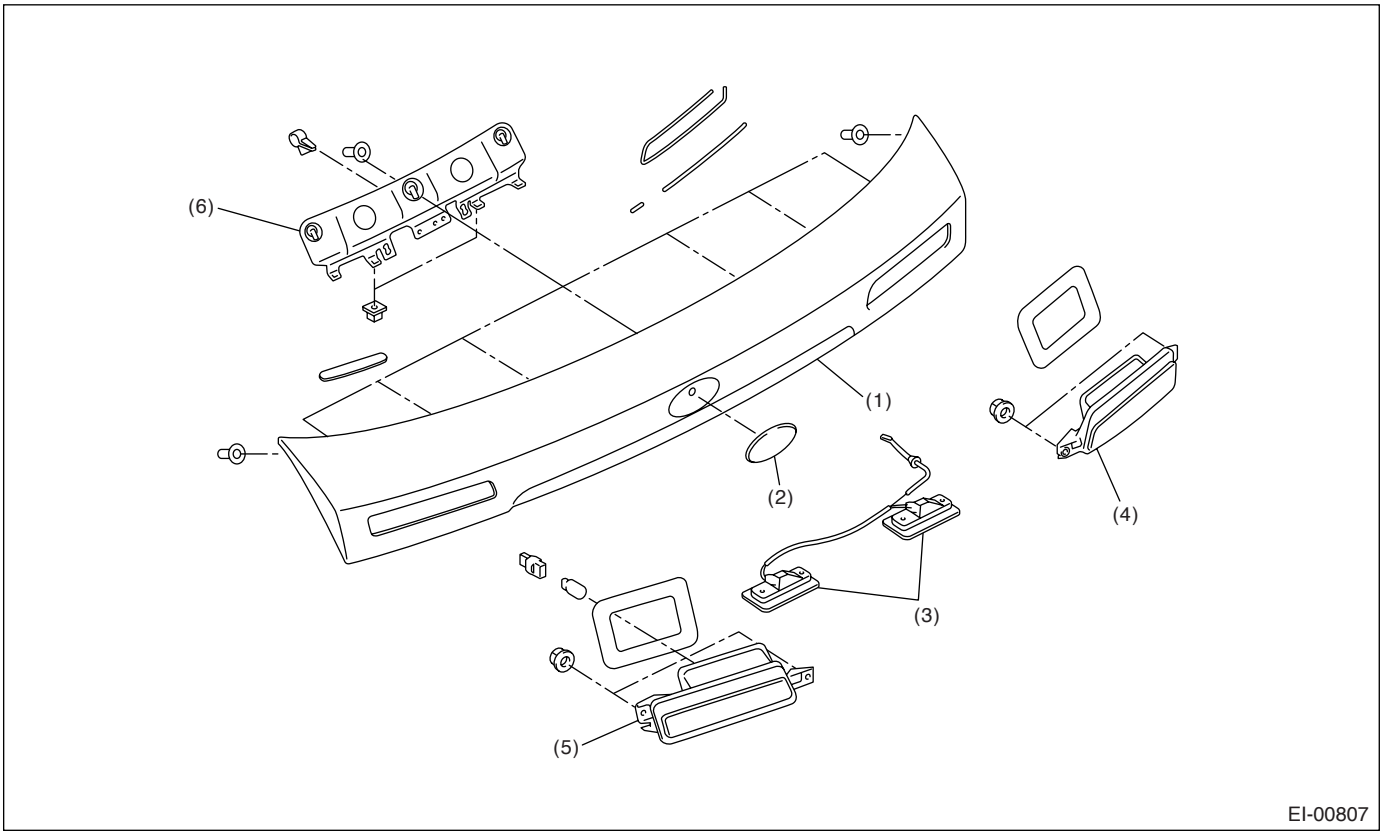


(1) Front fender garnish
(2) Front door garnish
(3) Rear door garnish
(4) Rear quarter garnish

15.TRUNK LID GARNISH

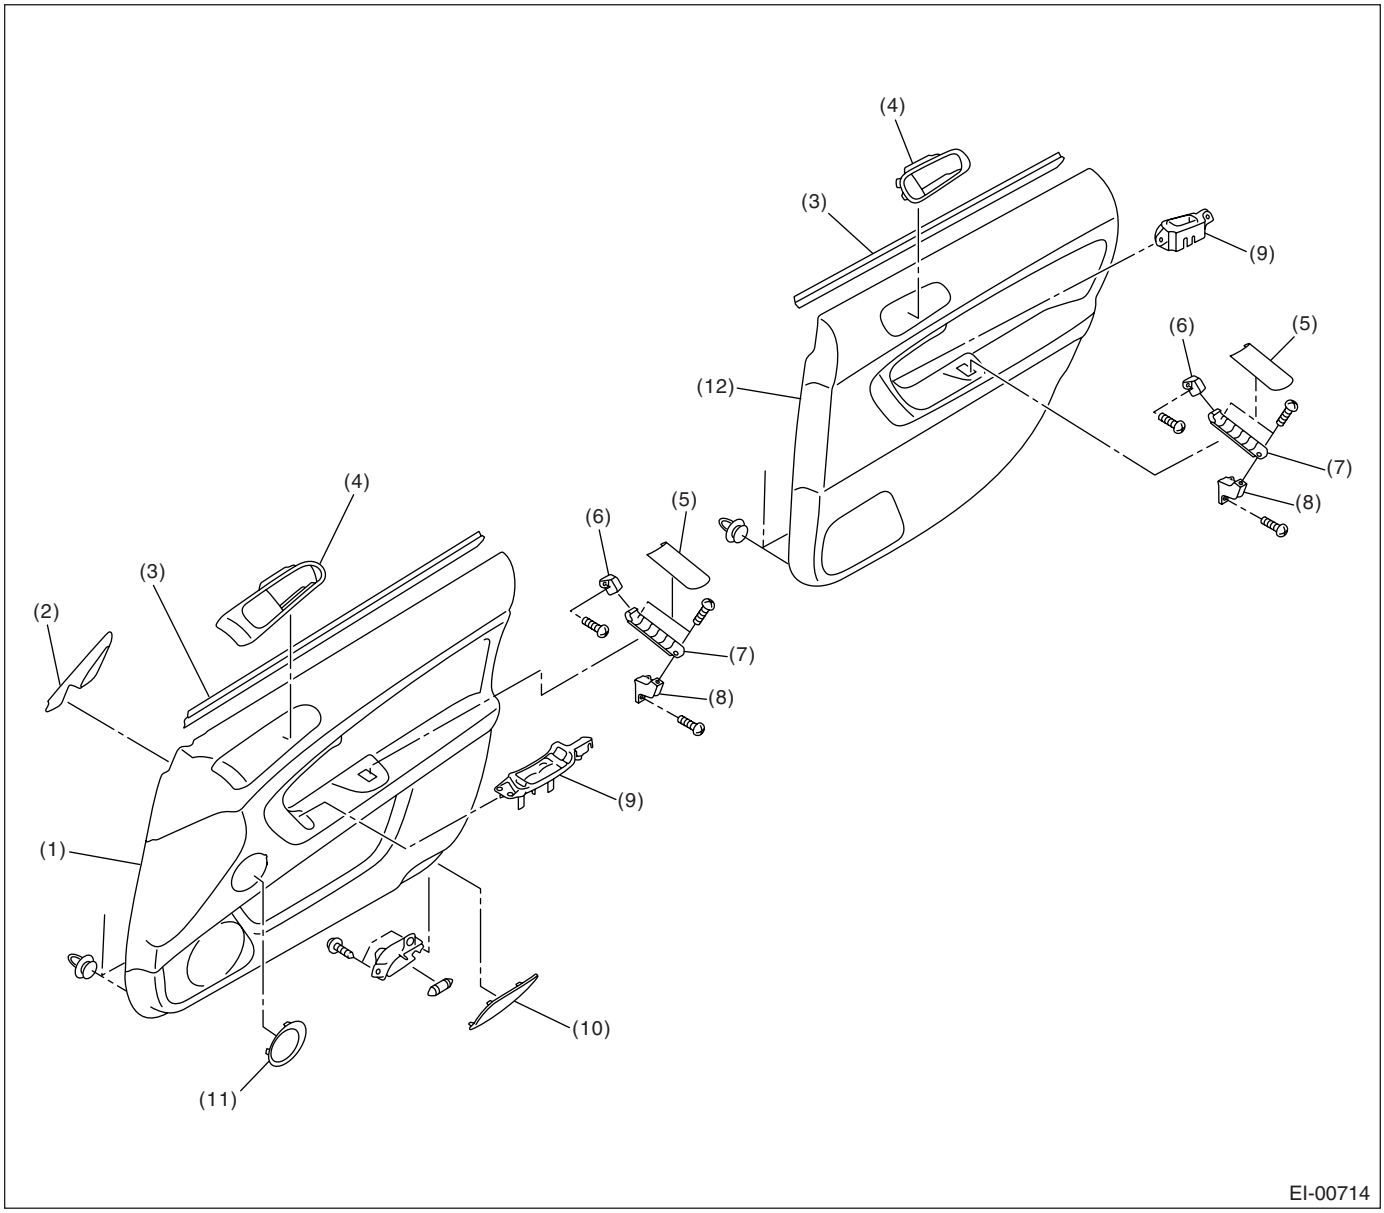


16.REAR GATE GARNISH



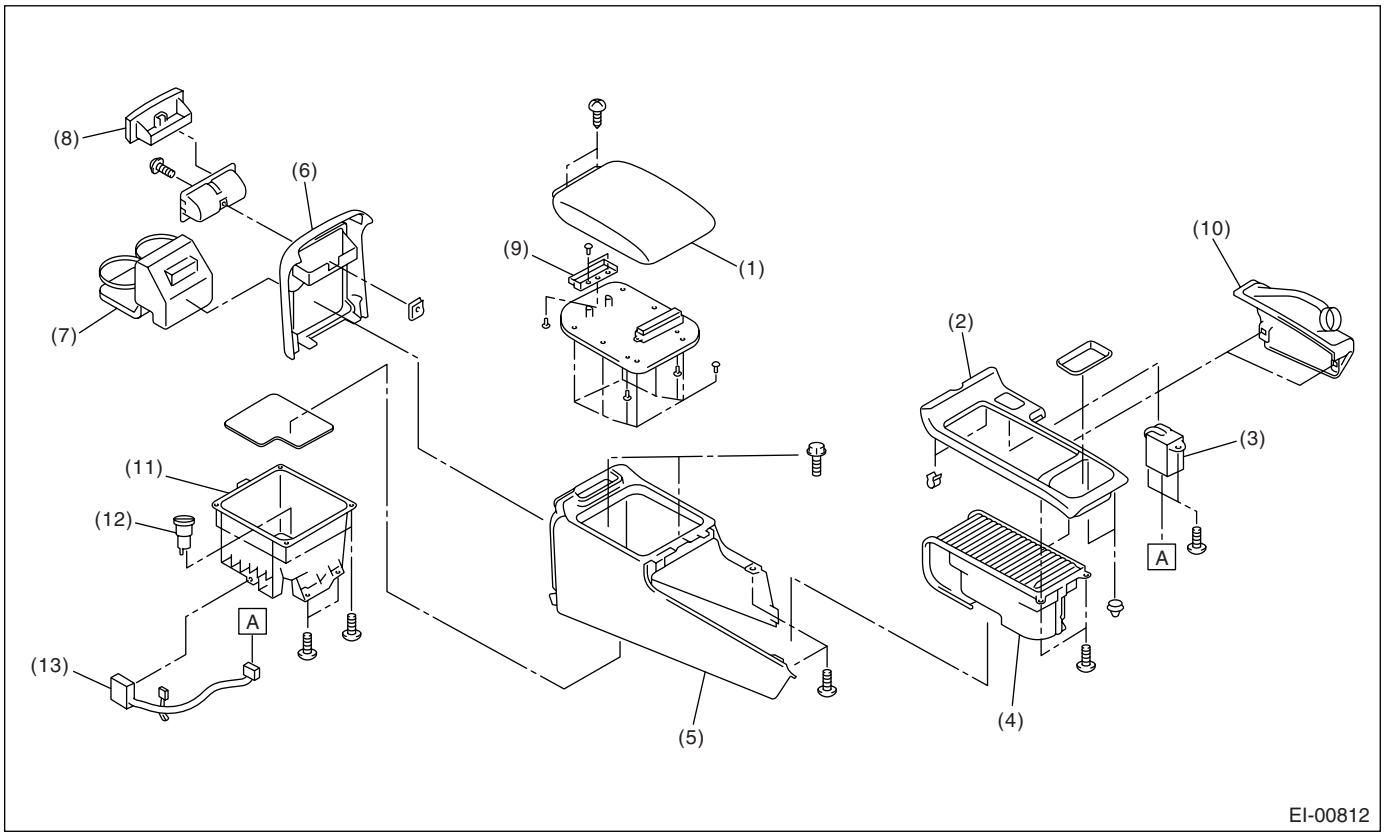
(1) Rear gate garnish
(2) Ornament
(3) License plate light
(4) Rear fog light or back-up light
(5) Back-up light or rear fog light
(6) License plate light bracket

17.DOOR TRIM



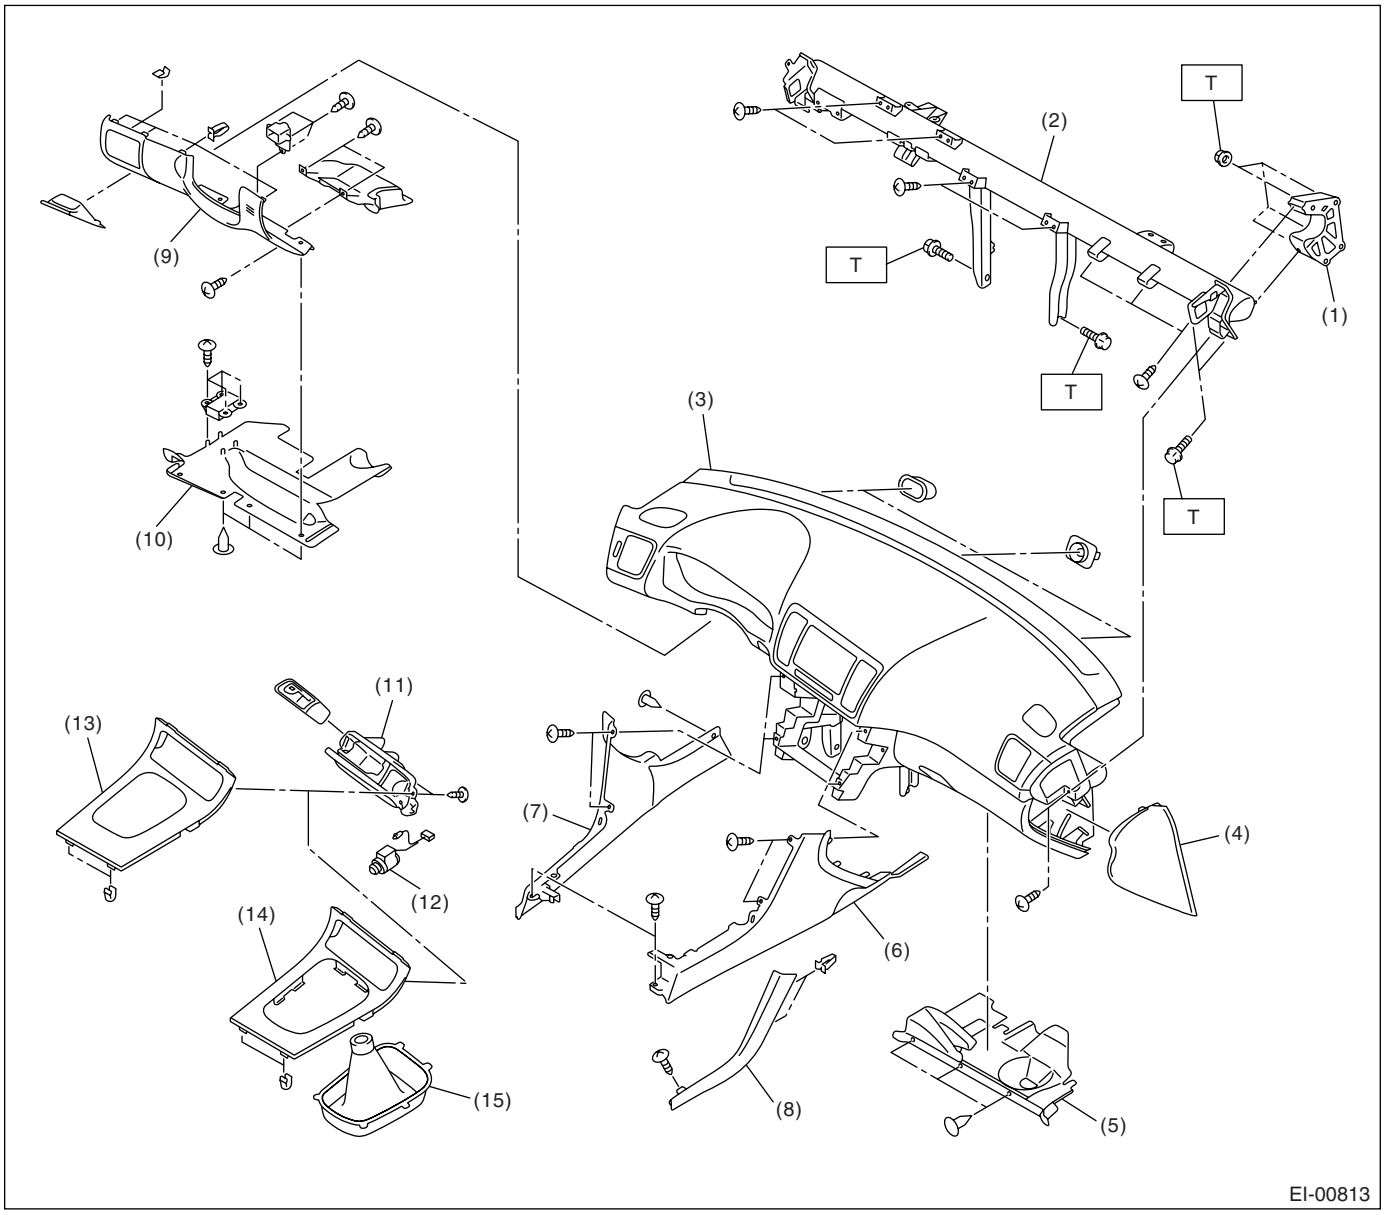
(1)	Front door trim	(5)	Door grip	(9)	Power window switch
(2)	Gusset cover	(6)	Door grip bracket upper	(10)	Step light cover
(3)	Upper weather strip	(7)	Door grip frame	(11)	Speaker cover
(4)	Inner remote cover	(8)	Door grip bracket lower	(12)	Rear door trim

18.CONSOLE BOX



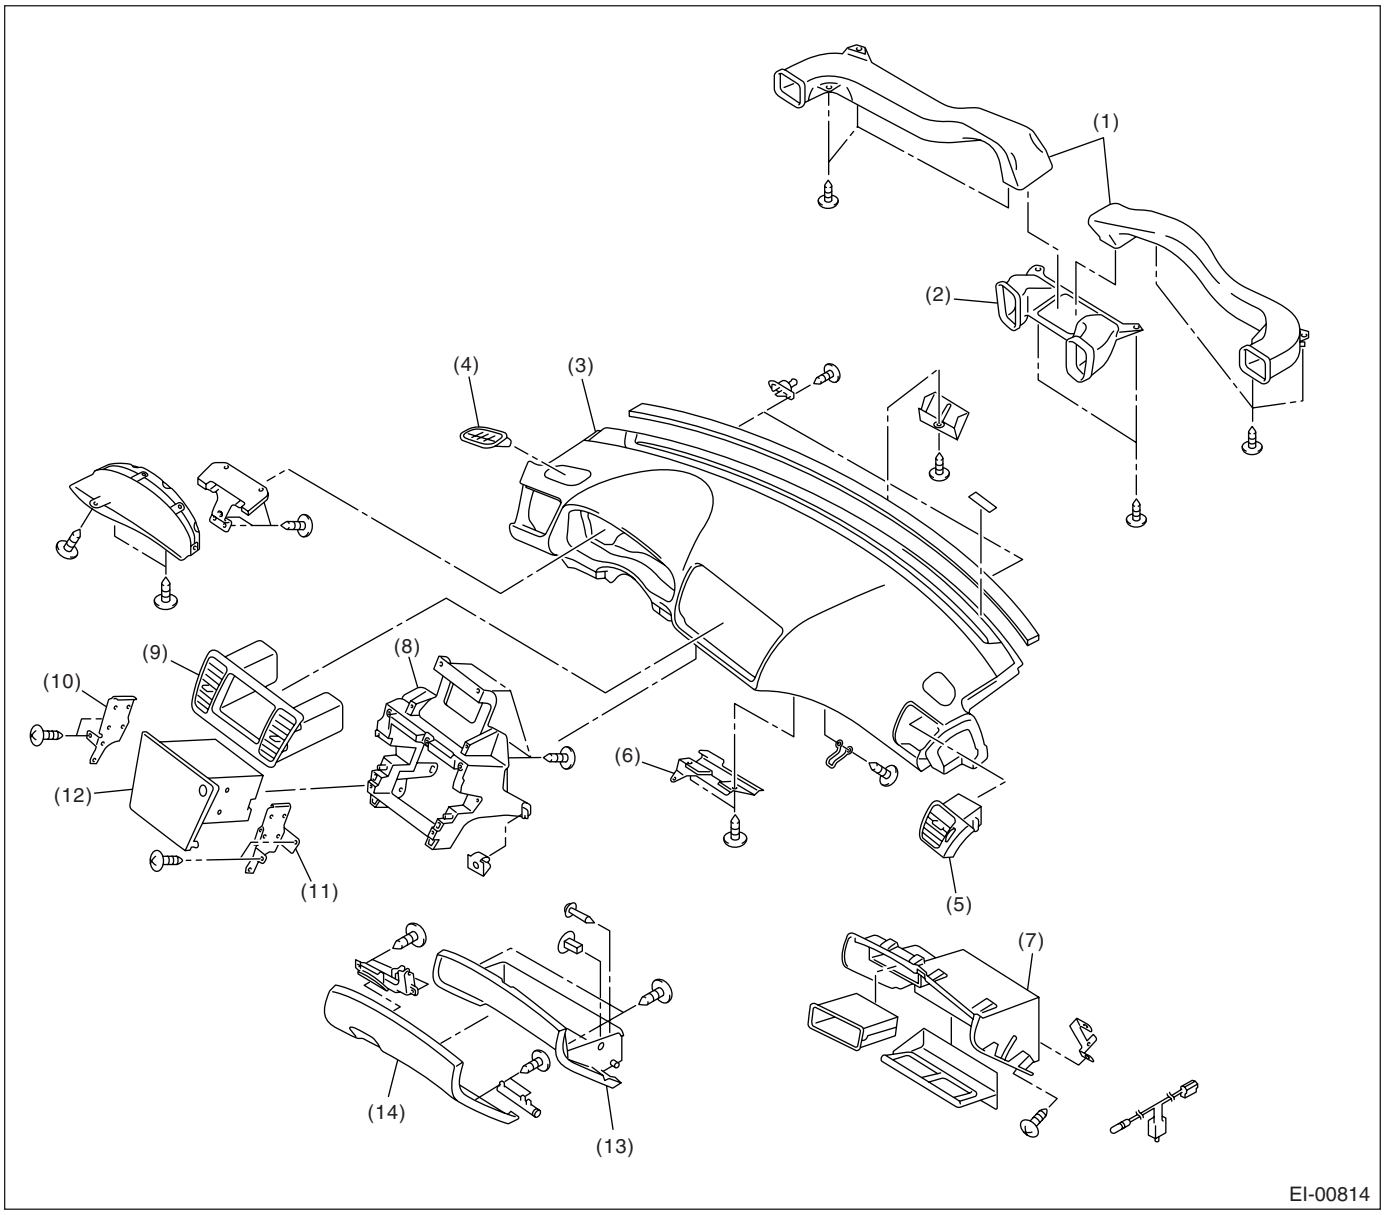
(1) Upper lid
(2) Console cover
(3) Seat heater switch
(4) Front cup holder
(5) Console box outer
(6) Rear lid
(7) Rear cup holder
(8) Ash tray
(9) Lid hinge
(10) Parking brake lever boot
(11) Console pocket
(12) Front accessory power supply socket
(13) Console box harness

19.INSTRUMENT PANEL



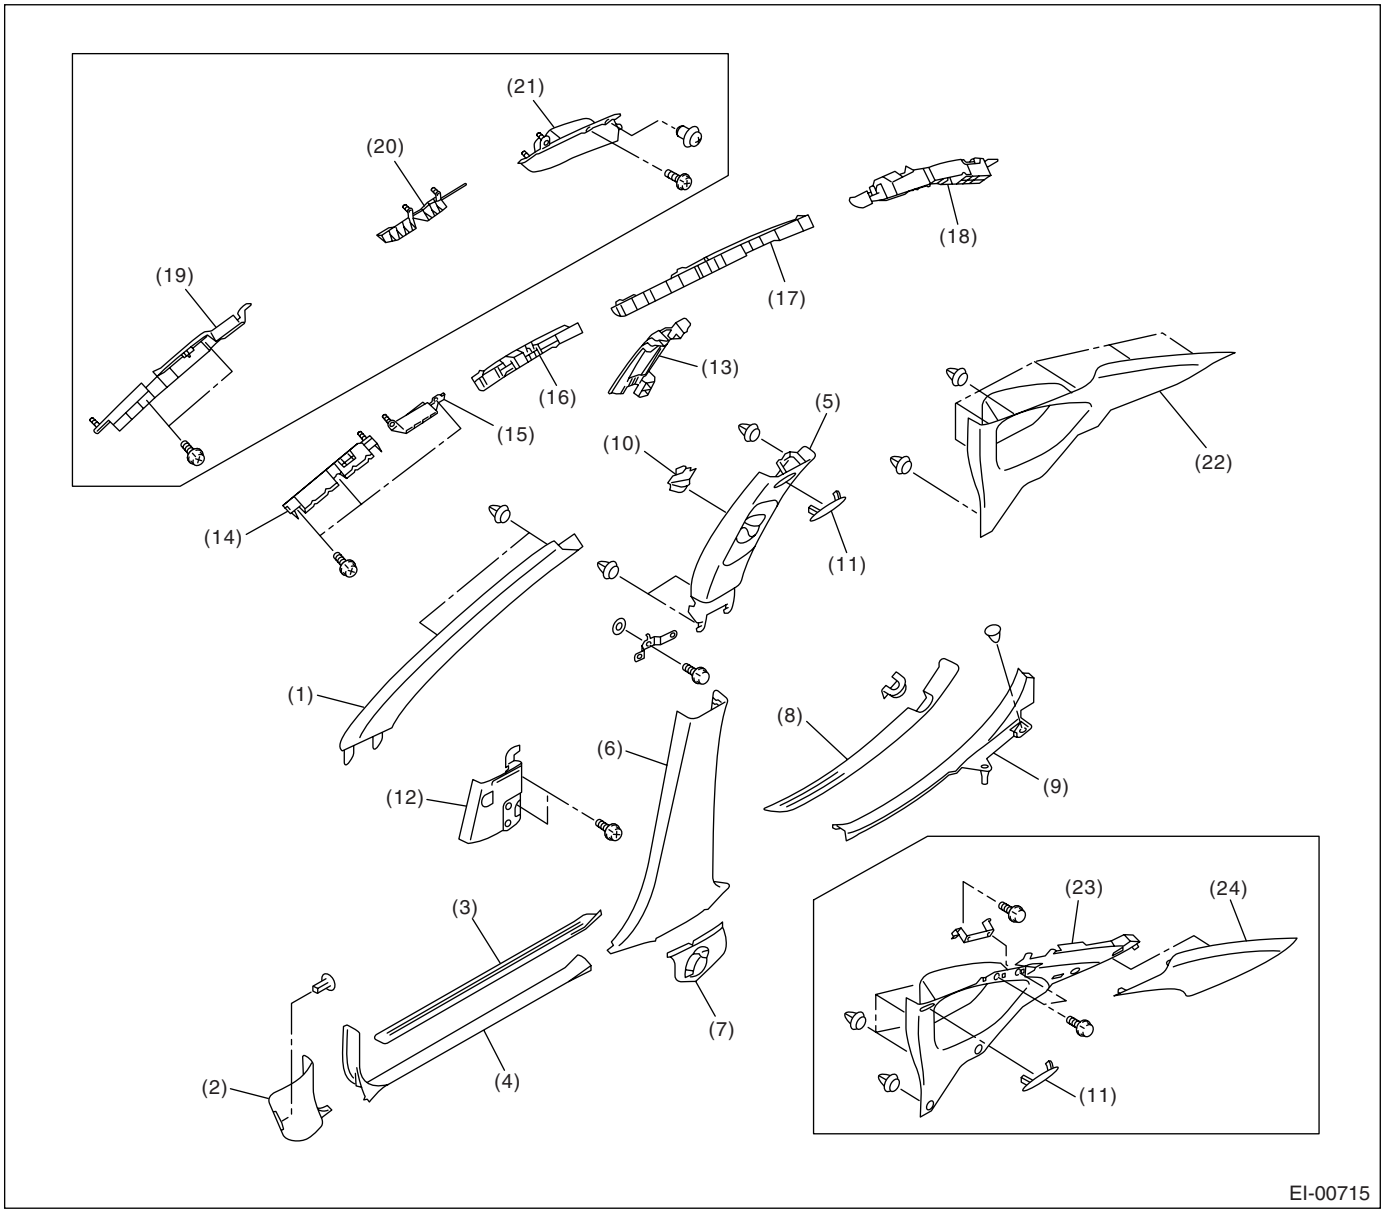
(1) Steering support beam bracket
(2) Steering support beam
(3) Instrument panel pad & frame ASSY
(4) Instrument panel side cover
(5) Glove box lower cover
(6) Console side panel RH
(7) Console side panel LH
(8) Console side garnish
(9) Instrument panel lower cover upper
(10) Instrument panel lower cover under
(11) Ash tray holder
(12) Front accessory power supply socket
(13) Console front panel (AT model)
(14) Console front panel (MT model)
(15) Shift lever boot

Tightening torque: N·m (kgf-m, ft-lb)
T: 25 (25.5, 18.4)



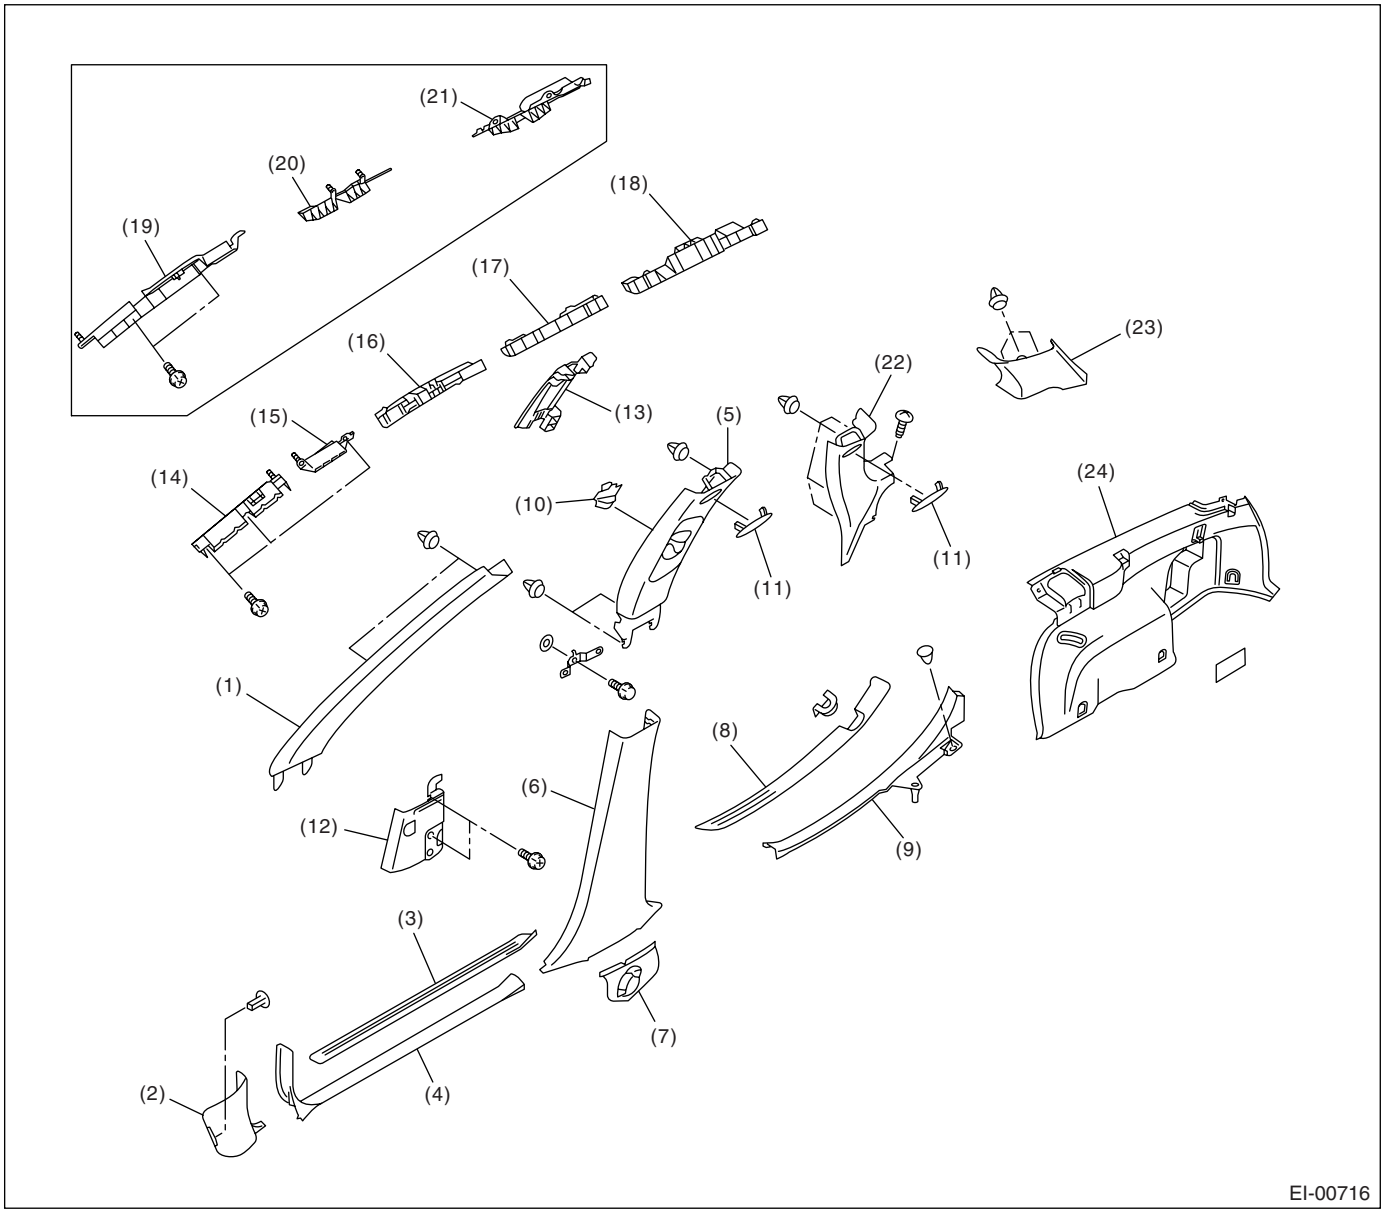
(1) Air vent side duct
(2) Air vent center duct
(3) Instrument panel pad & frame
(4) Air vent defroster grille
(5) Air vent side grille
(6) Navigation unit bracket (Model with navigation system)
(7) Glove box panel
(8) Center console frame
(9) Air vent center grille
(10) Audio bracket (LH)
(11) Audio bracket (RH)
(12) Center panel
(13) Glove box
(14) Glove box lid

20.INNER TRIM (SEDAN MODEL)



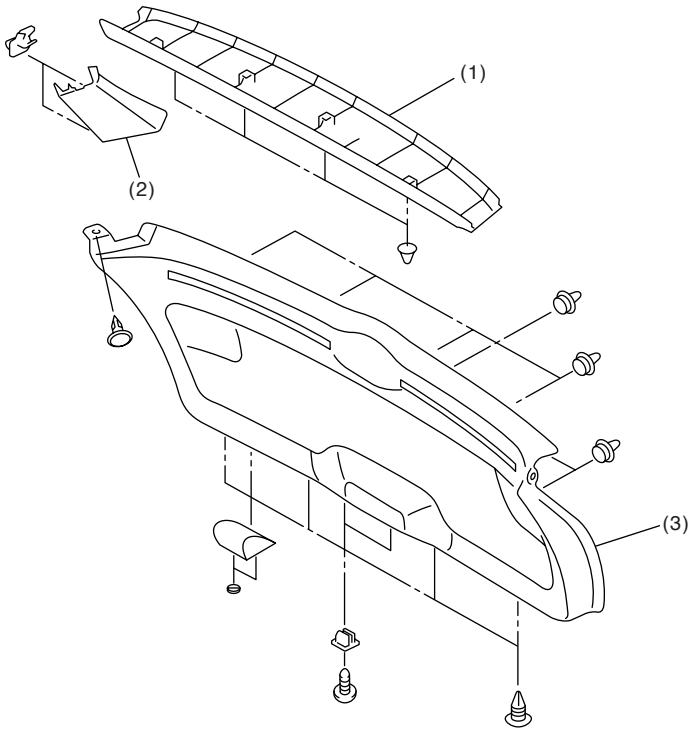
(1) Front pillar upper trim
(2) Front pillar lower trim
(3) Front outside scuff plate
(4) Front inside scuff plate
(5) Center pillar upper trim
(6) Center pillar lower trim
(7) Seat belt lower anchor bolt cover
(8) Rear outside scuff plate
(9) Rear inside scuff plate
(10) Seat belt shoulder anchor adjuster button
(11) Bolt cover (Model with curtain airbag)
(12) Center pillar inner protector lower
(13) Center pillar inner protector upper
(14) Front pillar inner protector lower
(15) Front pillar inner protector upper
(16) Roof side inner protector front
(17) Roof side inner protector center
(18) Roof side inner protector rear
(19) Curtain airbag guide front (Model with curtain airbag)
(20) Curtain airbag guide center (Model with curtain airbag)
(21) Curtain airbag guide rear (Model with curtain airbag)
(22) Rear quarter trim
(23) Rear quarter trim front (Model with curtain airbag)
(24) Rear quarter trim rear (Model with curtain airbag)

21.INNER TRIM (WAGON MODEL)



(1) Front pillar upper trim
(2) Front pillar lower trim
(3) Front outside scuff plate
(4) Front inside scuff plate
(5) Center pillar upper trim
(6) Center pillar lower trim
(7) Seat belt lower anchor bolt cover
(8) Rear outside scuff plate
(9) Rear inside scuff plate
(10) Seat belt shoulder anchor adjuster button
(11) Bolt cover (Model with curtain airbag)
(12) Center pillar inner protector lower
(13) Center pillar inner protector upper
(14) Front pillar inner protector lower
(15) Front pillar inner protector upper
(16) Roof side inner protector front
(17) Roof side inner protector center
(18) Roof side inner protector rear
(19) Curtain airbag guide front (Model with curtain airbag)
(20) Curtain airbag guide center (Model with curtain airbag)
(21) Curtain airbag guide rear (Model with curtain airbag)
(22) Rear quarter front pillar trim
(23) Rear quarter rear pillar trim
(24) Rear quarter lower trim

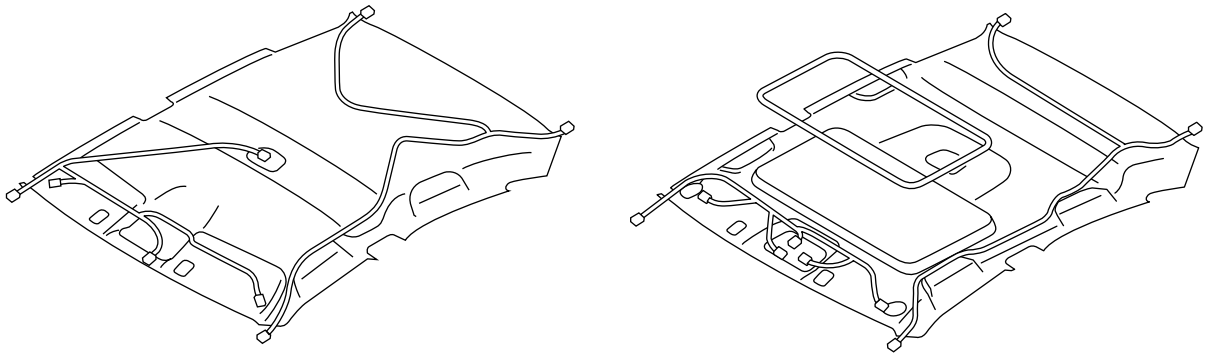
22.REAR GATE TRIM



EI-00808

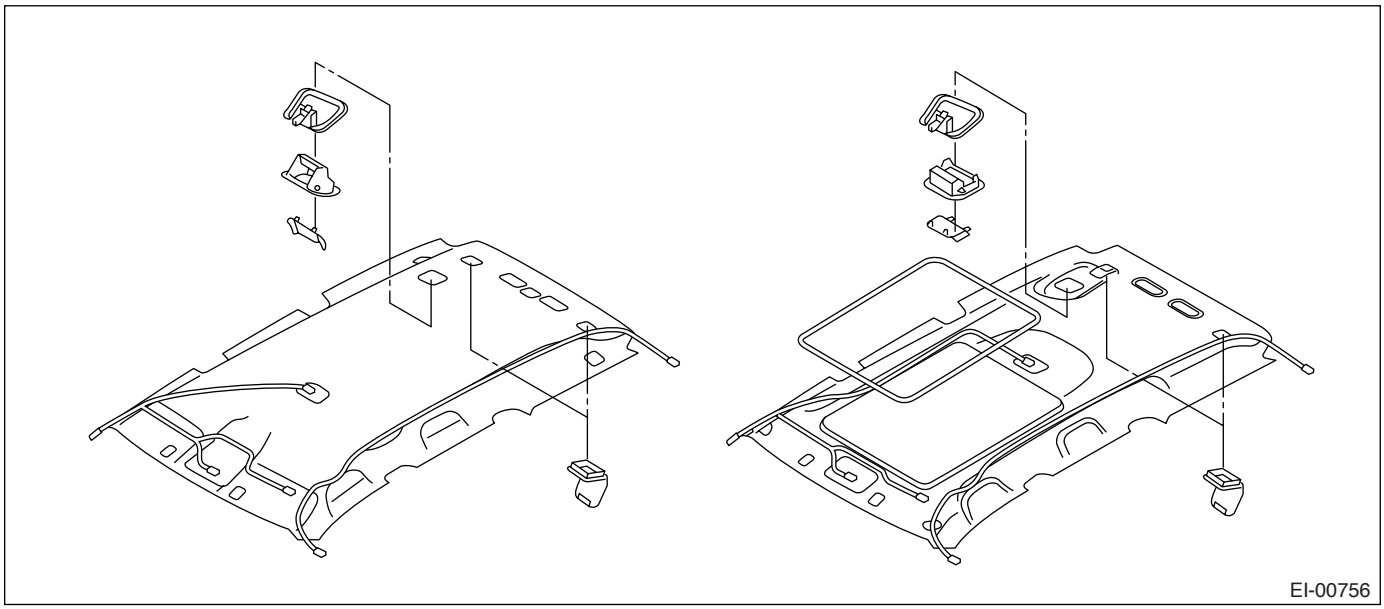
(1) Rear gate panel upper trim (2) Rear gate panel pillar trim (3) Rear gate panel lower trim

23.ROOF TRIM (SEDAN MODEL)

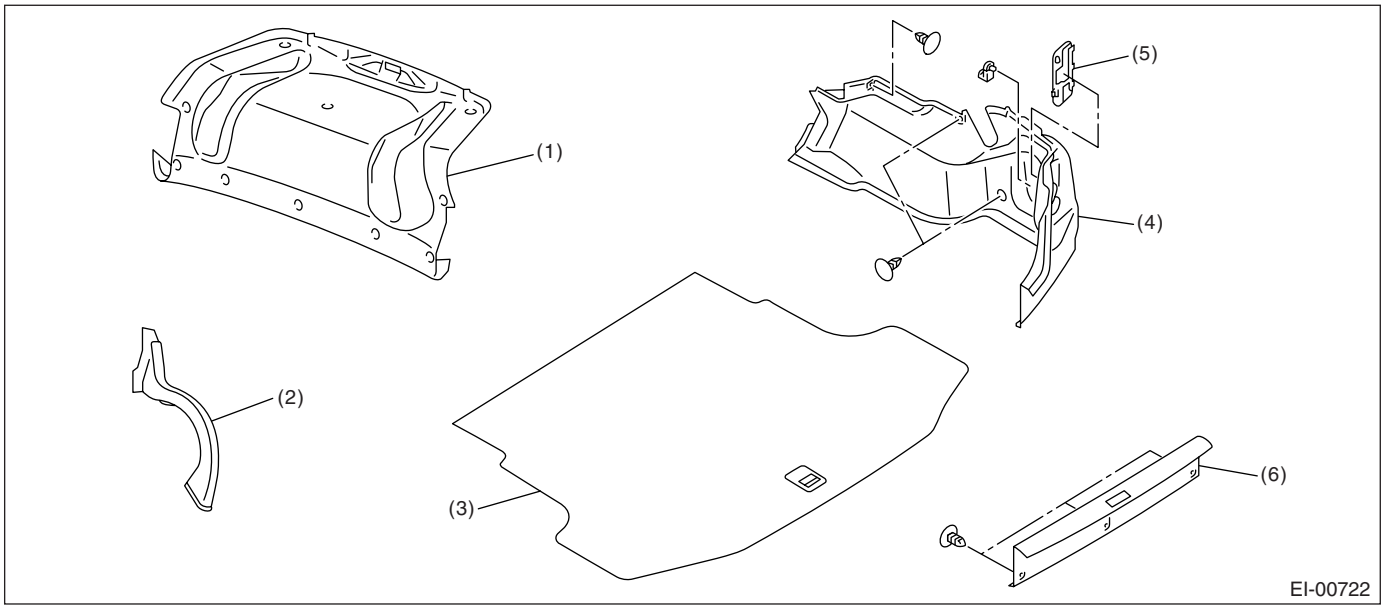


EI-00755

24.ROOF TRIM (WAGON MODEL)

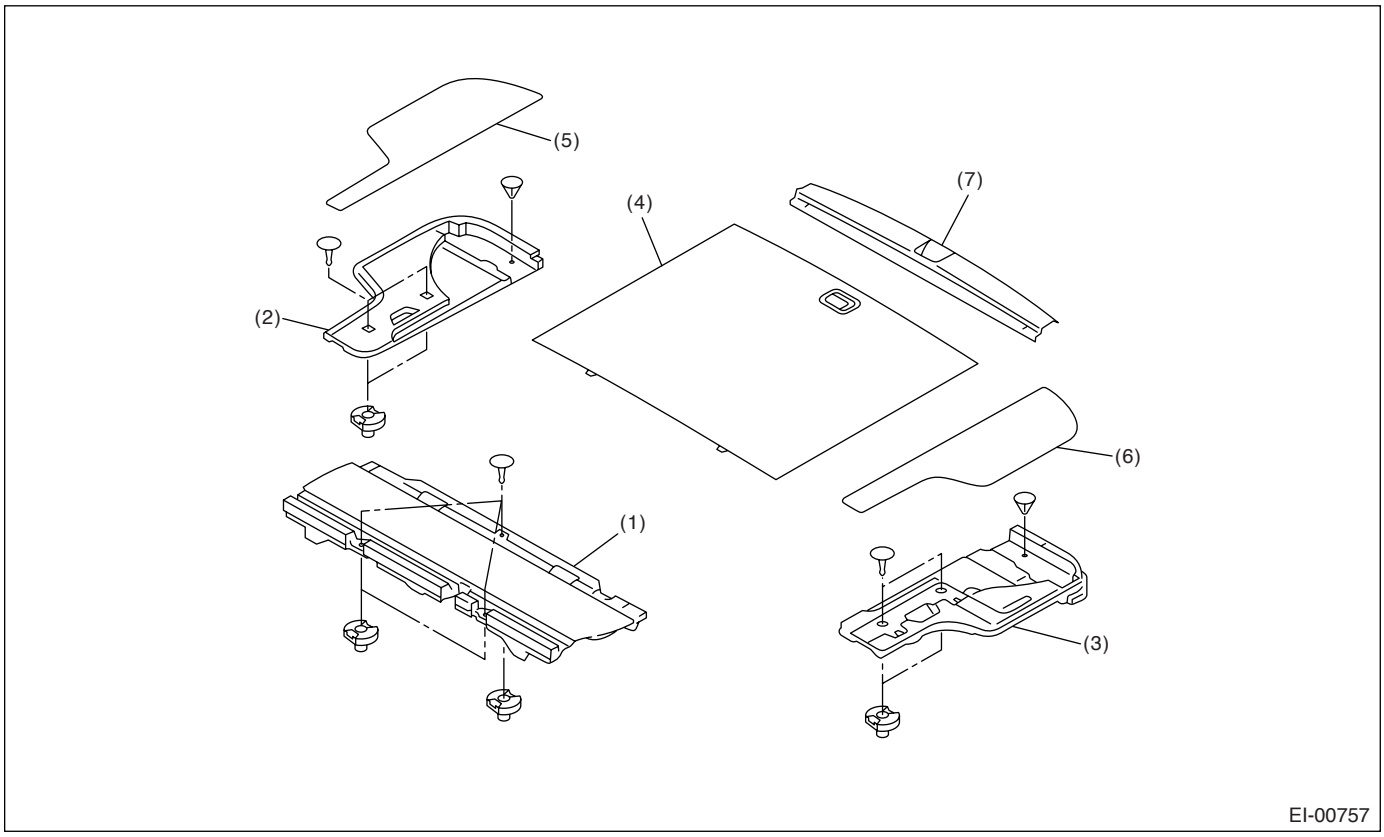


25.TRUNK ROOM TRIM



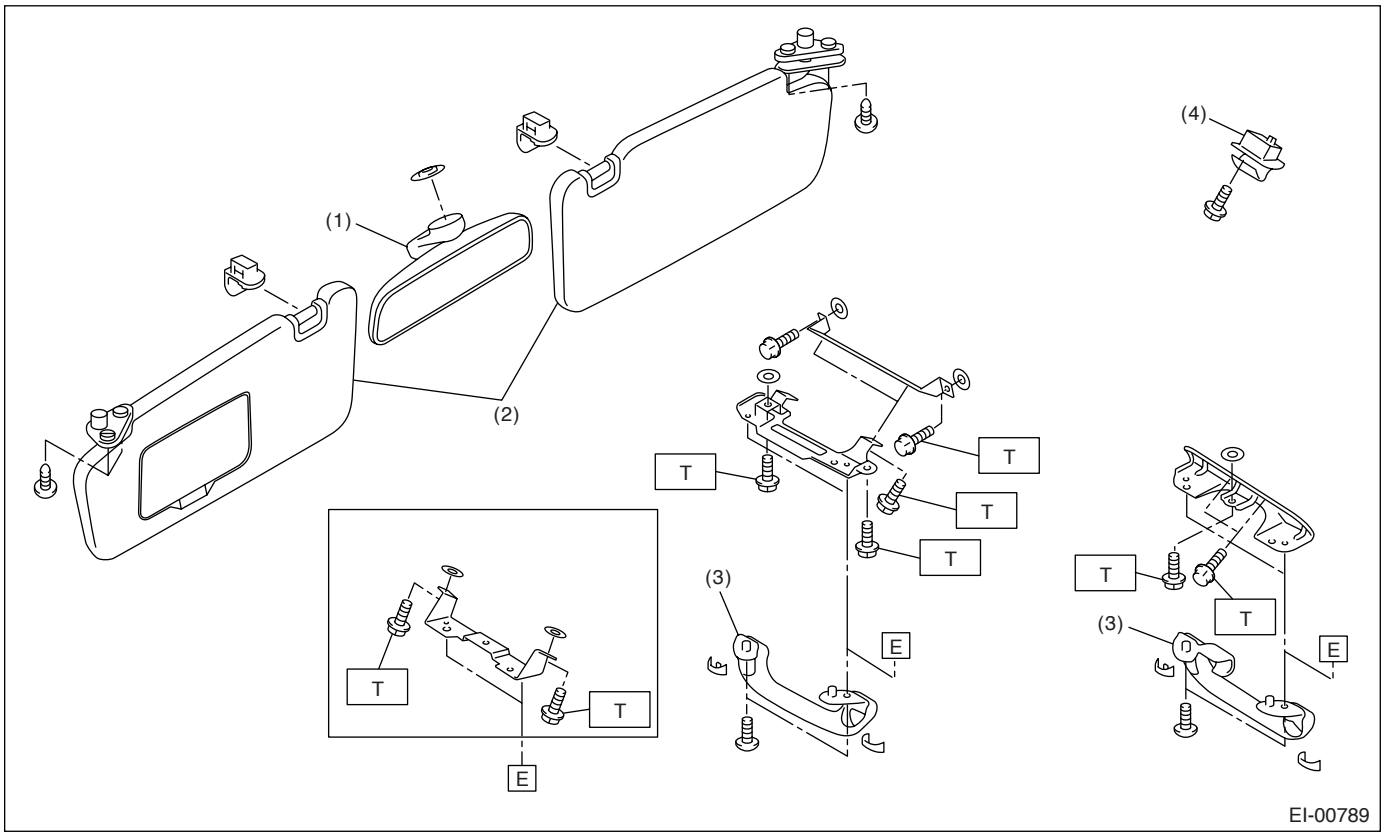
(1) Trunk lid trim
(2) Trunk lid arm cover
(3) Trunk room mat
(4) Trunk side trim
(5) Combination light cover
(6) Trunk room end cover

26.LUGGAGE FLOOR MAT



(1) Front floor mat
(2) Floor box (RH)
(3) Floor box (LH)
(4) Center floor mat
(5) Side floor mat (RH)
(6) Side floor mat (LH)
(7) Luggage floor end cover

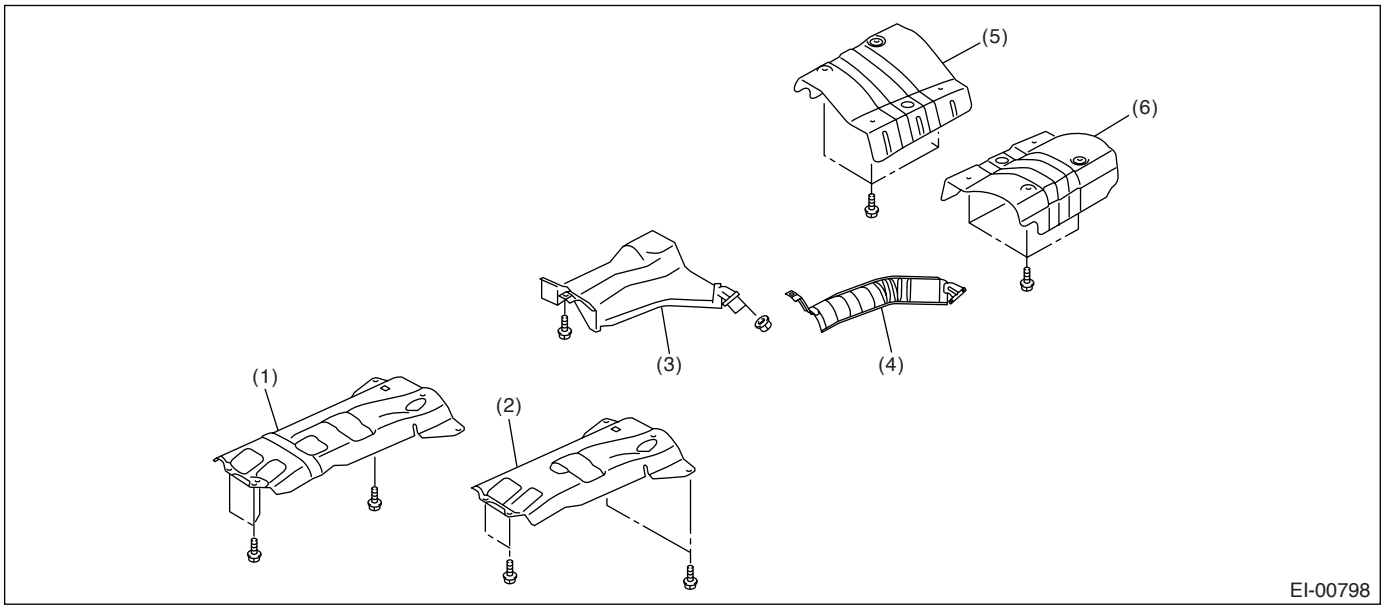
27.ROOM INNER PARTS



(1) Room mirror
(2) Sun visor
(3) Assist grip
(4) Coat hook (Wagon model)

Tightening torque: N·m (kgf-m, ft-lb)
T: 7.4 (0.75, 5.46)

28.HEAT SHIELD COVER



(1) Front heat shield cover (5AT model)
(2) Front heat shield cover (4AT model and MT model)
(3) Center heat shield cover (Turbo model)
(4) Center heat shield cover (Non-turbo model)
(5) Rear heat shield cover RH
(6) Rear heat shield cover LH

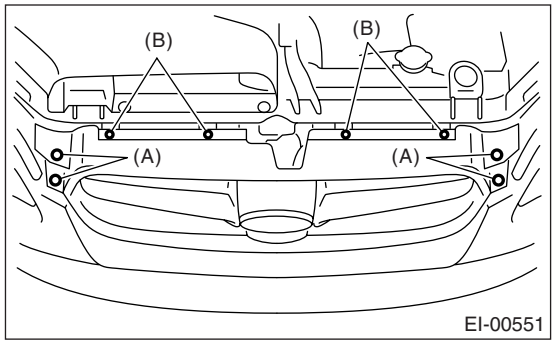
B: PREPARATION TOOL

TOOL NAME	REMARKS
Clip remover	Used for removal of trim.
Clip clamp pliers	Used for removal of various clips and clamps.

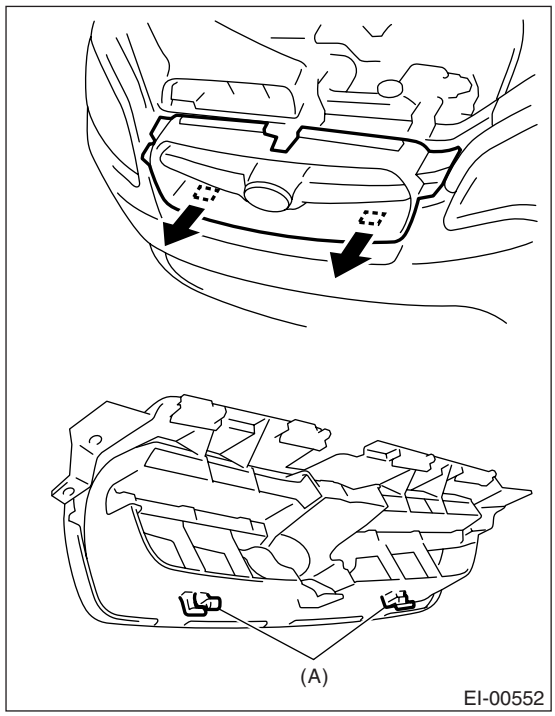
2. Front Grille

A: REMOVAL

1) Open the hood.
2) Remove the push clips (A) and front grille clips (B) from each side of front grille.



3) Remove the clips on the back side of front grille.
4) Pull lower side of the front grille forward, remove hooks (A), and then remove the front grille from vehicle body.



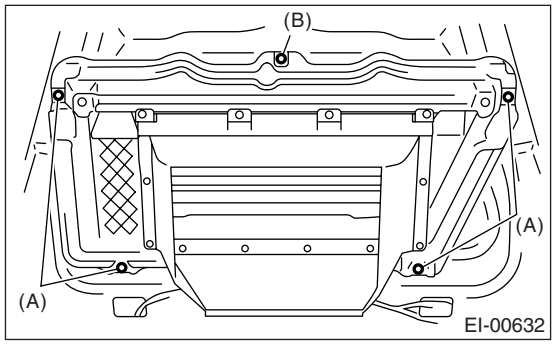
B: INSTALLATION

Install in the reverse order of removal.

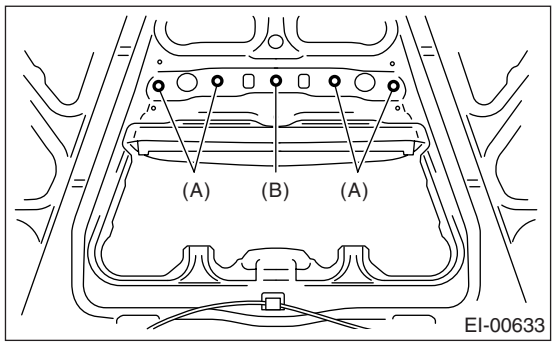
3. Front Hood Grille

A: REMOVAL

1) Open the front hood.
2) Remove the front hood insulator. <Ref. to EB-13, FRONT HOOD INSULATOR, REMOVAL, Front Hood.>
3) Remove the screws (A) and clip (B), and remove the front hood duct.

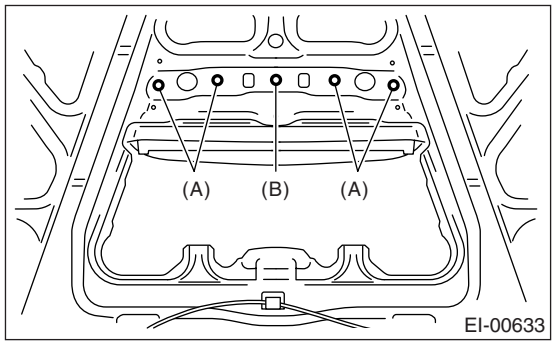


4) Loosen the nuts (A), remove the clip (B), and then remove the front hood grille.



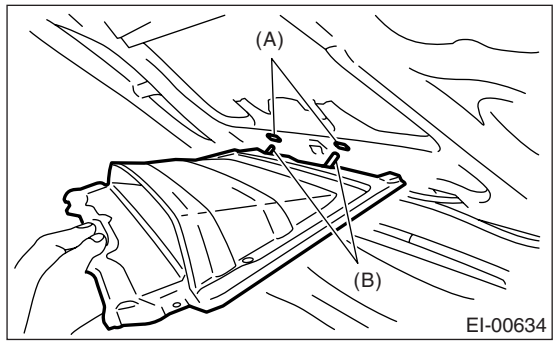
B: INSTALLATION

1) Fit the clip (B) of front hood grille, and install the front hood grille using nuts (A).

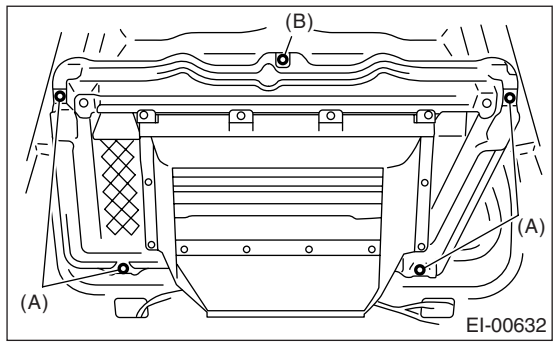


Tightening torque:
4.5 N·m (0.46 kgf-m, 3.32 ft-lb)

2) Insert the hooks (B) of the front hood duct into holes (A) of the front hood.



3) Install the front hood duct with the screws (A) and clip (B).

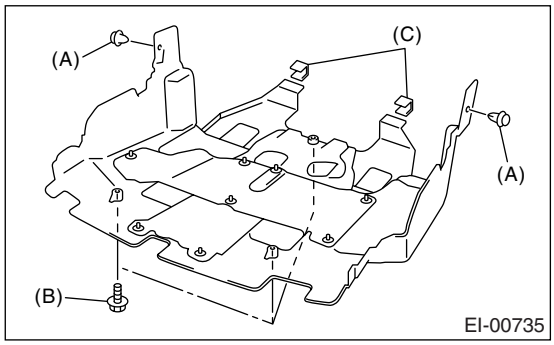


4. Front Under Cover

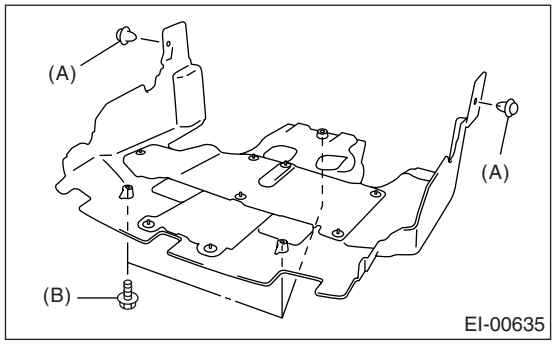
A: REMOVAL

1) Lift-up the vehicle.
2) Remove the clips (A), (C) and bolts (B) in front fender, and then remove the front under cover.

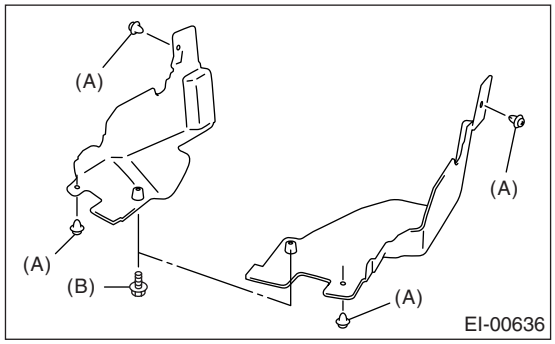
• Large type (Turbo model)



• Large type (DOHC non-turbo model)



• Small type (SOHC non-turbo model)



B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:
14 N·m (1.42 kgf-m, 10.3 ft-lb)

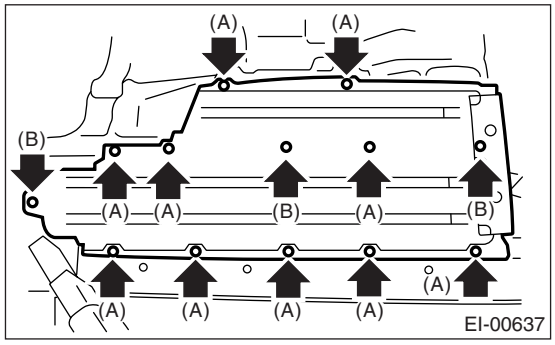
5. Floor Under Protector

A: REMOVAL

1) Lift-up the vehicle.

NOTE:
Plate type lift can not be used.

2) Remove the push turn clips (A) and bolts (B), and remove the floor under protector.



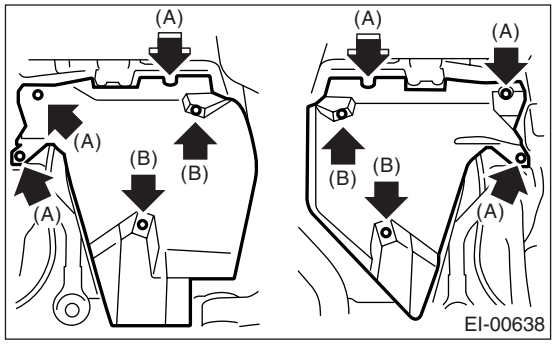
B: INSTALLATION

Install in the reverse order of removal.

6. Fuel Tank Protector

A: REMOVAL

1) Lift-up the vehicle.
2) Remove the bolts (A) and plastic nuts (B), and then remove the fuel tank protector.



B: INSTALLATION

Install in the reverse order of removal.

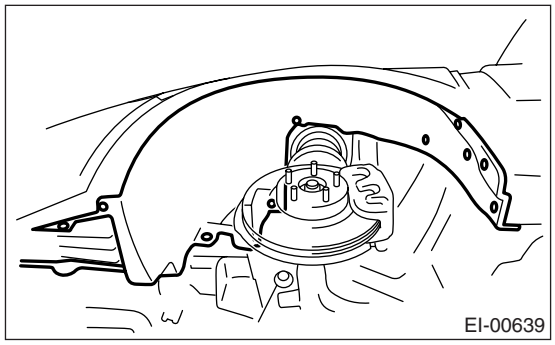
Tightening torque:
Bolt
17.5 N·m (1.78 kgf-m, 12.9 ft-lb)

7. Mud Guard

A: REMOVAL

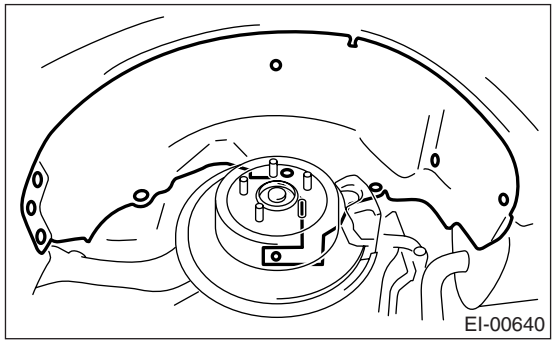
1. FRONT MUD GUARD

1) Jack-up the vehicle.
2) Remove the front wheels.
3) Loosen the screws and clips to remove mud guard.



2. REAR MUD GUARD

1) Jack-up the vehicle.
2) Remove the rear wheels.
3) Loosen the screws and clips to remove mud guard.



B: INSTALLATION

1. FRONT MUD GUARD

Install in the reverse order of removal.

2. REAR MUD GUARD

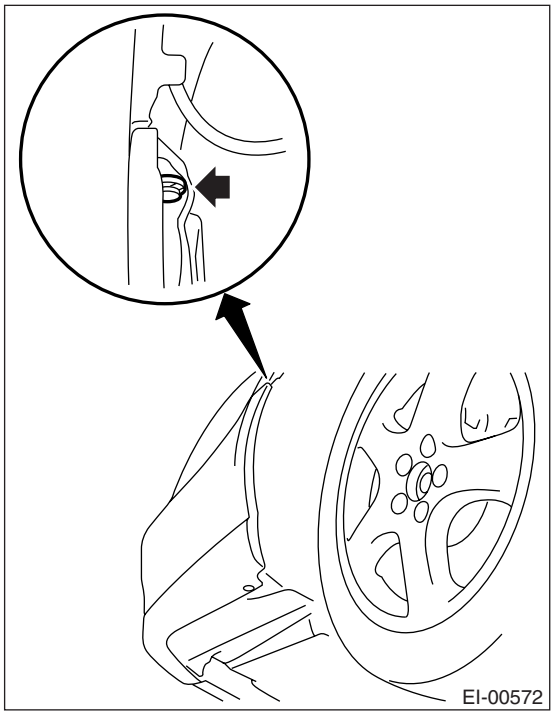
Install in the reverse order of removal.

8. Front Bumper

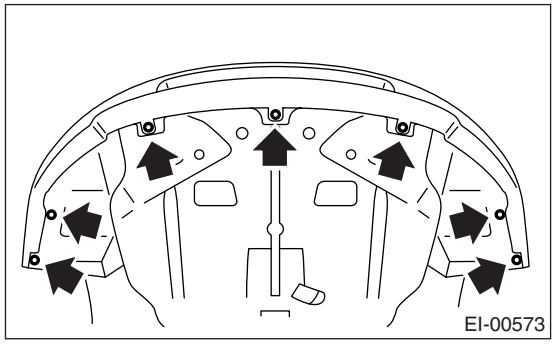
A: REMOVAL

1. FRONT BUMPER FACE

1) Disconnect the ground cable from battery.
2) Remove the front grille. <Ref. to EI-24, REMOVAL, Front Grille.>
3) Turn over the front mud guard, and remove the clips connecting the fender and bumper.



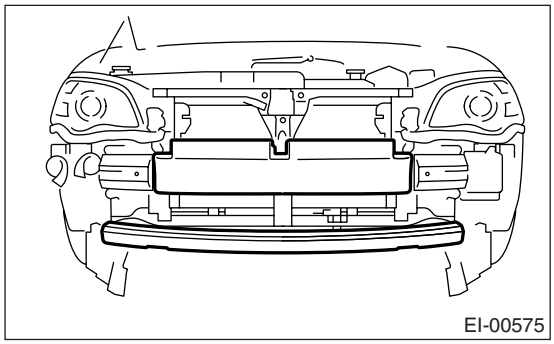
4) Remove the clips at the lower side of bumper.



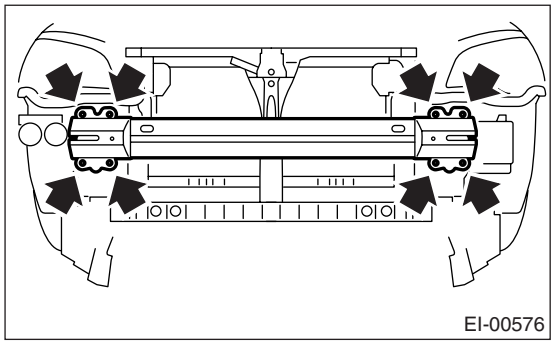
5) Disconnect the fog light connector. (Model with fog light)
6) Remove the bumper from vehicle body.
7) Remove the fog light from bumper face. <Ref. to LI-21, REMOVAL, Front Fog Light Assembly.>

2. FRONT BUMPER BEAM ASSEMBLY

1) Disconnect the ground cable from battery.
2) Remove the front grille. <Ref. to EI-24, REMOVAL, Front Grille.>
3) Remove the front bumper face. <Ref. to EI-30, FRONT BUMPER FACE, REMOVAL, Front Bumper.>
4) Remove the energy absorber foam from bumper beam.

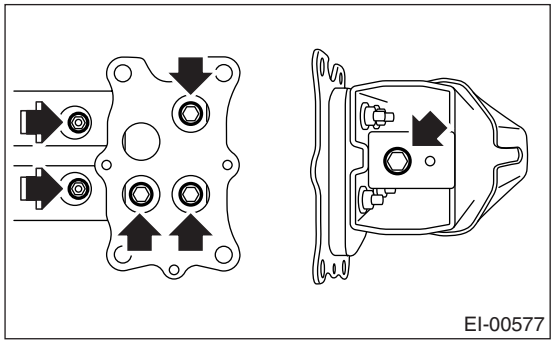


5) Remove the bolts, and remove the bumper beam assembly from vehicle body.

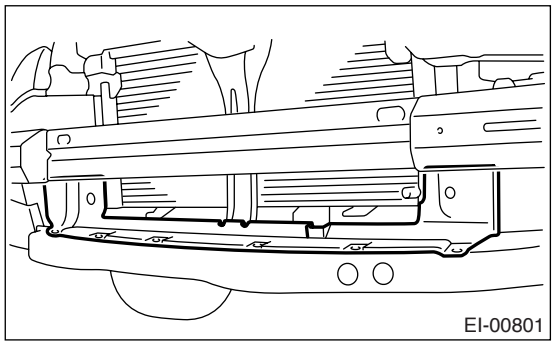


NOTE:
After all bolts are removed, raise the whole bumper beam a little to remove it from vehicle body.

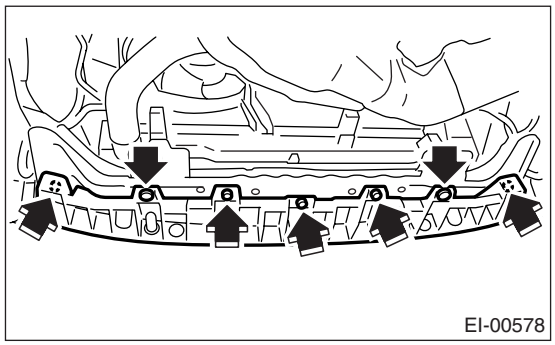
6) Remove the bolts and nuts, and disassemble the bumper beam.



7) Remove the clips, and remove the radiator guide.



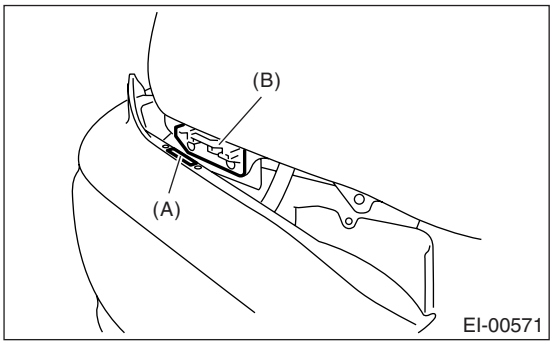
8) Remove the bolts and clips, and remove the bumper lower center bracket.



B: INSTALLATION

1. FRONT BUMPER FACE

1) Install in the reverse order of removal.
2) Fit the slider (A) to the guide plate (B) securely.



2. FRONT BUMPER BEAM ASSEMBLY

Install in the reverse order of removal.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to EI-5, FRONT BUMPER, COMPONENT, General Description.>

C: REPAIR

1. COATING METHOD FOR PP BUMPER

Process No.	Process name	Job contents	
1	Bumper installation	Place the bumper on a paint worktable as required. Use the paint worktable conforming to inner shape of bumper when possible.	 EI-00234 (1) Bumper (2) Set bumper section
2	Masking	Mask specified part (black base) with masking tape. Use masking tape for PP (example, Nichiban No. 533, etc.).	
3	Degreasing, cleaning	Clean all parts to be painted with white gasoline, normal alcohol, etc. to remove dirt, oil, fat, etc.	
4	Primer paint	Apply primer to all parts to be painted, using spray gun. Use primer (clear).	
5	Drying	Dry at normal temperature [10 — 15 min. at 20°C (68°F)]. In half-dried condition, PP primer paint is dissolved by solvent, e.g. thinner, etc. Therefore, if dust or dirt must be removed, use ordinary alcohol, etc.	
6	Top coat paint (I)	Non-colored	Metallic paint
		Use section (block) paint for top coat. • Paint to be used (for each color): Solid paint Hardener PB Thinner T-301 • Mixing ratio: Main agent vs. hardener = 4:1 • Viscosity: 10 — 13 sec./20°C (68°F) • Film thickness: 35 — 45 μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kg/cm^2, 36 — 50 psi)	Use section (block) paint for top coat. • Paint to be used (for each color): Metallic paint Hardener PB Thinner T-306 • Mixing ratio: Main agent vs. hardener = 10:1 • Viscosity: 10 — 13 sec./20°C (68°F) • Film thickness: 15 — 20 μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kg/cm^2, 36 — 50 psi)
7	Drying	Not required.	Dry at normal temperature [more than 10 min. at 20°C (68°F)]. In half-dried condition, avoid dust, dirt.
8	Top coat paint (II)	Not required.	Apply a clear coat to parts with top coat paint (I), three times, at 5 — 7 minutes intervals. • Paint to be used: Metallic paint Hardener PB Thinner T-301 • Mixing ratio: Clear coat vs. hardener = 6:1 • Viscosity: 14 — 16 sec./20°C (68°F) • Film thickness: 25 — 30 μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kg/cm^2, 36 — 50 psi)
9	Drying	60°C (140°F), 60 min. or 80°C (176°F), 30 min. If higher than 80°C (176°F), PP may be deformed. Keep maximum temperature at 80°C (176°F).	
10	Inspection	Paint check.	
11	Masking removal	Remove masking tape applied in process No. 2.	

2. REPAIR INSTRUCTIONS FOR COLORED PP BUMPER

NOTE:
All PP bumpers are provided with a grained surface, and if the surface is damaged, it cannot normally be restored to its former condition. Damages limited to the shallow scratches that cause only a change in the luster of the base material or coating, can be almost fully restored. Before repairing a damaged area, explain this point to the customer and obtain an understanding about the matter. Repair methods are outlined below, based on a classification of the extent of damage.

1) Minor damage causing only a change in the lustre of the bumper due to a light touch
Almost restorable.

<table>
<tr><th>Process No.</th><th>Process name</th><th colspan="2">Job contents</th></tr>
<tr><td>1</td><td>Cleaning</td><td colspan="2">Clean the area to be repaired using water.</td></tr>
<tr><td>2</td><td>Sanding</td><td colspan="2">Grind the repairing area with #500 sand paper in a “feathering” motion.</td></tr>
<tr><td rowspan="3">3</td><td rowspan="3">Finish</td><td>Resin section</td><td>Coated section</td></tr>
<tr><td>Repeatedly apply wax to the affected area using a soft cloth (such as flannel). Recommended wax: NITTO KASEI Soft 99 TIRE WAX BLACK, or equivalent.</td><td rowspan="2">Perform either the same process as for the resin section or process No. 18 and subsequent in the “3)” section, depending on the degree and nature of damage.</td></tr>
<tr><td>Polish the waxed area with a clean cloth after 5 to 10 minutes.</td></tr>
</table>

2) Deep damage caused by scratching with fences, etc.
A dent cannot be repaired but a whitened or swelled part can be removed.

<table>
<tr><th>Process No.</th><th>Process name</th><th colspan="2">Job contents</th></tr>
<tr><td>1</td><td>Cleaning</td><td colspan="2">Clean damaged area with water.</td></tr>
<tr><td>2</td><td>Removal of damaged area</td><td colspan="2">Cut off protruding area, if any, due to collision, using a putty knife.</td></tr>
<tr><td>3</td><td>Sanding</td><td colspan="2">Grind the affected area with #100 to #500 sand paper.</td></tr>
<tr><td rowspan="2">4</td><td rowspan="2">Finish</td><td>Resin section</td><td>Coated section</td></tr>
<tr><td>Same as Process No. 3 in the “1)” section.</td><td>Perform Process No. 12 and subsequent operations in the “3)” section.</td></tr>
</table>

3) Deep damage such as a break or hole that requires filling
Much of the peripheral grained surface must be sacrificed for repair. The degree of restoration is not really worth the expense. (The surface, however, will become almost flush with adjacent areas.)
Recommended repair kit: PP Part Repair Kit (NRM)

Process No.	Process name	Job contents	
1	Bumper removal	Remove the bumper as required.	
2	Removal of parts	Remove the parts built into bumper as required.	
3	Bumper placement	Place the bumper on a paint worktable as required. It is recommended to use the paint worktable conforming to internal shape of bumper.	 EI-00234 (1) Bumper (2) Set bumper section
4	Surface preparation	Remove dust, oil, etc. from areas to be repaired and surrounding areas, using a suitable solvent (NRM No. 900 Precleno, white gasoline, or alcohol, etc.).	
5	Cutting	If nature of damage are cracks or holes, cut a guide slit of 20 to 30 mm (0.79 to 1.18 in) in length along the crack or hole up to the bumper's base surface. Then, bevel or "vee-out" the affected area using a knife or grinder.	 EI-00235 (1) Paint surface (2) PP base surface (3) 20 — 30 mm (0.79 — 1.18 in) (4) 3 mm (0.12 in)
6	Sanding (I)	Grind beveled surface with sand paper (#40 to #60) to smooth finish.	
7	Cleaning	Clean the sanded surface with the same solvent as used in Process No. 4.	
8	Temporary welding	Grind the side just opposite the beveled area with sand paper (#40 to #60) and clean using a solvent. Temporarily spot-weld the side, using a PP welding rod and heater gun.	 EI-00236 (1) Welded point (Use heater gun and PP welding rod) (2) PP base surface (3) Beveled section NOTE: • Do not melt welding rod until it flows out. This results in reduced strength. • Leave the welded spot unattended until it cools completely.

Process No.	Process name	Job contents
9	Welding	Using a heater gun and PP welding rod, weld the beveled spot while melting the rod and damaged area.
		 EI-00237 (1) Welding rod (2) Melt hatched area (3) Section NOTE: • Melt the sections indicated by hatched area. • Do not melt the welding rod until it flows out, in order to provide strength. • Always keep the heater gun 1 to 2 cm (0.4 to 0.8 in) away from the welding spot. • Leave the welded spot unattended until it cools completely.
10	Sanding (II)	Remove excess part of weld with a putty knife. If a drill or disc wheel is used instead of the knife, operate it at a rate lower than 1,500 rpm and grind the excess part little by little. A higher rpm will cause the PP substrate to melt from the heat.
		 EI-00042
		Sand the welded spot smooth with #240 sand paper.
11	Masking	Mask the black substrate section using masking tape. Recommended masking tape: Nichiban No. 533 or equivalent
12	Cleaning/ degreasing	Completely clean the entire coated area, using solvent similar to that used in Process No. 4.
13	Primer coating	Apply a coat of primer to the repaired surface and its surrounding areas. Mask these areas, if necessary. Recommended primer: Mp/ 364 PP Primer NOTE: Be sure to apply coat of primer at a spraying pressure of 245 — 343 kPa (2.5 — 3.5 kg/cm^2, 36 — 50 psi) with a spray gun.
14	Leave unattended	Leave the repaired area unattended at 20°C (68°F) for 10 to 15 minutes until primer is half-dry. NOTE: If dirt or dust comes in contact with the coated area, wipe it off with a cloth with alcohol. (Do not use thinner since the coated area tends to melt.)
15	Primer surfacer coating	Apply a coat of primer surfacer to the repaired area two or three times at an interval of 3 to 5 minutes. Recommended surfacer: • UPS 300 Flex Primer • No. 303 UPS 300 Exclusive hardener • NPS 725 Exclusive Reducer (thinner) • Mixing ratio: 2 : 1 (UPS 300 : No. 303) • Viscosity: 12 — 14 sec./20°C (68°F) • Coating film thickness: 40 — 50 μ

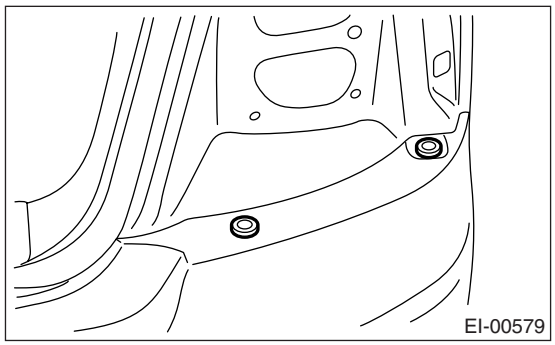
Process No.	Process name	Job contents	
16	Drying	Allow the coated surface to dry for 20 minutes at 20°C (68°F) [or 30 minutes at 60°C (140°F)].	
17	Sanding (III)	Sand the coated surface and its surrounding areas using #400 sand paper and water.	
18	Cleaning/ degreasing	Same as Process No. 12.	
19	Top coat (I)	Non-colored	Metallic paint
		Use a “block” coating method. • Recommended paint: Suncryl (SC) No. 307 Flex Hardener SC Reducer (thinner) • Mixing ratio: Suncryl (SC) vs. No. 307 Flex Hardener = 3 : 1 • Viscosity: 11 — 13 sec./20°C (68°F) • Coating film thickness: 40 — 50 μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kg/cm^2, 36 — 50 psi)	Use a “block” coating method. • Recommended paint: Suncryl (SC) No. 307 Flex Hardener SC Reducer (thinner) • Mixing ratio: Suncryl (SC) vs. No. 307 Flex Hardener = 3 : 1 • Viscosity: 11 — 13 sec./20°C (68°F) • Coating film thickness: 20 — 30 μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kg/cm^2, 36 — 50 psi)
20	Leave unattended	Not required.	Leave unattended at 20°C (68°F) for at least 10 minutes until the topcoated area is half-dry. NOTE: Be careful to keep dust or dirt from coming in contact with the affected area.
21	Top coat (II)	Not required.	Apply a clear coat three times at an interval of 3 to 5 minutes. • Recommended paint: SC710 Overlay Clear No. 307 Flex Hardener SC Reducer (thinner) • Mixing ratio: Suncryl (SC) vs. No. 307 Flex Hardener = 3 : 1 • Viscosity: 10 — 13 sec./20°C (68°F) • Coating film thickness: 20 — 30 μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kg/cm^2, 36 — 50 psi)
22	Drying	Allow the coated surface to dry for 2 hours at 20°C (68°F) or 30 minutes at 60°C (140°F). NOTE: Do not allow the temperature to exceed 80°C (176°F) since this will deform the PP substrate.	
23	Inspection	Carefully check the condition of the repaired area.	
24	Masking removal	Remove the masking tape applied in Process No. 11 and 13.	
25	Parts installation	Install parts on the bumper in reverse order of removal.	
26	Bumper installation	Install the bumper.	

9. Rear Bumper

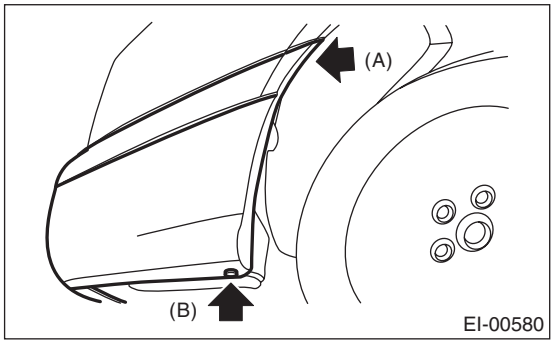
A: REMOVAL

1. REAR BUMPER FACE

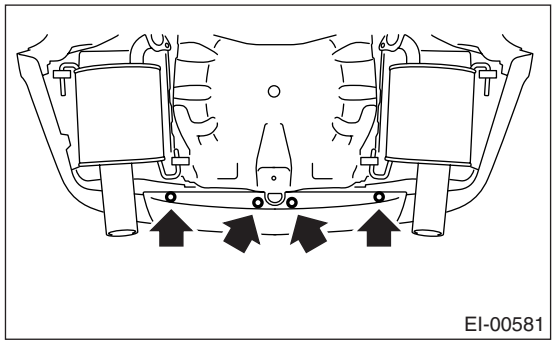
1) Disconnect the ground cable from battery.
2) Remove the rear combination light assembly. <Ref. to LI-25, REMOVAL, Rear Combination Light Assembly.>
3) Remove the two clips.



4) Turn over the mud guard, and remove the bolt (A) inside wheel house, and the clips (B) on the lower side of bumper.

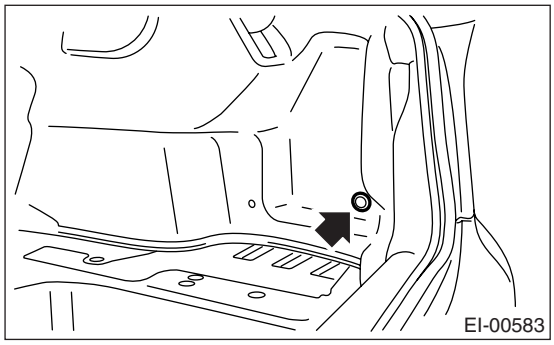


5) Remove the clips on the lower side of rear bumper.

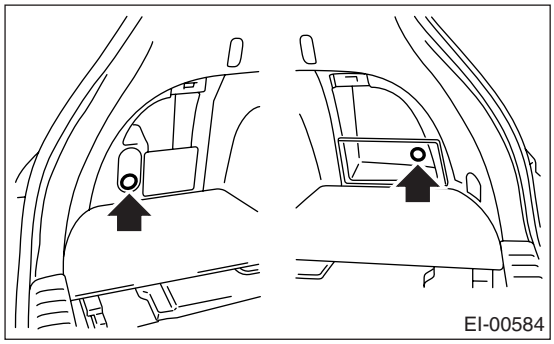


6) Remove the service hole cover, and remove the bolt.

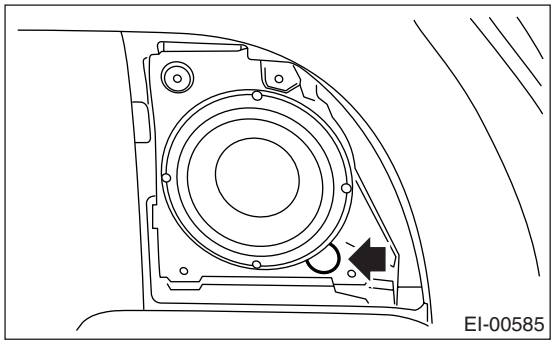
- Sedan model: trunk side trim



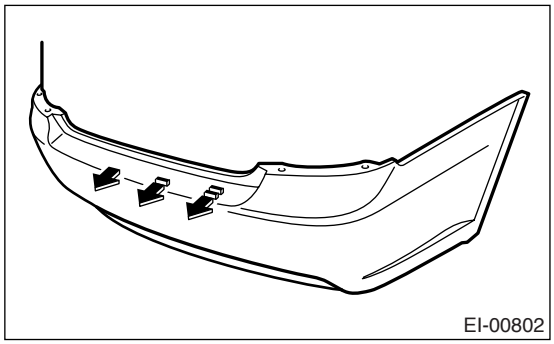
- Wagon model: rear quarter lower trim



NOTE:
For model with McIntosh Audio, remove the woofer cover.



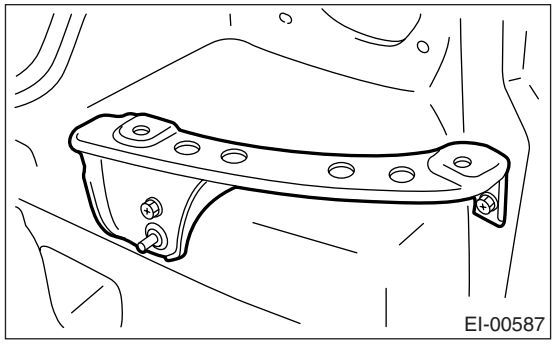
7) Remove the rear bumper from vehicle body.



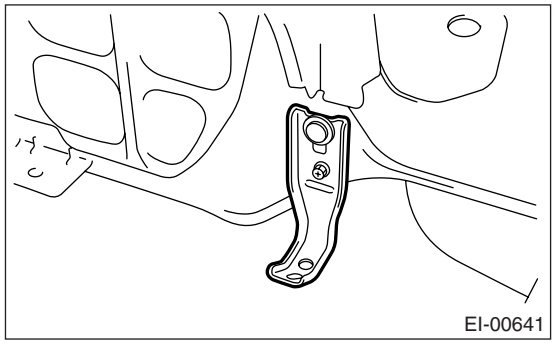
NOTE:
- Do not pull with a excessive force. Otherwise the bracket installation area may be damaged.
- Remove from the end in order.

2. REAR BUMPER BRACKET

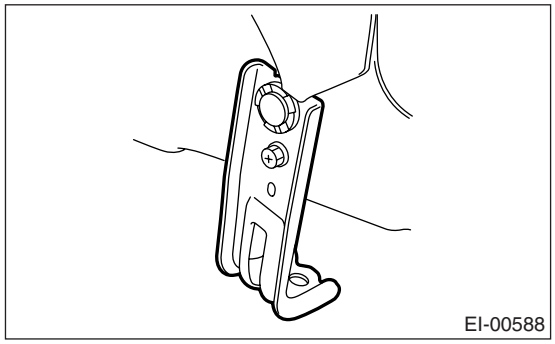
1) Remove the rear bumper face from vehicle body.
2) Remove the rear bumper bracket corner from vehicle body. (both sides)



3) Remove the lower brackets from vehicle body.
- Sedan model: 2 places

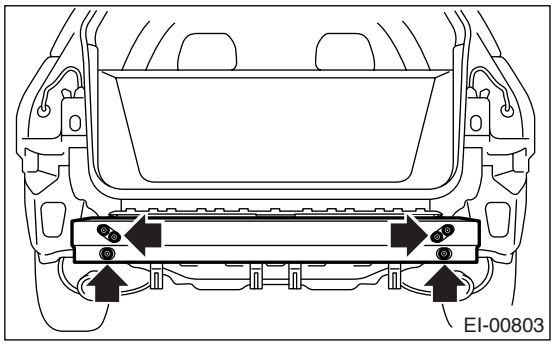


- Wagon model: 4 places

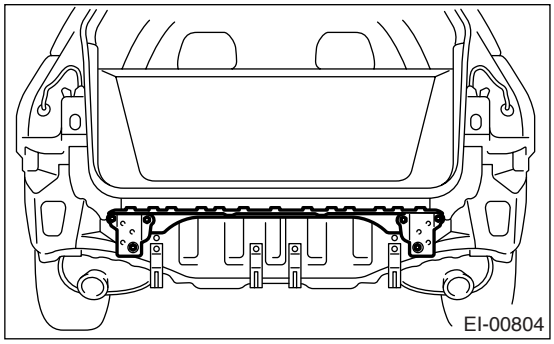


3. REAR BUMPER BEAM ASSEMBLY

1) Disconnect the ground cable from battery.
2) Remove the rear bumper face. <Ref. to EI-37, REAR BUMPER FACE, REMOVAL, Rear Bumper.>
3) Remove the nuts, and remove the beam main reinforcement from vehicle body.



4) Remove the nuts, and remove the bumper beam bracket and beam upper rear from vehicle body.



B: INSTALLATION

1. REAR BUMPER FACE

1) Install the beam upper rear to vehicle body.
2) Install the bumper face to vehicle body.

NOTE:
If the bumper face is easily come off the beam upper rear, adjust the hook area of the bracket side.

3) Install in the reverse order of removal.

Tightening torque:
Refer to "COMPONENT" of "General Description".
<Ref. to EI-6, REAR BUMPER (SEDAN MODEL), COMPONENT, General Description.>

2. REAR BUMPER BRACKET

Install in the reverse order of removal.

3. REAR BUMPER BEAM ASSEMBLY

Install in the reverse order of removal.

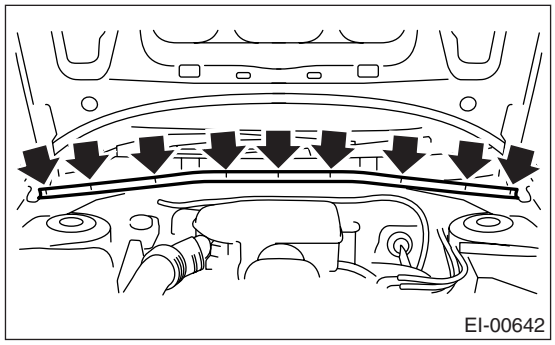
C: REPAIR

Refer to the description for front bumper repair. <Ref. to EI-30, REMOVAL, Front Bumper.>

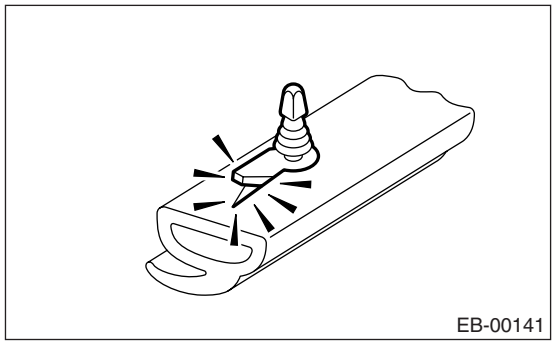
10.Cowl Panel

A: REMOVAL

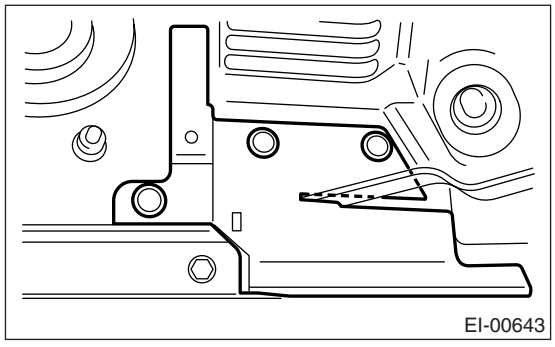
1) Open the hood.
2) Remove the wiper arm. <Ref. to WW-17, REMOVAL, Front Wiper Arm.>
3) Remove the weather strip clip, and remove the weather strip.



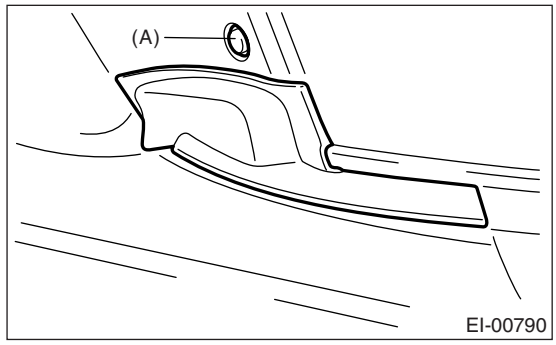
NOTE:
If the weather strip clip is removed with excessive force, the weather strip may be damaged. Be sure to use a clip remover to remove.



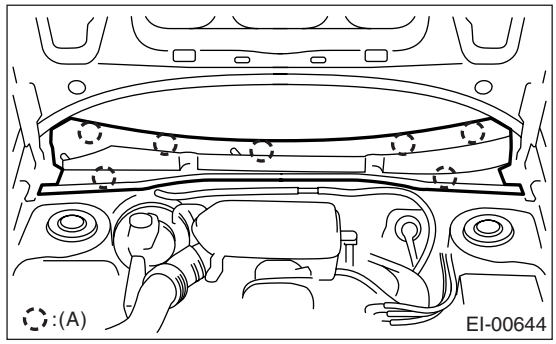
4) Remove the clip, and remove the cover cowl panel.



5) Remove the cowl panel side and clip (A).



6) Remove the clips (A), and remove the cowl panel.



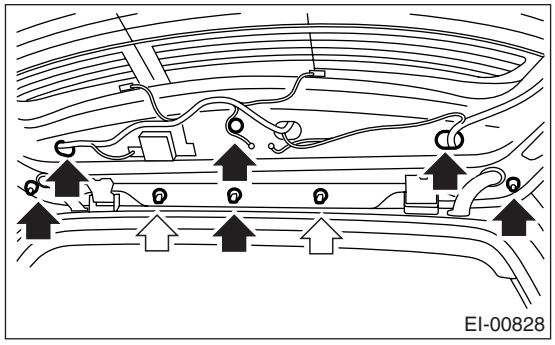
B: INSTALLATION

Install in the reverse order of removal.

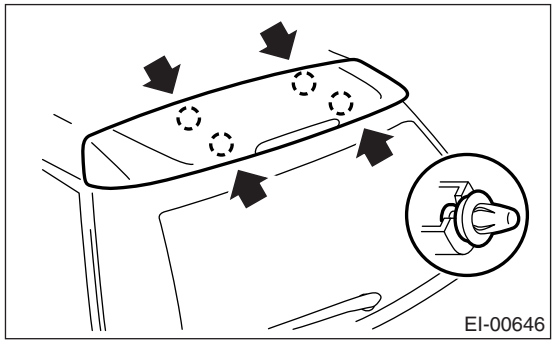
11.Roof Spoiler

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the rear gate trim. <Ref. to EI-69, REMOVAL, Rear Gate Trim.>
3) Disconnect the connector of the high mounted stop light and the washer hose of rear washer.
4) Remove the cap nut and plastic caps.



5) Remove the clips, and remove the roof spoiler.



B: INSTALLATION

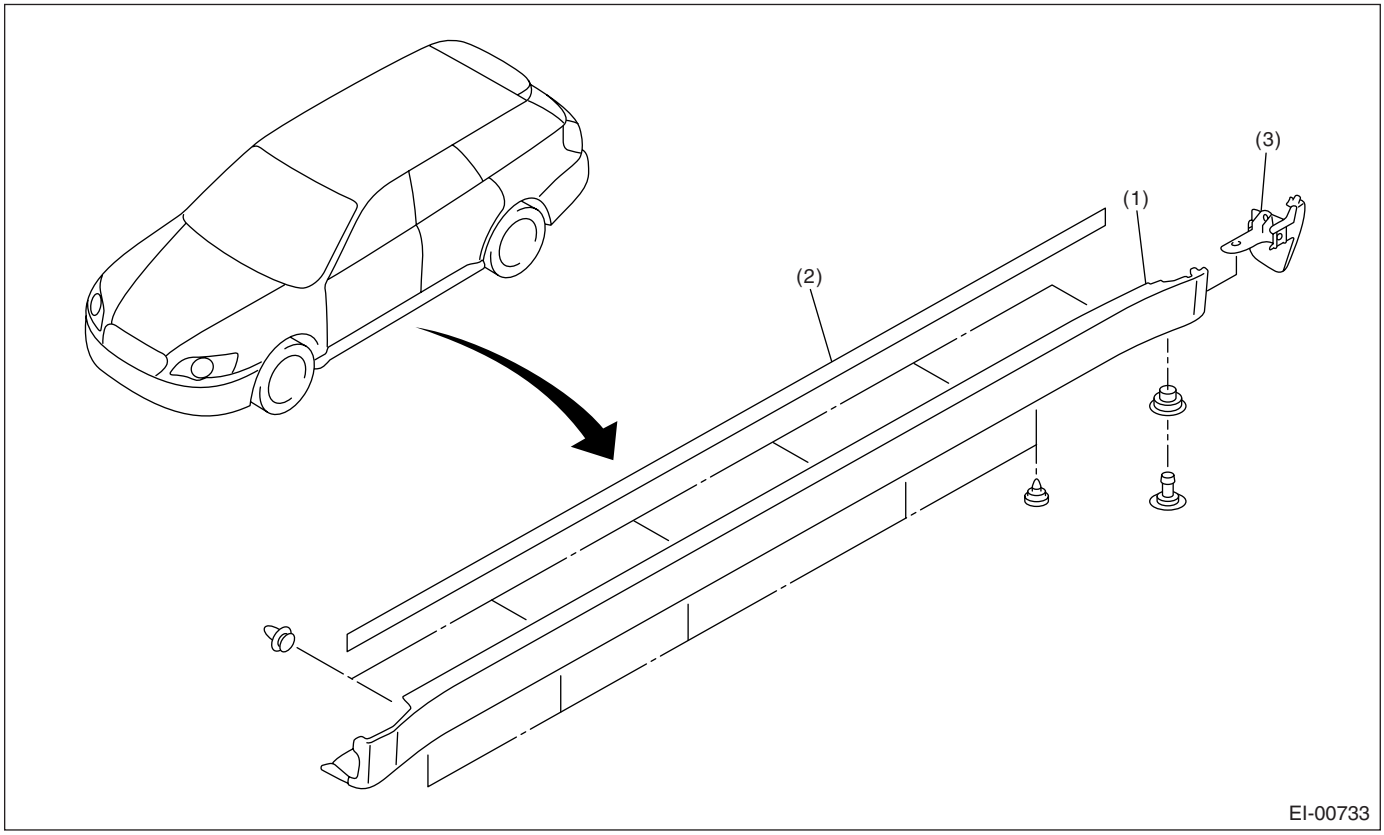
Install in the reverse order of removal.

Tightening torque:
4.5 N·m (0.46 kgf-m, 3.32 ft-lb)

12.Side Sill Spoiler

A: REMOVAL

Remove the clips (two for front fender arch area, six for side sill spoiler lower area), and remove the side spoiler.

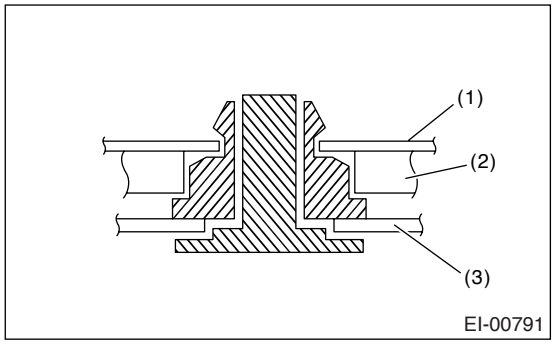


(1) Side sill spoiler (2) Double-sided tape (3) End cover

B: INSTALLATION

Install in the reverse order of removal.

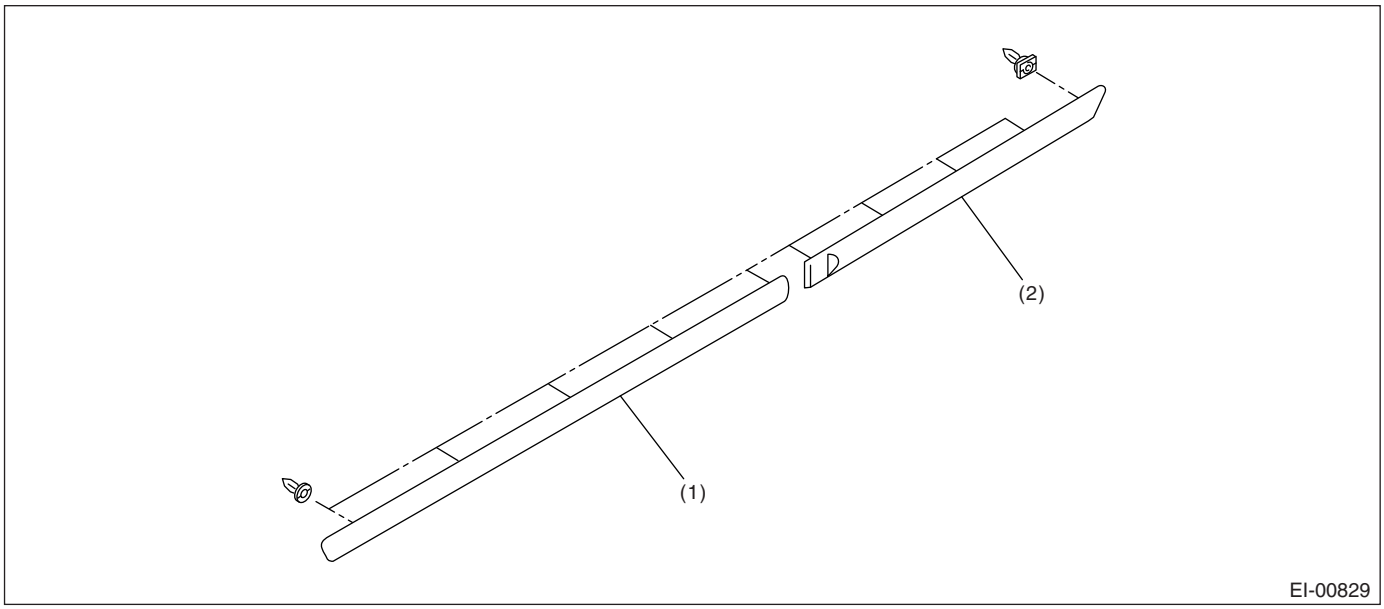
NOTE:
For the rearmost clip securing side sill spoiler, install through the end cover.



(1) Vehicle body
(2) End cover
(3) Side sill spoiler

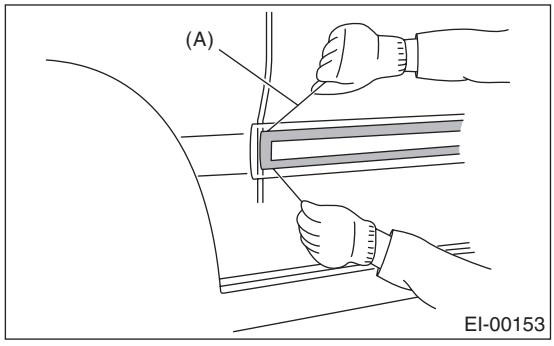
13.Side Protector

A: REMOVAL

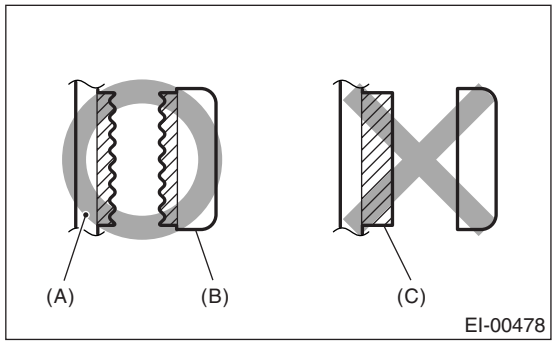


(1) Front door protector (2) Rear door protector

1) Slide in a thin thread (A) of 0.8 mm (0.031 in) diameter or less (fishing line etc.) between body and protector, cut the double-sided tape, and pull the protector toward you, and remove the clip using clip remover.



NOTE:
• To optimize the effect of solvent, slide the thread along body without removing the double-sided tape on the surface of body and spoiler.
• If it is difficult to detach the double-sided tape, warm up to approx. 40°C (104°F).
• If the double-sided tape remains thick on the surface due to interfacial peeling, apply the solvent after slicing off the double-sided tape using a cutter.



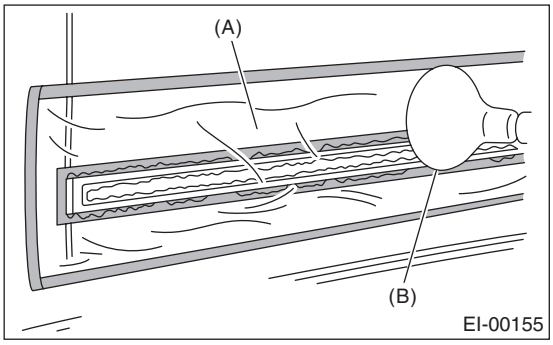
(A) Panel
(B) Side protector
(C) Double-sided tape

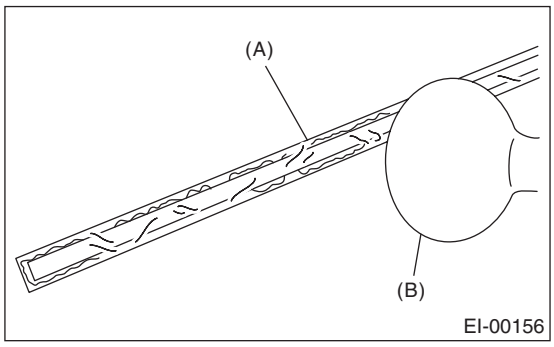
2) Apply masking tape around the double-sided tape remaining on the surface of body or spoiler.
3) Apply solvent uniformly on double-sided tape using a brush.

CAUTION:
• Do not use the solvent to the body which is repaired with lacquer paint.
• Wipe off immediately when the solvent is touched on surface of the body or spoiler.

Solvent:
3M 8907 or equivalent

4) Cover the area where solvent is applied using plastic wrap (A), and then heat the double-sided tape for 5 to 10 minutes in 40 — 60°C (104 — 140°F) using a heat lamp (B).



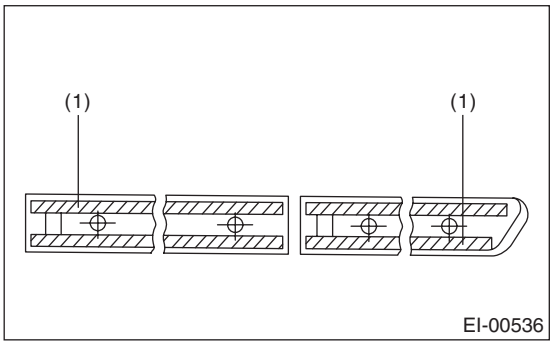


CAUTION:
Do not heat the double-sided tape until the surface becomes white and excessively dried.

5) Remove the double-sided tape using a plastic spatula.
6) After completely removing the double-sided tape, detach the masking tape and clean the surface using a cotton cloth damped with white gasoline.

B: INSTALLATION

1) Apply primer to the protector surface where the double-sided tape to be adhered, and then adhere the double-sided tape as shown in the figure.



(1) Double-sided tape: thickness 1.2 mm (0.047 in), width 5mm (0.197 in)

Primer:
3M K-500 or equivalent

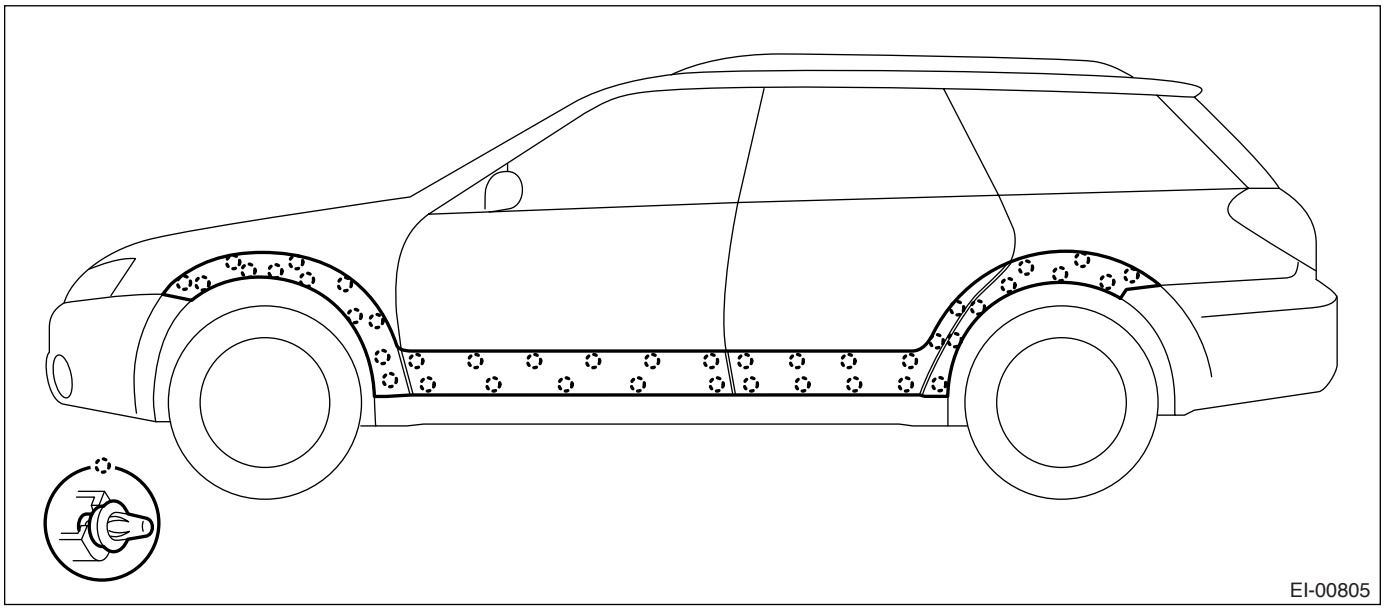
Double-sided tape:
3M 5531-5 or equivalent

2) Heat the adhering part using a heat lamp.
Body side: 40 — 60°C (104 — 140°F)
Protector side: 20 — 30°C (68 — 86°F)
3) Detach the double-sided tape backing sheet, align the clip position, and then adhere to the body using care to avoid air entering.

CAUTION:
To keep the adhesion, do not wash the vehicle within 24 hours from installation.

14.Side Garnish

A: REMOVAL

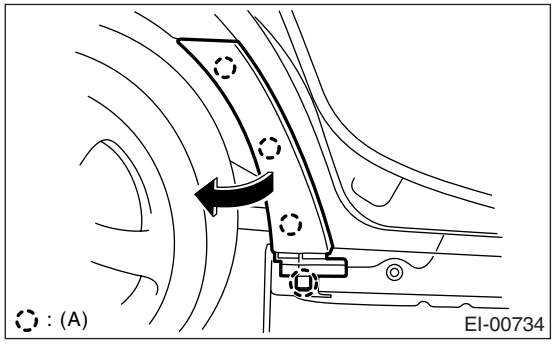


For removal of side garnish, refer to the removal procedure of “Side Protector”. <Ref. to EI-42, REMOVAL, Side Protector.>

15.Rear Quarter Protector

A: REMOVAL

1) Remove the side sill spoilers. <Ref. to EI-41, REMOVAL, Side Sill Spoiler.>
2) Remove the clips (A) with rotating it rearward using the fender arch as a fulcrum, and then remove the rear quarter protector.



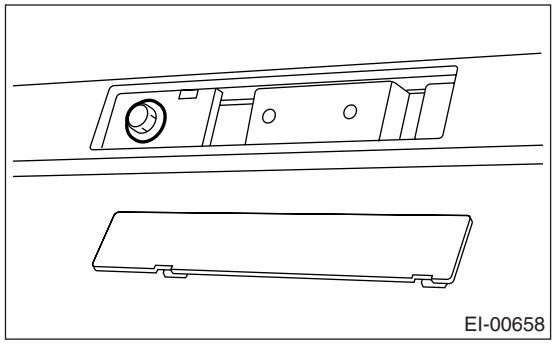
B: INSTALLATION

Install in the reverse order of removal.

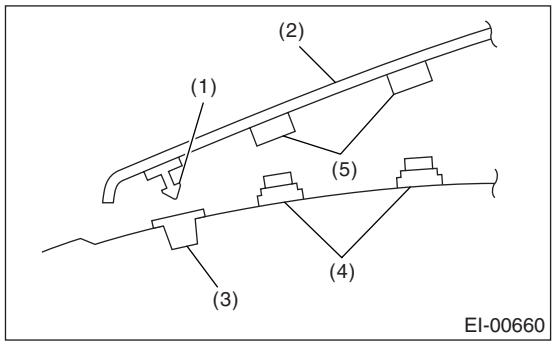
16.Roof Molding

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the roof carrier attachment cover, and remove the bolts. (2 places for each side)

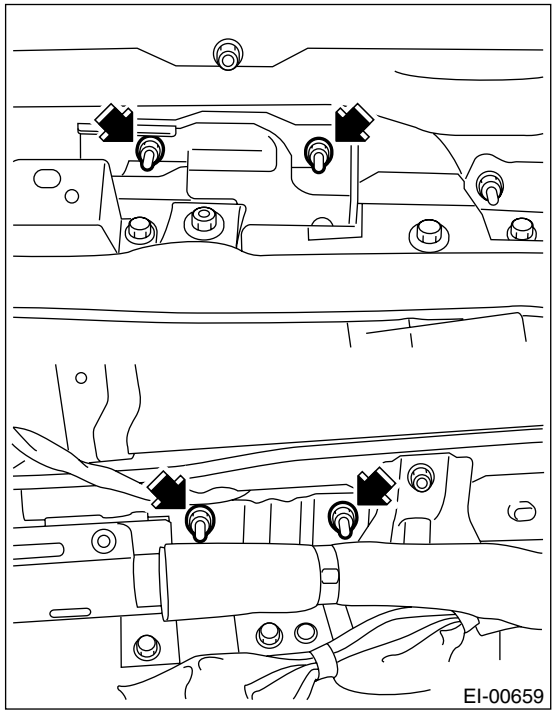


3) Pull the roof molding upward, and remove it from vehicle body.



(1) Locating pin
(2) Roof molding
(3) Cap
(4) Clip
(5) Grommet

4) Remove the roof trim. <Ref. to EI-67, REMOVAL, Roof Trim.>
5) Remove the nuts, and remove the roof carrier attachment.



B: INSTALLATION

Install in the reverse order of removal.

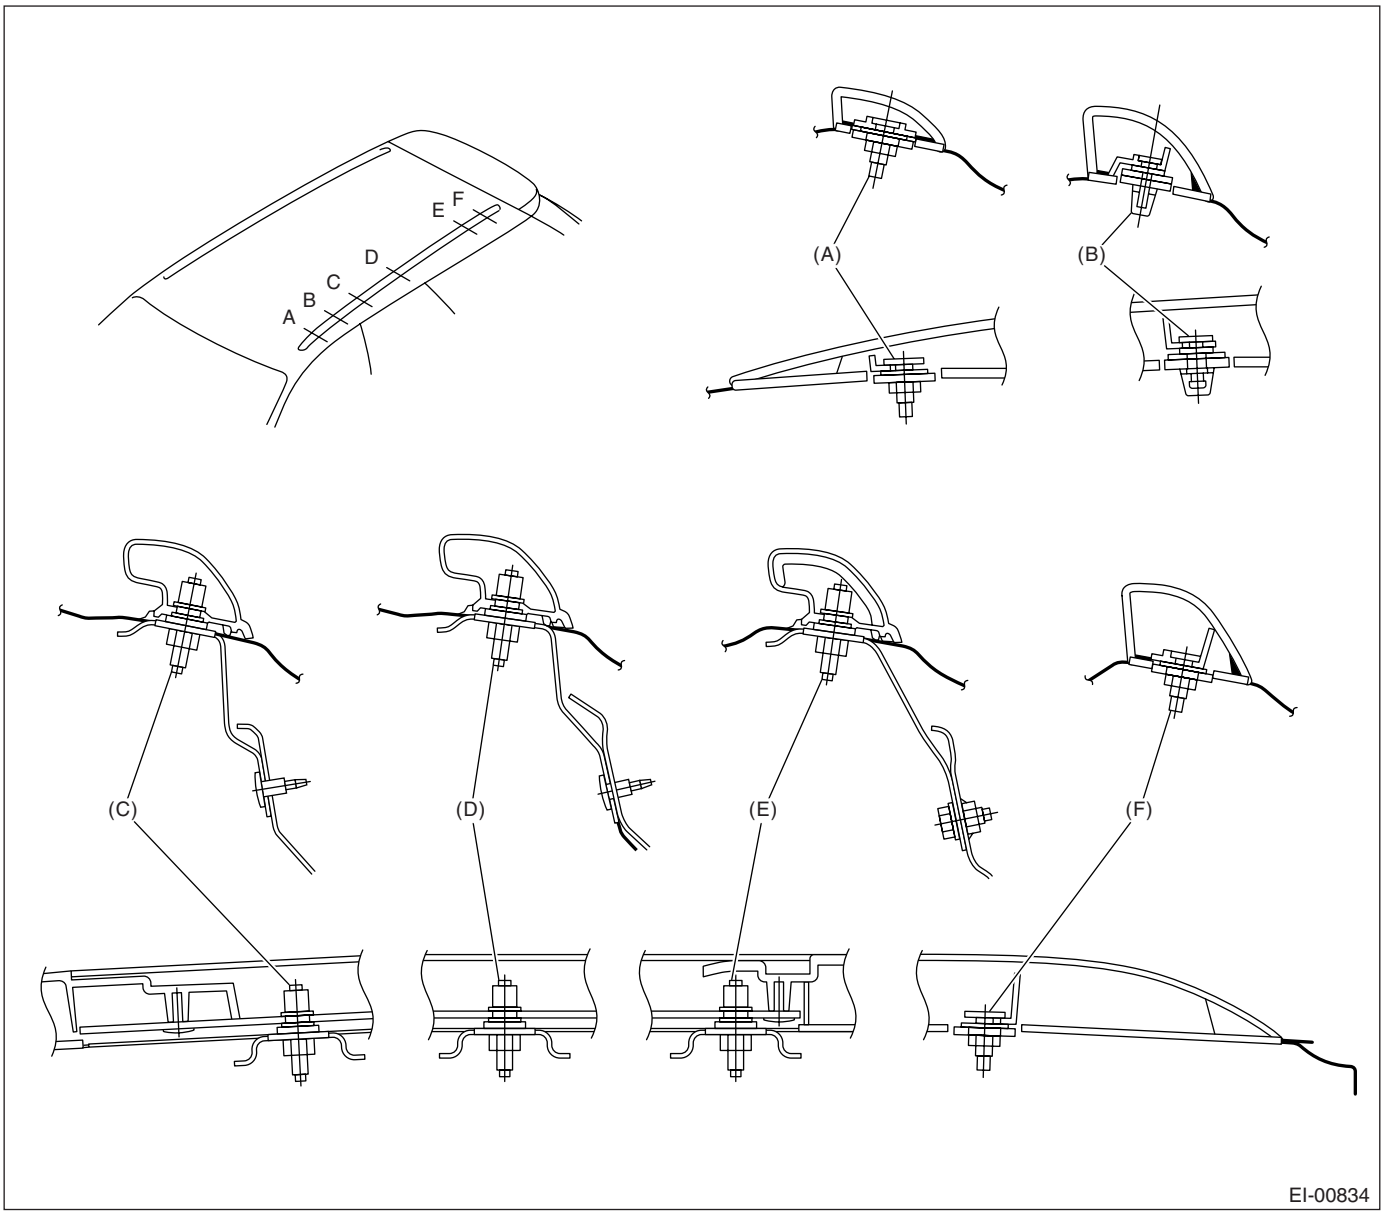
CAUTION:
Replace the clip with new one when the broken pin grommet is found during the removal of roof molding. When the body side cap or clip is damaged, or the roof molding is lifted or peeled from body, be sure to repair them correctly, because those troubles may cause the water leakage.

Tightening torque:
7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

17.Roof Rail

A: REMOVAL

1) Remove the roof trim. <Ref. to EI-67, REMOVAL, Roof Trim.>
2) Remove the six nuts.



B: INSTALLATION

Install in the reverse order of removal.

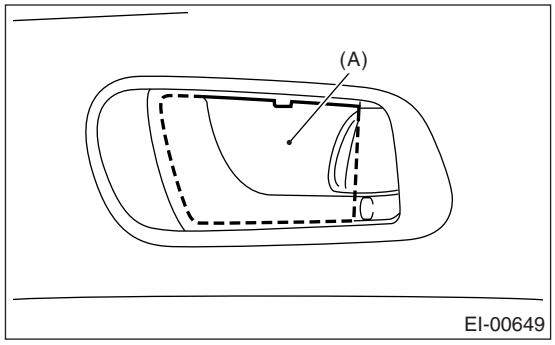
CAUTION:
When removing or installing the roof rail, be careful not to scratch the body panel with the stud bolt of roof rail.

Tightening torque:
7.5 N·m (0.76 kgf-m, 5.53 ft-lb)

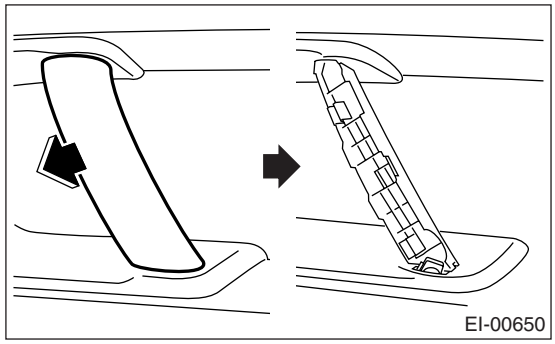
18.Door Trim

A: REMOVAL

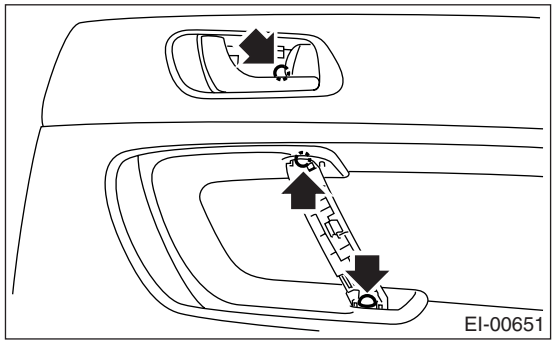
1) Disconnect the ground cable from battery.
2) Remove the cover (A) at inner remote area.



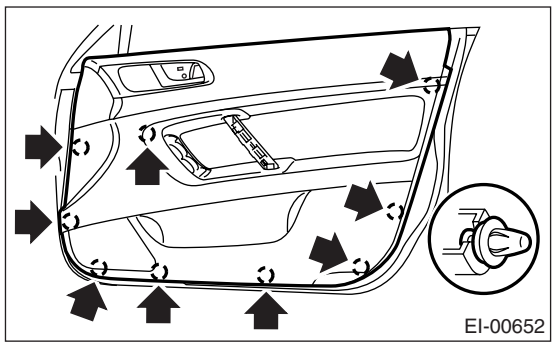
3) Pull the hand grip cover toward you, and remove it.



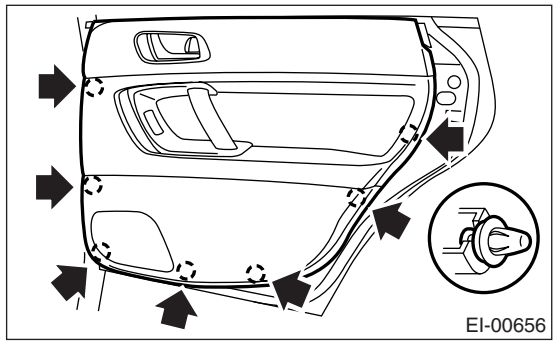
4) Loosen the screws.



5) Remove the clips, and disconnect each connector and wire to remove door trim.
• Front door trim



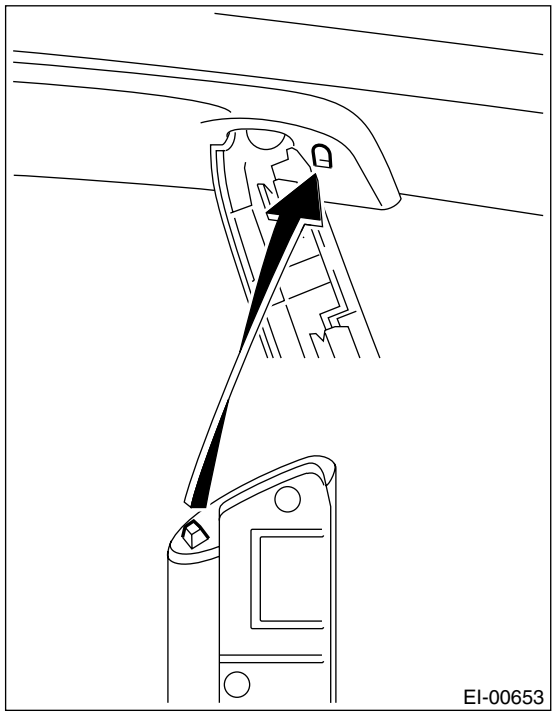
• Rear door trim



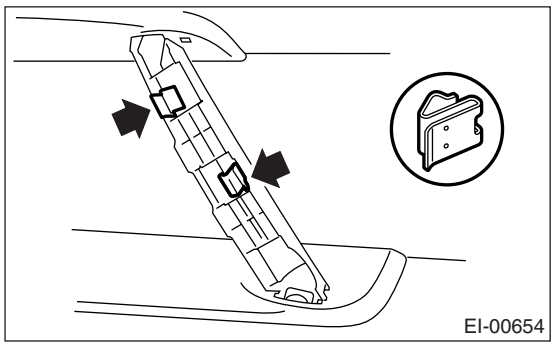
B: INSTALLATION

Install in the reverse order of removal.

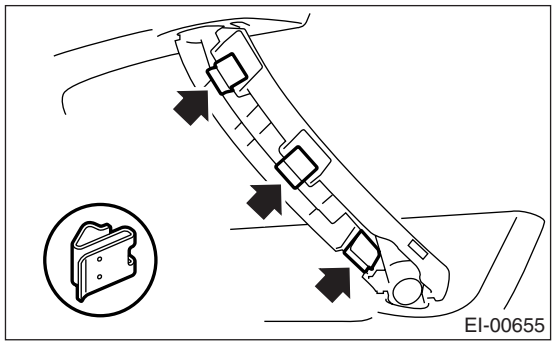
NOTE:
Be careful not to install the hand grip cover and plate clip of hand grip in the wrong direction.
• Hand grip cover (front and rear door)
Convex upward



• Bottom clip of the front door faces the opposite direction



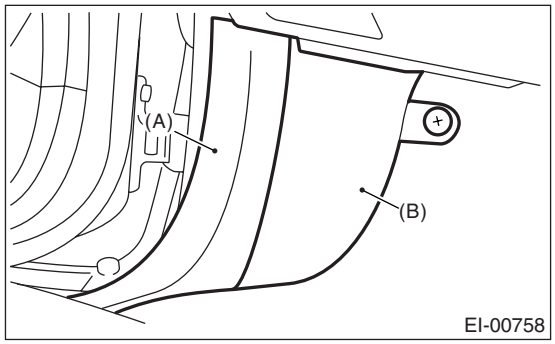
• Lower side of the hand grip cover for front door has pawl part.
• The lowest clip of rear door faces the opposite direction



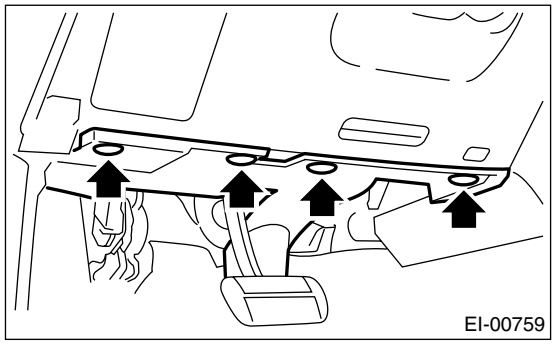
19.Instrument Panel Lower Cover

A: REMOVAL

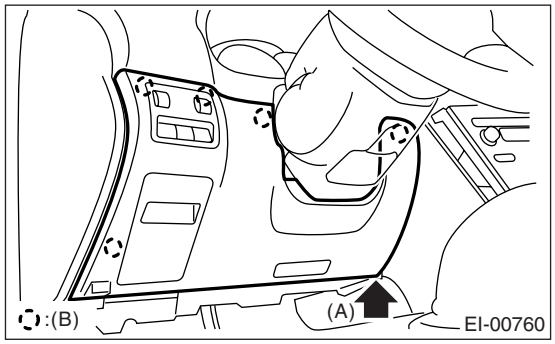
1) Disconnect the ground cable from battery.
2) Remove the front door inside scuff plate (A) and front pillar lower trim (B). <Ref. to EI-60, REMOVAL, Lower Inner Trim.>



3) Remove the clips, and remove the instrument panel lower cover under.



4) Loosen the screw (A), disconnect the connectors, and remove the instrument panel lower cover upper.



(B) Clip

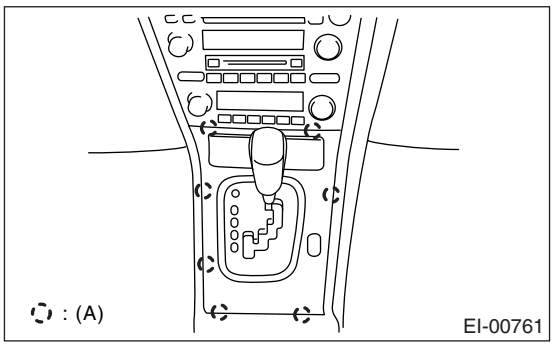
B: INSTALLATION

Install in the reverse order of removal.

20.Glove Box

A: REMOVAL

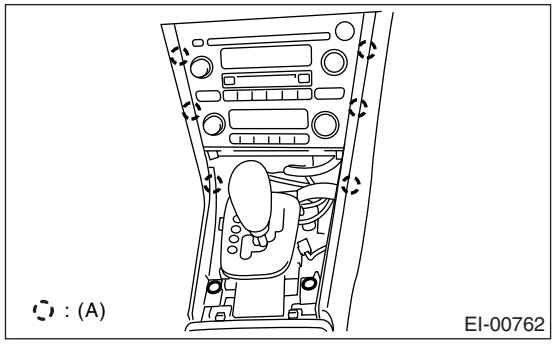
1) Disconnect the ground cable from battery.
2) Remove the console box. <Ref. to EI-53, REMOVAL, Console Box.>
3) Remove the console front panel.



(A) Hook

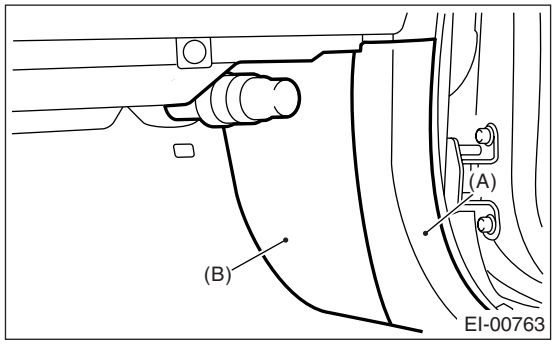
NOTE:
For AT model, remove the ring indicator.
For MT model, remove the shift knob.

4) Remove the console side garnish.

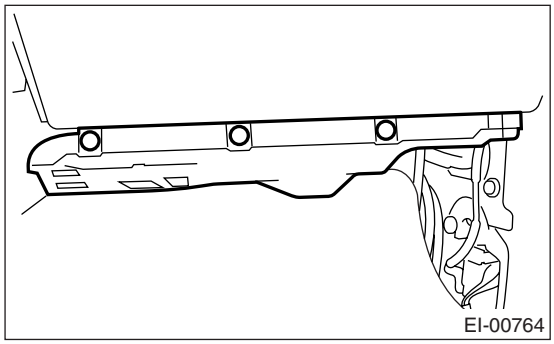


(A) Hook

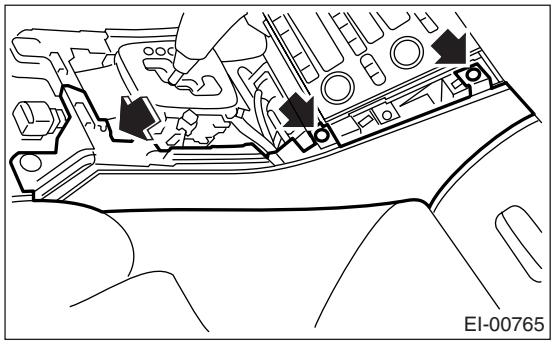
5) Remove the front inside scuff plate (A) and front pillar lower trim (B). <Ref. to EI-60, REMOVAL, Lower Inner Trim.>



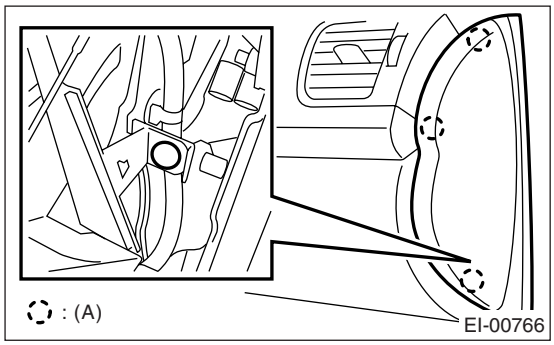
6) Remove the clip, and remove the glove box lower cover.



7) Remove the console side panel.

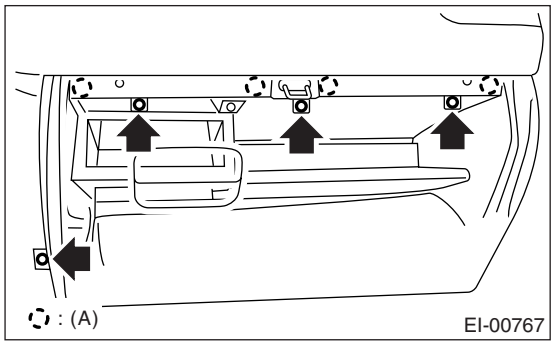


8) Remove the instrument panel side cover, and remove the clip.



(A) Clip

9) Remove the screw, and remove the glove box.



(A) Clip

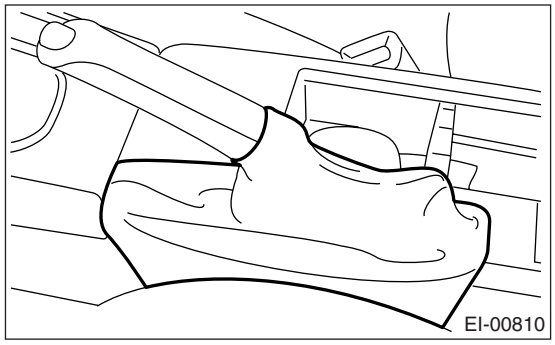
B: INSTALLATION

Install in the reverse order of removal.

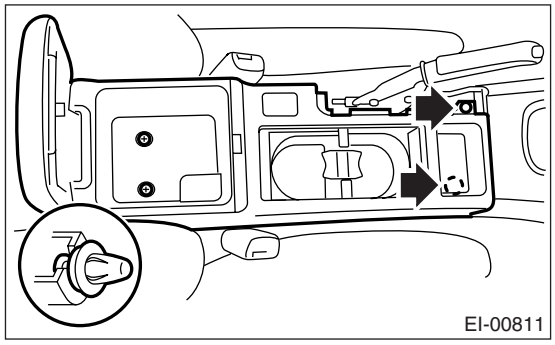
21.Console Box

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the parking brake lever cover.



3) Remove the bolts and clips.



4) Disconnect the connector, and remove the console box.

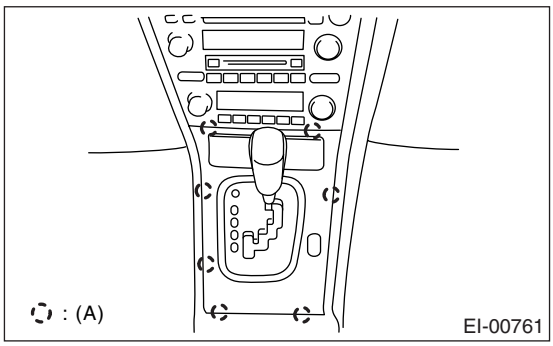
B: INSTALLATION

Install in the reverse order of removal.

22.Center Console

A: REMOVAL

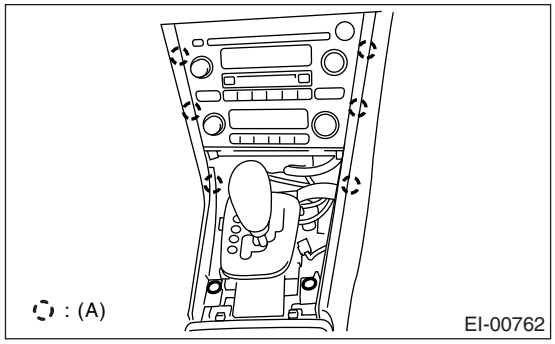
1) Disconnect the ground cable from battery.
2) Remove the console box. <Ref. to EI-53, REMOVAL, Console Box.>
3) Remove the console front panel.



(A) Hook

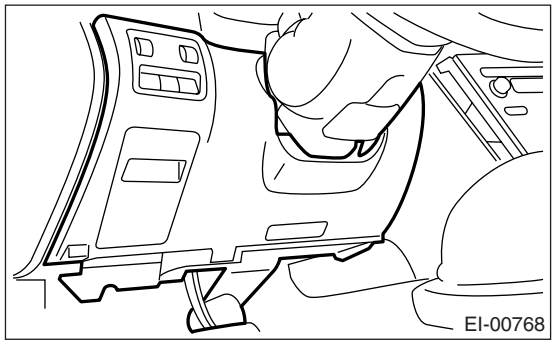
NOTE:
For AT model, remove the ring indicator.
For MT model, remove the shift knob.

4) Loosen the screw, remove the hook, and remove the console side garnish.

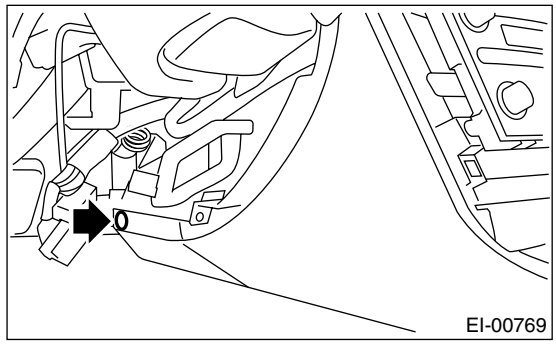


(A) Hook

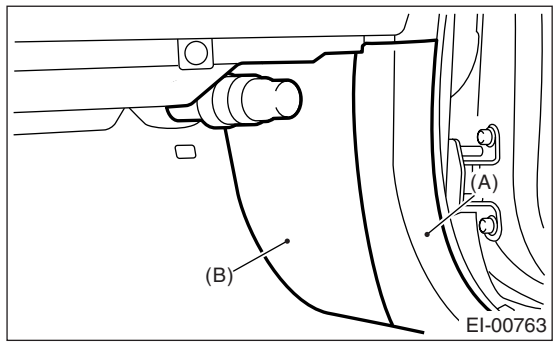
5) Remove the instrument panel lower cover. <Ref. to EI-50, REMOVAL, Instrument Panel Lower Cover.>



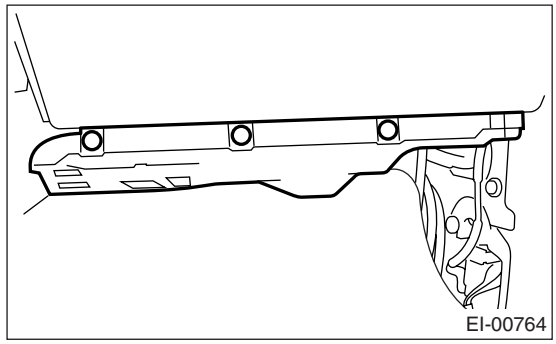
6) Remove the clip at the console side panel tip.



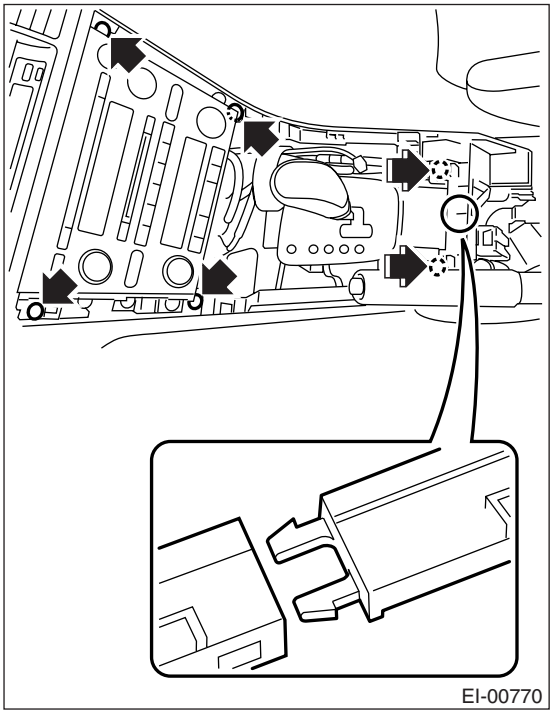
7) Remove the passenger side front inside scuff plate (A) and front pillar lower trim (B). <Ref. to EI-60, REMOVAL, Lower Inner Trim.>



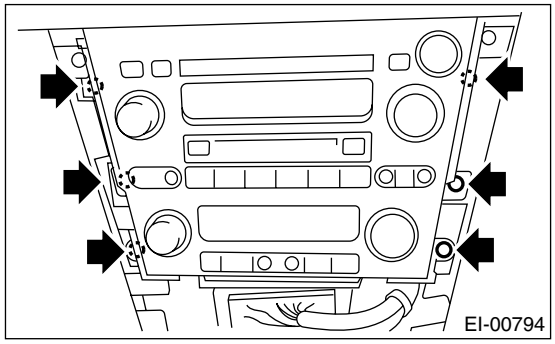
8) Remove the clip, and remove the glove box lower cover.



9) Remove the screws, and remove the console side panel.



10) Loosen the screws to pull out the audio unit assembly, and disconnect the connector to remove audio unit.



NOTE:
Audio unit assembly can be removed without removing the console side panel.

B: INSTALLATION

Install in the reverse order of removal.

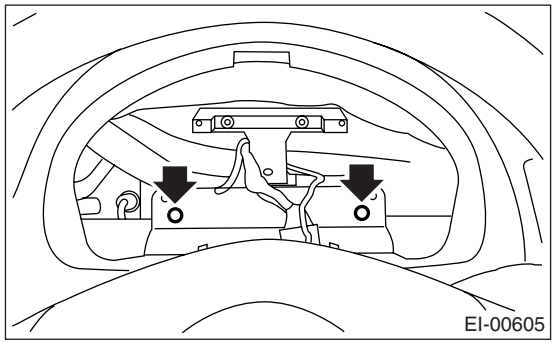
23.Instrument Panel Assembly

A: REMOVAL

1. INSTRUMENT PANEL (EXCLUDING STEERING SUPPORT BEAM)

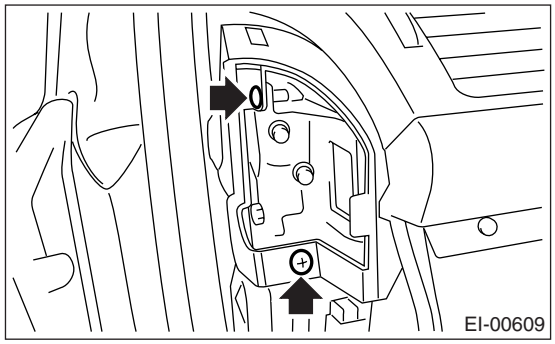
CAUTION:
Be careful to the harness of airbag system when servicing the instrument panel. Damage may cause the system malfunction.

1) Disconnect the ground cable from battery.
2) Remove the front pillar upper trim. <Ref. to EI-62, REMOVAL, Upper Inner Trim.>
3) Remove the console box. <Ref. to EI-53, REMOVAL, Console Box.>
4) Remove the center console. <Ref. to EI-54, REMOVAL, Center Console.>
5) Remove the instrument panel lower cover. <Ref. to EI-50, REMOVAL, Instrument Panel Lower Cover.>
6) Remove the glove box. <Ref. to EI-51, REMOVAL, Glove Box.>
7) Remove the combination meter assembly. <Ref. to IDI-16, REMOVAL, Combination Meter Assembly.>
8) Remove the screws.



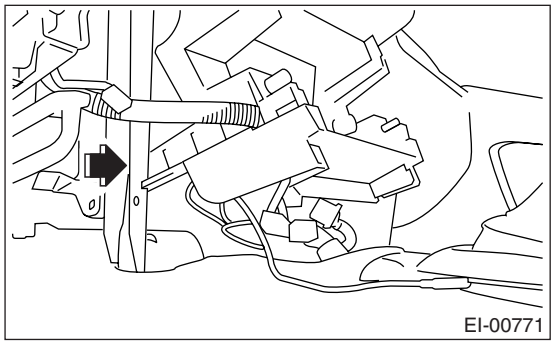
EI-00605

9) Remove the driver side instrument panel side cover, and remove the screws.



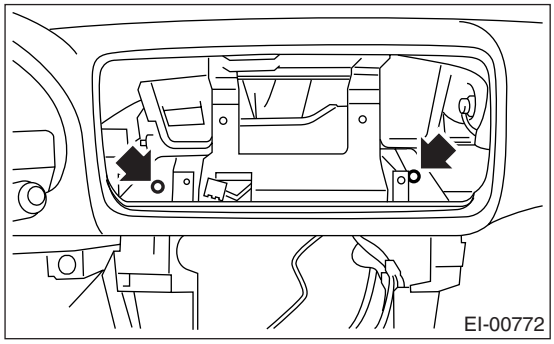
EI-00609

10) Remove the screw at the side of center console.



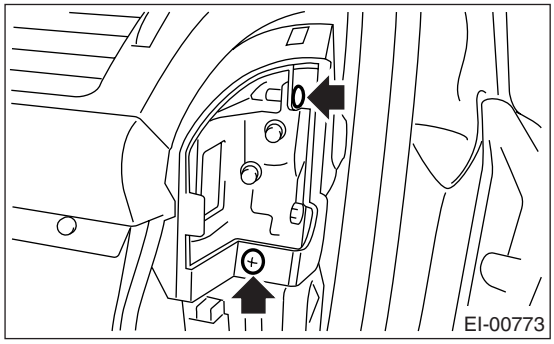
EI-00771

11) Remove the center air vent grille of instrument panel. <Ref. to AC-44, CENTER GRILLE, REMOVAL, Air Vent Grille.>
12) Remove the screws.



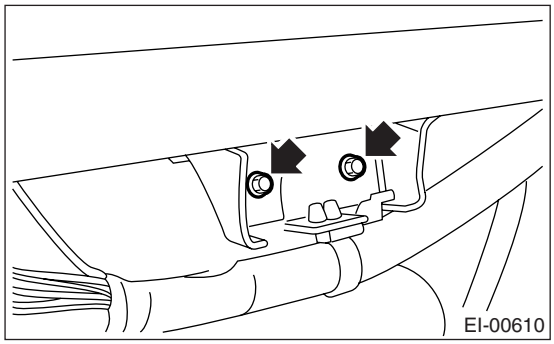
EI-00772

13) Remove the screws at side of passenger side instrument panel.



EI-00773

14) Remove the bolts securing passenger side airbag module to the steering support beam.

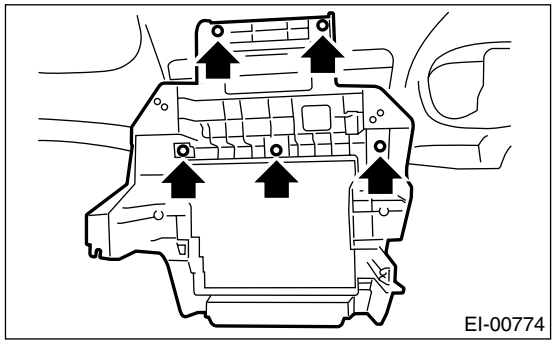


EI-00610

15) Disconnect the connectors, and remove the instrument panel from vehicle body.

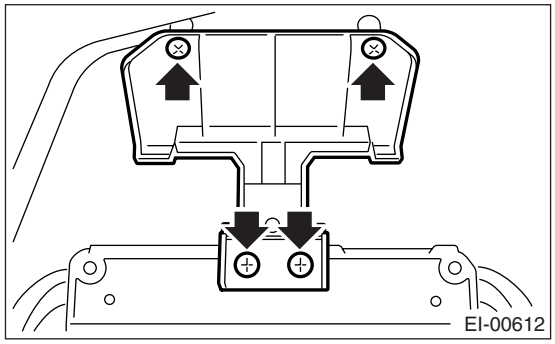
NOTE:
• If necessary, make matching marks for easy reassembly.
• When storing the removed instrument panel, be sure to prepare a table or the like to put instrument panel on to prevent damage.

16) Remove the side air vent grille. <Ref. to AC-44, REMOVAL, Air Vent Grille.>
17) Remove the heater vent duct. <Ref. to AC-46, REMOVAL, Heater Vent Duct.>
18) Loosen the screws to remove center console frame.



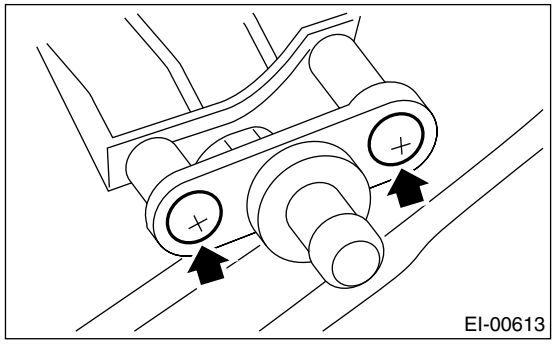
EI-00774

19) Loosen the screws to remove meter bracket.



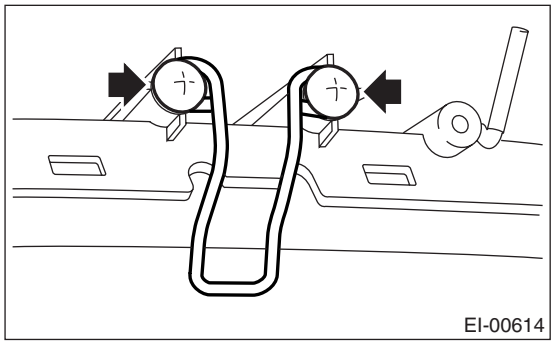
EI-00612

20) Loosen the screws to remove instrument panel matching pins.



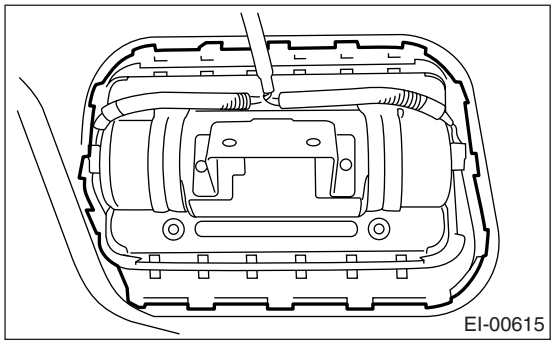
EI-00613

21) Loosen the screws to remove glove box striker.



EI-00614

22) Remove the pawl, and remove the passenger's airbag module.



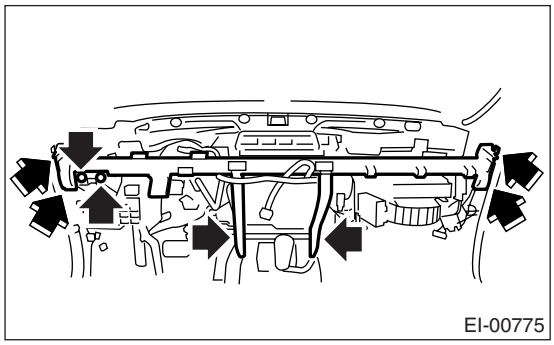
EI-00615

2. STEERING SUPPORT BEAM

1) Remove the instrument panel. <Ref. to EI-56, INSTRUMENT PANEL (EXCLUDING STEERING SUPPORT BEAM), REMOVAL, Instrument Panel Assembly.>
2) Remove the steering shaft assembly. <Ref. to PS-23, REMOVAL, Tilt Steering Column.>
3) Remove each harness clip, and remove the harness from steering support beam.

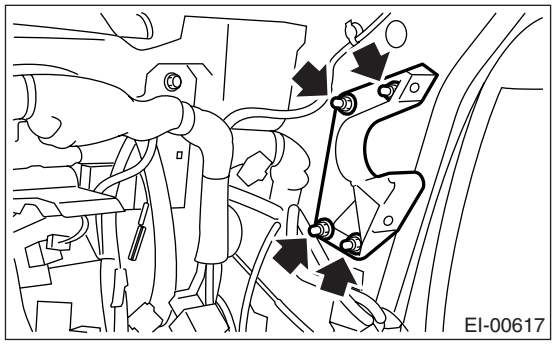
NOTE:
If necessary, make matching marks for easy reassembly.

4) Remove the bolt and remove steering support beam.



EI-00775

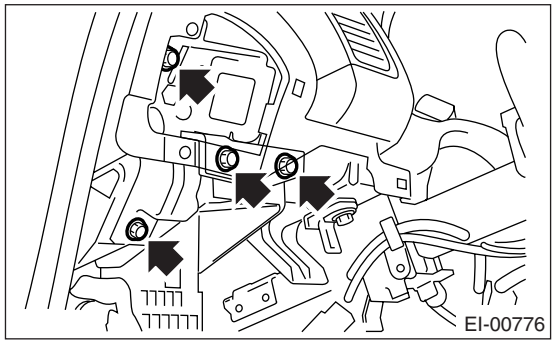
5) Remove the steering support beam bracket.



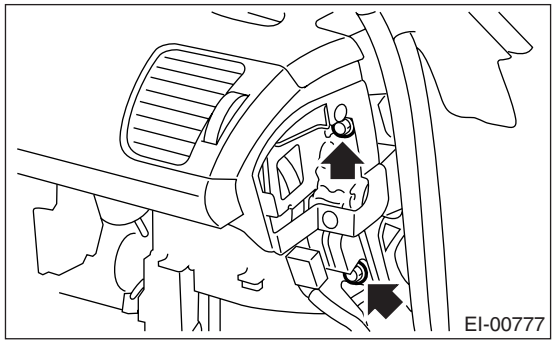
3. INSTRUMENT PANEL ASSEMBLY (INCLUDING STEERING SUPPORT BEAM)

CAUTION:
Be careful to the harness of airbag system when servicing the instrument panel. Damage may cause the system malfunction.

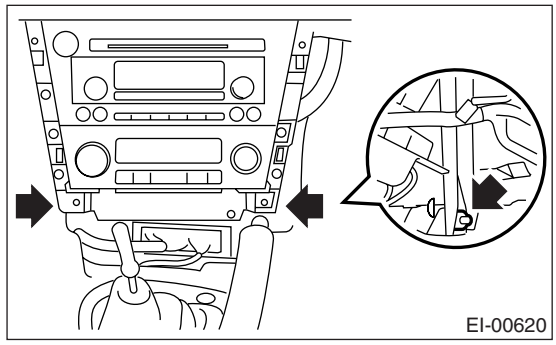
1) Remove the front pillar upper trim. <Ref. to EI-62, REMOVAL, Upper Inner Trim.>
2) Remove the center console. <Ref. to EI-54, REMOVAL, Center Console.>
3) Remove the instrument panel lower cover. <Ref. to EI-50, REMOVAL, Instrument Panel Lower Cover.>
4) Remove the glove box. <Ref. to EI-51, REMOVAL, Glove Box.>
5) Remove the steering shaft assembly. <Ref. to PS-23, REMOVAL, Tilt Steering Column.>
6) Remove the driver side instrument panel side cover, and remove the bolts.



7) Remove the bolts at the side of passenger side instrument panel.



8) Loosen the bolts on the center console side.



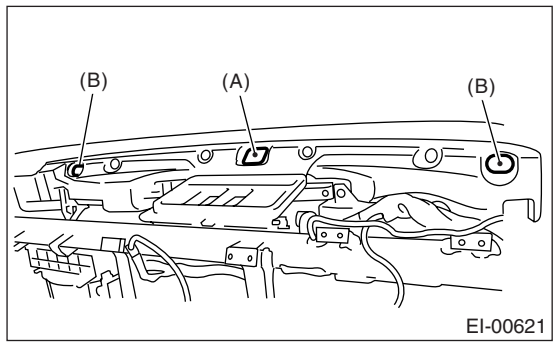
9) Disconnect each connector, and remove the instrument assembly.

NOTE:
If necessary, make matching marks for easy reassembly.

B: INSTALLATION

1. INSTRUMENT PANEL (EXCLUDING STEERING SUPPORT BEAM)

1) Insert the matching pins (3 places) on the instrument panel tip into the grommet (A) and (B) on the body panel side.



2) Check the inserted state of matching pins, and pull the harness around.
3) Tighten the instrument panel with screw, and recheck the installation of instrument panel and the state of pulled harness.
4) Install in the reverse order of removal.

2. STEERING SUPPORT BEAM

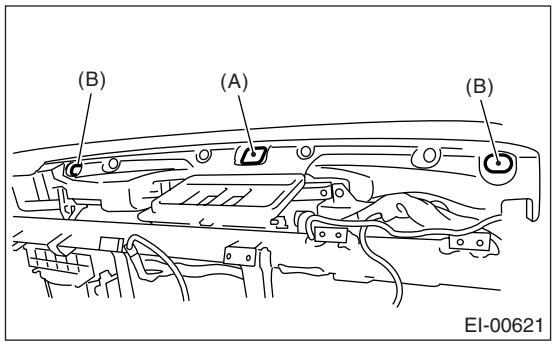
1) Temporarily tighten the steering support beam with bolt, and pull the harness around.
2) Make sure that there is no mutual interference in each pedal, and tighten the each bolt.

Tightening torque:
25 N·m (25.5 kgf-m, 18.4 ft-lb)

3) Install in the reverse order of removal.

3. INSTRUMENT PANEL ASSEMBLY (INCLUDING STEERING SUPPORT BEAM)

1) Insert the matching pins (3 places) on the instrument panel tip into the grommet (A) and (B) on the body panel side.



2) Check the inserted state of matching pins, and pull the harness around.
3) Temporarily tighten the steering support beam with bolt, and pull the harness around.
4) Make sure that there is no mutual interference in each pedal, and tighten the each bolt.

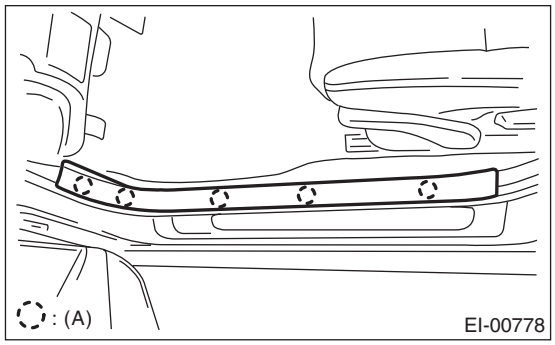
Tightening torque:
25 N·m (25.5 kgf-m, 18.4 ft-lb)

5) Install in the reverse order of removal.

24.Lower Inner Trim

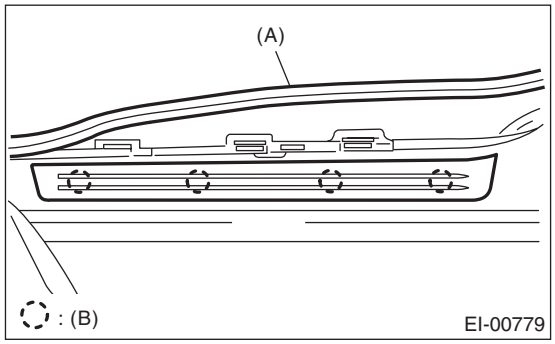
A: REMOVAL

1) Remove the hook, and remove the inside scuff plate.



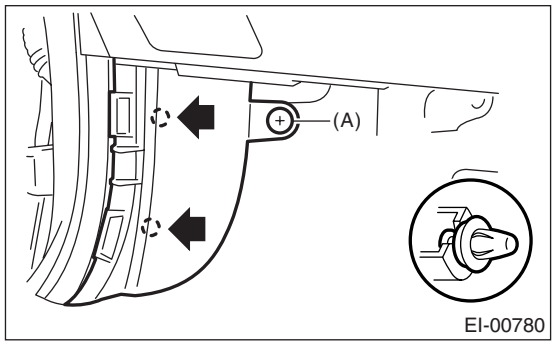
(A) Hook

2) Remove the door molding (A), and remove the outside scuff plate.



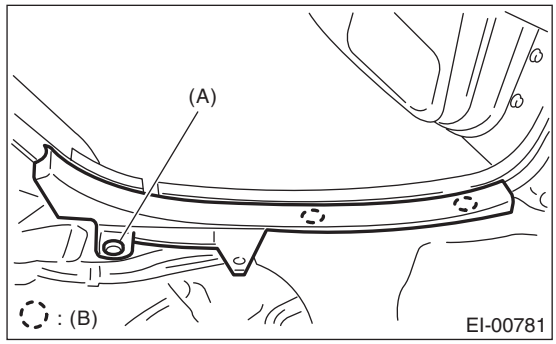
(B) Clip

3) Remove the clip (A), and remove the front pillar lower trim.



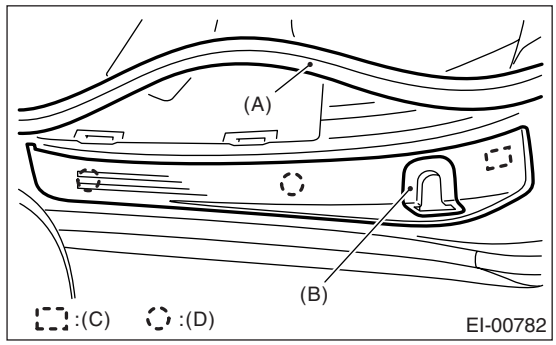
4) Remove the rear seat cushion. <Ref. to SE-14, REMOVAL, Rear Seat.>

5) Remove the clip (A), and remove the inside scuff plate.



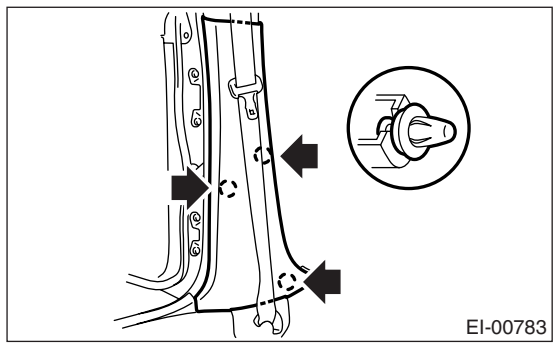
(B) Hook

6) Remove the door molding (A) and door catcher cover (B), and then remove the outside scuff plate.

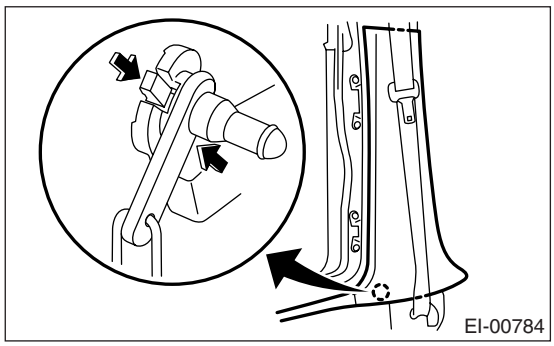


(C) Hook with plate clip
(D) Clip

7) Remove the clips of the center pillar lower trim.



8) Remove the center pillar lower trim while pushing the pawl part on the upper and lower side of dropout prevention clip.



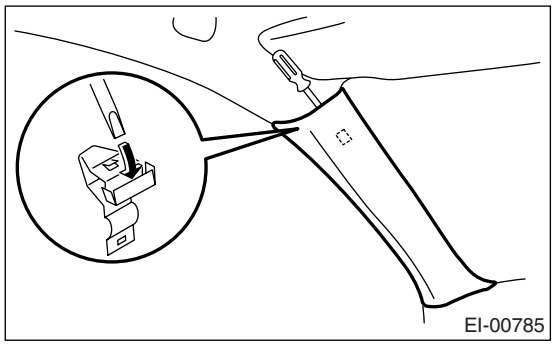
B: INSTALLATION

Install in the reverse order of removal.

25.Upper Inner Trim

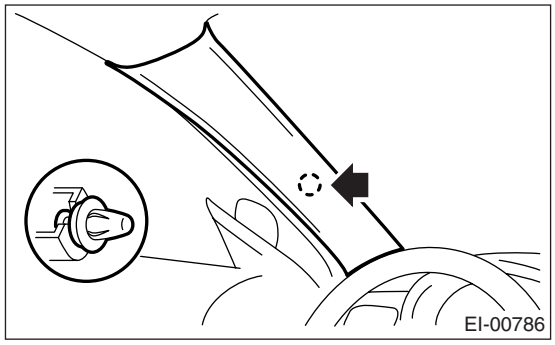
A: REMOVAL

1) From the top side of trim, remove the metal clip using flat tip driver.



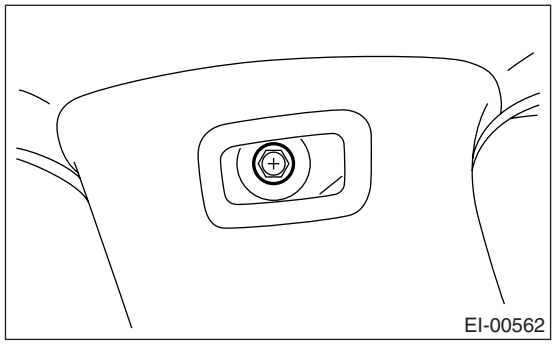
CAUTION:
When metal clip is removed from upper inner trim, replace the both of upper inner trim and metal clip with new ones.

2) Remove the front pillar upper trim.

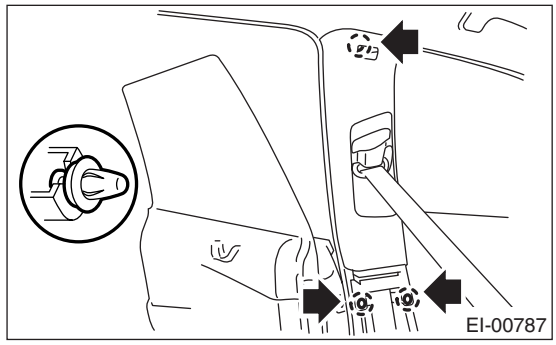


3) Remove the front inside scuff plate, rear inside scuff plate and center pillar lower trim. <Ref. to EI-60, REMOVAL, Lower Inner Trim.>

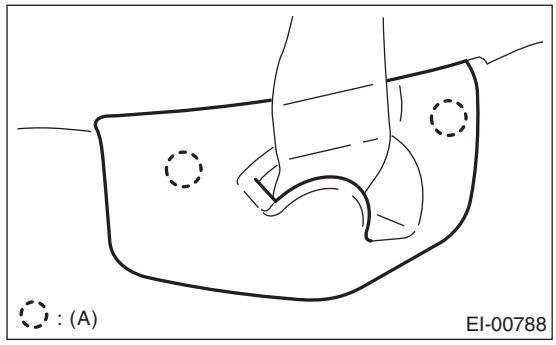
4) Remove the cap on the upper side of pillar trim, and remove the bolt inside. (Model with curtain air-bag)



5) Remove the center pillar upper trim.

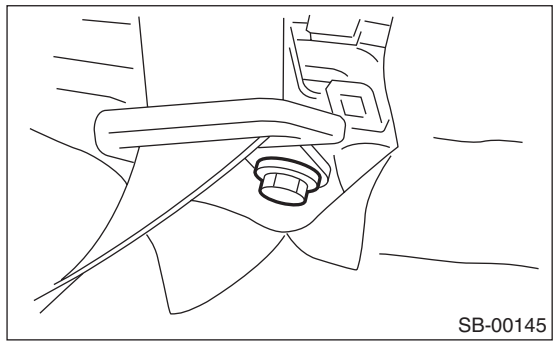


6) Remove the seat belt lower anchor bolt cover.



(A) Clip

7) Remove the seat belt lower anchor bolt, and pull out the seat belt from center pillar upper trim.



B: INSTALLATION

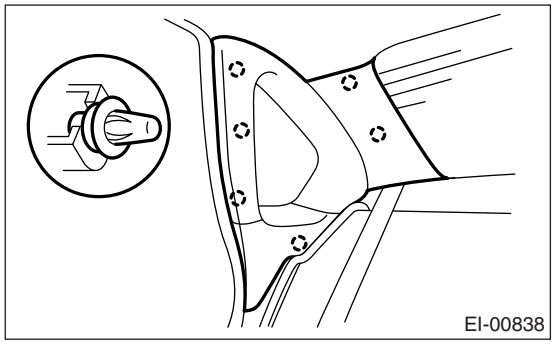
Install in the reverse order of removal.

26.Rear Quarter Trim

A: REMOVAL

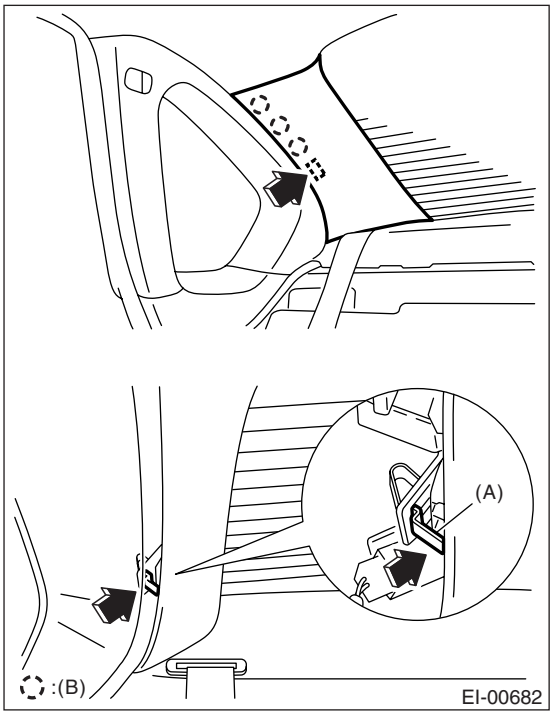
1. SEDAN MODEL (MODEL WITHOUT CURTAIN AIRBAG)

1) Remove the rear seat. <Ref. to SE-14, SEDAN MODEL, REMOVAL, Rear Seat.>
2) Remove the rear quarter trim.



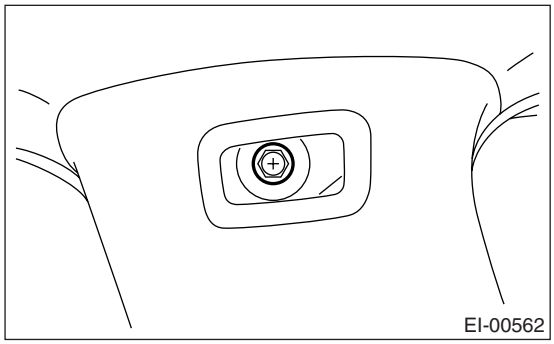
2. SEDAN MODEL (MODEL WITH CURTAIN AIRBAG)

1) Remove the rear seat. <Ref. to SE-14, WAGON MODEL, REMOVAL, Rear Seat.>
2) Turn over the trim, and remove the quarter trim rear by pressing the claw (A) of metal clip using flat tip screwdriver or the like.

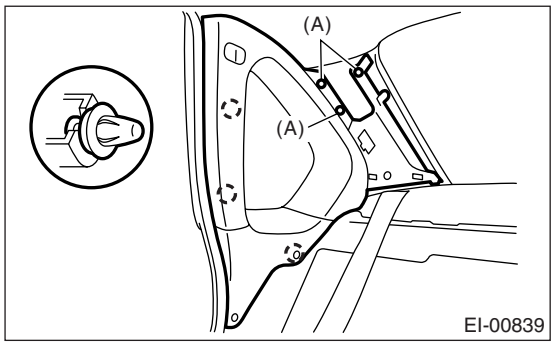


(B) Hook

3) Remove the cap on the upper side of trim, and remove the bolt inside.

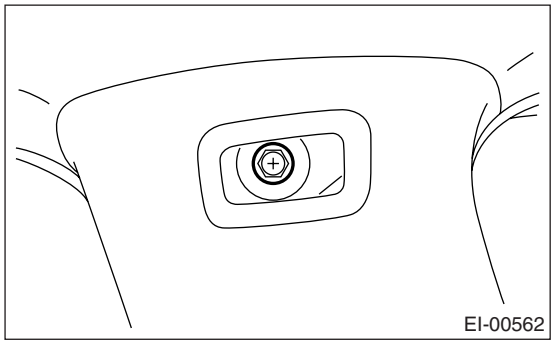


4) Remove the bolts (A), and remove the quarter trim (front).

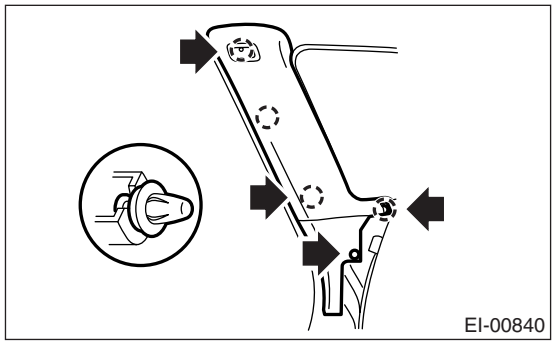


3. WAGON MODEL

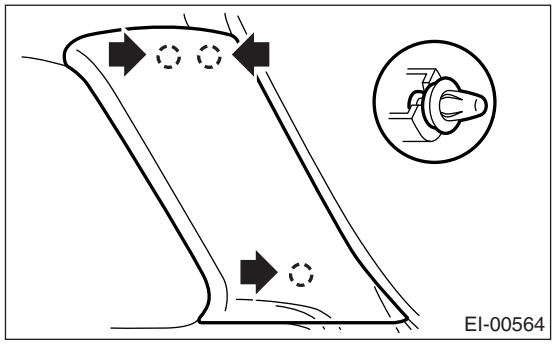
1) Remove the rear seat cushion and backrest shoulder. <Ref. to SE-14, SEDAN MODEL, REMOVAL, Rear Seat.>
2) Remove the cap on the upper side of pillar trim, and remove the bolt inside. (Model with curtain airbag)



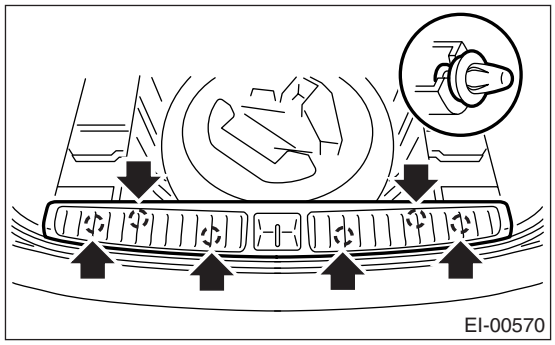
3) Remove the clip, and remove the quarter front pillar trim.



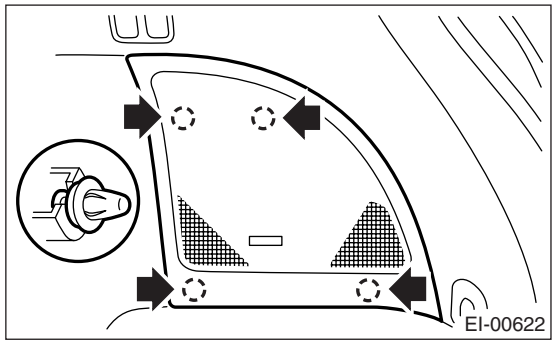
4) Remove the quarter rear pillar trim.



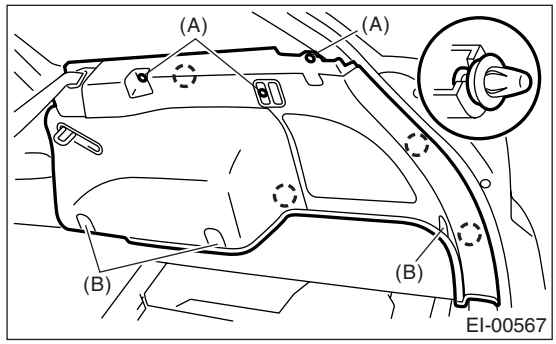
5) Remove the luggage floor box. <Ref. to EI-74, REMOVAL, Luggage Floor Box.>
6) Remove the luggage floor end cover.



7) Remove the woofer cover. (Model with McIntosh Audio)



8) Remove the screws (A) and bolts (B), and remove the quarter lower trim.



NOTE:
• Remove the screw cover on the tonneau cover installing part.
• Pull out the shopping bag hook, remove the screw on back.

B: INSTALLATION

1. SEDAN MODEL

Install in the reverse order of removal.

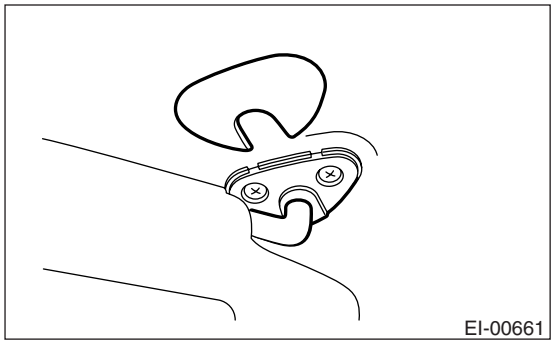
2. WAGON MODEL

Install in the reverse order of removal.

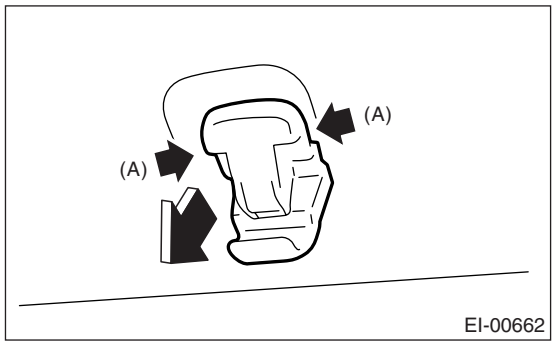
27.Sun Visor

A: REMOVAL

1) Remove the cover, loosen the mounting screws, and remove the sun visor.



2) Disconnect the connector. (Model with vanity mirror light)
3) Press the (A) on both side using flat tip driver, pull the sun visor hook and remove it.



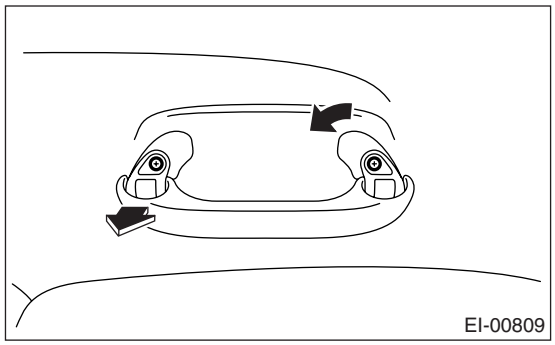
B: INSTALLATION

Install in the reverse order of removal.

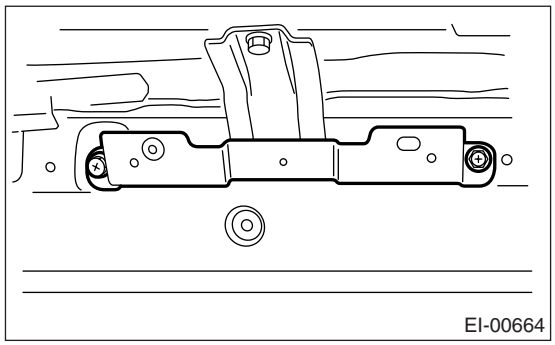
28. Assist Grip

A: REMOVAL

1) Remove the screw cover, and remove the screw inside.
2) Pull the left side of assist grip toward you, and rotate the right side of it counterclockwise to remove.



3) Remove the roof trim. <Ref. to EI-67, REMOVAL, Roof Trim.>
4) Remove the bolts, and remove the assist grip bracket.



B: INSTALLATION

Install in the reverse order of removal.

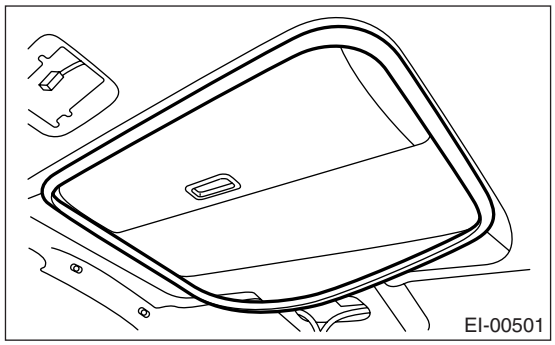
CAUTION:
Be sure to install the grommet to assist grip bracket.
When install the assist grip without grommet, it may cause the faulty returning.

29.Roof Trim

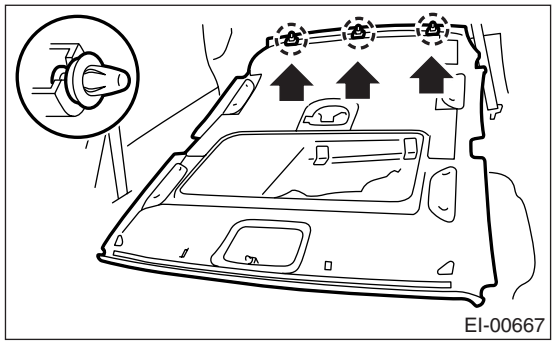
A: REMOVAL

1. SEDAN MODEL

1) Disconnect the ground cable from battery.
2) Remove the front seats. <Ref. to SE-7, REMOVAL, Front Seat.>
3) Remove the rear seat. <Ref. to SE-14, REMOVAL, Rear Seat.>
4) Remove the console box. <Ref. to EI-53, REMOVAL, Console Box.>
5) Remove the center console. <Ref. to EI-54, REMOVAL, Center Console.>
6) Remove the select lever. (AT model)
<Ref. to CS-7, REMOVAL, Select Lever.>
7) Remove the spot map light. <Ref. to LI-34, REMOVAL, Spot Map Light.>
8) Remove the room light. <Ref. to LI-35, REMOVAL, Room Light.>
9) Remove the sun visor. <Ref. to EI-65, REMOVAL, Sun Visor.>
10) Remove the assist grip. <Ref. to EI-66, REMOVAL, Assist Grip.>
11) Remove the upper inner trim. <Ref. to EI-62, REMOVAL, Upper Inner Trim.>
12) Remove the rear quarter trim. <Ref. to EI-63, SEDAN MODEL (MODEL WITH CURTAIN AIRBAG), REMOVAL, Rear Quarter Trim.>
13) Remove the sunroof opening trim. (Model with sunroof)



14) Remove the clips and each harness, and remove the roof trim.
15) Pull out the roof trim from vehicle.

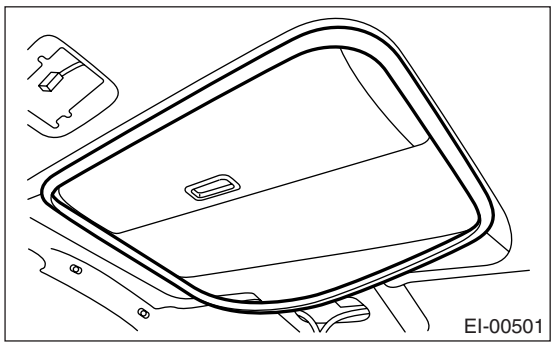


2. WAGON MODEL

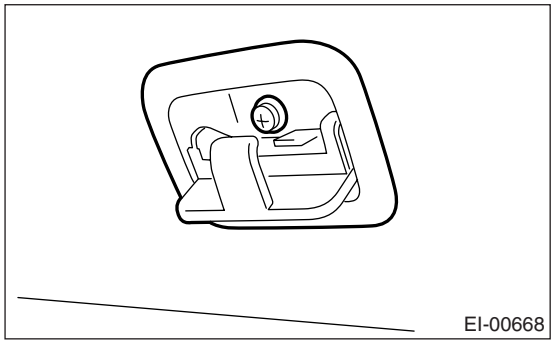
1) Disconnect the ground cable from battery.
2) Remove the spot map light. <Ref. to LI-34, REMOVAL, Spot Map Light.>
3) Remove the room light. <Ref. to LI-35, REMOVAL, Room Light.>
4) Remove the luggage room light. <Ref. to LI-36, REMOVAL, Luggage Room Light.>
5) Remove the sun visor. <Ref. to EI-65, REMOVAL, Sun Visor.>
6) Remove the assist grip. <Ref. to EI-66, REMOVAL, Assist Grip.>
7) Remove the upper inner trim. <Ref. to EI-62, REMOVAL, Upper Inner Trim.>
8) Remove the rear quarter trim. <Ref. to EI-63, WAGON MODEL, REMOVAL, Rear Quarter Trim.>

CAUTION:
Do not remove the roof end trim with excessive force. Otherwise roof trim may be damaged.
Roof trim and roof end trim are fastened by rivets.

9) Remove the sunroof opening trim. (Model with sunroof)

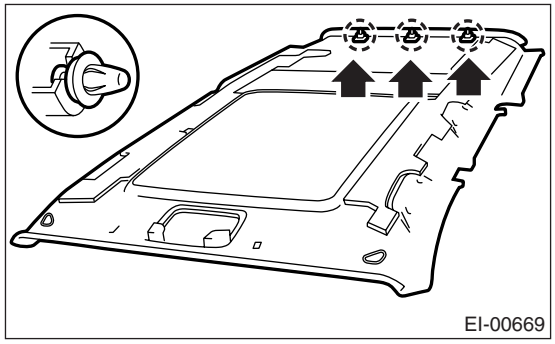


10) Remove the coat hook.



11) Remove the clips and each harness, pull out the rear center seat belt, and remove the roof trim.

CAUTION:
Do not remove the roof end trim with excessive force. Otherwise roof trim may be damaged.



B: INSTALLATION

1. SEDAN MODEL

Install in the reverse order of removal.

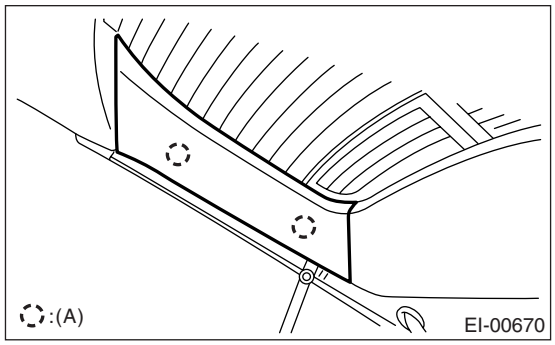
2. WAGON MODEL

Install in the reverse order of removal.

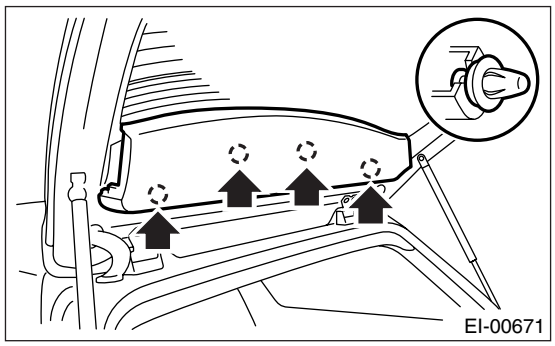
30.Rear Gate Trim

A: REMOVAL

1) Remove the clips (A), and remove the rear gate pillar trim.

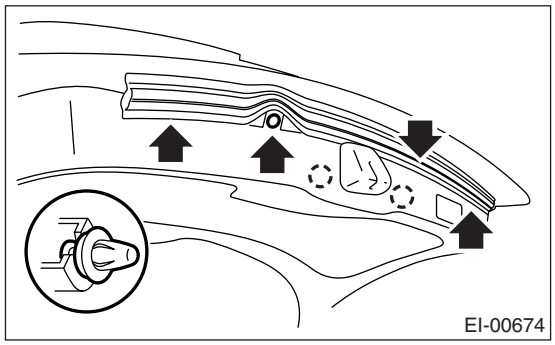


2) Remove the clips, and detach the rear gate upper trim.

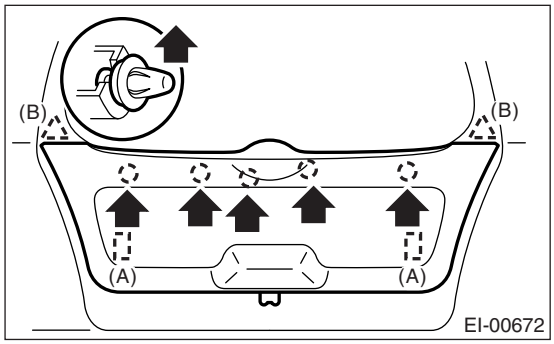


3) Remove the cover in the inner handle, loosen the inside screw.

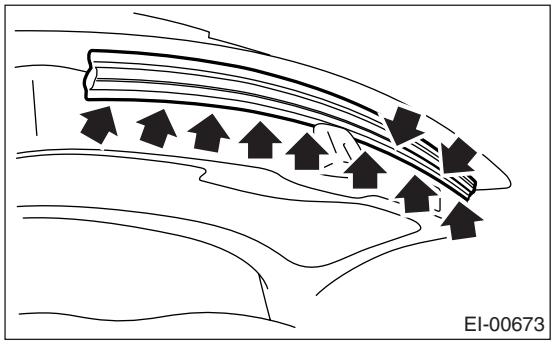
4) Turn over the weather strip, and remove the clips.



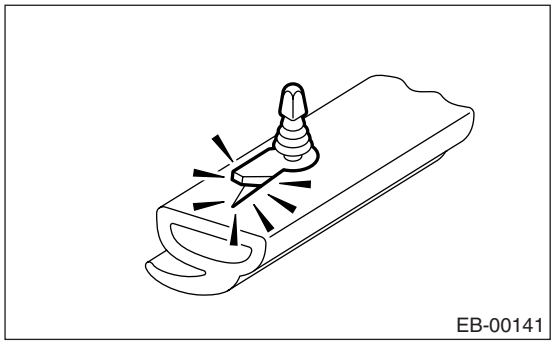
5) Remove the clips (A) and (B), remove the rear gate lower trim.



6) Remove the rear gate weather strip.



NOTE:
If the weather strip clip is removed with excessive force, the weather strip may be damaged. Be sure to use a clip remover to remove.



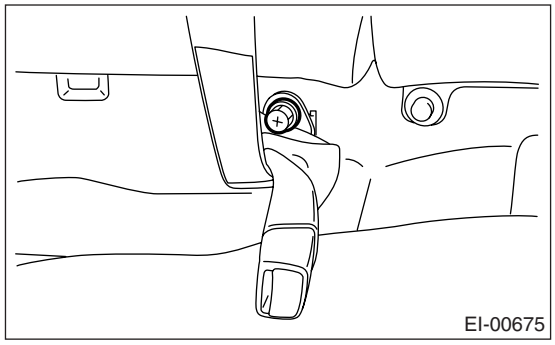
B: INSTALLATION

Install in the reverse order of removal.

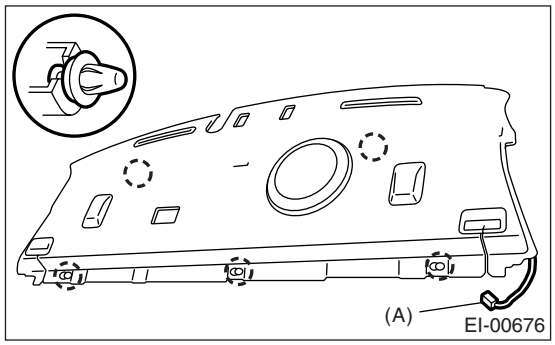
31.Rear Shelf Trim

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the rear quarter trim. <Ref. to EI-63, SEDAN MODEL (MODEL WITH CURTAIN AIR-BAG), REMOVAL, Rear Quarter Trim.>
3) Remove the high-mounted stop light. <Ref. to LI-33, REMOVAL, High-mounted Stop Light.>
4) Remove the rear seat cushion. <Ref. to SE-14, WAGON MODEL, REMOVAL, Rear Seat.>
5) Remove the lower anchor bolt of rear center seat belt.



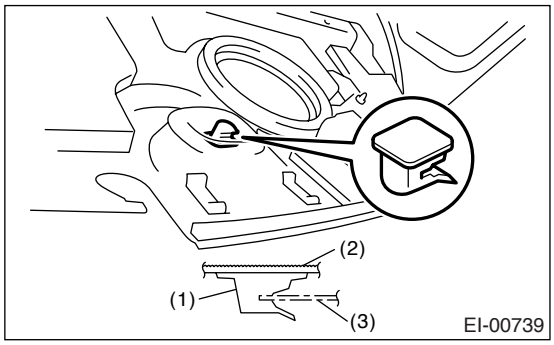
6) After disconnecting the high-mounted stop light harness connector (A) and removing the five clips, remove the rear shelf trim with pulling it frontward.



B: INSTALLATION

Install in the reverse order of removal.

NOTE:
Securely insert the vehicle body panel into the hook of rear shelf trim center, and then install the rear shelf trim.



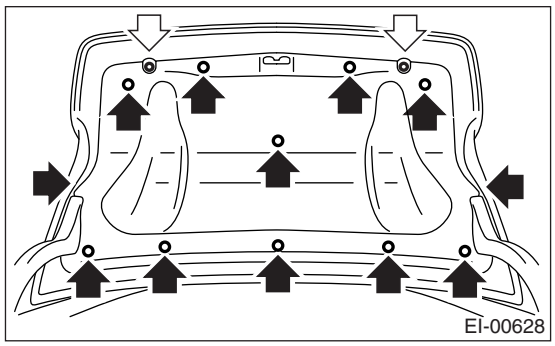
(1) Hook
(2) Rear shelf trim
(3) Vehicle body panel

32. Trunk Room Trim

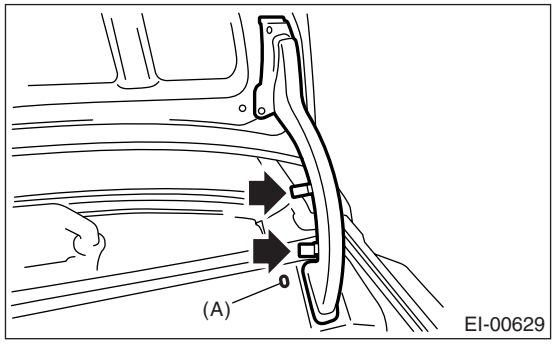
A: REMOVAL

1. TRUNK LID TRIM

1) Remove the trim clips and stopper rubbers, and remove the trunk lid trim.

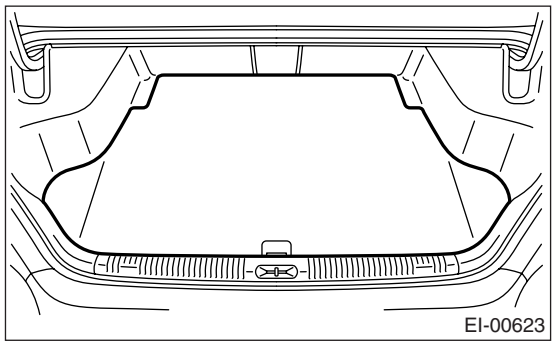


2) Remove the clip (A) of trunk side trim, and then remove the trunk lid arm cover.

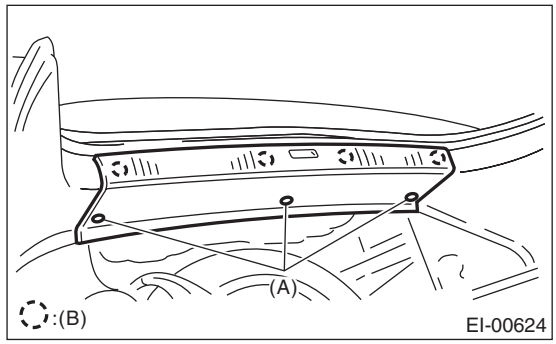


2. TRUNK ROOM TRIM

1) Remove the trunk room mat.

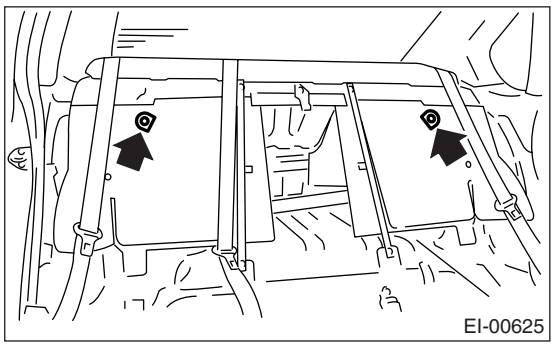


2) Remove the trim clips (A), and remove the trunk room end cover.

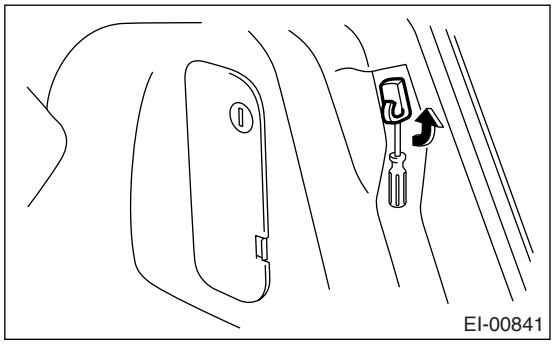


(B) Clip

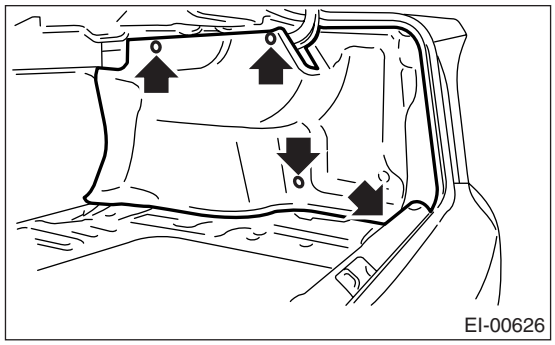
3) Remove the rear seat backrest, and then remove the trim clips at the front side of trunk side trim. <Ref. to SE-14, WAGON MODEL, REMOVAL, Rear Seat.>



4) Insert the flat tip driver from the lower side of trunk hook, and then remove the trunk hook with rotating it 90°.



5) Remove the trim clips, and remove the trunk side trim.



B: INSTALLATION

1. TRUNK LID TRIM

Install in the reverse order of removal.

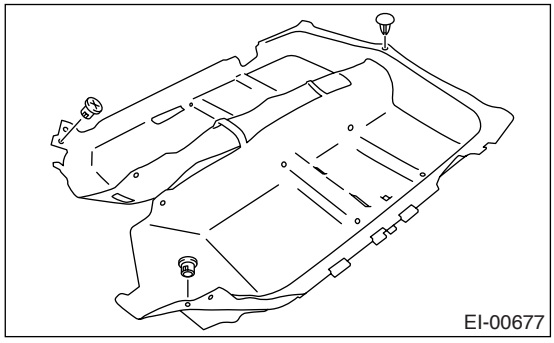
2. TRUNK ROOM TRIM

Install in the reverse order of removal.

33.Floor Mat

A: REMOVAL

1) Remove the front seats. <Ref. to SE-7, REMOVAL, Front Seat.>
2) Remove the rear seat cushion. <Ref. to SE-14, REMOVAL, Rear Seat.>
3) Remove the console box. <Ref. to EI-53, Console Box.>
4) Remove the console side panel. <Ref. to EI-54, REMOVAL, Center Console.>
5) Remove the lower inner trim. <Ref. to EI-60, REMOVAL, Lower Inner Trim.>
6) Remove the footrest. (MT model)
7) Remove the clips from floor mat.
8) Remove the mat hook on both side.
9) Remove the mat from toe board area.
10) Remove the mat from rear heater duct.
11) Roll the mat, and then take it out of opened rear door.



B: INSTALLATION

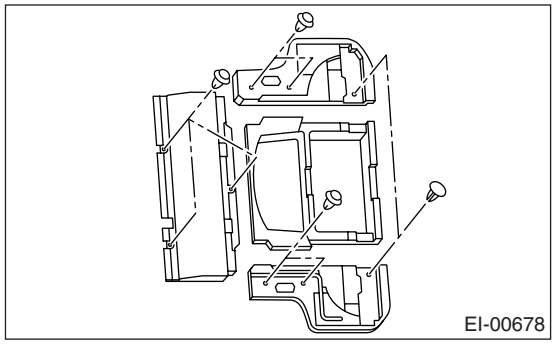
Install in the reverse order of removal.

NOTE:
• Secure the mat firmly with hook and clip.
• Insert the mat edge firmly into the groove of side sill cover.

34.Luggage Floor Box

A: REMOVAL

1) Remove the luggage floor mat.
2) Remove the clips, and remove the luggage floor box.



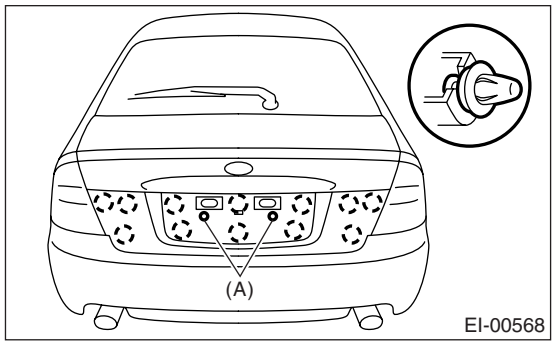
B: INSTALLATION

Install in the reverse order of removal.

35. Trunk Lid Garnish

A: REMOVAL

Remove the license plate, loosen the bolts (A), and remove the trunk lid garnish.



B: INSTALLATION

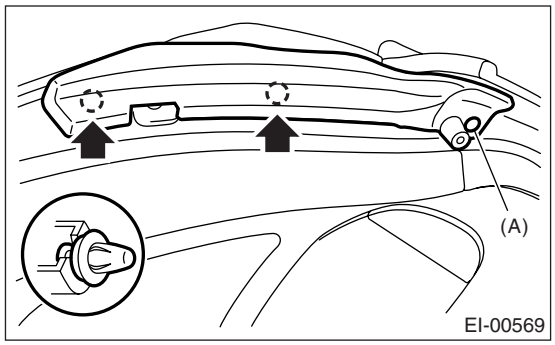
Install in the reverse order of removal.

Tightening torque:
7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

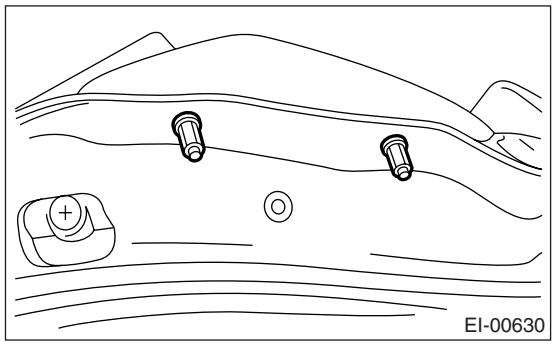
36.Rear Gate Garnish

A: REMOVAL

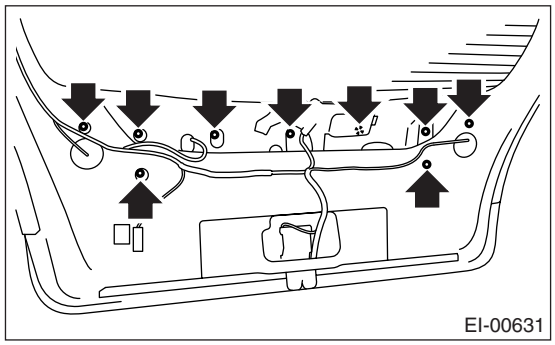
1) Remove the rear gate trim. <Ref. to EI-69, REMOVAL, Rear Gate Trim.>
2) Remove the clip (A), and remove the rear gate panel side cover.



3) Remove the hexagon cap nut.



4) Remove the nuts, disconnect each connector, and remove the rear gate garnish.



B: INSTALLATION

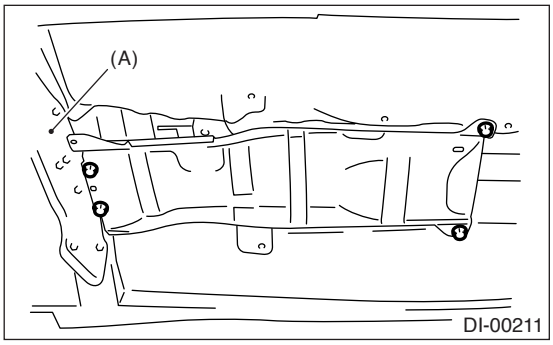
Install in the reverse order of removal.

37.Heat Shield Cover

A: REMOVAL

1. FRONT HEAT SHIELD COVER

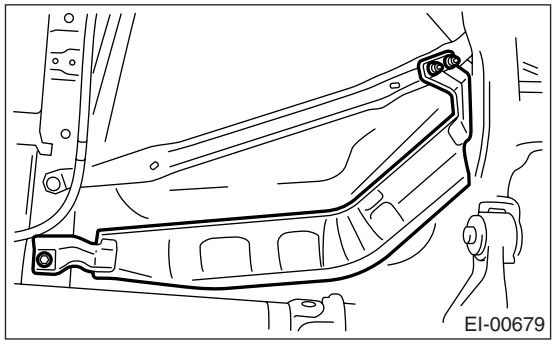
Remove the four bolts to remove front heat shield cover.



(A) Transmission mount

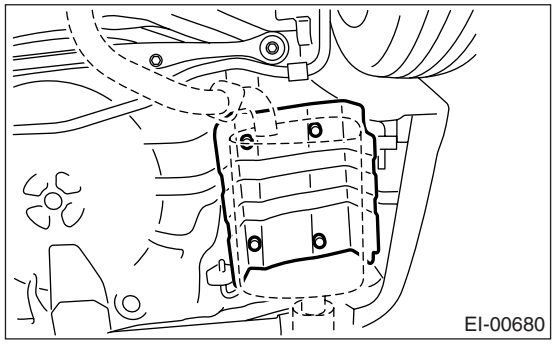
2. CENTER HEAT SHIELD COVER

Remove the nut and bolt to remove center heat shield cover.



3. REAR HEAT SHIELD COVER

1) Remove the muffler. <Ref. to EX(H4SO 2.0)-13, REMOVAL, Muffler.> <Ref. to EX(H4DOTC)-12, REMOVAL, Muffler.>
2) Remove the four bolts to remove rear heat shield cover.



B: INSTALLATION

Install in the reverse order of removal.

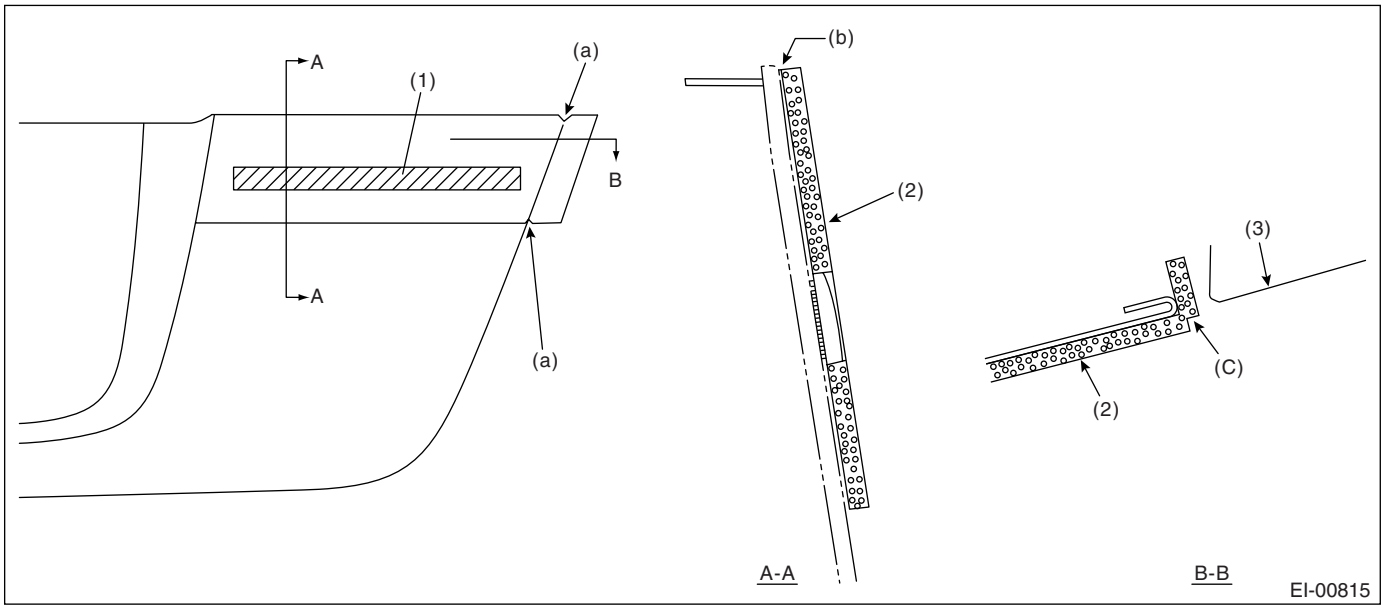
38.Ornament

A: INSTALLATION

1. LETTER MARK

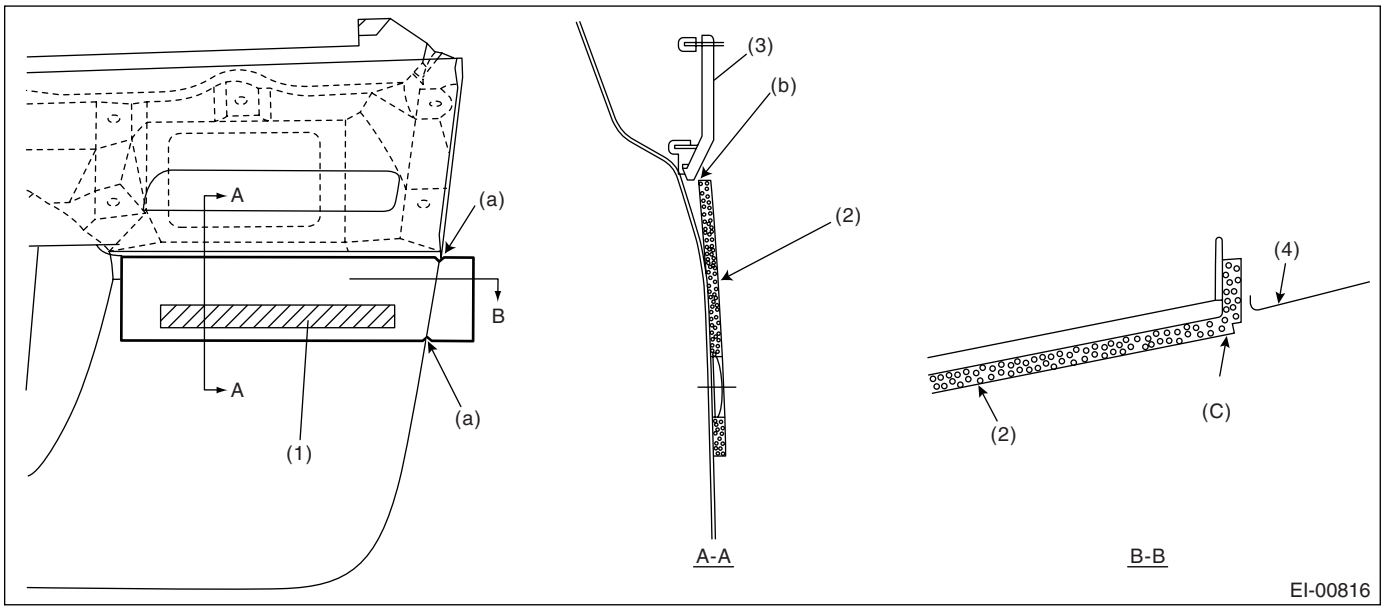
Adhere the letter mark with following dimension.

- Sedan model



(a)	Apply the apply tape with aligning the cut out to the end of trunk lid garnish.	(b)	Apply the apply tape with aligning R stop on the top end of trunk lid garnish.	(c)	Align the slit of apply tape to panel end.
(1)	Letter mark	(2)	Apply tape	(3)	Rear combination light

• Wagon model

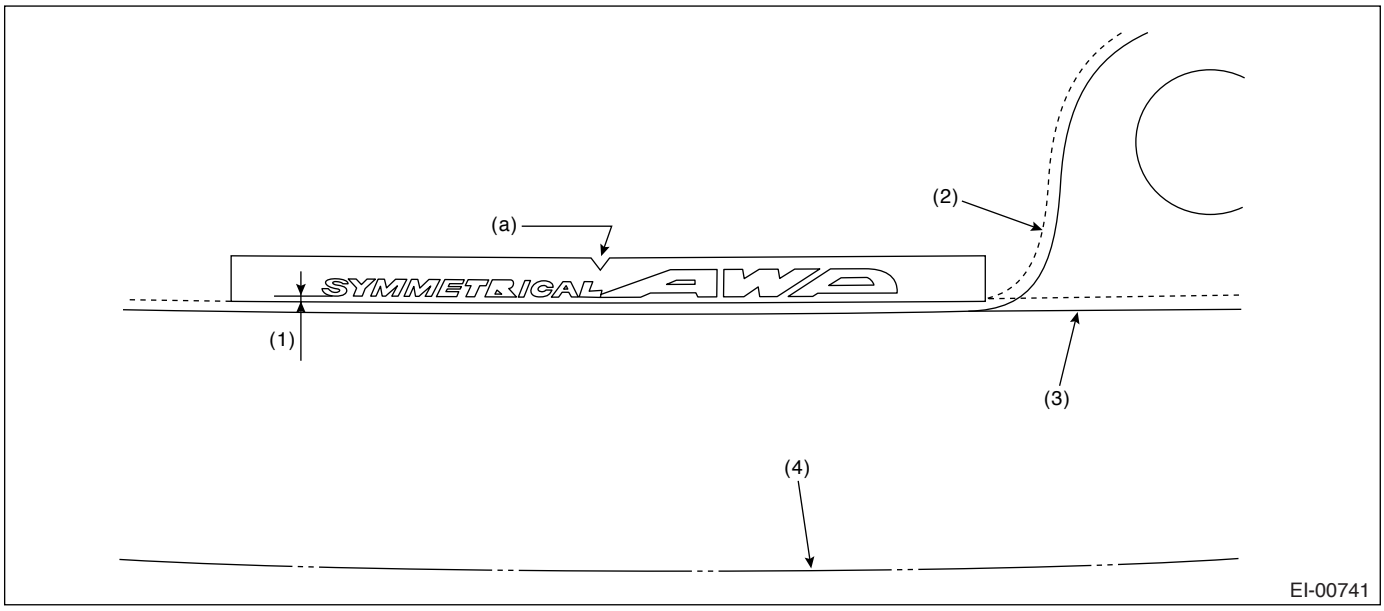


(a) Apply the apply tape with aligning the cut out to the end of rear gate panel.
(b) Apply the apply tape with aligning outer bottom end of rear gate garnish.
(c) Align the slit of apply tape to panel end.
(1) Letter mark
(2) Apply tape
(3) Rear gate garnish
(4) Rear combination light

2. AWD STICKER

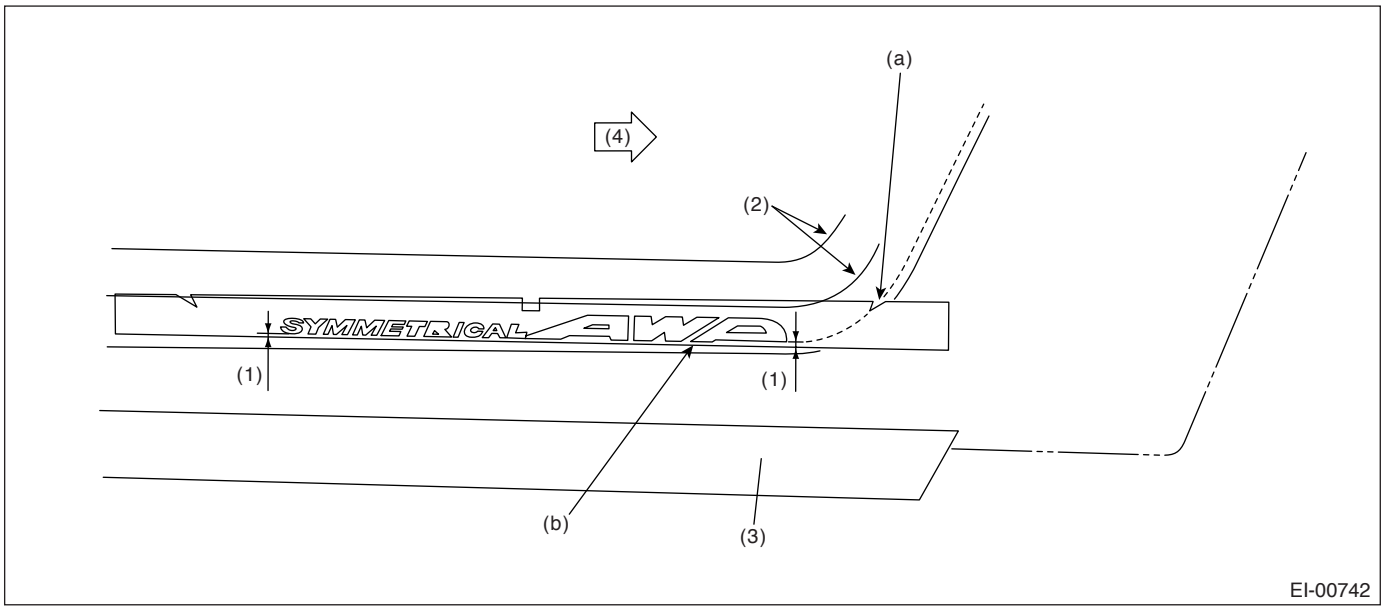
Apply the AWD sticker from inside of glass with following dimension.

• Sedan model

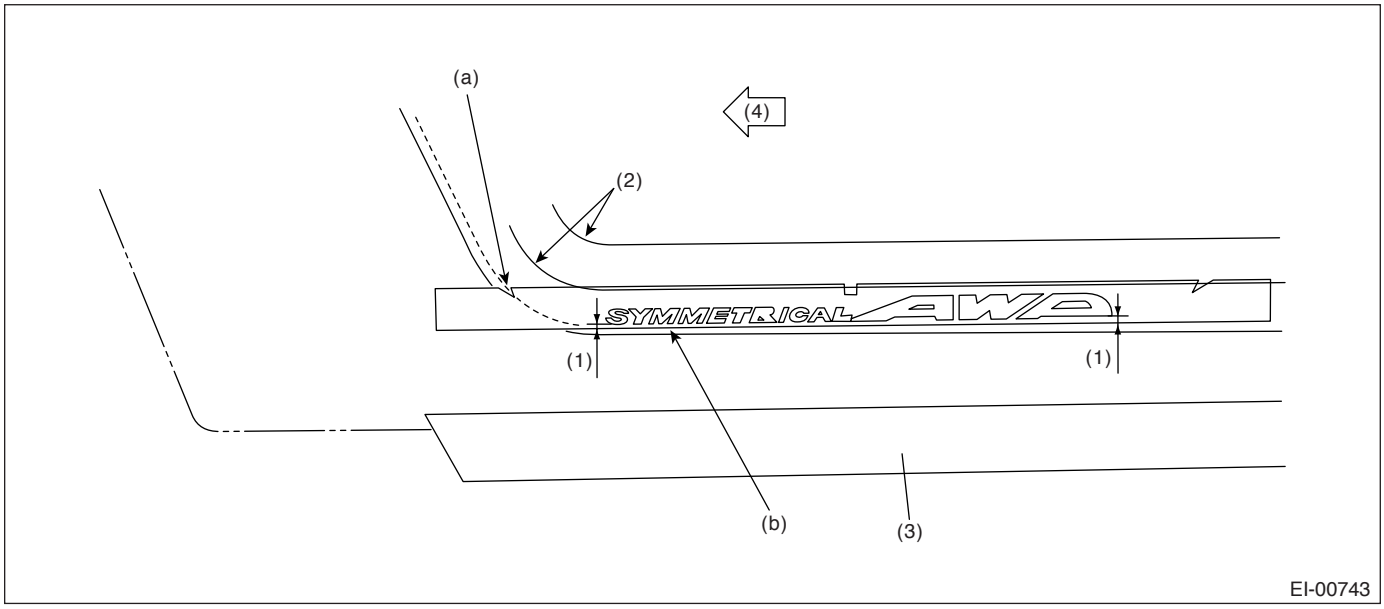


(a) Apply the apply tape with aligning the cut out to the end of rear glass center.
(1) 1 mm (0.04 in)
(2) Gradation end of ceramic print (with rear wiper)
(3) Gradation end of ceramic print (without rear wiper)
(4) End of rear glass

• Wagon model (RH side)



• Wagon model (LH side)



(a) Apply the apply tape with aligning the cut out to the ceramic print.
(b) Gradation end of ceramic print
(1) 1 mm (0.04 in)
(3) Molding
(4) Front side of vehicle
(2) Glass antenna wire

BODY SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

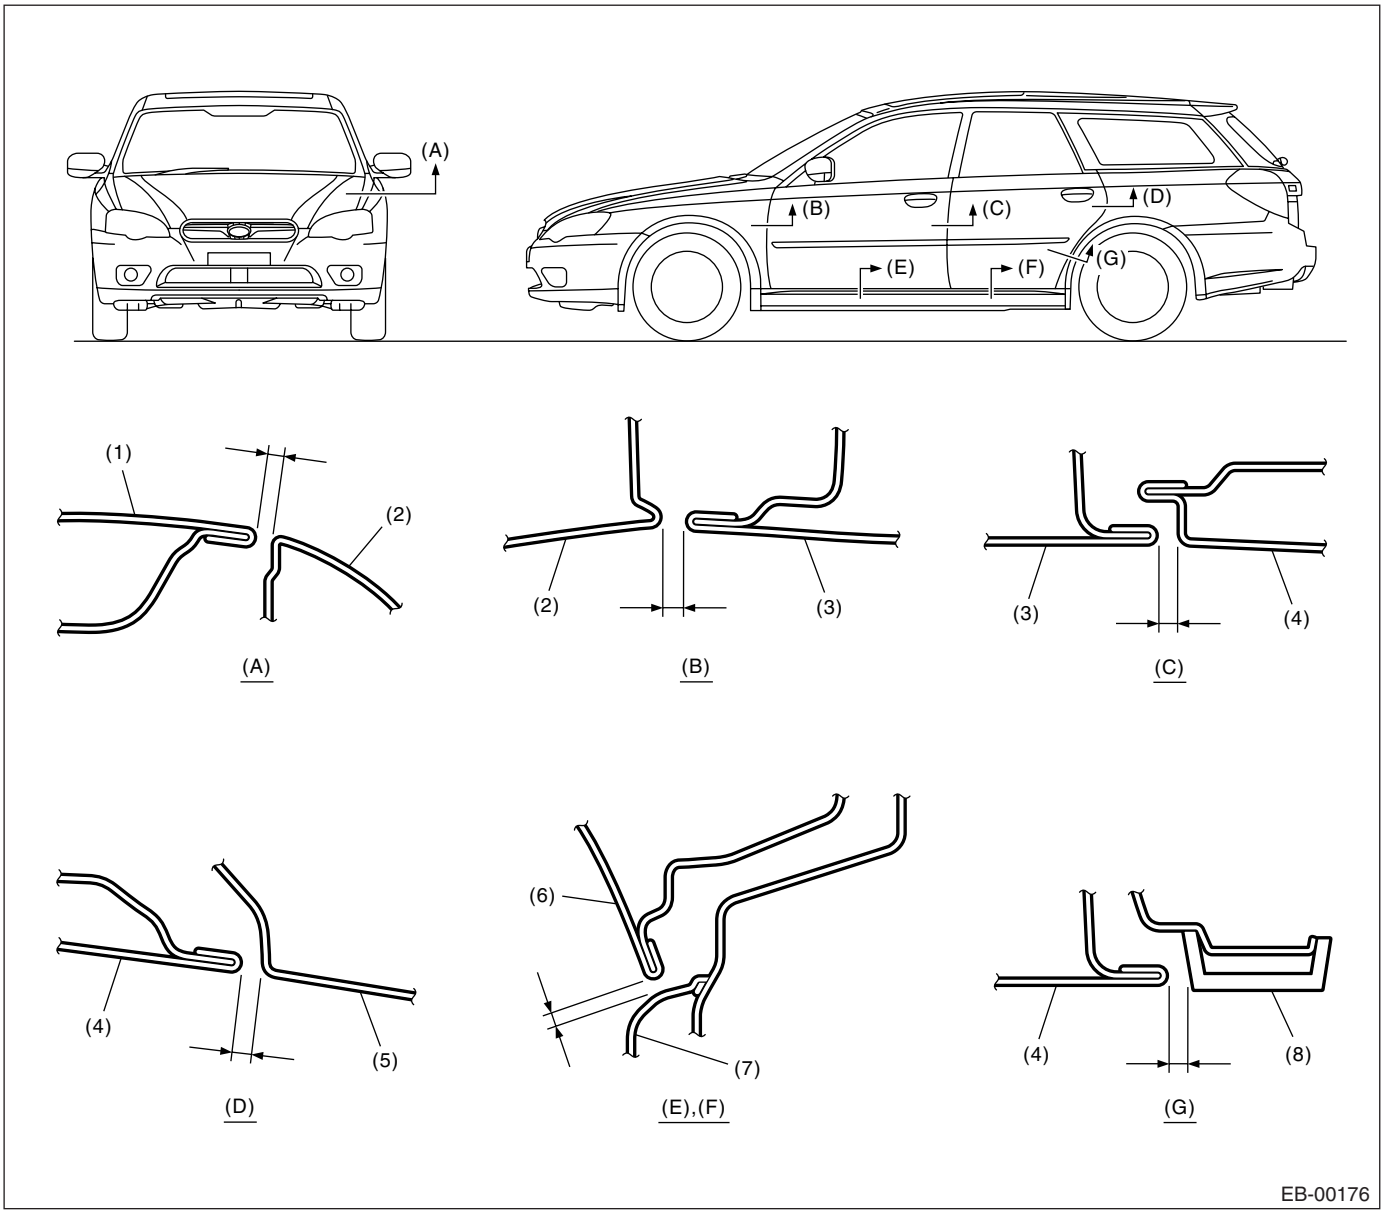
1. General Description

A: SPECIFICATION

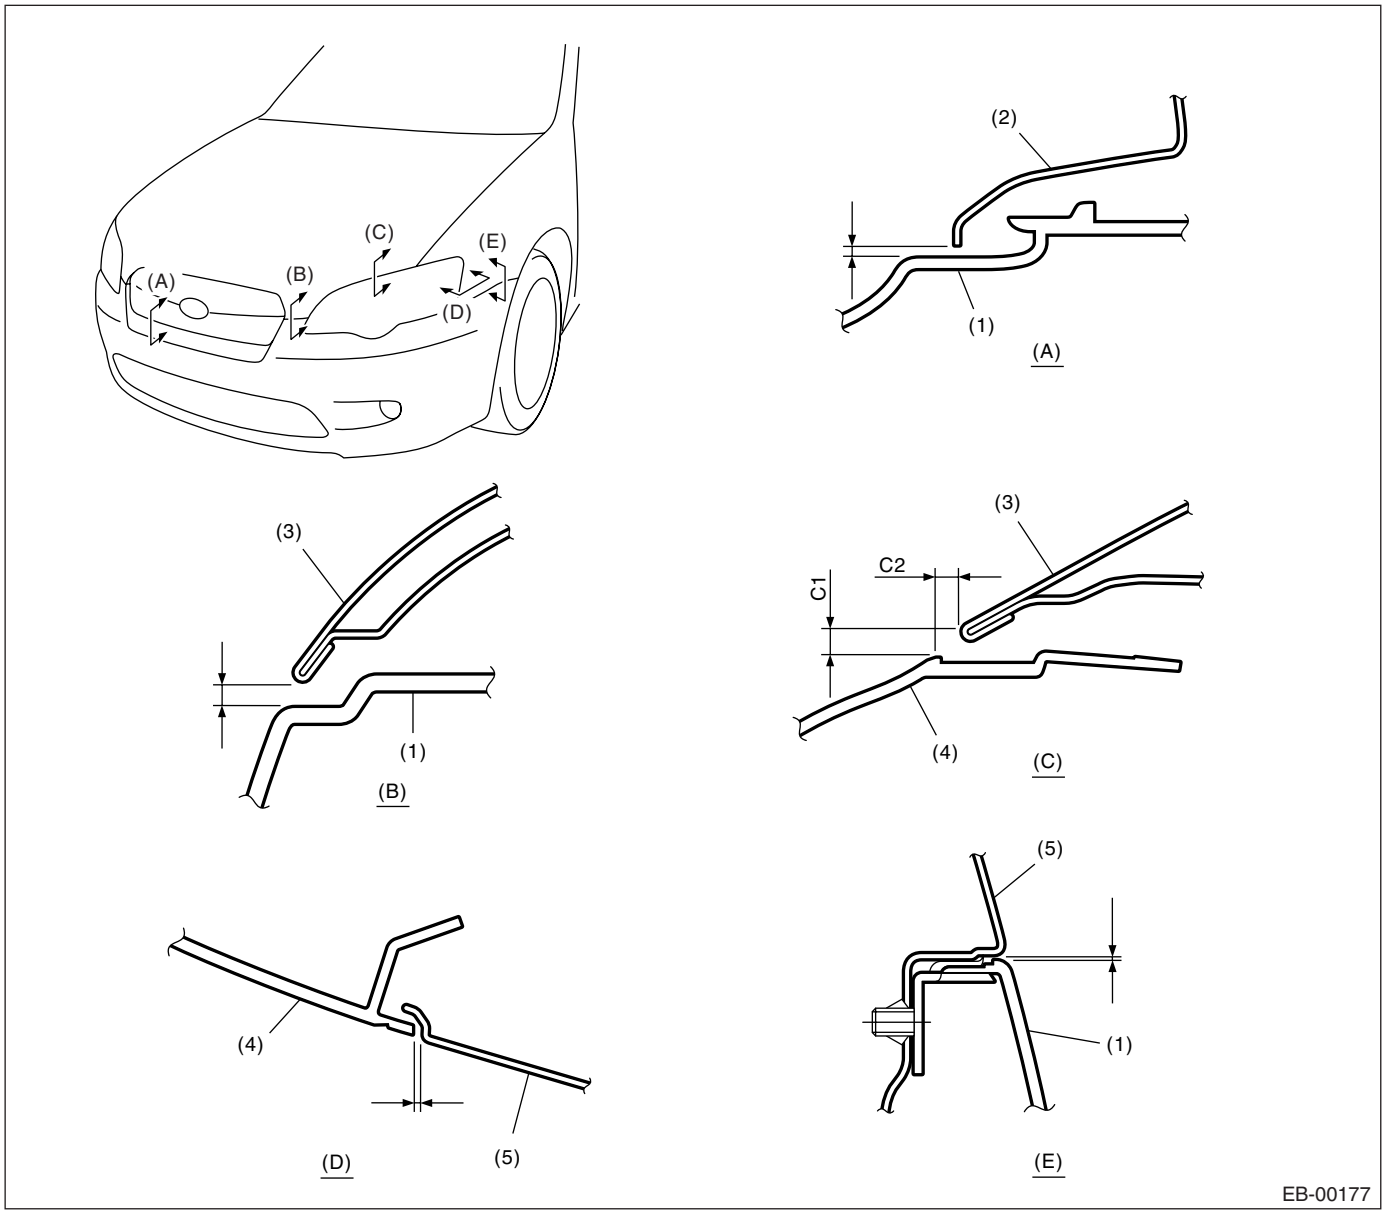
1. SIDE



(1) Front hood panel
(2) Front fender panel
(3) Front door panel
(4) Rear door panel
(5) Rear quarter panel
(6) Door panel
(7) Side sill
(8) Rear quarter lower protector

Section	Part	Standard value
(A)	Front hood panel to Front fender panel	3.5±1.0 mm (0.14±0.04 in)
(B)	Front fender panel to Front door panel	4.65±1.0 mm (0.18±0.04 in)
(C)	Front door panel to Rear door panel	5.1±1.0 mm (0.20±0.04 in)
(D)	Rear door panel to Rear quarter panel	4.6±1.0 mm (0.18±0.04 in)
(E), (F)	Door panel to Side sill	6.0±1.0 mm (0.24±0.04 in)
(G)	Rear door panel to Rear quarter lower protector	5.0±1.0 mm (0.20±0.04 in)

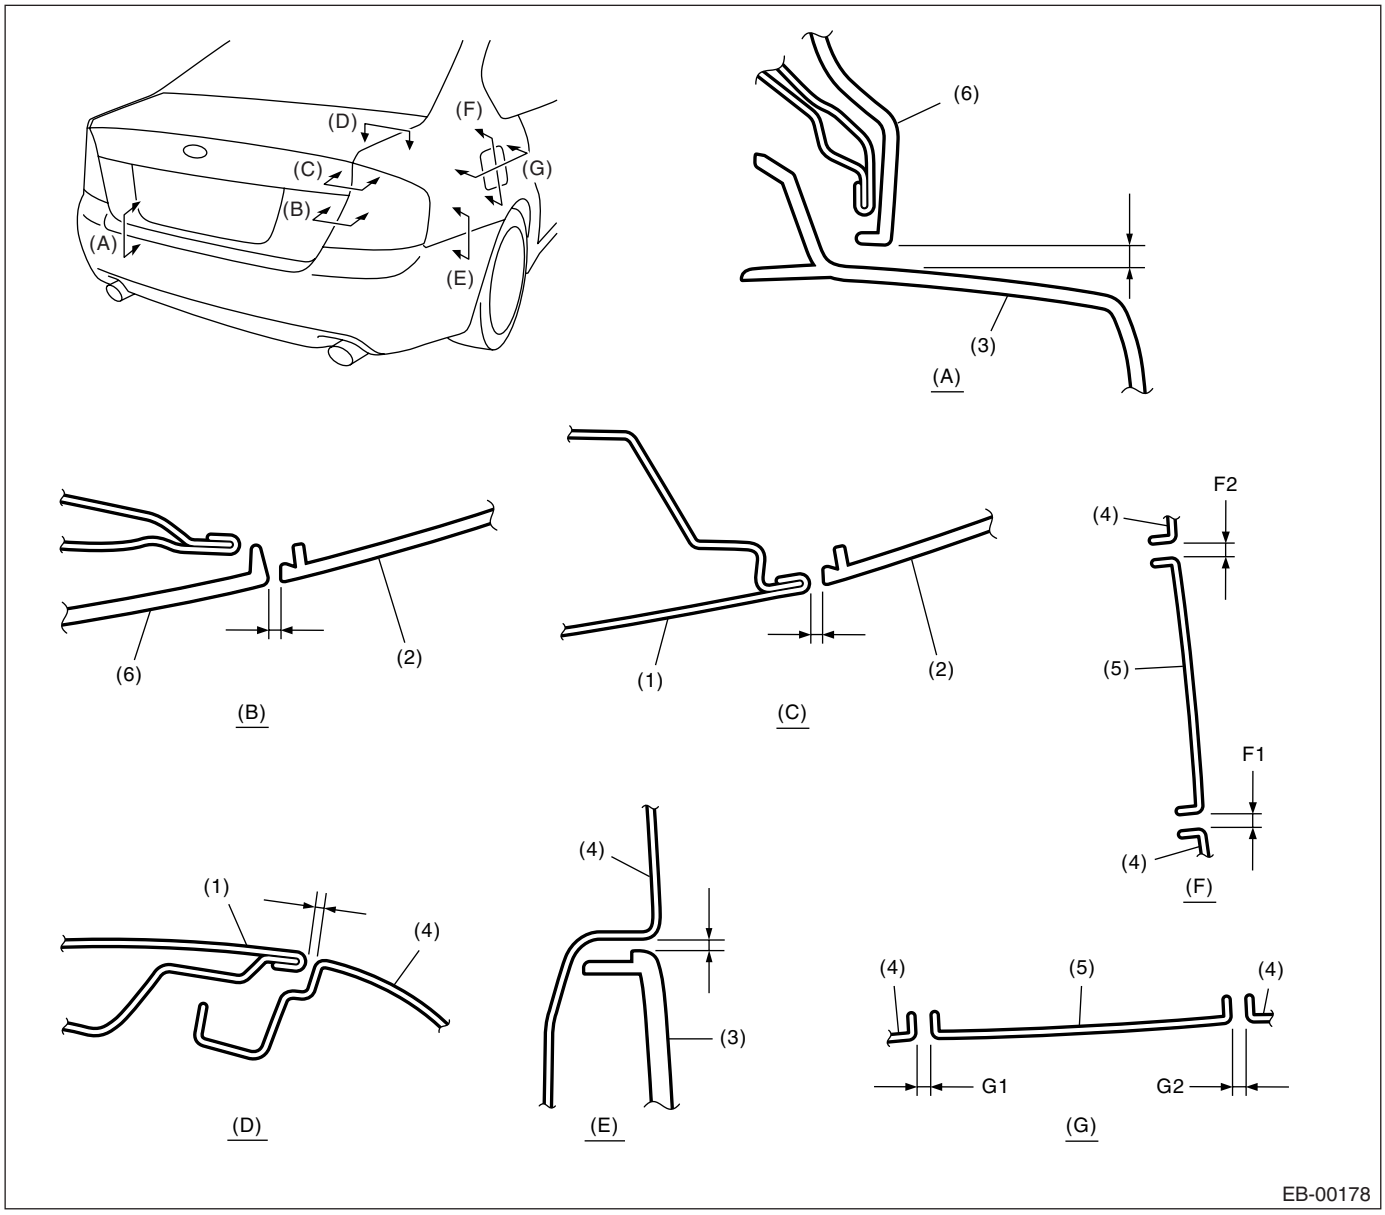
2. FRONT



(1) Front bumper
(2) Front grille
(3) Front hood panel
(4) Headlight
(5) Front fender panel

Section	Part	Standard value
(A)	Front bumper to Front grille (Longitudinal direction)	1.0±0.7 mm (0.04±0.03 in)
(B)	Front hood panel to Front bumper	4.0 — 6.0 mm (0.16 — 0.24 in)
(C)	Front hood panel to Headlight	C1: 6.0±1.0 mm (0.24±0.04 in) C2: 5.0±1.0 mm (0.20±0.04 in)
(D)	Front fender panel to Headlight	2.0±1.0 mm (0.08±0.04 in)
(E)	Front fender panel to Front bumper	1.0±0.7 mm (0.04±0.03 in)

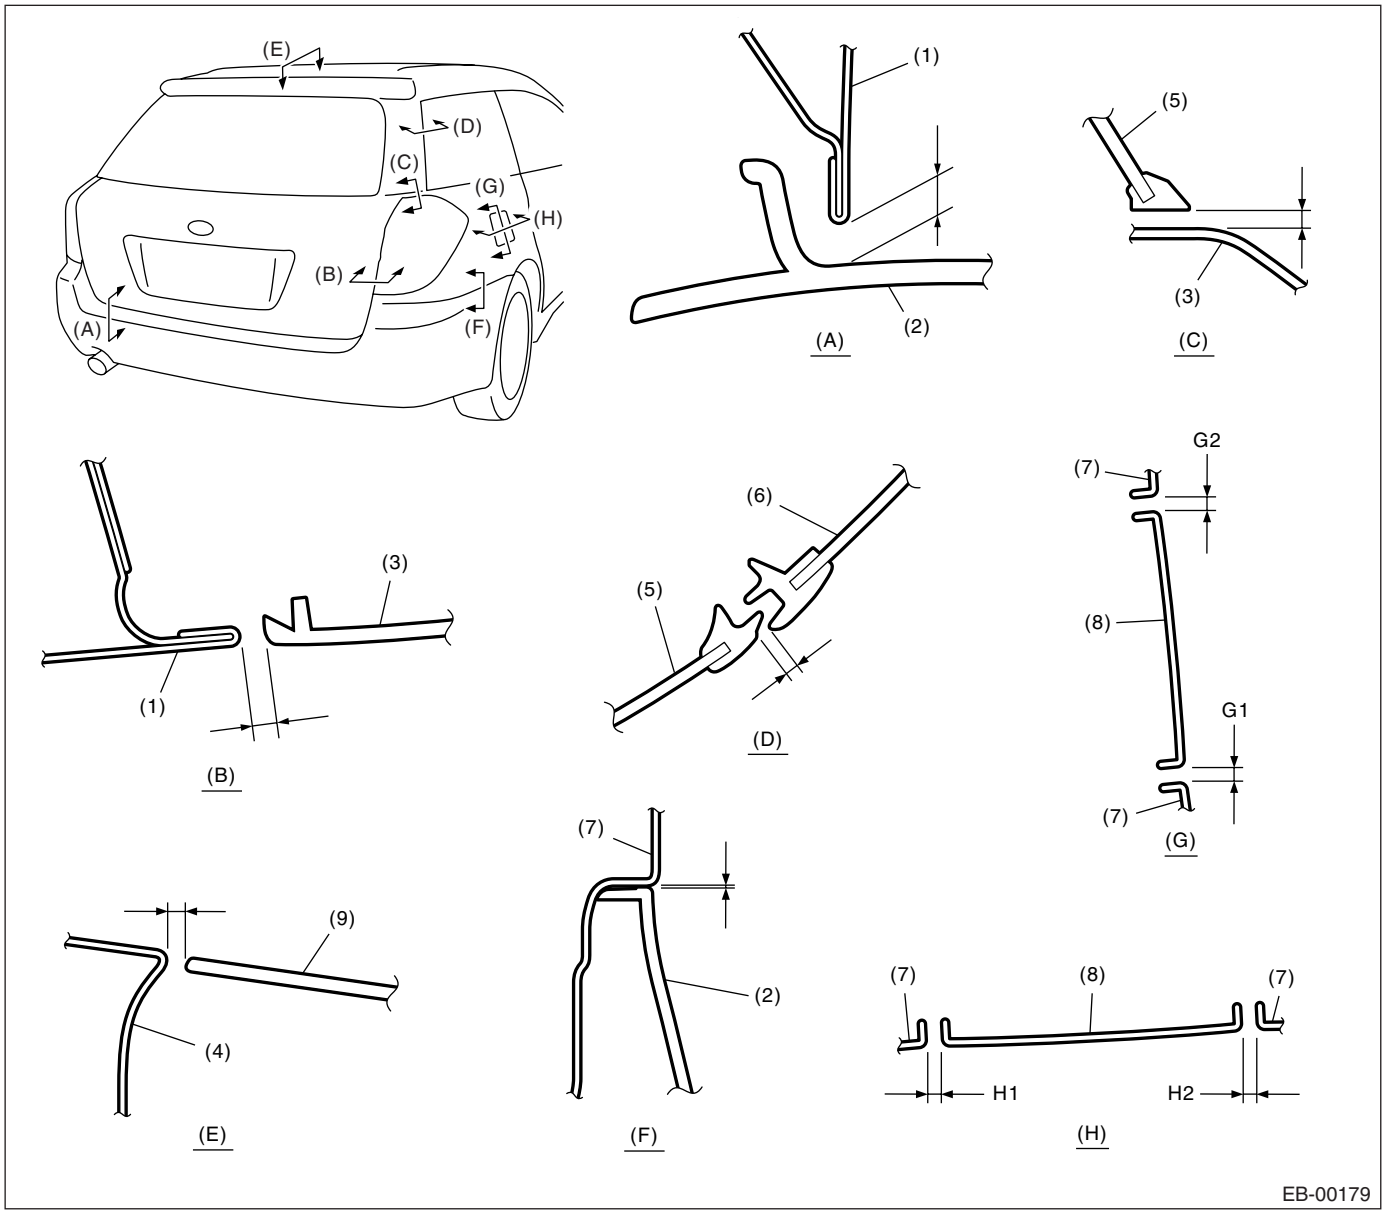
3. REAR (SEDAN MODEL)



(1) Trunk lid panel
(2) Rear combination light
(3) Rear bumper
(4) Rear fender panel
(5) Fuel filler flap lid
(6) Trunk lid garnish

Section	Part	Standard value
(A)	Trunk lid garnish to Rear bumper	7.0±1.5 mm (0.28±0.06 in)
(B)	Trunk lid garnish to Rear combination light	4.0±1.0 mm (0.16±0.04 in)
(C)	Trunk lid panel to Rear combination light	3.5±1.0 mm (0.14±0.04 in)
(D)	Trunk lid panel to Rear fender panel	3.5±1.0 mm (0.14±0.04 in)
(E)	Rear fender panel to Rear bumper	1.0±0.7 mm (0.04±0.03 in)
(F)	Rear fender panel to Fuel filler flap lid (Longitudinal direction)	F1: 3.7±0.5 mm (0.15±0.02 in) F2: 3.4±0.5 mm (0.13±0.02 in)
(G)	Rear fender panel to Fuel filler flap lid (Lateral direction)	G1, G2: 3.5±0.5 mm (0.14±0.02 in)

4. REAR (WAGON MODEL)

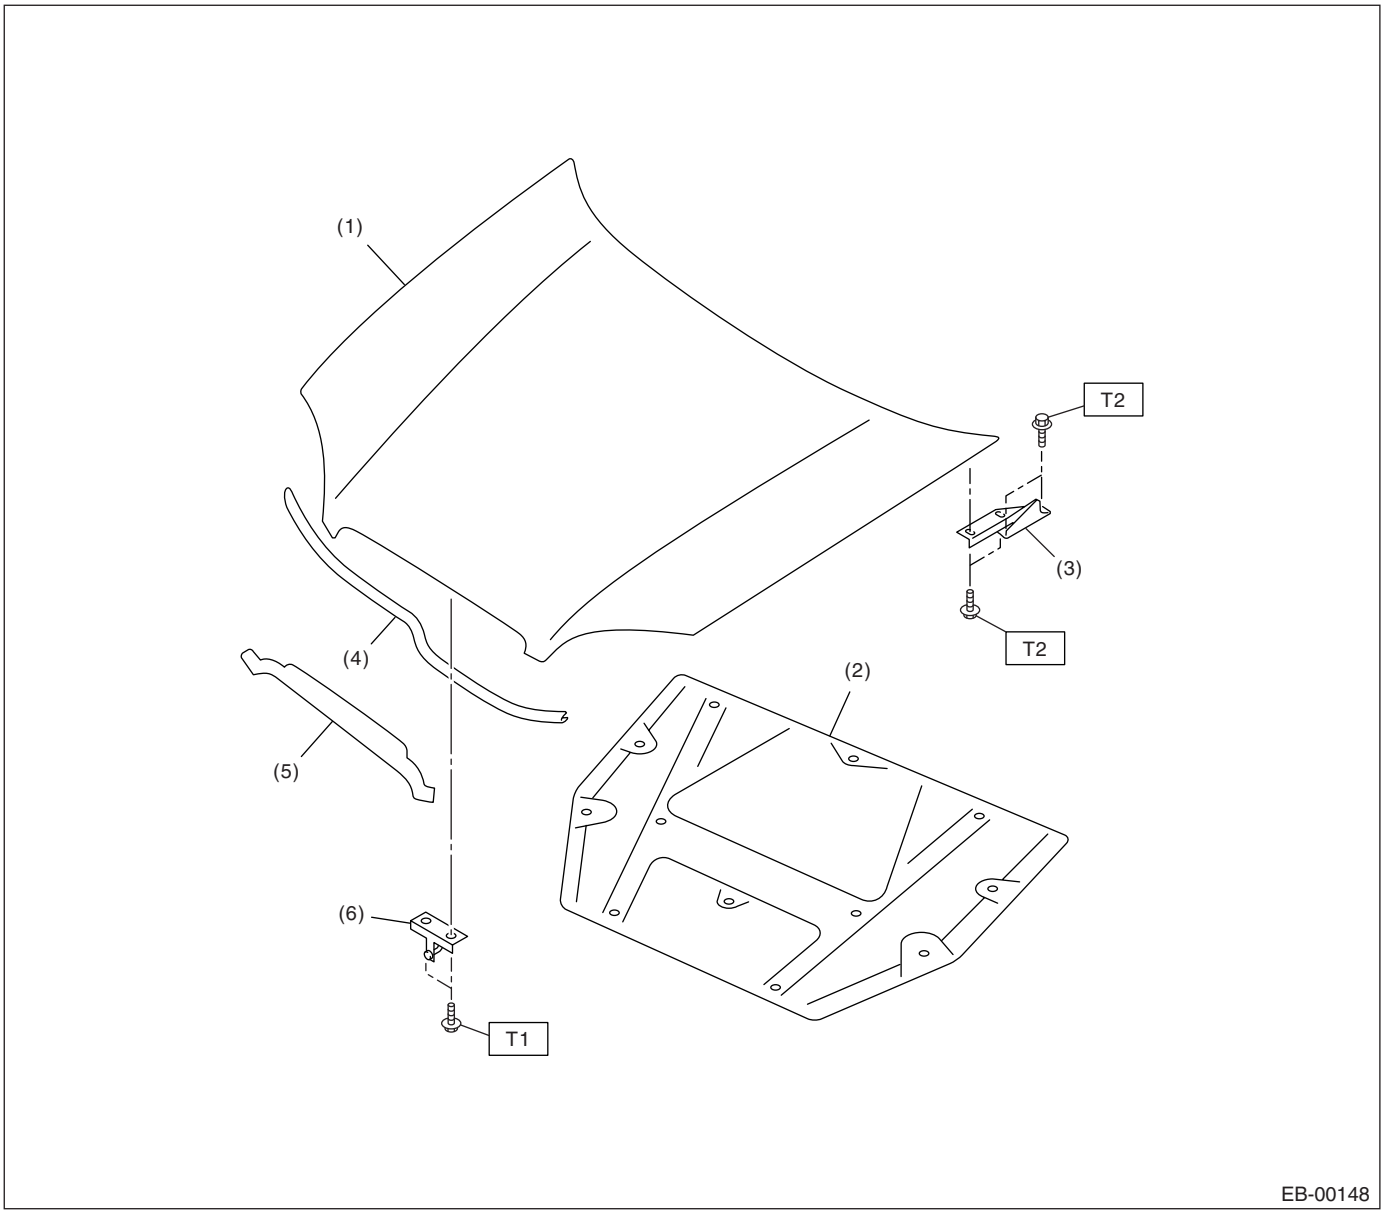


(1) Rear gate panel
(2) Rear bumper
(3) Rear combination light
(4) Roof panel
(5) Rear gate glass
(6) Door quarter glass
(7) Rear fender panel
(8) Fuel filler flap lid
(9) Roof spoiler

Section	Part	Standard value
(A)	Rear gate panel to Rear bumper	8.0±1.5 mm (0.31±0.06 in)
(B)	Rear gate panel to Rear combination light	5.1±1.0 mm (0.20±0.04 in)
(C)	Rear gate glass to Rear combination light	5.5±1.0 mm (0.22±0.04 in)
(D)	Rear gate glass to Rear quarter glass	4.0±1.5 mm (0.16±0.06 in)
(E)	Roof panel to Roof spoiler	5.5±1.0 mm (0.22±0.04 in)
(F)	Rear fender panel to Rear bumper	1.0±0.7 mm (0.04±0.03 in)
(G)	Rear fender panel to Fuel filler flap lid (Longitudinal direction)	G1: 3.7±0.5 mm (0.15±0.02 in) G2: 3.4±0.5 mm (0.13±0.02 in)
(H)	Rear fender panel to Fuel filler flap lid (Lateral direction)	H1, H2: 3.5±0.5 mm (0.14±0.02 in)

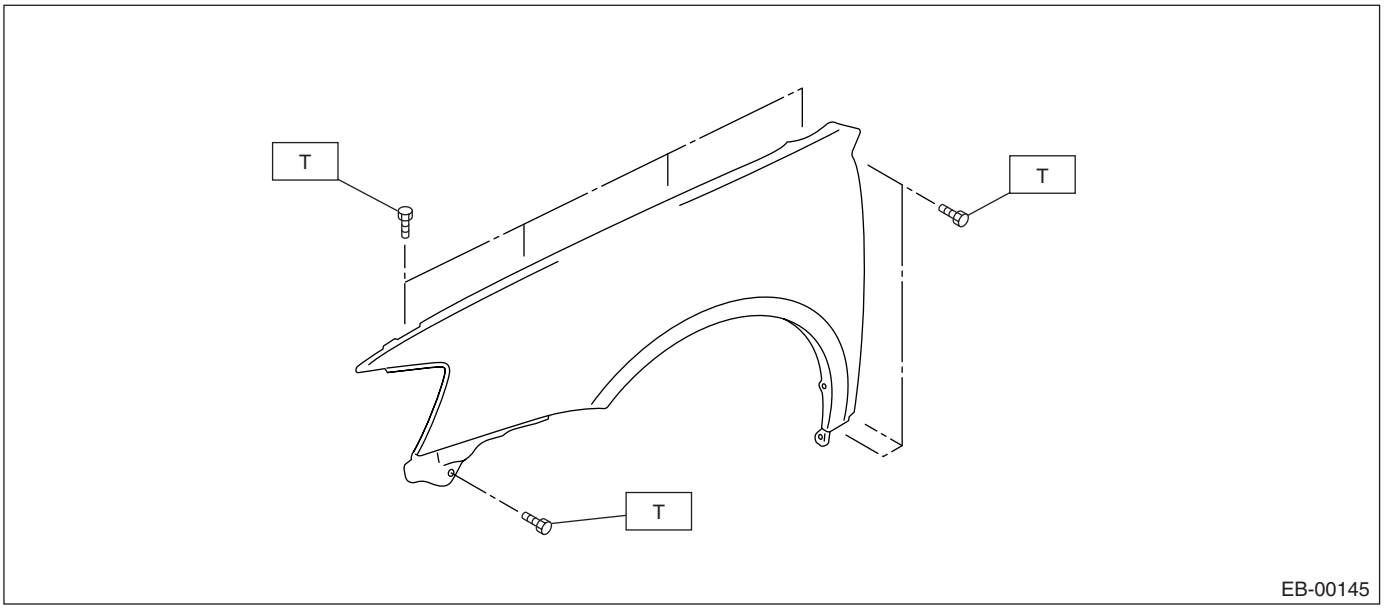
B: COMPONENT

1. FRONT HOOD



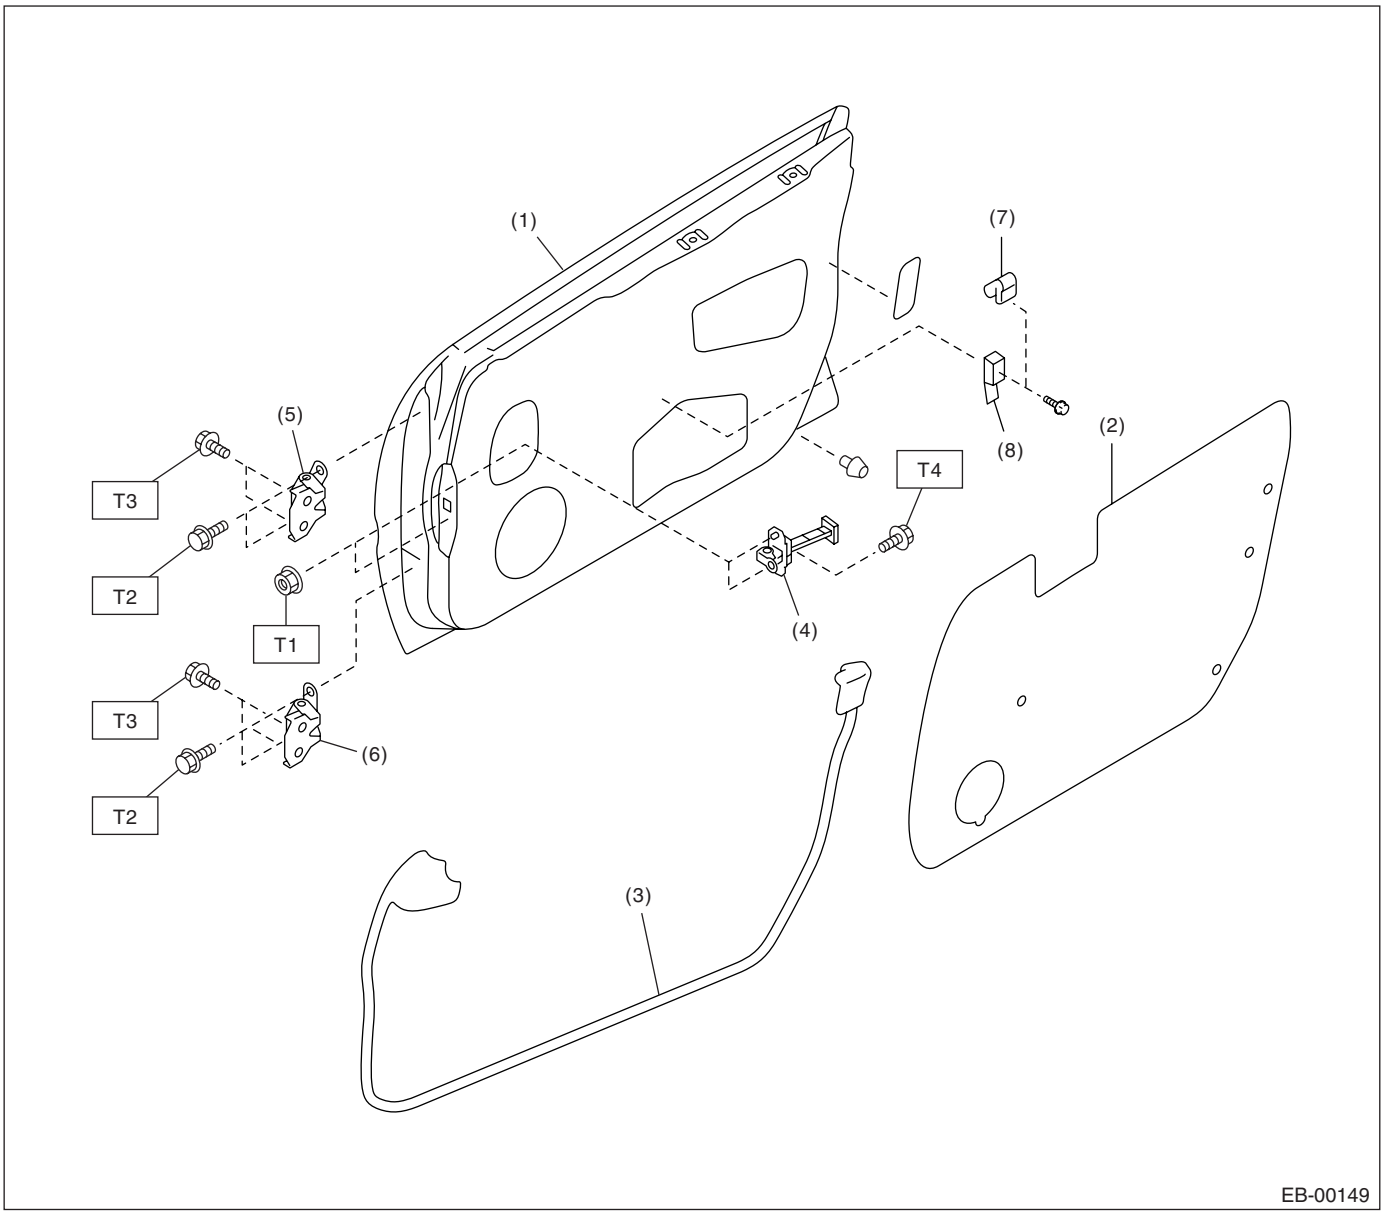
(1)	Front hood panel	(4)	Intake duct weather strip	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Front hood insulator	(5)	Front hood weather strip	***T1: 33 (3.4, 24.5)***
(3)	Front hood hinge	(6)	Front hood striker	***T2: 24.5 (2.5, 18.1)***

2. FRONT FENDER PANEL



Tightening torque: N·m (kgf-m, ft-lb)
T: 7.4 (0.75, 5.5)

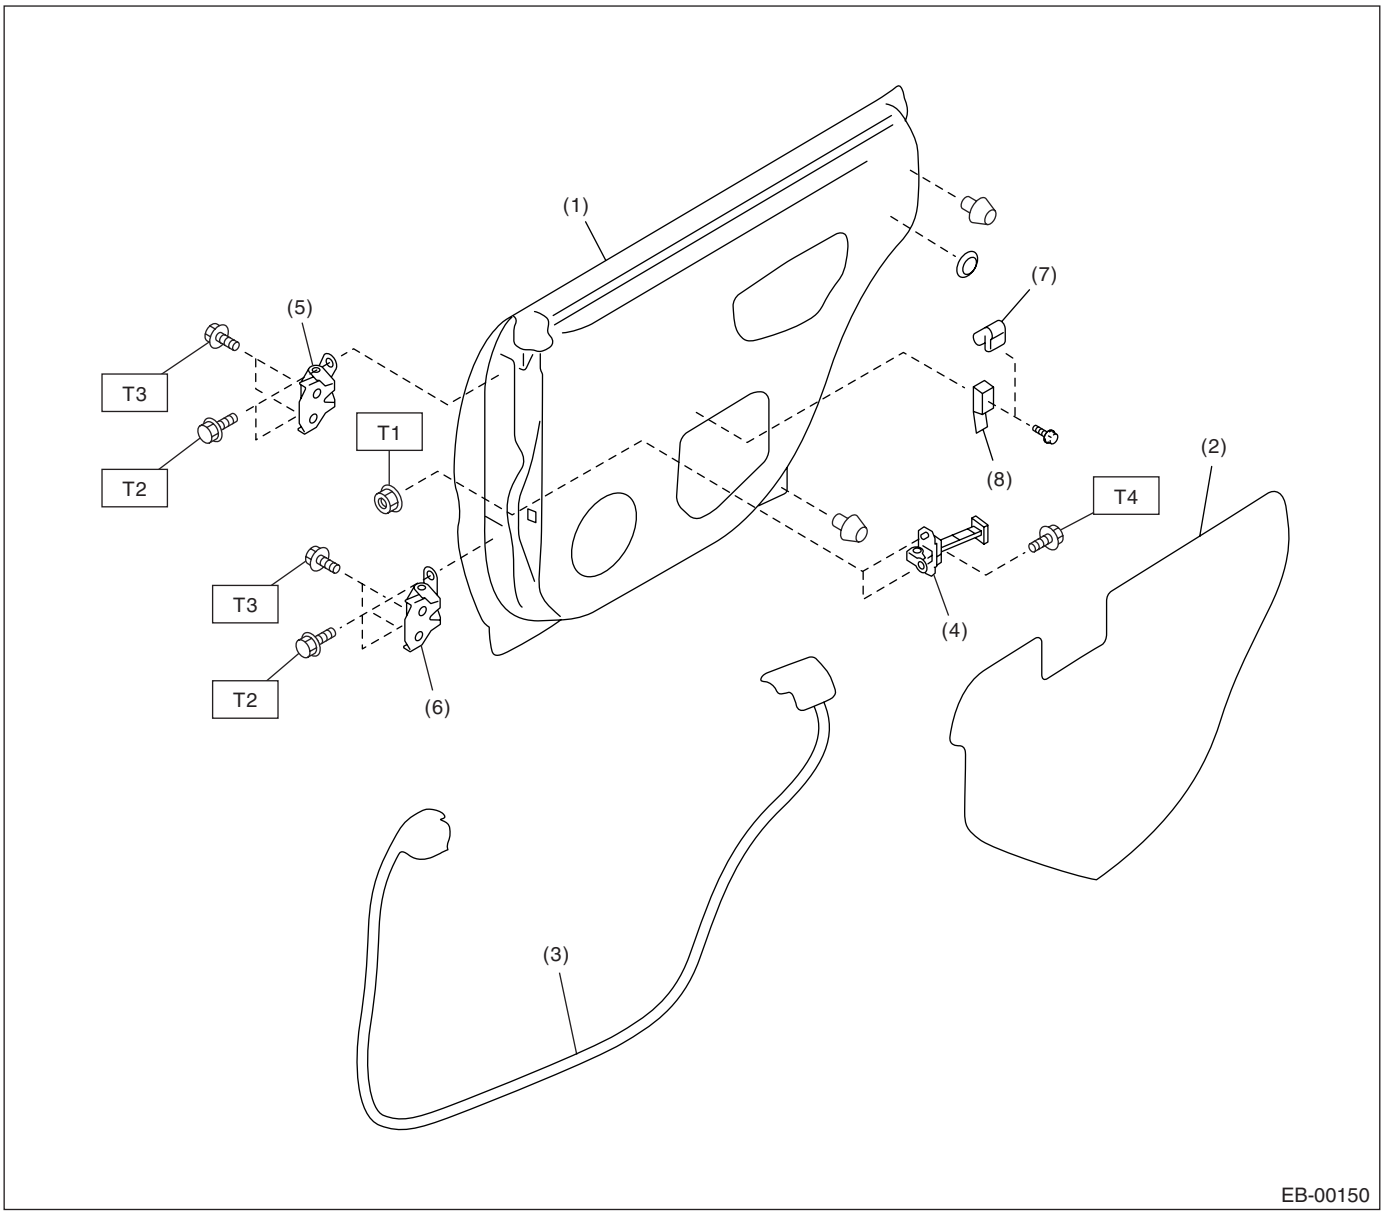
3. FRONT DOOR PANEL



(1)	Front door panel	(6)	Lower hinge
(2)	Sealing cover	(7)	Door trim bracket upper
(3)	Front door weather strip	(8)	Door trim bracket lower
(4)	Checker		
(5)	Upper hinge		

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.4 (0.75, 5.5)
T2: 24.5 (2.5, 18.1)
T3: 29.4 (3.0, 21.7)
T4: 32.3 (3.3, 23.8)

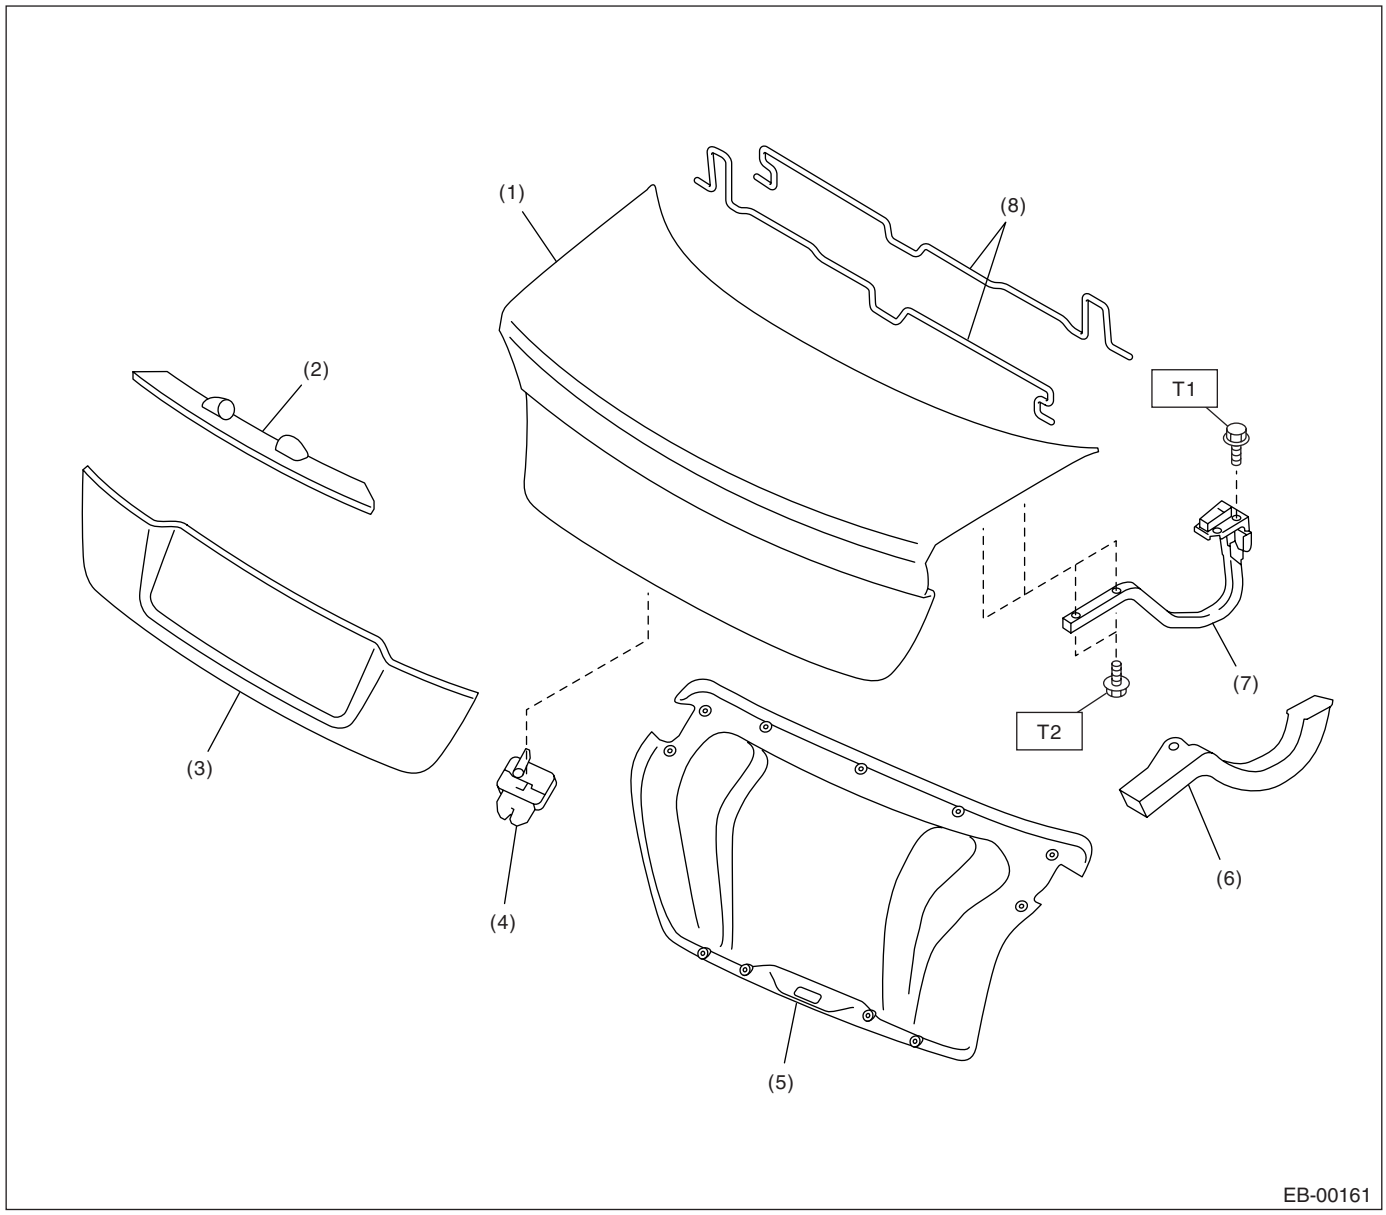
4. REAR DOOR PANEL



(1)	Rear door panel	(6)	Lower hinge
(2)	Sealing cover	(7)	Door trim bracket upper
(3)	Rear door weather strip	(8)	Door trim bracket lower
(4)	Checker		
(5)	Upper hinge		

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.4 (0.75, 5.5)
T2: 24.5 (2.5, 18.1)
T3: 29.4 (3.0, 21.7)
T4: 32.3 (3.3, 23.8)

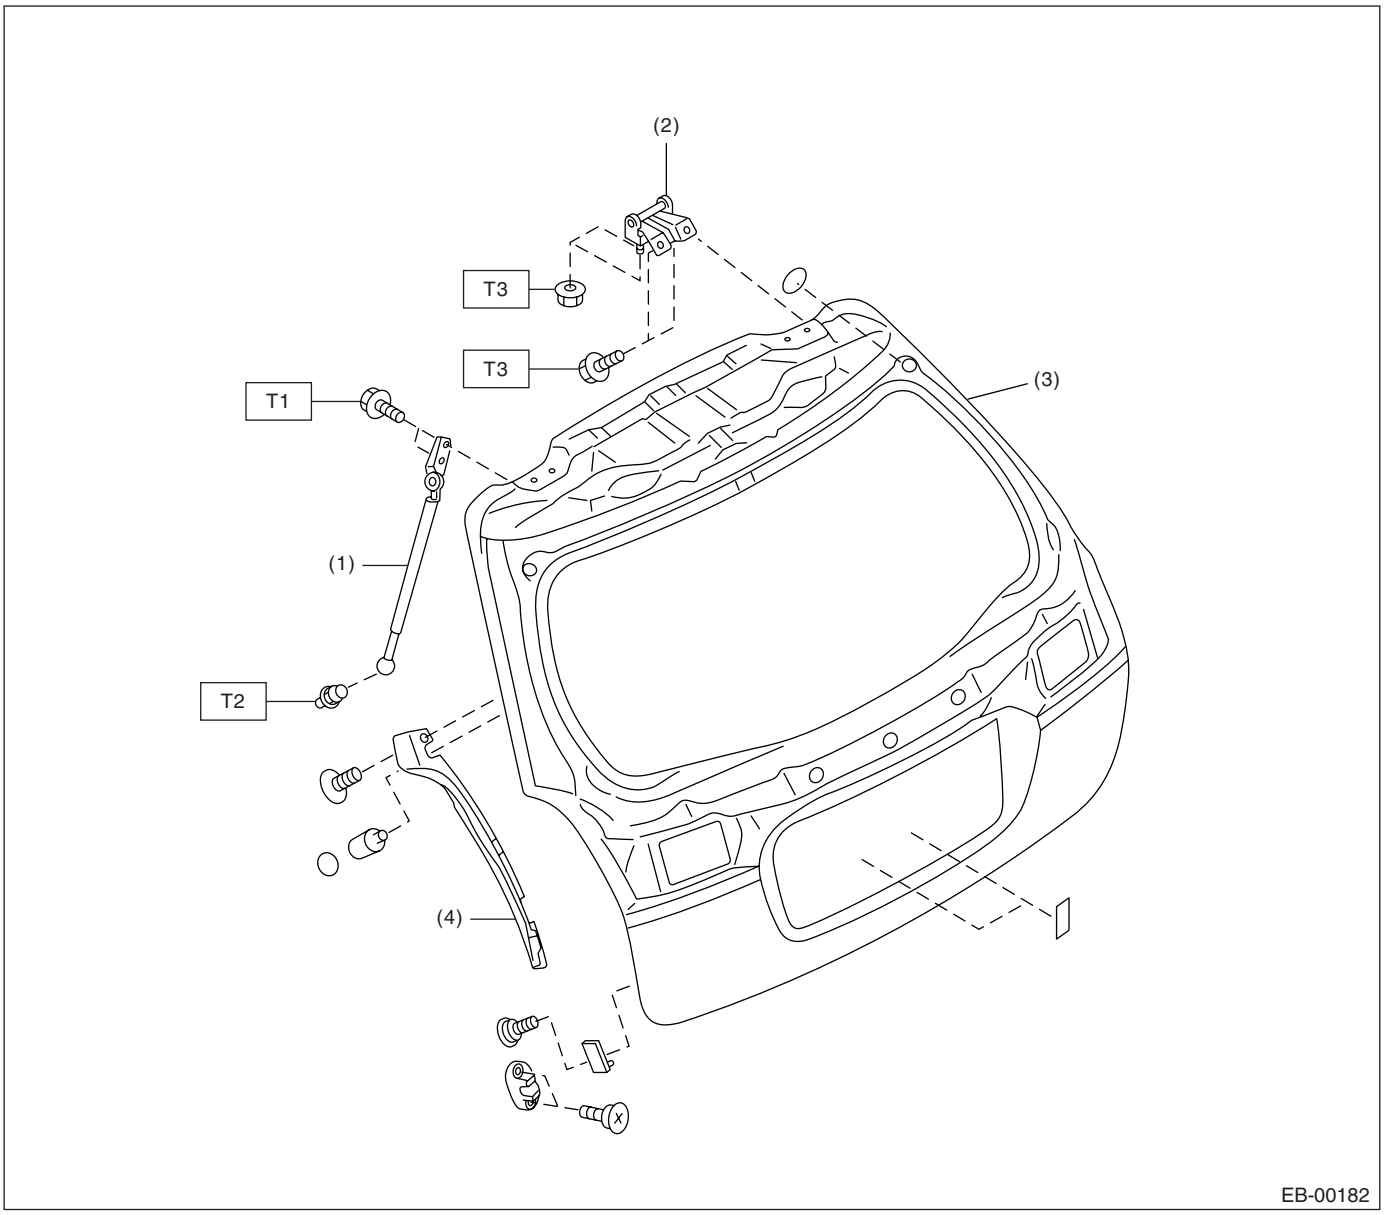
5. TRUNK LID PANEL



(1) Trunk lid panel
(2) License plate light cover
(3) Trunk lid garnish
(4) Trunk lid lock ASSY
(5) Trunk lid trim
(6) Trunk lid arm cover
(7) Trunk lid arm ASSY
(8) Torsion bar

Tightening torque: N·m (kgf-m, ft-lb)
T1: 17.6 (1.8, 12.9)
T2: 14 (1.43, 10.3)

6. REAR GATE PANEL



(1) Rear gate damper stay
(2) Hinge
(3) Rear gate panel
(4) Rear gate side panel cover

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.76, 5.5)
T2: 14.0 (1.43, 10.3)
T3: 25.0 (2.6, 18.4)

C: CAUTION

• Exterior body panels are heavy. Do not drop and damage the panels. During removal and installation, do not damage the panel painting surface.
• While removing mounting bolts, using assistance devices such as a support jack will help to support the panel.
• Be careful not to lose small parts.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-925610000	925610000	WRENCH	Used for removing and installing door hinge.
 ST-927780000	927780000	REMOVER	Used for removing and installing trunk torsion bar.

2. GENERAL TOOL

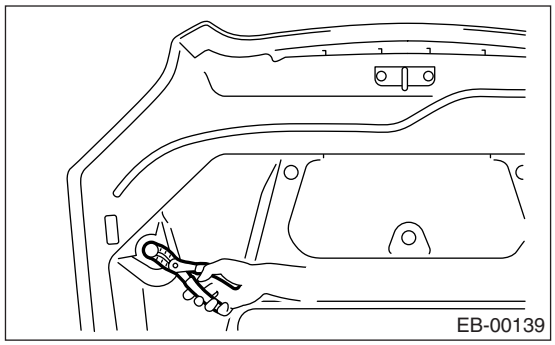
TOOL NAME	REMARKS
Support jack	Used for supporting door panel.
Clip remover	Used for removing various types of clips.

2. Front Hood

A: REMOVAL

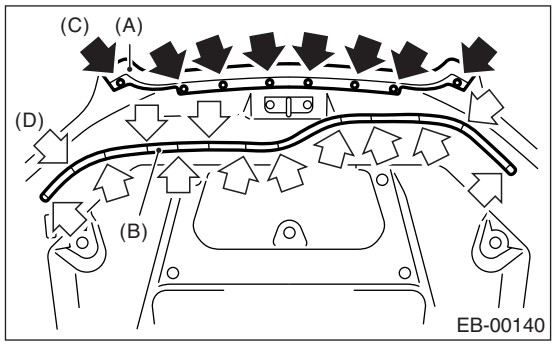
1. FRONT HOOD INSULATOR

1) Open the hood.
2) Release the clips to remove the front hood insulator.



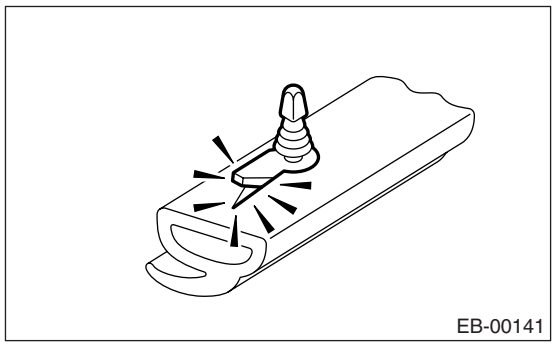
2. FRONT HOOD WEATHER STRIP

1) Open the hood.
2) Remove the clips, and remove the front hood weather strip (A) and intake duct weather strip (B).



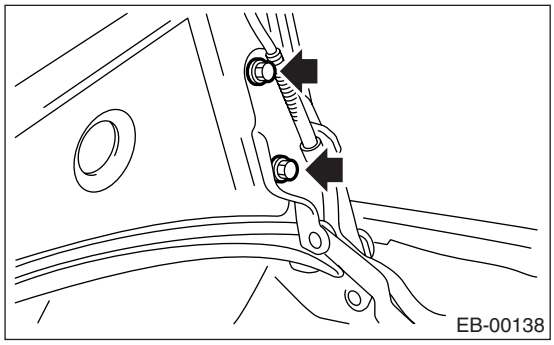
(C) Clip
(D) Weather strip clip

NOTE:
If the weather strip clip is removed with excessive force, the weather strip may be damaged. Be sure to use clip remover to remove.

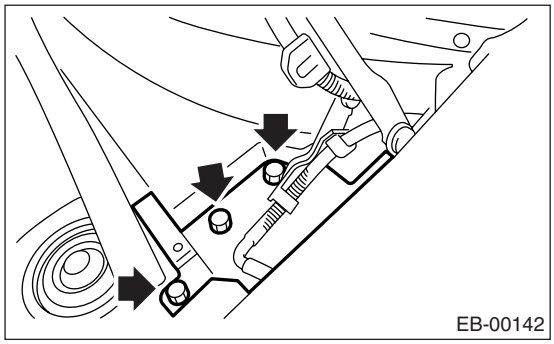


3. FRONT HOOD HINGE

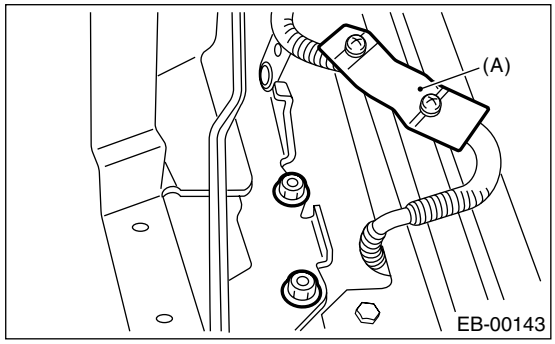
1) Remove the bolts, and remove the front hood panel. <Ref. to EB-14, FRONT HOOD PANEL, REMOVAL, Front Hood.>



2) Remove the clips, and remove the cowl side panel front.

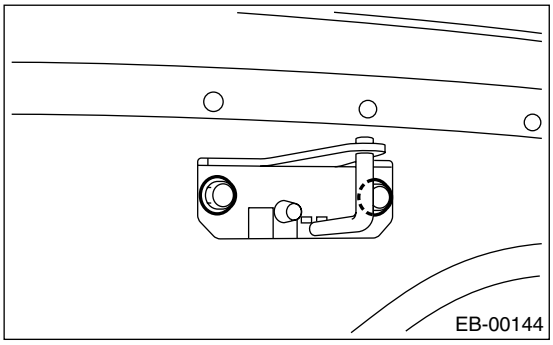


3) Remove the clamp (A) of the window washer hose, and remove bolt of the hinge.



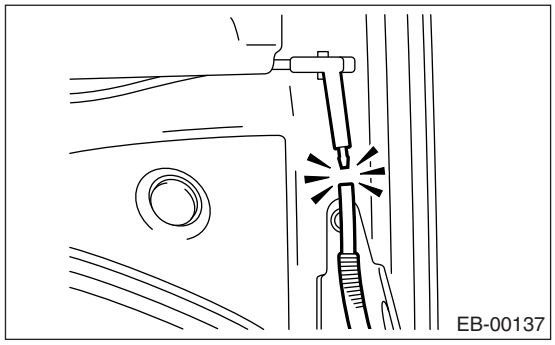
4. FRONT HOOD STRIKER

1) Open the hood.
2) Remove the bolt, and remove the front hood striker.

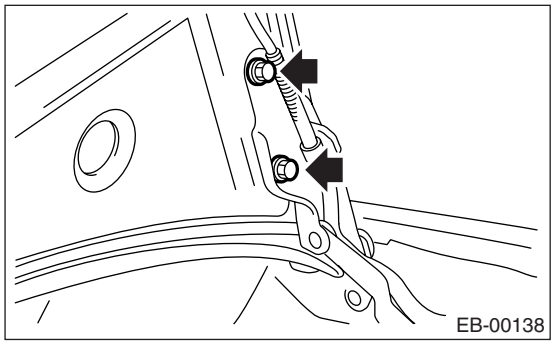


5. FRONT HOOD PANEL

1) Open the front hood to remove the window washer hose.



2) Remove the front hood insulator.
<Ref. to EB-13, FRONT HOOD INSULATOR, REMOVAL, Front Hood.>
3) Remove the front hood weather strip.
<Ref. to EB-13, FRONT HOOD WEATHER STRIP, REMOVAL, Front Hood.>
4) Remove the front hood striker.
<Ref. to EB-14, FRONT HOOD STRIKER, REMOVAL, Front Hood.>
5) Remove the front hood duct. (Turbo model)
<Ref. to EI-25, REMOVAL, Front Hood Grille.>
6) Remove the window washer hose and nozzle.
<Ref. to WW-20, REMOVAL, Front Washer Nozzle.>
7) Remove the bolts, and remove the front hood panel from front hood hinge.



B: INSTALLATION

1. FRONT HOOD INSULATOR

Install in the reverse order of removal.

NOTE:
Be careful not to catch the window washer hose in.

2. FRONT HOOD WEATHER STRIP

Install in the reverse order of removal.

3. FRONT HOOD HINGE

Install in the reverse order of removal.

Tightening torque:
24.5 N·m (2.5 kgf-m, 18.1 ft-lb)

4. FRONT HOOD STRIKER

Install in the reverse order of removal.

Tightening torque:
33.0 N·m (3.4 kgf-m, 24.5 ft-lb)

5. FRONT HOOD PANEL

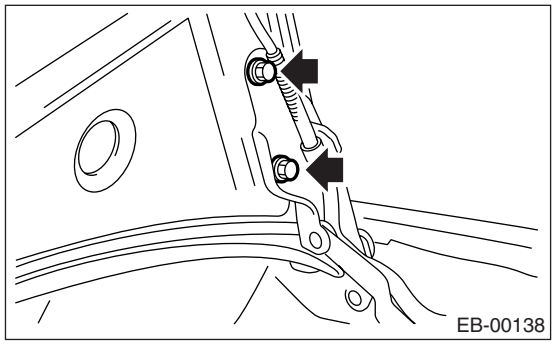
Install in the reverse order of removal.

Tightening torque:
24.5 N·m (2.5 kgf-m, 18.1 ft-lb)

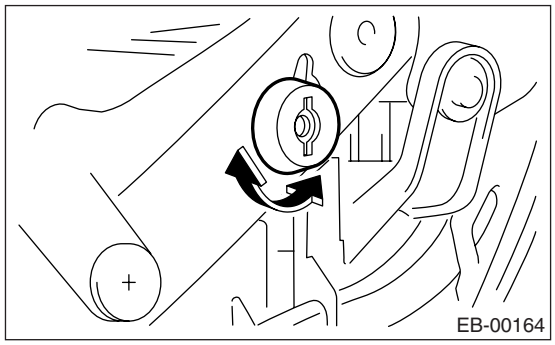
C: ADJUSTMENT

1) Adjust the clearance between front hood panel and front fender panel. Clearance must be equal at both sides. For the dimension of clearance, refer to “SPECIFICATIONS” in “General Description”. <Ref. to EB-2, SPECIFICATION, General Description.>

2) Use a hinge mounting bolts to align the front hood longitudinally and laterally.



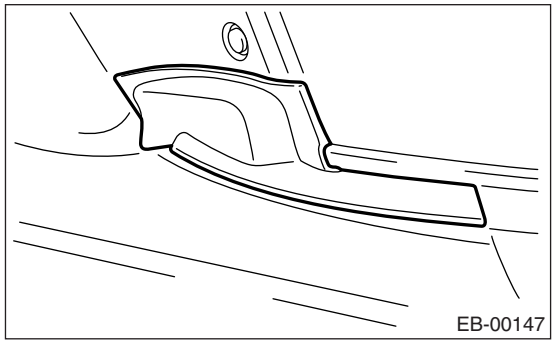
3) Adjust the height at the front end of hood. <Ref. to SL-40, ADJUSTMENT, Front Hood Lock Assembly.>
4) Rotate the hood buffer to adjust lateral height.



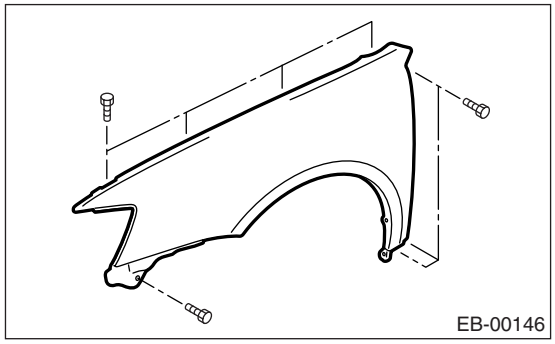
3. Front Fender Panel

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the side sill spoilers. <Ref. to EI-41, REMOVAL, Side Sill Spoiler.>
3) Remove the front grille. <Ref. to EI-24, REMOVAL, Front Grille.>
4) Remove the front bumper face. <Ref. to EI-30, REMOVAL, Front Bumper.>
5) Remove the headlight assembly. **<Ref. to LI-14,** REMOVAL**, Headlight Assembly.>**
6) Remove the mud guard. <Ref. to EI-29, REMOVAL, Mud Guard.>
7) Remove the cowl panel side.



8) Remove the bolt, and remove the front fender panel.



B: INSTALLATION

1) Install in the reverse order of removal.
2) Install with attention to make uniform clearance between front fender panel and front hood panel. For the dimension of clearance, refer to “SPECIFICATIONS” in “General Description”. <Ref. to EB-2, SPECIFICATION, General Description.>

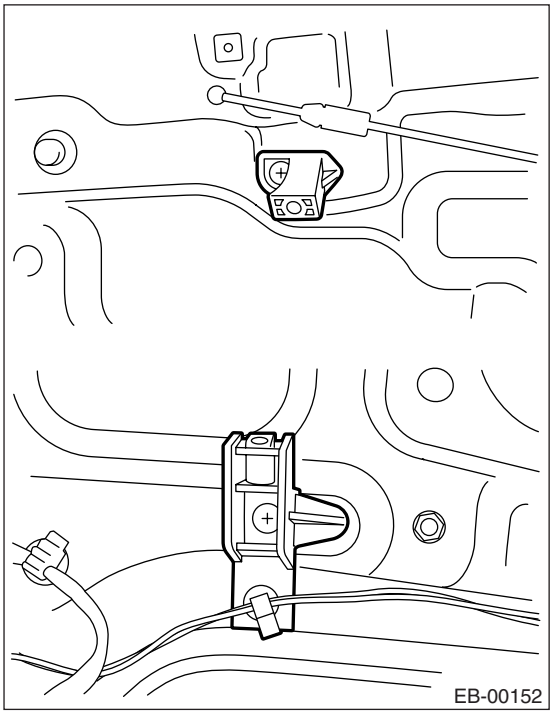
Tightening torque:
7.4 N·m (0.75 kgf-m, 5.5 ft-lb)

4. Front Door

A: REMOVAL

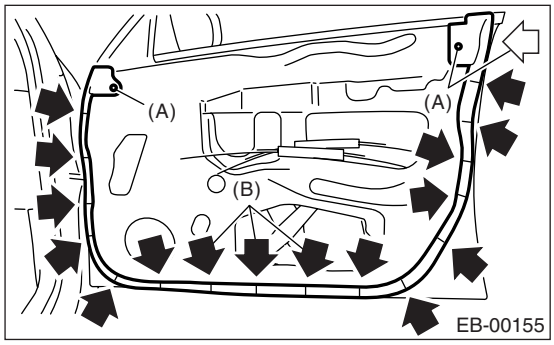
1. FRONT DOOR PANEL

1) Disconnect the ground cable from battery.
2) Remove the front door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Remove the outer mirror assembly. <Ref. to GW-18, REMOVAL, Outer Mirror Assembly.>
4) Remove the front door speaker. <Ref. to ET-6, REMOVAL, Front Speaker.>
5) Pull back the sealing cover. <Ref. to EB-20, REMOVAL, Front Sealing Cover.>
6) Remove the gusset and front door glass. <Ref. to GW-10, REMOVAL, Front Door Glass.>
7) Remove the door sash and front door regulator and motor. <Ref. to GW-15, REMOVAL, Front Regulator and Motor Assembly.>
8) Remove the front door latch assembly. <Ref. to SL-30, REMOVAL, Front Door Latch and Door Lock Actuator Assembly.>
9) Remove the front outer handle. <Ref. to SL-29, REMOVAL, Front Outer Handle.>
10) Remove the screw to remove the door trim bracket.



EB-00152

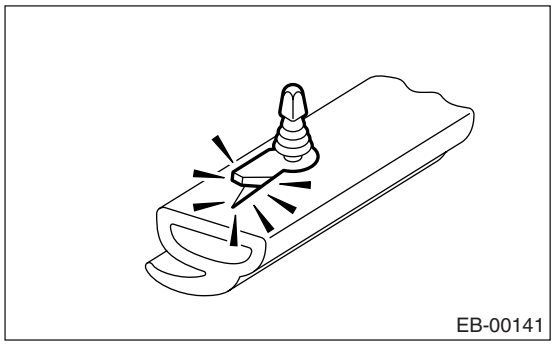
11) Remove the front door weather strip.



EB-00155

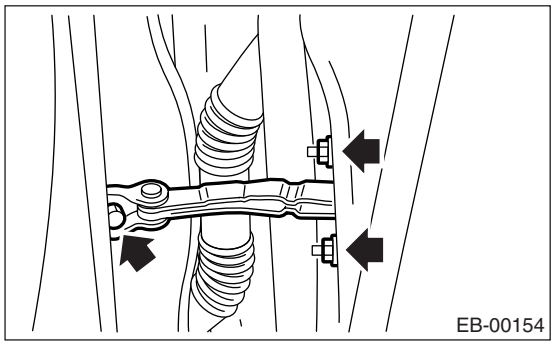
(A) Pin clip
(B) Weather strip clip

NOTE:
If the weather strip clip is removed with excessive force, the weather strip may be damaged. Be sure to use clip remover to remove.



EB-00141

12) Remove the bolts and nuts to remove the door checker.



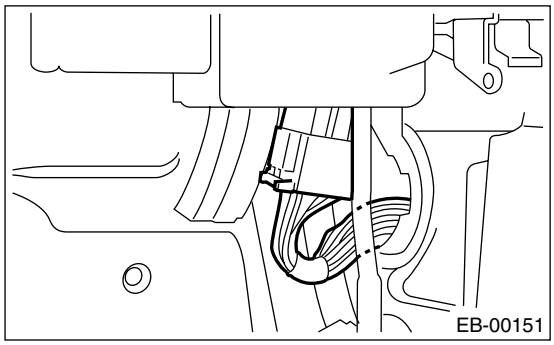
EB-00154

13) Remove the front door. <Ref. to EB-17, FRONT DOOR ASSEMBLY, REMOVAL, Front Door.>

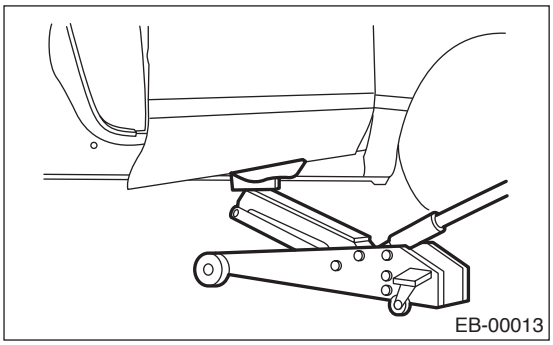
2. FRONT DOOR ASSEMBLY

1) Disconnect the ground cable from battery.
2) Remove the front pillar lower trim. <Ref. to EI-60, REMOVAL, Lower Inner Trim.>
3) Remove the instrument panel lower cover or glove box lower cover. <Ref. to EI-50, REMOVAL, Instrument Panel Lower Cover.> or <Ref. to EI-51, REMOVAL, Glove Box.>

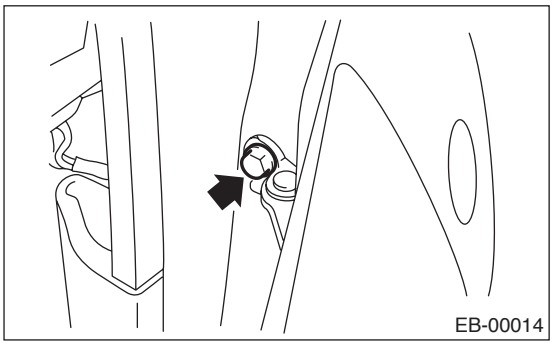
4) Disconnect the connector of door harness from body harness.



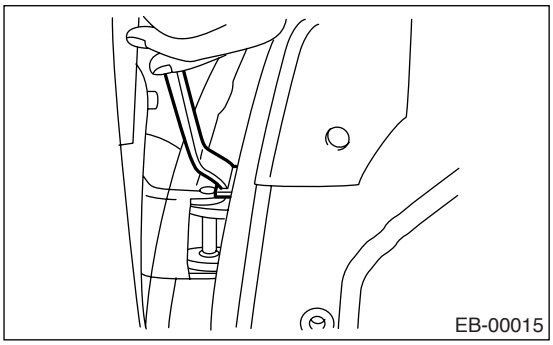
5) Put a wooden block on jack and place jack under the front door. Support the door with a jack to protect it from damage.



6) Remove the bolt from the door checker.



7) Remove the door-side bolts for upper and lower hinges to remove front door panel.



8) Remove the door hinge from vehicle.

B: INSTALLATION

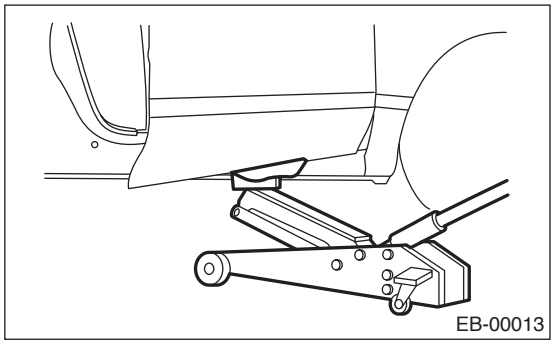
1. FRONT DOOR PANEL

Install in the reverse order of removal.

Tightening torque:
Refer to "COMPONENT" of "General Description".
<Ref. to EB-8, FRONT DOOR PANEL, COMPONENT, General Description.>

2. FRONT DOOR ASSEMBLY

1) Put a wooden block on jack and place the front door on that.

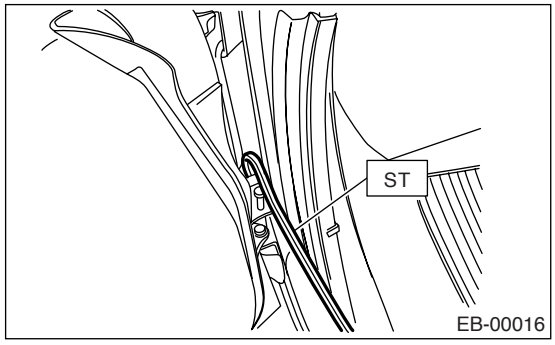


2) Apply grease to the sliding area of door hinges, and install the door hinge to vehicle.
3) Install the front door to upper hinge and lower hinge adjusting by jack.
4) Tighten the bolt of door checker.
5) Connect the door harness connector, and install the instrument panel lower cover.
6) Install the front pillar lower trim.

Tightening torque:
Refer to "COMPONENT" of "General Description".
<Ref. to EB-8, FRONT DOOR PANEL, COMPONENT, General Description.>

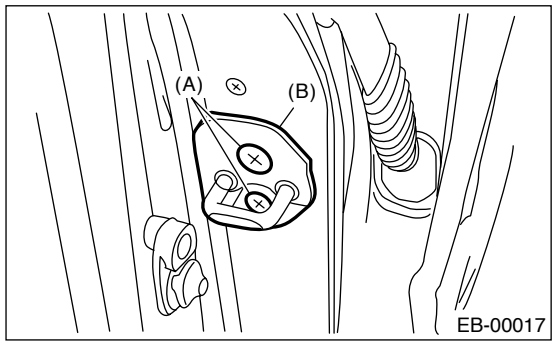
C: ADJUSTMENT

1) Using the ST, loosen the body-side bolts of upper and lower hinges to align the position of front door panel longitudinally and laterally.
ST 925610000 DOOR HINGE WRENCH



2) Loosen the screws (A), and tap the striker (B) using plastic hammer to adjust the gap between rear end surface of front door panel and front end surface of rear door.

CAUTION:
Do not use an impact wrench. Welding area on the striker nut plate is easily broken.

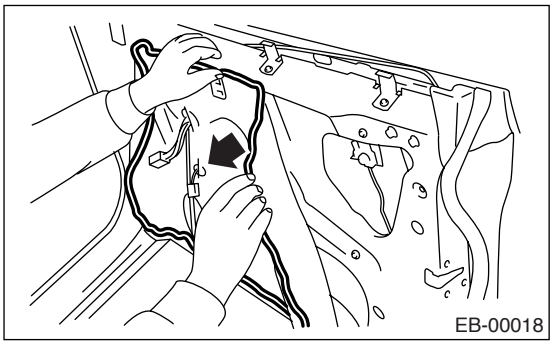


5. Front Sealing Cover

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the front door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Remove the front speaker. <Ref. to ET-6, REMOVAL, Front Speaker.>
4) Pull back the sealing cover.

NOTE:
• Carefully remove the butyl tape. Excessive force will easily break the cover.
• If cover gets broken, replace it with a new one.



B: INSTALLATION

1) Install in the reverse order of removal.
2) When replacing the sealing cover, use the butyl tape.
3) Press the butyl tape-applied area firmly to prevent any floating on surface.

Butyl tape:
3M8626 or equivalent

NOTE:
• Apply a uniform bead of butyl tape.
• Attach the sealing cover, keeping it from becoming wrinkled.
• Breaks in the bead will allow water leakage and contamination.

C: INSPECTION

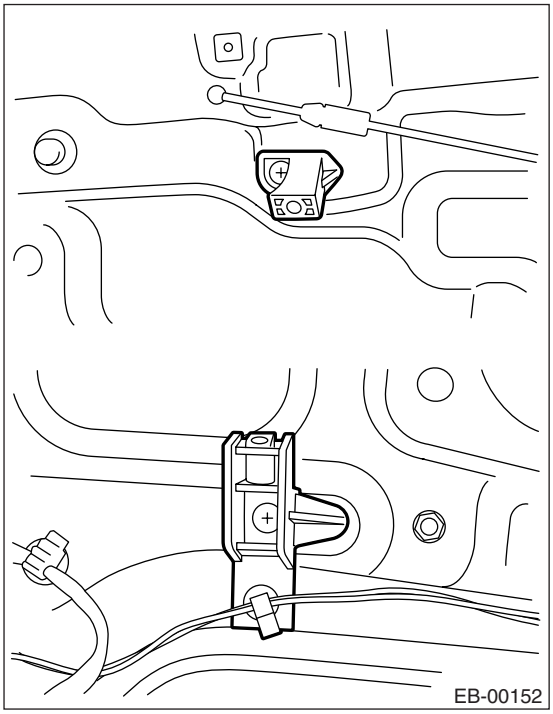
If the sealing cover gets damaged, replace it with a new one.

6. Rear Door

A: REMOVAL

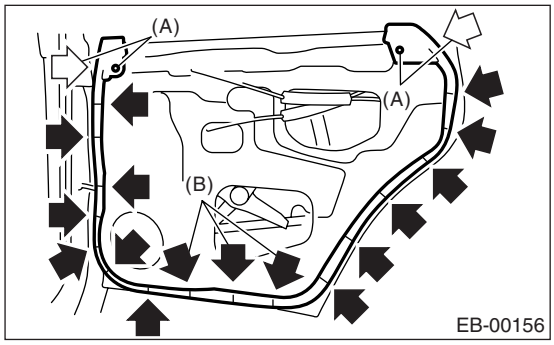
1. REAR DOOR PANEL

1) Disconnect the ground cable from battery.
2) Remove the rear door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Remove the rear speaker. <Ref. to ET-9, REMOVAL, Rear Speaker.>
4) Pull back the sealing cover. <Ref. to EB-24, REMOVAL, Rear Sealing Cover.>
5) Remove the rear door glass. <Ref. to GW-22, REMOVAL, Rear Door Glass.>
6) Remove the door sash and rear door regulator and motor assembly. <Ref. to GW-24, REMOVAL, Rear Regulator and Motor Assembly.>
7) Remove the rear door latch. <Ref. to SL-34, REMOVAL, Rear Door Latch and Door Lock Actuator Assembly.>
8) Remove the rear outer handle. <Ref. to SL-33, REMOVAL, Rear Outer Handle.>
9) Remove the screw to remove the door trim bracket.



EB-00152

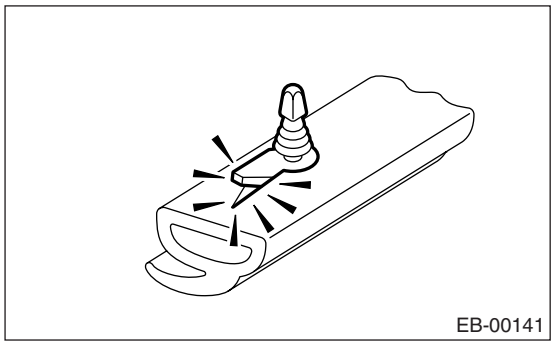
10) Remove the rear door inner weather strip.



EB-00156

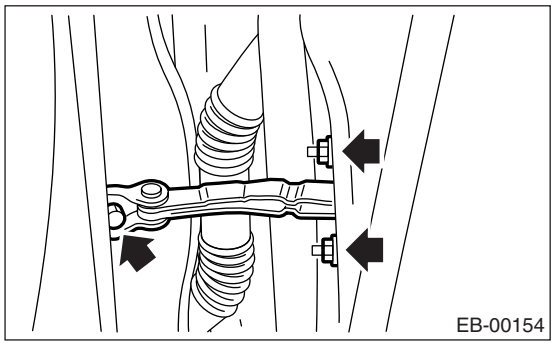
(A) Pin clip
(B) Weather strip clip

NOTE:
If the weather strip clip is removed with excessive force, the weather strip may be damaged. Be sure to use clip remover to remove.



EB-00141

11) Remove the bolts and nuts to remove the door checker.



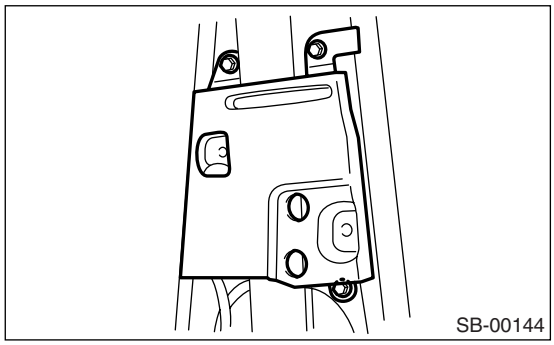
EB-00154

12) Remove the rear door. <Ref. to EB-21, REAR DOOR ASSEMBLY, REMOVAL, Rear Door.>

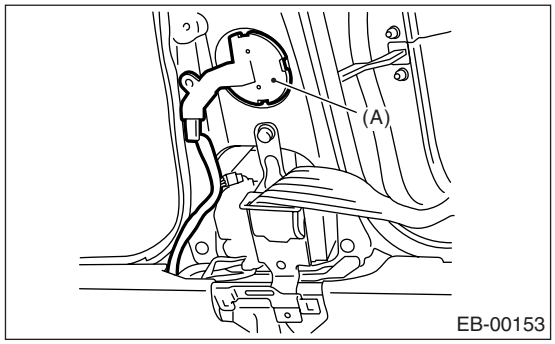
2. REAR DOOR ASSEMBLY

1) Disconnect the ground cable from battery.
2) Remove the center pillar lower trim. <Ref. to EI-60, REMOVAL, Lower Inner Trim.>

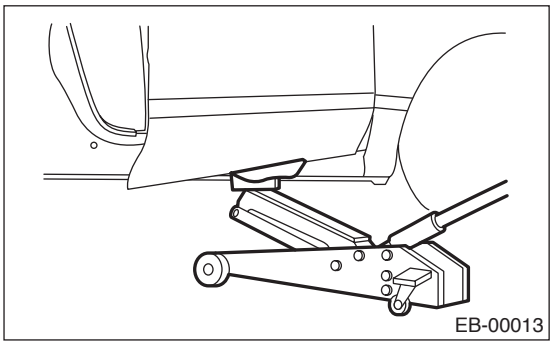
3) Remove the center pillar inner protector lower.



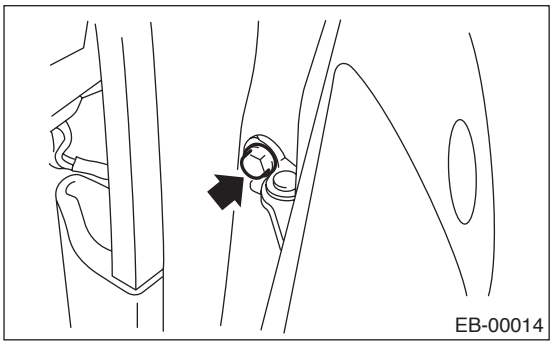
4) Remove the harness holder (A), and disconnect the door harness connector inside pillar.



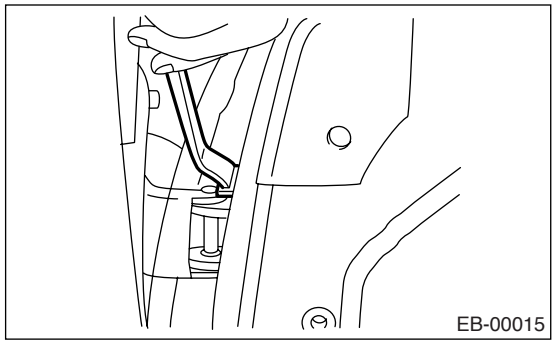
5) Put a wooden block on jack and place jack under the rear door. Support the rear door with the jack to protect it from damage.



6) Remove the bolt from the door checker.



7) Remove the door-side bolts for upper and lower hinges to remove the rear door panel.



8) Remove the door hinge from vehicle.

B: INSTALLATION

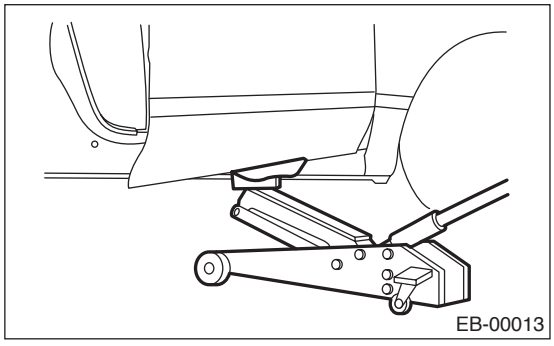
1. REAR DOOR PANEL

Install in the reverse order of removal.

Tightening torque:
Refer to "COMPONENT" of "General Description".
<Ref. to EB-9, REAR DOOR PANEL, COMPONENT, General Description.>

2. REAR DOOR ASSEMBLY

1) Put a wooden block on jack and place the rear door on that.

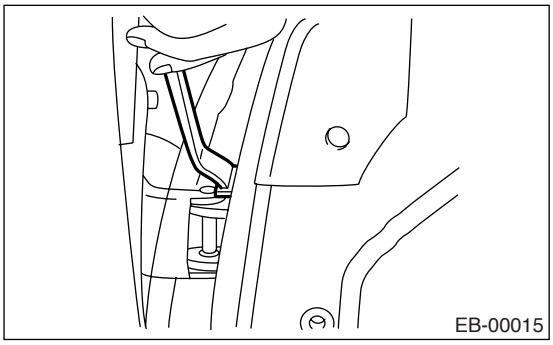


2) Apply grease to sliding area of the door hinges.
3) Install the rear door to upper hinge and lower hinge adjusting by jack.
4) Tighten the bolt of door checker.
5) Connect the door harness connector, and install the center pillar inner protector.
6) Install the center pillar lower trim.

Tightening torque:
Refer to "COMPONENT" of "General Description".
<Ref. to EB-9, REAR DOOR PANEL, COMPONENT, General Description.>

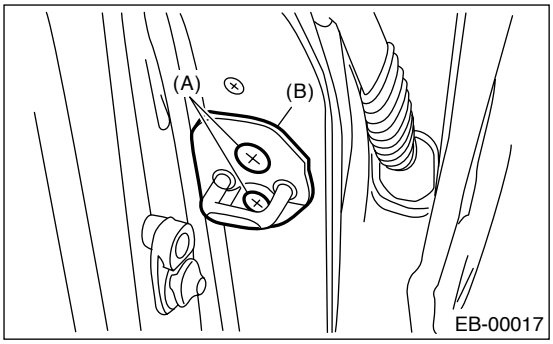
C: ADJUSTMENT

1) Open the rear door, loosen the door-side bolts of upper and lower hinges to align the position of rear door panel longitudinally and laterally.



2) Loosen the screws (A), and tap the striker (B) using plastic hammer to adjust the gap between rear end surface of rear door panel and body surface.

CAUTION:
Do not use an impact wrench. Welding area on the striker nut plate is easily broken.

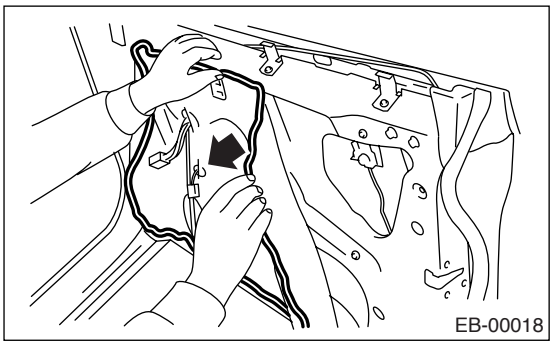


7. Rear Sealing Cover

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the rear door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Pull back the sealing cover.

NOTE:
• Carefully remove the butyl tape. Excessive force will easily break the cover.
• If cover gets broken, replace it with a new one.



B: INSTALLATION

1) Install in the reverse order of removal.
2) When replacing the sealing cover, use the butyl tape.
3) Press the butyl tape-applied area firmly to prevent any floating on surface.

Butyl tape:
3M8626 or equivalent

NOTE:
• Apply a uniform bead of butyl tape.
• Attach the sealing cover, keeping it from becoming wrinkled.
• Breaks in the bead will allow water leakage and contamination.

C: INSPECTION

If the sealing cover gets damaged, replace it with a new one.

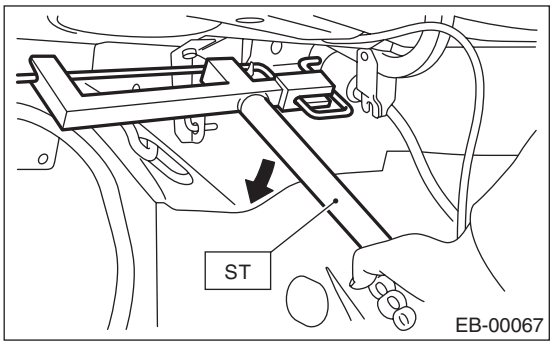
8. Trunk Lid

A: REMOVAL

1. TORSION BAR

1) Open the trunk lid.
2) Using the ST, remove the torsion bar from the hinge link.
ST 927780000 REMOVER

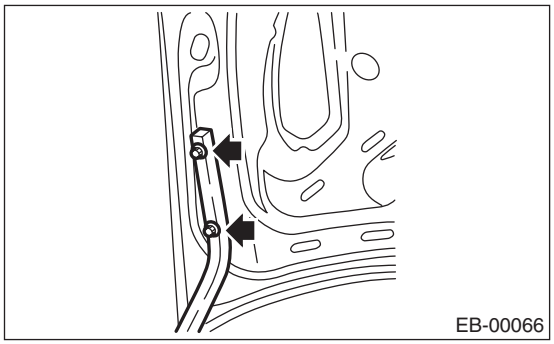
CAUTION:
During removal and installation, carefully handle the torsion bar, because it will generate reactive force.



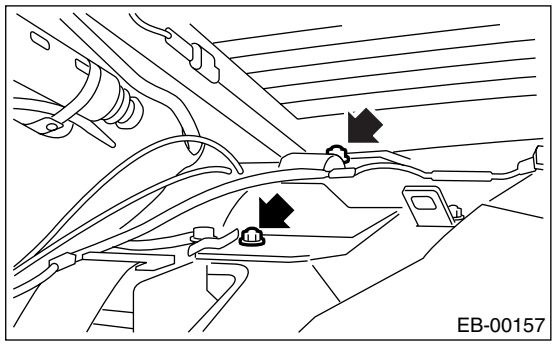
3) Remove the right/left torsion bars.

2. TRUNK LID ARM

1) Disconnect the ground cable from battery.
2) Open the trunk lid to remove the trunk lid trim, trunk lid arm cover and trunk room trim. <Ref. to EI-71, TRUNK ROOM TRIM, REMOVAL, Trunk Room Trim.>
3) Disconnect the trunk lid release cable. <Ref. to SL-39, REMOVAL, Trunk Lid Lock Assembly.>
4) Disconnect each connector, and remove the harness clip.
5) Remove the trunk lid mounting bolts to remove the trunk lid panel from trunk lid arm.

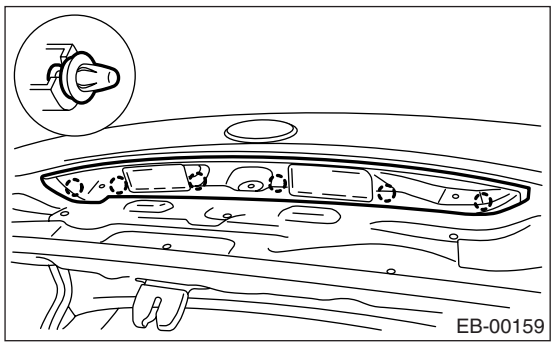


6) Remove the torsion bar from the trunk lid hinge link. <Ref. to EB-25, TORSION BAR, REMOVAL, Trunk Lid.>
7) Remove the rear shelf trim. <Ref. to EI-70, REMOVAL, Rear Shelf Trim.>
8) Remove the bolts to remove the trunk lid arm.

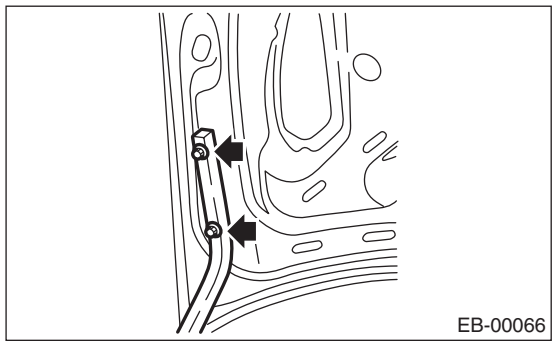


3. TRUNK LID PANEL

1) Disconnect the ground cable from battery.
2) Open the trunk lid to remove the trunk lid trim and trunk lid arm cover. <Ref. to EI-71, TRUNK ROOM TRIM, REMOVAL, Trunk Room Trim.>
3) Disconnect the connector to remove the trunk lid harness.
4) Remove the trunk lid lock assembly. <Ref. to SL-39, REMOVAL, Trunk Lid Lock Assembly.>
5) Remove the trunk lid garnish. <Ref. to EI-75, REMOVAL, Trunk Lid Garnish.>
6) Remove the license plate light cover.



7) Remove the bolts to remove the trunk lid panel from the trunk lid arm.



B: INSTALLATION

1. TORSION BAR

1) Install in the reverse order of removal.
2) Apply grease to the rotating area of hinges and of torsion bar.

2. TRUNK LID ARM

Install in the reverse order of removal.

Tightening torque:
Refer to "COMPONENT" of "General Description".
<Ref. to EB-10, TRUNK LID PANEL, COMPONENT, General Description.>

3. TRUNK LID PANEL

1) Install in the reverse order of removal.
2) Install with attention to make uniform clearance around the trunk lid panel. For the dimension of clearance, refer to "SPECIFICATIONS" in "General Description". <Ref. to EB-2, SPECIFICATION, General Description.>

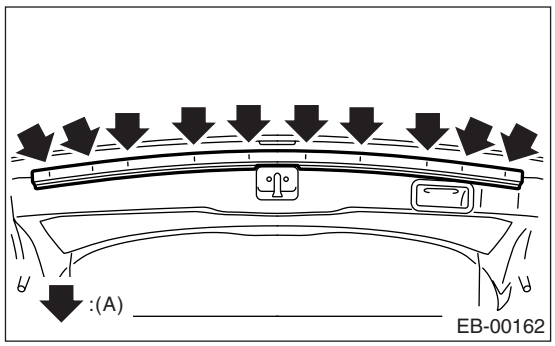
Tightening torque:
14 N·m (1.43 kgf-m, 10.3 ft-lb)

9. Rear Gate

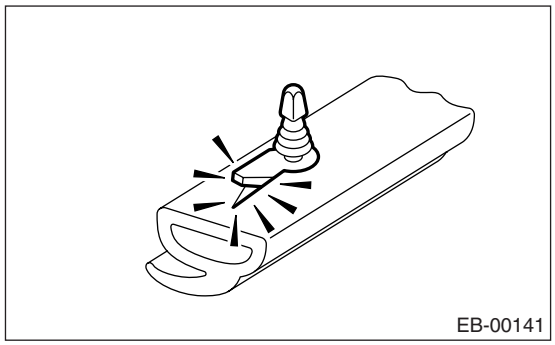
A: REMOVAL

1. REAR GATE PANEL

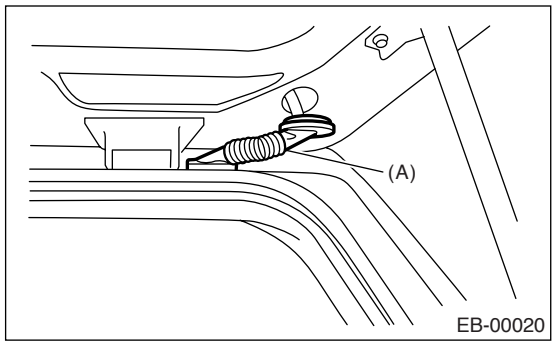
1) Disconnect the ground cable from battery.
2) Open the rear gate.
3) Remove the rear gate trim. <Ref. to EI-69, REMOVAL, Rear Gate Trim.>
4) Remove the rear gate garnish. <Ref. to EI-76, REMOVAL, Rear Gate Garnish.>
5) Remove the rear wiper arm. <Ref. to WW-21, REMOVAL, Rear Wiper Arm.>
6) Remove the rear wiper motor. <Ref. to WW-22, WAGON MODEL, REMOVAL, Rear Wiper Motor.>
7) Remove the rear gate outer handle. <Ref. to SL-36, REMOVAL, Rear Gate Outer Handle.>
8) Remove the rear gate latch assembly. <Ref. to SL-37, REMOVAL, Rear Gate Latch Assembly.>
9) Detach the roof spoiler. <Ref. to EI-40, REMOVAL, Roof Spoiler.>
10) Remove harness clip of each connector from the rear gate panel.
11) Remove the weather strip clips (A), and remove the rear gate panel weather strip.



NOTE:
If the weather strip clip is removed with excessive force, the weather strip may be damaged. Be sure to use clip remover to remove.

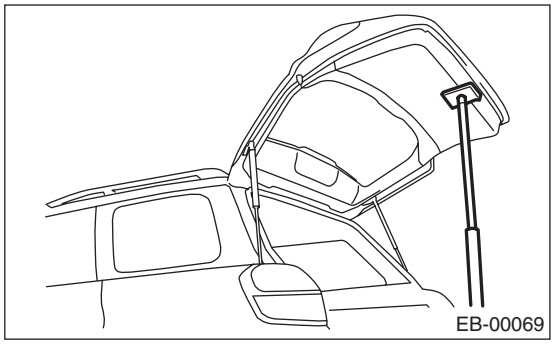


12) Remove the rubber duct (A) connection, and pull out the harness and washer hose from the rear gate.

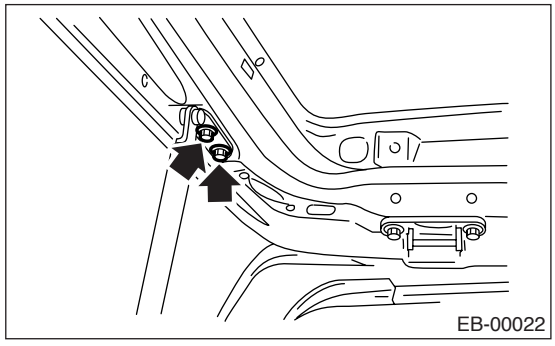


13) Before removing the rear gate damper stay, prevent the rear gate from closing using prop or the like.

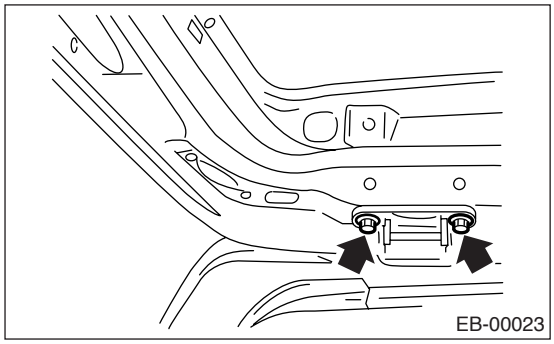
CAUTION:
If the prop comes off, operators may get injured and vehicle may get damaged. Make sure to support the rear gate with secure material to prevent injury or damage.



14) Remove the mounting bolts of rear gate damper stay.



15) Remove the rear gate hinge bolts, and remove the rear gate panel.



EB-00023

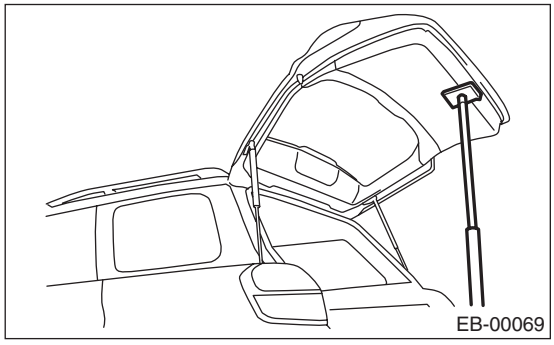
16) Remove the rear gate hinge from vehicle.

2. REAR GATE DAMPER STAY

CAUTION:
• Do not damage piston rods and oil seals.
• Never disassemble cylinders: They contain gas.

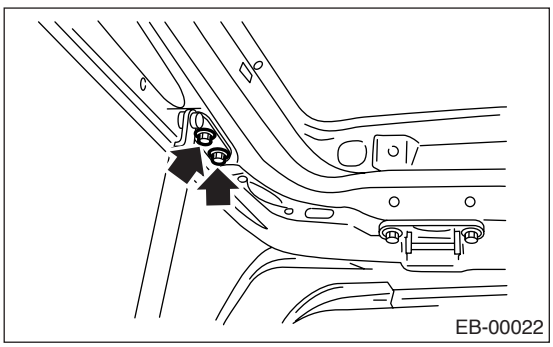
1) Open the rear gate.
2) Before removing the rear gate damper stay, prevent the rear gate from closing using prop or the like.

CAUTION:
If the prop comes off, operators may get injured and vehicle may get damaged. Make sure to support the rear gate with secure material to prevent injury or damage.



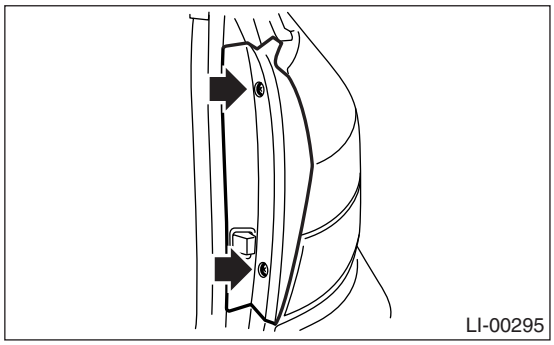
EB-00069

3) Remove the mounting bolts of rear gate damper stay.



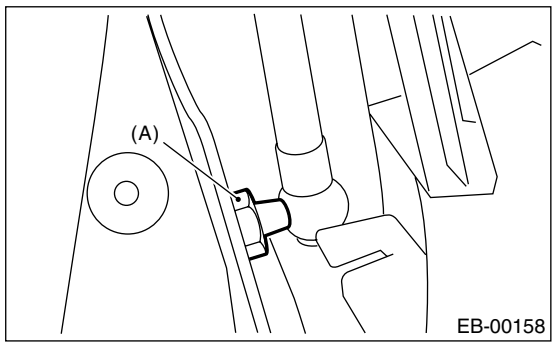
EB-00022

4) Remove the clips and then detach the rear combination light covers.



LI-00295

5) Remove the mounting bolt (A), and remove the damper stay.



EB-00158

B: INSTALLATION

1. REAR GATE PANEL

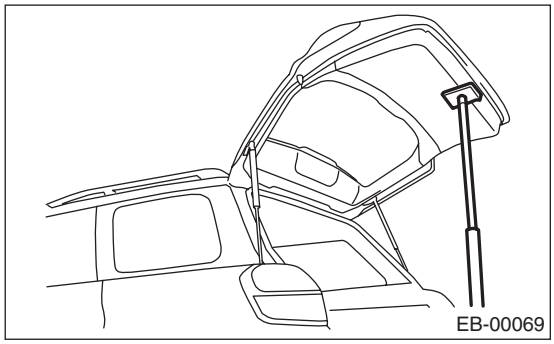
1) Install in the reverse order of removal.
2) Install with attention to make uniform clearance between rear gate panel and body. For the dimension of clearance, refer to “SPECIFICATIONS” in “General Description”. <Ref. to EB-2, SPECIFICATION, General Description.>

Tightening torque:
Refer to “COMPONENT” of “General Description”.
<Ref. to EB-11, REAR GATE PANEL, COMPONENT, General Description.>

2. REAR GATE DAMPER STAY

1) Prevent the rear gate from closing using prop or the like.

CAUTION:
If the prop comes off, operators may get injured and vehicle may get damaged. Make sure to support the rear gate with secure material to prevent injury or damage.



2) Install in the reverse order of removal.

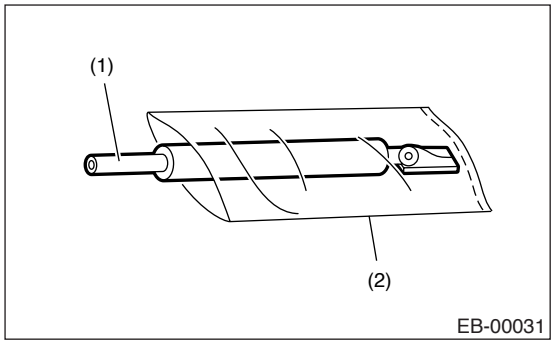
Tightening torque:
19.6 N·m (2.0 kgf-m, 14.5 ft-lb)

C: DISPOSAL

1. REAR GATE DAMPER STAY

CAUTION:
Gas is colorless, odorless and harmless. However, gas pressure may spray cutting powder or oil. Be sure to wear dust-resistant goggles.

1) Cover with a vinyl sack as shown in the figure.

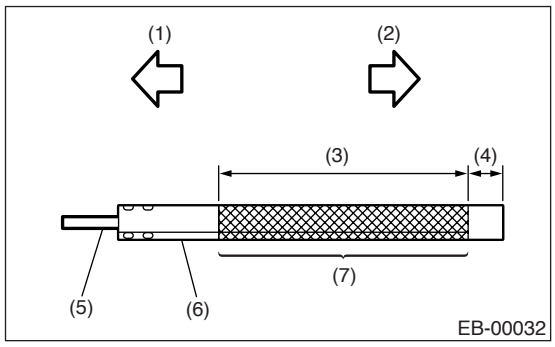


(1) Rear gate damper stay
(2) Vinyl sack

NOTE:
Prevent the vinyl sack from being caught by drill cutting edge.

2) Lift the body side slightly with piston rods fully extended, and secure the body side with vise.

Drill a hole in 2 to 3 mm (0.08 to 0.12 in) diameter at a point 10 to 200 mm (0.39 to 7.87 in) from door side, and bleed rear gate damper stay gas completely.



(1) Body side
(2) Door side
(3) 190 mm (7.48 in)
(4) 10 mm (0.39 in)
(5) Piston rod
(6) Cylinder
(7) Portion to be drilled

BODY SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

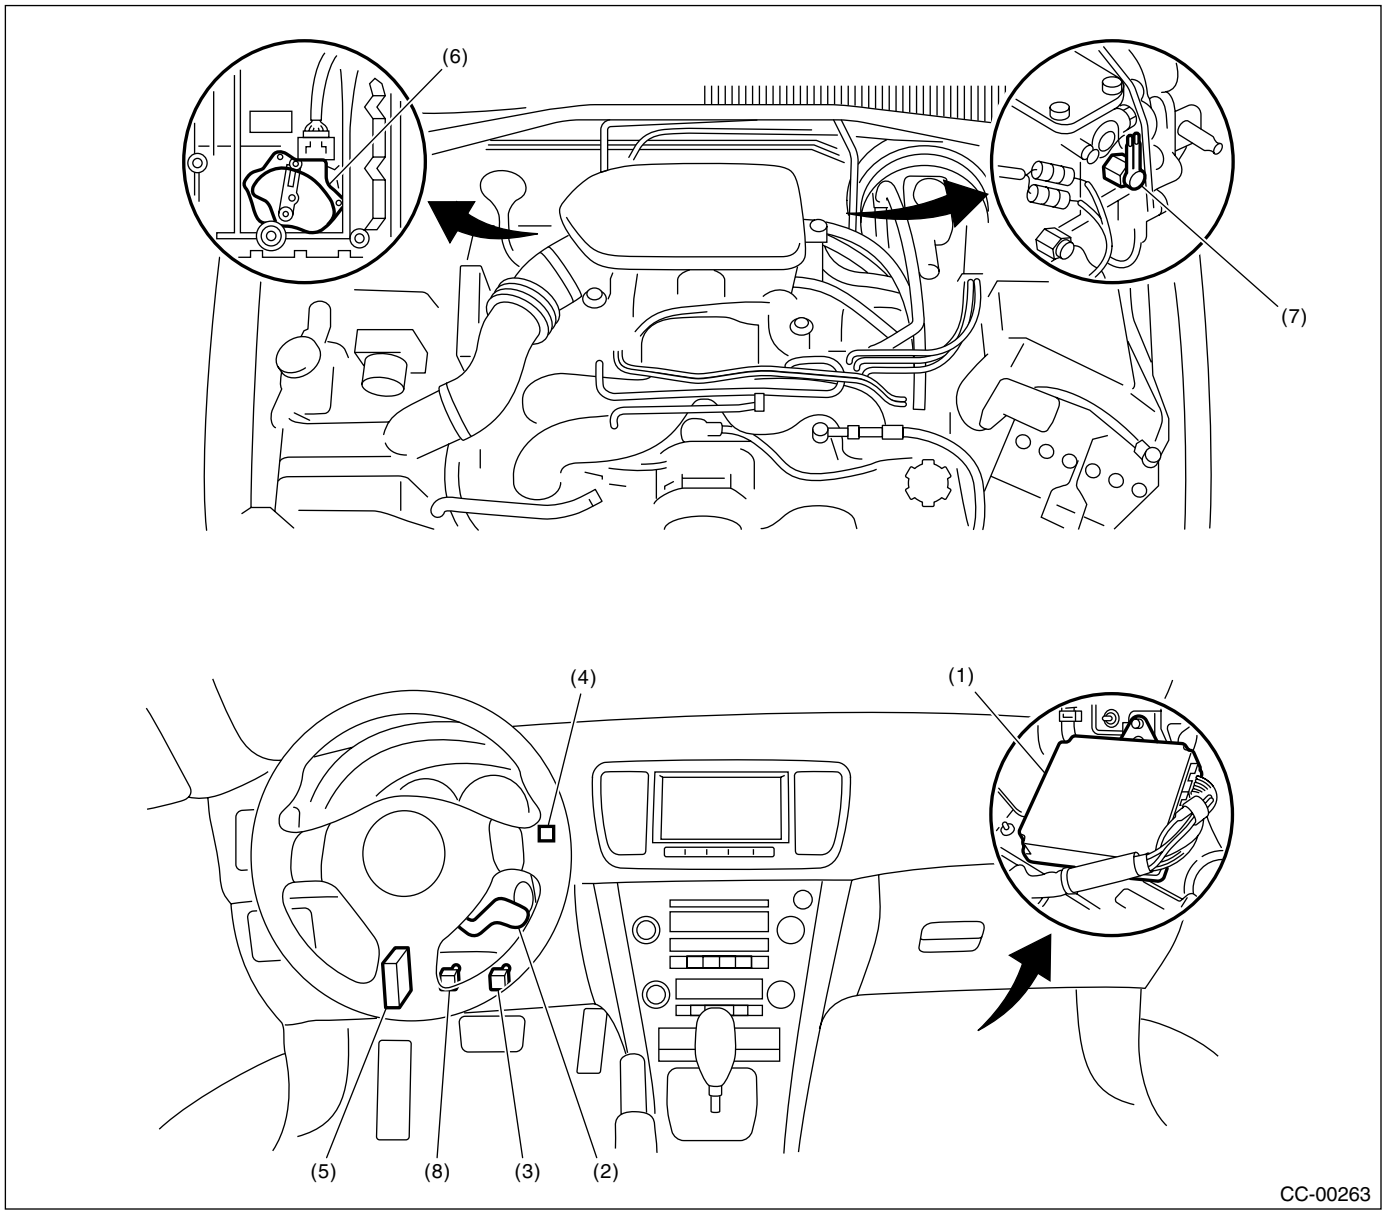
Page

1. General Description 2
2. Cruise Control Unit 4
3. Cruise Control Command Switch 5
4. Stop Light and Brake Switch 6
5. Clutch Switch 7
6. Inhibitor Switch 8
7. Neutral Position Switch 9

1. General Description

A: COMPONENT



(1) Engine control module (ECM)
(2) Cruise control command switch
(3) Stop light & brake switch
(4) Cruise indicator light & cruise set indicator light
(5) Transmission control module (TCM) (AT model)
(6) Inhibitor switch (AT model)
(7) Neutral position switch (MT model)
(8) Clutch switch (MT model)

B: CAUTION

• Before disassembling or reassembling parts, always disconnect the battery ground cable from battery. When repairing the audio, control module, etc. which are provided with memory functions, record the memory contents before disconnecting the ground cable from battery. Otherwise, the memory will be erased.
• Reassemble the parts in the reverse order of disassembly unless otherwise indicated.
• Adjust the parts to specifications specified in this manual.
• Connect the connectors securely during reassembly.
• After reassembly, ensure functional parts operate properly.

C: PREPARATION TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.

2. Cruise Control Unit

A: NOTE

The control of cruise control system is carried out in Engine control module (ECM).

B: REMOVAL

<Ref. to FU(H4SO 2.0)-34, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H4SO 2.5)-36, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-35, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H6DO)-34, REMOVAL, Engine Control Module (ECM).>

C: INSTALLATION

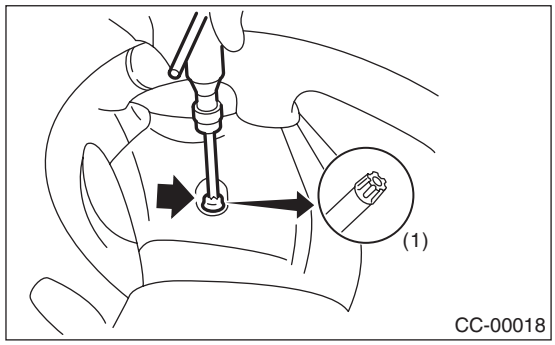
<Ref. to FU(H4SO 2.0)-34, INSTALLATION, Engine Control Module (ECM).> <Ref. to FU(H4SO 2.5)-36, INSTALLATION, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-35, INSTALLATION, Engine Control Module (ECM).> <Ref. to FU(H6DO)-34, INSTALLATION, Engine Control Module (ECM).>

3. Cruise Control Command Switch

A: REMOVAL

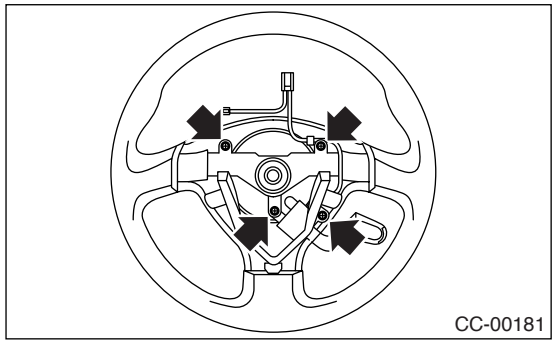
WARNING:
Before servicing, be sure to read the notes in the "AB" section for proper handling of the driver's airbag module. <Ref. to AB-4, CAUTION, General Description.>

1) Set the front wheels in straight ahead position.
2) Turn the ignition switch to OFF.
3) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
4) Using TORX® BIT T30 (Tamper resistant type), loosen the two TORX® bolts which secure driver's airbag module.

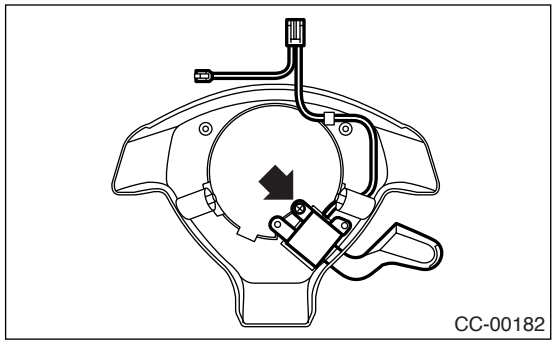


(1) TORX® BIT T30

5) Disconnect the airbag module connector on back of the airbag module.
6) Remove the steering wheel. <Ref. to PS-20, REMOVAL, Steering Wheel.>
7) Remove the four screws to remove the lower cover from steering wheel.



8) Remove one screw to remove the cruise control command switch from lower cover.

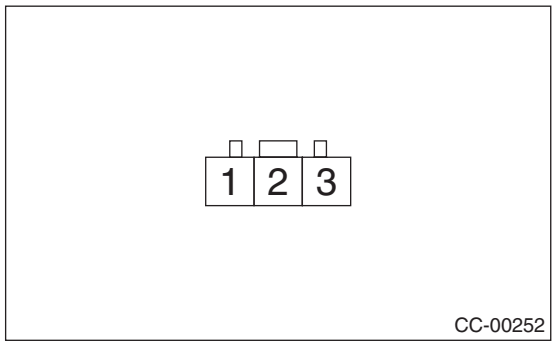


B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Measure the cruise control command switch resistance.



Switch	Area	Terminal No.	Standard
CANCEL SET/COAST RESUME/ ACCEL	ALL OFF	2 and 3	Approx. 4 kΩ
CANCEL	ON	2 and 3	Less than 1 Ω
SET/COAST	ON	2 and 3	Approx. 250 Ω
RESUME/ ACCEL	ON	2 and 3	Approx. 1500 Ω
MAIN	OFF	1 and 2	More than 1 MΩ
	ON	1 and 2	Less than 1 Ω

If NG, replace the cruise control command switch.

4. Stop Light and Brake Switch

A: REMOVAL

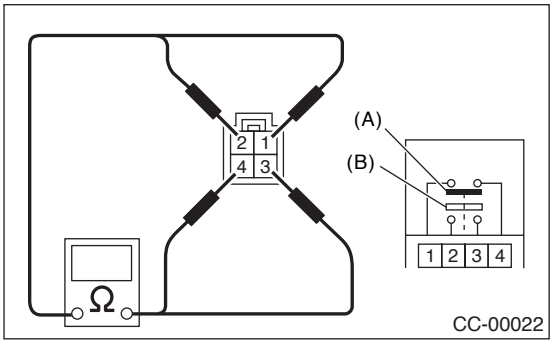
1) Disconnect the ground cable from battery.
2) Disconnect the connector from stop light & brake switch, and then remove the switch. <Ref. to BR-45, REMOVAL, Stop Light Switch.>

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Measure the resistance of brake switch (A) and stop light switch (B).



Switch	Pedal	Terminal No.	Standard
Brake	Released	1 and 4	Less than 1 Ω
	Depressed	1 and 4	More than 1 MΩ
Stop Light	Released	2 and 3	More than 1 MΩ
	Depressed	2 and 3	Less than 1 Ω

If NG, replace the stop light & brake switch.

5. Clutch Switch

A: REMOVAL

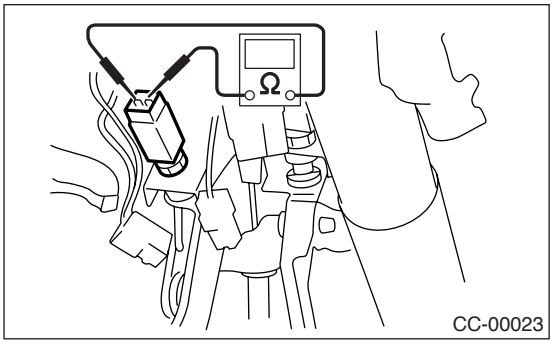
1) Disconnect the ground cable from battery.
2) Disconnect the connector from clutch switch, and then remove the switch. **<Ref. to CL-27,** DISASSEMBLY**, Clutch Pedal.>**

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Measure the clutch switch resistance.



Switch	Pedal	Terminal No.	Standard
Clutch	Released	1 and 2	Less than 1 Ω
	Depressed	1 and 2	More than 1 MΩ

If NG, replace the clutch switch.

6. Inhibitor Switch

A: REMOVAL

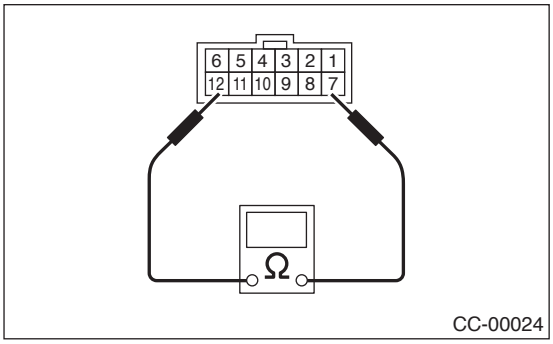
1) Disconnect the ground cable from battery.
2) Disconnect the connector from inhibitor switch, and then remove the switch. **<Ref. to 4AT-52,** REMOVAL**, Inhibitor Switch.>**

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Measure the inhibitor switch resistance.



Selector lever position	Terminal No.	Standard
P	7 and 12	Less than 1 Ω
N		Less than 1 Ω
Except P and N		More than 1 MΩ

If NG, replace the inhibitor switch.

7. Neutral Position Switch

A: REMOVAL

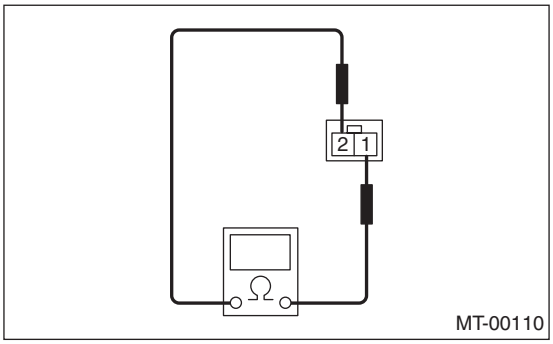
1) Disconnect the ground cable from battery.
2) Disconnect the connector from neutral position switch, and then remove the switch. <Ref. to 5MT-41, BACK-UP LIGHT SWITCH AND NEUTRAL POSITION SWITCH, REMOVAL, Switches and Harness.>

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Measure the neutral position switch resistance.



Gear shift position	Terminal No.	Standard
Neutral position	1 and 2	Less than 1 Ω
Other positions		More than 1 MΩ

If NG, replace the neutral position switch.

BODY SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

8. Diagnostic Procedure with Diagnostic Trouble Code (DTC) 15

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	**CHECK MALFUNCTION INDICATOR LIGHT.** Ensure the malfunction indicator light illuminates.	Does the malfunction indicator light illuminate?	Go to step **5.**	Go to step **2.**
2	**CHECK CRUISE INDICATOR LIGHT.** Ensure the cruise indicator light blinks.	Does the cruise indicator light blink?	Go to step **5.**	Go to step **3.**
3	**CHECK CRUISE CONTROL MAIN SWITCH OPERATION.** Check the cruise control main switch operation. (Ensure the cruise indicator light illuminates.)	Is the cruise control main switch turned on? (Does the cruise indicator light illuminate?)	Go to step **4.**	Go to phenomenon 1. <Ref. to CC(diag)-10, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
4	**CHECK CRUISE CONTROL SET OPERATION.** Check the cruise control set operation.	Can the cruise control be set while driving at more than 40 km/h (25 MPH)?	Go to step **6.**	Go to step **5.**
5	**PERFORM CRUISE CANCEL CONDITIONS DIAGNOSIS.** Perform the cruise cancel conditions diagnosis.	Is DTC displayed?	Go to “List of Diagnostic Trouble Code (DTC)”. <Ref. to CC(diag)-12, List of Diagnostic Trouble Code (DTC).>	Go to phenomenon 2. <Ref. to CC(diag)-10, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
6	**CHECK CRUISE SET INDICATOR LIGHT.** Ensure the cruise set indicator light illuminates.	Does the cruise set indicator light illuminate?	Go to step **7.**	Go to phenomenon 3. <Ref. to CC(diag)-10, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
7	**CHECK VEHICLE SPEED IS HELD WITHIN SET SPEED.** Make sure the vehicle speed is held within set speed.	Is vehicle speed held within set speed ±3 km/h (±2 MPH)? (Make an inspection on a level road.)	Go to step **8.**	Go to phenomenon 4. <Ref. to CC(diag)-10, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
8	**CHECK RESUME/ACCEL OPERATION.** Check the RESUME/ACCEL switch operation.	Does the vehicle speed increase or return to set speed after RESUME/ACCEL switch has been pressed?	Go to step **9.**	Go to phenomenon 5. <Ref. to CC(diag)-10, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

	Step	Check	Yes	No
9	**CHECK SET/COAST OPERATION.** Check the SET/COAST switch operation.	Does the vehicle speed decrease after SET/COAST switch has been pressed?	Go to step **10.**	Go to phenomenon 6. <Ref. to CC(diag)-10, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
10	**CHECK CANCEL OPERATION.** Check the CANCEL switch operation.	Is the cruise control released after CANCEL switch has been pressed?	Go to step **11.**	Go to phenomenon 7. <Ref. to CC(diag)-10, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
11	**CHECK CRUISE CONTROL RELEASE OPERATION.** Check the cruise control release operation.	Is the cruise control released after brake pedal has been depressed?	Go to step **12.**	Go to phenomenon 8. <Ref. to CC(diag)-10, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
12	**CHECK CRUISE CONTROL RELEASE OPERATION.** Check the cruise control release operation.	Is the cruise control released after shifting to the neutral position?	Go to step **13.**	Go to phenomenon 9. <Ref. to CC(diag)-10, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
13	**CHECK CRUISE CONTROL RELEASE OPERATION.** Check the cruise control release operation.	Is the cruise control released after depressing the clutch pedal?	Finish the diagnosis.	Go to phenomenon 10. <Ref. to CC(diag)-10, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

2. General Description

A: CAUTION

Airbag system wiring harness is routed near the cruise control command switch.

CAUTION:
• All airbag system wiring harnesses and connectors are yellow. Do not use the electrical test equipment on these circuits.
• Be careful not to damage the airbag system wiring harness when servicing the cruise control command switch.

B: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST24082AA230	24082AA230	CARTRIDGE	Troubleshooting for electrical system
ST22771AA030	22771AA030	SUBARU SELECT MONITOR KIT	Troubleshooting for electrical system • English: 22771AA030 (Without printer) • German: 22771AA070 (Without printer) • French: 22771AA080 (Without printer) • Spanish: 22771AA090 (Without printer)

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and ampere.

C: INSPECTION

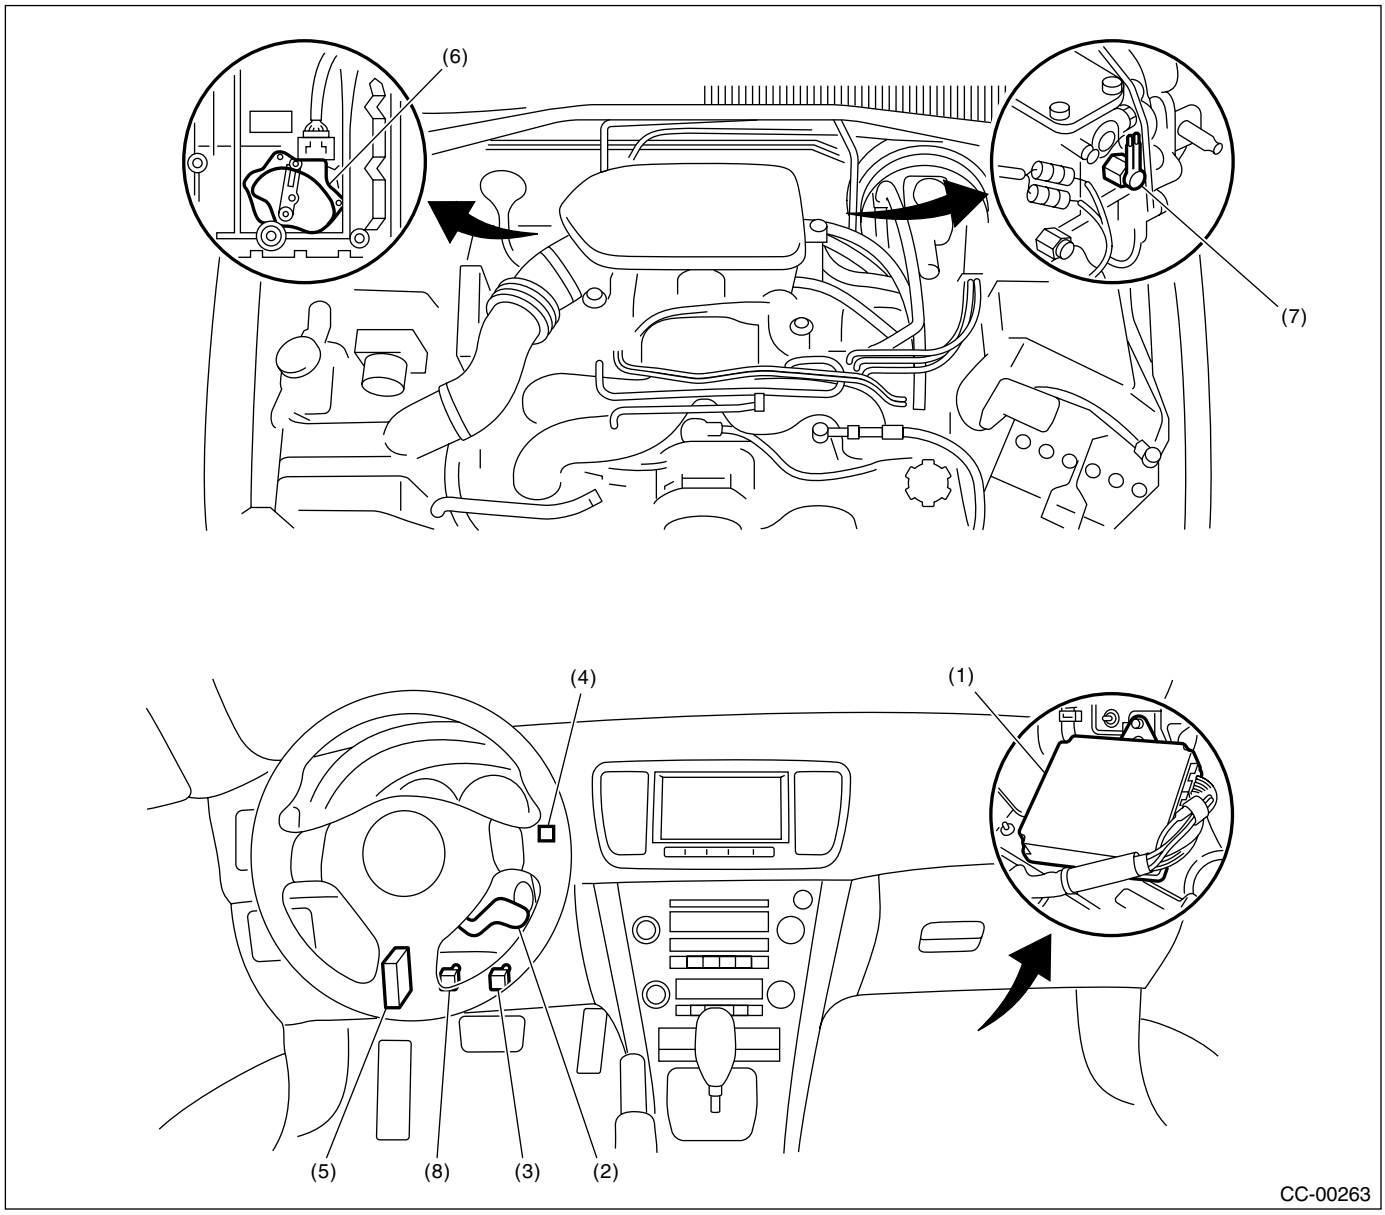
Measure the battery voltage and specific gravity of electrolyte.

Standard voltage:
12 V or more

Specific gravity:
More than 1.260

3. Electrical Component Location

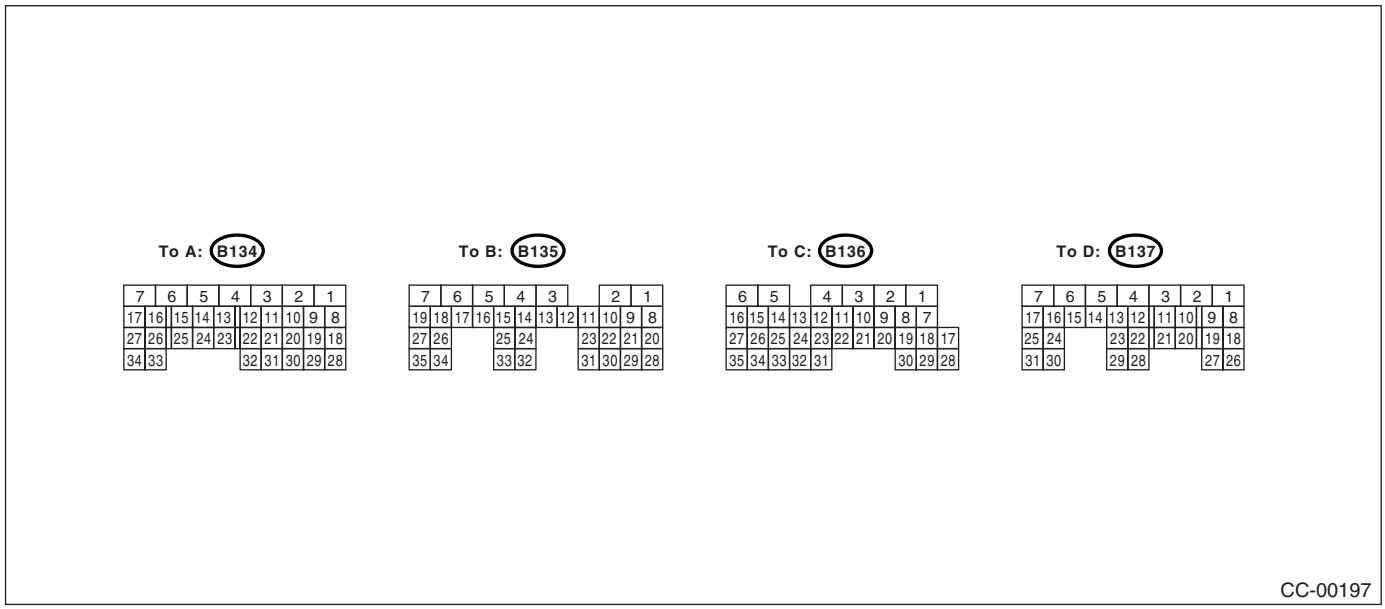
A: LOCATION



(1) Engine control module (ECM)
(2) Cruise control command switch
(3) Stop and brake switch
(4) Cruise indicator light and cruise set indicator light
(5) Transmission control module (TCM) (AT model)
(6) Inhibitor switch (AT model)
(7) Neutral position switch (MT model)
(8) Clutch switch (MT model)

4. Engine Control Module (ECM) I/O Signal

A: ELECTRICAL SPECIFICATION



• 2.0 L turbo model, 3.0 L model, 2.5 L EC, K4 and EK model

Content		Terminal No.	Measurement Condition and I/O Signal (Idling with ignition ON: Except cruise set light)
Main power supply	VB (CONTROL 1) VB (CONTROL 2)	B6 B5	• Battery voltage is present when the main power is turned ON. • "0 V" voltage is present when the main power is turned OFF.
Command Switch		C11	• "0 V" voltage is present when the command switch is turned to CANCEL position. • "Approx. 1 V" voltage is present when the command switch is turned to SET/COAST position. • "Approx. 3 V" voltage is present when the command switch is turned to RESUME/ACCEL position. • "Approx. 4 V" voltage is present when the command switch is released.
Brake switch 1 (Brake switch)		C9	• Battery voltage is present when the brake pedal is released. • "0 V" voltage is present when the brake pedal is depressed.
Brake switch 2 (Stop light switch)		C8	• Battery voltage is present when the brake pedal is depressed. • "0 V" voltage is present when the brake pedal is released.
Main switch		C7	• "0 V" voltage is present while the main switch is pressed or turned on. • Battery voltage is present when the main switch is turned OFF.
Ground	GND (CONTROL 1) GND (CONTROL 2)	D2 D1	—
Ignition switch		D14	• Battery voltage is present when the ignition switch is turned ON. • "0 V" voltage is present when the ignition switch is turned OFF.
Clutch switch (MT model)		C10	• "0 V" voltage is present when the clutch pedal is depressed. • Battery voltage is present when the clutch pedal is released.
Neutral position switch (MT model)		D9	• "0 V" voltage is present when the shift lever is set in any position except neutral. • "Approx. 5 V" voltage is present when the shift lever is set in neutral position.
Neutral signal (AT model)		D9	• "Approx. 5 V" voltage (4AT model) or battery voltage (5AT model) is present when the shift lever is set in any position except "P" or "N". • "0 V" voltage is present when the shift lever is set in "P" or "N" position.

• 2.0 L non-turbo model, 2.5 L KS, KA model

Content		Terminal No.	Measurement Condition and I/O Signal (Idling with ignition ON: Except cruise set light)
Main power supply	VB (CONTROL 1) VB (CONTROL 2)	C3 C4	• Battery voltage is present when the main power is turned ON. • "0 V" voltage is present when the main power is turned OFF.
Command Switch		C21	• "0 V" voltage is present when the command switch is turned to CANCEL position. • "Approx. 1 V" voltage is present when the command switch is turned to SET/COAST position. • "Approx. 3 V" voltage is present when the command switch is turned to RESUME/ACCEL position. • "Approx. 4 V" voltage is present when the command switch is released.
Brake switch 1 (Brake switch)		D12	• Battery voltage is present when the brake pedal is released. • "0 V" voltage is present when the brake pedal is depressed.
Brake switch 2 (Stop light switch)		D13	• Battery voltage is present when the brake pedal is depressed. • "0 V" voltage is present when the brake pedal is released.
Main switch		D14	• "0 V" voltage is present while the main switch is pressed or turned on. • Battery voltage is present when the main switch is turned OFF.
Ground	GND (CONTROL 1) GND (CONTROL 2)	C5 C6	—
Ignition switch		B13	• Battery voltage is present when the ignition switch is turned ON. • "0 V" voltage is present when the ignition switch is turned OFF.
Clutch switch (MT model)		D22	• "0 V" voltage is present when the clutch pedal is depressed. • Battery voltage is present when the clutch pedal is released.
Neutral position switch (MT model)		B12	• "0 V" voltage is present when the shift lever is set in any position except neutral. • "Approx. 5 V" voltage is present when the shift lever is set in neutral position.
Neutral signal (AT model)		B12	• "Approx. 5 V" voltage is present when the shift lever is set in any position except "P" or "N". • "0 V" voltage is present when the shift lever is set in "P" or "N" position.

B: WIRING DIAGRAM

<Ref. to WI-134, WIRING DIAGRAM, Cruise Control System.>

5. Subaru Select Monitor

A: OPERATION

1. GENERAL DESCRIPTION

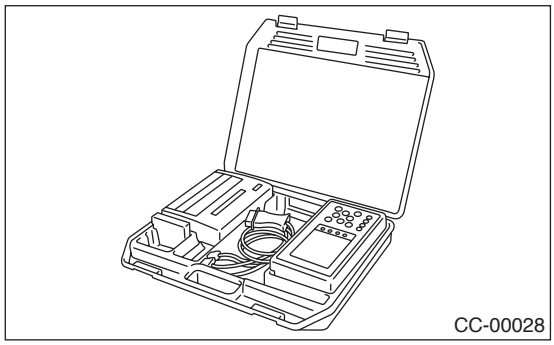
For the on-board diagnosis function of the cruise control system, use Subaru Select Monitor.
The on-board diagnosis function operates under two categories, which are used depending on the type of problems;
1) Cruise Control Cancel Conditions Diagnosis:
(1) This category of diagnosis requires actual vehicle driving in order to determine the cause, as when cruise speed is cancelled during driving although cruise cancel condition is not entered.
(2) Cruise control memory in ECM stores the cancel condition (Code No.) which occurred during driving. When there are plural cancel conditions (Code No.), they are shown on the Subaru Select Monitor.

CAUTION:
• The cruise control memory stores not only the cruise "cancel" which occurred (although "cancel" operation is not entered by the driver), but also the "cancel" condition input by the driver.
• The content of memory is cleared when ignition switch or cruise control main switch is turned OFF.

2) Real-time Diagnosis:
Real-time diagnosis function is used to determine whether or not the input signal system is in good order, according to the signal emitted from switches, sensors, etc.
(1) Vehicle cannot be driven at cruise speed when problem occurs in the cruise control system or its associated circuits.
(2) Monitor the signal conditions from switches and sensors.

2. CRUISE CANCEL CONDITIONS DIAGNOSIS

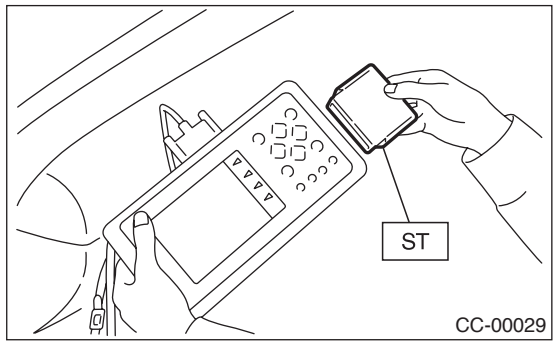
1) Prepare the Subaru Select Monitor kit.



CC-00028

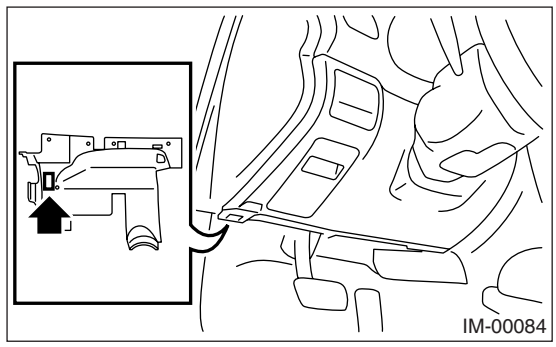
2) Connect the diagnosis cable to Subaru Select Monitor.

3) Insert the cartridge to Subaru Select Monitor. <Ref. to CC(diag)-4, SPECIAL TOOL, PREPARATION TOOL, General Description.>



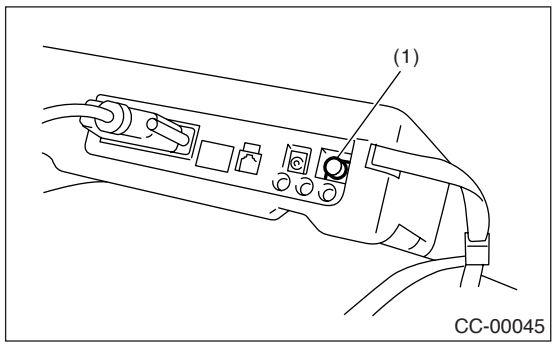
CC-00029

4) Connect the Subaru Select Monitor to data link connector.
(1) Data link connector is located in the lower portion of instrument panel (on the driver's side).



IM-00084

(2) Connect the diagnosis cable to data link connector.
5) Start the engine and turn the cruise control main switch to ON.
6) Turn the Subaru Select Monitor switch to ON.



CC-00045

(1) Power switch

7) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
On the system selection display screen, select the {Engine} and press the [YES] key. Press the [YES] key after the information of engine type is displayed.
8) Drive vehicle at least 40 km/h (25 MPH) with cruise speed set.

9) If the cruise speed is canceled by itself (without doing any cancel operations), DTC will display on the screen when selecting the {Check Cancel Code} and pressing the [YES] key on the engine malfunction diagnosis display screen.

CAUTION:
• When performing diagnostics, observe the legal speed of the road.
• DTC will also displayed when cruise control cancel is effected by driver. Do not confuse.
• Put a co-worker in the vehicle to assist the diagnosis during driving.

NOTE:
DTC will be cleared by turning ignition switch or cruise control main switch to OFF.

3. REAL-TIME DIAGNOSIS

1) Connect the Subaru Select Monitor.
2) Turn the ignition switch and cruise control main switch to ON.
3) Turn the Subaru Select Monitor switch to ON.
4) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
5) On the «System Selection Menu» display screen, select the {Engine} and press the [YES] key.
6) Press the [YES] key after the information of engine type is displayed.
7) On the «Cruise Control Diagnosis» display screen, select the {Current Data Display/Save}, and then press the [YES] key.
8) Make sure that normal indication is displayed when operated as follows:
• Depress/release the brake pedal. (Stop light switch and brake switch turn ON.)
• Turn the main switch to ON.
• Turn the “CANCEL” switch to ON.
• Turn ON the “SET/COAST” switch.
• Turn ON the “RESUME/ACCEL” switch.
• Depress or release the clutch pedal.
• Place the shift lever in any position except neutral.

NOTE:
• For details concerning operation procedure, refer to “SUBARU SELECT MONITOR OPERATION MANUAL”.
• For DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to CC(diag)-12, List of Diagnostic Trouble Code (DTC).>

6. Diagnostics with Phenomenon

A: DIAGNOSTIC PROCEDURE WITH PHENOMENON

Phenomenon		Checking item	Reference
1	Cruise control main switch is not turned to ON. (Cruise indicator light does not illuminate.)	(1) Check the cruise indicator light.	<Ref. to CC(diag)-11, CHECK CRUISE INDICATOR LIGHT & CRUISE SET INDICATOR LIGHT., Diagnostics with Phenomenon.>
		(2) Check the cruise control command switch.	<Ref. to CC(diag)-15, DTC 11, 15, 21 AND 24 CRUISE CONTROL COMMAND SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
2	Cruise control cannot be set.	(1) Check the cruise control command switch.	<Ref. to CC(diag)-15, DTC 11, 15, 21 AND 24 CRUISE CONTROL COMMAND SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
		(2) Check the stop light switch and brake switch.	<Ref. to CC(diag)-18, DTC 12 AND 25 STOP LIGHT SWITCH AND BRAKE SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
		(3) Check the clutch switch.	<Ref. to CC(diag)-21, DTC 13 CLUTCH SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
		(4) Check the neutral position switch.	<Ref. to CC(diag)-24, DTC 14 NEUTRAL POSITION SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
		(5) Check the vehicle speed sensor.	<Ref. to CC(diag)-32, DTC 22 AND 32 VEHICLE SPEED SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
3	Cruise set indicator light does not illuminate.	Check the cruise set indicator light.	<Ref. to CC(diag)-11, CHECK CRUISE INDICATOR LIGHT & CRUISE SET INDICATOR LIGHT., Diagnostics with Phenomenon.>
4	Vehicle speed is not held within set speed ±3 km/h (±2 MPH).	Inspect the vehicle speed sensor.	<Ref. to CC(diag)-32, DTC 22 AND 32 VEHICLE SPEED SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
5	Vehicle speed does not increase or does not return to set speed after RESUME/ ACCEL switch has been pressed.	Check the RESUME/ACCEL switch.	<Ref. to CC(diag)-15, DTC 11, 15, 21 AND 24 CRUISE CONTROL COMMAND SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
6	Vehicle speed does not decrease after SET/COAST switch has been pressed.	Check the SET/COAST switch.	<Ref. to CC(diag)-15, DTC 11, 15, 21 AND 24 CRUISE CONTROL COMMAND SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
7	Cruise control is not released after CANCEL switch has been pressed.	Check the CANCEL switch.	<Ref. to CC(diag)-15, DTC 11, 15, 21 AND 24 CRUISE CONTROL COMMAND SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
8	Cruise control is not released after brake pedal has been depressed.	Check the stop light switch and brake switch.	<Ref. to CC(diag)-18, DTC 12 AND 25 STOP LIGHT SWITCH AND BRAKE SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
9	Cruise control is not released after shifting to the neutral position.	Check the neutral position switch.	<Ref. to CC(diag)-24, DTC 14 NEUTRAL POSITION SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
10	Cruise control is not released after clutch pedal has been depressed.	Check the clutch switch.	<Ref. to CC(diag)-21, DTC 13 CLUTCH SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

B: CHECK CRUISE INDICATOR LIGHT & CRUISE SET INDICATOR LIGHT.

TROUBLE SYMPTOM:

Cruise control can be set, but the cruise indicator light & cruise set indicator light do not illuminate.

	Step	Check	Yes	No
1	**CHECK CRUISE INDICATOR LIGHT & CRUISE SET INDICATOR LIGHT.** 1) Perform the self-diagnosis for combination meter. <Ref. to IDI-3, SELF-DIAGNOSIS, INSPECTION, Combination Meter System.> 2) Check the cruise indicator light & cruise set indicator light illuminate.	Does the cruise indicator light & cruise set indicator light illuminate?	Go to step **2.**	Replace the meter case assembly. <Ref. to IDI-16, Combination Meter Assembly.>
2	**CHECK LAN COMMUNICATION CIRCUIT ERROR DISPLAY.** 1) Turn the ignition switch to ON again after completing self-diagnosis. 2) Check that communication error is displayed on the odo/trip meter in combination meter.	Is the error code “Er xx” displayed on odo/trip meter?	Check the LAN communication circuit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Replace the ECM. <Ref. to FU(H4SO 2.0)-34, Engine Control Module (ECM).> <Ref. to FU(H4SO 2.5)-36, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-35, Engine Control Module (ECM).> <Ref. to FU(H6DO)-34, Engine Control Module (ECM).>

7. List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Contents of diagnosis	Reference
11	Main switch	Main switch of cruise control command switch is turned to OFF, and then the cruise control is released.	This DTC is indicated without operating the main switch. <Ref. to CC(diag)-15, DTC 11, 15, 21 AND 24 CRUISE CONTROL COMMAND SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
12	Stop and brake switch	Stop light switch or brake switch is turned to ON, and then the cruise control is released.	This DTC is indicated without depressing the brake pedal. <Ref. to CC(diag)-18, DTC 12 AND 25 STOP LIGHT SWITCH AND BRAKE SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
13	Clutch switch	Clutch switch is turned to ON, and then the cruise control is released.	This DTC is indicated without depressing the brake pedal. <Ref. to CC(diag)-21, DTC 13 CLUTCH SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
14	Neutral switch	Neutral position switch is turned to ON, and then the cruise control is released.	This DTC is indicated without shifting to neutral position. <Ref. to CC(diag)-24, DTC 14 NEUTRAL POSITION SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
15	Cancel switch	Cancel switch is turned to ON, and then the cruise control is released.	This DTC is indicated without operating the cancel switch. <Ref. to CC(diag)-15, DTC 11, 15, 21 AND 24 CRUISE CONTROL COMMAND SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
16	Ignition switch	Ignition switch is turned to OFF, and then the cruise control is released.	This DTC is indicated without operating the ignition switch. <Ref. to CC(diag)-29, DTC 16 IGNITION SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Contents of diagnosis	Reference
21	Cruise Control Switch Malfunction When Ignition Switch Is Turned To ON	When the ignition switch is turned to ON, each switch of cruise control command switch is already turned to ON.	This DTC is indicated without operating the main switch. <Ref. to CC(diag)-15, DTC 11, 15, 21 AND 24 CRUISE CONTROL COMMAND SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
22	Vehicle Speed Variation Malfunction	Malfunction of vehicle speed signal variation is detected.	<Ref. to CC(diag)-32, DTC 22 AND 32 VEHICLE SPEED SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
23	Engine Related Sensor Malfunction	Malfunction related to engine is detected.	<Ref. to EN(H4SO 2.0)(diag)-2, Basic Diagnostic Procedure.> <Ref. to EN(H4SO 2.5)(diag)-2, Basic Diagnostic Procedure.> <Ref. to EN(H4DOTC)(diag)-2, Basic Diagnostic Procedure.> <Ref. to EN(H6DO)(diag)-2, Basic Diagnostic Procedure.>
24	Cruise Control Related Switch Malfunction	Command switch malfunction is detected. (When the switch is being pressed ON for an abnormal period of time (about two minutes), open circuit is detected.)	This DTC is indicated with normal operation. <Ref. to CC(diag)-15, DTC 11, 15, 21 AND 24 CRUISE CONTROL COMMAND SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
25	Brake Switch Input Circuit Malfunction	Malfunction of brake switch input circuit in ECM is detected.	<Ref. to CC(diag)-18, DTC 12 AND 25 STOP LIGHT SWITCH AND BRAKE SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
26	Engine speed signal	• Abnormal increase of engine speed is detected. • Gear is placed in Neutral, 1st or Reverse positions.	Cruise in more than 2nd shift position.
32	Out of Vehicle Speed of Cruise Control Operation	• Controlled vehicle speed decreased under the limit during cruising. • Set operation was performed out of vehicle speed available for setting. • Resume operation was performed without memorized vehicle speed.	This DTC is displayed though the vehicle speed is increased to the speed available for cruise set and set operation was performed again. <Ref. to CC(diag)-32, DTC 22 AND 32 VEHICLE SPEED SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Contents of diagnosis	Reference
33	WAIT is prohibited after operating accelerator pedal.	Controlled vehicle speed increased above the limit during cruising.	This DTC is displayed when driving at higher speed than appropriate cruise control speed. In this case, lower the vehicle speed to the speed available for cruise set, and perform cruise set operation again.
34	Prohibited when accelerator pedal position large is continued.	The vehicle has been driven at higher speed than set vehicle speed for an abnormal period of time (about 10 minutes) during cruise driving.	This DTC is displayed when driving for a long period of time at higher speed than appropriate cruise set vehicle speed by operating accelerator pedal. In this case, release the cruise set.
35	Prohibited when vehicle speed feedback unavailable.	Set vehicle speed cannot keep because of some reasons (steep uphill, parking brake, abnormal decrease of engine output, etc.) during cruise driving.	This DTC is displayed when driving condition is not suitable for cruise control. Perform cruise set operation again after eliminating the estimated cause.
41	VDC/TCS operation	Vehicle dynamics control (VDC) or TCS is operated during cruise driving or cruise setting.	This DTC is displayed when driving condition is not suitable for cruise control. Perform cruise set operation again after eliminating the estimated cause.
42	High speed CAN communication malfunction	High speed CAN communication malfunction is detected during cruise driving or cruise setting.	<Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
43	ABS/VDC malfunction	ABS or vehicle dynamics control (VDC) system malfunction is detected during cruise driving or cruise setting.	<Ref. to ABS(diag)-2, Basic Diagnostic Procedure.> or <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>
44	Body integrated module malfunction	Body integrated module system malfunction is detected during cruise driving or cruise setting.	<Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
45	Meter malfunction	Combination meter malfunction is detected during cruise driving or cruise setting.	<Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

8. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

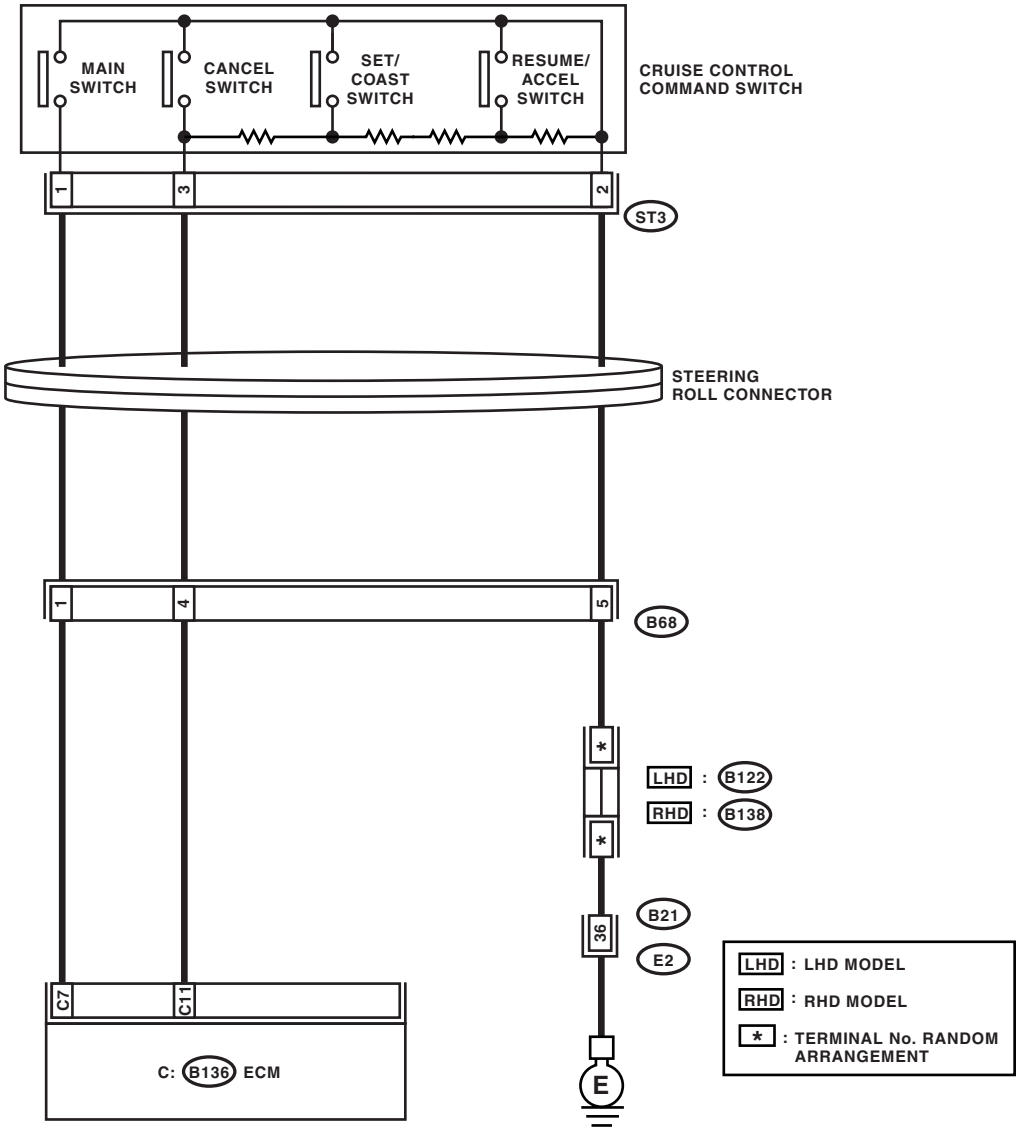
A: DTC 11, 15, 21 AND 24 CRUISE CONTROL COMMAND SWITCH

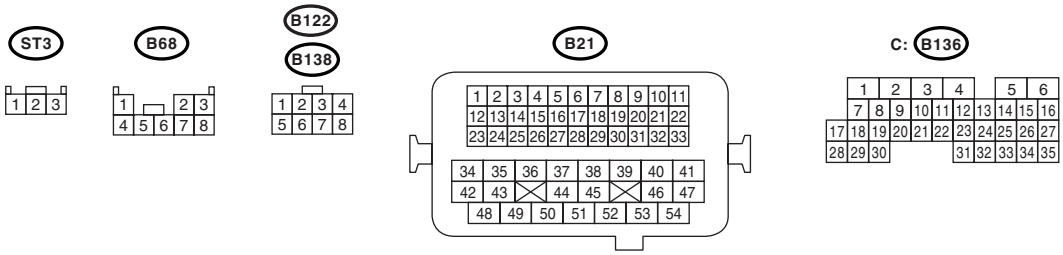
TROUBLE SYMPTOM:

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

WIRING DIAGRAM:

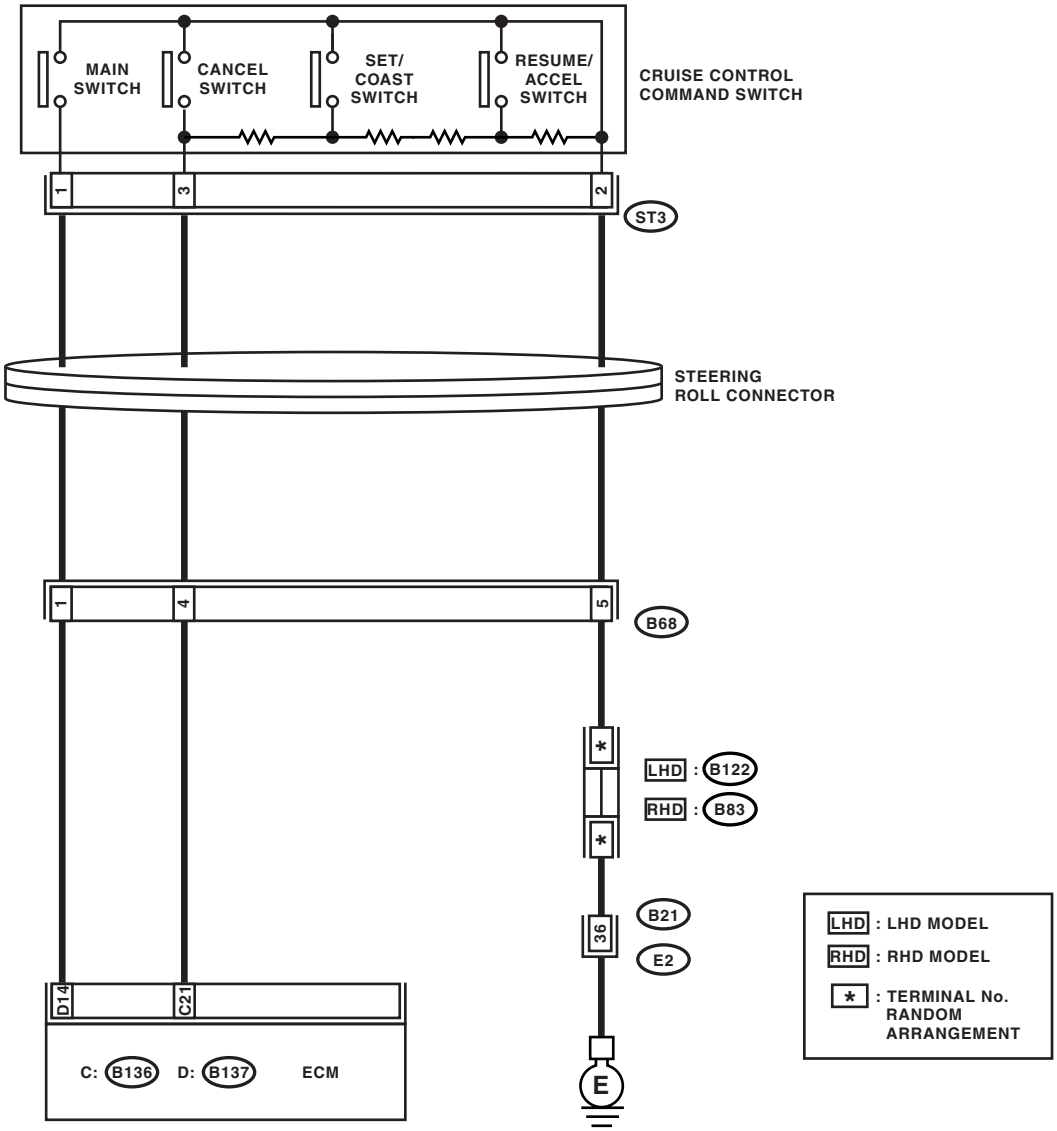
- 2.0 L turbo model, 3.0 L model, 2.5 L EC, K4 and EK model

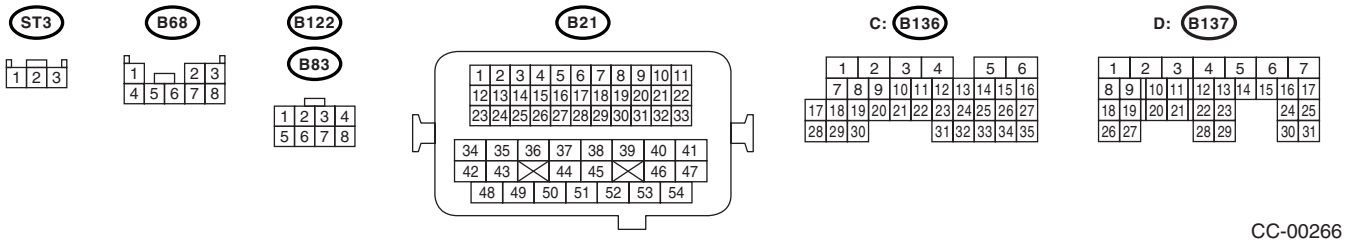




CC-00265

• 2.0 L non-turbo model, 2.5 L KS, KA model





CC-00266

	Step	Check	Yes	No
1	**CHECK CRUISE CONTROL COMMAND SWITCH.** 1) Remove the driver's airbag module. <Ref. to AB-14, REMOVAL, Driver's Airbag Module.> 2) Disconnect the harness connector of cruise control command switch. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***(ST3) No. 1 (+) — Chassis ground (–):*** ***(ST3) No. 3 (+) — Chassis ground (–):***	Is the voltage more than 5 V?	Go to step **2.**	Check the harness for open or short circuit between cruise control command switch and ECM.
2	**INSPECTION FOR CANCEL SWITCH.** 1) Turn the ignition switch to OFF. 2) Remove the cruise control command switch. <Ref. to CC-5, REMOVAL, Cruise Control Command Switch.> 3) Measure the resistance between switch terminals when CANCEL switch is pressed and not pressed. ***Terminals*** ***No. 2 — No. 3:***	Is the resistance less than 1 Ω when CANCEL switch is pressed? Is the resistance approx. 4 kΩ when CANCEL switch is not pressed?	Go to step **3.**	Replace the cruise control command switch. <Ref. to CC-5, Cruise Control Command Switch.>
3	**CHECK SET/COAST SWITCH.** Measure the resistance between switch terminals when SET/COAST switch is pressed and not pressed. ***Terminals*** ***No. 2 — No. 3:***	Is the resistance approx. 250 Ω when SET/COAST switch is pressed? Is the resistance approx. 4 kΩ when SET/COAST switch is not pressed?	Go to step **4.**	Replace the cruise control command switch. <Ref. to CC-5, Cruise Control Command Switch.>
4	**CHECK RESUME/ACCEL SWITCH CIRCUIT.** Measure the resistance between switch terminals when RESUME/ACCEL switch is pressed and not pressed. ***Terminals*** ***No. 2 — No. 3:***	Is the resistance approx. 1500 Ω when RESUME/ACCEL switch is pressed? Is the resistance approx. 4 kΩ when RESUME/ACCEL switch is not pressed?	Replace the ECM. <Ref. to FU(H4SO 2.0)-34, Engine Control Module (ECM).> <Ref. to FU(H4SO 2.5)-36, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-35, Engine Control Module (ECM).> <Ref. to FU(H6DO)-34, Engine Control Module (ECM).>	Replace the cruise control command switch. <Ref. to CC-5, Cruise Control Command Switch.>

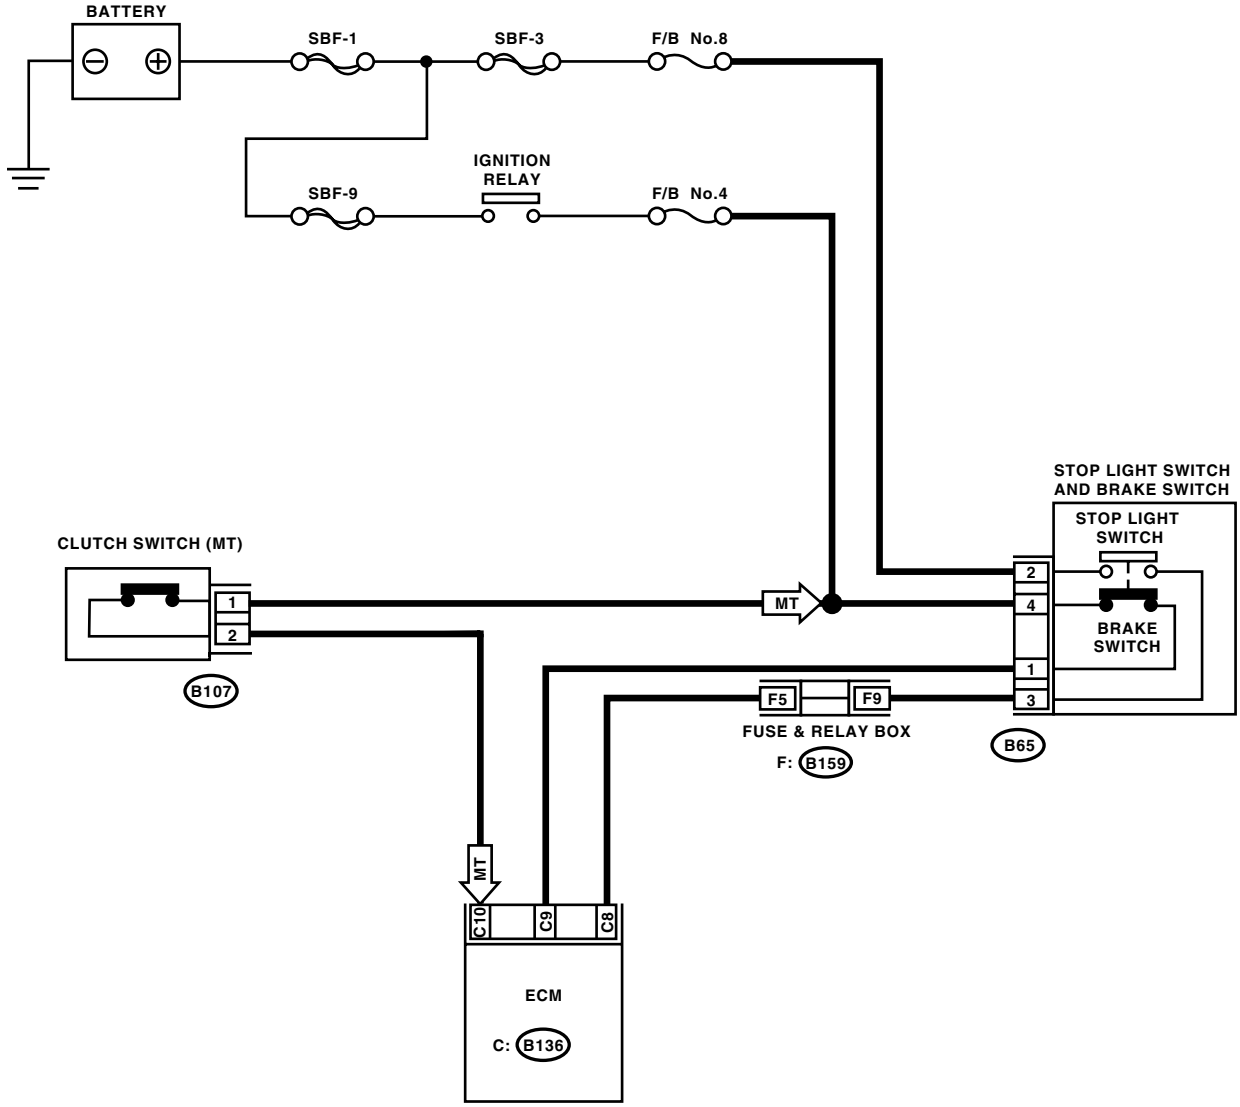
B: DTC 12 and 25 STOP LIGHT SWITCH AND BRAKE SWITCH

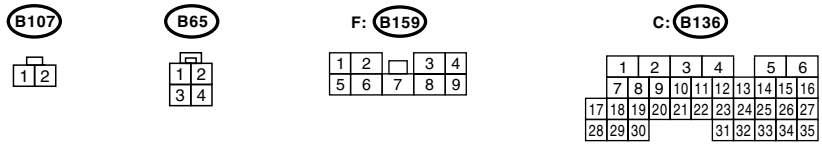
TROUBLE SYMPTOM:

- Cruise control cannot be set.
- Cruise control cannot be released.

WIRING DIAGRAM:

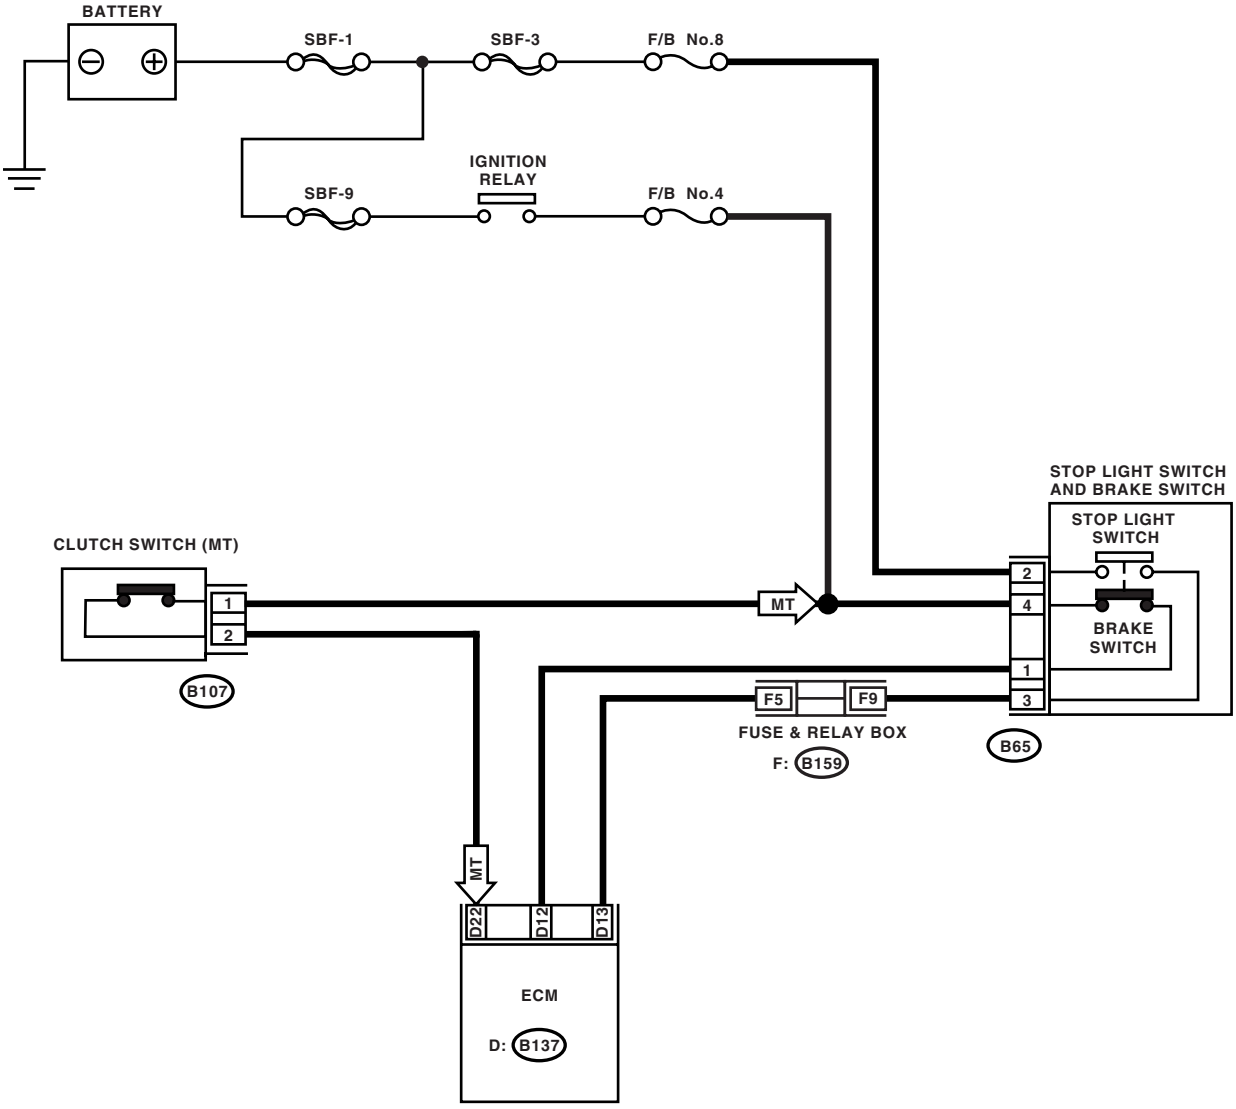
- 2.0 L turbo model, 3.0 L model, 2.5 L EC, K4 and EK model

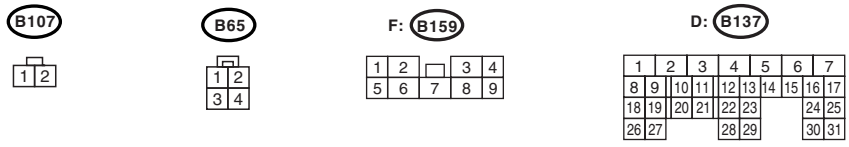




CC-00267

• 2.0 L non-turbo model, 2.5 L for KS, KA model





CC-00268

	Step	Check	Yes	No
1	**CHECK STOP LIGHT SWITCH AND BRAKE SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the stop light switch and brake switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***(B65) No. 2 (+) — Chassis ground (−):***	Is the voltage more than 10 V?	Go to step **2.**	• Check fuse No. 8 (in fuse & relay box). • Check the harness for open or short between stop light/brake switch and fuse & relay box.
2	**CHECK STOP LIGHT SWITCH AND BRAKE SWITCH CIRCUIT.** Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***(B65) No. 4 (+) — Chassis ground (−):***	Is the voltage more than 10 V?	Go to step **3.**	• Check fuse No. 4 (in fuse & relay box). • Check the harness for open or short between stop light/brake switch and fuse & relay box.
3	**CHECK STOP LIGHT SWITCH AND BRAKE SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of ECM. 3) Measure the resistance between ECM harness connector terminal and stop light switch and brake switch harness connector terminal. ***Connector & terminal*** ***2.0 L turbo model, 3.0 L model, 2.5 L EC, K4 and EK model:*** ***(B136) No. 8 — (B65) No. 3:*** ***(B136) No. 9 — (B65) No. 1:*** ***2.0 L non-turbo model, 2.5 L KS, KA model:*** ***(B137) No. 13 — (B65) No. 3:*** ***(B137) No. 12 — (B65) No. 1:***	Is the resistance less than 10 Ω?	Go to step **4.**	Repair the harness.
4	**CHECK STOP LIGHT SWITCH AND BRAKE SWITCH.** Remove and check the stop light switch and brake switch. <Ref. to CC-6, Stop Light and Brake Switch.>	Are the stop light switch and brake switch OK?	Replace the ECM. <Ref. to FU(H4SO 2.0)-34, Engine Control Module (ECM).> <Ref. to FU(H4SO 2.5)-36, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-35, Engine Control Module (ECM).> <Ref. to FU(H6DO)-34, Engine Control Module (ECM).>	Replace the stop light switch and brake switch.

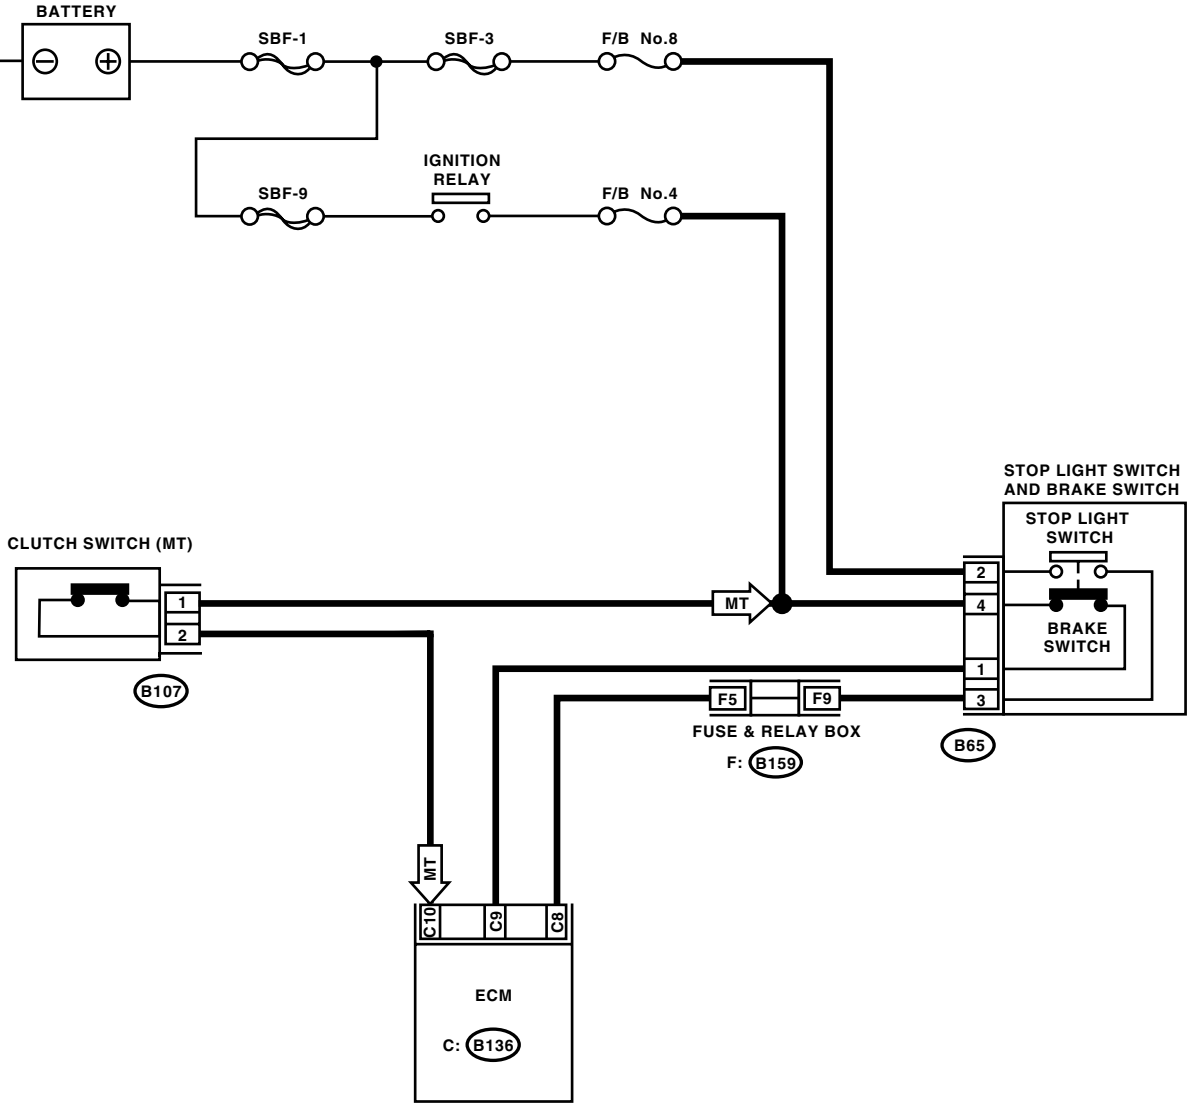
C: DTC 13 CLUTCH SWITCH

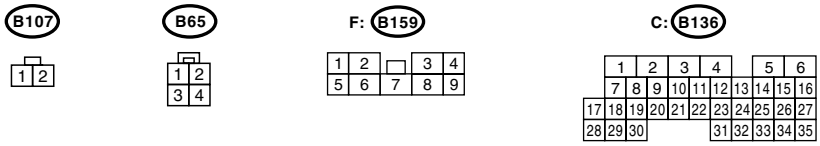
TROUBLE SYMPTOM:

- Cruise control cannot be set.
- Cruise control cannot be released.

WIRING DIAGRAM:

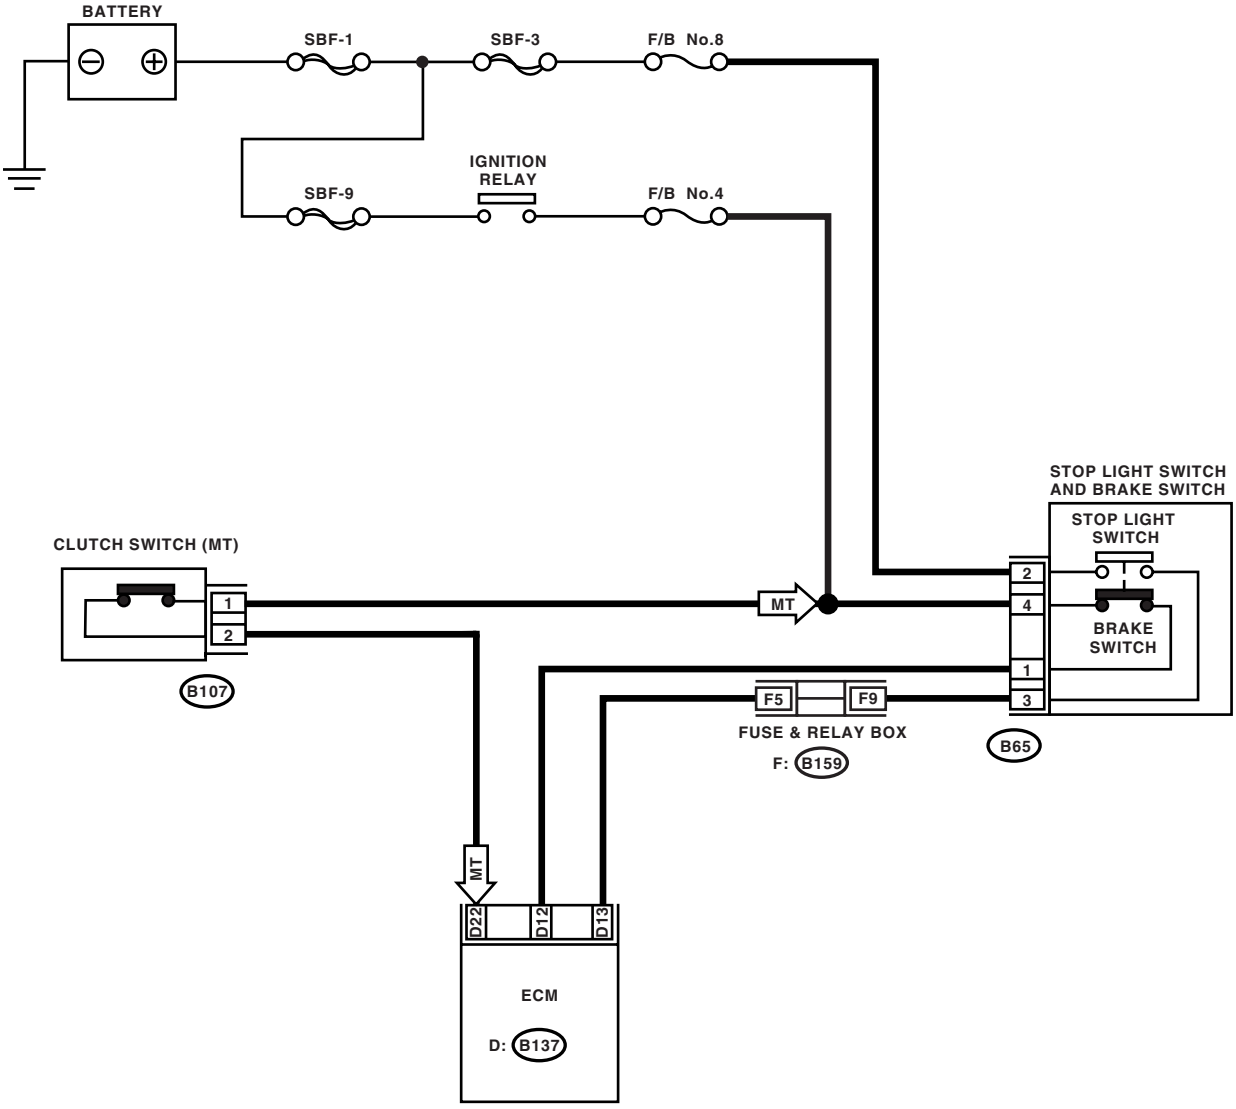
- 2.5 L EC, K4 and EK model

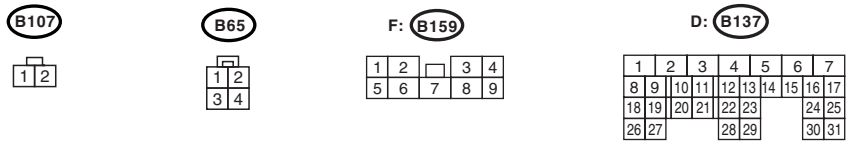




CC-00267

• 2.0 L non-turbo model, 2.5 L KS, KA model





CC-00268

	Step	Check	Yes	No
1	**CHECK CLUTCH SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the clutch switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***(B107) No. 1 (+) — Chassis ground (−):***	Is the voltage more than 10 V?	Go to step **2.**	• Check fuse No. 4 (in fuse & relay box). • Check the harness for open or short between clutch switch and fuse & relay box.
2	**CHECK CLUTCH SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the ECM harness connector. 3) Measure the resistance between clutch switch harness connector terminal and ECM harness connector terminal. ***Connector & terminal*** ***2.5 L EC, K4 and EK model:*** ***(B107) No. 2 — (B136) No. 10:*** ***2.0 L non-turbo model, 2.5 L KS, KA model:*** ***(B107) No. 2 — (B137) No. 22:***	Is the resistance less than 10 Ω?	Go to step **3.**	Repair the harness.
3	**CHECK CLUTCH SWITCH.** Remove and check the clutch switch. <Ref. to CC-7, Clutch Switch.>	Is the clutch switch OK?	Replace the ECM. <Ref. to FU(H4SO 2.0)-34, Engine Control Module (ECM).> <Ref. to FU(H4SO 2.5)-36, Engine Control Module (ECM).>	Replace the clutch switch.

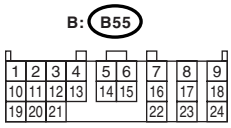
D: DTC 14 NEUTRAL POSITION SWITCH

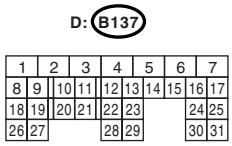
TROUBLE SYMPTOM:

Cruise control cannot be set.

WIRING DIAGRAM:

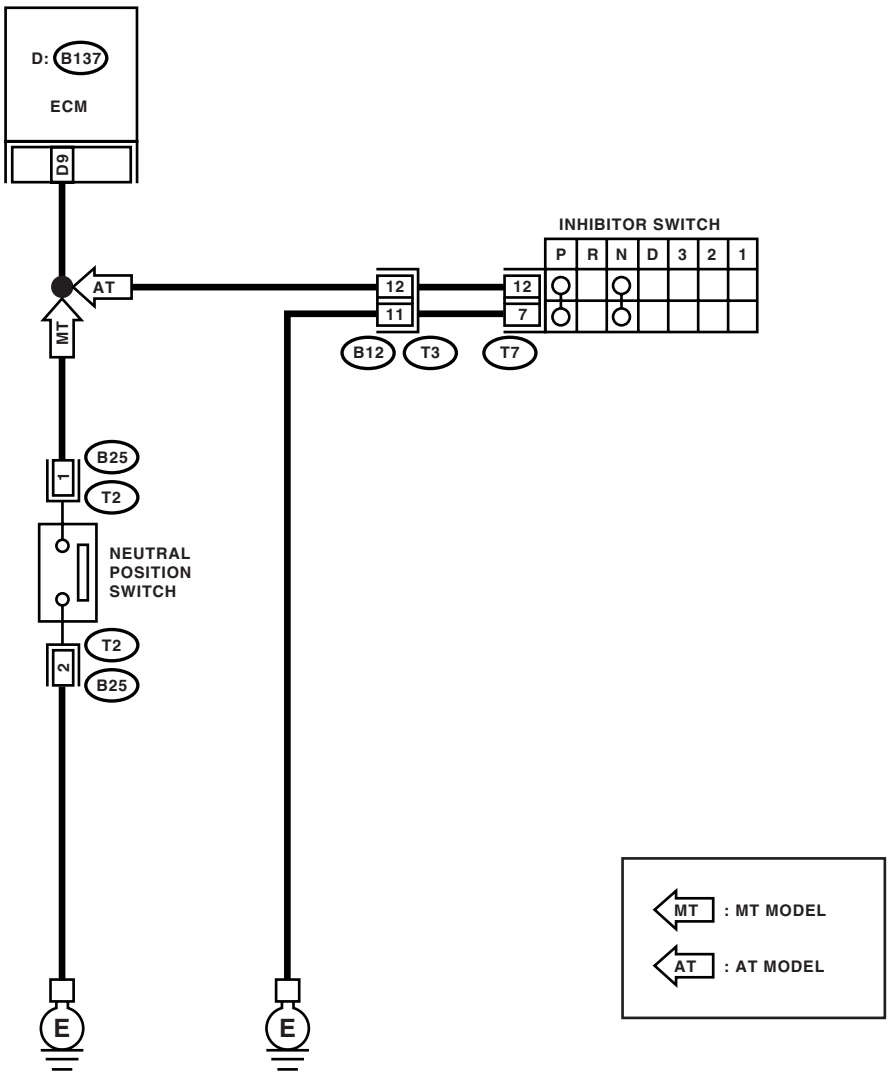
- 2.0 L turbo model, 3.0 L model

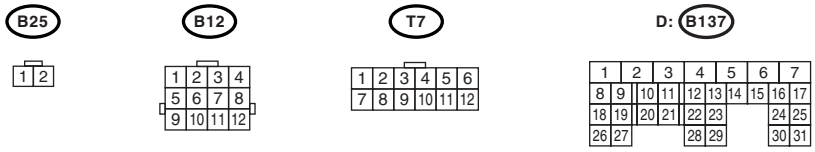




CC-00219

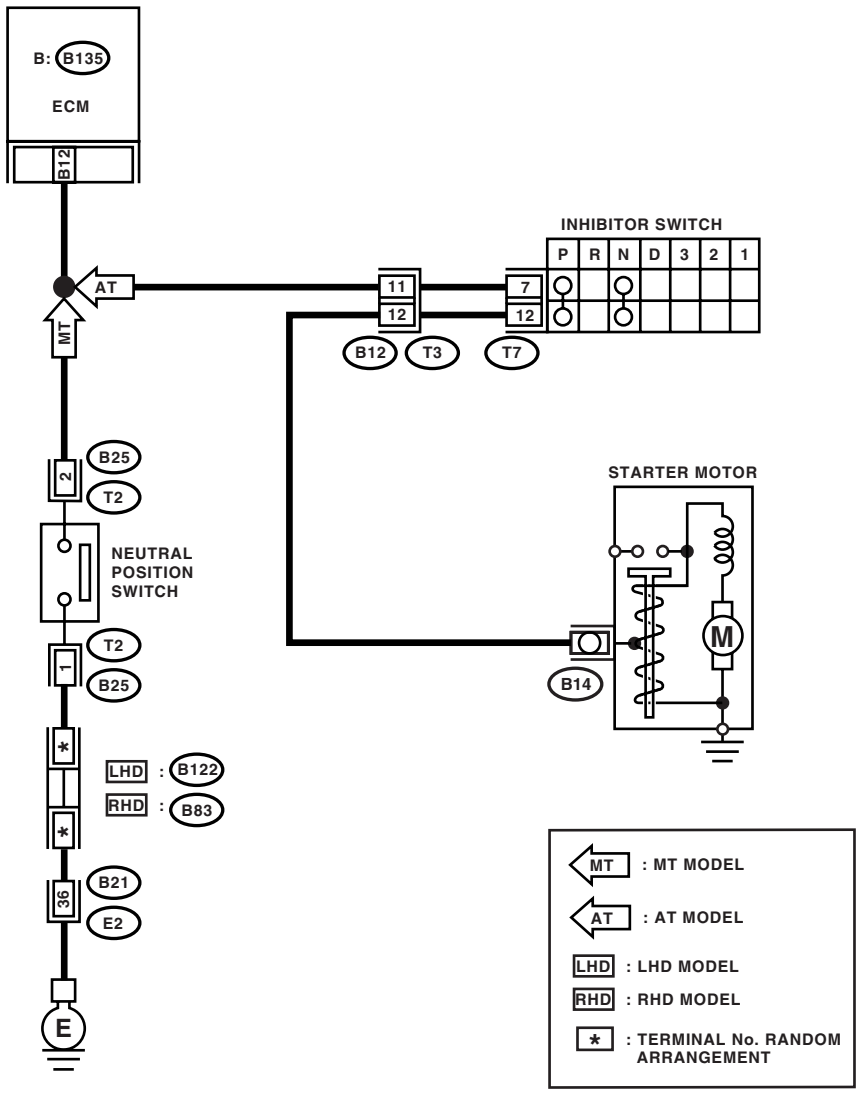
• 2.5 L EC, K4 and EK model

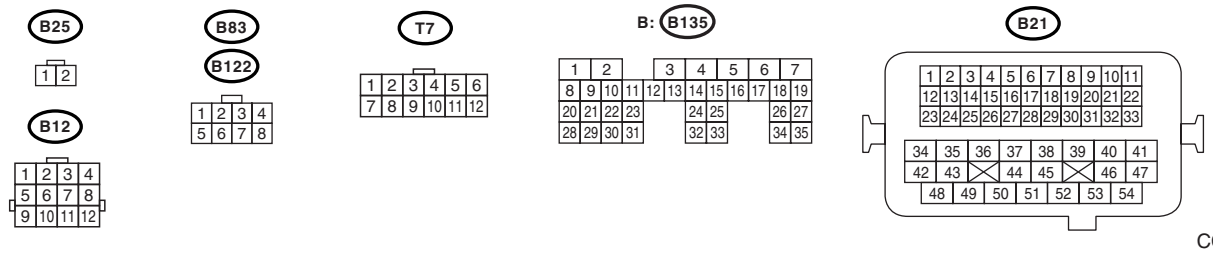




CO-00269

• 2.0 L non-turbo model, 2.5 L KS, KA model





CC-00270

	Step	Check	Yes	No
1	**CHECK VEHICLE FOR SPECIFICATION.** Check the vehicle for destination and specification.	Is the vehicle turbo model or 3.0 L model?	Go to step **2.**	Go to step **5.**
2	**CHECK NEUTRAL POSITION SWITCH.** 1) Connect the Subaru Select Monitor to data link connector. 2) Turn the ignition switch and Subaru Select Monitor switch to ON. 3) Select {Engine} from the main menu. 4) Then, select {Current Data Display & Save}. 5) Check the neutral position switch signal by shifting the select lever to "P" or "N" range.	Is ON displayed in the Subaru Select Monitor when the select lever is in "P" or "N" range? Or is OFF displayed in the Subaru Select Monitor when the select lever is in other than "P" or "N" range?	Replace the ECM. <Ref. to FU(H4DOTC)-35, Engine Control Module (ECM).> <Ref. to FU(H6DO)-34, Engine Control Module (ECM).>	Go to step **3.**
3	**CHECK TCM OUTPUT VOLTAGE.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM harness connector terminal and chassis ground. ***Connector & terminal*** ***(B55) No. 19 (+) — Chassis ground (–):***	Is the voltage more than 10 V when the select lever is in other than "P" or "N" range? Or is the voltage less than 1 V when the select lever is in "P" or "N" range?	Go to step **4.**	Inspect the TCM. <Ref. to 5AT(diag)-2, Basic Diagnostics Procedure.>
4	**CHECK HARNESS BETWEEN TCM AND ECM.** 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector from TCM and ECM. 3) Measure the resistance between TCM harness connector terminal and ECM harness connector terminal. ***Connector & terminal*** ***(B137) No. 9 — (B55) No. 19:***	Is the resistance less than 10 Ω?	Replace the ECM. <Ref. to FU(H4DOTC)-35, Engine Control Module (ECM).> <Ref. to FU(H6DO)-34, Engine Control Module (ECM).>	Repair the wiring harness.
5	**CHECK TRANSMISSION TYPE.**	Is the transmission type AT?	Go to step **6.**	Go to step **9.**
6	**CHECK INHIBITOR SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the inhibitor switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***2.5 L EC, K4 and EK model:*** ***(T7) No. 12 (+) — Chassis ground (–):*** ***2.0 L non-turbo model, 2.5 L KS, KA model:*** ***(T7) No. 7 (+) — Chassis ground (–):***	Is the voltage approx. 5 V?	Go to step **7.**	Check the harness for open or short between inhibitor switch and ECM.
7	**CHECK INHIBITOR SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the starter motor harness connector. 3) Measure the resistance between inhibitor switch harness connector terminal and chassis ground. ***Connector & terminal*** ***2.5 L EC, K4 and EK model:*** ***(T7) No. 7 — Chassis ground:*** ***2.0 L non-turbo model, 2.5 L KS, KA model:*** ***(T7) No. 12 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **8.**	Repair the harness.

	Step	Check	Yes	No
8	**CHECK INHIBITOR SWITCH.** Remove and check the inhibitor switch. <Ref. to CC-8, Inhibitor Switch.>	Is the inhibitor switch OK?	Replace the ECM. <Ref. to FU(H4SO 2.0)-34, Engine Control Module (ECM).> <Ref. to FU(H4SO 2.5)-36, Engine Control Module (ECM).>	Replace the inhibitor switch.
9	**CHECK NEUTRAL POSITION SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the neutral position switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***2.5 L EC, K4 and EK model:*** ***(B25) No. 1 (+) — Chassis ground (−):*** ***2.0 L non-turbo model, 2.5 L KS, KA model:*** ***(B25) No. 2 (+) — Chassis ground (−):***	Is the voltage approx. 5 V?	Go to step **10.**	Check the harness for open or short between neutral position switch and ECM.
10	**CHECK NEUTRAL POSITION SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between neutral position switch harness connector terminal and chassis ground. ***Connector & terminal*** ***2.5 L EC, K4 and EK model:*** ***(B25) No. 2 — Chassis ground:*** ***2.0 L non-turbo model, 2.5 L KS, KA model:*** ***(B25) No. 1 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **11.**	Repair the harness.
11	**CHECK NEUTRAL POSITION SWITCH.** Remove and check the neutral position switch. <Ref. to CC-9, Neutral Position Switch.>	Is the neutral position switch OK?	Replace the ECM. <Ref. to FU(H4SO 2.0)-34, Engine Control Module (ECM).> <Ref. to FU(H4SO 2.5)-36, Engine Control Module (ECM).>	Replace the neutral position switch.

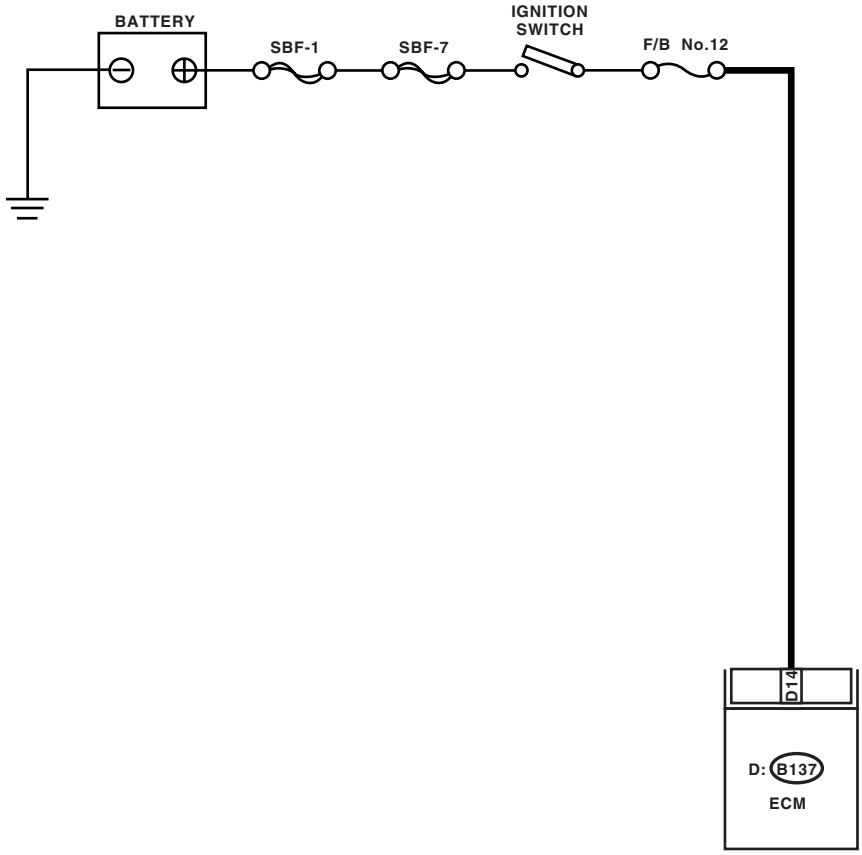
E: DTC 16 IGNITION SWITCH

TROUBLE SYMPTOM:

Cruise control cannot be set.

WIRING DIAGRAM:

- 2.0 L turbo model, 3.0 L model, 2.5 L EC, K4 and EK model



D: B137

1	2	3	4	5	6	7			
8	9	10	11	12	13	14	15	16	17

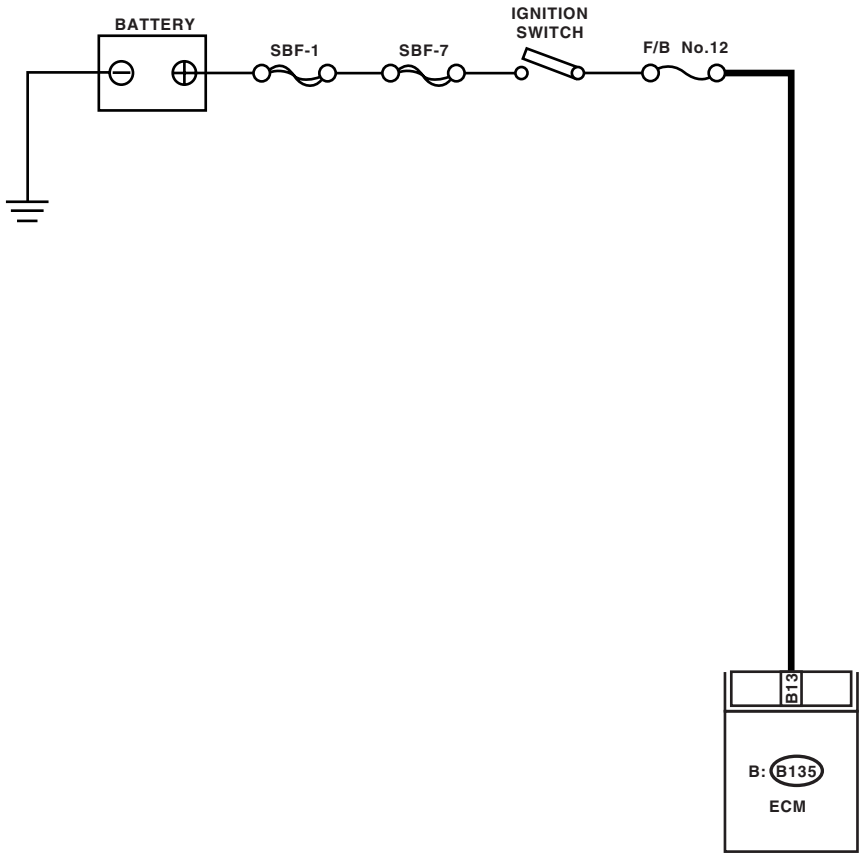
26	27			28	29			30	31

CC-00220

• 2.0 L non-turbo model, 2.5 L KS, KA model



B: B135

1	2		3	4	5	6	7			
8	9	10	11	12	13	14	15	16	17	18	19
20	21	22	23			24	25			26	27
28	29	30	31			32	33			34	35

CC-00271

	Step	Check	Yes	No
1	**CHECK IGNITION SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the ECM harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***2.0 L turbo model, 3.0 L model, 2.5 L EC, K4 and EK model:*** ***(B137) No. 14 (+) — Chassis ground (–):*** ***2.0 L non-turbo model, 2.5 L KS, KA model:*** ***(B135) No. 13 (+) — Chassis ground (–):***	Is the voltage more than 10 V?	Check poor contact in ECM connector.	• Check fuse No. 12 (in fuse & relay box). • Check the harness for open or short circuit between ignition switch and ECM.

F: DTC 22 AND 32 VEHICLE SPEED SENSOR

DIAGNOSIS:
Disconnection or short circuit of vehicle speed sensor system.
TROUBLE SYMPTOM:
Cruise control cannot be set. (Cancelled immediately.)

	Step	Check	Yes	No
1	**CHECK ABS WARNING LIGHT.** 1) Turn the ignition switch to ON. 2) After the combination meter initial operation is completed, confirm that the ABS warning light continues to illuminate.	Does the ABS warning light continue to illuminate?	Check ABSCM or VDCCM <Ref. to ABS(diag)-2, Basic Diagnostic Procedure.> or <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>	Go to step **2.**
2	**CHECK LAN COMMUNICATION CIRCUIT ERROR DISPLAY.** Check that the communication error is displayed on the odo/trip meter in combination meter.	Is the error code “Er xx” displayed on odo/trip meter?	Check the LAN communication circuit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Replace the ECM. <Ref. to FU(H4SO 2.0)-34, Engine Control Module (ECM).> <Ref. to FU(H4SO 2.5)-36, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-35, Engine Control Module (ECM).> <Ref. to FU(H6DO)-34, Engine Control Module (ECM).>

BODY SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

9. List of Diagnostic Trouble Code (DTC) 15
10. Diagnostic Procedure with Diagnostic Trouble Code (DTC) 17

1. Basic Diagnostic Procedure

A: PROCEDURE

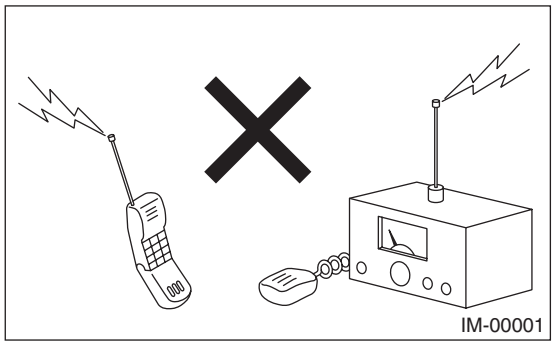
	Step	Check	Yes	No
1	**CHECK IMMOBILIZER WARNING LIGHT.** 1) Turn the ignition switch to “OFF” or “ACC”. 2) Wait for more than 60 seconds.	Does the immobilizer warning light blink?	Go to step **2.**	Check the immobilizer warning light circuit. <Ref. to IM(diag)-11, CHECK IMMOBILIZER INDICATOR CIRCUIT, INSPECTION, Diagnostics Chart for Immobilizer Indicator Light.>
2	**CHECK KEY SWITCH.** Remove the key from ignition switch.	Does the immobilizer warning light blink within 1 second after removing ignition key?	Go to step **3.**	Check the key switch circuit. <Ref. to IM(diag)-13, CHECK KEY SWITCH CIRCUIT, INSPECTION, Diagnostics Chart for Immobilizer Indicator Light.>
3	**CHECK IMMOBILIZER WARNING LIGHT.** Turn the ignition switch to ON.	Does the immobilizer warning light off?	Go to step **5.**	Go to step **4.**
4	**CHECK ENGINE START.** Turn the ignition switch to START.	Does the starter operate?	Check the LAN communication circuit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Check the DTC display (body integrated unit). Go to step **7.**
5	**CHECK ENGINE START.** Turn the ignition switch to START.	Does the starter operate?	Go to step **6.**	Check the LAN communication circuit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
6	**CHECK ENGINE START.** Turn the ignition switch to START.	Does the engine start?	Immobilizer system is OK.	Check the DTC display (ECM). Go to step **7.**
7	**CHECK INDICATION OF DTC ON DISPLAY.** 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. <Ref. to IM(diag)-8, Subaru Select Monitor.> 3) Turn the ignition switch and Subaru Select Monitor switch to ON. 4) Read DTC on display.	Is the DTC displayed on screen?	Go to step **8.**	Repair the related parts.

	Step	Check	Yes	No
8	**PERFORM THE DIAGNOSIS.** 1) Inspect using the “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. <Ref. to IM(diag)-17, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> 2) Repair the trouble cause. 3) Perform clear memory mode. 4) Read DTC again.	Is the DTC displayed on screen?	Inspect using the “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. <Ref. to IM(diag)-17, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

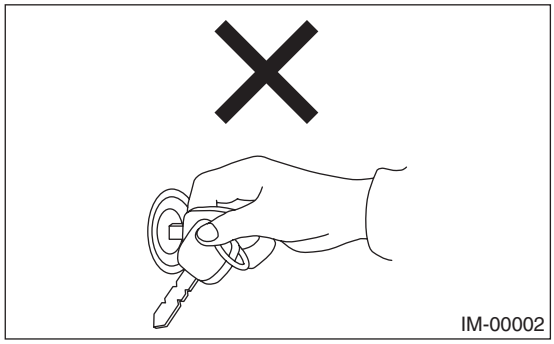
2. General Description

A: CAUTION

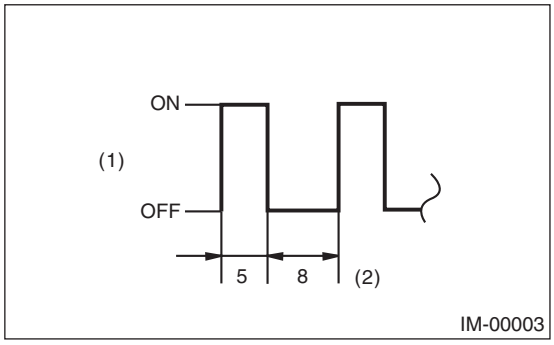
CAUTION:
• All airbag system wiring harnesses and connectors are yellow. Do not use the electrical test equipment on these circuits.
• Be careful not to damage the airbag system wiring harness.
• While diagnostic items are being checked, do not operate radios, portable telephones, etc. which emit electromagnetic waves near or inside the vehicle.



• When turning the ignition switch to ON or OFF while diagnostic items are being checked, do not allow keys with different ID codes close to the ignition switch. If the ignition key is in a key holder, remove it from the holder before carrying out diagnosis.



• When repeatedly turning the ignition switch to ON or OFF while diagnostic items are being checked, it should be switched in cycles of "ON" for at least 5 seconds → "OFF" for at least 8 seconds.



(1) Ignition switch position
(2) Sec.

• If the engine fails to start with a registered ignition key, detach the ignition key from ignition switch and wait for approx. 1 second until immobilizer indicator light begins to flash. And then start the engine again.
• Before checking the diagnostic items, obtain all keys for the vehicle to be checked possessed by owner.

B: PREPARATION TOOL

1. SPECIAL TOOL

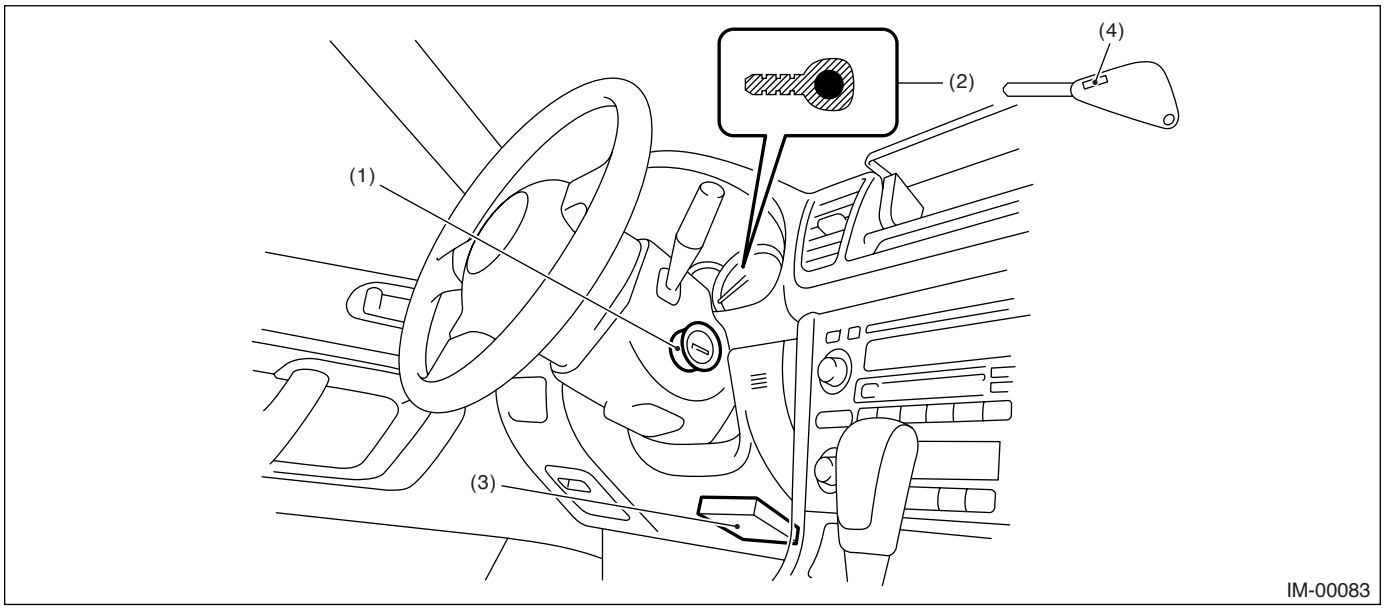
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST24082AA230	24082AA230	CARTRIDGE	Troubleshooting for electrical system.
ST22771AA030	22771AA030	SUBARU SELECT MONITOR KIT	Troubleshooting for electrical system. • English: 22771AA030 (Without printer) • German: 22771AA070 (Without printer) • French: 22771AA080 (Without printer) • Spanish: 22771AA090 (Without printer)

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and ampere.

3. Electrical Component Location

A: LOCATION



(1) Antenna
(2) Immobilizer indicator light (LED bulb)
(3) Body integrated unit
(4) Transponder

NOTE:
Body integrated unit location for RHD model is symmetrically opposite.

4. Immobilizer Control Module I/O Signal

A: WIRING DIAGRAM

1. IMMOBILIZER

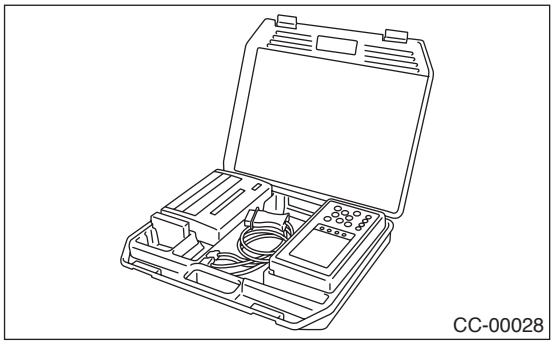
<Ref. to WI-246, WIRING DIAGRAM, Immobilizer System.>

5. Subaru Select Monitor

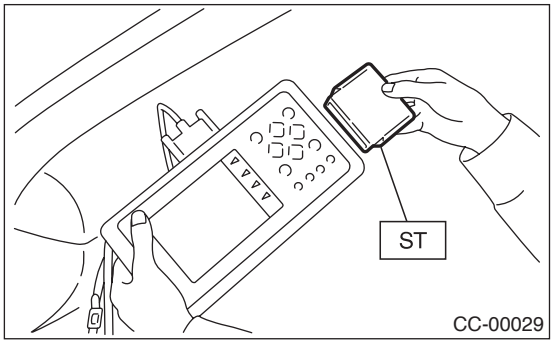
A: OPERATION

1. HOW TO USE SUBARU SELECT MONITOR

1) Prepare the Subaru Select Monitor kit.

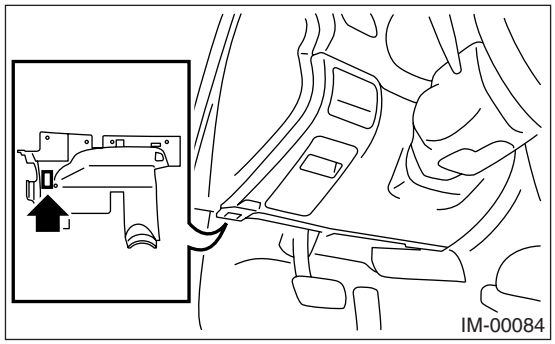


2) Connect the diagnosis cable to Subaru Select Monitor.
3) Insert the cartridge to Subaru Select Monitor.



4) Connect the Subaru Select Monitor to data link connector.

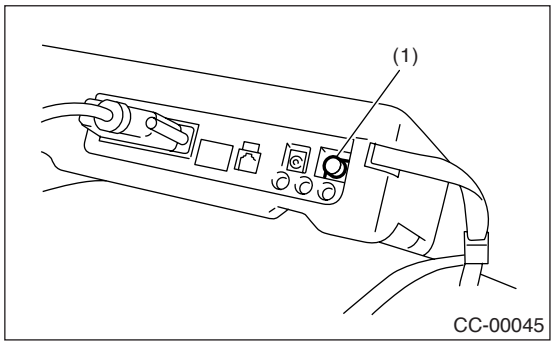
(1) Data link connector is located in the lower portion of the instrument panel (on the driver's side).



(2) Connect the diagnosis cable to data link connector.

CAUTION:
Do not connect the scan tools except for Subaru Select Monitor.

5) Turn the ignition switch to ON (engine OFF), and the Subaru Select Monitor switch to ON.



(1) Power switch

6) Using the Subaru Select Monitor, call up DTCs and various data, then record them.

2. READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE AND BODY INTEGRATED UNIT

Refer to Read Diagnostic Trouble Code for information about how to indicate DTC. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>

3. COMMUNICATION LINE CHECK

NOTE:
The communication line between ECM and body integrated module can be checked in "System Operation Check Mode". This is referred to as "Communication line check".

1) Connect the Subaru Select Monitor.
2) On the «System operation check mode» display, select the {security system}.
3) Start the communication line check.
4) Is «Communication Line not Shorted» displayed on screen?
If displayed, go to step 5).
If "NO", go to step 6).
5) After diagnostic results, it is determined that the circuit is not shorted. Finish the communication line check.
6) If a problem is detected, repair the trouble cause. <Ref. to IM(diag)-22, DTC P1572 IMM CIRCUIT FAILURE (EXCEPT ANTENNA CIRCUIT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

6. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1. ECM

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
3) Press the [YES] key after the information of engine type is displayed.
4) On the «Engine Diagnosis» display screen, select the {Diagnostic Code(s) Display}, and then press the [YES] key.
5) On the «Diagnostic Code(s) Display» display screen, select the {Current Diagnostic Code(s)} or {History Diagnostic Code(s)}, and then press the [YES] key.

NOTE:
• For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.
• For detailed concerning DTC, refer to the List of DTC. <Ref. to IM(diag)-15, LIST, List of Diagnostic Trouble Code (DTC).>

2. BODY INTEGRATED UNIT

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Integ. unit mode} and press the [YES] key.
3) Press the [YES] key after the {Integ. unit mode} is displayed.
4) On the «Integ. unit mode failure diag» display screen, select the {Diagnostic Code(s) Display} and press the [YES] key.

NOTE:
• For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.
• For detailed concerning DTC, refer to the List of DTC. <Ref. to IM(diag)-15, LIST, List of Diagnostic Trouble Code (DTC).>

7. Clear Memory Mode

A: OPERATION

1. ECM

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
3) Press the [YES] key after the information of engine type is displayed.
4) On the «Engine Diagnosis» display screen, select the {Clear Memory} and press the [YES] key.
5) When the 'Done' are shown on the display screen, turn the Subaru Select Monitor and ignition switch to OFF.

NOTE:
• After the memory has been cleared, the idle air control solenoid valve must be initialized. To execute this procedure, turn the ignition switch to ON. Wait 3 seconds before starting the engine.
• For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

2. BODY INTEGRATED UNIT

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Integ. unit mode} and press the [YES] key.
3) Press the [YES] key after the {Integ. unit mode} is displayed.
4) On the «Integ. unit mode failure diag» display screen, select the {Clear Memory} and press the [YES] key.
5) When the 'Done' are shown on the display screen, turn the Subaru Select Monitor and ignition switch to OFF.

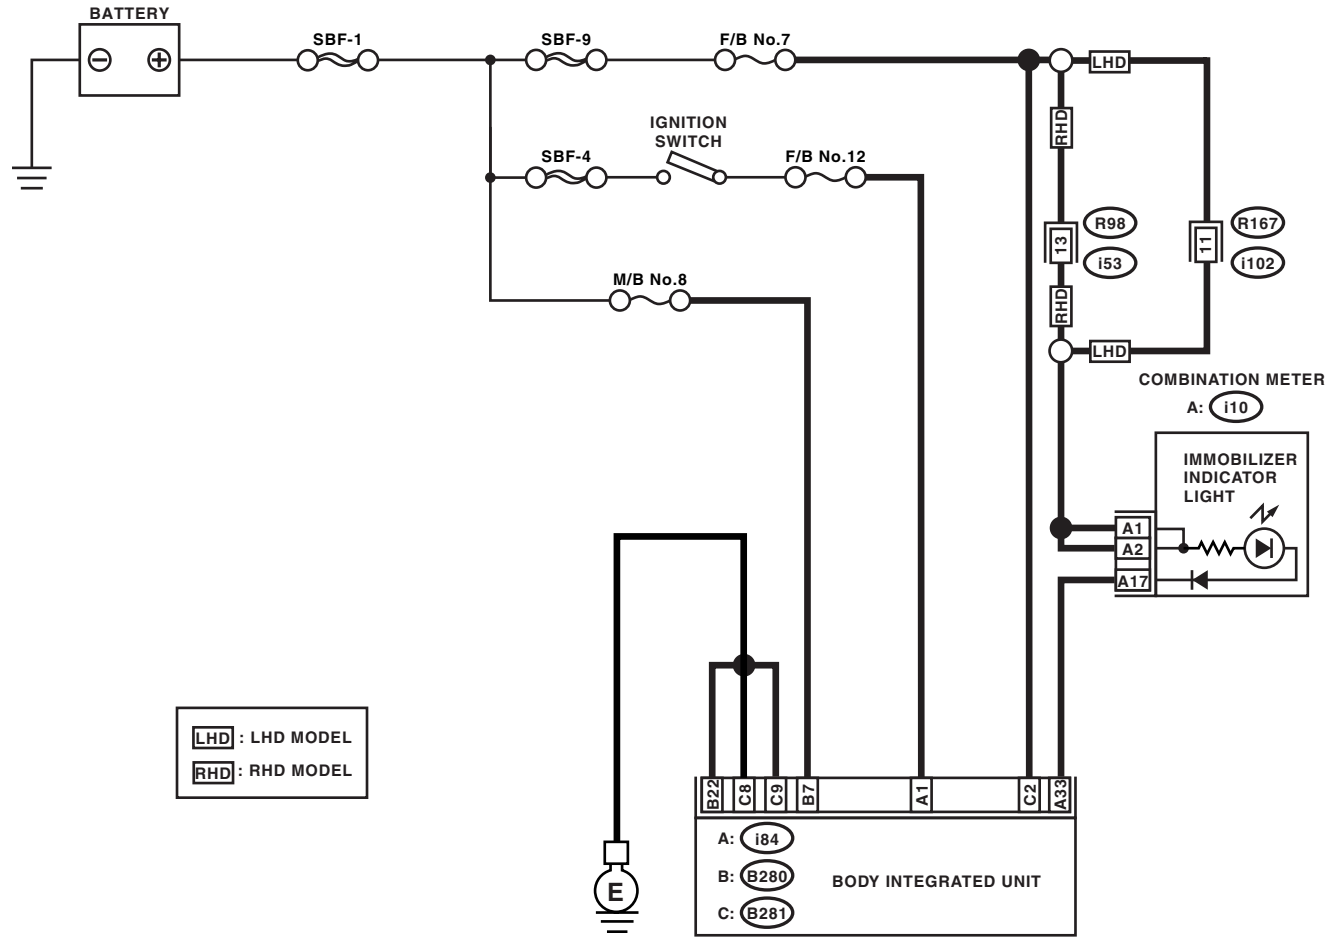
NOTE:
For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

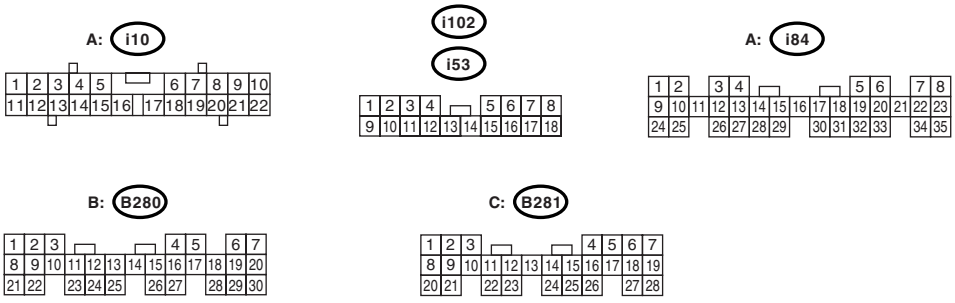
8. Diagnostics Chart for Immobilizer Indicator Light

A: INSPECTION

1. CHECK IMMOBILIZER INDICATOR CIRCUIT

WIRING DIAGRAM:





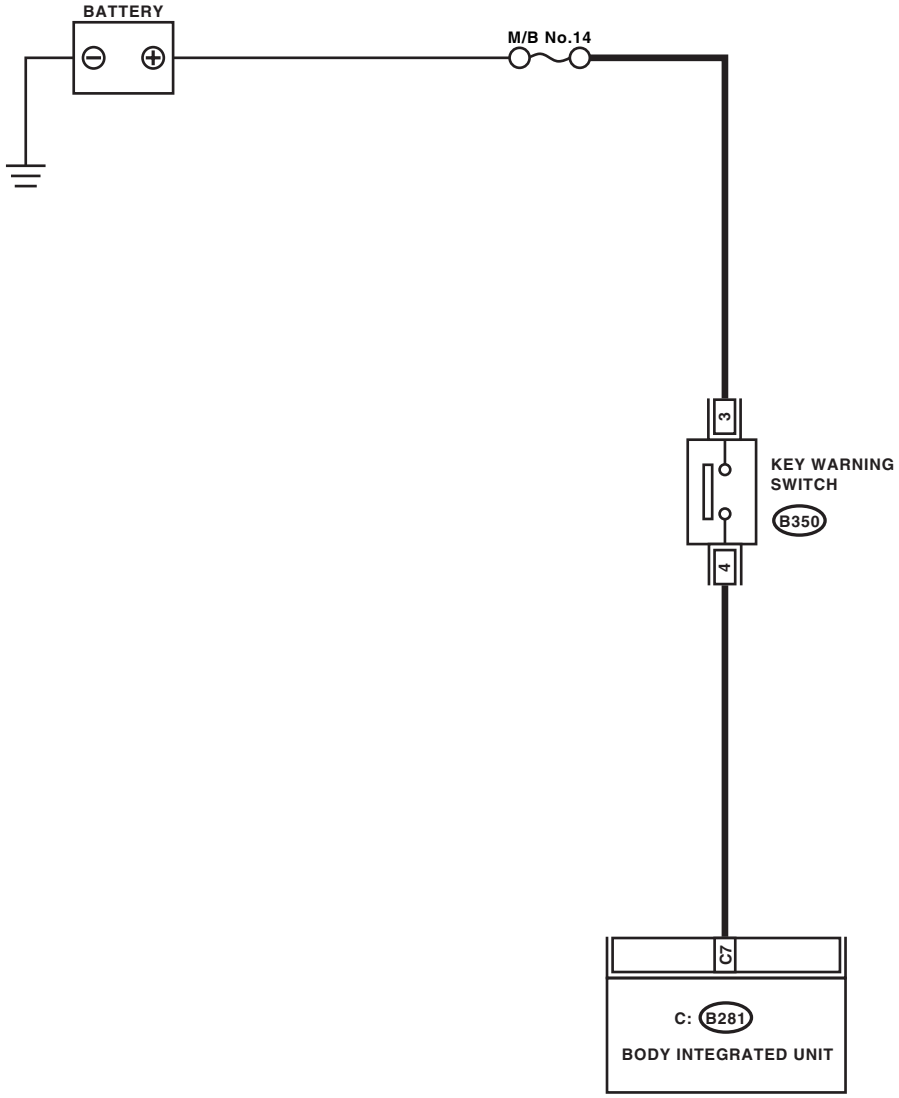
IM-00086

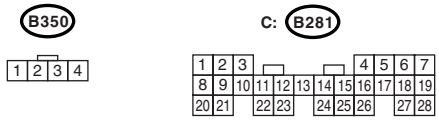
Diagnostics Chart for Immobilizer Indicator Light

	Step	Check	Yes	No
1	**CHECK IMMOBILIZER WARNING LIGHT.** 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector from body integrated unit. 3) Connect the resistor (100 Ω) between body integrated unit harness connector terminal (i84) No. 33 and chassis ground.	Does the immobilizer indicator light illuminate?	Go to step **2.**	Go to step **5.**
2	**CHECK BODY INTEGRATED UNIT GROUND CIRCUIT.** Measure the resistance between body integrated unit harness connector terminal and chassis ground. ***Connector & terminal*** ***(B280) No. 22 — Chassis ground:*** ***(B281) No. 8, No. 9 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **3.**	Repair the open circuit of body integrated unit ground circuit.
3	**CHECK BODY INTEGRATED UNIT IGNITION CIRCUIT.** 1) Turn the ignition switch to ON. (engine OFF) 2) Measure the voltage between body integrated unit harness connector terminal and chassis ground. ***Connector & terminal*** ***(i84) No. 1 (+) — Chassis ground (−):***	Is the voltage more than 10 V?	Go to step **4.**	Check the harness for open or short circuit between body integrated unit and ignition switch.
4	**CHECK BODY INTEGRATED UNIT POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Measure the voltage between body integrated unit harness connector terminal and chassis ground. ***Connector & terminal*** ***(B280) No. 7 (+) — Chassis ground (−):*** ***(B281) No. 2 (+) — Chassis ground (−):***	Is the voltage more than 10 V?	Replace the body integrated unit <Ref. to SL-46, Body Integrated Unit.> and replace the all ignition keys (including transponder). Execute the registration procedure next. Refer to “REGISTRATION MANUAL FOR IMMOBILIZER”.	Check the harness for open or short circuit between body integrated unit and fuse.
5	**CHECK COMBINATION METER CIRCUIT.** 1) Remove the combination meter. <Ref. to IDI-16, Combination Meter Assembly.> 2) Measure the voltage between the combination meter harness connector terminal and chassis ground. ***Connector & terminal*** ***(i10) No. 1, No. 2 (+) — Chassis ground (−):***	Is the voltage more than 10 V?	Go to step **6.**	Check the harness for open or short circuit between combination meter and fuse.
6	**CHECK COMBINATION METER CIRCUIT.** Measure the resistance between body integrated unit harness connector terminal and combination meter harness connector terminal. ***Connector & terminal*** ***(i84) No. 33 — (i10) No. 17:***	Is the resistance less than 10 Ω?	LED bulb malfunction. Replace the combination meter case assembly. <Ref. to IDI-17, DISASSEMBLY, Combination Meter Assembly.>	Repair the harness/connector.

2. CHECK KEY SWITCH CIRCUIT

WIRING DIAGRAM:





IM-00078

Diagnostics Chart for Immobilizer Indicator Light

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY CIRCUIT.** 1) Disconnect the harness connector from key warning switch. 2) Turn the ignition switch to “ACC” or “LOCK” (with key inserted). 3) Measure the voltage between key warning switch harness connector terminal and chassis ground. ***Connector & terminal*** ***(B350) No. 3 (+) — Chassis ground (−):***	Is the voltage more than 10 V?	Go to step **2.**	Check the harness for open or short circuit between key warning switch and fuse.
2	**CHECK KEY WARNING SWITCH.** 1) Insert the ignition key to ignition switch. (OFF or ACC) 2) Measure the resistance between key warning switch terminals. ***Connector & terminal*** ***No. 3 — No. 4:***	Is the resistance less than 1 Ω?	Go to step **3.**	Replace the key warning switch.
3	**CHECK KEY WARNING SWITCH.** 1) Remove the ignition key from ignition switch. 2) Measure the resistance between key warning switch terminals. ***Connector & terminal*** ***No. 3 — No. 4:***	Is the resistance more than 1 MΩ?	Go to step **4.**	Replace the key warning switch.
4	**CHECK HARNESS BETWEEN KEY WARNING SWITCH AND BODY INTEGRATED UNIT.** 1) Disconnect the harness connector from key warning switch. 2) Disconnect the harness connector from body integrated unit. 3) Measure the resistance between key warning switch harness connector terminal and body integrated unit harness connector terminal. ***Connector & terminal*** ***(B350) No. 4 — (B281) No. 7:***	Is the resistance less than 10 Ω?	Replace the body integrated unit <Ref. to SL-46, Body Integrated Unit.> and replace the all ignition keys (including transponder). Execute the registration procedure next. Refer to “REGISTRATION MANUAL FOR IMMOBILIZER”.	Repair the harness between key warning switch and body integrated unit.

9. List of Diagnostic Trouble Code (DTC)

A: LIST

1. ECM

DTC	Item	Contents of diagnosis	Index No.
P0513	Incorrect Immobilizer Key	Incorrect immobilizer key (Use of unregistered key in body integrated unit)	<Ref. to IM(diag)-17, DTC P0513 INCORRECT IMMOBILIZER KEY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1570	ANTENNA	Faulty antenna	<Ref. to IM(diag)-18, DTC P1570 ANTENNA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1571	Reference Code Incompatibility	Reference code incompatibility between body integrated unit and ECM	<Ref. to IM(diag)-21, DTC P1571 REFERENCE CODE INCOMPATIBILITY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1572	EGI — Immobilizer Communication (Except Antenna Circuit)	Communication failure between body integrated unit and ECM	<Ref. to IM(diag)-22, DTC P1572 IMM CIRCUIT FAILURE (EXCEPT ANTENNA CIRCUIT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1574	Key — Immobilizer Communication	Failure of body integrated unit to verify key (transponder) ID code	<Ref. to IM(diag)-25, DTC P1574 KEY COMMUNICATION FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1576	EGI Control Module EEPROM	ECM malfunctioning	<Ref. to IM(diag)-25, DTC P1576 EGI CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1577	IMM Control Module EEPROM	Body integrated unit malfunctioning	<Ref. to IM(diag)-25, DTC P1577 IMM CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1578	Meter malfunctioning	Reference code incompatibility between body integrated unit and combination meter	<Ref. to IM(diag)-26, DTC P1578 METER FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

NOTE:
Perform the engine DTC when the DTC except for immobilizer DTC is detected.
<Ref. to EN(H4SO 2.0)(diag)-66, List of Diagnostic Trouble Code (DTC).> <Ref. to EN(H4SO 2.5)(diag)-70, List of Diagnostic Trouble Code (DTC).> <Ref. to EN(H4DOTC)(diag)-55, List of Diagnostic Trouble Code (DTC).> <Ref. to EN(H6DO)(diag)-66, List of Diagnostic Trouble Code (DTC).>

2. BODY INTEGRATED UNIT

DTC	Item	Contents of diagnosis	Index No.	Relation between ECM and DTC
B0401	M collation NG	Reference code incompatibility between body integrated unit and combination meter	<Ref. to IM(diag)-26, DTC P1578 METER FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	P1578
B0402	Immobilizer Key collation NG	• Incorrect immobilizer key (Use of unregistered key in body integrated unit) • Faulty antenna	<Ref. to IM(diag)-17, DTC P0513 INCORRECT IMMOBILIZER KEY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to IM(diag)-18, DTC P1570 ANTENNA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> or <Ref. to IM(diag)-25, DTC P1574 KEY COMMUNICATION FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	• P0513 • P1570 • P1574
B0403	E/G request NG	Communication failure between body integrated unit and ECM	<Ref. to IM(diag)-22, DTC P1572 IMM CIRCUIT FAILURE (EXCEPT ANTENNA CIRCUIT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	P1572

NOTE:
• Immobilizer system of 2.5 L EC, EK model and 3.0 L model perform the starter relay control. When the body integrated unit detect the inconformity of reference code, immediately out put the starter relay cut signal to ECM, and then ECM stop the starter relay operation. In this case, engine does not start, and DTC is not recorded in ECM. Check that the engine does not start on the DTC of body integrated unit.
• DTC B0402 is recorded as freeze frame data when the ignition switch is turned to OFF. When trying to start the engine with unregistered immobilizer key, DTC is not displayed on Subaru Select Monitor immediately. Turn the ignition switch to OFF once and turn to ON again before checking DTC. At this time (when turning the ignition switch to ON again), be careful that the DTC is displayed as freeze frame data even with the registered immobilizer key.

10.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC P0513 INCORRECT IMMOBILIZER KEY

DTC DETECTING CONDITION:

Incorrect immobilizer key (Use of unregistered key in body integrated unit)

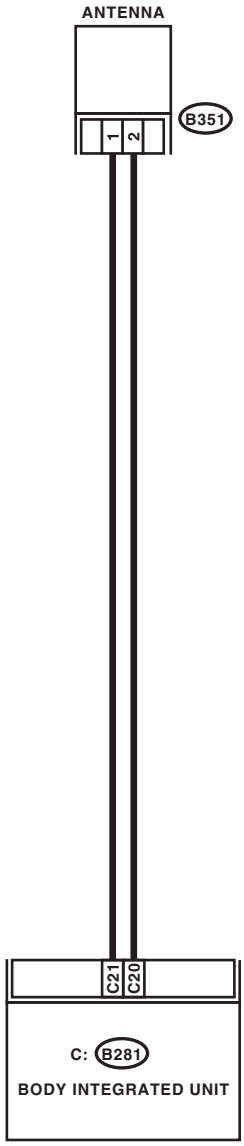
	Step	Check	Yes	No
1	**PERFORM TEACHING OPERATION ON IGNITION KEY.** Perform teaching operation on all keys of the vehicle. Refer to “REGISTRATION MANUAL FOR IMMOBILIZER”.	Is the teaching operation for all keys completed?	END.	Replace the ignition keys (including transponder) which cannot be registered. Go to step **2.**
2	**PERFORM TEACHING OPERATION ON IGNITION KEY.** Perform teaching operation on all keys of the vehicle. Refer to “REGISTRATION MANUAL FOR IMMOBILIZER”.	Is the teaching operation for all keys completed?	END.	Replace the body integrated unit <Ref. to SL-46, Body Integrated Unit.> and replace all the ignition keys (including transponder). Execute the registration procedure next. Refer to “REGISTRATION MANUAL FOR IMMOBILIZER”.

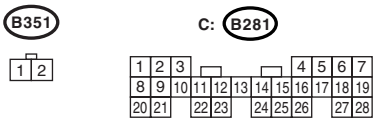
B: DTC P1570 ANTENNA

DTC DETECTING CONDITION:

Faulty antenna

WIRING DIAGRAM:





IM-00079

	Step	Check	Yes	No
1	**CHECK ANTENNA CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector from antenna. <Ref. to SL-50, Immobilizer Antenna.> 3) Measure the resistance of antenna circuit. ***Connector & terminal*** ***(B351) No. 1 — No. 2:***	Is the resistance less than 10 Ω?	Go to step **2.**	Replace the antenna. <Ref. to SL-50, Immobilizer Antenna.>
2	**CHECK ANTENNA CIRCUIT.** 1) Disconnect the harness connector from body integrated unit. 2) Measure the resistance between harness connector and chassis ground. ***Connector & terminal*** ***(B281) No. 21 — Chassis ground:***	Is the resistance less than 10 Ω?	Repair the harness.	Go to step **3.**
3	**CHECK ANTENNA CIRCUIT.** Measure the resistance between harness connector and chassis ground. ***Connector & terminal*** ***(B281) No. 20 — Chassis ground:***	Is the resistance less than 10 Ω?	Repair the harness.	Go to step **4.**
4	**CHECK ANTENNA CIRCUIT.** 1) Turn the ignition switch to ON. (engine OFF) 2) Measure the voltage between harness connector and chassis ground. ***Connector & terminal*** ***(B281) No. 21 (+) — Chassis ground (−):***	Is the voltage 0 V?	Go to step **5.**	Repair the harness.
5	**CHECK ANTENNA CIRCUIT.** Measure the voltage between harness connector and chassis ground. ***Connector & terminal*** ***(B281) No. 20 (+) — Chassis ground (−):***	Is the voltage 0 V?	Go to step **6.**	Repair the harness between body integrated unit and antenna, because there is short circuit with battery voltage line or ignition switch “ON” line.
6	**CHECK BODY INTEGRATED UNIT FUNCTION.** 1) Turn the ignition switch to OFF. 2) Connect the harness connector to body integrated unit. 3) Insert the key to ignition switch, and measure the changes in voltage between antenna harness connectors. ***Connector & terminal*** ***(B281) No. 20 (+) — No. 21 (−):***	Is the voltage −30 to 30 V? (Approx. 0.1 second after inserting the key) Is the voltage 0 V? (Approx. 1 second after inserting the key)	Go to step **7.**	Replace the body integrated unit <Ref. to SL-46, Body Integrated Unit.> and replace all the ignition keys (including transponder). Execute the registration procedure next. Refer to “REGISTRATION MANUAL FOR IMMOBILIZER”.

	Step	Check	Yes	No
7	**CHECK IGNITION KEY (TRANSPONDER).** 1) Remove the key from ignition switch. 2) Start the engine using other keys that have undergone the teaching operation, furnished with vehicle.	Does the engine start?	Replace all the ignition keys (including transponder). Execute the registration procedure next. Refer to “REGISTRATION MANUAL FOR IMMOBILIZER”.	Replace the body integrated unit <Ref. to SL-46, Body Integrated Unit.> and replace the all ignition keys (including transponder). Execute the registration procedure next. Refer to “REGISTRATION MANUAL FOR IMMOBILIZER”.

C: DTC P1571 REFERENCE CODE INCOMPATIBILITY

DTC DETECTING CONDITION:

Reference code incompatibility between body integrated unit and ECM

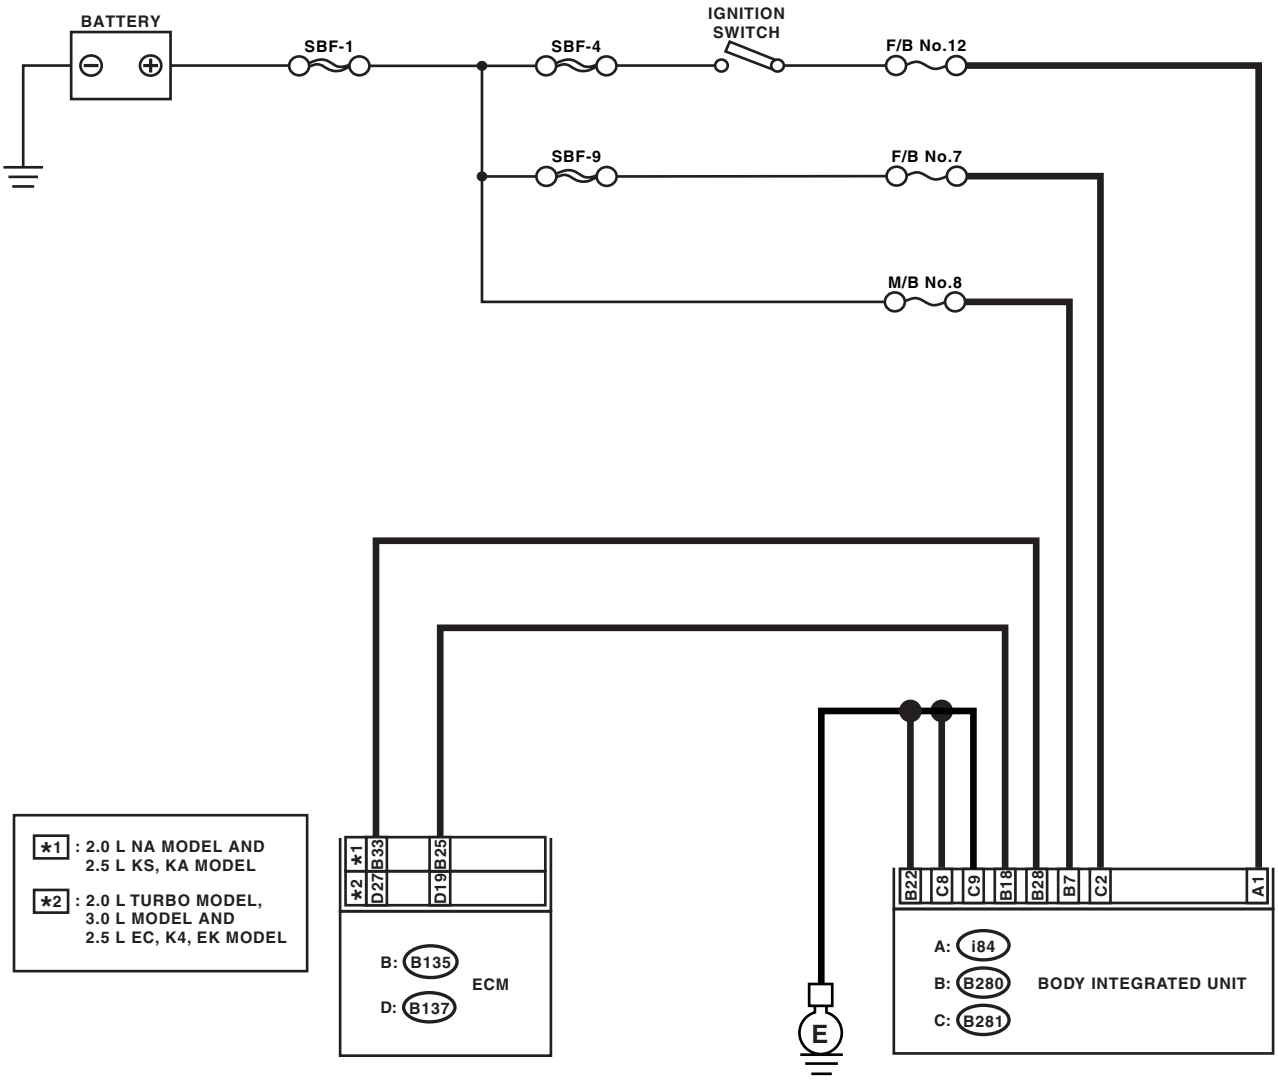
	Step	Check	Yes	No
1	**PERFORM TEACHING OPERATION ON IGNITION KEY.** Perform teaching operation on all keys of the vehicle. Refer to “REGISTRATION MANUAL FOR IMMOBILIZER”.	Is the teaching operation for all keys completed?	END.	Replace the ECM. <Ref. to FU(H4SO 2.0)-34, Engine Control Module (ECM).> <Ref. to FU(H4SO 2.5)-36, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-35, Engine Control Module (ECM).> <Ref. to FU(H6DO)-34, Engine Control Module (ECM).> Replace the body integrated unit <Ref. to SL-46, Body Integrated Unit.> and replace all the ignition keys (including transponder). Execute the registration procedure next. Refer to “REGISTRATION MANUAL FOR IMMOBILIZER”.

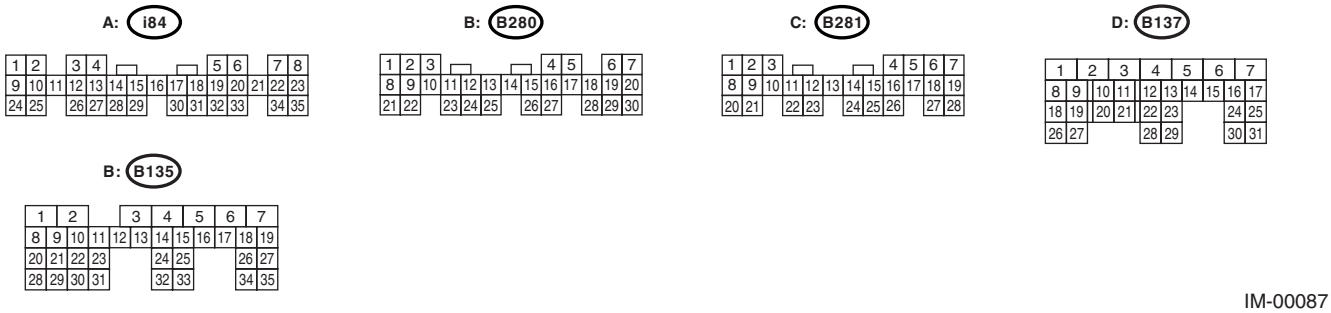
D: DTC P1572 IMM CIRCUIT FAILURE (EXCEPT ANTENNA CIRCUIT)

DTC DETECTING CONDITION:

Communication failure between body integrated unit and ECM

WIRING DIAGRAM:





IM-00087

	Step	Check	Yes	No
1	**CHECK BODY INTEGRATED UNIT POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector from body integrated unit. 3) Measure the voltage between body integrated unit harness connector terminal and chassis ground. ***Connector & terminal*** ***(B280) No. 7 (+) — Chassis ground (−):*** ***(B281) No. 2 (+) — Chassis ground (−):***	Is the voltage more than 10 V?	Go to step **2.**	Check the harness for open or short circuit between body integrated unit and fuse.
2	**CHECK BODY INTEGRATED UNIT POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. (engine OFF) 2) Measure the voltage between body integrated unit harness connector terminal and chassis ground. ***Connector & terminal*** ***(i84) No. 1 (+) — Chassis ground (−):***	Is the voltage more than 10 V?	Go to step **3.**	Check the harness for open or short circuit between body integrated unit and ignition switch.
3	**CHECK BODY INTEGRATED UNIT GROUND CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between body integrated unit harness connector terminal and chassis ground. ***Connector & terminal*** ***(B280) No. 22 — Chassis ground:*** ***(B281) No. 8, No. 9 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **4.**	Repair the open circuit of body integrated unit ground circuit.
4	**CHECK HARNESS BETWEEN BODY INTEGRATED UNIT AND ECM.** 1) Disconnect the harness connector from body integrated unit and ECM. 2) Measure the resistance between body integrated unit harness connector terminal and ECM connector terminal. ***Connector & terminal*** ***2.0 L non-turbo model, 2.5 L KS, KA model*** ***(B280) No. 18 — (B135) No. 25:*** ***2.0 L turbo model, 3.0 L model, 2.5 L EC, K4, EK model*** ***(B280) No. 18 — (B137) No. 19:***	Is the resistance less than 10 Ω?	Go to step **5.**	Repair the open circuit of harness between body integrated unit and ECM.
5	**CHECK HARNESS BETWEEN BODY INTEGRATED UNIT AND ECM.** Measure the resistance between body integrated unit harness connector terminal and ECM connector terminal. ***Connector & terminal*** ***2.0 L non-turbo model, 2.5 L KS, KA model*** ***(B280) No. 28 — (B135) No. 33:*** ***2.0 L turbo model, 3.0 L model, 2.5 L EC, K4, EK model*** ***(B280) No. 28 — (B137) No. 27:***	Is the resistance less than 10 Ω?	Go to step **6.**	Repair the open circuit of harness between body integrated unit and ECM.

	Step	Check	Yes	No
6	**CHECK HARNESS OF COMMUNICATION LINE.** 1) Turn the ignition switch to ON. (engine OFF) 2) Measure the voltage between body integrated unit harness connector terminal and chassis ground. ***Connector & terminal*** ***(B280) No. 18, No. 28 (+) — Chassis ground (−):***	Is the voltage 0 V?	Go to step **7.**	Repair the harness between body integrated unit and ECM, because there is short circuit with battery voltage line or ignition switch "ON" line.
7	**CHECK HARNESS OF COMMUNICATION LINE.** Measure the voltage between harness connector terminal and engine ground. ***Connector & terminal*** ***2.0 L non-turbo model, 2.5 L KS, KA model*** ***(B135) No. 25, 33 (+) — Engine ground (−):*** ***2.0 L turbo model, 3.0 L model, 2.5 L EC, K4, EK model*** ***(B137) No. 19, 27 (+) — Engine ground (−):***	Is the voltage 0 V?	Go to step **8.**	Repair the harness between body integrated unit and ECM, because there is short circuit with battery voltage line or ignition switch "ON" line.
8	**CHECK ECM BY COMMUNICATION LINE CHECK.** 1) Connect the harness connector to ECM. 2) Disconnect the harness connector from body integrated unit. 3) Start the communication line check. <Ref. to IM(diag)-8, COMMUNICATION LINE CHECK, OPERATION, Subaru Select Monitor.>	Does "Communication Line not Shorted" appear on the screen?	Replace the body integrated unit <Ref. to SL-46, Body Integrated Unit.> and replace the all ignition keys (including transponder). Execute the registration procedure next. Refer to "REGISTRATION MANUAL FOR IMMOBILIZER".	Replace the ECM. <Ref. to FU(H4SO 2.0)-34, Engine Control Module (ECM).> <Ref. to FU(H4SO 2.5)-36, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-35, Engine Control Module (ECM).> <Ref. to FU(H6DO)-34, Engine Control Module (ECM).> Perform the registration procedure next. Refer to "REGISTRATION MANUAL FOR IMMOBILIZER".

E: DTC P1574 KEY COMMUNICATION FAILURE

DTC DETECTING CONDITION:

Failure of body integrated unit to verify key (transponder) ID code

	Step	Check	Yes	No
1	**CHECK BODY INTEGRATED UNIT FUNCTION.** Insert the key to ignition switch (LOCK position), and measure the changes in voltage between antenna connectors. ***Connector & terminal (B142) No. 1 — No. 2:***	Is the voltage −30 to 30 V? (Approx. 0.1 second after inserting the key) Is the voltage 0 V? (Approx. 1 second after inserting the key)	Go to step **2.**	Replace the body integrated unit <Ref. to SL-46, Body Integrated Unit.> and replace the all ignition keys (including transponder). Execute the registration procedure next. Refer to “REGISTRATION MANUAL FOR IMMOBILIZER”.
2	**CHECK IGNITION KEY (TRANSPONDER).** 1) Remove the key from ignition switch. 2) Start the engine using other keys that have undergone the teaching operation, furnished with vehicle.	Does the engine start?	Replace all the ignition keys (including transponder). Execute the registration procedure next. Refer to “REGISTRATION MANUAL FOR IMMOBILIZER”.	Replace the body integrated unit <Ref. to SL-46, Body Integrated Unit.> and replace the all ignition keys (including transponder). Execute the registration procedure next. Refer to “REGISTRATION MANUAL FOR IMMOBILIZER”.

F: DTC P1576 EGI CONTROL MODULE EEPROM

DTC DETECTING CONDITION:

ECM malfunctioning

1. REPLACE ECM

Replace the ECM. <Ref. to FU(H4SO 2.0)-34, Engine Control Module (ECM).> <Ref. to FU(H4SO 2.5)-36, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-35, Engine Control Module (ECM).> <Ref. to FU(H6DO)-34, Engine Control Module (ECM).>
Perform the registration procedure next. Refer to “REGISTRATION MANUAL FOR IMMOBILIZER”.

G: DTC P1577 IMM CONTROL MODULE EEPROM

DTC DETECTING CONDITION:

Body integrated unit malfunctioning

1. REPLACE BODY INTEGRATED UNIT

Replace the body integrated unit <Ref. to SL-46, Body Integrated Unit.> and replace the all ignition keys (including transponder). Execute the registration procedure next. Refer to “REGISTRATION MANUAL FOR IMMOBILIZER”.

H: DTC P1578 METER FAILURE

DTC DETECTING CONDITION:

Reference code incompatibility between body integrated unit and combination meter

1. CHECK LAN COMMUNICATION SYSTEM

Inspect LAN communication system in the following situation. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

- DTC of body integrated unit B0300, B0301, B0302, B0111 or B0321 is displayed.
- “Er IU” or “Er LC” is displayed in odo/trip meter on combination meter.

2. REPLACE COMBINATION METER

Replace the combination meter. <Ref. to IDI-16, REMOVAL, Combination Meter Assembly.> Execute the registration procedure of all immobilizer part (combination meter and etc.) next. Refer to “REGISTRATION MANUAL FOR IMMOBILIZER”.

NOTE:

- When the combination meter has been replaced, be sure to perform the registration procedure of immobilizer.
- Engine may not start when the combination meter which removed from the model with immobilizer to the model without immobilizer. When installed wrong one, correct with the following procedure.
  (1) Turn the ignition switch to OFF.
  (2) Reinstall the combination meter. (Install the combination meter for the model without immobilizer.)
  (3) Disconnect the ground cable from battery, and reconnect one minute later.
  (4) Turn the ignition switch to START, and check that the engine starts.
- When the combination meter and body integrated unit are replaced at the same time, the registration procedure cannot be performed. In this case, it is necessary to write an ID newly to body integrated unit.

BODY SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

11.	List of Diagnostic Trouble Code (DTC)	28
12.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	30
13.	General Diagnostic Table	79

1. Basic Diagnostic Procedure

A: PROCEDURE

1. WITH SUBARU SELECT MONITOR

CAUTION:
• Subaru Select Monitor is required for reading DTC, performing diagnosis and reading current data.
• Remove foreign matter (dust, water and oil etc.) from the body integrated unit connector during removal and installation.
• For the model with immobilizer, registration of immobilizer may be needed after the replacement of controller and etc. For detail procedure, refer to "REGISTRATION MANUAL FOR IMMOBILIZER".

NOTE:
• To check harness for broken wires or short circuits, shake it while holding it or the connector.
• Check List for Interview <Ref. to LAN(diag)-3, Check List for Interview.>

	Step	Check	Yes	No
1	**CHECK PRE-INSPECTION.** 1) Ask the customer when and how the trouble occurred using interview check list. <Ref. to LAN(diag)-3, Check List for Interview.> 2) Check the display of freeze frame data. (Combination meter, odo/trip meter)	Is freeze frame data displayed?	Go to step **3.**	Go to step **2.**
2	**BASIC INSPECTION.** Check the components which might affect body control. <Ref. to LAN(diag)-5, INSPECTION, General Description.>	Is the component that might influence the body control problem normal?	Go to step **3.**	Repair or replace each unit.
3	**CHECK INDICATION OF DTC.** 1) Read the DTC. <Ref. to LAN(diag)-14, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.> NOTE: If the communication function of the Subaru Select Monitor cannot be executed normally, check the communication circuit. <Ref. to LAN(diag)-30, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> 2) Record all DTCs and freeze frame data.	Is DTC displayed?	Go to step **5.**	Go to step **4.**
4	**PERFORM THE GENERAL DIAGNOSTICS.** Inspect using "General Diagnostics Table". <Ref. to LAN(diag)-79, General Diagnostic Table.>	Is result of inspection OK?	LAN system is normal.	Go to step **5.**
5	**PERFORM THE DIAGNOSIS.** 1) Fix the wrong part. 2) Perform the clear memory mode. <Ref. to LAN(diag)-20, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.> 3) Read DTC. <Ref. to LAN(diag)-14, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>	Is DTC displayed?	Repeat step 5 until DTC is not shown.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

Inspect the following items about the vehicle's state.

1. DISPLAY OF FREEZE FRAME DATA

Freeze frame data is displayed in odo/trip meter.	When and how often are they displayed? ❑ Always ❑ Sometimes ❑ Only once
	Which freeze frame data is displayed? (Record them all) ❑ Er IU (Fail in the body integrated unit) ❑ Er HC (Fail of high-speed CAN) ❑ Er LC (Fail of low-speed CAN) ❑ Er –– (Fails of both high-speed and low-speed CAN) ❑ Er EG (Fail of EGI communication counter) ❑ Er TC (Fail of TCM communication counter) ❑ Er Ab (Fail of vehicle dynamics control (VDC)/ABS communication counter)
Ignition key position	❑ OFF ❑ ACC ❑ ON (before starting engine) ❑ START ❑ ON (after Engine starting, engine is running) ❑ ON (after Engine starting, engine is at a standstill)
Timing	❑ Immediately after turning the ignition to ON ❑ Immediately after turning the ignition to START

2. DISPLAY IN COMBINATION METER

Display in combination meter	a) Display of temperature gauge	❑ OK / ❑ NG
	b) Display of fuel gauge	❑ OK / ❑ NG
Center display	c) Display of ambient temperature	❑ OK / ❑ NG
Display of other indicators	d) Malfunction indicator light	❑ ON / ❑ OFF
	e) SPORT indicator light (AT warning light)	❑ ON / ❑ OFF
	f) ABS warning light/Vehicle dynamics control (VDC) warning light	❑ ON / ❑ OFF
	g) Immobilizer indicator light	❑ ON / ❑ Blink / ❑ OFF
	h) Seat belt warning light (Driver's seat)	❑ ON / ❑ OFF
	i) Seat belt warning light (Passenger's seat)	❑ ON / ❑ OFF

3. SYMPTOMS

Behavior of vehicle	a) Illumination volume control is not available.	❑ Yes / ❑ No
	b) Rear wiper does not operate.	❑ Yes / ❑ No
	c) Wiper deicer does not operate.	❑ Yes / ❑ No
	d) Rear defogger does not operate.	❑ Yes / ❑ No
	e) Door lock does not operate.	❑ Yes / ❑ No
	f) Trunk/rear gate lock does not operate	❑ Yes / ❑ No
	g) Driver's door lock does not operate.	❑ Yes / ❑ No
	h) Shift lock does not operate.	❑ Yes / ❑ No
	i) Rear fog light does not come on.	❑ Yes / ❑ No
	j) Double lock does not operate. (EK model)	❑ Yes / ❑ No
	k) Heater cock valve does not operate.	❑ Yes / ❑ No
	l) Key illumination blinks.	❑ Yes / ❑ No

4. CONDITIONS UNDER WHICH TROUBLE OCCURS

Driving condition	❑ At standstill (While idling)			
	❑ When the vehicle is running	Vehicle speed	km/h (MPH)	
	❑ When accelerating	Acceleration	km/h (MPH) to	km/h (MPH)
	❑ Decelerating (With braking)	Deceleration	km/h (MPH) to	km/h (MPH)
	❑ Decelerating (Without braking)	Deceleration	km/h (MPH) to	km/h (MPH)
	❑ Flat road ❑ Uphill ❑ Downhill ❑ Gravel road ❑ Bumpy road ❑ Snowy road			
	Does it occur when operating any part? Operated part: Trouble Symptom:			
	Are other troubles occurred? From where: Trouble Symptom:			

3. General Description

A: CAUTION

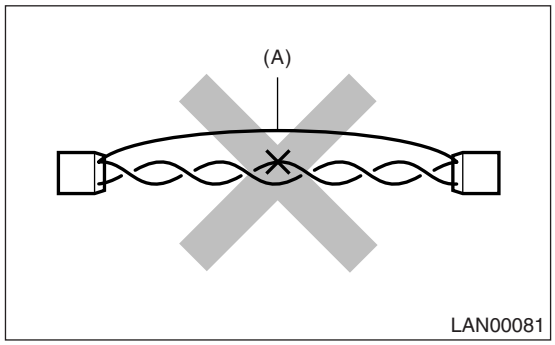
1. SRS AIRBAG SYSTEM

Airbag system wiring harness is routed near the body integrated unit and twisted pair line.

CAUTION:
• All airbag system wiring harness and connectors are colored yellow. Do not use the electrical test equipment on these circuits.
• Be careful not to damage the Airbag system wiring harness when servicing the body integrated unit and LAN system.

2. LAN SYSTEM

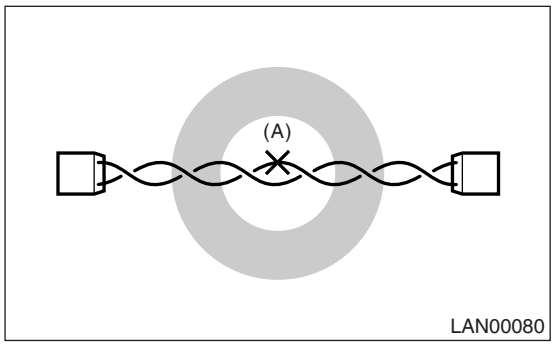
• Bus line of LAN system is twisted pair line. Be careful not to bypass or partly unbind the twisted pair line.
• Do not make clearance between bus lines (CAN High, CAN Low).
• Difference of bus line length should be within 10 cm (3.94 in).
• Fray near the connector should be within 8 cm (3.94 in).



(A) Bypass wire connection

• If the characteristics of the twisted pair line is changed, it may cause extremely weakness to the noise.

• When repairing the harness, connect the wires using soldering and protect it with insulating tape, etc.



(A) Soldering and protection with insulating tape

B: INSPECTION

Before performing diagnostics, check the following items which might affect body integrated unit malfunctions.
1) Measure the battery voltage and check electrolyte.

Standard voltage: 12 V, or more

Specific gravity: Above 1.260

2) Check the fuse condition.
Make sure that ampere of the fuse is setting value, and it is not blown out.
3) Check the connecting condition of harness and harness connector.
4) Confirm settings of body integrated unit are corresponded to vehicle equipment. <Ref. to LAN(diag)-18, REGISTRATION BODY INTEGRATED UNIT (EQUIPMENT SETTING), OPERATION, Subaru Select Monitor.>
5) Confirm setting are corresponded to vehicle equipment by function setting (ECM customizing) of body integrated unit. <Ref. to LAN(diag)-20, FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.>
6) Confirm “Factory initial setting” of body integrated unit registrations is “Market”.
7) Confirm key illumination does not blink with ignition switch turned to ON.

C: PREPARATION TOOL

1. SPECIAL TOOL

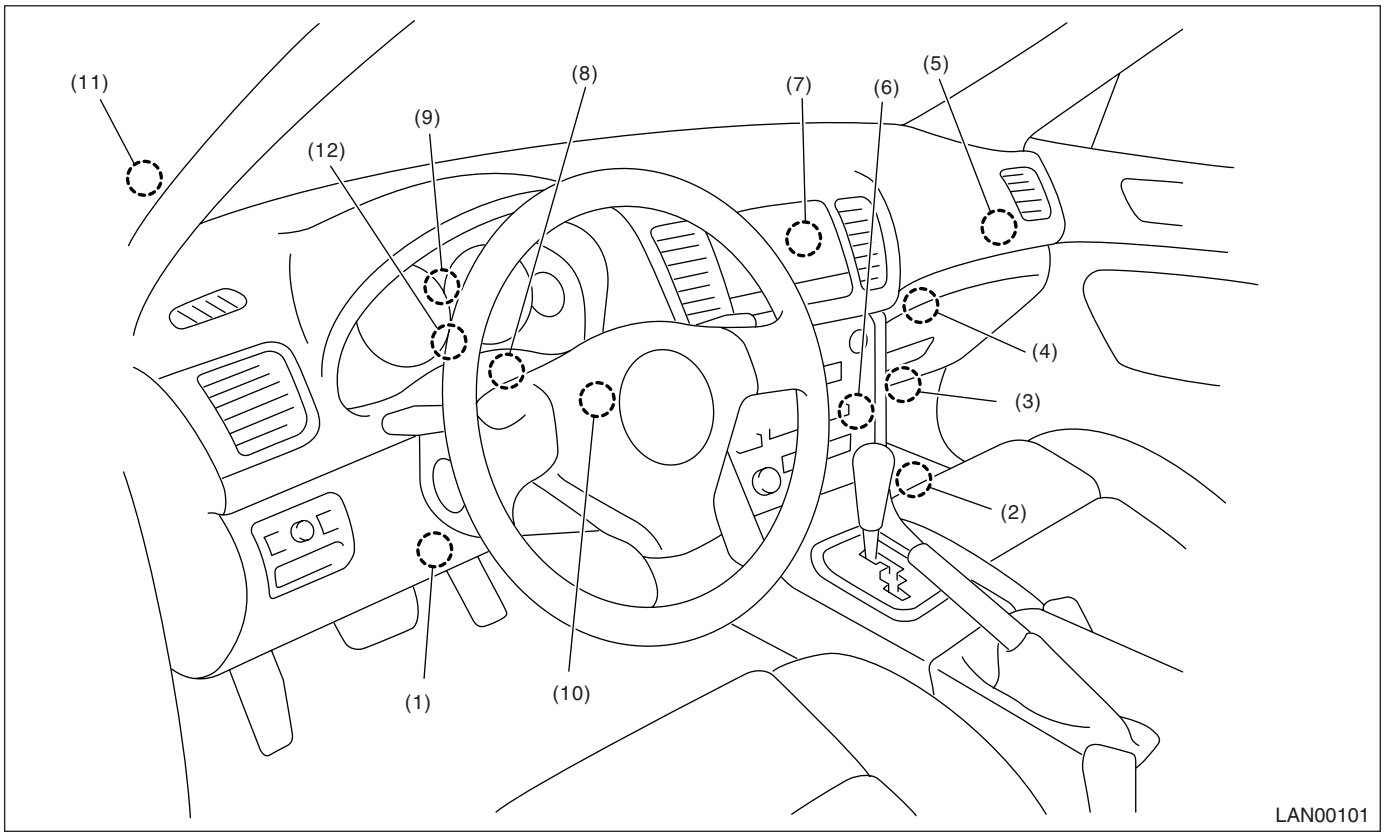
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST24082AA230	24082AA230	CARTRIDGE	Troubleshooting for electrical system.
ST22771AA030	22771AA030	SUBARU SELECT MONITOR KIT	Troubleshooting for electrical system. • English: 22771AA030 (Without printer) • German: 22771AA070 (Without printer) • French: 22771AA080 (Without printer) • Spanish: 22771AA090 (Without printer)

2. GENERAL TOOL

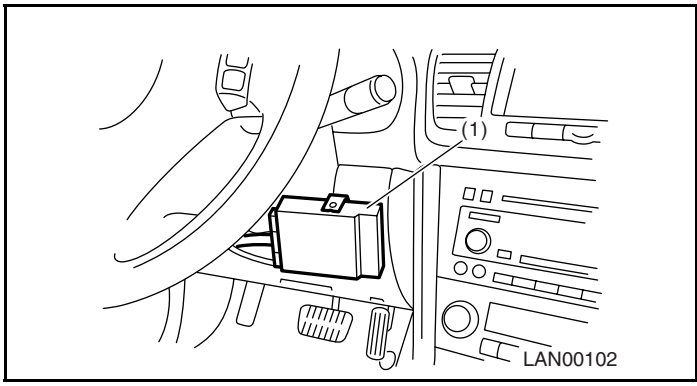
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and ampere.

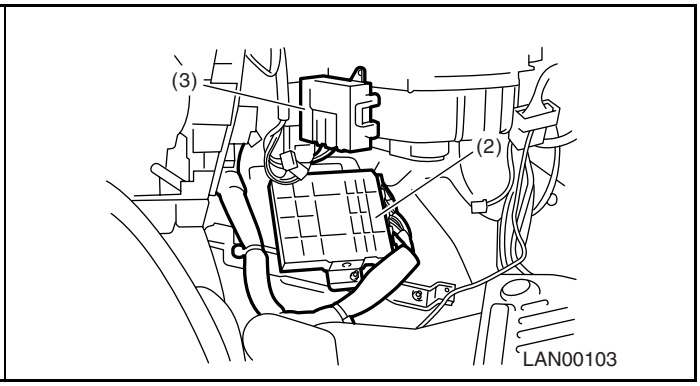
4. Electrical Component Location

A: LOCATION

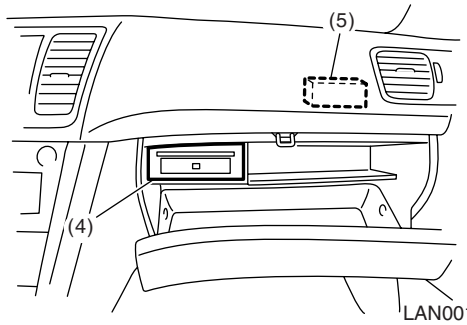


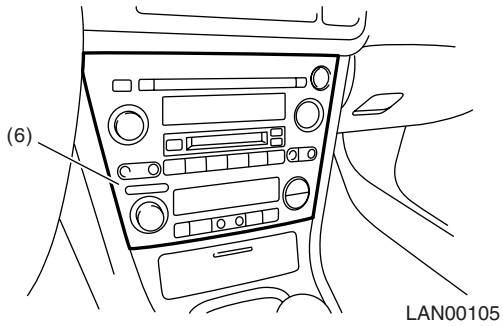
(1) Body integrated unit
(2) Engine control module (ECM)
(3) Auto A/C control unit
(4) Navigation module
(5) Keyless entry control unit (Antenna)
(6) A/C control panel
(7) Center display
(8) Transmission control module (TCM)
(9) Combination meter
(10) Steering angle sensor
(11) ABSCM&H/U or VDCCM&H/U (In engine compartment)
(12) Odo/trip meter

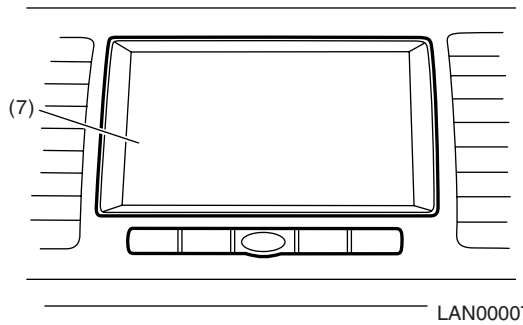


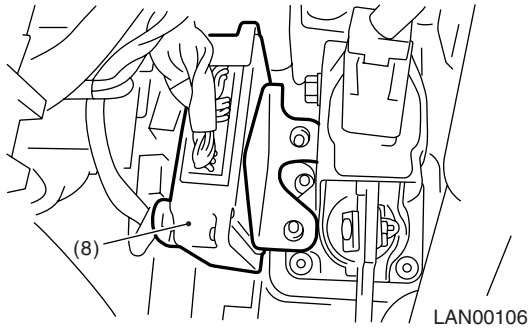


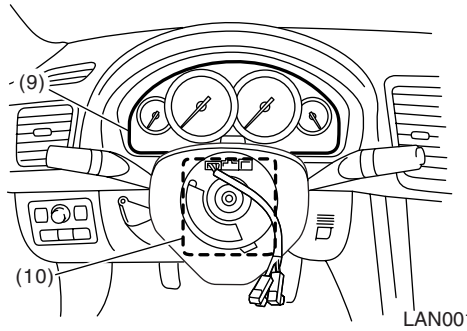
Electrical Component Location

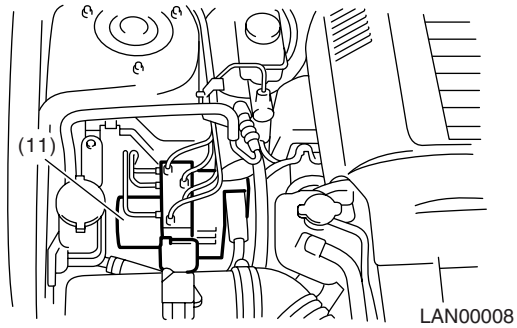


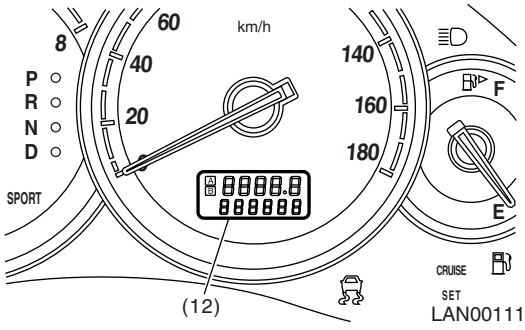








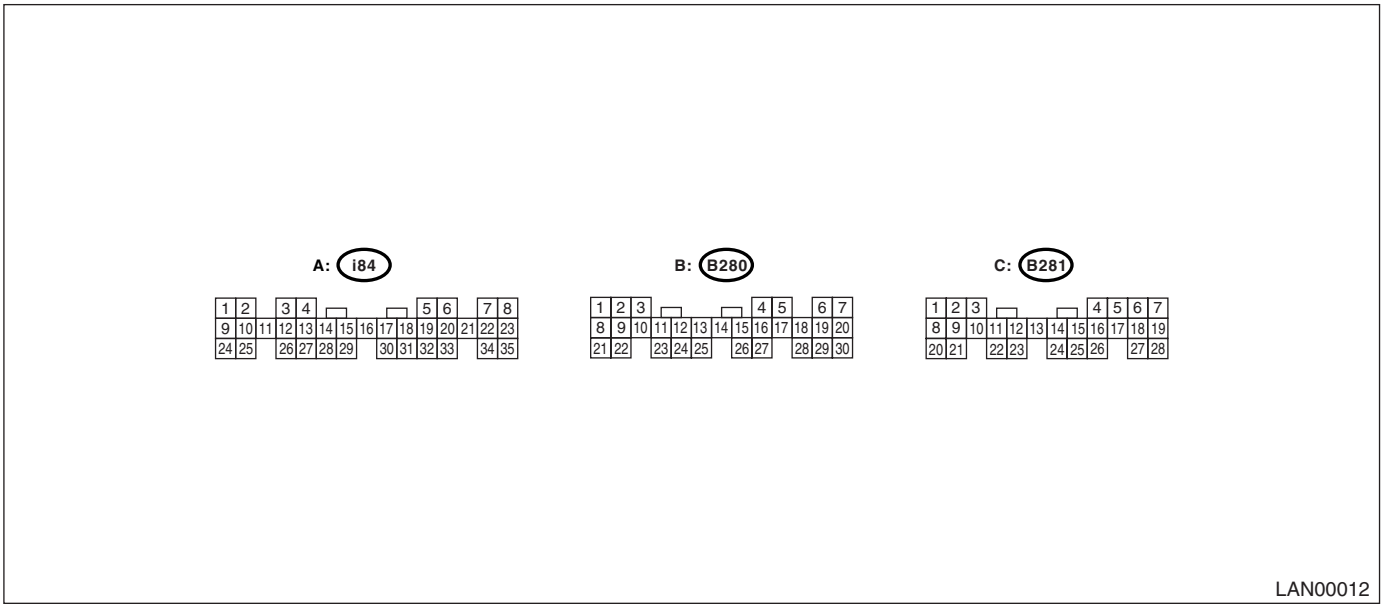




SUBARU.

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION



Description	Connector No.	Terminal No.	Signal (V or Ω)	NOTE
			Ignition switch ON (engine OFF)	
System control power supply	B281	C2	10 — 13 V	Always
Backup power supply	B280	B7	10 — 13 V	Always
Ignition power supply	i84	A1	10 — 13 V	Ignition ON
ACC power supply	i84	A24	10 — 13 V	ACC ON
Ground	i84	A21	Less than 1 Ω	Always
	B281	C9		
	B281	C8		
	B280	B22		
Key warning switch	B281	C7	10 — 13 V	When ignition key inserted
Stop light switch	B281	C23	10 — 13 V	When brake pedal depressed
Illumination volume (Vi1)	i84	A10	4.5 — 5.5 V	Small light ON
Illumination volume (Vi 2)	i84	A2	0.5 — 4.5 V	—
Illumination volume (Vi 3)	i84	A25	Less than 1 Ω	Ground circuit
Illumination output	i84	A5	10 — 13 V	Small light ON
Front fog light input	B281	C17	10 — 13 V	Front fog light ON
Rear fog light input	B281	C4	10 — 13 V	Small light ON Front fog light ON Rear fog light ON
Rear fog light output	B280	B13	10 — 13 V	Rear fog light ON
Headlight input	B281	C16	10 — 13 V	Headlight ON (Both of Hi, Lo)
Door switch input Driver's seat	i84	A19	Less than 1 V (10 — 13 V at OFF)	Driver's door open (ON)
Door switch input Passenger's seat	i84	A32	Less than 1 V (10 — 13 V at OFF)	Passenger's door open (ON)
Door switch input Rear RH seat	i84	A18	Less than 1 V (10 — 13 V at OFF)	Rear RH door open (ON)

Control Module I/O Signal

Description	Connector No.	Terminal No.	Signal (V or Ω)	NOTE
			Ignition switch ON (engine OFF)	
Door switch input Rear LH seat	i84	A31	Less than 1 V (10 — 13 V at OFF)	Rear LH door open (ON)
Door switch Trunk/Rear gate	i84	A17	Less than 1 V (10 — 13 V at OFF)	Trunk/Rear gate open (ON)
Illumination control switch	i84	A30	10 — 13 V (at dimmer ON)	Extinct the clock and audio illumination
Manual switch (LOCK)	i84	A15	Less than 1 Ω	Door lock switch ON
Manual switch (UNLOCK)	i84	A29	Less than 1 Ω	Door lock switch ON
Door lock power supply	i84	A34	10 — 13 V	
All door LOCK output	i84	A7	10 — 13 V	Manual, door key switch ON
All door UNLOCK output	i84	A8	10 — 13 V	Manual, door key switch ON
Trunk/Rear gate UNLOCK output	i84	A22	10 — 13 V	When the trunk open signal received with keyless entry (Sedan model)
Key/shift lock power supply	B281	C1	10 — 13 V	
Shift lock output	B280	B6	10 — 13 V	Ignition switch ON, at “P” range, foot brake ON
Wiper deicer switch	i84	A14	Less than 1 Ω	Wiper deicer switch ON
Wiper deicer relay output	B280	B14	Less than 1 Ω	Wiper deicer relay ON
Rear defogger switch	i84	A28	Less than 1 Ω	Rear defogger switch ON
Rear defogger relay output	B281	B16	Less than 1 Ω	Rear defogger relay ON
Shift switch (ON)	B281	C26	Less than 1 Ω	At Manual mode
Shift switch (UP)	B281	C15	Less than 1 Ω	At Manual mode UP
Shift switch (DOWN)	B281	C25	Less than 1 Ω	At Manual mode DOWN
“P” range switch	B281	C13	Less than 1 Ω	
Impact sensor	B281	C5	Less than 1 Ω	Impact sensor ON (Model with immobilizer)
Fuel level sensor	B281	C19	0 — 102.3 Ω	
Ambient sensor	B281	C3	0.5 — 4.5 V	SIG
	B281	C10	Less than 1 Ω	GND
Seat belt switch (driver’s seat)	i84	A4	Less than 1 Ω	Driver’s seat belt worn
Seat belt switch (passenger’s seat)	i84	A13	Less than 1 Ω	Passenger’s seat belt worn
Seat belt warning light (driver’s seat)	i84	A20	Less than 1 Ω	Driver’s seat belt worn
Seat belt warning light (passenger’s seat)	B281	C24	Less than 1 Ω	Passenger’s seat belt worn
Sedan/Wagon identification switch	B281	C11	Sedan 10 — 13 V Wagon 0 — 5 V	
Rear wiper switch (ON)	B281	C6	Less than 1 Ω	Rear wiper switch ON
Rear wiper switch (INT)	B281	C18	Less than 1 Ω	Rear wiper switch ON
Rear washer switch	B281	C27	Less than 1 Ω	Rear washer switch ON
Rear wiper power supply	B280	B21	10 — 13 V	
Rear wiper ON output	B280	B1	10 — 13 V	Rear wiper switch ON
Rear wiper return	B280	B8	Less than 1 Ω B1 — B8 1 Ω or less	At wiper reversing

Description	Connector No.	Terminal No.	Signal (V or Ω)	NOTE
			Ignition switch ON (engine OFF)	
Room light output	B280	B3	Less than 1 Ω	When LOCK, UNLOCK with key-less entry
Key ring illumination output	B280	B4	Less than 1 Ω	Ignition key removed, driver door open
Turn hazard output	B280	B12	Less than 1 Ω	When operating keyless entry answer back
Keyless buzzer output	i84	A6	Less than 1 Ω	When operating keyless entry answer back
Immobilizer pilot light	i84	A33	Less than 1 Ω	At ignition key removed, immobilizer operating
Kick down switch	B280	B12	Less than 1 Ω	Kick down switch ON
Keyless communication	i84	A9	2 — 10 V	At keyless entry signal received
High-speed CAN circuit (Hi)	B280	B20	Between B20 — B30 Serial communication	At communicating (sending and receiving)
High-speed CAN circuit (Lo)	B280	B30		
Low-speed CAN circuit 1 (Hi)	i84	A26	Between A25 — A26 Serial communication	At communicating (sending and receiving)
Low-speed CAN circuit 1 (Lo)	i84	A25		
Low-speed CAN circuit 2 (Hi)	B280	B26	Between B25 — B27 Serial communication	At communicating (sending and receiving) (Model with auto A/C)
Low-speed CAN circuit 2 (Lo)	B280	B27		
Immobilizer antenna	B281	C20 — C21	Serial communication	
Immobilizer communication (Main)	B280	B18 (Back-up B28)	Serial communication	
Subaru Select Monitor communication	B280	B19	Serial communication

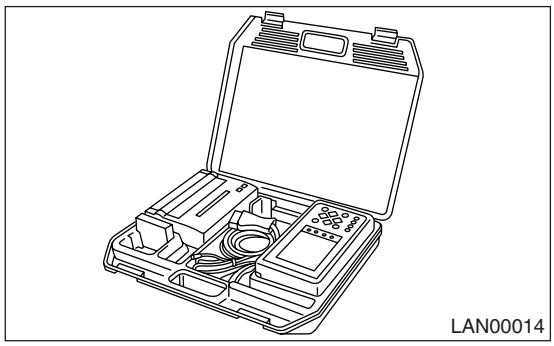
6. Subaru Select Monitor

A: OPERATION

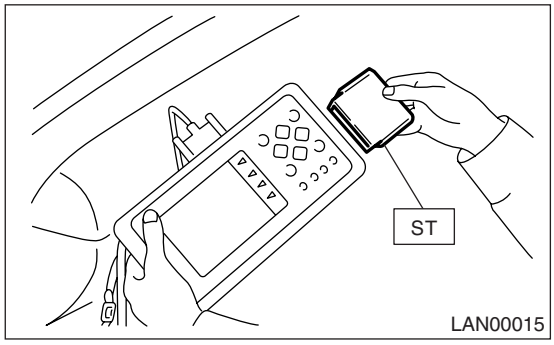
1. READ DIAGNOSTIC TROUBLE CODE (DTC)

NOTE:
• DTC is displayed in the sequence of inputting. (When inputting more than two simultaneously, DTC is displayed in the sequence of priority.)
• When more than two DTCs are displayed, perform the diagnosis of top of them.

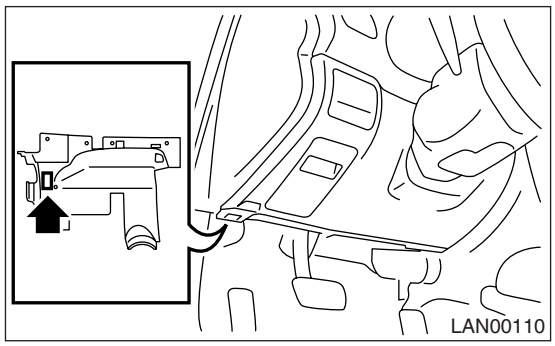
1) Prepare the Subaru Select Monitor kit.



2) Connect the diagnosis cable to Subaru Select Monitor.
3) Insert the cartridge to Subaru Select Monitor. <Ref. to LAN(diag)-6, SPECIAL TOOL, PREPARATION TOOL, General Description.>

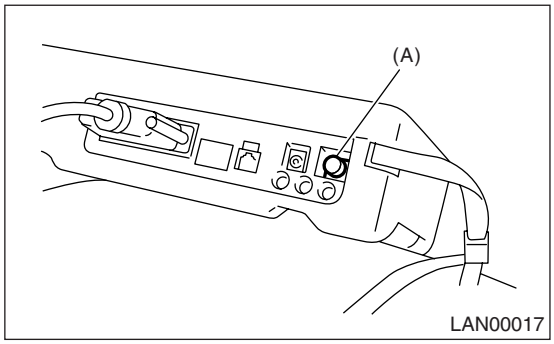


4) Connect the Subaru Select Monitor to data link connector.
Data link connector is located in the lower portion of the instrument panel (on the driver's side).



CAUTION:
Do not connect scan tools except for Subaru Select Monitor.

5) Turn the ignition switch to ON (engine OFF) and turn the Subaru Select Monitor switch to ON.



(A) Power switch

6) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
7) On the «System Selection Menu» display screen, select the {Integ. Unit mode} and press the [YES] key.
8) On the «Integ. Unit mode failuer diag» display screen, select the {Diagnostic Code(s) Display} and press the [YES] key.

NOTE:
• For details concerning operation procedure, refer to "SUBARU SELECT MONITOR OPERATION MANUAL".
• For details concerning DTCs, refer to the List of Diagnostic Trouble Code (DTC). <Ref. to LAN(diag)-28, List of Diagnostic Trouble Code (DTC).>

2. READ CURRENT DATA

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Integ. Unit mode} and press the [YES] key.
3) On the «Integ. Unit mode failuer diag» display screen, select the {Current Data Display & Save} and press the [YES] key.
4) On the «Current Data Display & Save» display screen, select the {12 Data Display} and press the [YES] key.
5) Using the scroll key, scroll the display screen up or down until the desired data is shown.
• A support list contains both of analog and digital data, and they are shown in the following table.

3. DISPLAY OF ANALOG DATA

Items to be displayed	Unit of measure	NOTE
BATT Voltage (Control)	10 — 15 V	—
BATT Voltage (BACK UP)	10 — 15 V	—
IG power supply voltage	10 — 15 V	—

5. CONFIRMATION OF CURRENT SETTING

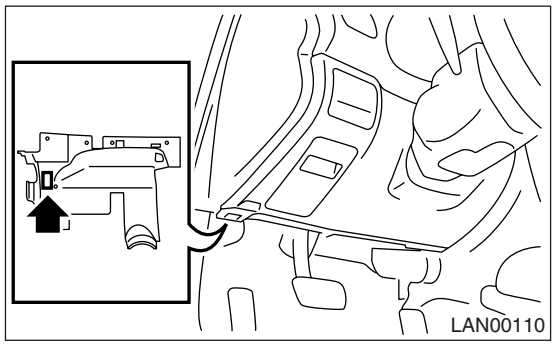
1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Integ. Unit mode} and press the [YES] key.
3) On the «Integ. Unit mode failuer diag» display screen, select the {Current Data Display & Save} and press the [YES] key.
4) On the «Current Data Display & Save» display screen, select the {12 Data Display} and press the [YES] key.
5) Using the scroll key, scroll the display screen up or down until the desired data is shown.
6) Display the following items and record the settings.
Required items for new registration (Except for system not equipped)

Item	Item to confirm				Remarks
Key No. to register	1	2	3	4	Registered ID type
Off delay	OFF	Long	Normal	Short	Setting for lighting off time
Auto-lock	60, 50, 40, 30, 20		OFF		(Unit sec.)
Rr defogger op. mode	Normal		Continuous		
Wiper deicer op. mode	Normal		Continuous		Optional setting
Security Alarm Setup	ON		OFF		
Impact Sensor Setup	ON		OFF		Optional setting
Alarm monitor delay setting	ON		OFF		
Lockout prevention	ON		OFF		
Impact Sensor	Yes		No		Optional setting
Siren setting	Yes		No		Optional setting
Answer-back buzzer setup	ON		OFF		Not equipped
Hazard answer-back setup	ON		OFF		
Automatic locking setup	ON		OFF		
Ans.-back Buzzer	Yes		No		Not equipped
Auto locking	Yes		No		
Door open warning (prevention of battery run-out)	Yes		No		
A/C ECM setting	Yes		No		Model with auto A/C
P/W ECM setting	Yes		No		Not equipped
Center display failure	Yes		No		Model with center display
Wiper deicer	Yes		No		Optional setting
Rear fog light setting	Yes		No		Optional setting
Factory initial setting	Manufacture		Market		Not change to Manufacture mode
Security setting (Specified security set-ting)	Yes		No		Operate the selected security set. (EK model)

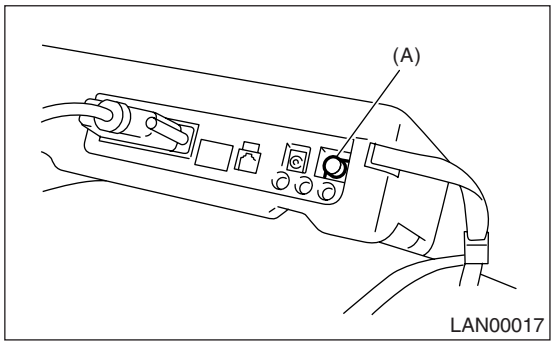
6. REGISTRATION BODY INTEGRATED UNIT (EQUIPMENT SETTING)

CAUTION:
Body integrated unit is core of LAN system, and also can select the function of all vehicle system control. It is possible to control the original functions of vehicle when registrations of body integrated unit and function setting are corresponded to vehicle equipment.
If registrations and function setting are different from vehicle equipment, vehicle system does not operate normally and diagnosis cannot be performed correctly. Pay attention to items below.
• Be sure to correspond registrations and function settings to vehicle equipment.
• Do not change the settings of vehicle improperly.
• Confirm key illumination does not blink or "Factory initial setting" of body integrated unit registrations is "Market". If "Factory initial setting" is set to "Factory", key illumination blinks with ignition key turned to ON to give warning of unconfirmed settings.
• Key illumination does not blink with ignition switch turned to ON and go off with door closed.
• Be sure to register immobilizer if body integrated unit is replaced with a new one. (Model with immobilizer)
• Make a registration of immobilizer when the parts replaced related to immobilizer. Refer to "REGISTRATION MANUAL FOR IMMOBILIZER".

1) Turn the ignition switch to OFF.
2) Connect the Subaru Select Monitor to data link connector.



3) Turn the ignition switch to ON and Subaru Select Monitor to ON.



(A) Power switch

4) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
5) On the «Each System Check» display screen, select the {Integ. Unit mode} and then select the "ECM customizing".

6) Change the setting with UP/DOWN key and press the [YES] key.
• List of body integrated unit registration item

NOTE:
Setting is different depending on grade of vehicle.

Data		Initial setting	Registration	Remarks
21	A/C ECM setting	OFF	ON	Illumination control does not operate if A/C ECM setting is set to “OFF” in case of model with auto A/C.
			OFF	If A/C ECM setting is set to “ON” in case of model without auto A/C, illumination change to night illumination and it is difficult to be recognized.
22	P/W ECM setting	OFF	ON	Be sure to set P/W ECM setting to “OFF”. Auto-reverse function
			OFF	
23	Center display failure (OP)	OFF	ON	Information may not be displayed on center display if Center display failure is set to “OFF” in case of model with center display.
			OFF	
24	Wiperdeicer (OP)	OFF	ON	ON signal does not output with operation of wiper deicer switch if Wiperdeicer is set to “OFF” in model with wiper deicer.
			OFF	
25	Rear fog light setting (OP)	OFF	ON	Vehicle is controlled in rear fog light equipped mode.
			OFF	Vehicle is controlled in rear fog light no-equipped mode. (Be sure to set to “OFF” in model without rear fog light.
26	Factory initial setting (Reset of body integrated unit)	Factory	Factory (Reset)	If Factory initial setting is set to “Factory”, registrations of items above is changed to “OFF”. Be sure to set to “Market”.
			Market (Settlement)	

CAUTION:
• It is possible to control the original functions of vehicle when registrations of body integrated unit and function setting are corresponded to vehicle equipment.
• When body integrated unit is new one or “Factory” mode, key illumination blinks to show equipment settings does not completed.
• Be sure not to change Factory initial setting except installation of new body integrated unit.

NOTE:
• “Factory” mode:
  • Body integrated unit has been not set yet. It can be recognized by key illumination blinking with ignition switch turned to ON.
  • All body integrated units as part for repair are set to “Factory” mode. When replacing a body integrated unit, be sure to perform the registration operation.
• “Market” mode:
  Each settings have been set. It can be recognized by key illumination coming on in concocting with room light and going off with ignition switch turned to ON.

7) Perform the Factory setting. On the «ECM customizing» display screen of Subaru Select Monitor, select the {Factory initial setting} and press the [YES] key.
8) Change the mode from Factory into Market.
9) Replace the immobilizer cartridge, and register the immobilizer key. (Model with immobilizer)
10) Perform the registration according to the procedures of “IMMOBILIZER REGISTRATION MANUAL”.
11) When key registration is completed, “Do you want to register remote engine start?” is displayed. Perform the registration only if equipped.
12) Perform the function setting (ECM customizing).
<Ref. to LAN(diag)-21, FUNCTION SETTING (ECM CUSTOMIZING), OPERATION, Subaru Select Monitor.>

NOTE:
For details concerning operation procedure, refer to “SUBARU SELECT MONITOR OPERATION MANUAL”.

7. CLEAR MEMORY MODE

1) On the «Main Menu» display screen, select the {2. Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Integ. Unit mode} and press the [YES] key.
3) Press [YES] key after displayed the information of body integrated unit type.
4) On the «Integ. Unit mode failuer diag» display screen, select the {Clear Memory} and press the [YES] key.

Display	Contents to be monitored
Clear memory?	Clear function of DTC and freeze frame data

5) When the “Done” are shown on the display screen, turn the ignition switch to OFF.

NOTE:
For detailed operation procedure, refer to “SUBARU SELECT MONITOR OPERATION MANUAL”.

8. FREEZE FRAME DATA

NOTE:
• Data stored at the time of trouble occurrence is shown on display.
• Freeze frame data will be memorized maximum to 20.
• If freeze frame data is not stored in memory correctly (caused by low power supply of body integrated unit), DTC will be displayed with “?” on the head of it in the Subaru Select Monitor display. This shows it may be an unreliable reading.

9. FUNCTION SETTING (ECM CUSTOMIZING)

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Integ. Unit mode} and press the [YES] key.
3) On the «Integ. Unit mode failuer diag» display screen, select the {ECM customizing} and press the [YES] key.
4) Change the setting with UP/DOWN key and press the [YES] key.

• List of function setting item (ECM customizing)

No.	Data	Initial setting value	Customize setting	Remarks	
1	Off delay time	Normal		Delay time below can be selected by setting.	
			Setting	After door closed	After key unlock
			OFF	0 sec.	0 sec.
			Short	3 sec.	10 sec.
			Normal	5 sec.	20 sec.
			Long	8 sec.	30 sec.
2	Auto-lock time	30 sec.	0 — 60 seconds	Workable when Auto locking is set to “ON” and Automatic locking setup is “ON” Time can be changed by 10 seconds: 0 (OFF) — 60 (maximum).	
3	Rr defogger op. mode	15 min.	15 min.	Rear defogger stops in 15 minutes automatically after switch is turned to ON.	
			Continuation	Rear defogger repeats active condition for 15 minutes and inactive condition for 2 minutes until switch is turned to OFF.	
4	Wiper deicer op. mode	15 min.	15 min.	Wiper deicer stops in 15 minutes automatically after switch is turned to ON.	
			Continuation	Wiper deicer repeats active condition for 15 minutes and inactive condition for 2 minutes until switch is turned to OFF.	
5	Security Alarm Setup	OFF	ON	Security alarm (horn or siren) in active condition	
			OFF	Security alarm in inactive condition	
6	Impact Sensor Setup	OFF	ON	Workable when Impact Sensor Setup is set to “ON” Impact sensor in active condition	
			OFF	Impact sensor in inactive condition (Set Impact Sensor Setup of model without impact sensor to “OFF”.)	
7	Alarm monitor delay setting	ON		After doors are locked by keyless entry system operated, Alarm monitor starts in following time.	
			ON	Delay time is 30 seconds.	
			OFF	Delay time is 0 second.	
8	Lockout prevention	ON	ON	Lockout prevention in active condition (Lockout prevention does not operate if safety knob is locked by hand.)	
			OFF	Lockout prevention in inactive condition	
9	Impact sensor (OP)	OFF	ON	Vehicle is controlled in impact sensor equipped mode. (Set Impact sensor to “OFF” in model without impact sensor. If Impact sensor is set to “ON”, hazard, horn or siren operate after doors are locked by keyless entry system operated (Alarm monitor starting).	
			OFF	Vehicle is controlled in impact sensor no-equipped mode.	
10	Siren setting	OFF	ON	Siren sounds when alarm operates. (Set Siren setting to “OFF” in model without siren. Horn does not sound if Siren setting is set to “ON”.)	
			OFF	Horn sounds when alarm operates.	

No.	Data	Initial setting value	Customize setting	Remarks
11	Answer-back buzzer setup	ON	ON	Workable when Answer-back buzzer setup is set to “ON” When lock/unlock is selected by keyless entry system operated, answer-back buzzer sounds.
			OFF	When lock/unlock is selected by keyless entry system operated, answer-back buzzer does not sound.
12	Hazard answer-back setup	ON	ON	Workable when Hazard answer-back setup is set to “ON” When lock/unlock is selected by keyless entry system operated, hazard answer-back operates.
			OFF	When lock/unlock is selected by keyless entry system operated, hazard answer-back does not operate.
13	Automatic locking setup	ON	ON	Workable when Automatic locking setup is set to “ON” When lock/unlock is selected by keyless entry system operated, automatic locking operates.
			OFF	When lock/unlock is selected by keyless entry system operated, automatic locking does not operate.
14	Ans.-back Buzzer	ON	ON	Vehicle is controlled in answer-back buzzer equipped mode.
			OFF	Vehicle is controlled in answer-back buzzer non-equipped mode. (Set Ans.-back Buzzer to “OFF” in model without answer back buzzer.)
15	Auto locking	ON	ON	Vehicle is controlled in auto locking equipped mode.
			OFF	Vehicle is controlled in auto locking non-equipped mode. (Set Auto locking to “OFF” in model without answer-back buzzer.)
16	Initial Keyless Setting	—	—	—
			Execution	Settings of keyless entry system are initialized. (No. 2: 30 sec., No.11: ON, No.12: ON, No.13: ON, No.14: ON)
17	Initial button setting	—	—	—
			Execution	Settings of each function are initialized. (No. 1: Normal, No. 3: 15 min., No. 4: 15 min., No. 8: ON)
18	Initial Security setting	—	—	—
			Execution	Settings of security system are initialized. (No. 5: OFF, No. 6: OFF, No. 7: ON, No.10: OFF)
19	Passive Alarm (Not used)	OFF	ON	Applicable to North America model (If Passive Alarm is set to “ON”, nothing operates and there is no negative effect.)
			OFF	
20	Door open warning (prevention of battery run-out)	OFF	ON	If detecting door open for 30 minutes, room light, key illumination and door warning light are turned off to prevent battery run-out.
			OFF	Room light, key illumination and door warning light is not turned off.
21	(Specification) Security setup	OFF	ON	Selected security settings in active condition (EK model)
			OFF	Normally in active condition

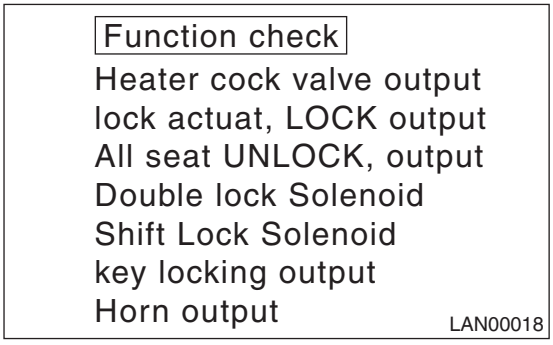
5) After setting, make sure that vehicle equipment is same as the setting changed in the {Current Data Display & Save}.

CAUTION:
• It is possible to control the original functions of vehicle when settings above are corresponded to vehicle equipment.
• Do not change the settings except for setting above during operation of equipment setting.
• Be sure not to change “Factory” initial setting except in installation of new body integrated unit.

NOTE:
For details concerning operation procedure, refer to “SUBARU SELECT MONITOR OPERATION MANUAL”.

10.FUNCTION CHECK

In order to check the body integrated unit function, inspect the body integrated unit and actuator using Subaru Select Monitor without operating switches.
1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Integ. Unit mode} and press the [YES] key.
3) On the «Integ. Unit mode failuer diag» display screen, select the {System Operation Check Mode} and press the [YES] key.
4) Select item to operate on the «System Operation Check Mode» display screen with “UP/Down key”, and press the [YES] key.



5) Pressing [YES] starts, [NO] cancels the operation and [YES] returns to the System Operation Check Mode display screen.

NOTE:
If not equipped (based on area or condition), process will not go on.

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1. WITHOUT SUBARU SELECT MONITOR

NOTE:
Use the Subaru Select Monitor, because DTCs can not be read out.

2. WITH SUBARU SELECT MONITOR

For details concerning DTC reading procedure, refer to “Subaru Select Monitor”. <Ref. to LAN(diag)-14, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>

8. Clear Memory Mode

A: OPERATION

1. WITHOUT SUBARU SELECT MONITOR

NOTE:
Use the Subaru Select Monitor for Clear Memory Mode.

2. WITH SUBARU SELECT MONITOR

For detailed procedures of clearing DTC, refer to “SUBARU SELECT MONITOR”. <Ref. to LAN(diag)-20, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.>

9. Read Current Data

A: OPERATION

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Integ. Unit mode} and press the [YES] key.
3) On the «Integ. Unit mode failuer diag» display screen, select the {Current Data Display & Save} and press the [YES] key.
4) On the «Data Display Menu» screen, select the {12 Data Display} and press the [YES] key.
5) Using the scroll key, scroll the display screen up or down until the desired data is shown.
<Ref. to LAN(diag)-15, DISPLAY OF ANALOG DATA, OPERATION, Subaru Select Monitor.> <Ref. to LAN(diag)-16, DISPLAY OF ON/OFF DATA, OPERATION, Subaru Select Monitor.> <Ref. to LAN(diag)-17, CONFIRMATION OF CURRENT SETTING, OPERATION, Subaru Select Monitor.>

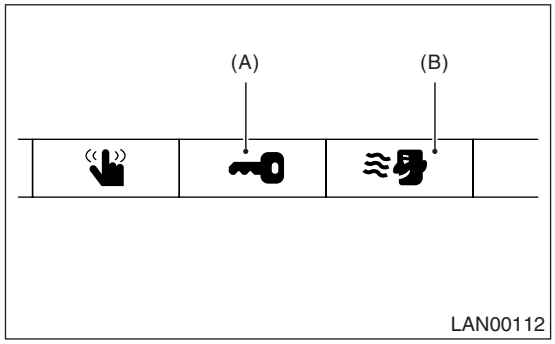
10.Function Setting (Customize)

A: OPERATION

1. WITHOUT SUBARU SELECT MONITOR

NOTE:
Applied to the Model with center display.

1) Display the information screen with pressing the “INFO” switch of center display.
2) Select “SET” on the touch panel at the right top of center display screen.
3) Select the item from “A: Keyless entry” or “B: Various setup” on the touch panel.



4) Change the setting on the touch panel which contains item to be changed.
5) Return to the information display screen and complete it.
Function setting item list

Item	Setting
Keyless	Auto lock
	Auto lock time setting
	Answerback hazard
Each function	Room light delay time
	Anti-lock out
	Rear defogger
	Wiper deicer

2. WITH SUBARU SELECT MONITOR

For detailed procedures of function setting (ECM customizing), refer to “SUBARU SELECT MONITOR”. <Ref. to LAN(diag)-21, FUNCTION SETTING (ECM CUSTOMIZING), OPERATION, Subaru Select Monitor.>

11.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Content of diagnosis	NOTE
None	Communication for initializing impossible	Open or short in Subaru Select Monitor communication line.	<Ref. to LAN(diag)-30, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
None	DTC is not stored.	Internal error of combination meter.	<Ref. to LAN(diag)-33, DIAGNOSTIC TROUBLE CODE (DTC) IS NOT STORED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B0100	Integ. unit system error	Body integrated unit internal error	<Ref. to LAN(diag)-33, DTC B0100 INTEG. UNIT SYSTEM ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B0101	BATT power supply (Control) error	Open or short in battery power supply control circuit	<Ref. to LAN(diag)-34, DTC B0101 BATT P/SUPPLY MALFUNCTION CONT., Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B0102	BATT p/supply malfunction cont.	Open or short in BATT power backup circuit	<Ref. to LAN(diag)-36, DTC B0102 BATT P/SUPPLY MALFUNCTION CONT., Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B0103	IGN power failure	Open or short in IGN power supply circuit	<Ref. to LAN(diag)-38, DTC B0103 IGNITION POWER FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B0104	ACC power failure	Open or short in ACC power supply circuit	<Ref. to LAN(diag)-40, DTC B0104 ACC POWER FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B0106	shift lock circuit Failure	Ground short of shift lock circuit	<Ref. to LAN(diag)-42, DTC B0106 SHIFT LOCK CIRCUIT FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B0107	R Fog lamp circuit Failure	Ground short of rear fog circuit	<Ref. to LAN(diag)-44, DTC B0107 R FOG LAMP CIRCUIT FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B0201	High speed CAN fail · error counter abnormal	Malfunction of high-speed CAN communication	<Ref. to LAN(diag)-46, DTC B0201 CAN-HS COUNTER ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B0202	CAN-HS bus off	Any unit is cut communication.	<Ref. to LAN(diag)-47, DTC B0202 CAN-HS BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B0211	CAN-HS (EGI) data abnormal	Received error data from ECM.	<Ref. to LAN(diag)-51, DTC B0211 CAN-HS ECM DATA ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B0212	CAN-HS (TCM) data abnormal	Received error data from TCM.	<Ref. to LAN(diag)-53, DTC B0212 CAN-HS TCM DATA ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B0213	CAN-HS VDC/ABS data abnormal	Received error data from VDC/ABS unit.	<Ref. to LAN(diag)-54, DTC B0213 CAN-HS VDC/ABS DATA ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B0221	CAN-HS ECM no-receive data	Not received error data from ECM.	<Ref. to LAN(diag)-56, DTC B0221 CAN-HS ECM NO-RECEIVE DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B0222	CAN-HS TCM no-receive data	Not received error data from TCM	<Ref. to LAN(diag)-60, DTC B0222 CAN-HS TCM NO-RECEIVE DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Content of diagnosis	NOTE
B0223	CAN-HS VDC/ABS no-receive data	Not received error data from VDC/ABS unit.	<Ref. to LAN(diag)-62, DTC B0223 CAN-HS VDC/ABS NO-RECEIVE DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B0300	CAN-LS malfunction	Open or short in low-speed CAN circuit, on each side or both sides.	<Ref. to LAN(diag)-65, DTC B0300 CAN-LS MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B0301	CAN-LS fail / error counter abnormal	Malfunction of low-speed CAN communication	<Ref. to LAN(diag)-68, DTC B0301 CAN-LS COUNTER ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B0302	CAN-LS bus off	Any unit is cut communication.	<Ref. to LAN(diag)-70, DTC B0302 CAN-LS BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B0311	CAN-LS meter unit data abnormal	Received error data from meter.	<Ref. to LAN(diag)-73, DTC B0311 CAN-LS METER UNIT DATA ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B0313	CAN-LS monitor data abnormal	Received error data from monitor unit.	<Ref. to LAN(diag)-74, DTC B0313 CAN-LS MONITOR DATA ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B0321	CAN-LS meter no-receive data	Not received error data from meter	<Ref. to LAN(diag)-75, DTC B0321 CAN-LS METER NO-RECEIVE DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B0401	M collation NG	Malfunction related immobilizer	<Ref. to IM(diag)-15, List of Diagnostic Trouble Code (DTC).>
B0402	Immobilizer Key collation NG	Malfunction related immobilizer	<Ref. to IM(diag)-15, List of Diagnostic Trouble Code (DTC).>
B0403	E/G request NG	Malfunction related immobilizer	<Ref. to IM(diag)-15, List of Diagnostic Trouble Code (DTC).>
B0500	Keyless UART com. Malfunction	Open or short circuit in keyless UART circuit	<Ref. to LAN(diag)-77, DTC B0500 KEYLESS UART COM. MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

12.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: COMMUNICATION FOR INITIALIZING IMPOSSIBLE

NOTE:
- DTC is displayed in the sequence of the amount of counter numbers.
- When more than two DTCs are displayed, perform the diagnosis of top of them.

DIAGNOSIS:
Subaru Select Monitor communication line is open or shorted.
TROUBLE SYMPTOM:
Not communicable with Subaru Select Monitor.
WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK IGNITION SWITCH.**	Is the ignition switch ON?	Go to step **2.**	Turn the ignition switch to ON, and select Integ. Unit mode using Subaru Select Monitor.
2	**CHECK BATTERY.** 1) Turn the ignition switch to OFF. 2) Measure the battery voltage.	Is the voltage more than 11 V?	Go to step **3.**	Charge or replace the battery.
3	**CHECK BATTERY TERMINAL.**	Is there poor contact at battery terminal?	Repair or tighten the battery terminal.	Go to step **4.**
4	**CHECK COMMUNICATION OF SUBARU SELECT MONITOR.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check whether communication to other systems can be executed normally.	Are system and model year displayed?	Go to step **7.**	Go to step **5.**
5	**CHECK COMMUNICATION OF SUBARU SELECT MONITOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector. 3) Turn the ignition switch to ON. 4) Check whether communication to other systems can be executed normally.	Are system and model year displayed?	Go to step **7.**	Go to step **6.**
6	**CHECK HARNESS CONNECTOR BETWEEN EACH CONTROL UNIT AND SUBARU SELECT MONITOR.** 1) Turn the ignition switch to ON. 2) Disconnect the body integrated unit connector. 3) Measure the resistance between data link connector and chassis ground. ***Connector & terminal*** ***(B40) No. 10 — Chassis ground:***	Is the resistance more than 1 MΩ?	Go to step **7.**	Repair the harness and connector between each control unit and Subaru Select Monitor.
7	**CHECK OUTPUT SIGNAL TO BODY INTEGRATED UNIT.** 1) Turn the ignition switch to ON. 2) Measure the voltage between body integrated unit and chassis ground. ***Connector & terminal*** ***(B40) No. 10 (+) — Chassis ground (−):***	Is the voltage less than 1 V?	Go to step **8.**	Repair the harness and connector between each control unit and Subaru Select Monitor.
8	**CHECK HARNESS CONNECTOR BETWEEN BODY INTEGRATED UNIT AND DATA LINK CONNECTOR.** Measure the resistance between body integrated unit and data link connector. ***Connector & terminal*** ***(B40) No. 10 — (B280) No. 19:***	Is the resistance less than 1 Ω?	Go to step **9.**	Repair the harness and connector between body integrated unit and Subaru Select Monitor.
9	**CHECK INSTALLATION OF BODY INTEGRATED UNIT CONNECTOR.** Turn the ignition switch to OFF.	Is the body integrated unit connector inserted into body integrated unit until the clamp locks onto it?	Go to step **10.**	Insert the body integrated unit connector into body integrated unit.

	Step	Check	Yes	No
10	**CHECK POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON (engine OFF). 2) Measure the ignition voltage between body integrated unit connector and chassis ground. ***Connector & terminal*** ***(i84) No. 1 (+) — Chassis ground (−):***	Is the voltage more than 10 V?	Go to step **11.**	Repair the open circuit of harness between the body integrated unit and battery.
11	**CHECK HARNESS CONNECTOR BETWEEN BODY INTEGRATED UNIT AND CHASSIS GROUND.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from body integrated unit. 3) Measure the harness resistance between the body integrated unit and chassis ground. ***Connector & terminal*** ***(B280) No. 19 — Chassis ground:***	Is the resistance more than 1 MΩ?	Go to step **12.**	Repair the poor contact of harness between the body integrated unit and ground.
12	**CHECK POOR CONTACT IN CONNECTORS.**	Is there poor contact at control unit ground and Subaru Select Monitor?	Replace the body integrated unit. <Ref. to SL-46, Body Integrated Unit.>	Repair the poor contact connector.

CAUTION:
When replacing body integrated unit on the model with immobilizer system, refer to "REGISTRATION MANUAL FOR IMMOBILIZER".

B: DIAGNOSTIC TROUBLE CODE (DTC) IS NOT STORED

DTC DETECTING CONDITION:

Defective combination meter

DIAGNOSIS:

- Freeze frame data in odo/trip meter is not cleared.
- "No trouble code" is displayed on Subaru Select Monitor.

NOTE:
If DTC is not displayed on Subaru Select Monitor, LAN communication System should be OK.

	Step	Check	Yes	No
1	**CHECK FREEZE FRAME DATA WITH COMBINATION METER.** Turn the ignition switch to ON.	Is the freeze frame data displayed?	Perform the diagnosis according to freeze frame data.	Go to step **2.**
2	**CHECK COMBINATION METER.** Perform the self-diagnosis of combination meter.	Is combination meter OK?	Go to step **3.**	Replace the combination meter. <Ref. to IDI-16, Combination Meter Assembly.>
3	**CHECK BODY INTEGRATED UNIT.** 1) Display the current data of ECM using Subaru Select Monitor. 2) Check data of "body integrated unit data received".	Is the "Yes" displayed?	Go to step **4.**	Replace the body integrated unit. <Ref. to SL-46, Body Integrated Unit.>
4	**CHECK BODY INTEGRATED UNIT.** 1) Display the current data of ECM using Subaru Select Monitor. 2) Check data of "body integrated unit counter update".	Is the "Yes" displayed?	Repair the poor contact connector.	Replace the body integrated unit. <Ref. to SL-46, Body Integrated Unit.>

C: DTC B0100 INTEG. UNIT SYSTEM ERROR

DTC DETECTING CONDITION:

System error in body integrated unit

TROUBLE SYMPTOM:

- Check light comes on in the combination meter, and displays freeze frame data "Er IU".
- LAN communication immobilizer function may not be executed normally.

	Step	Check	Yes	No
1	**CHECK ALL DTCS.**	Is DTC concerning ECM displayed?	Go to step **2.**	Replace the body integrated unit. <Ref. to SL-46, Body Integrated Unit.>
2	**CHECK DTC CONCERNING ECM.**	Is output DTC on ECM concerning CAN communication error?	Replace the body integrated unit. <Ref. to SL-46, Body Integrated Unit.>	Perform the diagnosis according to DTC concerning ECM.

D: DTC B0101 BATT P/SUPPLY MALFUNCTION CONT.

DTC DETECTING CONDITION:

BATT power supply control circuit is open or shorted.

TROUBLE SYMPTOM:

No malfunction occurs with back-up power supply function.

NOTE:

When some B0102 BATT p/supply malfunction backup are output at the same time, all function of body integrated unit may not function.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK FUSE (No. 7).** 1) Turn the ignition switch to OFF. 2) Remove the fuse (No. 7).	Is the fuse blown out?	Replace the fuse (No. 7). If the replaced fuse has blown out easily, repair the short circuit in harness between fuse (No. 7) and body integrated unit.	Go to step **2.**
2	**CONTINUITY CHECK OF WIRING HARNESS.** 1) Disconnect the connector (B281) from body integrated unit. 2) Measure the voltage between body integrated unit connector and chassis ground. ***Connector & terminal*** ***(B281) No. 2 (+) — Chassis ground (−):***	Is the voltage more than 10 V?	Go to step **3.**	Repair the harness for open or shorted circuit between body integrated unit and fuse.
3	**CHECK POOR CONTACT IN CONNECTORS.**	Is there poor contact in body integrated unit connector?	Repair the poor contact connector.	Go to step **4.**
4	**CHECK BODY INTEGRATED UNIT HARNESS.** 1) Connect all the connectors. 2) Perform the clear memory mode. 3) Read DTC.	Is the same DTC displayed?	Replace the body integrated unit. <Ref. to SL-46, Body Integrated Unit.>	Temporary poor contact occurs.

E: DTC B0102 BATT P/SUPPLY MALFUNCTION CONT.

DTC DETECTING CONDITION:

BATT power backup circuit is open or shorted.

TROUBLE SYMPTOM:

- Engine malfunction indicator light may be illuminates.
- Keyless entry, room light, key illumination does not operate.
- “En IU” may display in combination meter.

NOTE:

When some B0101 BATT p/supply malfunction cont. are output at the same time, all function of body integrated unit may not function.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK FUSE (No. 8).** 1) Turn the ignition switch to OFF. 2) Remove the fuse (No. 8).	Is the fuse blown out?	Replace the fuse (No. 8). If the replaced fuse has blown out easily, repair the short circuit in harness between fuse (No. 8) and body integrated unit.	Go to step **2.**
2	**CONTINUITY CHECK OF WIRING HARNESS.** 1) Disconnect the connector (B280) from body integrated unit. 2) Measure the voltage between body integrated unit connector and chassis ground. ***Connector & terminal*** ***(B280) No. 7 (+) — Chassis ground (−):***	Is the voltage more than 10 V?	Go to step **3.**	Repair the harness for open or shorted circuit between body integrated unit and fuse.
3	**CHECK POOR CONTACT IN CONNECTORS.**	Is there poor contact in body integrated unit connector?	Repair the poor contact connector.	Go to step **4.**
4	**CHECK BODY INTEGRATED UNIT HARNESS.** 1) Connect all the connectors. 2) Perform the clear memory mode. 3) Read DTC.	Is the same DTC displayed?	Replace the body integrated unit. <Ref. to SL-46, Body Integrated Unit.>	Temporary poor contact occurs.

F: DTC B0103 IGNITION POWER FAILURE

DTC DETECTING CONDITION:

IGN power supply circuit is open or shorted.

TROUBLE SYMPTOM:

Symptom that illuminating engine malfunction indicator light, “Er HC” high speed CAN error display may be occurred.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK FUSE (No. 12).** 1) Turn the ignition switch to OFF. 2) Remove the fuse (No. 12).	Is the fuse blown out?	Replace the fuse (No. 12). If the replaced fuse has blown out easily, repair the short circuit in harness between fuse (No. 12) and body integrated unit.	Go to step **2.**
2	**CONTINUITY CHECK OF WIRING HARNESS.** 1) Disconnect the connector (i84) from body integrated unit. 2) Turn the ignition switch to ON. 3) Measure the voltage between body integrated unit connector and chassis ground. ***Connector & terminal*** ***(i84) No. 1 (+) — Chassis ground (−):***	Is the voltage more than 10 V?	Go to step **3.**	Repair the harness for open or shorted circuit between body integrated unit and fuse.
3	**CHECK POOR CONTACT IN CONNECTOR.**	Is there poor contact in body integrated unit connector?	Repair the poor contact connector.	Go to step **4.**
4	**CHECK BODY INTEGRATED UNIT HARNESS.** 1) Connect all the connectors. 2) Perform the clear memory mode. 3) Read DTC.	Is the same DTC displayed?	Replace the body integrated unit. <Ref. to SL-46, Body Integrated Unit.>	Temporary poor contact occurs.

G: DTC B0104 ACC POWER FAILURE

DTC DETECTING CONDITION:

ACC power supply circuit is open or shorted.

TROUBLE SYMPTOM:

Rear wiper may not operate on ACC.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK FUSE (No. 31).** 1) Turn the ignition switch to OFF. 2) Remove the fuse (No. 31).	Is the fuse blown out?	Replace the fuse (No. 31). If the replaced fuse has blown out easily, repair the short circuit in harness between fuse (No. 31) and body integrated unit.	Go to step **2.**
2	**CONTINUITY CHECK OF WIRING HARNESS.** 1) Disconnect the connector (i84) from body integrated unit. 2) Turn the ignition switch to ON. 3) Measure the voltage between body integrated unit connector and chassis ground. ***Connector & terminal*** ***(i84) No. 24 (+) — Chassis ground (−):***	Is the voltage more than 10 V?	Go to step **3.**	Repair the harness for open or shorted circuit between body integrated unit and fuse.
3	**CHECK POOR CONTACT IN CONNECTOR.**	Is there poor contact in body integrated unit connector?	Repair the poor contact connector.	Go to step **4.**
4	**CHECK BODY INTEGRATED UNIT HARNESS.** 1) Connect all the connectors. 2) Perform the clear memory mode. 3) Read DTC.	Is DTC displayed?	Replace the body integrated unit. <Ref. to SL-46, Body Integrated Unit.>	Temporary poor contact occurs.

H: DTC B0106 SHIFT LOCK CIRCUIT FAILURE

DTC DETECTING CONDITION:

Shift lock circuit is ground shorted.

TROUBLE SYMPTOM:

Key interlock does not unlock or lock.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector (B280). 2) Measure the resistance between body integrated unit connector and chassis ground. ***Connector & terminal*** ***(B280) No. 6 — Chassis ground:***	Is the resistance 10 — 30 Ω?	Go to step **5.**	Go to step **2.**
2	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector (B280). 2) Disconnect the shift lock solenoid connector. 3) Measure the resistance between body integrated unit connector and shift lock solenoid connector. ***Connector & terminal*** ***(B280) No. 6 — (B116) No. 3:***	Is the resistance less than 10 Ω?	Go to step **3.**	Repair or replace the open or short circuit of harness.
3	**CHECK SHIFT LOCK SOLENOID.** 1) Disconnect the shift lock solenoid connector. 2) Measure the internal resistance of shift lock solenoid. ***Connector & terminal*** ***(B116) No. 3 — No. 4:***	Is the resistance 10 — 30 Ω?	Go to step **4.**	Replace the shift lock solenoid.
4	**CHECK GROUND CIRCUIT.** 1) Disconnect the shift lock solenoid connector. 2) Measure the resistance between shift lock solenoid connector and chassis ground. ***Connector & terminal*** ***(B116) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Temporary poor contact occurs. Check the connection of each terminals, and then repair them if necessary.	Replace the body integrated unit. <Ref. to SL-46, Body Integrated Unit.>
5	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector (B280). 2) Measure the resistance between body integrated unit connector (B280) and chassis ground. ***Connector & terminal*** ***(B280) No. 6 — Chassis ground:***	Is the resistance more than 1 MΩ?	Replace the body integrated unit. <Ref. to SL-46, Body Integrated Unit.>	Repair or replace the short circuit of harness.

I: DTC B0107 R FOG LAMP CIRCUIT FAILURE

DTC DETECTING CONDITION:

Rear fog input/output circuits are ground shorted.

TROUBLE SYMPTOM:

- Rear fog light does not come on or go off.
- Indicator in the combination meter may not be goes off.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector (B280). 2) Measure the voltage between body integrated unit connector and chassis ground. ***Connector & terminal*** ***(B280) No. 13 (+) — Chassis ground (−):***	Is the voltage 10 — 13 V?	Temporary poor contact.	Go to step **2.**
2	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector (B280). 2) Disconnect the rear fog light relay. 3) Measure the resistance between body integrated unit connector and rear fog light relay connector. ***Connector & terminal*** ***(B280) No. 13 — (B225) No. 27:***	Is the resistance less than 1 Ω?	Go to step **3.**	Repair the open or short circuit of harness.
3	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector (B280). 2) Disconnect the rear fog light relay. 3) Measure the resistance between body integrated unit connector and chassis ground. ***Connector & terminal*** ***(B280) No. 13 — Chassis ground:***	Is the resistance more than 1 MΩ?	Replace the body integrated unit. <Ref. to SL-46, Body Integrated Unit.>	Repair or replace the short circuit of harness.

J: DTC B0201 CAN-HS COUNTER ABNORMAL

DTC DETECTING CONDITION:

High speed CAN communication of body integrated unit which monitoring the error data and non-received data are faulty.

TROUBLE SYMPTOM:

- "Er HC" is displayed in odo/trip meter.
- Engine malfunction indicator light illuminates.

	Step	Check	Yes	No
1	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector (B280). 2) Measure the resistance between harness connector terminals. ***Connector & terminal*** ***(B280) No. 20 — No. 30:***	Is the resistance 55 — 65 Ω?	Temporary poor contact occurs.	Go to step **2.**
2	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector (B280). 2) Measure the resistance between harness connector terminals. ***Connector & terminal*** ***(B280) No. 20 — No. 30:***	Is the resistance more than 30 MΩ?	Repair or replace the open circuit of harness.	Go to step **3.**
3	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector (B280). 2) Measure the input voltage between harness connector and chassis ground while turning the ignition switch to ON. ***Connector & terminal*** ***(B280) No. 20 (+) — Chassis ground (−):*** ***(B280) No. 30 (+) — Chassis ground (−):***	Is the voltage more than 6 V?	Repair or replace the short circuit of harness.	Go to step **4.**
4	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector (B280). 2) Measure the resistance between harness connector and chassis ground. ***Connector & terminal*** ***(B280) No. 20 — Chassis ground:*** ***(B280) No. 30 — Chassis ground:***	Is the resistance less than 10 Ω?	Repair or replace the short circuit of harness.	Go to step **5.**
5	**CHECK BODY INTEGRATED UNIT.** Read the data of "body integrated unit data received" on ECM data display using Subaru Select Monitor.	Is the "Yes" displayed?	Go to step **6.**	Replace the body integrated unit. <Ref. to SL-46, Body Integrated Unit.>
6	**CHECK BODY INTEGRATED UNIT.** Read the data of "body integrated unit counter update" on ECM data display using Subaru Select Monitor.	Is the "Yes" displayed?	Temporary poor contact occurs. Check the connected condition of connector, read the DTC again to make sure that the DTC is not output.	Replace the body integrated unit. <Ref. to SL-46, Body Integrated Unit.>

K: DTC B0202 CAN-HS BUS OFF

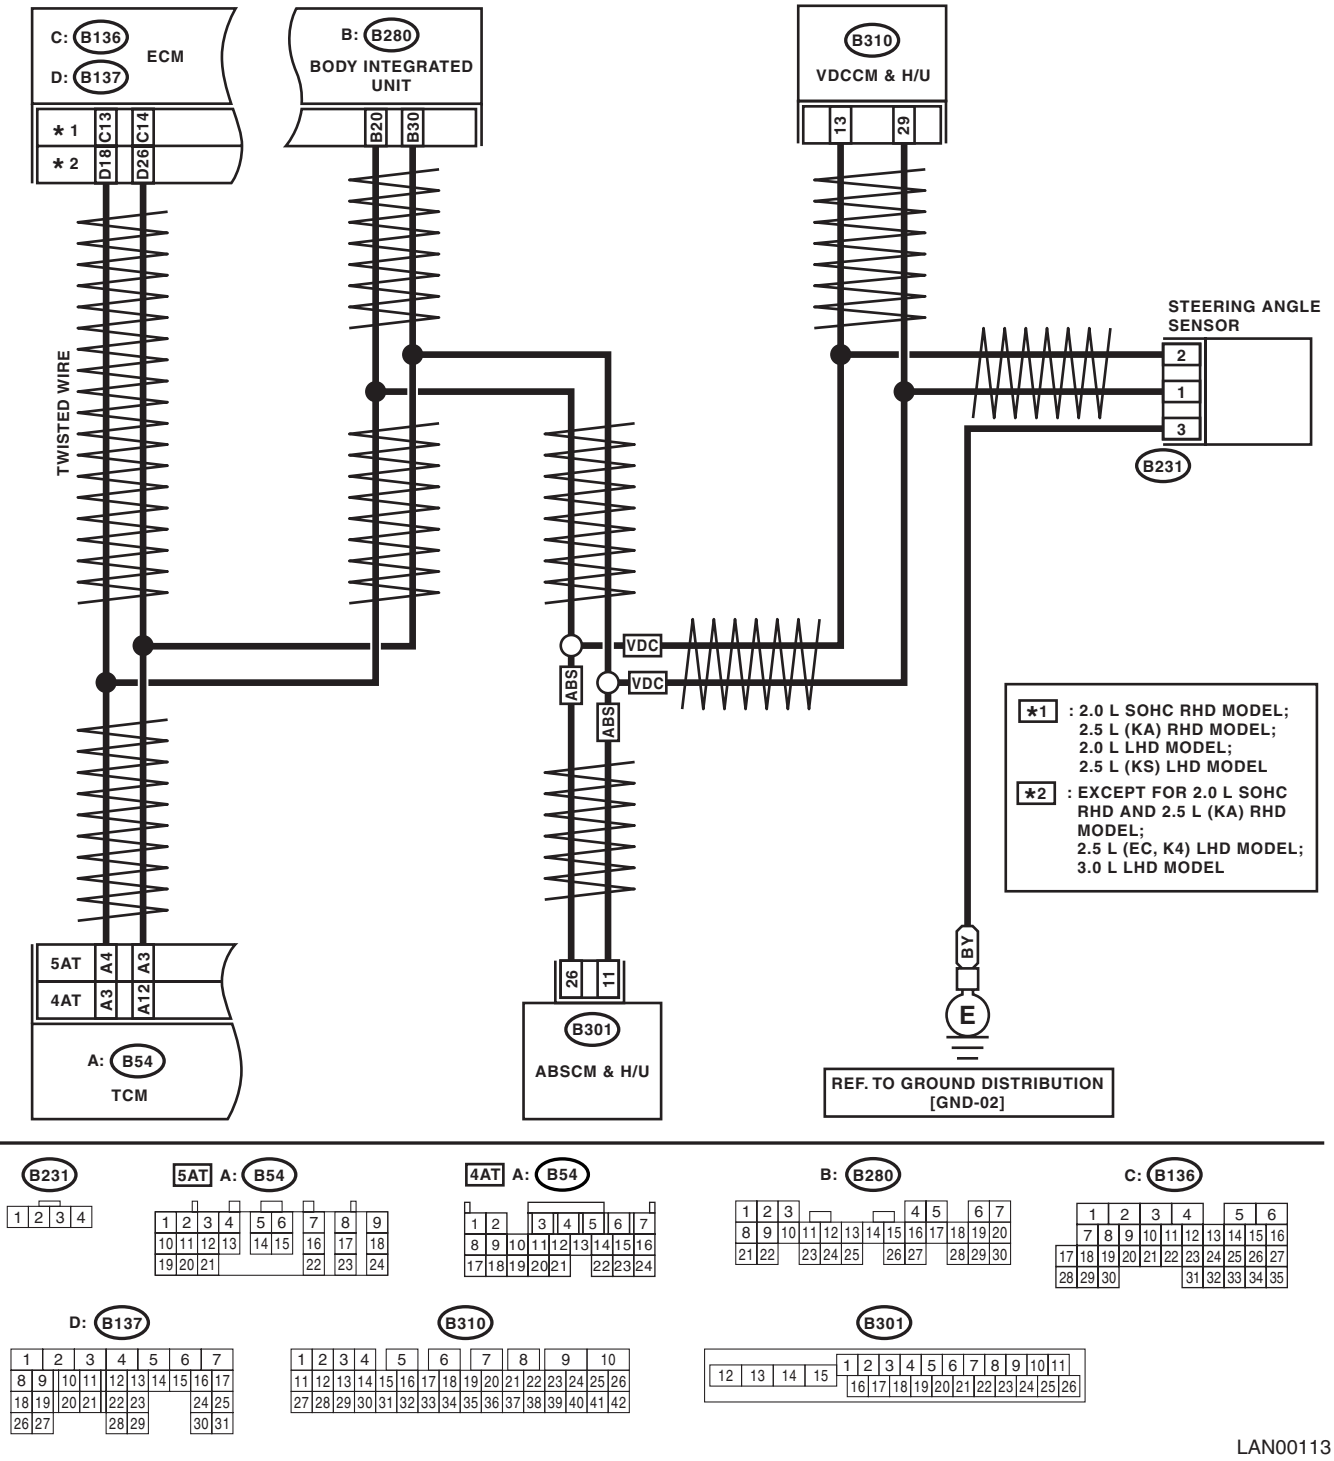
DTC DETECTING CONDITION:

- Locate the unit or CAN line which trouble occurs, and repair and replace it.
- Not received data and error data may be detected at the same time.

TROUBLE SYMPTOM:

"Er HC" is displayed in odo/trip meter.

WIRING DIAGRAM:



LAN00113

	Step	Check	Yes	No
1	**CHECK TCM.** 1) Disconnect the TCM connector (B54). 2) Perform the clear memory of body integrated unit. <Ref. to LAN(diag)-20, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.> 3) Read DTC of body integrated unit.	Is DTC (B0202) displayed?	Go to step **2.**	Replace the TCM. <Ref. to 4AT-140, Transmission Control Device.> <Ref. to 5AT-61, Transmission Control Module (TCM).>
2	**CHECK STEERING ANGLE SENSOR.** 1) Disconnect the steering angle sensor connector (B231). 2) Perform the clear memory mode of body integrated unit. <Ref. to LAN(diag)-20, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.> 3) Read DTC of body integrated unit.	Is DTC (B0202) displayed?	Go to step **3.**	Replace the steering angle sensor. <Ref. to VDC-16, REPLACEMENT, Steering Angle Sensor.>
3	**CHECK BODY INTEGRATED UNIT.** 1) Disconnect the body integrated unit connector (B280). 2) Read the data between VDC/ABSCM and ECM. Check item: • Engine speed • Average front wheel speed (value on constant driving)	Engine speed, front wheel speed is correctly communicated. (Appears same value)	Replace the body integrated unit. <Ref. to SL-46, Body Integrated Unit.>	Go to step **4.**
4	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector (B280). 2) Measure the resistance between harness connector terminals. ***Connector & terminal*** ***(B280) No. 20 — No. 30:***	Is the resistance 55 — 65 Ω?	Go to step **10.**	Go to step **5.**
5	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector (B280). 2) Measure the resistance between harness connector terminals. ***Connector & terminal*** ***(B280) No. 20 — No. 30:***	Is the resistance 115 — 125 Ω?	Go to step **7.**	Go to step **6.**
6	**CHECK HARNESS.** 1) Disconnect the harness connector of body integrated unit. 2) Measure the resistance between harness connector terminals. ***Connector & terminal*** ***(B280) No. 20 — No. 30:***	Is the resistance more than 30 MΩ?	Open harness on related line of body integrated unit. Repair or replace the open circuit of harness.	Go to step **7.**
7	**CHECK HARNESS.** 1) Disconnect the VDC/ABSCM connector (ABS:B301, VDC:310). 2) Measure the resistance between harness connector terminals. ***Connector & terminal*** ***ABS*** ***(B301) No. 11 — No. 26:*** ***VDC*** ***(B310) No. 13 — No. 29:***	Is the resistance 115 — 125 Ω?	Go to step **8.**	Go to step **9.**

	Step	Check	Yes	No
8	**CHECK VDC/ABSCM.** 1) Disconnect the VDC/ABSCM connector (ABS:B301, VDC:310). 2) Measure the resistance between VDC/ABSCM terminals. ***Connector & terminal*** ***ABS*** ***(B301) No. 11 — No. 26:*** ***VDC*** ***(B310) No. 13 — No. 29:***	Is the resistance 115 — 125 Ω?	Go to step **9.**	Open harness in end resistance of VDC/ABSCM. Replace the VDC/ABSCM. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).> <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>
9	**CHECK ECM.** 1) Disconnect the ECM connector (*1: B136, *2: B137). 2) Measure the resistance between ECM connector terminals. ***Connector & terminal*** ****1: 2.0 L SOHC RHD model, 2.5 L (KA) RHD model, 2.0 L LHD model, 2.5 L (KS) LHD model*** ***(B136) No. 13 — No. 14:*** ****2: Except for 2.0 L SOHC RHD and 2.5 L (KA) RHD model, 2.5 L (EC, K4) LHD model, 3.0 L LHD model*** ***(B137) No. 18 — No. 26:***	Is the resistance 115 — 125 Ω?	Repair or replace the open circuit of harness connector.	Open harness in end resistance of ECM. Replace the ECM. <Ref. to FU(H4SO 2.0)-34, Engine Control Module (ECM).> <Ref. to FU(H4SO 2.5)-36, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-35, Engine Control Module (ECM).> <Ref. to FU(H6DO)-34, Engine Control Module (ECM).>
10	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector (B280). 2) Measure the resistance between body integrated unit connector and chassis ground. ***Connector & terminal*** ***(B280) No. 20 — Chassis ground:*** ***(B280) No. 30 — Chassis ground:***	Is the resistance less than 10 Ω? (Ground)	Repair or replace the ground short circuit of the harness.	Go to step **11.**
11	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector (B280). 2) Measure the voltage between body integrated unit connector and chassis ground. ***Connector & terminal*** ***(B280) No. 20 (+) — Chassis ground (−):*** ***(B280) No. 30 (+) — Chassis ground (−):***	Is the voltage more than 6 V? (Power)	Repair or replace the short circuit of harness.	Go to step **12.**
12	**CHECK DTC.** Read the DTC of ECM using Subaru Select Monitor. <Ref. to EN(H4SO 2.0)(diag)-25, READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE (NORMAL MODE), OPERATION, Subaru Select Monitor.> <Ref. to EN(H4DOTC)(diag)-21, READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE (NORMAL MODE), OPERATION, Subaru Select Monitor.>	Is DTC other than “CAN communication” displayed?	Perform the diagnosis according to DTC.	Go to step **13.**

Step		Check	Yes	No
13	**CHECK DTC.** Read the DTC of VDC/ABSCM using Subaru Select Monitor. <Ref. to ABS(diag)-15, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.> <Ref. to VDC(diag)-16, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>	Is DTC other than “CAN communication” displayed?	Perform the diagnosis according to DTC.	Go to step **14.**
14	**CHECK DTC.** Read the DTC of TCM using Subaru Select Monitor. <Ref. to 4AT(diag)-17, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.> <Ref. to 5AT(diag)-16, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>	Is DTC other than “CAN communication” displayed?	Perform the diagnosis according to DTC.	Replace the body integrated unit. <Ref. to SL-46, Body Integrated Unit.>

L: DTC B0211 CAN-HS ECM DATA ABNORMAL

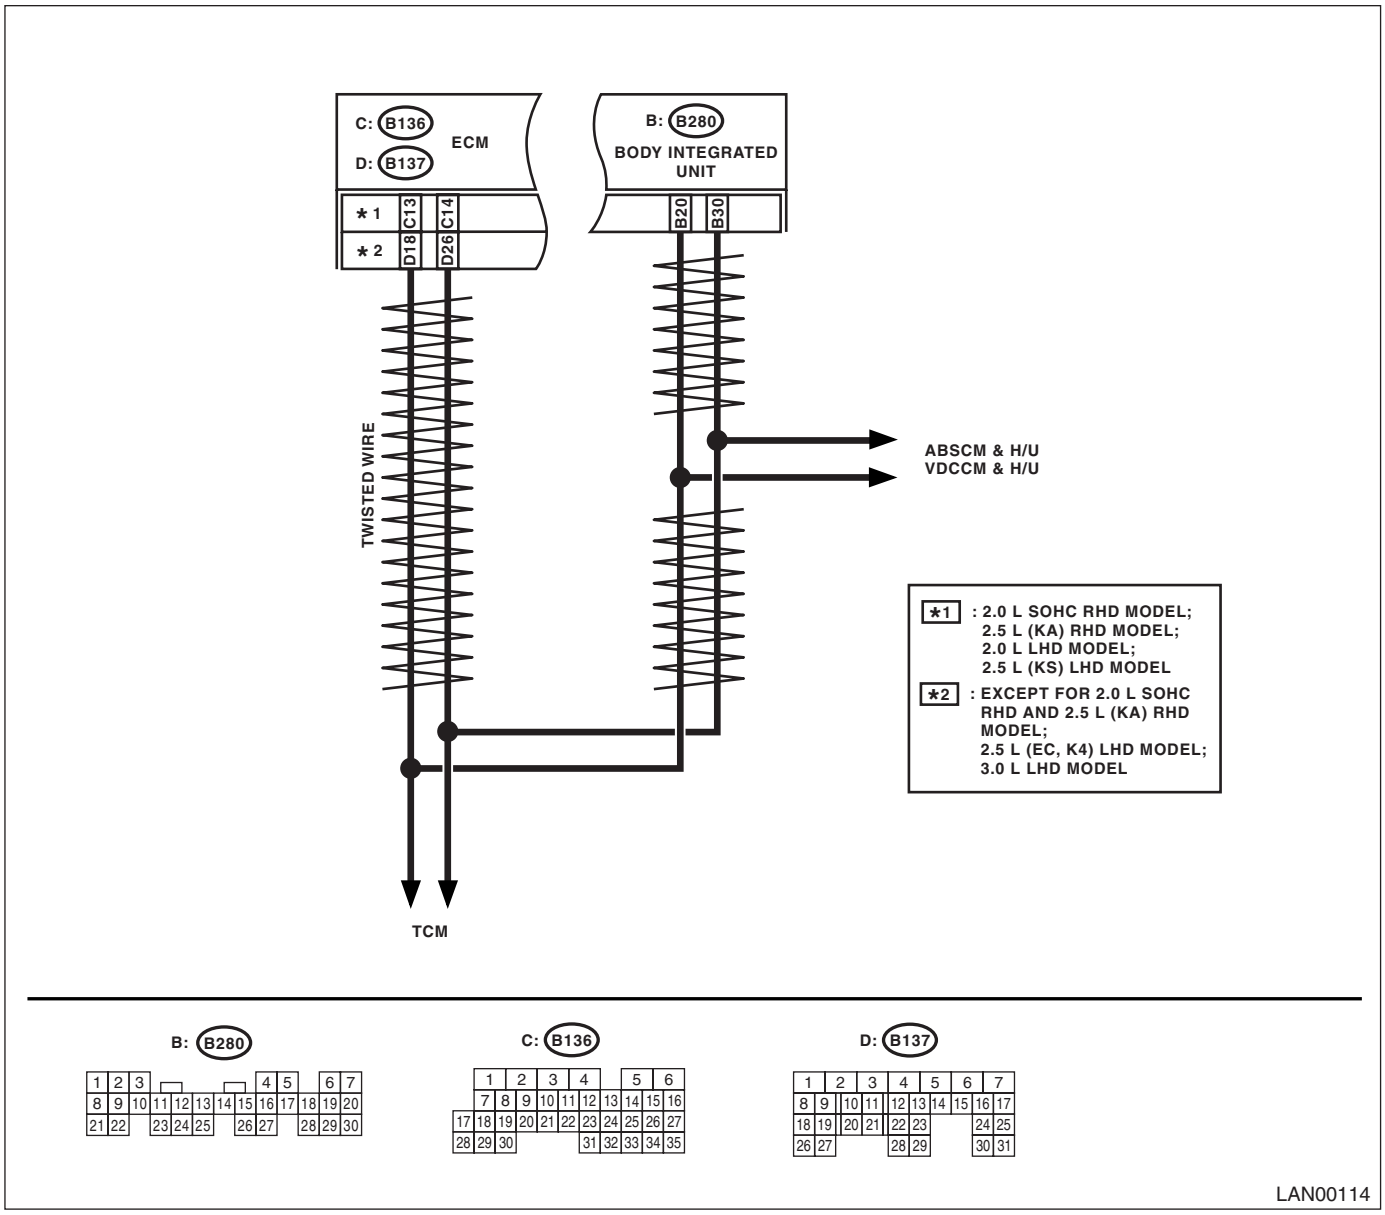
DTC DETECTING CONDITION:

Defective data from ECM.

TROUBLE SYMPTOM:

"Er HC" or "Er EG" is displayed in odo/trip meter.

WIRING DIAGRAM:



Step		Check	Yes	No
1	**CHECK ECM.** Read the DTC of ECM using Subaru Select Monitor.	Is DTC other than “CAN communication” displayed?	Perform the diagnosis according to DTC.	Replace the ECM. <Ref. to FU(H4SO 2.0)-34, Engine Control Module (ECM).> <Ref. to FU(H4SO 2.5)-36, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-35, Engine Control Module (ECM).> <Ref. to FU(H6DO)-34, Engine Control Module (ECM).>

M: DTC B0212 CAN-HS TCM DATA ABNORMAL

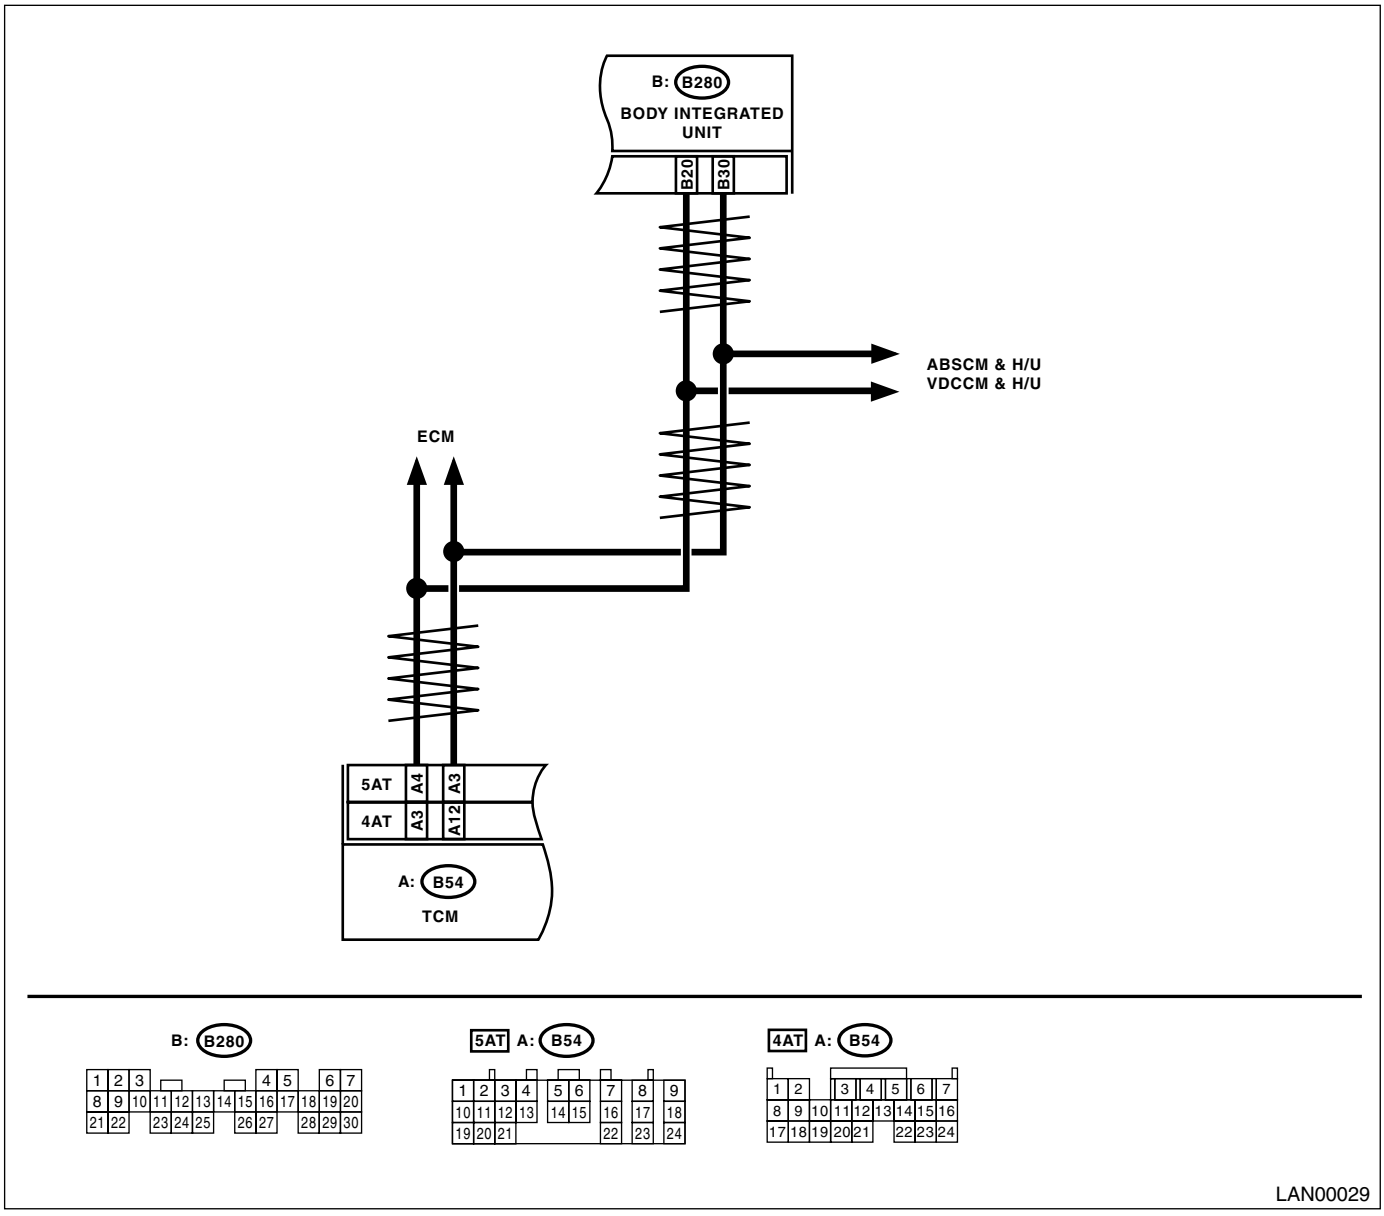
DTC DETECTING CONDITION:

TCM error, or harness between the main harness splice and TCM is open or short, the connector is not connected securely and the terminal has poor caulking.

TROUBLE SYMPTOM:

- SPORT indicator light blinks.
- "Er HC" or "Er tC" is displayed in odo/trip meter.

WIRING DIAGRAM:



Step		Check	Yes	No
1	**CHECK TCM.** Read the DTC of TCM using Subaru Select Monitor. <Ref. to 4AT(diag)-17, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.> <Ref. to 5AT(diag)-16, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>	Is DTC other than "CAN communication" displayed?	Perform the diagnosis according to DTC.	Replace the TCM. <Ref. to 4AT-65, Transmission Control Module (TCM).> <Ref. to 5AT-61, Transmission Control Module (TCM).>

N: DTC B0213 CAN-HS VDC/ABS DATA ABNORMAL

DTC DETECTING CONDITION:

VDC/ABSCM body error, or harness between the main harness splice and TCM is open or short, the connector is not connected securely and the terminal has poor caulking.

TROUBLE SYMPTOM:

- ABS warning light and VDC warning light come on.
- “Er HC” or “Er Ab” is displayed in odo/trip meter.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK VDC/ABSCM.** Read the DTC of VDC/ABSCM using Subaru Select Monitor.	Is DTC other than “CAN communication” displayed?	Perform the diagnosis according to DTC.	Replace the VDC/ABSCM. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).> <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>

O: DTC B0221 CAN-HS ECM NO-RECEIVE DATA

DTC DETECTING CONDITION:

Defective ECM. (If error is in the main harness, Diagnostic Trouble Code (DTC) P0600 High-speed CAN circuit is input simultaneously.)

TROUBLE SYMPTOM:

- Engine malfunction indicator light illuminates.
- “Er HC” is displayed in odo/trip meter.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector (B280). 2) Measure the resistance between harness connectors. ***Connector & terminal*** ***(B280) No. 20 — No. 30:***	Is the resistance 55 — 65 Ω? (Standard 60 Ω)	Read the DTC of ECM. Perform the diagnosis according to DTC. <Ref. to EN(H4SO 2.0)(diag)-25, READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE (NORMAL MODE), OPERATION, Subaru Select Monitor.> <Ref. to EN(H4SO 2.5)(diag)-26, READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE (NORMAL MODE), OPERATION, Subaru Select Monitor.> <Ref. to EN(H4DOTC)(diag)-21, READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE (NORMAL MODE), OPERATION, Subaru Select Monitor.> <Ref. to EN(H6DO)(diag)-25, READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE (NORMAL MODE), OPERATION, Subaru Select Monitor.>	Go to step **2.**
2	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector (B280). 2) Measure the resistance between harness connectors. ***Connector & terminal*** ***(B280) No. 20 — No. 30:***	Is the resistance 115 — 125 Ω? (End resistance or main line is open)	Go to step **3.**	Related line of body integrated unit is open when ∞ Ω. Repair or replace the open circuit of harness.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Disconnect the ECM connector (*1: B136, *2: B137). 2) Measure the resistance between harness connector terminals. ***Connector & terminal*** ****1: 2.0 L SOHC RHD model, 2.5 L (KA) RHD model, 2.0 L LHD model, 2.5 L (KS) LHD model*** ***(B136) No. 13 — No. 14:*** ****2: Except for 2.0 L SOHC RHD and 2.5 L (KA) RHD model, 2.5 L (EC, K4) LHD model, 3.0 L LHD model*** ***(B137) No. 18 — No. 26:***	Is the resistance 115 — 125 Ω? (End resistance standard 120 Ω)	Go to step **4.**	Go to step **5.**
4	**CHECK ECM.** 1) Disconnect the ECM connector (*1: B136, *2: B137). 2) Measure the resistance between ECM connector terminals. ***Connector & terminal*** ****1: 2.0 L SOHC RHD model, 2.5 L (KA) RHD model, 2.0 L LHD model, 2.5 L (KS) LHD model*** ***(B136) No. 13 — No. 14:*** ****2: Except for 2.0 L SOHC RHD and 2.5 L (KA) RHD model, 2.5 L (EC, K4) LHD model, 3.0 L LHD model*** ***(B137) No. 18 — No. 26:***	Is the resistance 115 — 125 Ω?	Read the DTC of ECM. Perform the diagnosis according to DTC. <Ref. to EN(H4SO 2.0)(diag)-25, READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE (NORMAL MODE), OPERATION, Subaru Select Monitor.> <Ref. to EN(H4SO 2.5)(diag)-26, READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE (NORMAL MODE), OPERATION, Subaru Select Monitor.> <Ref. to EN(H4DOTC)(diag)-21, READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE (NORMAL MODE), OPERATION, Subaru Select Monitor.> <Ref. to EN(H6DO)(diag)-25, READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE (NORMAL MODE), OPERATION, Subaru Select Monitor.>	End resistance is open. Replace the ECM. <Ref. to FU(H4SO 2.0)-34, Engine Control Module (ECM).> <Ref. to FU(H4SO 2.5)-36, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-35, Engine Control Module (ECM).> <Ref. to FU(H6DO)-34, Engine Control Module (ECM).>

	Step	Check	Yes	No
5	**CHECK HARNESS.** 1) Disconnect the ECM connector (*1: B136, *2: B137). 2) Measure the resistance between harness connector and chassis ground. ***Connector & terminal*** ****1: 2.0 L SOHC RHD model, 2.5 L (KA) RHD model, 2.0 L LHD model, 2.5 L (KS) LHD model*** ***(B136) No. 13 — Chassis ground:*** ***(B136) No. 14 — Chassis ground:*** ****2: Except for 2.0 L SOHC RHD and 2.5 L (KA) RHD model, 2.5 L (EC, K4) LHD model, 3.0 L LHD model*** ***(B137) No. 18 — Chassis ground:*** ***(B137) No. 26 — Chassis ground:***	Is the resistance less than 10 Ω?	Repair or replace the short circuit of harness.	Go to step **6.**
6	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector (B280), ECM connector (*1: B136, *2: B137), TCM connector (B54), ABS (B301)/ VDC (B310) CM connector. 2) Measure the input voltage between harness connector and chassis ground while turning the ignition switch to ON. ***Connector & terminal*** ***(B280) No. 20 (+) — Chassis ground (−):*** ***(B280) No. 30 (+) — Chassis ground (−):***	Is the voltage more than 6 V?	Repair or replace the short circuit of harness.	Read the DTC of ECM. Perform the diagnosis according to DTC. <Ref. to EN(H4SO 2.0)(diag)-25, READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE (NORMAL MODE), OPERATION, Subaru Select Monitor.> <Ref. to EN(H4SO 2.5)(diag)-26, READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE (NORMAL MODE), OPERATION, Subaru Select Monitor.> <Ref. to EN(H4DOTC)(diag)-21, READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE (NORMAL MODE), OPERATION, Subaru Select Monitor.> <Ref. to EN(H6DO)(diag)-25, READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE (NORMAL MODE), OPERATION, Subaru Select Monitor.>

P: DTC B0222 CAN-HS TCM NO-RECEIVE DATA

DTC DETECTING CONDITION:

TCM error, or harness between the main harness splice and TCM is open or short, the connector is not connected securely and the terminal has poor caulking.

TROUBLE SYMPTOM:

- Engine malfunction indicator light illuminates.
- “Er HC” is displayed in odo/trip meter.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK HARNESS.** 1) Disconnect the TCM connector (B54) 2) Measure the resistance between harness connector terminals. ***Connector & terminal*** ***4AT MODEL*** ***(B54) No. 3 — No. 12:*** ***5AT MODEL*** ***(B54) No. 3 — No. 4:***	Is the resistance ∞ Ω?	Open harness in related lines of TCM. Repair or replace the open circuit of harness.	Go to step **2.**
2	**CHECK TCM.** Read the DTC of TCM using Subaru Select Monitor. <Ref. to 4AT(diag)-17, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.> <Ref. to 5AT(diag)-16, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>	Is DTC other than “CAN communication” displayed?	Perform the diagnosis according to DTC.	Replace the TCM. <Ref. to 4AT-65, Transmission Control Module (TCM).> <Ref. to 5AT-61, Transmission Control Module (TCM).>

Q: DTC B0223 CAN-HS VDC/ABS NO-RECEIVE DATA

DTC DETECTING CONDITION:

Defective VDC/ABSCM. (If error is in the main harness, DTC P0600 High-speed CAN circuit is input at the same time.)

TROUBLE SYMPTOM:

- ABS warning light and VDC warning light come on.
- “Er HC” is displayed in odo/trip meter.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK HARNESS.** 1) Disconnect the harness connector of body integrated unit. 2) Measure the resistance between harness connector terminals. ***Connector & terminal*** ***(B280) No. 20 — No. 30:***	Is the resistance 55 — 65 Ω?	Read the DTC of VDC/ABSCM, and perform the diagnosis according to DTC.	Go to step **2.**
2	**CHECK HARNESS.** 1) Disconnect the harness connector of body integrated unit. 2) Measure the resistance between harness connector terminals. ***Connector & terminal*** ***(B280) No. 20 — No. 30:***	Is the resistance 115 — 125 Ω?	Go to step **5.**	Go to step **3.**
3	**CHECK HARNESS.** 1) Disconnect the harness connector of body integrated unit. 2) Measure the resistance between the harness connector terminal and chassis ground. ***Connector & terminal*** ***(B280) No. 20 — Chassis ground:*** ***(B280) No. 30 — Chassis ground:***	Is the resistance ∞ Ω?	Open harness on related line of body integrated unit. Repair or replace the open circuit of harness.	Go to step **4.**
4	**CHECK HARNESS.** 1) Disconnect the harness connector of body integrated unit. 2) Measure the voltage between the harness connector terminal and chassis ground. (Ignition switch ON) ***Connector & terminal*** ***(B280) No. 20 (+) — Chassis ground (−):*** ***(B280) No. 30 (+) — Chassis ground (−):***	Is the voltage more than 6 V?	Repair or replace the short circuit of harness.	Go to step **5.**
5	**CHECK END RESISTANCE.** 1) Disconnect the VDC/ABSCM harness connector. 2) Measure the resistance between VDC/ABSCM connector terminals. ***Connector & terminal*** ***ABS*** ***(B301) No. 11 — No. 26:*** ***VDC*** ***(B310) No. 13 — No. 29:***	Is the resistance between 115 — 125 Ω?	Go to step **6.**	End resistance is opened. Replace the VDC/ABSCM. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).> <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>
6	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector (B280) and VDC/ABSCM connector (ABS:B301, VDC:310). 2) Measure the resistance between harness connector terminals. ***Connector & terminal*** ***ABS*** ***(B301) No. 11 — (B280) No. 30:*** ***(B301) No. 26 — (B280) No. 20:*** ***VDC*** ***(B310) No. 13 — (B280) No. 20:*** ***(B310) No. 29 — (B280) No. 30:***	Is the resistance less than 10 Ω?	Go to step **7.**	Main wiring harness opened. Repair or replace the open circuit of harness.

	Step	Check	Yes	No
7	**CHECK VDC/ABSCM.** 1) Connect all the connectors. 2) Read the DTC of VDC/ABSCM using Subaru Select Monitor.	Is DTC other than “CAN communication” displayed?	Perform the diagnosis according to DTC concerning VDC/ABSCM.	Temporary poor contact occurs. Check the connecting condition of connector and terminals.

R: DTC B0300 CAN-LS MALFUNCTION

DTC DETECTING CONDITION:

Each side of low-speed CAN communication line is open or shorted, connector is not connected securely, the terminal has poor caulking.

TROUBLE SYMPTOM:

“Er LC” is displayed in odo/trip meter, but no interfere on communication.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK HARNESS.** 1) Disconnect the CAN junction connector (i77) and body integrated unit connector (i84). 2) Measure the resistance between connector terminals. ***Connector & terminal*** ***(i84) No. 26 — (i77) No. 8:*** ***(i84) No. 27 — (i77) No. 2:***	Is the resistance less than 10 Ω?	Go to step **2.**	Repair or replace the short circuit of harness.
2	**CHECK HARNESS.** 1) Disconnect the combination meter connector. 2) Measure the resistance between junction connector and combination meter connector. ***Connector & terminal*** ***(i10) No. 21 — (i77) No. 1:*** ***(i10) No. 22 — (i77) No. 7:***	Is the resistance less than 10 Ω?	Go to step **3.**	Repair or replace the open circuit of harness.
3	**CHECK HARNESS.** 1) Disconnect the center display connector (i90). 2) Measure the resistance between junction connector and center display connector. ***Connector & terminal*** ***Model with navigation*** ***(i90) No. 6 — (i77) No. 5:*** ***(i90) No. 14 — (i77) No. 11:*** ***Model without navigation*** ***(i103) No. 2 — (i77) No. 5:*** ***(i103) No. 4 — (i77) No. 11:***	Is the resistance less than 10 Ω?	Go to step **4.**	Repair or replace the open circuit of harness.
4	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector (B280) and auto A/C control unit connector (B238). 2) Measure the resistance between body integrated unit connector and auto A/C control unit connector. ***Connector & terminal*** ***(B238) No. 1 — (B280) No. 26:*** ***(B238) No. 11 — (B280) No. 25:***	Is the resistance less than 10 Ω?	Go to step **5.**	Repair or replace the open circuit of harness.
5	**CHECK HARNESS.** 1) Connect the junction connector. 2) Measure the resistance between body integrated unit connector and chassis ground. ***Connector & terminal*** ***(B280) No. 25 — Chassis ground:*** ***(B280) No. 26 — Chassis ground:*** ***(i84) No. 26 — Chassis ground:*** ***(i84) No. 27 — Chassis ground:***	Is the resistance less than 10 Ω?	Repair or replace the short circuit of harness.	Go to step **6.**
6	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between body integrated unit connector and chassis ground. ***Connector & terminal*** ***(B280) No. 25 (+) — Chassis ground (–):*** ***(B280) No. 26 (+) — Chassis ground (–):*** ***(i84) No. 26 (+) — Chassis ground (–):*** ***(i84) No. 27 (+) — Chassis ground (–):***	Is the voltage more than 6 V?	Repair or replace the short circuit of harness.	Go to step **7.**
7	**CHECK CENTER DISPLAY FAIL.** Read the current data of body integrated unit.	Is center display fail OK?	Go to step **8.**	Replace the center display.

	Step	Check	Yes	No
8	**CHECK AUTO A/C.** Perform the auto A/C self-diagnosis. <Ref. to AC(diag)-13, A/C CONTROL SYSTEM SELF-DIAGNOSIS, OPERATION, Diagnostic Chart for Self-Diagnosis.>	Is the self-diagnosis OK?	Go to step **9.**	Replace the auto A/C control unit. <Ref. to AC-32, Control Unit (Auto A/C Model).>
9	**CHECK COMBINATION METER.** 1) Connect all the connectors. 2) Turn the ignition switch to ON. 3) Check the display of combination meter, odo/trip.	Is “Er SS” and “Er SP” displayed?	Replace the body integrated unit. <Ref. to SL-46, Body Integrated Unit.>	Replace the combination meter. <Ref. to IDI-16, Combination Meter Assembly.>

S: DTC B0301 CAN-LS COUNTER ABNORMAL

DTC DETECTING CONDITION:

Locate the unit which trouble occurs, open or short in CAN line, and repair and replace it.
(Free running counter error may be detected at the same time from the unit which the malfunction occurs.)

TROUBLE SYMPTOM:

"Er LC" is displayed in odo/trip meter.

	Step	Check	Yes	No
1	**CHECK CENTER DISPLAY.** 1) Display the accelerator opening angle in the meter on "Information" of center display menu. 2) Read the display when the accelerator opening angle is fully opened from fully closed.	Does the value changed from 0 to 100?	Go to step **2.**	Go to step **7.**
2	**CHECK AUTO A/C CONTROL UNIT.** 1) Display the current data of body integrated unit using Subaru Select Monitor. 2) Display the number of blower fan level in the analog data. 3) Read the data display when the blower fan level is changed on air conditioner control part.	Does the data display change?	Go to step **3.**	Go to step **5.**
3	**CHECK COMBINATION METER.** 1) Display the current data of body integrated unit using Subaru Select Monitor. 2) Display the door switch in analog data. 3) Read the display of data and combination meter when each door is opened/closed.	Does the indicator of data and combination meter on body integrated unit change according to operation?	Go to step **4.**	Go to step **6.**
4	**CHECK CENTER DISPLAY HARNESS.** 1) Disconnect the center display harness connector and CAN joint connector. 2) Measure the resistance between harness connectors. ***Connector & terminal*** ***(i90) No. 14 — (i77) No. 1:*** ***(i90) No. 6 — (i77) No. 5:***	Is the resistance less than 10 Ω?	Go to step **7.**	Repair or replace the open circuit of harness.
5	**CHECK AUTO A/C CONTROL UNIT HARNESS.** 1) Disconnect the auto A/C control module connector. 2) Disconnect the body integrated unit connector. 3) Measure the resistance of harness between body integrated unit and auto A/C control unit. ***Connector & terminal*** ***(B280) No. 26 — (B283) No. 1:*** ***(B280) No. 25 — (B283) No. 11:***	Is the resistance less than 10 Ω?	Go to step **8.**	Repair or replace the open circuit of harness.
6	**CHECK COMBINATION METER HARNESS.** 1) Disconnect the combination meter connector. 2) Disconnect the body integrated unit connector. 3) Measure the resistance between body integrated unit and combination meter connector. ***Connector & terminal*** ***(i84) No. 26 — (i10) No. 22:*** ***(i84) No. 27 — (i10) No. 21:***	Is the resistance less than 10 Ω?	Go to step **9.**	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
7	**CHECK CENTER DISPLAY.** 1) Display the current data of body integrated unit using Subaru Select Monitor. 2) Read the fail display of center display.	Is center display fail OK?	Go to step **8.**	Replace the center display.
8	**CHECK AUTO A/C CONTROL UNIT.** Perform the auto A/C control unit self-diagnosis. <Ref. to AC(diag)-13, A/C CONTROL SYSTEM SELF-DIAGNOSIS, OPERATION, Diagnostic Chart for Self-Diagnosis.>	Is the self-diagnosis OK?	Go to step **9.**	Replace the auto A/C control unit. <Ref. to AC-32, Control Unit (Auto A/C Model).>
9	**CHECK COMBINATION METER.** Perform the self-diagnosis for combination meter system. <Ref. to IDI-3, SELF-DIAGNOSIS, INSPECTION, Combination Meter System.>	Is the self-diagnosis OK?	Go to step **10.**	Replace the combination meter. <Ref. to IDI-16, Combination Meter Assembly.>
10	**CHECK BODY INTEGRATED UNIT.** Read the data of “body integrated unit data received” on ECM data display using Subaru Select Monitor.	Is the “Yes” displayed?	Go to step **11.**	Replace the body integrated unit. <Ref. to SL-46, Body Integrated Unit.>
11	**CHECK BODY INTEGRATED UNIT.** Read the data of “body integrated unit counter update” on ECM data display using Subaru Select Monitor.	Is the “Yes” displayed?	Temporary poor contact occurs. Check the connection of connector.	Replace the body integrated unit. <Ref. to SL-46, Body Integrated Unit.>

T: DTC B0302 CAN-LS BUS OFF

DTC DETECTING CONDITION:

Because of occurring a lot of error data, some units are disconnected not to affect other units.
Communication error from the unit which error is occurred is input at the same time.

TROUBLE SYMPTOM:

“Er LC” is displayed in odo/trip meter.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK CENTER DISPLAY.** 1) Display the accelerator opening angle in the meter on “Information” of center display menu. 2) Read the display when the accelerator opening angle is fully opened from fully closed.	Is the value changes from 0 to 100?	Go to step **2.**	Go to step **7.**
2	**CHECK AUTO A/C CONTROL UNIT. (FOR MANUAL A/C, GO TO STEP 3.)** 1) Display the current data of body integrated unit using Subaru Select Monitor. 2) Display the number of blower fan level in the analog data. 3) Read the data display when the number of blower fan level is changed on air conditioner control part.	Does the data display change?	Go to step **3.**	Go to step **5.**
3	**CHECK COMBINATION METER.** 1) Display the current data of body integrated unit using Subaru Select Monitor. 2) Display the door switch in analog data. 3) Read the display of data and combination meter when each door is opened/closed.	Does the indicator of data and combination meter on body integrated unit change according to operation?	Go to step **4.**	Go to step **6.**
4	**CHECK CENTER DISPLAY HARNESS.** 1) Disconnect the center display harness connector and CAN joint connector. 2) Measure the resistance between harness connectors. ***Connector & terminal*** ***(i90) No. 14 — (i77) No. 11:*** ***(i90) No. 6 — (i77) No. 5:***	Is the resistance less than 10 Ω?	Go to step **7.**	Repair or replace the open circuit of harness.
5	**CHECK AUTO A/C CONTROL UNIT HARNESS.** 1) Disconnect the auto A/C control module connector. 2) Disconnect the body integrated unit connector. 3) Measure the resistance of harness between body integrated unit and auto A/C control unit. ***Connector & terminal*** ***(B280) No. 26 — (D283) No. 1:*** ***(B280) No. 25 — (D283) No. 11:***	Is the resistance less than 10 Ω?	Go to step **8.**	Repair or replace the open circuit of harness.
6	**CHECK COMBINATION METER HARNESS.** 1) Disconnect the combination meter connector. 2) Disconnect the body integrated unit connector. 3) Measure the resistance between body integrated unit and combination meter connector. ***Connector & terminal*** ***(i84) No. 26 — (i10) No. 22:*** ***(i84) No. 27 — (i10) No. 21:***	Is the resistance less than 10 Ω?	Go to step **9.**	Repair or replace the open circuit of harness.
7	**CHECK CENTER DISPLAY.** 1) Display the current data of body integrated unit using Subaru Select Monitor. 2) Read the fail display of center display.	Is center display fail OK?	Go to step **8.**	Replace the center display.
8	**CHECK AUTO A/C CONTROL UNIT.** Perform the auto A/C control unit self-diagnosis. <Ref. to AC(diag)-13, A/C CONTROL SYSTEM SELF-DIAGNOSIS, OPERATION, Diagnostic Chart for Self-Diagnosis.>	Is the self-diagnosis OK?	Go to step **9.**	Replace the auto A/C control unit. <Ref. to AC-32, Control Unit (Auto A/C Model).>

	Step	Check	Yes	No
9	**CHECK COMBINATION METER.** Perform the self-diagnosis for combination meter system. <Ref. to IDI-3, SELF-DIAGNOSIS, INSPECTION, Combination Meter System.>	Is the self-diagnosis OK?	Go to step **10.**	Replace the combination meter. <Ref. to IDI-16, Combination Meter Assembly.>
10	**CHECK BODY INTEGRATED UNIT.** Read the data of “body integrated unit data received” on ECM data display using Subaru Select Monitor.	Is the “Yes” displayed?	Go to step **11.**	Replace the body integrated unit. <Ref. to SL-46, Body Integrated Unit.>
11	**CHECK BODY INTEGRATED UNIT.** Read the data of “body integrated unit counter update” on ECM data display using Subaru Select Monitor.	Is the “Yes” displayed?	Connect all the connector, and make sure same DTC is not displayed.	Replace the body integrated unit. <Ref. to SL-46, Body Integrated Unit.>

U: DTC B0311 CAN-LS METER UNIT DATA ABNORMAL

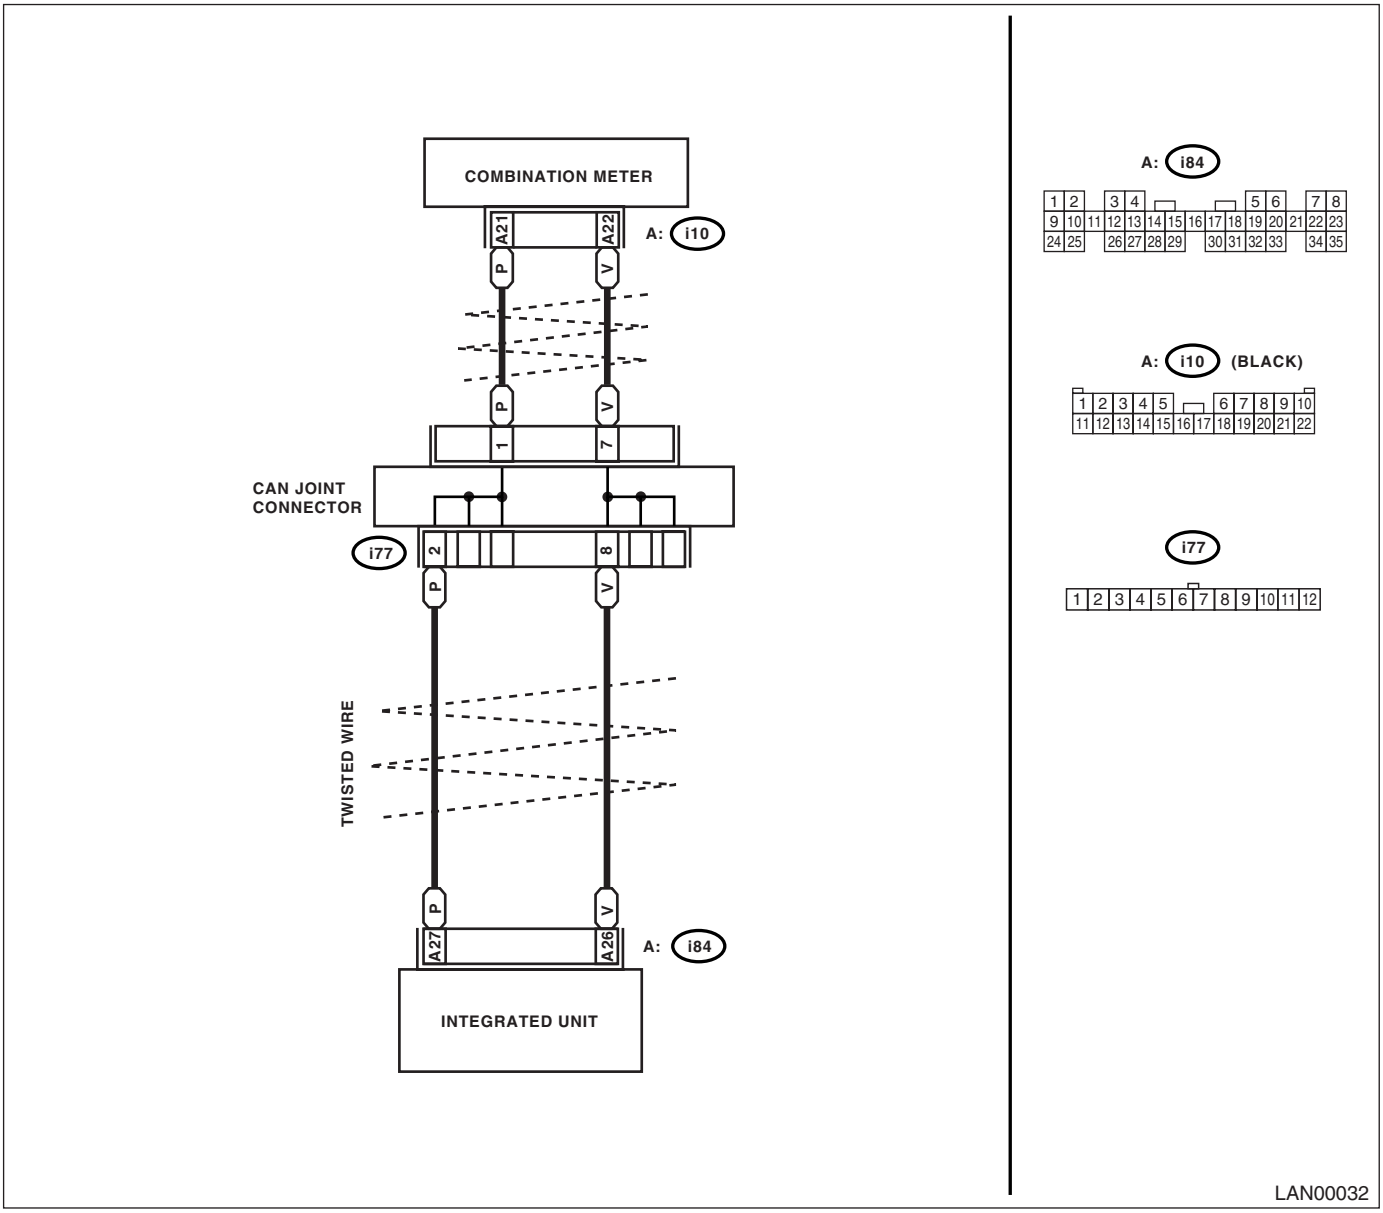
DTC DETECTING CONDITION:

Combination meter error, or harness between the main harness splice and combination meter is open or short, the connector is not connected securely and the terminal has poor caulking.

TROUBLE SYMPTOM:

"Er Lc" is displayed in odo/trip meter.

WIRING DIAGRAM:



Step		Check	Yes	No
1	**CHECK COMBINATION METER.** Perform the self-diagnosis for combination meter. <Ref. to IDI-3, SELF-DIAGNOSIS, INSPECTION, Combination Meter System.>	Is the self-diagnosis OK?	Read the DTC again, and then perform the diagnosis according to DTC displayed on the top.	Replace the combination meter. <Ref. to IDI-16, Combination Meter Assembly.>

V: DTC B0313 CAN-LS MONITOR DATA ABNORMAL

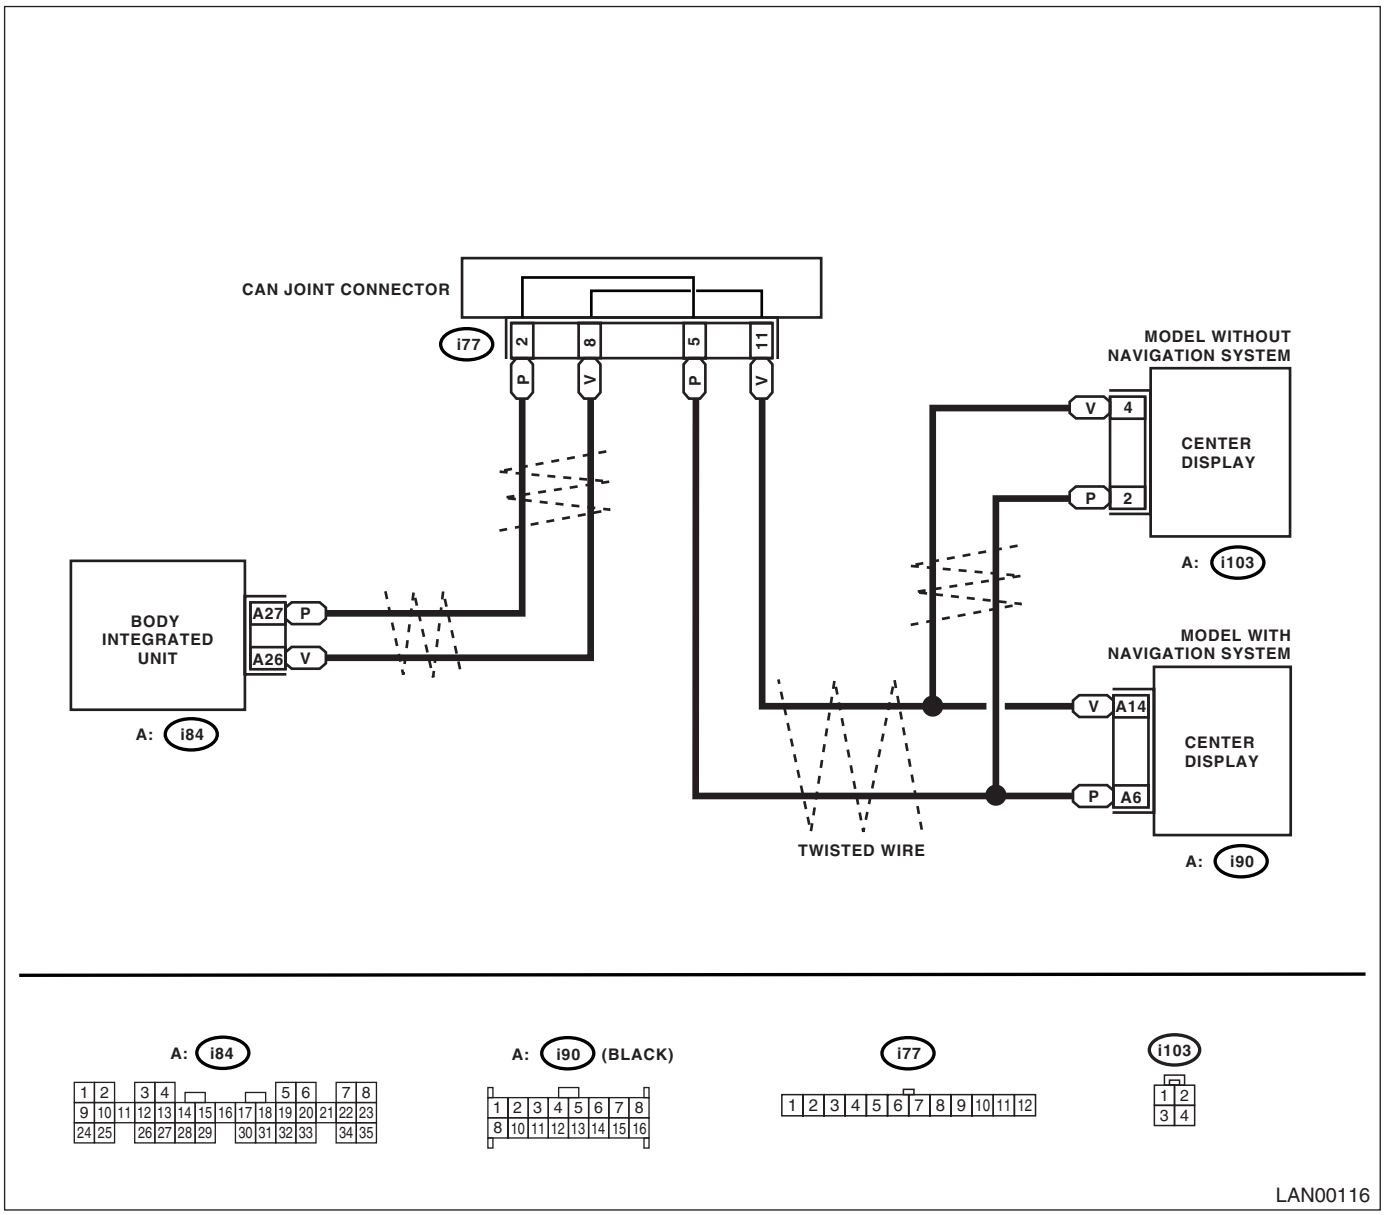
DTC DETECTING CONDITION:

Center display unit error, or harness between the center display unit and combination meter is open or short, the connector is not connected securely and the terminal has poor caulking.

TROUBLE SYMPTOM:

"Er LC" is displayed in odo/trip meter.

WIRING DIAGRAM:



LAN00116

Step		Check	Yes	No
1	**CHECK CENTER DISPLAY.** 1) Display the current data of body integrated unit using Subaru Select Monitor. 2) Read the fail display of center display.	Is center display fail OK?	Go to step **2.**	Replace the center display.
2	**CHECK NAVIGATION.** 1) Display the current data of body integrated unit using Subaru Select Monitor. 2) Read the display of NAVI fail.	Is NAVI fail OK?	Replace the center display.	Send the navigation unit to repair center.

W: DTC B0321 CAN-LS METER NO-RECEIVE DATA

DTC DETECTING CONDITION:

Combination meter unit error, or harness between the main harness splice and combination meter unit is open or short, the connector is not connected securely and the terminal has poor caulking.

TROUBLE SYMPTOM:

Fail mode occurs because the data is not received from combination meter unit.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK COMMUNICATION LINE.** 1) Warm up the engine. 2) Compare the data of body integrated unit and combination meter using Subaru Select Monitor. Check item: • Engine speed • Each door switch • P switch	Is the data displayed same?	Go to step **2.**	Perform the self-diagnosis for combination meter. <Ref. to IDI-3, SELF-DIAGNOSIS, INSPECTION, Combination Meter System.>
2	**CHECK HARNESS.** 1) Disconnect the body integrated unit, combination meter connector. 2) Measure the resistance between harness connectors. ***Connector & terminal*** ***(i10) No. 21 — (i84) No. 27:*** ***(i10) No. 26 — (i84) No. 26:***	Is the resistance less than 10 Ω?	Go to step **4.**	Go to step **3.**
3	**CHECK HARNESS.** 1) Disconnect the CAN joint connector (i77) with connector of unit is disconnected. 2) Measure the resistance between harness connector. ***Connector & terminal*** ***(i10) No. 21 — (i77) No. 1:*** ***(i10) No. 26 — (i77) No. 7:*** ***(i84) No. 27 — (i77) No. 2:*** ***(i84) No. 26 — (i77) No. 8:***	Is the resistance less than 10 Ω?	Go to step **4.**	Repair or replace the open circuit of harness.
4	**CHECK HARNESS.** Measure the resistance between harness connector (i77) and chassis ground. ***Connector & terminal*** ***(i77) No. 1 — Chassis ground:*** ***(i77) No. 7 — Chassis ground:*** ***(i77) No. 2 — Chassis ground:*** ***(i77) No. 8 — Chassis ground:***	Is the resistance less than 10 Ω?	Repair or replace the short circuit of harness.	Go to step **5.**
5	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between harness connector (i77) and chassis ground. ***Connector & terminal*** ***(i77) No. 1 (+) — Chassis ground (−):*** ***(i77) No. 7 (+) — Chassis ground (−):*** ***(i77) No. 2 (+) — Chassis ground (−):*** ***(i77) No. 8 (+) — Chassis ground (−):***	Is the voltage more than 6 V?	Repair or replace the short circuit of harness.	Go to step **6.**
6	**CHECK COMBINATION METER.** Perform the self-diagnosis for combination meter. <Ref. to IDI-3, SELF-DIAGNOSIS, INSPECTION, Combination Meter System.>	Is the self-diagnosis OK?	Temporary poor contact occurs.	Check the connection of connector. Replace the combination meter. <Ref. to IDI-16, Combination Meter Assembly.>

X: DTC B0500 KEYLESS UART COM. MALFUNCTION

DTC DETECTING CONDITION:

UART between keyless control unit and body integrated unit is open or shorted, connector is not connected securely, the terminal has poor caulking.

TROUBLE SYMPTOM:

Door lock does not operate with keyless.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector (i84) and keyless entry control unit connector (i96). 2) Measure the resistance between harness. ***Connector & terminal*** ***(i84) No. 9 — (i96) No. 3:***	Is the resistance less than 10 Ω?	Go to step **2.**	Repair or replace the open circuit of harness.
2	**CHECK HARNESS.** Measure the resistance between harness connector and chassis ground. ***Connector & terminal*** ***(i84) No. 9 — Chassis ground:***	Is the resistance less than 1 MΩ?	Repair or replace the short circuit of harness.	Go to step **3.**
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between harness connector and chassis ground. ***Connector & terminal*** ***(i84) No. 9 (+) — Chassis ground (−):***	Is the voltage more than 6 V?	Repair or replace the short circuit of harness.	Go to step **4.**
4	**OPERATION CHECK.** Check the door lock operation when the doors LOCK/UNLOCK using manual LOCK switch.	Does it operate on switch operation?	Go to step **5.**	Replace the body integrated unit. <Ref. to SL-46, Body Integrated Unit.>
5	**OPERATION CHECK.** 1) Disconnect the key warning switch connector (B350). 2) Close all the door, and then perform the LOCK/UNLOCK operation on keyless entry operation.	Does it operate?	Check key warning switch.	Replace the keyless entry control module. <Ref. to SL-45, Keyless Entry Control Unit.>

13.General Diagnostic Table

A: INSPECTION

Read the DTC or inspect and diagnose the following data in the current data display using Subaru Select Monitor.

1. LAN SYSTEM

Item	Operation	Specifications		NOTE
		YES	NO	
Diagnostic code	DTC is not displayed when inspecting all DTCs.	DTC is not displayed.	Perform the diagnosis according to DTC.	—
Engine coolant temperature	Check the current data display of ECM, TCM and body integrated unit, and make sure all data have same values.	Same values	Inspect LAN system.	If engine coolant temperature sensor is not OK, inspect the sensor circuit.
R defogger SW	It turns to ON when pressing switch. (Low-speed CAN is OK)	Turns to ON.	Inspect rear defogger switch.	Rear defogger switch is connected with Low-speed CAN.
R defogger output	When switch input, it is output.	Output	Replace the body integrated unit.	If not operate with output, check the rear defogger relay.
Door lock SW	When locked with door lock switch, it turns to ON.	Turns to ON.	Inspect door lock switch.	Door lock switch is connected with Low-speed CAN.
Door lock actuator	When locked with door lock switch, it is output.	Output	Replace the body integrated unit.	—

2. BODY INTEGRATED UNIT

Item	Operation	Specifications		NOTE
		YES	NO	
Illumination VR power supply	Operate the illumination volume, illumination light is controlled with changing of data display voltage.	Illumination light is controlled with changing of data.	Inspect the illumination volume.	—
Fuel level resistance	Check the fuel level resistance and fuel level resistance 2. Both resistances are same.	Same values	Inspect body integrated unit.	Compare the input and output values of body integrated unit.
R fog light input	When turned rear fog light switch to ON, data display turns to ON.	Turns to ON.	Inspect rear fog light switch.	—
R fog light output	When turned rear fog light switch to ON, output turns to ON.	Turns to ON.	Inspect body integrated unit.	If not operate with output turned to ON, check the rear fog light relay.
R wiper SW input	When rear wiper SW to ON, data display turns to ON.	Turns to ON.	Inspect rear wiper switch.	—
R wiper output	When rear wiper switch to ON, output signal turns to ON.	Turns to ON.	Replace the body integrated unit.	If not operate with output turned to ON, check the rear wiper motor.
Keyless Entry	Keyless entry LOCK/UNLOCK the doors.	Operate	Inspect the keyless antenna.	If the antenna is OK, replace the body integrated unit.
Brake SW	When brake pedal is depressed, it turns to ON.	Turns to ON.	Inspect brake switch.	—
Shift lock solenoid	The shift lock releases when depressing the brake pedal.	Released	Inspect the shift lock.	—

General Diagnostic Table

Item	Operation	Specifications		NOTE
		YES	NO	
Body integrated unit registration function setting	Does Vehicle equipment correspond to setting values?	Correspondence	Reconfigure the values according to vehicle equipment.	—
Customize	When changing customize setting, the registration completes correctly.	Registered	Inspect body integrated unit.	—
Manual mode	Switch the shift (UP/DOWN) on Manual mode. Indicator is changed in 1 — 2.	Change	Inspect the shift lever.	—
Function check	Each checking item operate correctly. (Except for not equipped)	Operate	Inspect for non-functional actuator.	—
Security	After looking with keyless entry system and open the door, security system is armed and the horn sounds.	Horn sounds. (Security system operates.)	Inspect the security system.	—

WIRING SYSTEM SECTION

WIRING SYSTEM WI

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

1. Basic Diagnostic Procedure

A: BASIC PROCEDURES

1. GENERAL DESCRIPTION

The most important purpose of diagnostics is to determine which part is malfunctioning quickly, to save time and labor.

2. IDENTIFICATION OF TROUBLE SYMPTOM

Determine what the problem is based on the symptom.

3. PROBABLE CAUSE OF TROUBLE

Look at the wiring diagram and check the system's circuit. Then check the switch, relay, fuse, ground, etc.

4. LOCATION AND REPAIR OF TROUBLE

1) Using the diagnostics, narrow down the causes.
2) If necessary, use a voltmeter, ohmmeter, etc.
3) Before replacing certain component parts (switch, relay, etc.), check the power supply, ground, for open wiring harness, poor connectors, etc. If no problem is encountered, check the component parts.

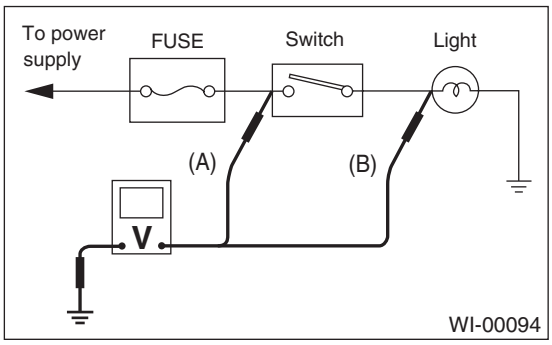
5. SYSTEM OPERATION CHECK

After repairing, ensure that the system operates properly.

B: BASIC INSPECTION

1. VOLTAGE MEASUREMENT

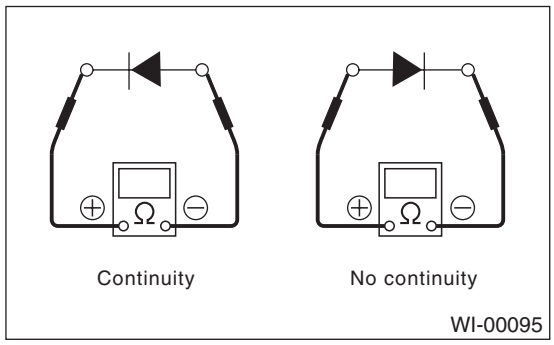
1) Using a voltmeter, connect the negative lead to a good ground point or negative battery terminal and the positive lead to the connector or component terminal.
2) Contact the positive lead of the voltmeter on connector (A). The voltmeter will indicate a voltage.
3) Shift the positive lead to connector (B). The voltmeter will indicate no voltage.



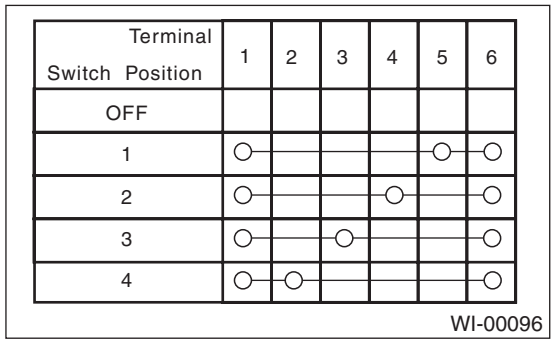
4) With the test set-up held as it is, turn the switch ON. The voltmeter will indicate a voltage and, at the same time, the light will come on.
5) The circuit is in good order. If a problem such as a light failing to illuminate occurs, use the procedures outlined above to track down the malfunction.

2. CIRCUIT CONTINUITY CHECKS

1) Disconnect the battery terminal or connector so there is no voltage between the check points.
Contact the two leads of an ohmmeter to each of the check points.
If the circuit has diodes, reverse the two leads and check again.
2) Use an ohmmeter to check for diode continuity.
When contacting the negative lead to the diode positive side and the positive lead to the negative side, there should be continuity.
When contacting the two leads in reverse, there should be no continuity.



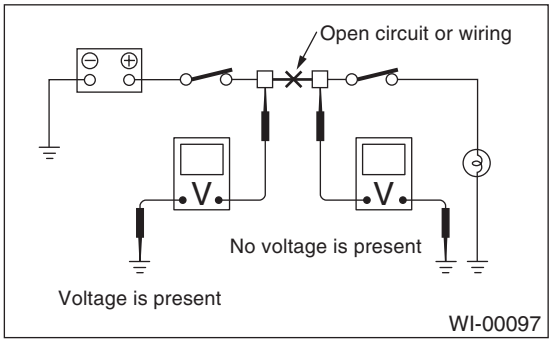
3) Symbol "❍ — ❍" indicates that continuity exists between two points or terminals. For example, when a switch position is at "3", continuity exists among terminals 1, 3 and 6, as shown in the table below.



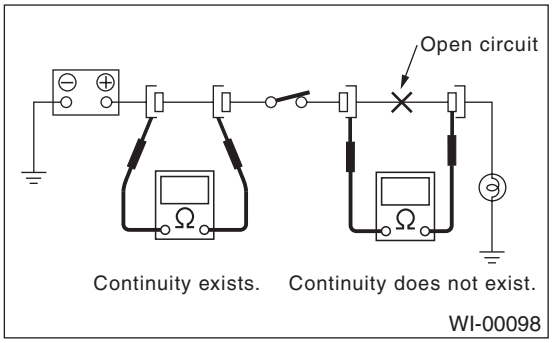
Terminal / Switch Position	1	2	3	4	5	6
OFF						
1	○				○	○
2	○			○		○
3	○		○			○
4	○	○				○

3. HOW TO DETERMINE AN OPEN CIRCUIT

1) WITH VOLTMETER:
An open circuit is determined by measuring the voltage between respective connectors and ground using a voltmeter, starting with the connector closest to the power supply. The power supply must be turned ON so that current flows in the circuit. If voltage is not present between a particular connector and ground, the circuit between that connector and the previous connector is open.

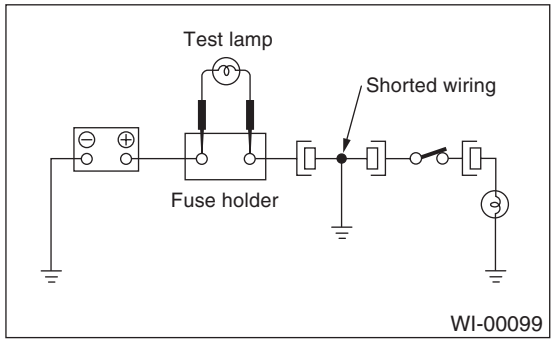


2) WITH OHMMETER:
Disconnect all connectors affected, and check continuity in the wiring between adjacent connectors. When the ohmmeter indicates “infinite”, the wiring is open.

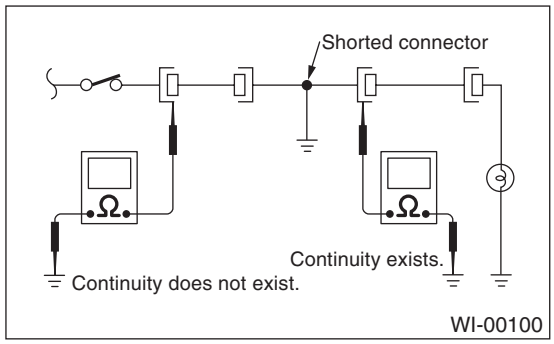


4. HOW TO DETERMINE A SHORT CIRCUIT

1) WITH TEST LIGHT:
Connect a test light (rated at approx. 3 watts) in place of the blown fuse and allow current to flow through the circuit. Disconnect one connector at a time from the circuit. Starting with the one located farthest from the power supply. If the test light goes out when a connector is disconnected, the wiring between that connector and the next connector (farther from the power supply) is shorted.



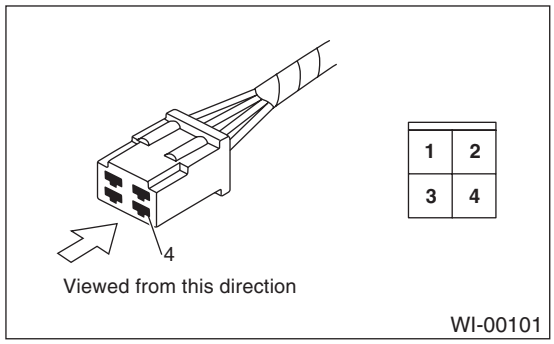
2) WITH OHMMETER:
Disconnect all affected connectors, and check continuity between each connector and ground. When the ohmmeter indicates continuity between a particular connector and a ground, that connector is shorted.



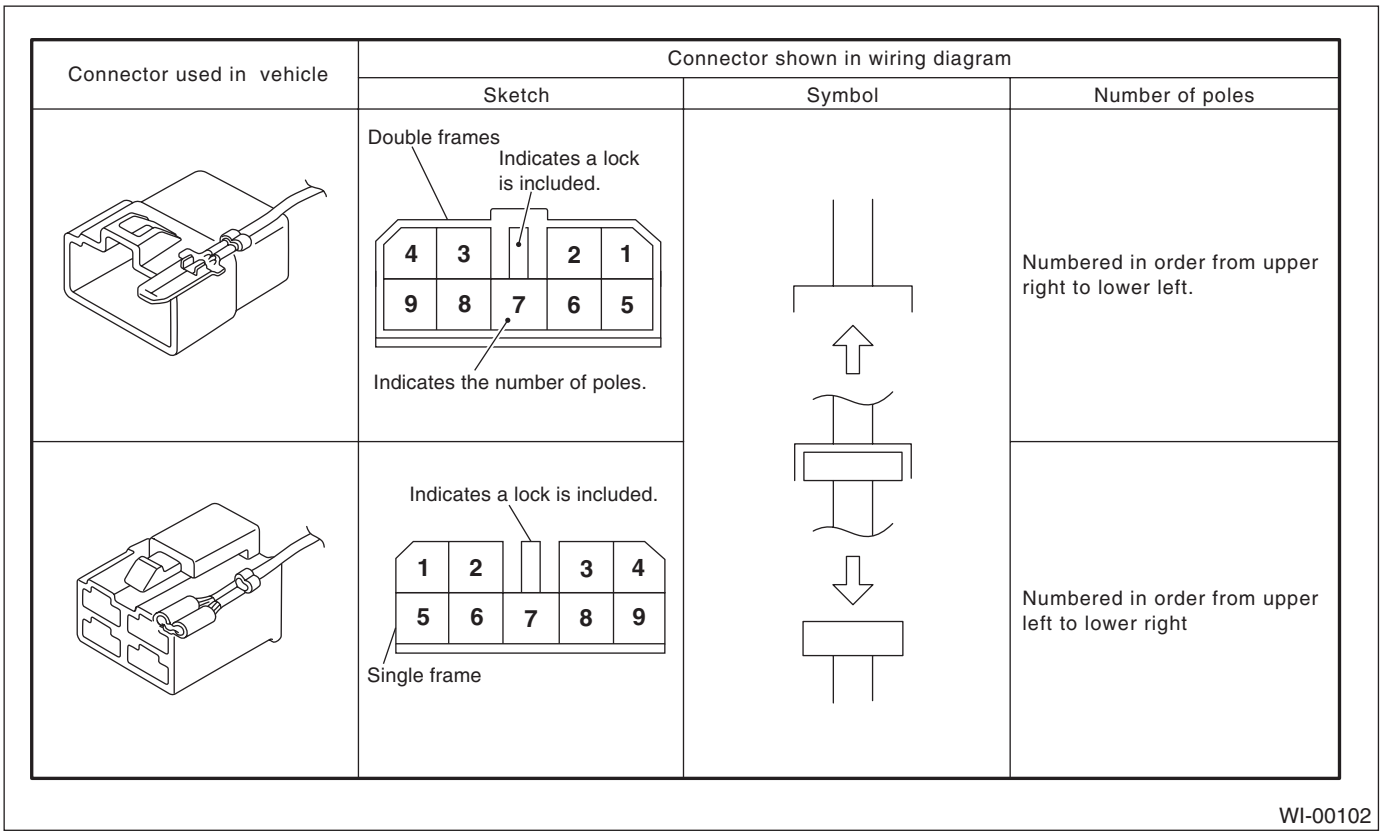
C: HOW TO READ WIRING DIAGRAMS

1. WIRING DIAGRAM

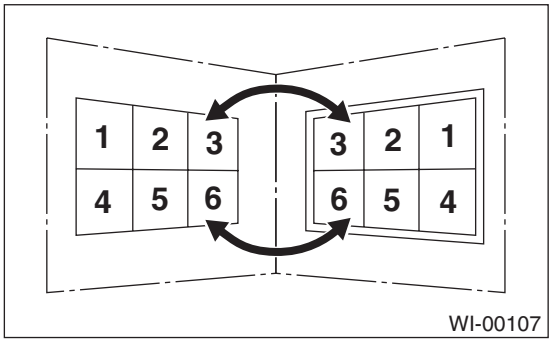
The wiring diagram of each system is illustrated so that you can understand the path through which the electric current flows from the battery.
Sketches and codes are used in the diagrams. They should read as follows:
• Each connector and its terminal position are indicated by a sketch of the connector in a disconnected state which is viewed from the front.



• The number of poles or pins, presence of a lock are indicated in the sketch of each connector. In the sketch, the highest pole number refers to the number of poles which the connector has. For example, the sketch of the connector shown in figure indicates the connector has 9 poles.



• When one set of connectors is viewed from the front side, the pole numbers of one connector are symmetrical to those of the other. When these two connectors are connected as a unit, the poles which have the same number are joined.



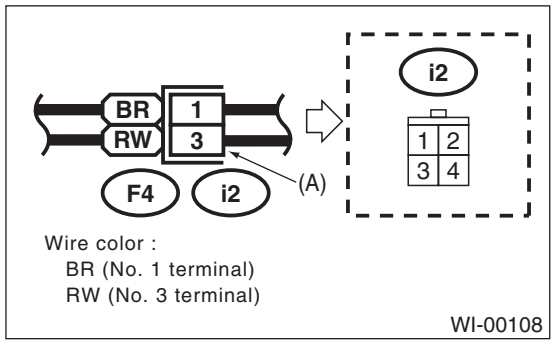
• WIRING DIAGRAM:

The connectors are numbered along with the number of poles, external colors, and mating connections in the accompanying list.

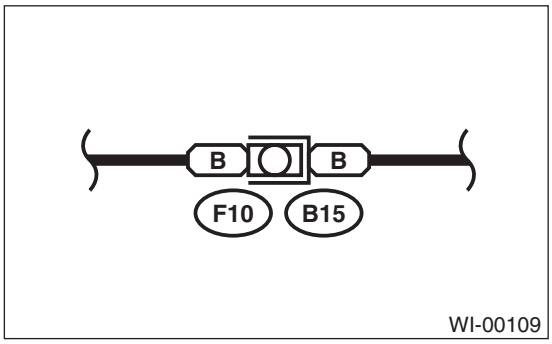
• The sketch of each connector in the wiring diagram usually shows the (A) side of the connector. The relationship between the wire color, terminal number and connector is described in the figure.

NOTE:

A wire which runs in one direction from a connector terminal sometimes may have a different color from that which runs in the other direction from that terminal.

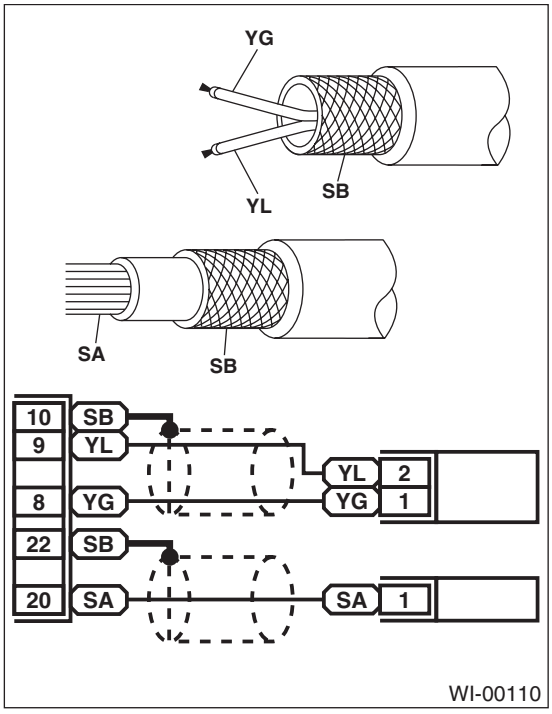


• In the wiring diagram, connectors which have no terminal number refer to one-pole types. Sketches of these connectors are omitted intentionally.

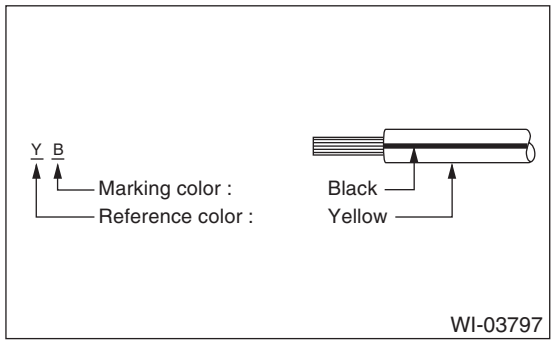


• The following color codes are used to indicate the colors of the wires.

Color code	Color
L	Blue
B	Black
Y	Yellow
G	Green
R	Red
W	White
Br	Brown
Lg	Light green
Gr	Gray
P	Pink
Or	Orange
Sb	Light blue
V	Purple
SA	Sealed (Inner)
SB	Sealed (Outer)



• The wire color code, which consists of two letters (or three letters including Br or Lg), indicates the standard color (base color of the wire covering) by its first letter and the stripe marking by its second letter.



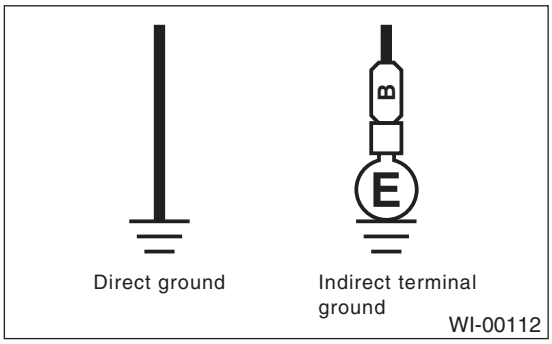
• The table lists the nominal sectional areas and allowable currents of the wires.

CAUTION:
When replacing or repairing a wire, be sure to use the same size and type of the wire which was originally used.

NOTE:
• The allowable current in the table indicates the tolerable amperage of each wire at an ambient temperature of 40°C (104°F).
• The allowable current changes with ambient temperature. Also, it changes if a bundle of more than two wires is used.

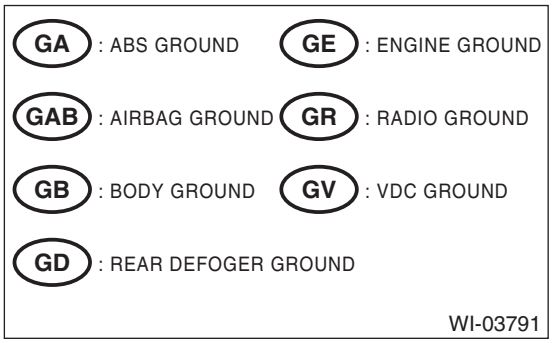
Nominal sectional area mm^2	No. of strands/ strand diameter	Outside diameter of wiring mm	Allowable current Amps/ 40°C (104°F)
0.3	7/0.26	1.8	7
0.5	7/0.32	2.2 (or 2.0)	12
0.75	30/0.18	2.6 (or 2.4)	16
0.85	11/0.32	2.4 (or 2.2)	16
1.25	16/0.32	2.7 (or 2.5)	21
2	26/0.32	3.1 (or 2.9)	28
3	41/0.32	3.8 (or 3.6)	38
5	65/0.32	4.6 (or 4.4)	51
8	50/0.45	5.5	67

• Each unit is either directly grounded to the body or indirectly grounds through a harness ground terminal. Different symbols are used in the wiring diagram to identify the two grounding systems.



• The ground points shown in the wiring diagram refer to the following:

NOTE:
All wiring harnesses are provided with a ground point which should be securely connected.



• Relays are classified as normally-open or normally-closed.

The normally-closed relay has one or more contacts. The wiring diagram shows the relay mode when the energizing circuit is OFF.

Relay type		Energizing circuit OFF	Energizing circuit ON
Normally-open type	4-pole			6-pole		Normally-closed type	4-pole		Mixed type	6-pole		
Key to symbols:

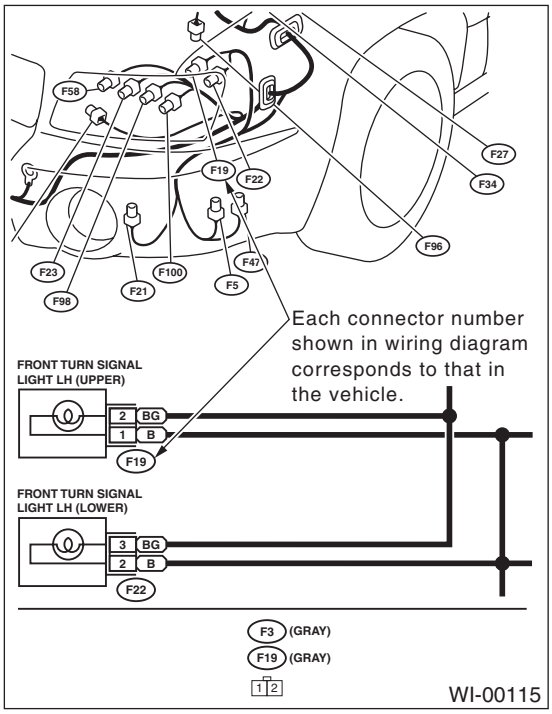
○ ⟶ : Current flows.

× ⟶ : Current does not flow.

WI-00114

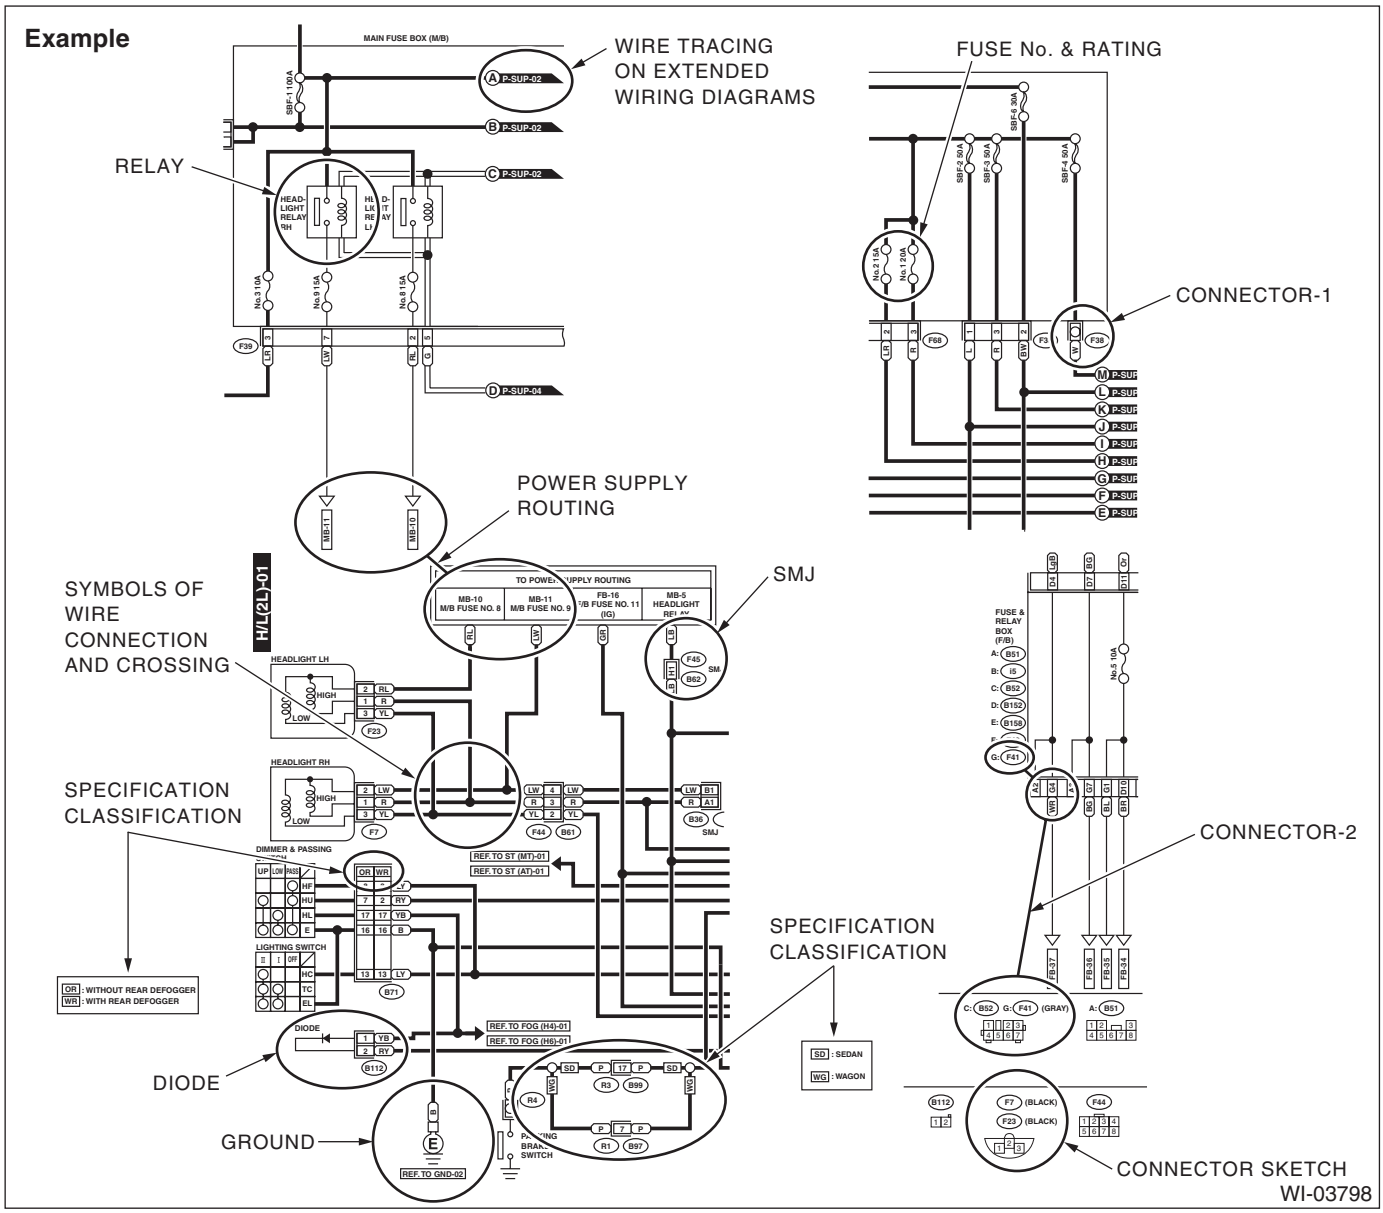
• Each connector number shown in the wiring diagram corresponds to that in the wiring harness. The location of each connector in the actual vehicle is determined by reading the first character of the connector (for example, a “F” for F8, “i” for i16, etc.) and the type of wiring harness. The first character of each connector number corresponds to the area or system of the vehicle.

Symbol	Wiring harness and cord
F	Front wiring harness
B	Bulkhead wiring harness
E	Engine wiring harness
T	Transmission cord
D	Door cord LH & RH, Rear gate cord Rear door cord LH & RH, Rear defogger cord
i	Instrument panel wiring harness
R	Rear wiring harness, Fuel tank cord, Roof cord, Rear gate cord, Rear defogger ground cord (Sedan model)
AB	Airbag wiring harness



D: SYMBOLS IN WIRING DIAGRAMS

A number of symbols are used in each wiring diagram to easily identify parts or circuits.



1. RELAY

A symbol used to indicate a relay.

2. CONNECTOR 1

The sketch of the connector indicates the one-pole types.

3. WIRING CONNECTION

Some wiring diagrams are indicated in foldouts for convenience. Wiring destinations are indicated where necessary by corresponding symbols. (When two pages are needed for clear indication)

4. FUSE No. & RATING

The “FUSE No. & RATING” corresponds with that used in the fuse box (main fuse box, fuse and joint box).

5. CONNECTOR 2

- Each connector is indicated by a symbol.
- Each terminal number is indicated in the corresponding wiring diagram in an abbreviated form.
- For example, terminal number “G4” refers to No. 4 terminal of connector (G: F41) shown in the connector sketch.

6. CONNECTOR SKETCH

• Each connector sketch clearly identifies the shape and color of a connector as well as terminal locations. Non-colored connectors are indicated in natural color.
• When more than two types of connector number are indicated in a connector sketch, it means that the same type connectors are used.

7. GROUND

Each grounding point can be located easily by referring to the corresponding wiring harness.

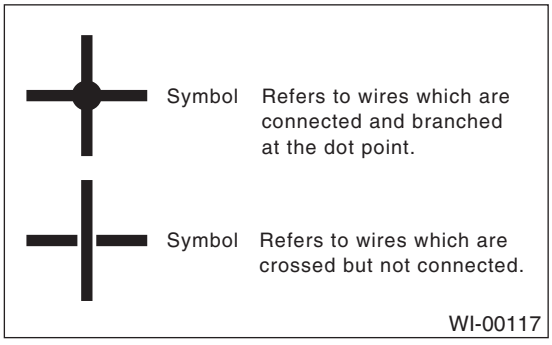
8. DIODE

A symbol is used to indicate a diode.

9. WIRE TRACING ON EXTENDED WIRING DIAGRAMS

For a wiring diagram extending over at least two pages, a symbol (consisting of the same characters with arrows), facilitates wire tracing from one page to the next.
A ←→ A, B ←→ B

10.SYMBOLS OF WIRE CONNECTION AND CROSSING



11.DC POWER SUPPLY CIRCUIT

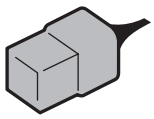
A symbol is used to indicate the power supply in each wiring diagram.
“MB-5”, “MB-6”, etc., which are used as power-supply symbols throughout the text, correspond with those shown in the “DC POWER SUPPLY CIRCUIT” in the wiring diagram.
Accordingly, using the “DC POWER SUPPLY CIRCUIT” and wiring diagrams permits service personnel to understand the entire electrical arrangement of a system.

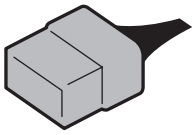
12.CLASSIFICATION BY SPECIFICATION

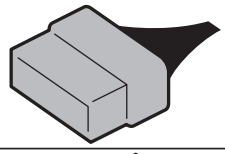
When the wiring diagram differ according to vehicle specifications, the specification difference is described by using abbreviations.

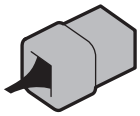
E: CONNECTOR SYMBOL IN WIRING HARNESS

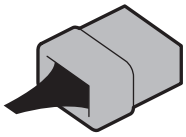
A number of connector symbols are used in each wiring diagram to easily identify the wiring harness connectors.

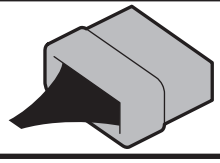
Standard type: Female		
Pole: From 1 to 8	Pole: From 9 to 20	Pole: More than 21
				Standard type: Male		
				


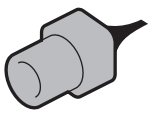


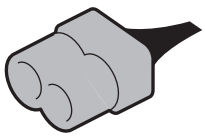


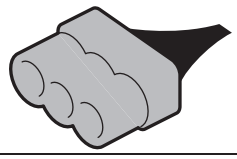


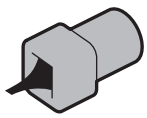


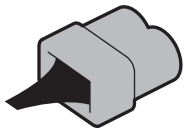


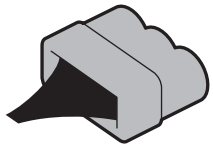
Water proof type: Female		
Pole: From 1 to 8	Pole: From 9 to 20	Pole: More than 21
				Water proof type: Male		
				












WI-02445

F: ABBREVIATION IN WIRING DIAGRAMS

Abbr.	Full name
ABS	Antilock Brake System
ACC	Accessory
A/C	Air conditioner
AD	Auto Down
AT	Automatic transmission
AU	Auto Up
A/B	Airbag
A/F	Air/Fuel (Air fuel ratio sensor)
ATF	Automatic transmission fluid
AWD	All Wheel Drive
B, BAT	Battery
CPC	Canister Purge Control
D	Drive Range
DN	Down
E	Ground
ELR	Emergency Locking Retractor
F/B	Fuse & Relay box
FL1.5	Fusible Link 1.5 mm^2
H/L	Headlight
I/F	Interface
IG	Ignition
Illumi.	Illumination
INT	Intermittent
LH	Left Hand
Lo	Low
M	Motor
M/B	Main fuse box
MG	Magnet
Mi	Middle
MT	Manual transmission
N	Neutral Range
OCV	Oil flow control solenoid valve
OP	Optional Parts or Open
P	Parking Range
PASS	Passing
R	Reverse Range
RH	Right Hand
SBF	Slow Blow Fuse
ST	Starter
SW	Switch
TGV	Tumble generated valve
U, UP	Up
VDC	Vehicle Dynamics Control
VVL	Variable Valve Lift
WASH	Washer

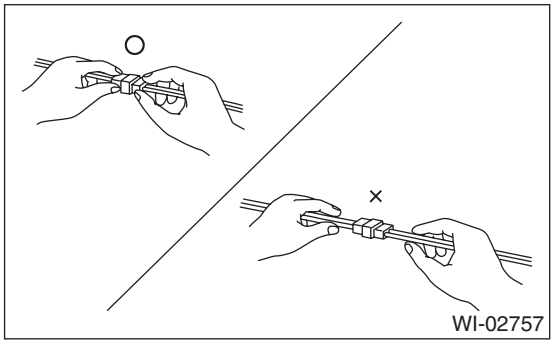
2. Working Precautions

A: PRECAUTIONS WHEN WORKING WITH THE PARTS MOUNTED ON THE VEHICLE

1) When working under a vehicle which is jacked-up, always be sure to use rigid rack.
2) The parking brake must always be applied during working. Also, in automatic transmission vehicles, keep the select lever set to the P (Parking) range.
3) Be sure the workshop is properly ventilated when running the engine. Further, be careful not to touch the belt or fan while the engine is operating.
4) Be careful not to touch hot metal parts, especially the radiator and exhaust system immediately after the engine has been turned off.

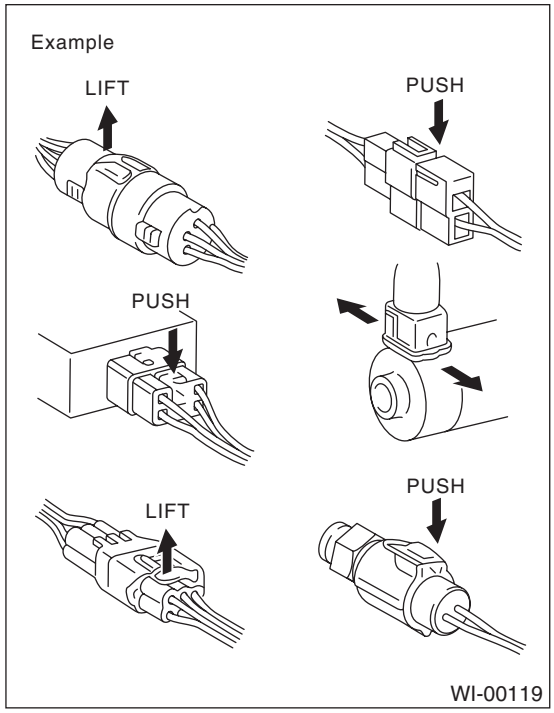
B: PRECAUTIONS IN TROUBLE DIAGNOSIS AND REPAIR OF ELECTRIC PARTS

1) The battery cable must be disconnected from the battery's (–) terminal, and the ignition switch must be set to the OFF position, unless otherwise required by the diagnostics.
2) Securely fasten the wiring harness with clamps and slips so that the harness does not interfere with the body end parts or edges and bolts or screws.
3) When installing parts, be careful not to catch them on the wiring harness.
4) When disconnecting a connector, do not pull the wires, but pull while holding the connector body.

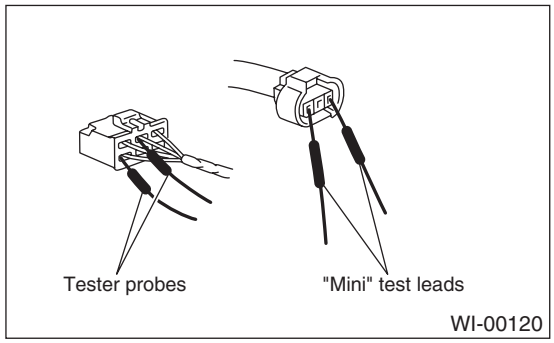


5) Some connectors are provided with a lock. One type of such a connector is disconnected by pushing the lock, and the other, by moving the lock up. In either type the lock shape must be identified before attempting to disconnect the connector.

To connect, insert the connector until it snaps and confirm that it is tightly connected.



6) When checking continuity between connector terminals, or measuring voltage across the terminal and ground, always contact tester probe(s) on terminals from the wiring connection side. If the probe is too thick to gain access to the terminal, use "mini" test leads.
To check water-proof connectors (which are not measurable from the wiring side), contact test probes on the terminal side. Be careful not to bend or damage the terminals.



7) Sensors, relays, electrical unit, etc., are sensitive to strong impacts.
Handle them with care so that they are not dropped or mishandled.

WIRING SYSTEM SECTION

WIRING SYSTEM WI

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

WIRING SYSTEM SECTION

WIRING SYSTEM WI

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

FUJI HEAVY INDUSTRIES LTD. G2320GE8
